As part of its commitment to reduce electricity cost pressures, the government has removed the DRC from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and would mean ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.

As a further step to mitigate electricity cost pressures for non-residential users, the government introduced legislation the *Budget Measures Act, 2015*, passed in December 2015, to end the DRC for all other users on April 1, 2018, nine months earlier than previously estimated.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge.

Q. Why did the residual stranded debt only fall from $2.6 billion to $2.2 billion between March 31, 2014, and March 31, 2015, if the Ontario Electricity Financial Corporation's (OEFC) unfunded liability fell by about $1.6 billion and the DRC collected the same year was $0.956 billion?

A. Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998* and the revocation of Ontario Regulation 89/12, the residual stranded debt was defined under the *Electricity Act, 1998* as the stranded debt minus the estimated present value of future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The Debt Retirement Charge would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

The residual stranded debt fell by less than the decrease in OEFC's unfunded liability due to a reduction in the estimated present value of future dedicated revenues to OEFC from $7.2 billion as at March 31, 2014, to $6.0 billion as at March 31, 2015, which reflected the uncertainty of and update to the forecast of future dedicated revenues to OEFC. These forecasted revenues depend on the financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, regulatory decisions by the Ontario Energy Board, as well as other factors such as interest rates and electricity consumption.

The residual stranded debt was not a fixed, one-time determination. Under the *Electricity Act, 1998*, and Ontario Regulation 89/12, the estimated amount of residual stranded debt depended on actual OEFC results to-date and a forecast of future revenues to OEFC.

Q. Why has the residual stranded debt only declined by $5.6 billion since April 1, 1999, to March 31, 2015?

A. The residual stranded debt increased from $7.8 billion as at April 1, 1999, to an estimated $11.9 billion as at March 31, 2004, as a result of an increase in stranded debt primarily due to the electricity price freeze, as well as a reduction in the estimated present value of future dedicated revenues to the Ontario Electricity Financial Corporation (OEFC), mainly reflecting the downward revision in 2004 of the previous overestimation of future financial performance of Ontario Power Generation (OPG), and lower tax rates. OPG had significantly underperformed compared to its plans over the previous period of 1999 to 2004.

Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The residual stranded debt has been reduced by an estimated $9.3 billion, from an estimated peak of $11.9 billion as at March 31, 2004, to $2.2 billion as at March 31, 2015.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998* and the revocation of Ontario Regulation 89/12, the residual stranded debt was defined under the *Electricity Act, 1998* as the stranded debt minus the estimated present value of future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The Debt Retirement Charge would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt" were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. Since you have collected more than $12.5 billion in Debt Retirement Charge (DRC) revenue to March 31, 2015, why hasn't stranded debt declined by more?

A. Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The Ontario Electricity Financial Corporation (OEFC) has paid down stranded debt by an estimated total of about $12.3 billion from its peak in 2003-04, reducing stranded debt to $8.2 billion as at March 31, 2015.

- As confirmed in the Auditor General's 2011 Annual Report, the DRC is used exclusively by OEFC to meet its mandate, as provided for under the *Electricity Act, 1998*, which includes servicing and retiring its debt and other liabilities.

- Servicing costs to the OEFC include interest expense, which is currently about $1.4 billion per year and has totalled about $30.5 billion between April 1, 1999 and March 31, 2015.

- Stranded debt increased by over $1 billion between April 1, 1999, and March 31, 2004, primarily as a result of the 4.3 ¢/kilowatt-hour (kWh) price freeze, which cost OEFC about $900 million.

- The Auditor General audits OEFC's annual financial statements and has provided an unqualified opinion every year since the initial 1999–2000 financial statements.

Q. After the removal of the DRC what is the government's plan to pay into the OEFC, to make up for that money? With the lower revenue going into the OEFC, isn't there a danger of it becoming insolvent?

A. The government has removed the Debt Retirement Charge (DRC) from residential users' electricity bills as of January 1, 2016. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998*, the DRC would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge. The government expects that the stranded debt will continue to decline following the end of the DRC.

Background

Q. What is OEFC?

A. The Ontario Electricity Financial Corporation (OEFC) is an agency of the Province and was established by the *Electricity Act, 1998* as the legal continuation of the former Ontario Hydro.

OEFC's mandate includes servicing and retiring the former Ontario Hydro's debt and certain other liabilities.

- OEFC inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. The debt was accumulated by building Ontario's electricity generation and transmission infrastructure.

- A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets

OEFC receives dedicated revenues to service and retire the stranded debt from a number of sources, including payments in lieu of taxes (PILs) from Ontario Power Generation (OPG), Hydro One and municipal electricity utilities (MEUs); Electricity Sector Dedicated Income from the Province in respect of the net incomes of OPG and Hydro One; and the Debt Retirement Charge paid by electricity users, as provided for by the *Electricity Act, 1998*.

Q. When will the OEFC's 2015-16 Annual Report be released publicly?

A. The 2015-16 Annual Report is currently being prepared. Under the Electricity Act, 1998, the time frame for preparing and submitting the Annual Report may be extended to reflect the timeframe for Public Accounts. Given the changes to the Electricity Act and significant activities during 2015-16 that affected OEFC, it was prudent to take additional time to review the impacts on OEFC in preparing the financial results for 2015-16..

- OEFC’s annual reports contain OEFC’s audited financial statements which are also released as part of the Province’s Public Accounts

    - OEFC's audited 2014-2015 financial statements, including the notes to the financial statements, were released on Sep 28, 2015 in Volume Two of the 2014-15 Public Accounts.

- The Auditor General audits OEFC’s annual financial statements and has provided an unqualified opinion every year since the initial 1999-2000 financial statements.

- Public Accounts may be downloaded from the Ministry of Finance web site (http://www.fin.gov.on.ca/en/budget/paccts/).

- OEFC’s past Annual Reports (1999-2000 to 2014-2015) can be downloaded from the OEFC website. (http://www.oefc.on.ca/publications.html).

- A spreadsheet containing OEFC's historical financial statements can be accessed on OEFC’s website (http://www.oefc.on.ca/pdf/OEFC_financials_historicals_en.xls)

Q. What is the difference between stranded debt and unfunded liability?

A. The Ontario Electricity Financial Corporation (OEFC) inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. The debt was accumulated by building Ontario's electricity generation and transmission infrastructure. This amount included $30.5 billion in total debt.

A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets.

OEFC's initial unfunded liability of $19.4 billion as at April 1, 1999, was the stranded debt adjusted for $1.5 billion of additional assets, including primarily an accounting asset for deferred debt charges.

Q. What was the origin of the residual stranded debt?

A. The Ontario Electricity Financial Corporation (OEFC) is one of five entities established by the *Electricity Act, 1998*, as part of the restructuring of the former Ontario Hydro. OEFC's mandate includes servicing and retiring the debt and other liabilities of the former Ontario Hydro.

- OEFC inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets.

- As of April 1, 1999, the present value of future payments-in-lieu of taxes and electricity sector dedicated income was estimated at $13.1 billion. Subtracting the $13.1 billion from stranded debt of $20.9 billion resulted in a difference of $7.8 billion, the initial estimated residual stranded debt.

The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", including the regulation-making authority of Ontario Regulation 89/12, were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. How does OEFC provide financial assistance to the successor corporations of Ontario Hydro? Are these loans added to residual stranded debt/outstanding liabilities?

A. Consistent with its mandate, OEFC provides financial assistance to the successor corporations of Ontario Hydro, namely Ontario Power Generation (OPG) and the Independent Electricity System Operator (IESO). For example, financing is provided by OEFC for new generation development projects such as the Niagara tunnel project.

OEFC borrows to provide these loans, thereby increasing its debt portfolio, but with an offsetting asset (Notes and Loan Receivables) from the companies, thereby not affecting the unfunded liability ("stranded debt") on OEFC's balance sheet.

Q. What is the "due from the Province of Ontario" payment?

A. Due from Province

The Due from Province of Ontario that appears in OEFC's financial statements represents the cumulative value of the Electricity Sector Dedicated Income (ESDI) since April 1, 1999.

ESDI reflects the Province's commitment to dedicate its cumulative combined net income of OPG and Hydro One in excess of the Province's interest cost of its investment in its electricity subsidiaries to OEFC.

- For example, the combined net incomes of OPG and Hydro One in 2014-15 was $1,558M, and the Province's interest cost in acquiring the equity in the two companies totals about $520 million annually. This resulted in an ESDI of $1,038 million in 2014-15, so the ESDI Due from Province of Ontario increased from $3,865 million as of March 31, 2014, to $4,903 million as of March 31, 2015.

The ESDI commitment is reflected in Public Accounts as a transfer payment to OEFC from the Province's Consolidated Revenue Fund and is authorized by a voted appropriation.

CORPORATE AND ELECTRICITY FINANCE DIVISION

Asset Optimization and the Trillium Trust

Q: What asset optimization initiatives did the Province move forward with in 2014-15?

A: On February 4, 2015, the Province completed the sale of its remaining 36.7 million GM common shares for total proceeds of $1.55 billion, resulting in a fiscal gain of $1.08 billion.

General Motors also redeemed the Province's preferred shares on December 31, 2014, for total proceeds of $0.16 billion, including a gain of $0.02 billion.

The $1.1 billion gain on the sale of the common and preferred shares exceeded the $900 million asset optimization target included in the 2014 Budget for 2014–15 Net Revenue Gains from Asset Optimization.

The Ontario government directed the gain from the sale, including the additional $200 million generated above the 2014 target, to the Trillium Trust. The Province also directed to the Trillium Trust the $249 million net proceeds from the September 2013 sale of the Province's interest in 10 million shares of GM.

Q: The 2014-15 Public Accounts showed that the sale of GM shares provided revenue benefits to the Province. Is the Province selling assets to improve the path to balance?

A: The government's plan to balance the budget is centred on:

- Responsibly Managing Spending
- Transforming and Modernizing Government
- Addressing the Underground Economic and Tax Compliance
- Investing Strategically to Grow the Economy

The government's plan to eliminate the deficit does not depend on the revenues from asset sales. Maximizing the value of these assets is part of the government's economic plan for Ontario. The net revenue gains from these transactions are helping the government to deliver on its plan by investing in infrastructure.

The *Trillium Trust Act, 2014*, provides for the dedication of net revenue gains associated with the sale of designated assets to the Trust to help fund investments in transit, transportation and other priority infrastructure under Moving Ontario Forward.

Q: What's the status of the funds in the Trillium Trust?

A: The Public Accounts of Ontario 2014-2015, published in September 2015, show that $1.35 billion has been dedicated to the Trillium Trust.

These are the net proceeds from the sale of the Province's remaining General Motors common shares in early 2015, combined with net proceeds from a September 2013 GM share sale and the redemption of preferred shares in late 2014.

On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust.

This brings the total balance of the Trillium Trust to over $4.5 billion, to help fund further investments in transit, transportation and other priority infrastructure as part of Moving Ontario Forward.

- The $3.2 billion credit to the Trillium Trust comes from:
    - About $0.8 billion in gains on sale from the sale of Hydro One shares in November 2015.
    - The net benefit to the Province of about $2.4 billion from Hydro One's recognition of the deferred tax benefit.

Q: When will the government actually start using funds from the Trillium Trust to pay for transit and infrastructure?

A: As outlined in the 2016 Budget, the government plans to begin drawing down on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history. Based on planned expenditures, in 2016-17 the Trillium Trust would support Moving Ontario Forward initiatives, such as

- Regional Express Rail (RER);
- Hurontario Light Rail Transit (LRT); and
- Ontario Community Infrastructure Fund.

Like most large infrastructure investments, initial spending on Moving Ontario Forward projects is focused on planning, design, property acquisition and other activities to get projects construction-ready. This will allow for identification for expenditures, as this preliminary work is completed and construction activity

becomes underway, and for cash flow timing requirements from the Trillium Trust during 2016-17 and subsequent years.

Q: What is the current status of broadening Hydro One ownership?

A: The Province completed the Hydro One initial public offering (IPO) in November 2015 and raised approximately $1.83 billion in gross proceeds and about $116 million from related share sales. As announced in early May, a secondary offering of Hydro One shares raised approximately $1.97 billion in gross proceeds, and as announced in July, the Province has an agreement in principle to sell to First Nations in Ontario up to 2.5% of Hydro One shares at a price of $18 per share.

There were other associated benefits in connection with the IPO, including a positive impact to the Province's income from Hydro One as a result of a deferred tax benefit recorded by Hydro One. The Province also received cash of $1 billion in special payments from Hydro One, including $800 million in a special dividend paid prior to the IPO, and about $200 million in additional payments in lieu of taxes to the Ontario Electricity Financial Corporation (OEFC).

On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust, bringing total balance of the Trillium Trust to over $4.5 billion. The net revenue gains from the secondary offering in April 2016 will be credited to the Trillium Trust in the future.

The Province will proceed with future offerings in a staged and prudent manner, over time reducing its stake to 40 per cent while remaining the largest shareholder.

Through this initiative, the Province expects to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: In April 2015, the Premier's Advisory Council on Government Assets estimated Hydro One's valuation at between $13.5 billion and $15 billion; using this estimate, the province could realize up to $9 billion from the sale of 60% of Hydro One. Does the Province still expect these benefits?

A: The Province is on track to generate approximately $9 billion in gross proceeds and other revenue benefits from broadening the ownership of Hydro One, while remaining the largest single shareholder.

Through this initiative, the Province expects to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: In moving forward with broadening Hydro One ownership, isn't the government giving up future revenues from the company?

A: While broadening ownership in a revenue generating asset means that there may be an impact on revenues over the longer term, the fiscal impact of an asset sale includes upfront gains that the government will reinvest into public infrastructure, improving the lives of Ontarians where they live, work and play. In turn, this will create jobs, generate economic growth and additional revenues for the Province.

- The Province would also retain 40 per cent of Hydro One, following the IPO and subsequent share offerings, which would continue generating revenue for the Province.

Q: Why did the government remove certain oversight powers of the Office of the Auditor General over Hydro One?

A: To support Hydro One's transition from being wholly-owned by the Province to being publicly traded, the government agreed with the Premier Advisory Council's recommendations that the company should operate, to the extent possible, in the same legislative and regulatory environment as other publicly–traded, rate-regulated entities.

However, the Province has ensured Hydro One oversight measures are in place. Hydro One continues to be subject rate regulation by the Ontario Energy Board (OEB) and as a publicly traded company Hydro One is subject to requirements of the Business Corporations Act (Ontario) and the Securities Act (Ontario).

To further ensure the protection of ratepayers, the government required Hydro One to create a dedicated Ombudsperson, similar to those found at other publicly traded companies. The Ombudsperson is able to receive and investigate customer complaints.

The government has also put in place a governance agreement and registration rights agreement with Hydro One to clarify the Province's role as investor, including the process through which the Province nominates 40 per cent of the board of directors and the Province's rights related to future share sales by the Province or Hydro One.

The government will remain, by law, the largest single shareholder in Hydro One – and no other single shareholder or group of shareholders will be permitted to hold more than 10 per cent of the company's shares.

Q: What is the status of the potential merger between Hydro One Brampton and a group of urban local distribution companies (LDCs)?

A: The proposed merger of Hydro One Brampton with PowerStream, Enersource, and Horizon Utilities, continues to move forward.

The municipal councils for the cities of Barrie, Markham, Vaughan, Mississauga, Hamilton and St. Catharines have all voted to proceed with the merger. Ontario has also executed a Share Purchase Agreement with PowerStream, Enersource, and Horizon.

Commercial closing of the transaction would be subject to certain closing conditions, including Ontario Energy Board (OEB) approval. The proposed merger is currently being reviewed by the OEB.

- The proposed merger of these three strong performing utilities with Hydro One Brampton would create the second-largest electricity distributor in Ontario by number of customers. The merged entity would deliver efficiencies and economies of scale while continuing to provide safe, reliable and clean electricity.

Q: Will the Province realize any up-front benefit from the sale / merger of Hydro One Brampton with other local distribution companies (LDCs)? Would these benefits go to the Trillium Trust or to the Ontario Electricity Financial Corporation (OEFC)?

A: The purchasers have agreed to pay $607 million for Hydro One Brampton, subject to post-closing adjustments and regulatory approval from the Ontario Energy Board (OEB).

The *Trillium Trust Act, 2014*, ensures that net revenue gains from the sale of Hydro One Brampton shares would be credited to the Trillium Trust. Under the Act, the net revenue gains would take into account the gross proceeds less the book value of the asset and costs incurred in the disposition of the asset.

The *Electricity Act, 1998*, also allows the Province to meet its obligations to OEFC by, for example, relieving OEFC of certain debt obligations that it currently owes to the Province.

Q: Why is Hydro One Brampton being merged with three other urban local distribution companies – Powerstream, Horizon Utilities, and Enersource? Why wasn't there a competitive process for the sale/merger of Hydro One Brampton?

Together these utilities can take advantage of efficiencies of scale and resources sharing, which in turn could translate into savings for their respective ratepayers.

In the course of its Phase 2 consultations, the Premier's Advisory Council received a strong pre-emptive bid from the consortium of local distribution companies (LDCs) at the higher end of the indicative values identified in the Council's market soundings.

Such a merger will provide a much needed catalyst for wider Local Distribution Company consolidation.

As noted by the Auditor General in her 2015 Annual Report, based on information provided to the Office of the Auditor General (OAG) by Hydro One and the Ministry of Energy, the OAG's estimates that the purchase price is reasonable for Hydro One Brampton Networks, and would provide the province with a fair return on its investment.

Financial Advisor
-to be selected by Mike Manning, Scott Nelms & Steve Ashbourne (Blakes)
-Financial advisor is required by the Province to provide capital markets expertise
and advice with respect to plans developed by OPG and its advisors regarding structuring and marketing of the debentures to be issued under the " Ontario's Fair Hydro Plan".
-A commitment of adequate resources by your firm will be required immediately and it is currently expected that this project will be completed by September 2017, although it could extend longer.
-It is expected that the advice provided to Ontario will be based on your firm's assessment of what is best for the Province of Ontario and will be kept strictly confidential.
-The services provided will be compensated under Ontario's domestic medium term note (DMTN) program and will require no additional fees.

Suggest firms come in to make a presentation (half hour time limit) with selection based on scoring criteria (to be developed).

For example, scoring criteria could include: i) utility market experience and expertise; ii) evaluation of resources to be applied to the project;

Scott,
As discussed yesterday, I attach a Non-Disclosure Agreement relating to the Fair Hydro Plan and GA Deferral Financing. I hope this is helpful. It is a form which TD has used in the past and we are happy to execute it. Please let me know if you have any questions.
Have a great long weekend.

NON-DISCLOSURE AGREEMENT

This Non-Disclosure Agreement (the "Agreement") is entered into, and effective from, the ____ day of _____, 20___ by and between The Province of Ontario (the "Province") and TD Securities Inc. ("**TD**"), an Ontario Corporation.

WHEREAS the Province and TD (collectively referred to as the "**Parties**" and each individually as a "**Party**") wish to discuss the Fair Hydro Plan and the associated financings (the "**Transactions**") and wish to clarify the manner in which any Confidential Information of the Province (as hereinafter defined) disclosed in the course of such discussions is to be treated by TD.

NOW THEREFORE, in consideration of the premises and mutual obligations contained herein and for other good and valuable consideration (the receipt and sufficiency of which are hereby acknowledged), the Parties hereby agree as follows:

1. ***Definition of Confidential Information.*** For the purposes of this Agreement, the term "**Confidential Information**" means any information, knowledge, know-how, data, reports, notes, analyses, studies, interpretations, forecasts, audit reports, customer information, works, computer programs, technology, intellectual property, processes, systems, methodologies, ideas, innovations, business information, compilations, lists and other records concerning the business, financial, commercial, trade, and administrative affairs of the Province which, after the date hereof, may become known to TD, whether the form or manifestation of such Confidential Information is oral, written, electronic, digital, graphic, or any other tangible or intangible form whatsoever.

2. ***Protection and Non-Disclosure of Confidential Information.*** TD covenants and agrees that it shall protect the Confidential Information from harm, loss, theft and unauthorized access and that, except as provided herein, it shall not disclose any Confidential Information to any person or use the Confidential Information for any purpose except to the limited extent necessary to assist the Company in evaluating, negotiating and implementing the Transactions. Without limiting the generality of the foregoing, TD shall use at least the same degree of care, but no less than reasonable care, to avoid unauthorized disclosure or use of the Confidential Information as it employs in respect of its own Confidential Information of like importance. Without the prior consent of the other Party and except as otherwise provided herein, neither Party will, and each Party will direct its respective Representatives not to, disclose to any other person: (i) the existence and content of this Agreement; and (ii) the fact that discussions are taking place between the Parties concerning the Transactions.

3. ***Disclosure to Representatives.*** Notwithstanding section 2, TD may disclose the Confidential Information to those of its and its parent's directors, officers, employees, agents, contractors, consultants and legal, financial and other advisors (collectively, "**Representatives**") who need to know the Confidential Information for the purposes of assisting the Company in evaluating, negotiating and implementing the Transactions, provided that such Representatives are advised of the confidential nature of the Confidential Information. TD shall be responsible for any violation of this Agreement by its Representatives.

4. ***Exceptions to Non-Disclosure.*** Notwithstanding any other provisions of this Agreement, the obligations of TD under section 2 of this Agreement shall not apply, or will cease to apply, as the case may be, to Confidential Information if and to the extent that: (i) it was previously known to or in the possession of TD or its Representatives prior to receipt from the

Province; (ii) it is independently developed by or on behalf of TD or its Representatives without reference to the Confidential Information; (iii) it is or becomes publicly available and/or generally known in the industry, other than through a breach of this Agreement; (iv) it is disclosed to TD or its Representatives by a source other than the Province, provided such source is not known by TD or its Representatives to be bound by any contractual, legal or fiduciary obligation of confidentiality to the Province with respect to the information; (v) it is or has been excluded, in writing, from the scope of this Agreement by the Province (but only to the extent of and subject to any terms set out in such written exclusion); or (vi) TD and/or any of its Representatives is required or requested by any court, administrative agency, governmental or regulatory (including self-regulatory) body, stock exchange or securities commission of competent jurisdiction or under any applicable legal process, law, rule, regulation, subpoena, order or decree (collectively, "**Law**") to disclose, reveal or surrender any of the Confidential Information or details regarding the Transactions.

5. ***Required Disclosure.*** With respect to section 4(vi) above, if TD and/or any of its Representatives is required or requested to disclose any of the Confidential Information, TD shall, and if applicable shall direct its Representatives to, if permitted by applicable Law, notify the Province in writing promptly so that the Province may seek, at its own expense, a protective order or other appropriate remedy. In the absence of a protective order or other appropriate remedy, TD agrees to, and if applicable agrees to direct its Representatives to, furnish only that portion of the Confidential Information which is legally required (in the opinion of TD's counsel) and to provide reasonable cooperation to the Province in its effort, at its own expense, to obtain assurance, from the person to whom disclosure must be made, that the Confidential Information will be treated in a manner consistent with section 2 of this Agreement. The prohibitions and obligations in this Agreement related to the disclosure of Confidential Information and details regarding the Transactions shall not apply to any disclosure or proposed disclosure to a regulator having authority over TD or its parent.

6. ***Return or Destruction of Confidential Information.*** The Confidential Information (including any changes, revisions, improvements or modifications thereto) shall remain the Province's property. Upon the request of the Province, TD shall, and shall direct its Representatives to, return or destroy (at TD's option) all of the Confidential Information and provide the Province with written certification of compliance with this section 6. Notwithstanding the foregoing, TD and its Representatives, as applicable, may retain copies of Confidential Information: (i) that TD or its Representatives are required to retain for regulatory, legal and compliance purposes; (ii) that are automatically retained as part of a computer back-up, recovery or similar archival or disaster recovery system; or (iii) that was provided to TD's or its parent's board of directors or any committee thereof.

7. ***Equitable Relief.*** TD acknowledges and agrees that any breach or non-performance by TD of its obligations and duties in connection with this Agreement may cause the Province immediate and irreparable harm for which damages may not be an adequate remedy. Accordingly, TD agrees that the Province may have the right, in addition to its other rights and remedies, to seek equitable relief for any violation of this Agreement.

8. ***No Warranty.*** TD acknowledges and agrees that all Confidential Information is provided on an "as is" basis without any representation, warranty or covenant, express or implied, as to the origin, authorship, usefulness, reliability, fitness for a particular purpose, merchantability, accuracy, timeliness or completeness of any of the Confidential Information.

9. ***No Other Relationships or Agreements.*** The Parties agree that this Agreement is for the purposes of protecting the Confidential Information only and creates no joint venture or partnership or any agency relationship between any of them. The Parties agree that this Agreement does not in any manner whatsoever obligate them to enter into any further agreements or transactions.

10. ***General.*** This Agreement is governed by the laws of the Province of Ontario without regard to its rules on conflicts of law. Neither Party may assign its rights or obligations under this Agreement. No modification or waiver of any provision of this Agreement shall be effective unless in writing and signed by the Party sought to be bound. The headings in this Agreement are for convenience of reference only, are not part of this Agreement, and do not affect its interpretation. This Agreement is the entire agreement between the Parties on non-disclosure of confidential information and supersedes all prior representations and agreements between the Parties on that subject. This Agreement shall expire one year from the date hereof.

To: Mike Manning; Ronald Kwan
Subject: OEFC equity infusions to OPG
Date: Wednesday, March 08, 2017 8:18:36 AM

Hi Mike, Ron,

OPG has asked to meet with the Province to talk about financing arrangements for the Fair Hydro Plan. Gadi suggested that you would be the appropriate points of contact for this stream of work. I know this is short notice, but wonder if you might have availability to start the conversation with OPG this afternoon. I am going to pull in Energy staff as well and will send around an invite once we find a time that works.

Thanks,

Scott

From:	Anthony Martinello
To:	Kim Marshall; Ronald Kwan; Michael Boll; Mike Manning; Ken Kandeepan; Victor Buza
Subject:	OFA-IESO, discussion re Fair Hydro
Date:	Sunday, April 16, 2017 11:55:16 AM

Below are the proposed agenda items for our meeting.

Agenda:

1.Draw Amounts

-IESO may need to fund a) Fair Hydro forecast variances (short term), and b) Fair Hydro amounts not purchased by the OPG SPV (long term);

-in order to minimize costs and maximize cash-flow flexibility (matching to OPG SPV buys) – any appetite to amending the current 28 day minimum for draws;

2.IESO's Fair Hydro role

-IESO's credit rating agencies (Moody's Aa2, and DBRS) will examine IESO's credit capacities/solvency – need to update IESO/OFA's credit facilities to remove material adverse effect clauses or similar clauses and acknowledge/agree IESO's role in the Fairy Hydro plan and commitment to advance funds under the credit facility if needed for the Fair Hydro cash-flows.

3.General

General comments regarding IESO's Fair Hydro needs vs. IESO regular ongoing needs (corporate and market)

Regards.

Canadian Debt Capital Markets

DCM Weekly Market Update

Monday, 19 September 2016

As anticipated, new issue volumes remained elevated in the first full-week of September with ~$3.4 billion priced across eight issuers. Supply was well-diversified across the curve and spanned the full ratings spectrum, including AAA-rated supply and two high-yield offerings. Highlighting the week, Sun Life priced a jumbo C$1 billion 12NC7 subordinated offering with RBC acting as joint-bookrunner. Industrial Alliance also priced a sub-debt offering, followed by Home Trust rounding out the financial supply in syndicated NHA MBS format. In non-financial corporates, Brookfield Asset Management priced a C$500 million long 10-year, with RBC acting as a joint bookrunner, while in the high yield space Iron Mountain and Canexus Corp. accessing the high-yield space, representing the third and fourth low-grade transactions in calendar 2016, both pricing 7NC3 offerings for C$360 million in aggregate. RBC acted as lead left bookrunner on the Iron Mountain offering. Adding to the diverse array of product, Mountain View and Plenary Infrastructure Calgary priced amortizing P3 transactions and Real-T accessed the securitization space. Despite more volatile tone in equities, credit tone remained firm with well oversubscribed orderbooks supporting the ability to upsize and price at the tight end of guidance. The marketing front also remained active, with RBC hosting fixed income targeted events for Wells Fargo and Synchrony Financial, and announcing events next week for Central1 and Daimler Lease ABS. Also of note, RBC will be hosting its annual Corporate and Energy Infrastructure conference in Toronto on Tuesday.

Secondary markets remained busy across sectors in two-way flow. Financials were particularly active with banks and insurance credit flows improving following recent primary supply. Similarly, Telus accessed the US market pricing a $600 million long 10-year with RBC acting as a joint-active bookrunner, supporting domestic liquidity in the sector. In sympathy with volatile equity markets and the recent deluge of supply, spreads have halted their three-week tightening streak in Canada and closed the week 2-5bps wider offsetting a decline in underlying yields.

The government primary market was extremely active this week, with six issues pricing for aggregate proceeds of ~C$7 billion. Early in the week the City of Toronto priced a C$200 million dual-tranche transaction, consisting of a C$100 million re-opening of their 10-year issue and a C$100 million re-opening of their 30-year issue. On Wednesday the Region of Waterloo completed a 1-20 year ~C$104 million serial issue which represented the second municipal issue this fall. On Thursday, Canada Housing Trust priced a 5-year C$5 billion issue, the Province of Ontario issued a C$750 million re-opening of their 10-year benchmark issue, and the Province of Saskatchewan issued a C$475 million re-opening of their 10-year issue, representing one of the busiest days of the

year. To close out the week, the Province of Quebec re-opened their December 2048 issue for C$500 million. In secondaries, provincial trading was active on the back of the new issues, with better buying in the long end pulling spreads ~0.5bps tighter on the week. CMB flows also remained active following this week's issue with better buying as spreads ended 0.5-2bps tighter.

EQUITY MARKET UPDATE

North American equity indices seesawed this week with commodities underperforming and speculation around the overnight rate contributing to renewed volatility. Economic data also underwhelmed investors with soft initial jobless claims and retail sales. The TSX fell 0.6% to 14,451, while the S&P500 and Dow Jones rose 0.5% and 0.2% to 2,139 and 18,124 respectively. In commodities, crude fell $2.85 to close at $43.03, while gold fell $17.48 to end the day at $1,310.35. In currencies, the Canadian dollar weakened by 1.25% to 1.3212USDCAD.

Index	Level		1 Week Δ
S&P/TSX	14,451	▼	0.6%

Fri, Sep 16 – REAL-T (AAA(sf) to BBB(L)(sf)- ~C$403.6 million multi-tranche securitization offering

Government

Tues, Sep 13 – City of Toronto (AA/Aa1/AA) – C$100 million 2.40% 24Jun26 (re-opening) at CAN 1.50% 1Jun26+116bps and a C$100 million 3.25% 24Jun46 (re-opening) at CAN 3.50% 1Dec45 + 143bps

Wed, Sep 14 – Regional Municipality of Waterloo (-/Aaa/-) – C$104.55 million 1-20 years serial offering at various spreads

Thur, Sep 15 – Canada Housing Trust (AAA/Aaa/AAA) – C$5 billion 1.15% 22Sep16 at CAN 0.75% 1Sep21+44.5bps

Thur, Sep 15 – Province of Saskatchewan (AA/Aaa/AA+) – C$475 million at CAN 1.50% 1Jun26 + 100bps

Thur, Sep 15 – Province of Ontario (AA(L)/Aa2/A+) – C$750 million at CAN 1.50% 1Jun26 + 86.5bps

Fri, Sep 16 – Province of Quebec (A(H)/Aa2/A+) – C$500 million at CAN 3.50% 1Dec45 + 104bps

NORTH AMERICAN RATES UPDATE

North American government yield curves steepened last week with Fed speak contributing to the volatility in anticipation of this Wednesday's FOMC rate decision. Before the Fed's "quiet period", Governor Lael Brainard's speech at the Chicago Council on Global Affairs dampened speculation of a rate hike. Globally, the Bank of England maintained its benchmark rate, but suggested there is a chance of another rate cut as they continue to assess the long-term effects of Brexit. In reaction to the central bank activity, US Treasuries closed 2bps lower in the short-end and finished up to 5bps higher in longs. In Canada, bonds sold off sharply with the curve ending unchanged in the 2-year and rising 5bps in the long-end. The market is suggesting only a 20% probability of a hike this week from the Fed and a 54% likelihood of a change by the December meeting.

SWAPS

The Canadian swaps market saw a continued trend of spread tightening this week, with spreads lower across the curve by 0.25 to 1 bps. Early in the week saw low liquidity in the market, with spreads volatile on the back of flow skewed towards better receiving. However, flow improved markedly later on in the week, with a number of market participants active after the CMB auction. BA/LIBOR spreads were mixed, with spreads moderately tightening to unchanged in the front end, and wider by 1.25 to 3.5 bps in the long end of the curve.

Canadian Debt Capital Markets

DCM Weekly Market Update

Monday, 3 October 2016

Issuance in the Canadian corporate primary market was modest for the second consecutive week, with only one transaction coming from Nissan Canada Financial Services pricing its inaugural Canadian offering. The transaction consisted of a C$500 million three-year offering, and consistent with recent new issues, it was met with strong demand which allowed it to price at the tight end of guidance with broad distribution and very low fills. The pause in primary market activity has allowed investors to digest recent supply after a record summer and active start to September. Activity should resume in October, with a healthy marketing calendar positioning issuers for near term market access. This week, RBC hosted deal-related marketing for Kingston Solar LP (project finance), Calgary Fuel Facilities Corporation Ltd, and Daimler via their securitization vehicle (MBARC). RBC also announced events next week for the University of Ottawa and GM Financial. Secondary trading was active last week with notable activity across sectors including bank deposit notes, auto-finance, oil and gas, CMT and energy/utilities. Two-way flows were evident across the curve in the absence of primary market supply. Despite favourable tone, spreads widened modestly on the week, with the exception being oil and gas credits who benefitted from the OPEC announcement of a new production ceiling, with elevated trading volumes and notable spread tightening across names in the sector.

The government primary market was active last week, with two issues pricing aggregate volume of C$530 million. The Municipal Finance Authority of British Columbia priced a C$130 million re-opening of its June 2026 issue and the Province of Nova Scotia priced an upsized C$400 million 10-year offering. This was Nova Scotia's first syndicated fixed rate bond since January 2015. Secondary provincial flows last week were healthy. Provincial spreads ended the week off highs but were wider overall by 0.5-1.5bps across the curve. Despite CMB volumes that were healthy through the week, spreads were relatively volatile. Better selling in the 5-year and 10-year pushed spreads 1.5-3bps wider, while the front end tightened 0.5-1bps.

EQUITY MARKET UPDATE

North American equity indices rose on the week with modestly positive economic data in both Canada and the US throughout the week including jobless claims, GDP, home sales and durable goods. Globally, OPEC also announced a tentative agreement to cut production to 32.5 million barrels per day, the first cut in eight years. The
subsequent rally in commodities, including oil which was up $3.76 to $48.24, led the TSX to outperform until a dip Friday afternoon, ending up 0.2% at 14,726. South of the border the S&P and

NASDAQ rose 0.2% and 0.1% respectively to 2,168 and 5,312. Also on the week, gold fell $21.69 to $1,315.87 and the loonie appreciated 0.34% against the U.S. Dollar to close at 1.3127USDCAD.

Index	Level		1 Week Δ
S&P/TSX	14,726	▲	0.2%
DJA	18,308	▲	0.3%
S&P 500	2,168	▲	0.2%

CANADIAN NEW ISSUES

Corporate

Thur, Sep 29 - Nissan Canada Financial Services (A(L)/A3/-) – C$500 million 1.584% 3-year senior unsecured notes at GoC + 107bps

Government

Wed, Sep 28 - Municipal Finance Authority of British Columbia (-/Aaa/AAA) – C$130 million 2.50% 10-year re-opening at GoC +105bps

Thur, Sep 29 - Province of Nova Scotia (A(H)/Aa2/A+) – C$400 million 2.10% 1-Jun-27 new issue at CAN 1.00% 1-Jun-27 +102bps

NORTH AMERICAN RATES UPDATE

North American bond yields declined on the week with investors seeking safety on global volatility concerns. Namely, the Bank of England commented on additional easing that may be required in the aftermath of Brexit. There were also a number of Fed speakers, particularly mid-week, including Janet Yellen, although little new guidance on timing of the next rate hike surfaced. Futures markets continue to point to a rate hike in the US before the end of the year at the December meeting (60% probability weighting). In the US, rates rose 1bp in the short end and term rates declined 1-3bps in a flattening bias. In Canada the short end was unchanged, while term rates declined 1-5bps, with a flattening bias out to the 10-year.

SWAPS

The Canadian swap market displayed notable volatility over the week as US presidential debates, weakness from the European banking sector and strength in oil prices contributed to uneven sentiment. Given the rally in underlying rates as a result of the flight-to-quality trade, the market

was dominated by better paying interest from bank treasuries and real money accounts as swap spreads widened 1.50 bps – 3.50 bps with the greatest movement in the 10-year part of the curve while the 30-year benchmark tightened 0.25 bps. Of particular note last week, the 10-year swap rate reached 1.192% which represents an all-time low for that tenor. BA/LIBOR basis tightened 0.75 bps - 1.25 bps across the curve on the back of cross border activity from domestic financial institutions.

From: Mike Manning
To: Gadi Mayman
Cc: Bonnie Lemcke
Subject: OPG discussions with ratings agencies
Date: Wednesday, March 01, 2017 2:47:49 PM

Hi Gadi:
I got a call from John Lee on them having discussions with the ratings agencies after the GA Smoothing announcement. They would like to do some coordination with us which probably makes sense. I also talked to Bonnie about the Province's plans. My understanding is that there will be a media meeting at 8:00 tomorrow and a Media Press Conference at 10:00. In addition, there will be a DBRS conference call/meeting at 11:00.

I don't think we need to give OPG guidance on the timing of their discussions with the ratings agencies, except for waiting a period of time until after the Media Press Conference at 10:00. Let me know if you would like to give them particular guidance on timing or coordinating with the Province beyond that and I will let John know.

Mike

MARKET COMMENTARY

The Canadian corporate credit market was active last week, with three issuers tapping the market for a combined $1.8 billion. CIBC and SmartREIT each came to market with 5 year offerings, raising $1.25 billion and $150 million, respectively. H2O Power also printed $400 million 12.7 year secured notes. The Fed hiked 25 bps on Wednesday as expected, but the market viewed the statement as dovish as no additional hikes were added to the FOMC's "dot plot" forecast (1-2 additional hikes still forecasted for this year). Market tone remained stable with the S&P and TSX trading slightly higher WoW. The Dutch election, along with Article 50 Brexit legislation passing in the U.K. had little impact on markets. Oil prices also stabilized after dropping ~10% the week prior, finishing the week roughly unchanged. Canadian corporate spreads were generally tighter 1-4 bps on the week, in line with U.S. spreads which were ~4 bps better. At week end, YTD new issue volumes totaled $24.9 billion, 17% ahead of 2016's pace.

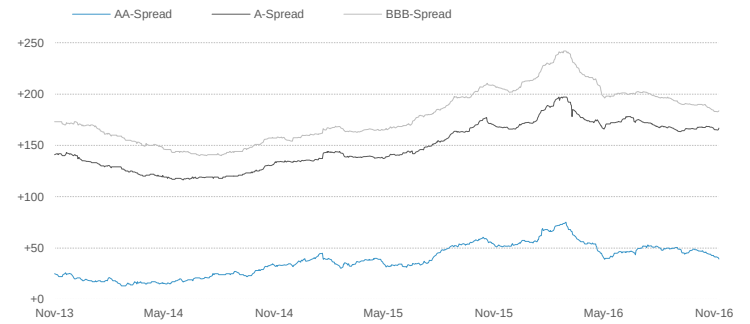
DEX UNIVERSE SPREADS



MARKET COMMENTARY

Global markets were dominated by the U.S. Presidential election last week, with the initial market sell-off reversing by week's end. Both the GoC and U.S. Treasury curves steepened significantly, with the 10 year Canada benchmark climbing in excess of 30 bps. Despite the election-induced volatility, three new issues came to market in Canada. Veresen printed $350 million 5 year notes at +270, while CHIP Mortgage Trust priced $175 million 25 year secured notes. Laurentian Bank also issued its second NHA MBS offering, following its inaugural issue earlier this year. In the secondary market, activity was moderate with flows heavily skewed towards client buying. Canadian spreads finished the week unchanged to 1 bp wider, while in the U.S., IG27 was 1 bp tighter WoW. At week end, YTD new issue volumes reached $95.1 billion, up 2% YoY.

This report has been prepared by Scotiabank Economics as a resource for the clients of Scotiabank. Opinions, estimates and projections contained herein are our own as of the date hereof and are subject to change without notice. The information and opinions contained herein have been compiled or arrived at from sources believed reliable but no representation or warranty, express or implied, is made as to their accuracy or completeness. Neither Scotiabank nor any of its officers, directors, partners, employees or affiliates accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or its contents.

These reports are provided to you for informational purposes only. This report is not, and is not constructed as, an offer to sell or solicitation of any offer to buy any financial instrument, nor shall this report be construed as an opinion as to whether you should enter into any swap or trading strategy involving a swap or any other transaction. The information contained in this report is not intended to be, and does not constitute, a recommendation of a swap or trading strategy involving a swap within the meaning of U.S. Commodity Futures Trading Commission Regulation 23.434 and Appendix A thereto. This material is not intended to be individually tailored to your needs or characteristics and should not be viewed as a "call to action" or suggestion that you enter into a swap or trading strategy involving a swap or any other transaction. Scotiabank may engage in transactions in a manner inconsistent with the views discussed this report and may have positions, or be in the process of acquiring or disposing of positions, referred to in this report.

Scotiabank, its affiliates and any of their respective officers, directors and employees may from time to time take positions in currencies, act as managers, co-managers or underwriters of a public offering or act as principals or agents, deal in, own or act as market makers or advisors, brokers or commercial and/or investment bankers in relation to securities or related derivatives. As a result of these actions, Scotiabank may receive remuneration. All Scotiabank products and services are subject to the terms of applicable agreements and local regulations. Officers, directors and employees of Scotiabank and its affiliates may serve as directors of corporations.

Any securities discussed in this report may not be suitable for all investors. Scotiabank recommends that investors independently evaluate any issuer and security discussed in this report, and consult with any advisors they deem necessary prior to making any investment.

This report and all information, opinions and conclusions contained in it are protected by copyright. This information may not be reproduced without the prior express written consent of Scotiabank.

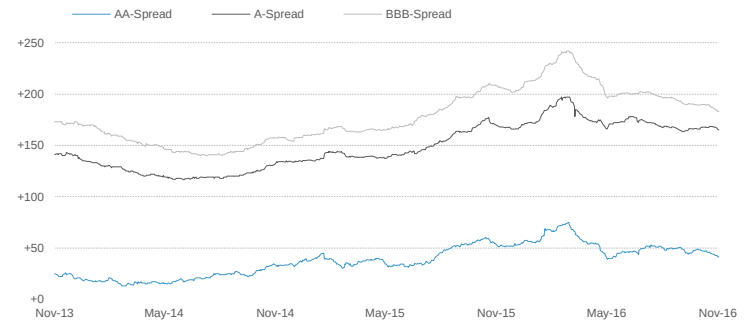
DEX UNIVERSE SPREADS



MARKET COMMENTARY

The Canadian corporate credit market was steady last week, with five issuers combining for $1.6 billion of new supply. In the Financial space, BMO printed a $400 million 18-month FRN while OMERS issued $230 million 5.5 year notes. From the real estate sector, H&R REIT priced $200 million 5.5 year notes. 407 International also came to market, printing $350 million 10.5 year notes. Markets were focused on the FOMC meeting along with U.S. Non-Farm Payrolls. The Fed held rates unchanged and provided few clues as to its December hike decision. Payrolls were a slight miss versus consensus forecasts, but Canadian jobs surprised to the upside (albeit solely due to a surge in part-time jobs). In secondary markets, two-way flows remained steady, with Canadian corporate spreads ultimately finishing the week ~3 bps wider. At week end, YTD new issue volumes reached $94.2 billion, just ahead of 2015's pace.

MARKET COMMENTARY

The Canadian corporate credit market was quiet last week, with one new issue coming to market. BMO was the lone issuer, pricing $2 billion 5 year Deposit Notes at +94. Global markets remained stable for the better part of the week, with mixed Q3 earnings commanding investor focus. Risk assets were also impacted Friday by news of the FBI reopening the Hillary Clinton email investigation. In secondary markets, trading activity continued to be robust, and was skewed toward client buying. Canadian spreads finished the week mixed, with some higher-beta BBB names outperforming. This week, eyes will be on the FOMC Wednesday for potential clues as to a potential December rate hike. YTD new issue volumes finished the week at $92.7 billion, just ahead of 2015's pace.

This report has been prepared by Scotiabank Economics as a resource for the clients of Scotiabank. Opinions, estimates and projections contained herein are our own as of the date hereof and are subject to change without notice. The information and opinions contained herein have been compiled or arrived at from sources believed reliable but no representation or warranty, express or implied, is made as to their accuracy or completeness. Neither Scotiabank nor any of its officers, directors, partners, employees or affiliates accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or its contents.

These reports are provided to you for informational purposes only. This report is not, and is not constructed as, an offer to sell or solicitation of any offer to buy any financial instrument, nor shall this report be construed as an opinion as to whether you should enter into any swap or trading strategy involving a swap or any other transaction. The information contained in this report is not intended to be, and does not constitute, a recommendation of a swap or trading strategy involving a swap within the meaning of U.S. Commodity Futures Trading Commission Regulation 23.434 and Appendix A thereto. This material is not intended to be individually tailored to your needs or characteristics and should not be viewed as a "call to action" or suggestion that you enter into a swap or trading strategy involving a swap or any other transaction. Scotiabank may engage in transactions in a manner inconsistent with the views discussed this report and may have positions, or be in the process of acquiring or disposing of positions, referred to in this report.

Scotiabank, its affiliates and any of their respective officers, directors and employees may from time to time take positions in currencies, act as managers, co-managers or underwriters of a public offering or act as principals or agents, deal in, own or act as market makers or advisors, brokers or commercial and/or investment bankers in relation to securities or related derivatives. As a result of these actions, Scotiabank may receive remuneration. All Scotiabank products and services are subject to the terms of applicable agreements and local regulations. Officers, directors and employees of Scotiabank and its affiliates may serve as directors of corporations.

Any securities discussed in this report may not be suitable for all investors. Scotiabank recommends that investors independently evaluate any issuer and security discussed in this report, and consult with any advisors they deem necessary prior to making any investment.

This report and all information, opinions and conclusions contained in it are protected by copyright. This information may not be reproduced without the prior express written consent of Scotiabank.

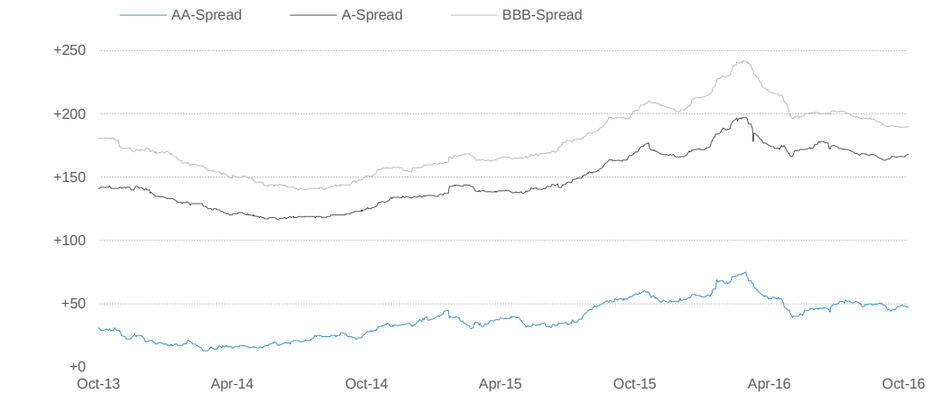
DEX UNIVERSE SPREADS



MARKET COMMENTARY

Global markets lacked a clear direction for most of last week with sentiment focused on Friday's U.S. non-farm payrolls release. Payrolls missed slightly, but were partially offset by upward revisions to August figures. Meanwhile, Canadian jobs data surprised to the upside, with the economy adding 67k jobs in September. The Canadian corporate credit market saw $2.2 billion priced, including a BNS 1 year FRN which came at 1M CDOR +19. Gaz Metro printed $125 million 30s at +162, and Kingston Solar LP completed a $633 million amortizer. In secondary trading, flows were relatively active, with subdued primary activity leading to client buying. Canadian corporate spreads finished the week a few bps wider, underperforming the U.S., where IG27 closed ~3bps tighter. At week end, YTD new issue volumes reached $88 billion, down 1% YoY.

MARKET COMMENTARY

Heightened volatility characterized global financial markets last week. Concerns over the European banking sector commanded investor focus and put equities in the red to start the week. However, stocks were lifted along with oil later in the week as OPEC agreed to its first production cut in 8 years. On Friday, Canadian GDP for July came in above expectations, growing 0.5% MoM. On the primary market front, Canadian bond markets were quiet, with just one new issue coming to market. Nissan Canada Financial Services printed $500 million 3 year notes, marking its inaugural deal in the Canadian market. At month end, September issuance totaled $8.7 billion, and YTD volumes continue to closely track 2015's pace. In secondary markets, flows were modest, with a slight skew towards client selling. Both Canadian and U.S. corporate spreads finished the week a few bps wider, on average.

MARKET COMMENTARY

Primary activity in the Canadian corporate bond market was light last week as central bank activity commanded investor focus. The Fed delayed raising rates for the sixth time running, in line with expectations. Meanwhile, the Bank of Japan kept its benchmark rate unchanged and adjusted its asset purchase program to target lower government bond yields. In terms of primary bond market activity, two new issues priced in the Canadian market. First Capital Realty re-opened its May 2026 maturity to raise $150 million. Also, high yield issuer Air Canada printed $200 million 7 year senior secured notes. Secondary markets were active, with solid two-way flows seen (skewed towards better buying). Canadian corporate spreads finished the week 2-4 bps tighter, underperforming the U.S., where IG26 was 5 bps better on the week.

This report has been prepared by Scotiabank Economics as a resource for the clients of Scotiabank. Opinions, estimates and projections contained herein are our own as of the date hereof and are subject to change without notice. The information and opinions contained herein have been compiled or arrived at from sources believed reliable but no representation or warranty, express or implied, is made as to their accuracy or completeness. Neither Scotiabank nor any of its officers, directors, partners, employees or affiliates accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or its contents.

These reports are provided to you for informational purposes only. This report is not, and is not constructed as, an offer to sell or solicitation of any offer to buy any financial instrument, nor shall this report be construed as an opinion as to whether you should enter into any swap or trading strategy involving a swap or any other transaction. The information contained in this report is not intended to be, and does not constitute, a recommendation of a swap or trading strategy involving a swap within the meaning of U.S. Commodity Futures Trading Commission Regulation 23.434 and Appendix A thereto. This material is not intended to be individually tailored to your needs or characteristics and should not be viewed as a "call to action" or suggestion that you enter into a swap or trading strategy involving a swap or any other transaction. Scotiabank may engage in transactions in a manner inconsistent with the views discussed this report and may have positions, or be in the process of acquiring or disposing of positions, referred to in this report.

Scotiabank, its affiliates and any of their respective officers, directors and employees may from time to time take positions in currencies, act as managers, co-managers or underwriters of a public offering or act as principals or agents, deal in, own or act as market makers or advisors, brokers or commercial and/or investment bankers in relation to securities or related derivatives. As a result of these actions, Scotiabank may receive remuneration. All Scotiabank products and services are subject to the terms of applicable agreements and local regulations. Officers, directors and employees of Scotiabank and its affiliates may serve as directors of corporations.

Any securities discussed in this report may not be suitable for all investors. Scotiabank recommends that investors independently evaluate any issuer and security discussed in this report, and consult with any advisors they deem necessary prior to making any investment.

This report and all information, opinions and conclusions contained in it are protected by copyright. This information may not be reproduced without the prior express written consent of Scotiabank.

™ Trademark of The Bank of Nova Scotia. Used under license, where applicable.

Scotiabank, together with "Global Banking and Markets", is a marketing name for the global corporate and investment banking and capital markets businesses of The Bank of Nova Scotia and certain of its affiliates in the countries where they operate, including, Scotiabanc Inc.; Citadel Hill Advisors L.L.C.; The Bank of Nova Scotia Trust Company of New York; Scotiabank Europe plc; Scotiabank (Ireland) Limited; Scotiabank Inverlat S.A., Institución de Banca Múltiple, Scotia Inverlat Casa de Bolsa S.A. de C.V., Scotia Inverlat Derivados S.A. de C.V. – all members of the Scotiabank group and authorized users of the Scotiabank mark. DEX UNIVERSE SPREADS

MARKET COMMENTARY

The Canadian corporate credit market saw continued activity last week, with $3.4 billion pricing across nine transactions. Brookfield Asset Management printed a highly successful $500 million 10.5 year transaction at GoC +253bps. Meanwhile in the insurance space, Sun Life Financial and Industrial Alliance each came to market with 7+5 year sub debt deals, raising a combined total of $1.4 billion. The high yield market saw Iron Mountain Canada and Canexus come to market, each with 7NC3 transactions that totaled $360 million. In secondary markets, Canadian corporate spreads finished a few bps wider, roughly in line with U.S. spreads, with IG26 closing ~3bps wider on the week. At week end, YTD new issue volume stood at $85 billion, 5% ahead of 2015's pace.

MARKET COMMENTARY

Momentum returned to the Canadian corporate credit market this week, with $4.25bn pricing across 6 transactions. At week end, YTD new issue volume stood at $82bn, 9% ahead of 2015's pace. Three energy issuers accessed the market. Suncor Energy raised $1bn across two tranches. Inter Pipeline Ltd priced $350m 7 year notes. FortisAlberta Inc. priced $150m 30 year notes. The financial space also saw three new issues. Royal Bank of Canada issued a $1.75bn 5 year deposit note. Canadian Western Bank printed a $250m 5 year deposit note. Merrill Lynch Canada Inc. completed a $750m jumbo NHA MBS transaction. Canadian corporate spreads closed unchanged to slightly tighter on the week, outperforming CDX which was 4 bps wider.

MARKET COMMENTARY

Primary activity in the Canadian corporate credit market was moderate last week with $541 million pricing across three transactions. Crombie REIT kicked off the week, reopening its 3.962% 2021 notes for $75 million at +245. Following recent offerings by TMT peers, TELUS completed a cross-border offering, issuing C$325 million 31 year notes in the domestic market, and US$500 million 10 year notes in the U.S. In the project finance space, Plenary Health Phase 1C issued $141 million for a CAMH redevelopment project. Canadian banks exited blackout, posting strong earnings, which led to supply south of the border. BNS and RBC each tapped the U.S. market post-earnings, raising a combined US$ 4.1 billion. Global markets saw a surge in momentum following President Trump's address Tuesday evening, sending a strong bid into risk assets. Canadian corporate spreads tightened 2 bps over the week, underperforming U.S. spreads which were 3 bps better WoW. The market-implied probability of an FOMC rate hike at the March 15 meeting increased to ~92%. At week end, YTD new issue volumes totaled $16.9 billion, 5% ahead of 2016's pace.

This report has been prepared by Scotiabank Economics as a resource for the clients of Scotiabank. Opinions, estimates and projections contained herein are our own as of the date hereof and are subject to change without notice. The information and opinions contained herein have been compiled or arrived at from sources believed reliable but no representation or warranty, express or implied, is made as to their accuracy or completeness. Neither Scotiabank nor any of its officers, directors, partners, employees or affiliates accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or its contents.

These reports are provided to you for informational purposes only. This report is not, and is not constructed as, an offer to sell or solicitation of any offer to buy any financial instrument, nor shall this report be construed as an opinion as to whether you should enter into any swap or trading strategy involving a swap or any other transaction. The information contained in this report is not intended to be, and does not constitute, a recommendation of a swap or trading strategy involving a swap within the meaning of U.S. Commodity Futures Trading Commission Regulation 23.434 and Appendix A thereto. This material is not intended to be individually tailored to your needs or characteristics and should not be viewed as a "call to action" or suggestion that you enter into a swap or trading strategy involving a swap or any other transaction. Scotiabank may engage in transactions in a manner inconsistent with the views discussed this report and may have positions, or be in the process of acquiring or disposing of positions, referred to in this report.

Scotiabank, its affiliates and any of their respective officers, directors and employees may from time to time take positions in currencies, act as managers, co-managers or underwriters of a public offering or act as principals or agents, deal in, own or act as market makers or advisors, brokers or commercial and/or investment bankers in relation to securities or related derivatives. As a result of these actions, Scotiabank may receive remuneration. All Scotiabank products and services are subject to the terms of applicable agreements and local regulations. Officers, directors and employees of Scotiabank and its affiliates may serve as directors of corporations.

Any securities discussed in this report may not be suitable for all investors. Scotiabank recommends that investors independently evaluate any issuer and security discussed in this report, and consult with any advisors they deem necessary prior to making any investment.

This report and all information, opinions and conclusions contained in it are protected by copyright. This information may not be reproduced without the prior express written consent of Scotiabank.

™ Trademark of The Bank of Nova Scotia. Used under license, where applicable.

Scotiabank, together with "Global Banking and Markets", is a marketing name for the global corporate and investment banking and capital markets businesses of The Bank of Nova Scotia and certain of its affiliates in the countries where they operate, including, Scotiabanc Inc.; Citadel Hill Advisors L.L.C.; The Bank of Nova Scotia Trust Company of New York; Scotiabank Europe plc; Scotiabank (Ireland) Limited; Scotiabank Inverlat S.A., Institución de Banca Múltiple, Scotia Inverlat Casa de Bolsa S.A. de C.V., Scotia Inverlat Derivados S.A. de C.V. – all members of the Scotiabank group and authorized users of the Scotiabank mark. The Bank of Nova Scotia is incorporated in Canada with limited liability and is authorised and regulated by the Office of the Superintendent of Financial Institutions Canada. The Bank of Nova Scotia is authorised by the UK Prudential Regulation Authority and is subject to regulation by the UK Financial Conduct Authority and limited regulation by the UK Prudential Regulation Authority. Details about the extent of The Bank of Nova Scotia's regulation by the UK Prudential Regulation Authority are available from us on request. DEX UNIVERSE SPREADS

MARKET COMMENTARY

The Canadian corporate credit market saw an influx of supply last week as six transactions priced for a combined $3.5 billion. Bell Canada issued $1.5 billion across 7 and 30 year tranches in the largest corporate transaction of 2017 thus far. Toyota Credit Canada and Metro also tapped the market for a combined $1 billion. The high yield market's first activity of the year had Superior Plus and Crew Energy price 7NC3 transactions for a combined $550 million. Market tone remained stable over the week, with FOMC minutes having minimal impact. Similarly, the Bank of Canada meeting this week is expected to be a non-event, with markets pricing in virtually a 100% probability of the Bank holding rates unchanged. Domestic banks are set to continue reporting Q1 results this week, with BNS and BMO reporting Tuesday, followed by NBF on Wednesday and TD on Thursday. Canadian corporate spreads closed relatively unchanged on the week, while in the U.S., IG27 finished 1bp tighter. At week end, YTD new issue volumes totaled $16.3 billion, 33% ahead of last year's pace.

MARKET COMMENTARY

Activity in the Canadian corporate credit market picked up last week, with four transactions pricing for a combined $1.85 billion. Shaw Communications started off the week by issuing $300 million of 10 year notes, representing the first issuance in the TMT space in 2017. Ford Credit Canada priced $750 million in 5 year notes at CRV +148. Enercare Solutions issued $500 million across two tranches (5 and 7 year). Brookfield Infrastructure Finance ULC finished off the week with a 7 year $300 million MTN . All transactions witnessed strong investor demand, evidence by large order books, low single digit fill percentages, and zero to negative new issue concessions. Global market tone remained robust. Both the S&P 500 and the TSX ended the week slightly higher. Canadian corporate spreads finished the week 2 bps better, outperforming the U.S. , where the IG27 was out by 1bp. At week end, YTD new issue volumes totaled $12.9 billion, 44% ahead of 2016's pace.

MARKET COMMENTARY

Activity in the Canadian corporate credit market was subdued last week, with two transactions pricing for a combined $1.25 billion. Bruce Power came to market with $750 million across 7 and 12 year tranches of Senior Unsecured Notes. BMW printed $500 million in ABS notes over three tranches. Both transactions were well-received and highlighted that investors remain receptive to new supply. Global market tone remained stable, while Canada outperformed. Canadian jobs data released Friday showed the economy added 48.3k jobs in January, well exceeding expectations. Canadian corporate spreads finished the week 2 bps better as the TSX closed up ~ 1.5% WoW. U.S. markets traded sideways despite political headlines, with the S&P500 finishing unchanged and IG27 out 1 bp. Secondary markets in Canada saw active flows, with client activity skewed towards better buying. At week end, YTD new issue volumes totaled $11 billion, 39% ahead of 2016's pace.

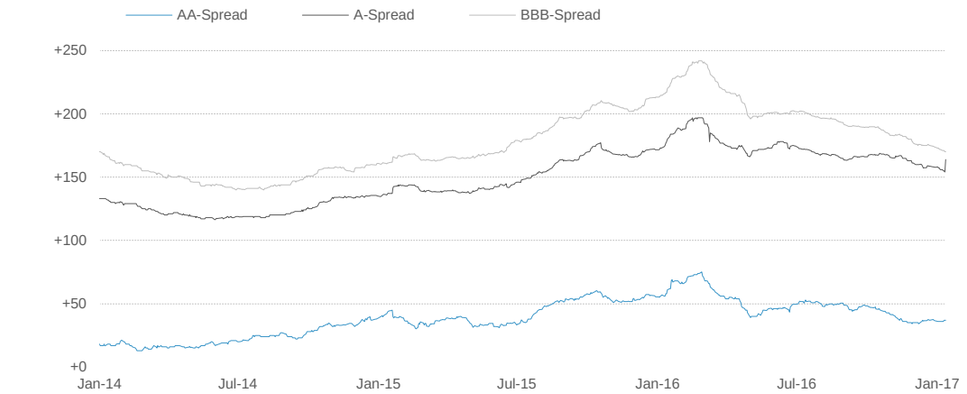
DEX UNIVERSE SPREADS



MARKET COMMENTARY

The Canadian corporate credit market saw the return of primary activity following the holidays, with $4.1 billion pricing across 7 transactions last week. BNS re-opened its December 2026 notes for an additional $500 million, while CIBC issued a $300 million FRN. The financial sector also saw CCDJ print $1 billion 5 year notes while BAML came to market with a $1.1 billion NHA MBS transaction. Non-financial issuance came from RioCan REIT and Algonquin Power, who each raised $300 million. Global market tone remained solid, with equity indices in Canada and the U.S. unchanged on the week. The Canadian dollar continued to strengthen, with USDCAD finishing the week at ~1.31. Canadian spreads finished the week marginally tighter, outperforming the U.S. where IG2 was 1 bp wider. At week end, YTD new issue volumes totaled $4.1 billion.

This report has been prepared by Scotiabank Economics as a resource for the clients of Scotiabank. Opinions, estimates and projections contained herein are our own as of the date hereof and are subject to change without notice. The information and opinions contained herein have been compiled or arrived at from sources believed reliable but no representation or warranty, express or implied, is made as to their accuracy or completeness. Neither Scotiabank nor any of its officers, directors, partners, employees or affiliates accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or its contents.

These reports are provided to you for informational purposes only. This report is not, and is not constructed as, an offer to sell or solicitation of any offer to buy any financial instrument, nor shall this report be construed as an opinion as to whether you should enter into any swap or trading strategy involving a swap or any other transaction. The information contained in this report is not intended to be, and does not constitute, a recommendation of a swap or trading strategy involving a swap within the meaning of U.S. Commodity Futures Trading Commission Regulation 23.434 and Appendix A thereto. This material is not intended to be individually tailored to your needs or characteristics and should not be viewed as a "call to action" or suggestion that you enter into a swap or trading strategy involving a swap or any other transaction. Scotiabank may engage in transactions in a manner inconsistent with the views discussed this report and may have positions, or be in the process of acquiring or disposing of positions, referred to in this report.

Scotiabank, its affiliates and any of their respective officers, directors and employees may from time to time take positions in currencies, act as managers, co-managers or underwriters of a public offering or act as principals or agents, deal in, own or act as market makers or advisors, brokers or commercial and/or investment bankers in relation to securities or related derivatives. As a result of these actions, Scotiabank may receive remuneration. All Scotiabank products and services are subject to the terms of applicable agreements and local regulations. Officers, directors and employees of Scotiabank and its affiliates may serve as directors of corporations.

Any securities discussed in this report may not be suitable for all investors. Scotiabank recommends that investors independently evaluate any issuer and security discussed in this report, and consult with any advisors they deem necessary prior to making any investment.

This report and all information, opinions and conclusions contained in it are protected by copyright. This information may not be reproduced without the prior express written consent of Scotiabank.

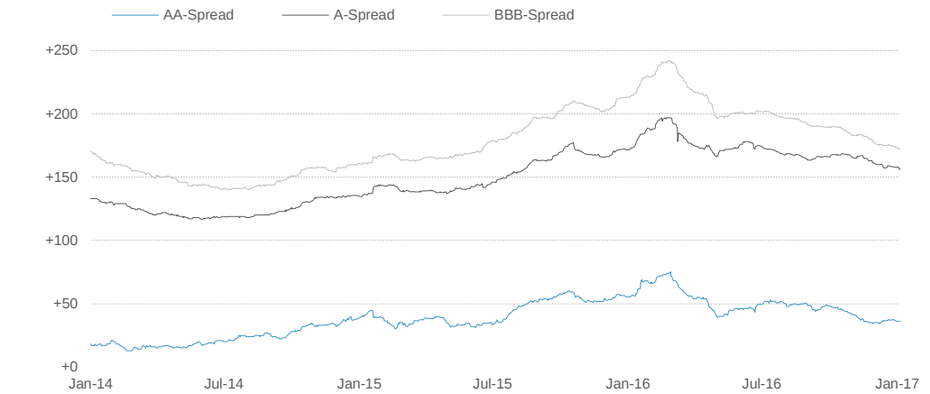
DEX UNIVERSE SPREADS



MARKET COMMENTARY

Unlike the U.S. market, corporate supply in Canada was muted last week with no new issues as the school break continued. However, with the holidays over and kids back in school, new issue activity could very well return to the market this week. Employment data drove rates markets in both Canada and the U.S. Friday, with a large upward revision in U.S. nonfarm payrolls leading to a sell-off in U.S. Treasuries (+9bps). Meanwhile, Canada saw impressive job growth of 53.7k in December, driving GoC yields 9bps higher on the day. In general, corporate spreads closed generally unchanged, with non-financial names outperforming.

This report has been prepared by Scotiabank Economics as a resource for the clients of Scotiabank. Opinions, estimates and projections contained herein are our own as of the date hereof and are subject to change without notice. The information and opinions contained herein have been compiled or arrived at from sources believed reliable but no representation or warranty, express or implied, is made as to their accuracy or completeness. Neither Scotiabank nor any of its officers, directors, partners, employees or affiliates accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or its contents.

These reports are provided to you for informational purposes only. This report is not, and is not constructed as, an offer to sell or solicitation of any offer to buy any financial instrument, nor shall this report be construed as an opinion as to whether you should enter into any swap or trading strategy involving a swap or any other transaction. The information contained in this report is not intended to be, and does not constitute, a recommendation of a swap or trading strategy involving a swap within the meaning of U.S. Commodity Futures Trading Commission Regulation 23.434 and Appendix A thereto. This material is not intended to be individually tailored to your needs or characteristics and should not be viewed as a "call to action" or suggestion that you enter into a swap or trading strategy involving a swap or any other transaction. Scotiabank may engage in transactions in a manner inconsistent with the views discussed this report and may have positions, or be in the process of acquiring or disposing of positions, referred to in this report.

Scotiabank, its affiliates and any of their respective officers, directors and employees may from time to time take positions in currencies, act as managers, co-managers or underwriters of a public offering or act as principals or agents, deal in, own or act as market makers or advisors, brokers or commercial and/or investment bankers in relation to securities or related derivatives. As a result of these actions, Scotiabank may receive remuneration. All Scotiabank products and services are subject to the terms of applicable agreements and local regulations. Officers, directors and employees of Scotiabank and its affiliates may serve as directors of corporations.

Any securities discussed in this report may not be suitable for all investors. Scotiabank recommends that investors independently evaluate any issuer and security discussed in this report, and consult with any advisors they deem necessary prior to making any investment.

This report and all information, opinions and conclusions contained in it are protected by copyright. This information may not be reproduced without the prior express written consent of Scotiabank.

MARKET COMMENTARY

The Canadian corporate credit market was active last week, with $5.9 billion priced across 4 transactions. BNS printed the largest Canadian bank transaction done to date, a $3 billion dual-tranche offering. RBC also issued $1.5 billion deposit notes following its earnings release. AltaLink LP issued $450 million 30 year notes. HSBC completed a 7 year $1 billion Maple transaction. Global markets carried positive momentum throughout the week. WTI finished the week up 9%, hitting a YTD high Friday. Canadian corporate spreads were 5 bps better on the week, while equity indices were relatively unchanged. At week end, YTD new issue volumes reached $105.4 billion, 6% ahead of 2015's pace.

MARKET COMMENTARY

Markets continued with risk-on sentiment in the weeks following the U.S. election. The S&P/TSX Composite Index hit a YTD high mid-week, gaining 3% since the election. The Dow Jones Industrial Avg. Index finished the week at an all-time high (19,152pts), up 4.4% since the election. Canadian corporate credit activity was light last week, with one issuer accessing the market. CI Financial issued $200 million 5 year notes at CRV+181 bps. In the secondary market, flows seen last week were biased to client buying. Canadian spreads finished the week 2-3 bps tighter, in line with the U.S. where IG27 was ~3-3.5 bps tighter. At week end, YTD new issue volumes reached $99.5 billion, 3% ahead of 2015's pace.

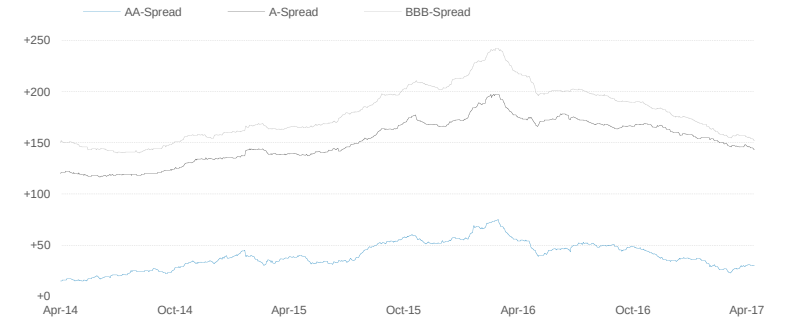
DEX UNIVERSE SPREADS



MARKET COMMENTARY

The Canadian corporate credit market was busy last week, with seven issuers tapping the market for $1.7 billion. Canadian REIT followed the two deals in the real estate space priced the week prior, printing $125 million 5.75 year notes at +174. Inter Pipeline issued $500 million 7 year notes, while Brookfield Infrastructure re-opened its Feb 24's for $400 million. RBC raised ~$450 million across MBS and FRN product while Equitable Bank brought a $150 million 2 year FRN. As expected, the Bank of Canada held rates constant at its meeting on Wednesday, with the market only pricing in a 28% probability of a rate hike by year end. Oil continued to recover, hovering near $53 throughout the week, with prices rising by ~12% over the last three weeks. Canadian corporate spreads ended the week 0-2 bps better, outperforming IG28 which ended the week 2 bps wider. At week end, YTD new issue volumes totaled $32.3 billion, 27% ahead of 2016's pace.

Hi Trevor:

I talked to Stephen and his view is that we shouldn't overstate the amount of expected work. He sees it front-end loaded, with a focus on the legislation. We also want to be clear that we will be expecting an independent view (of what is best for the Province), but that we would not want to put TD into an anti-OPG spot and would expect a collaborative process between OPG, its advisors, the Province and its advisor. I suspect that he is right, but as a lawyer is focussed on the legal part of the project, but I think the market/structuring part of the project will also be important and expect that it will also require time, expertise and resources on TD's part. Anyway, just a few thoughts and not trying to twist your arm one way or the other.

Mike

Ontario Forms New Trust to Tap Markets for Hydro Subsidies
2017-03-02 21:18:47.509 GMT

By Maciej Onoszko

(Bloomberg) -- Ontario Power Generation Inc. will set up a special purpose vehicle that will raise funds to help finance subsidies announced Thursday to curb soaring electricity bills in Canada's most-populous province.

Ontario's largest power generation company will manage the new entity for the province and its electricity system operator, known as IESO. The vehicle will tap bond and possibly equity markets for funding, said Chief Executive Officer Jeff Lyash.

"We've got the scale to do this, we have got access to debt markets, relationships with credit rating agencies, we have the internal capabilities," Lyash said by phone on Thursday. "We're basically a service provider -- think about it like a trust."

Ontario's plan includes refinancing investments in power generation over longer periods to reduce electricity costs in the short term. The province plans to push back the cost of the so-called global adjustment, which is a charge that covers the costs the power industry has incurred as part of its multi-billion dollar investment in facilities.

It will probably take a few months to set up the trust as the province needs to create the regulatory framework for the changes, Lyash said, adding the vehicle will be run separate from the rest of OPG's business. He declined to say how much money the entity would raise.

The trust will most likely access the bond market, but it could raise equity too, Lyash said, adding final decisions haven't been made.

The immediate reduction in the global adjustment will amount to about C$2.5 billion per year on average over the first 10 years, the province said in a presentation of its proposal on Thursday. The additional financing will add up to C$1.4 billion a year in interest payments.

Ontario Forms New Trust to Tap Markets for Hydro Subsidies
2017-03-02 21:18:47.509 GMT

By Maciej Onoszko
(Bloomberg) -- Ontario Power Generation Inc. will set up a special purpose vehicle that will raise funds to help finance subsidies announced Thursday to curb soaring electricity bills in Canada's most-populous province.
Ontario's largest power generation company will manage the new entity for the province and its electricity system operator, known as IESO. The vehicle will tap bond and possibly equity markets for funding, said Chief Executive Officer Jeff Lyash.
"We've got the scale to do this, we have got access to debt

markets, relationships with credit rating agencies, we have the internal capabilities," Lyash said by phone on Thursday. "We're basically a service provider -- think about it like a trust."
Ontario's plan includes refinancing investments in power generation over longer periods to reduce electricity costs in the short term. The province plans to push back the cost of the so-called global adjustment, which is a charge that covers the costs the power industry has incurred as part of its multi-billion dollar investment in facilities.
It will probably take a few months to set up the trust as the province needs to create the regulatory framework for the changes, Lyash said, adding the vehicle will be run separate from the rest of OPG's business. He declined to say how much money the entity would raise.
The trust will most likely access the bond market, but it could raise equity too, Lyash said, adding final decisions haven't been made.
The immediate reduction in the global adjustment will amount to about C$2.5 billion per year on average over the first 10 years, the province said in a presentation of its proposal on Thursday. The additional financing will add up to C$1.4 billion a year in interest payments.

Subject: FW: Amendments for flexibility in OEFC agreement

Hi John

OPG is asking about having the ability to issue debt from their subsidiaries going forward. Ken gave a bit of an explanation below.

From: RYFA Ken -TREASURY [mailto:ken.ryfa@opg.com]
Sent: Tuesday, January 31, 2017 1:58 PM
To: Linda Smith <Linda.Smith@ofina.on.ca>
Subject: RE: Amendments for flexibility in OEFC agreement

Linda,

OK, John will talk to Mike.

I left you a message about item 4 below as I wasn't sure exactly what you mean.

For your information I've attached an OPG subsidiary organization chart – look on the 2nd page. We already have a number of separate legal entities with both assets and debt – UMH Energy Partnership, Lower Mattagami Energy Limited Partnership, PSS Generating Station LP all have assets and corresponding debt (project financing) within the partnership entity. Both the assets and the debt roll up to OPG consolidated financial statements.

The structure that we are considering would work similarly. Below is an illustration of how the structure is expected to work which may answer your question:

Using regulated hydro as an example – call it Reg Hydro Co

OPG owns 100% of Reg Hydro Co

Regulated hydro assets currently in OPG are transferred to Reg Hydro Co

Would likely capitalize Reg Hydro Co with a combination of debt and equity – existing OPG debt with OEFC would stay in OPG but we would likely set up inter-corporate debt between OPG and Reg Hydro Co to reflect the rates and maturity profile of OPG debt with OEFC. However, when we consolidate Reg Hydro Co with OPG Inc. the inter-corporate debt would be eliminated leaving just the existing OPG debt with OEFC.

New debt incurred by Reg Hydro Co would be an obligation of Reg Hydro Co

Since Reg Hydro Co is owned 100% by OPG then the financial position of Reg Hydro Co will be captured in OPG consolidated results – e.g. inter-corporate debt would be eliminated on consolidation and Debt incurred by Reg Hydro Co would show up as debt in OPG consolidated.

Does this answer your question?

Let me think about the best efforts wording.

Thanks,

Ken

To: RYFA Ken -TREASURY
Subject: RE: Amendments for flexibility in OEFC agreement

Hi. My comments:

3. This is probably a discussion between John and Mike.

4. Currently, the charge for the loan is on the corporate balance sheet. How does this change in what you are suggesting? Once I have that information, I will speak to our policy people.

Other item – I would suggest using the words "best efforts to set the rate between 10 and 11 am"

From: RYFA Ken -TREASURY [mailto:ken.ryfa@opg.com]
Sent: Monday, January 30, 2017 6:37 PM
To: Linda Smith <Linda.Smith@ofina.on.ca>
Subject: Amendments for flexibility in OEFC agreement

Linda,

Discussion below is for amendments to the overall credit agreement. The proposed February 2017 draw would be done within the existing agreement with OEFC waiver on the term limit.

Amendments that OEFC is OK with:

1. Change from quarterly to monthly draw
2. Notice period for all draws – 10 business days

Amendment to be discussed with OEFC:

3. Term – our objective is to extend term of OPG's debt so we need very long term notes. Our proposal is –
    a. > 30 years (intent is to do 40 to 50 years) – maximum individual issue $250 million; maximum annual issue $500 million
    b. <= 30 years – amount of annual facility less amount issued under a)

4. Debt borrowed from OEFC by a subsidiary – understood that OEFC needs the entity to be set up but if the entities were established is this something that OEFC would consider?

Let me know whether the OEFC would consider these amendments.

Other items:

Process for setting the base rate – since the rate is generally set by 10 am what if we set bounds around the timing such as 10 am +/- 1 hour. If you need to go outside this range then you would inform us so that we understand the reason for the delay. If the reason is market volatility or difficulty in pricing the requested term then we would have the ability to delay pricing by 1 day and re-evaluate the next day. Thoughts?

Thanks,

Ken

Hi Gadi

I suggest that we respond as follows: pls let me know if you have any changes

Hi John

Gadi and others spent considerable time last night discussing the equity injection option and we are unclear as to how the Province will be made whole from a fiscal perspective. I suggest that you proceed with fleshing out this option and once we have all the details a decision can be made as to its viability.

Thanks

Ken k

Ken:

Have you had any confirmation from Gadi on the approach. As you know time is of the essence, as a result we are proceeding with discussions with the external auditors this morning to brief them on the approach and get their thoughts on the accounting implications and what needs to be done from a structuring perspective to ensure that the varying objectives can be met. Please advise ASAP.

Thanks John, it seems that what you are saying is OPG's net income will increase, all else being equal, by the

amount of the interest relating to the equity injection.

In which case upon consolidation there will be no fiscal impact to the Province.

As you work through the options this needs to be fleshed out since the Trust will be consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Ken k

> Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to "in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting entity." I understanding from Alec Cheng (OPG accounting) who was on yesterday accounting call with Nadine (Controllers Office) that OPG GBE status would be put at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

Hi Gadi

I suggest that we respond as follows: pls let me know if you have any changes

Hi John

Gadi and others spent considerable time last night discussing the equity injection option and we are unclear as to how the Province will be made whole from a fiscal perspective. I suggest that you proceed with fleshing out this option and once we have all the details a decision can be made as to its viability.

Thanks

Ken k

Ken:

Have you had any confirmation from Gadi on the approach. As you know time is of the essence, as a result we are proceeding with discussions with the external auditors this morning to brief them on the approach and get their thoughts on the accounting implications and what needs to be done from a structuring perspective to ensure that the varying objectives can be met. Please advise ASAP.

John

Thanks John, it seems that what you are saying is OPG's net income will increase, all else being equal, by the

amount of the interest relating to the equity injection.

In which case upon consolidation there will be no fiscal impact to the Province.

As you work through the options this needs to be fleshed out since the Trust will be consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Ken k

> Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to "in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting entity." I understanding from Alec Cheng (OPG accounting) who was on yesterday accounting call with Nadine (Controllers Office) that OPG GBE status would be put at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

Subject: RE: EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral
Date: Thursday, February 16, 2017 8:59:48 AM

Hi Gadi
My understanding is that when the asset is sold to OPG Trust by the IESO it converts into an intangible asset as opposed to a regulatory asset. This is because there is no OEB requirement in the future in order to write down the asset. The write down can commence theoretically from the point in time the GA recoveries exceed the payment to generators.
With regard to your second question the OPG uses the Province's equity injection (assuming that the approach that's agreed upon) to lend to the Trust. If so yes the OPG makes money on that segment. Having said that the Trust will capitalize the interest expense on their books and actual payment of the interest to OPG commences only when the GA recoveries exceed the payment to generators. There may be issues from the OPG's auditors on how OPG can recognize the interest income given that actual settlement is many years into the future. This is probably why we require further details from OPG on this option.
Thanks
Ken k

Subject: Re: EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral

Hmmm. If I understand this chain correctly, and I'm likely missing something important, would we have a non-regulated entity making hundreds of millions of dollars a year that the ratepayers ultimately have to cover in the future? Or would it be OPG, not the trust, making that profit from the interest on their loan to the trust, and if it's OPG making the profit, can't the OEB weigh in? If either's the case, it would be kind of contrary to the very robust language the government has been using about the OEB providing ratepayer protection with privatized electrical utilities.

No, I was informed by OPCD that IESO will set up the reg asset as you point out but will promptly sell same to the Trust. So the expectation is that at the end of each fiscal year the reg asset set up in that year would be sold to the OPG Trust.
Thanks
Ken k

On Feb 15, 2017, at 10:27 PM, Ronald Kwan <Ronald.Kwan@ofina.on.ca> wrote:

> Hi,
> I may be wrong on this, so correct me if so, as I have not been at the accounting meetings on this structure.
> But, based on the Energy submission, I took it as IESO would have the regulatory asset. As such, I took it that the Trust would be outside of OPG's OEB regulated entity.

>
> > First getting it past their auditors will be a challenge, as you've said, and secondly getting the OEB to accept that OPG should be earning the extra $750 million per year that we'd need at the peak of the debt accumulation will be even more challenging. It would have to be a hit to ratepayers. That would be even harder to explain than a hit to them from an ROE to the Province, which, as you've seen, I've had trouble wrapping my mind around in earlier emails.
> >
> > On Feb 15, 2017, at 10:11 PM, Ken Kandeepan <Ken.Kandeepan@ofina.on.ca> wrote:
> >
> > > Not entirely, though the underlying concept is similar. This is

just logical speculation on my part but what John is probably driving at is the Trust pays OPG the interest but instead of expensing same it's capitalized.
As such when the Trust is consolidated with OPG the interest income remains in OPG's books since there is no expense to offset it in the books of the Trust.
Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.
The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.
Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.
Thanks
Ken k

Hi John and Cindy

I just realized that in the event of an

equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount

equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all

else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may

be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken k

Subject: RE: OEFC Funding of the Global Adjustment Deferral

Ken:

Got your voice message with

respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the

debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting

entity.”
I
understanding
from
Alec
Cheng
(OPG
accounting)
who
was
on
yesterday
accounting
call
with
Nadine
(Controllers
Office)
that
OPG
GBE
status
would
be
put
at
high
risk
under
the
proposed
scheme
due
to
the
proposed
quantum
of
lending
from
the
OEFC.
Our
accounting
group
along
with
Treasury
will
be

performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

We can make ourselves

available
for
a
call
this
morning.
Please
advise.

Subject: RE: EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral
Date: Thursday, February 16, 2017 8:59:48 AM

Hi Gadi
My understanding is that when the asset is sold to OPG Trust by the IESO it converts into an intangible asset as opposed to a regulatory asset. This is because there is no OEB requirement in the future in order to write down the asset. The write down can commence theoretically from the point in time the GA recoveries exceed the payment to generators.
With regard to your second question the OPG uses the Province's equity injection (assuming that the approach that's agreed upon) to lend to the Trust. If so yes the OPG makes money on that segment. Having said that the Trust will capitalize the interest expense on their books and actual payment of the interest to OPG commences only when the GA recoveries exceed the payment to generators. There may be issues from the OPG's auditors on how OPG can recognize the interest income given that actual settlement is many years into the future. This is probably why we require further details from OPG on this option.
Thanks
Ken k

Subject: Re: EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral

Hmmm. If I understand this chain correctly, and I'm likely missing something important, would we have a non-regulated entity making hundreds of millions of dollars a year that the ratepayers ultimately have to cover in the future? Or would it be OPG, not the trust, making that profit from the interest on their loan to the trust, and if it's OPG making the profit, can't the OEB weigh in? If either's the case, it would be kind of contrary to the very robust language the government has been using about the OEB providing ratepayer protection with privatized electrical utilities.

No, I was informed by OPCD that IESO will set up the reg asset as you point out but will promptly sell same to the Trust. So the expectation is that at the end of each fiscal year the reg asset set up in that year would be sold to the OPG Trust.
Thanks
Ken k

On Feb 15, 2017, at 10:27 PM, Ronald Kwan <Ronald.Kwan@ofina.on.ca> wrote:

> Hi,
> I may be wrong on this, so correct me if so, as I have not been at the accounting meetings on this structure.
> But, based on the Energy submission, I took it as IESO would have the regulatory asset. As such, I took it that the Trust would be outside of OPG's OEB regulated entity.
> Ron
>

>
> > First getting it past their auditors will be a challenge, as you've said, and secondly getting the OEB to accept that OPG should be earning the extra $750 million per year that we'd need at the peak of the debt accumulation will be even more challenging. It would have to be a hit to ratepayers. That would be even harder to explain than a hit to them from an ROE to the Province, which, as you've seen, I've had trouble wrapping my mind around in earlier emails.
> >
> > On Feb 15, 2017, at 10:11 PM, Ken Kandeepan <Ken.Kandeepan@ofina.on.ca> wrote:
> >
> > > Not entirely, though the underlying concept is similar. This is

just logical speculation on my part but what John is probably driving at is the Trust pays OPG the interest but instead of expensing same it's capitalized.
As such when the Trust is consolidated with OPG the interest income remains in OPG's books since there is no expense to offset it in the books of the Trust.
Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.
The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.
Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.
Thanks
Ken k

Thanks
John,
it
seems
that
what
you
are
saying
is
OPG's
net
income
will
increase,
all
else
being
equal,
by
the
amount
of
the
interest
relating
to
the

equity
injection.

In
which
case
upon
consolidation
there
will
be
no
fiscal
impact
to
the
Province.

As
you
work
through
the
options
this
needs
to
be
fleshed
out
since
the
Trust
will
be
consolidated
with
OPG
we
need
to
understand
how
OPG
will
show
a
net

interest income.

Thanks

Ken
k

To: LEE John - TREASURY; 'Veinot, Cindy (TBS)'

Cc: Nadine Petsche (MOF)

Subject: RE: EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral

Hi John and Cindy

I just realized that in the event of an

equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount

equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all

else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may

be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken k

Adam,

Attached are some minor edits, I have shortened a couple of bullets in order to maintain that the Province has the most flexibility

-The OFA and Energy will retain a dealer to provide independent advice to the Province

-The long term debt issued by OPG Trust may be callable

Re: advisor to be hired by OFA+Energy and call feature of the bond

Regards

Carlos

GA FINANCING – EQUITY INJECTION OVERVIEW

This document serves to provide an overview of the implementation mechanism, timelines and other issues for the GA Financing and the Equity Injection for Ontario Power Generation (OPG) from the Province.

OVERVIEW

- The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.
- OPG will develop a Special Purpose Vehicle (SPV)referred to as "OPG Trust" to purchase the "right to collect" assets from the IESO in return for cash proceeds.
- OPG Trust will be structured to finance 51% of its funding requirements through the capital markets with the remaining 49% being provided by OPG as subordinated debt.
    - The 49% subordinated debt from OPG will be financed through debt from the capital markets (5%) and through equity injections from the Province (44%).
    - Annual payments will be received by OPG Trust for financing costs.
        - Staff Comments: Unclear if these financing costs/annual payments will be received by OPG [TBC: from IESO or ratepayers directly]?
- The mechanism by which the financing is conducted is yet to be finalized. Both OPG on behalf of OPG Trust and the OFA on behalf of the Province are separately looking to engage 'financial advisors' for the purpose of determining optimal financing structures, e.g. debt covenants, terms and conditions such as if to be callable, redeemable, etc. [Also see below.]

Commented [JK1]: Check with SIFB or CMD on the right terminology.

Commented [FC2R1]: To me this is part of the terms and conditions

BORROWING

- The 51% financing conducted by OPG Trust and the 5% financing via OPG will initially be financed through a short term credit facility which will be obtained by OPG. OPG has communicated that this may be through short term debt, raised from the Canadian money markets.
    - OPG staff further clarified that this would be facilitated through a new facility and to be put in place by OPG Trust and not any of the existing facilities OPG currently has in place.

Commented [JK3]: Did I get this right?

Commented [FC4]: If this is the case wouldn't they need a minimum amount of equity to be put in the Trust at the onset? I'm assuming OPG nor the Province will be providing a back stop to the Trust.

- Longer term debt will be issued as soon as possible, subject to market timing constraints.

- OPG to retain 3 dealers to advice on the long-term borrowing and financing of the GA.
- The OFA and Energy will ~~is also expected to~~ retain a dealer to provide ~~due diligence and~~ independent advice to ~~for~~ the Province~~'s equity injection [TBC] into OPG and long-term borrowing by OPG Trust~~ [TBC].

- The long term debt issued by OPG Trust may ~~also~~ be callable ~~to buy back the bonds once the financed GA starts to be repaid~~. [TBC]

EQUITY INJECTION MECHANISM

OVERVIEW

- The Province is expected to provide monthly equity injections to OPG
- In return, OPG would issue new shares to the Province at a value of $20 per share.
- These share issuances currently environed to be redeemable by the Province and OPG may also have rights to buy back the shares [TBC].
  - This would provide the Province with a flexible mechanism to redeem its equity investment in OPG, and allow OPG to return to a more suitable capital structure once the GA financing program has subsided.
  - Redeemable terms may include a lock-out period that permits the Province to redeem after a set time period.
  - [TBC] Shares may be considered preferred shares. Unclear whether at redemption these shares will have a non-par value (ie. not $20 per share).

PROCESS

- OPG Trust would receive the notice to purchase the asset from IESO.
- A notice would be received from OPG by the OFA for 44% of the asset for the equity injection.
- Separately OPG and OPG Trust would take out debt from the capital markets totaling 56% of the IESO asset value.
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [CY5]: Advice may be mostly for financing long term issuance by the trust

Formatted: Strikethrough

Formatted: Strikethrough

Commented [JK6]: I understood OFA's interest was more on how to structure its borrowing than other aspects but open to hearing different view.

Commented [CY7]: Call option is to add flexibility

Commented [JK8]: Why would OFA's borrowing be different? Carlos mentioned certain features, though would involve premiums?

Formatted: Strikethrough

Formatted: Not Strikethrough

Formatted: Not Strikethrough

Formatted: Strikethrough

Commented [FC9]: Not quarterly?

Commented [JK10R9]: Monthly now.

Commented [FC11]: Redeemable rights are really a call or put option and should be priced accordingly. In absence of this one of the parties is providing a subsidy to the other side.

Commented [SQ212]: [TBC whether 5 business days required for OFA to provide payment to OPG or whether 5 business days is for the entire process of OFA->OPG->OPGT].

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
    - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
    - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Bruno,

Some comments. Following up with OPCD to see if Energy will take the lead. Also, will be working with Carlos and TD consultants on the value of the shares.

Thanks.

Hopefully, we can regroup on the equity injection following a busy short week. Hoping to regroup with a sit-down to discuss the path forward.

Thanks,

John

GA FINANCING – EQUITY INJECTION OVERVIEW

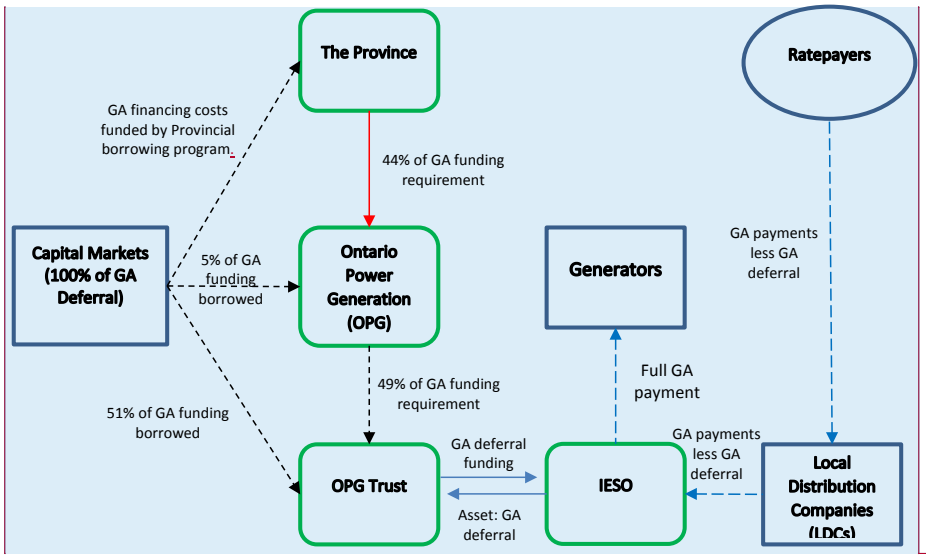
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

Commented [BA2R1]: See rewording

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC3]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

Commented [JP4]: Book value or some other valuation needs to be worked out. Not clear it is $20

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]
- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own ~~or through the OEFC~~ as it currently does?]
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [JK5]: I think this is because the financing and administrative costs would be recovered through ratepayers?

Commented [JP6]: The financing costs still need to be worked. To be determined.

Commented [DS7]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

Commented [JP8]: Confirming with OPCD to see if Energy will take the lead.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

Commented [JK9]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC10R9]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by

Commented [FC11]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing. That would mean that the Province may need to demonstrate that the expected ROE is higher than the cost of funding these new shares. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

Commented [JP12]: There should be no carrying costs nor return on investment on a consolidated basis. My understanding is there is no dividends.

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

GA FINANCING – EQUITY INJECTION OVERVIEW

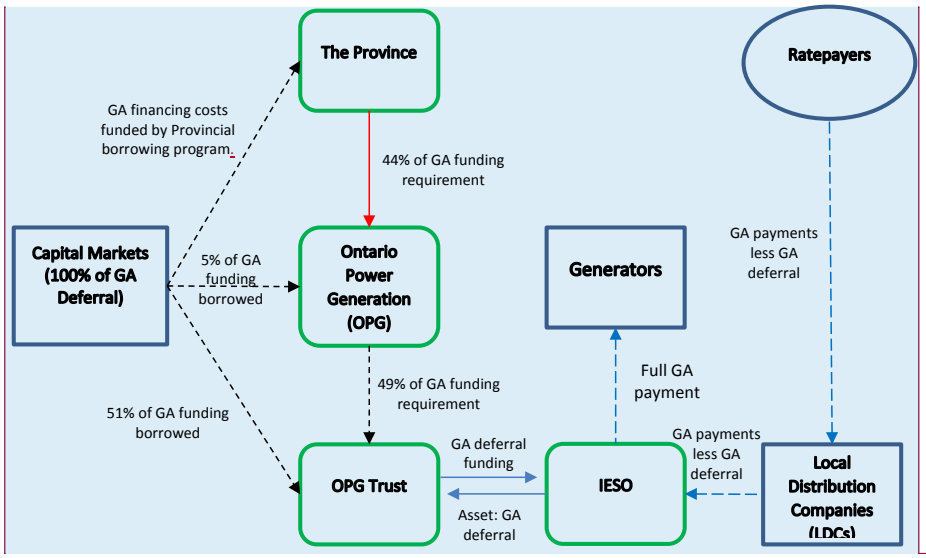
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

Commented [BA2R1]: See rewording

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC3]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]

Commented [JK4]: I think this is because the financing and administrative costs would be recovered through ratepayers?

- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own or through the OEFC as it currently does?]

Commented [DS5]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

Commented [JK6]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC7R6]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by

Commented [FC8]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing. That would mean that the Province may need to demonstrate that the expected ROE is higher than the cost of funding these new shares. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Hopefully, we can regroup on the equity injection following a busy short week. Hoping to regroup with a sit-down to discuss the path forward.

Thanks,

John

GA FINANCING – EQUITY INJECTION OVERVIEW

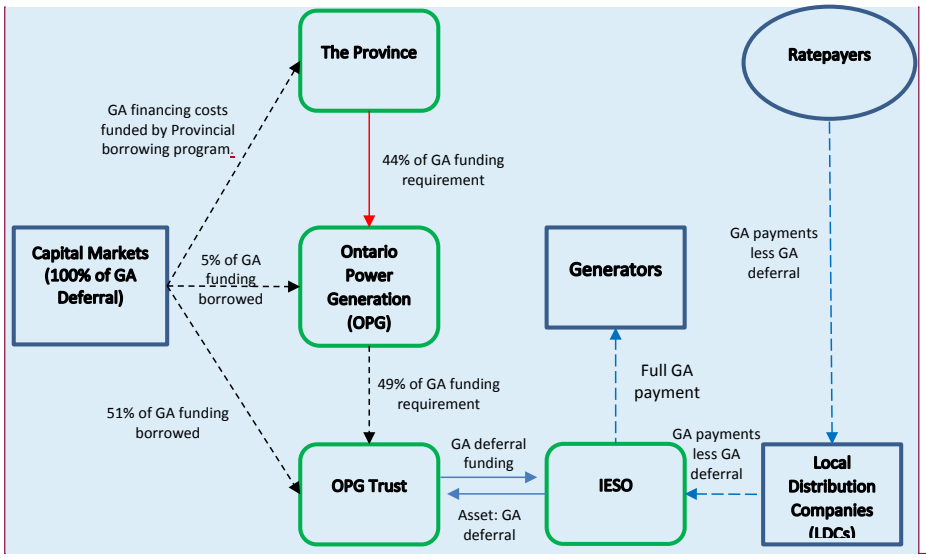
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

Commented [BA2R1]: See rewording

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC3]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]

Commented [JK4]: I think this is because the financing and administrative costs would be recovered through ratepayers?

- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own or through the OEFC as it currently does?]

Commented [DS5]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

Commented [JK6]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC7R6]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by

Commented [FC8]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

1. Dividend (Common Shares)

GA FINANCING – EQUITY INJECTION OVERVIEW

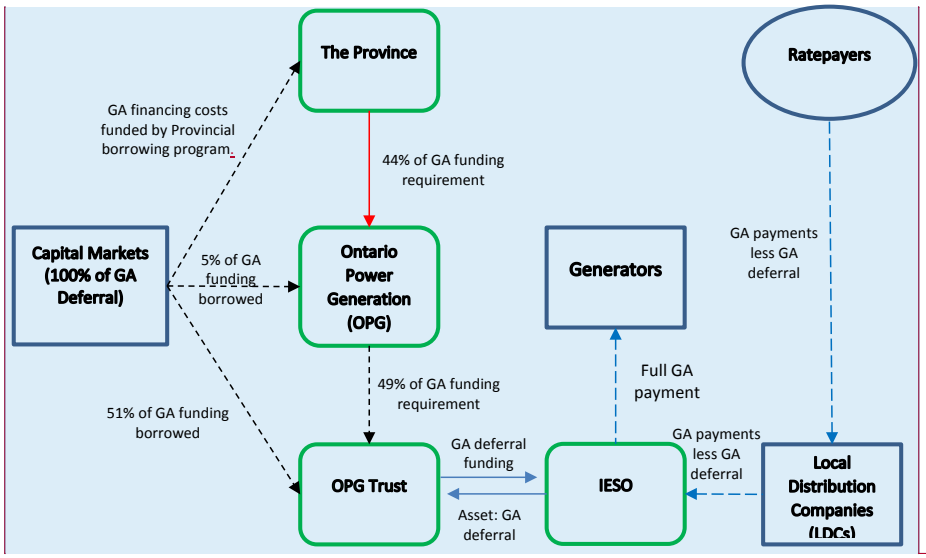
The Province is moving ahead with its support for the Global Adjustment (GA) smoothing mechanism. Under the mechanism, the Province will be providing equity injections to Ontario Power Generation Inc. (OPG), representing 44% of total GA financing requirements. This document provides an overview of the proposed GA financing structure, including the provincial equity injections, and discusses steps that must be undertaken by the Province to implement the equity injections.

GA FINANCING OVERVIEW

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers in order to fully compensate generators.

GA Deferral Process



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate

Commented [FC1]: I would suggest rewording the 44% label going to the Province to "Provincial borrowing" as now somehow suggests that there is a perfect matching between the borrowing and the equity contribution.

Commented [BA2R1]: See rewording

capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its equity injection through its annual borrowing program - from issuing debt into the capital markets.

OPG Trust would recover all financing and administrative costs from the ratepayers. OPG Trust may also set up a short-term borrowing facility to facilitate any market timings for its share of debt issuances. [NTD: for discussion?]. [OPG's current position is to not pass the interest/dividend to the Province for its equity injection. Although the Province would be entitled to any net income associated with the incremental equity it would mean that it would be out-of-pocket for servicing the cost of debt associated with the equity contribution.]

EQUITY INJECTION PROCESS OVERVIEW

IESO proposes that OPG Trust would purchase the GA deferral asset on a monthly basis. The Province would, therefore, be required to provide monthly equity injections to OPG if it is to match the purchase (different timing would introduce carrying costs to OPG and/or the Province). In return, OPG would issue new shares to the Province. It is proposed that shares would be purchased at the book value of $20 per share. [for discussion]

Commented [FC3]: I don't believe the $20 mark is relevant. The key concept is that equity is being issued at book value.

Commented [JP4]: Book value or some other valuation needs to be worked out. Not clear it is $20

The proposed process would be as follows:

- OPG Trust would receive notice from the IESO to purchase the asset from IESO.
- The Province in turn would receive notice from OPG for the OFA to provide 44% of the asset for the equity injection. [This asset would be equal to the GA amount being deferred and would not include any financing or administrative costs incurred by OPG or OPG Trust]
- Separately, OPG and OPG Trust would raise debt from the capital markets totaling 56% of the IESO asset value. [Is this proposing that OPG issue debt on its own ~~or through the OEFC~~ as it currently does?]
- There is a 5 business day transaction window from the timing of the notice received by the OFA to payment and settlement with the [or OPG?] IESO.

Commented [JK5]: I think this is because the financing and administrative costs would be recovered through ratepayers?

Commented [JP6]: The financing costs still need to be worked. To be determined.

Commented [DS7]: More for discussion, has OPG (on behalf of the OPG Trust) raised any concerns on borrowing from the markets on a monthly basis?

For the borrowing through OEFC, would just need to ensure approvals are in place in advance as OEFC Board meets quarterly. Shouldn't be an issue though as I think this has been done in the past where OEFC provides a total borrowing limit and OPG can draw down over a period of time.

Decisions and Approvals Required for Province's Equity Financing

The capital contribution (equity injection) to OPG could be carried out in the same way as the capital contribution to Hydro One prior to its initial public offering.

1. The Province, through the Ministry of Energy, would create an "Operating Asset" line for the purchasing of OPG equity. The creation of this line and the annual appropriation for the Operating Asset would require Treasury Board/Management Board of Cabinet approval.

Commented [JP8]: Confirming with OPCD to see if Energy will take the lead.

- The Operating Asset could be either a voted item or a statutory item. While the program would be implemented through legislation, it is assumed that the decisions around the capital contributions or equity injection would be made outside of legislation [largely consistent with the current state of legislative drafting]. Based on this assumption, the analysis that follows assumes the Operating Asset would be categorized as a voted item.

2. Depending on timing, the creation of the Operating Asset would either be included in the Province's Estimates (tabled following the release of the Provincial Budget) or, if this window is not met, in Supplementary Estimates.

    - Operating Assets are fiscally neutral, they represent a balance sheet item, but given they are included in the Estimates they are visible to the public, in this case through the Minister of Energy.

3. The Province would need to seek approval, through either Estimates or Supplementary Estimates, of an appropriation for the amount of the Operating Asset (i.e., approval to make a capital contribution up to the approved amount). The Province could seek approval of a placeholder amount of $1,000, or an estimate of the total projected required capital contribution for that fiscal year.

    - Under the assumption that the Operating Asset is categorized as a voted item, any capital contribution required over and above the approved amount would likely require further TB/MBC approvals. Given the magnitude of the initiative, staff have assumed that finding expense offsets is not a viable option.

4. Following the above approvals, the Province would be able to make the capital contribution into OPG and receive OPG shares in return.

Commented [JK9]: I believe this has to do with the notion that if the ministry can find offsets, then no need to go back to TB for approval.

Commented [FC10R9]: That is correct.

MECHANISM FOR RETURN OF CAPITAL TO PROVINCE

Under the mechanism, the Province will be providing an equity injection into OPG that would then use that contribution to purchase debt from OPG Trust. The current understanding is that that the proposed share price would be $20 at the time of purchase.

Subject to how the equity injection is structured, the Province would be able to sell back the shares to OPG at the same $20 per share in the future. This, however, would only result in the return of its equity injection and without any return, the Province would be responsible for the carrying costs of the equity injection partially offset, at least from an accounting perspective, by

Commented [FC11]: Why is this relevant? What is really relevant for the Province that transactions are done at carrying cost. If in the future the BV of OPG is higher than $20 this would cause the Province a loss before consolidation. I would suggest the focus be on transacting at BV.

any ROE earned on the incremental equity. The following methods could be utilized to allow the Province receives its equity contribution plus a return related to the cost of financing the equity injections.

1. Dividend (Common Shares)

   The Province would incur interest associated with the debt it borrows to finance the 44% equity injection. OPG would expect to have an equal or greater amount related to this 44% interest cost collected from ratepayers through annual cash payments. OPG could elect to provide the interest cost collected back to the Province as a dividend to cover the Province's cost of borrowing for its equity injection [subject to its Board approval].

2. Dividends (Preferred Shares)

   In order to reasonably guarantee a return to the Province, it may be necessary to establish a separate class of preferred shares with a dividend yield associated with the interest cost of the Province's borrowing costs or provide a mechanism for the interest cost to be recovered on a non-cash basis, e.g., through a form of dividend reinvestment plan or through cumulative preferred dividends that are not paid until principal starts being collected from ratepayers [in the event OPG chooses not to return capital during the accumulation of debt phase, which is understood to be OPG's current internal position, TBC].

   A preferred equity structure could potentially impact OPG's credit ratings if rating agencies view the preferred shares as debt rather than equity. In general preferred shares are treated at 50% for rating rations (check).

3. Redemption of Shares at a Premium

   Equity injections can be viewed as a subsidy if the province is not compensated for its risk or cost of financing. That would mean that the Province may need to demonstrate that the expected ROE is higher than the cost of funding these new shares. Under such a scenario, an appropriate pricing or premium on buyback would need to be priced in so that when the Province sells back its shares, it receives a higher price per share than the proposed $20/share book value. OPG staff have signaled to CEFD and CMD staff that their current plan is to not provide the Province with a cash flow, in dividends or otherwise, for the 44% equity injection until the point in time where the ratepayers start to pay down the deferred GA. [TBC]

Commented [JP12]: There should be no carrying costs nor return on investment on a consolidated basis. My understanding is there is no dividends.

LEGISLATION AND TIMING

- The proposed timing for the legislation is May, early June.
- It's unclear how these rates would be effective to consumers if the RPP prices are reset on May 1 and November 1 of every year.
  - Furthermore, the RPP prices are announced by the OEB in mid-April and mid-October annually.
  - Unclear on whether the timing for this implementation mechanism would be sufficient for May 1, RPP prices.
- [TBC] TBS would provide an annual allocation, with a three-year program review cycle.

Hi Stephen:
I think you have a good point that confidentiality goes with the territory (an understanding not an agreement) in our dealings with our domestic syndicate. Having said that, our Documentation group is working on an NDA and will have a draft on Monday which I will share with you. In terms of a formal engagement letter, I suspect it would mirror the scope of the advisory role which you outlined. An engagement letter wouldn't hurt and expect could be prepared fairly easily (maybe including the NDA). Your thoughts appreciated.

We pay TD plenty of commissions for underwriting our bonds, and those commissions are understood to also include providing other services to us, including advice, so I don't think that I'd consider this as free advice and don't see the need to pay more money to them beyond what we already pay.

Gadi

I talked this over with Serge. He is comfortable moving forward with one of the banks (maybe TD?). Although free advice sounds good, he was worried about perception and conflicts. His preference is to have Blakes procure their services. Any concerns with that approach?

Subject: RE: Financial Advisor

Hi Gadi:
I think having dealer advice on our side would be beneficial. I expect that OPG will have us outgunned with the dealer input that they will be receiving. It would be quite easy for us to pick from our dealer syndicate (thinking TD or BMO or Scotia Capital) and hopefully benefit from the advice we would receive. This could be done very quickly (i.e., as early as next week) and I expect could be done at no cost. The larger dealers would have utilities and U.S. expertise which would be beneficial and also have good input into what investors will require going forward. After all, the major Canadian dealers will be the ones making markets and having the most expertise on the structure. They would likely be quite eager to provide us advice on this matter and get involved.
Mike

TD did the Muskrat Falls deal, and structured it in what, at the time, was the most cost-effective way of doing it, but I don't think there was any legislation involved so it didn't have the same complexities. I don't know if there's a particularly big difference between any of the six banks, and they'll all likely push for the most iron clad guarantee that we're able to give, so maybe my idea isn't a great one on reflection, and we should fall back on a Blair Franklin type. Mike, any thoughts?

In the end, it's really about what the accountants say is acceptable or not, so I'm not sure having a second opinion from a financial advisor is of as much value as a second opinion on the direction that E&Y is giving OPG.

Subject: Re: Financial Advisor

I'm not sure how much value added that any of these boutiques would provide. The people that know the markets are the investment bankers that are actually going to be part of the syndicate that will have to market, sell and trade these bonds. Why not have one of TD, Scotia, National or BMO provide this double-checking? If we're worried about the conflict that they are going to give advice that will make it easier to sell the bonds to ultimately make their life as syndicate members easier, then I can see the potential attraction of an advisor that isn't in that business, but why can't Alan be that guy? I don't see that any of those that you've named would provide better external advice to the Province than he would, unless we're concerned that he's too embedded with OPG, but I don't think so.

As for the names you've mentioned, Hansel, if that turns out to be the third one, is run by a lawyer which might be helpful, but I don't know if they know much about bonds, maybe that's where Bill Gula comes in, Blair Franklin definitely knows bonds, as Fred Mifflin used to be head of government Finance at BMO many years ago and they advised the Feds on Muskrat Falls, and I haven't heard of Origin.

I've added Mike, because he knows way more about the bond market and what investors will want than anyone we've talked about in this exchange, so he may have some ideas as to where the Province should go for external advice.

Hope that helps.

Gadi

Hi Gadi,

Energy and Blakes suggest that the Province needs its own financial advisor to test what we are hearing from OPG. As I understand it, there are some elements that OPG believes are requirements in the legislation. The Province would like someone with a market perspective (in addition to your team) that can test the need for each of those requirements as they arise. Given timing, they need someone who can be available in real time to provide this advice.

I will circle back as to whether that is Hansell and not Hanslep. Let me know if there are other names that you might suggest.

Scott

Hi Scott, what is it that we're looking for from a financial advisor? Is this to help with the structuring of OPG Trust's debt

issuance? I know Blair Franklin, and they advised Canada on Muskrat Falls. I'm not familiar with Origin, and I don't know Bill Gula, but is that Hansell LLP, not Hanslep?

In any case, I'm not sure what any of them bring to the table beyond what the three banks already engaged would provide, with Alan and the OFA weighing in when their inevitable conflicts get in the way?

I'd be happy to discuss further to get more colour on what you're looking for.

Gadi

Hi,

I spoke with Alan Hibben. He's fully engaged on the file with OPG. He suggested three other firms/people -- Origin Financial, Blair Franklin, and Bill Gula (Hanslep LLP). Carolyn, suggest you chat with Judy if Blakes has worked with any of the above. Scott, you could talk to Gadi etc if he has some thoughts on the above as well.
Let's group after your chats.
Serge

I talked this over with Serge. He is comfortable moving forward with one of the banks (maybe TD?). Although free advice sounds good, he was worried about perception and conflicts. His preference is to have Blakes procure their services. Any concerns with that approach?

Subject: Financial Advisor

Hi,

I spoke with Alan Hibben. He's fully engaged on the file with OPG. He suggested three other firms/people -- Origin Financial, Blair Franklin, and Bill Gula (Hanslep LLP). Carolyn, suggest you chat with Judy if Blakes has worked with any of the above. Scott, you could talk to Gadi etc if he has some thoughts on the above as well.
Let's group after your chats.
Serge

Hi Guys:

It took a bit longer than expected, but TD has been selected as discussed. They have provided assurances that they are fully committed. I've notified BMO & Scotia as well. I will circle back later today on a meeting for early next week.

Thanks Mike. Can we assume that OFA's relationship NDA with TD will be sufficient? Do you think we will need a formal engagement letter for this advisory role? Steve

I had assumed this would be fairly limited work, focused on providing a check on what OPG is proposing to ensure the construct is financeable at a reasonable cost. Hopefully they can get comfortable with that approach without requiring additional compensation. I was in a meeting with John Lee from OPG this morning and confirmed again that this would not impair TD's standing in future syndicates.

Thanks Stephen. TD is having an internal meeting at 11:00 and will come back to us then. We can discuss with Scott at that time. By the way, do you have a template NDA that we could use. You mentioned you had a few yesterday. Our documentation Group at the OFA doesn't have one off the shelf and it would likely take more time to re-invent the wheel.
Regards, Mike

Mike, thanks for the update. This is not really surprising. A couple of thoughts. First, they should not overstate the amount of work - I think it will mostly be at the front-end, commenting on the legislation. Second, they may be realizing there's a possibility of becoming cross-threaded with OPG through the advisor role, leading to a lesser allocation in the future OPG syndicate. I think you might be able to reassure them this should be collaborative and that while the Province is looking for an independent view, TD should not be put into an anti-OPG spot through our process. Happy to discuss further if useful. Regards, Steve

We pay TD plenty of commissions for underwriting our bonds, and those commissions are understood to also include providing other services to us, including advice, so I don't think that I'd consider this as free advice and don't see the need to pay more money to them beyond what we already pay.

Gadi

Subject: RE: Financial Advisor

Hi Gadi:
I think having dealer advice on our side would be beneficial. I expect that OPG will have us outgunned with the dealer input that they will be receiving. It would be quite easy for us to pick from our dealer syndicate (thinking TD or BMO or Scotia Capital) and hopefully benefit from the advice we would receive. This could be done very quickly (i.e., as early as next week) and I expect could be done at no cost. The larger dealers would have utilities and U.S. expertise which would be beneficial and also have good input into what investors will require going forward. After all, the major Canadian dealers will be the ones making markets and having the most expertise on the structure. They would likely be quite eager to provide us advice on this matter and get involved.

Subject: Re: Financial Advisor

TD did the Muskrat Falls deal, and structured it in what, at the time, was the most cost-effective way of doing it, but I don't think there was any legislation involved so it didn't have the same complexities. I don't know if there's a particularly big difference between any of the six banks, and they'll all likely push for the most iron clad guarantee that we're able to give, so maybe my idea isn't a great one on reflection, and we should fall back on a Blair Franklin type. Mike, any thoughts?

In the end, it's really about what the accountants say is acceptable or not, so I'm not sure having a second opinion from a financial advisor is of as much value as a second opinion on the direction that E&Y is giving OPG.

Cc: Kennedy, Nancy (MOF); Manning, Mike (OFA)
Subject: Re: Financial Advisor

I'm not sure how much value added that any of these boutiques would provide. The people that know the markets are the investment bankers that are actually going to be part of the syndicate that will have to market, sell and trade these bonds. Why not have one of TD, Scotia, National or BMO provide this double-checking? If we're worried about the conflict that they are going to give advice that will make it easier to sell the bonds to ultimately make their life as syndicate members easier, then I can see the potential attraction of an advisor that isn't in that business, but why can't Alan be that guy? I don't see that any of

those that you've named would provide better external advice to the Province than he would, unless we're concerned that he's too embedded with OPG, but I don't think so.

As for the names you've mentioned, Hansel, if that turns out to be the third one, is run by a lawyer which might be helpful, but I don't know if they know much about bonds, maybe that's where Bill Gula comes in, Blair Franklin definitely knows bonds, as Fred Mifflin used to be head of government Finance at BMO many years ago and they advised the Feds on Muskrat Falls, and I haven't heard of Origin.

I've added Mike, because he knows way more about the bond market and what investors will want than anyone we've talked about in this exchange, so he may have some ideas as to where the Province should go for external advice.

Hope that helps.

Gadi

Hi Gadi,

Energy and Blakes suggest that the Province needs its own financial advisor to test what we are hearing from OPG. As I understand it, there are some elements that OPG believes are requirements in the legislation. The Province would like someone with a market perspective (in addition to your team) that can test the need for each of those requirements as they arise. Given timing, they need someone who can be available in real time to provide this advice.

I will circle back as to whether that is Hansell and not Hanslep. Let me know if there are other names that you might suggest.

Scott

Subject: Re: Financial Advisor

Hi Scott, what is it that we're looking for from a financial advisor? Is this to help with the structuring of OPG Trust's debt issuance? I know Blair Franklin, and they advised Canada on Muskrat Falls. I'm not familiar with Origin, and I don't know Bill Gula, but is that Hansell LLP, not Hanslep?

In any case, I'm not sure what any of them bring to the table beyond what the three banks already engaged would provide, with Alan and the OFA weighing in when their inevitable conflicts get in the way?

I'd be happy to discuss further to get more colour on what you're looking for.

We pay TD plenty of commissions for underwriting our bonds, and those commissions are understood to also include providing other services to us, including advice, so I don't think that I'd consider this as free advice and don't see the need to pay more money to them beyond what we already pay.

Hi Gadi:
I think having dealer advice on our side would be beneficial. I expect that OPG will have us outgunned with the dealer input that they will be receiving. It would be quite easy for us to pick from our dealer syndicate (thinking TD or BMO or Scotia Capital) and hopefully benefit from the advice we would receive. This could be done very quickly (i.e., as early as next week) and I expect could be done at no cost. The larger dealers would have utilities and U.S. expertise which would be beneficial and also have good input into what investors will require going forward. After all, the major Canadian dealers will be the ones making markets and having the most expertise on the structure. They would likely be quite eager to provide us advice on this matter and get involved.

TD did the Muskrat Falls deal, and structured it in what, at the time, was the most cost-effective way of doing it, but I don't think there was any legislation involved so it didn't have the same complexities. I don't know if there's a particularly big difference between any of the six banks, and they'll all likely push for the most iron clad guarantee that we're able to give, so maybe my idea isn't a great one on reflection, and we should fall back on a Blair Franklin type. Mike, any thoughts?

In the end, it's really about what the accountants say is acceptable or not, so I'm not sure having a second opinion from a financial advisor is of as much value as a second opinion on the direction that E&Y is giving OPG.

Subject: Re: Financial Advisor

I'm not sure how much value added that any of these boutiques would provide. The people that know the markets are the investment bankers that are actually going to be part of the syndicate that will have to market, sell and trade these bonds. Why not have one of TD, Scotia, National or BMO provide this double-checking? If we're worried about the conflict that they are going to give advice that will make it easier to sell the bonds to ultimately make their life as syndicate members easier, then I can see the potential attraction of an advisor that isn't in that business, but why can't Alan be that guy? I don't see that any of those that you've named would provide better external advice to the Province than he would, unless we're concerned that he's too embedded with OPG, but I don't think so.

As for the names you've mentioned, Hansel, if that turns out to be the third one, is run by a lawyer which might be helpful, but I don't know if they know much about bonds, maybe that's where Bill Gula comes in, Blair Franklin definitely knows bonds, as Fred Mifflin used to be head of government Finance at BMO many years ago and they advised the Feds on Muskrat Falls, and I haven't heard of Origin.

I've added Mike, because he knows way more about the bond market and what investors will want than anyone we've talked

about in this exchange, so he may have some ideas as to where the Province should go for external advice.

Hope that helps.

Hi Gadi,

Energy and Blakes suggest that the Province needs its own financial advisor to test what we are hearing from OPG. As I understand it, there are some elements that OPG believes are requirements in the legislation. The Province would like someone with a market perspective (in addition to your team) that can test the need for each of those requirements as they arise. Given timing, they need someone who can be available in real time to provide this advice.

I will circle back as to whether that is Hansell and not Hanslep. Let me know if there are other names that you might suggest.

Scott

Hi Scott, what is it that we're looking for from a financial advisor? Is this to help with the structuring of OPG Trust's debt issuance? I know Blair Franklin, and they advised Canada on Muskrat Falls. I'm not familiar with Origin, and I don't know Bill Gula, but is that Hansell LLP, not Hanslep?

In any case, I'm not sure what any of them bring to the table beyond what the three banks already engaged would provide, with Alan and the OFA weighing in when their inevitable conflicts get in the way?

I'd be happy to discuss further to get more colour on what you're looking for.

We do have an underwriting agreement with them already, which I'd suggest would cover this. Mike and I are in my office now, and his suggestion is that he will call TD and BMO today and ask them to come in for half an hour each early next week to discuss how they could provide value in this process. A bit of competition is probably a good idea, and Mike has narrowed it down to these two as the best options given that RBC and CIBC are already taken by OPG. Scott, would you be able to come over here for those discussions, and then between you and Mike, you can decide which of the two would be the best fit?

Hi Mike. Sorry to delay responding. I think the question will really be for TD to raise – the engagement letter will mostly be for their benefit. If they do not feel they need one, then a standalone NDA for OFA's file would be the path we would probably recommend. Regards, Steve

Hi Stephen:

I think you have a good point that confidentiality goes with the territory (an understanding not an agreement) in our dealings with our domestic syndicate. Having said that, our Documentation group is working on an NDA and will have a draft on Monday which I will share with you. In terms of a formal engagement letter, I suspect it would mirror the scope of the advisory role which you outlined. An engagement letter wouldn't hurt and expect could be prepared fairly easily (maybe including the NDA). Your thoughts appreciated.

mike

Thanks Mike. Can we assume that OFA's relationship NDA with TD will be sufficient? Do you think we will need a formal engagement letter for this advisory role? Steve

Hi Guys:

It took a bit longer than expected, but TD has been selected as discussed. They have provided assurances that they are fully committed. I've notified BMO & Scotia as well. I will circle back later today on a meeting for early next week.

Mike

Subject: FW: GA Financing Terms

Mike, I don't know how much you know about this, but maybe it's time to bring you up-to-speed if you're not aware of what the government is thinking of doing on electricity rate mitigation. I'd be happy to fill you in whenever it's convenient for you. Ken has been in the loop through the piece, as it's struck me from the beginning that this is far more of an accounting issue than a funding one.

Regards,

Gadi

Subject: RE: GA Financing Terms

I agree that from a funding perspective the Province, through the OFA (actually the OEFC, but that's just a detail), would be able to accommodate this, so I think it definitely becomes an accounting question. I'm under the impression that OPCD has already been linked in on this, but it would make sense to make sure that they are.

Regards,

Gadi

Subject: GA Financing Terms

Hi Gadi,

Energy was talking with OPG yesterday about GA Financing modelling. One of the simplifying assumptions in the model is the ability to build up interest without any payments for quite long periods of time (10 years +). This contributes to the debt build up, but allows for the large, early year rate reductions.

OPG is going to reality check this based on what it thinks a 3rd party lender would expect. At a high level, they have suggested that interest capitalization would be unrealistic beyond 1 year.

What do you think is realistic if OFA acts as lender? I assume the Province may have some more flexibility, but would require terms that meet the asset test for accounting purposes. Should we link in with OPCD as well on this question?

Thanks,

Scott

Ontario

Electricity Price Mitigation

Ministry of Energy

February 15, 2017

Minister

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate – $11/month savings, updating Rural or Remote Rate Protection (RRRP) – $45/month savings, expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants and suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

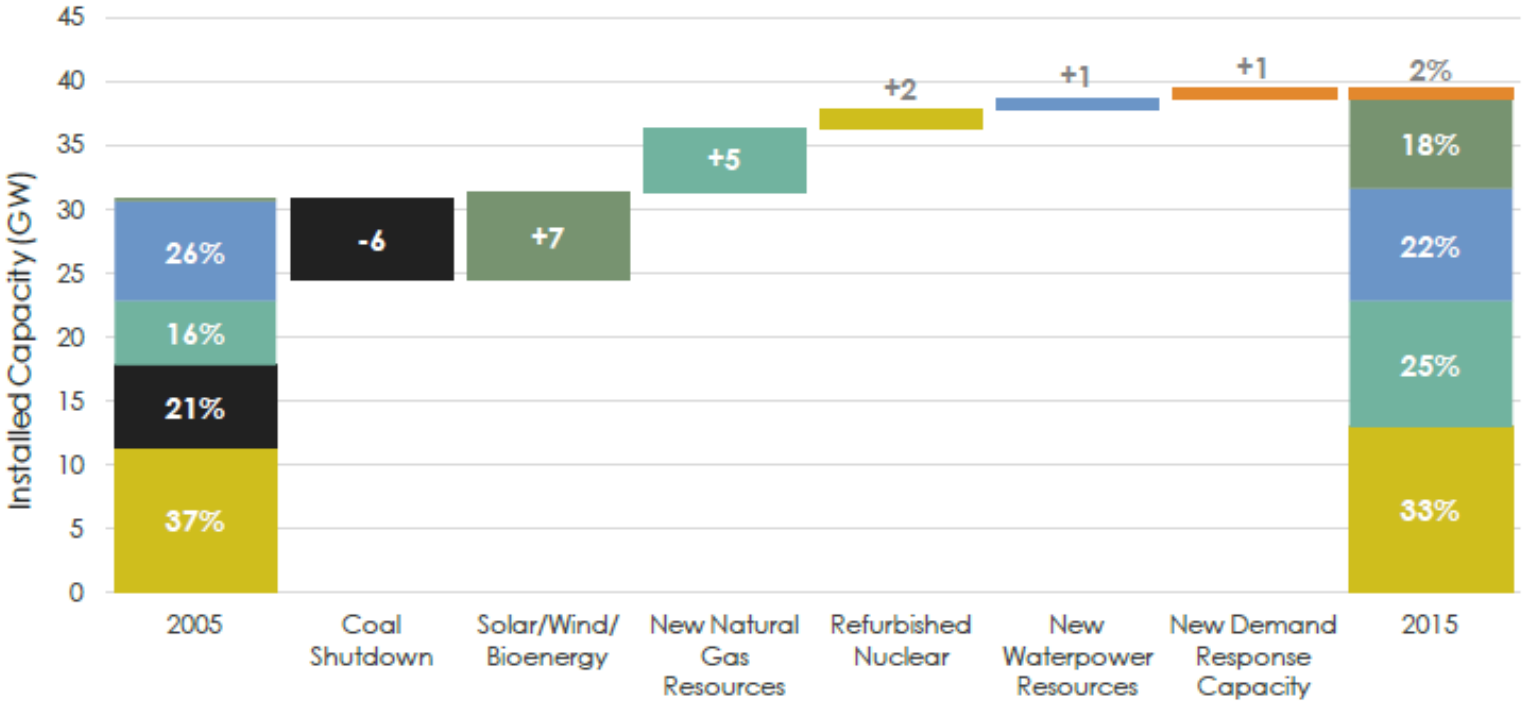
- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

CONFIDENTIAL CABINET DOCUMENT

Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



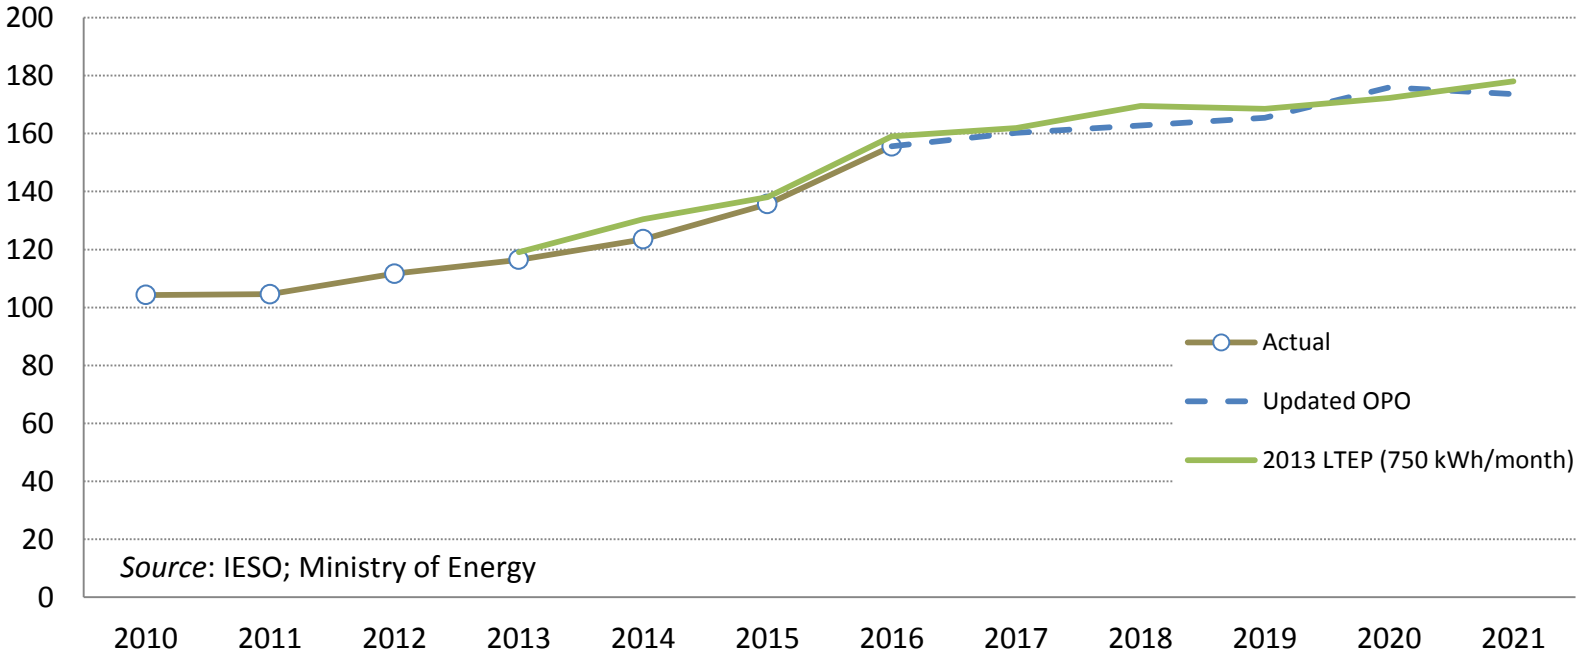
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



Rate Mitigation Proposal

- Three approaches are proposed:

  1) Helping the most vulnerable by enhancing electricity support programs and shifting cost onto the tax-base:
     - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
     - Ontario Electricity Support Program (OESP) Expansion;
     - LDC Affordability Fund; and
     - On-Reserve First Nations Delivery Credit.

  2) Ongoing activities to bend the future cost curve of electricity:
     - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates; and
     - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

  3) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
     - Implementation Model; and
     - Smoothing Mechanism.

- The following slides provide additional information on the above initiatives.

ELECTRICITY SUPPORT PROGRAMS TO HELP THE MOST VULNERABLE

Electricity Support Programs to Help the Most Vulnerable

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to delivery electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  a. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  b. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  c. **Establish an LDC Affordability Fund**, providing energy efficiency measures at no or minimal cost to those struggling to pay electricity bills and are ineligible for low-income conservation or support programs.

  d. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

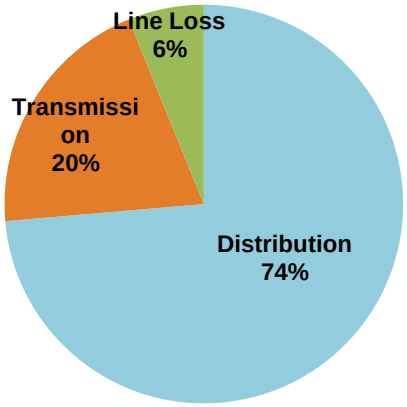
Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

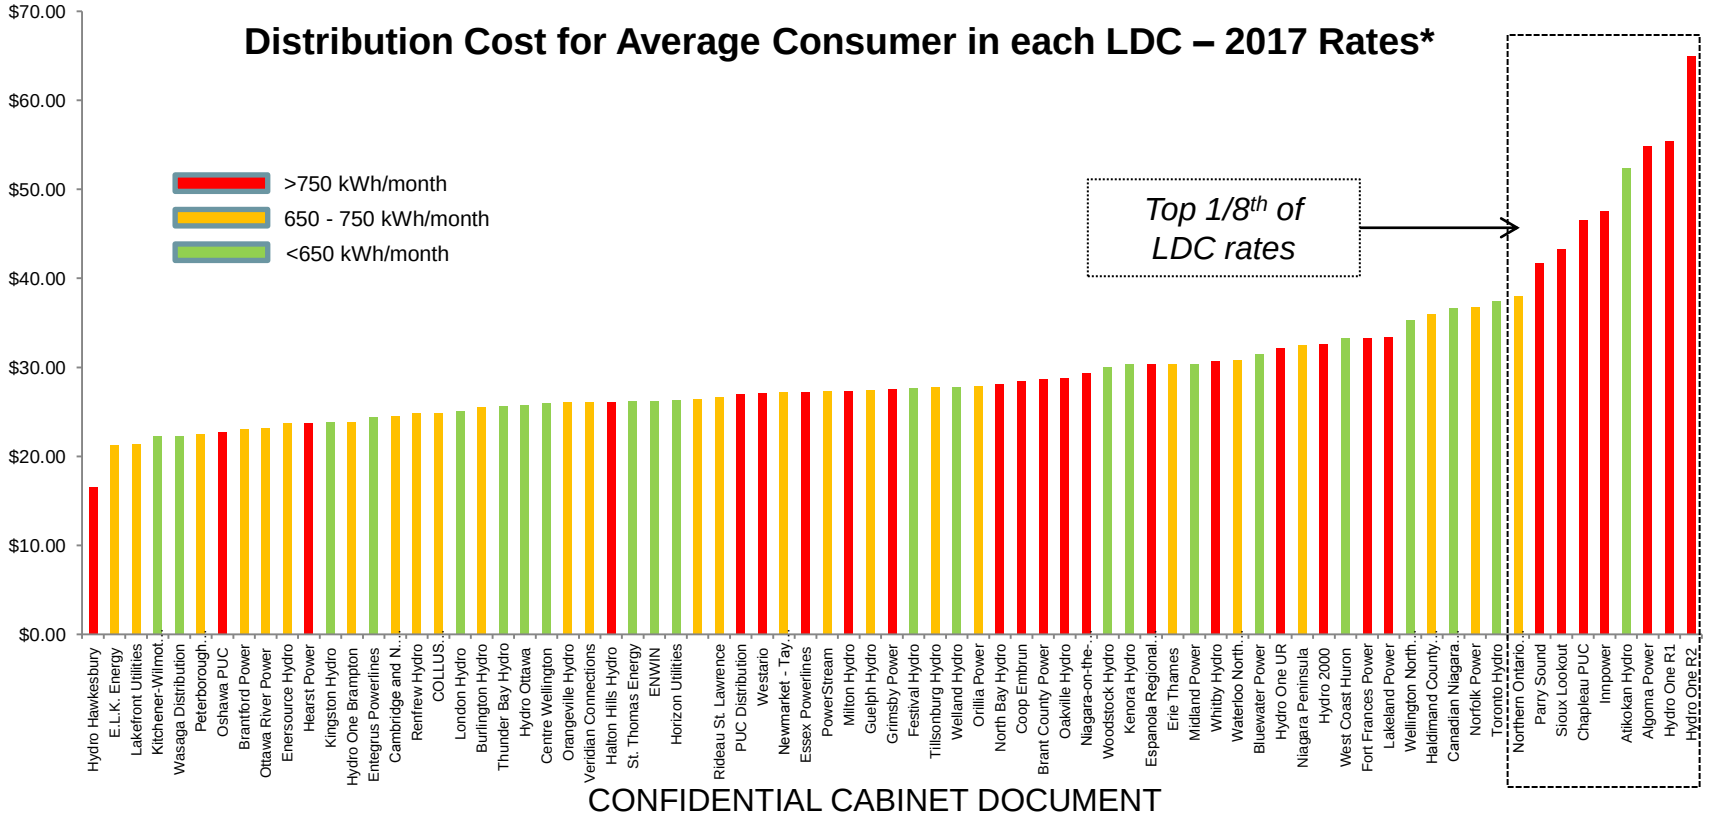
- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - An estimated 700,000 customers would benefit from these enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.



CONFIDENTIAL CABINET DOCUMENT

Note: *Rates are for 2017 (either approved or proposed)*

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program. Legal and regulatory risks (particularly with regards to legal authority and to the Ontario Energy Board's role in setting rates and incenting efficiencies) require further analysis
  - Some options may impact OEB rate-setting processes and create disincentives towards Hydro One productivity and performance improvements.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board.

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
TOTAL	**-**	**454**	**450**	**446**	**444**

Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Does not include Algoma Power or Hydro One Remotes which would continue to be on the rate base. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Costs will decrease through 2023 due to rate making changes and are expected to increase post 2023 due to regular rate increases.

B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP benefits vary by income level and family size, and there are two benefit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in benefits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

CONFIDENTIAL CABINET DOCUMENT

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced, including:
  - Working to get the OESP participation as close as possible to 100%:
    - Streamlining the application process to make it easier / quicker to get through (e.g., an alternative to the requirement to mail-in signed consent forms);
    - Putting in place a more aggressive communications strategy to make sure vulnerable communities are aware of the program; and
    - Exploring automatic OESP qualification for those who receive provincial programs (e.g., OW, ODSP).
  - Increasing the existing benefit scales by an additional 50% and expanding who benefits are provided to (see the following slide for details on what this enhancement would do).
- It is also recommended that the OESP be enhanced and also supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP benefit scales and how the scales would be enhanced if increased by 50% and benefits are extended to additional groups (represented in the circled boxes):

Existing OESP Benefit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000	-	-	$30	$34	$38	$42	$50
	$39,001 - $48,000	-	-	-	-	$30	$34	$38
	$48,001 - $52,000	-	-	-	-	-	-	$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +

	$28,001 - $39,000	-	-	$45	$50	$55	$60	$75
	$39,001 - $48,000	-	-	-	-	$45	$50	$55
	$48,001 - $52,000	-	-	-	-	-	-	$45

Proposed +50% OESP Benefit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000	-	$40	$45	$51	$57	$63	$75
	$39,001 - $48,000	-	-	$35	$40	$45	$51	$57
	$48,001 - $52,000	-	-	-	-	$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000	-	$60	$68	$75	$83	$90	$113
	$39,001 - $48,000	-	-	$52	$60	$68	$75	$83
	$48,001 - $52,000	-	-	-	-	$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-bas. The scope of changes would depend on the implementation / delivery mechanisms.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix require will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Ontario Electricity Support Program, including the 50% Enhancement (**Note:** The fiscal impact does not include adding new categories to the OESP matrix. ENERGY will work with the OEB to forecast what the total costs could be).	-	178	239	290	334

C. Establishing a New LDC Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as "low-income" but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000***** residential electricity accounts in arrears; of these about 19,900****** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.
- The Affordability Fund would not be used to provide grants or financial assistance to customers to forgive all or a portion of their arrears or electricity bill.

*** Note:** Unverified numbers reported by LDCs to the OEB
**** Note:** Low-income customers identified through participation in LEAP

C. Establishing a New LDC Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who are most in need, such as those who are facing disconnection and who cannot qualify for the low-income programs.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New LDC Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the feasibility of establishing a Fund and to identify a willing LDC(s) to administer the funds.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

- LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers that meet the targeted eligibility criteria.
  - Recipients could receive measures ranging from $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
    - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
    - Programmable thermostats, weather stripping, insulation (in homes with electric heating).
  - Consideration could also be given to including cold climate air source heat pumps for electrically heated homes, which can range in cost from $7,000 to $13,000.
  - As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New LDC Affordability Fund – Considerations

Considerations

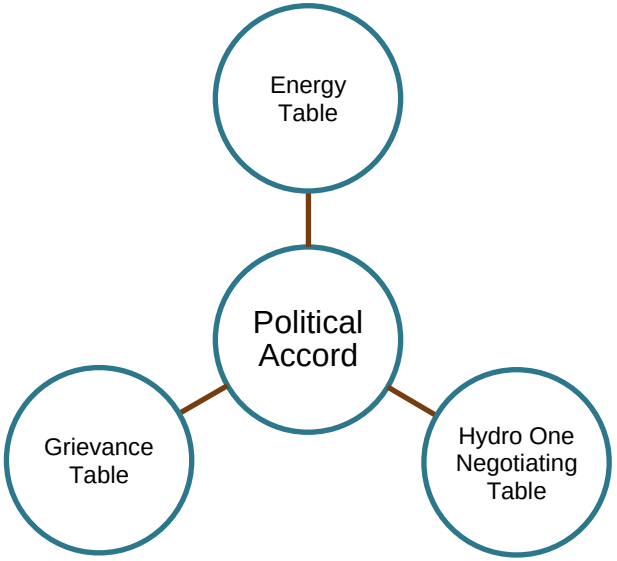
- The LDC Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to establish a Working Group, including the OEB, LDCs and potentially low income organizations to help develop funding criteria and allocation.
- LDCs need flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The LDC Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with one or several LDCs to administer the Fund and transfer money before end of fiscal year.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- In June 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by the energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million or 11 cents a month for a typical residential electricity consumer.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.

- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.

- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million or 11 cents a month for a typical residential electricity consumer.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473
Attawapiskat Power Corporation	336
Bluewater Power Distribution Corporation	237
Cat Lake Power Utility Ltd.	80
Cornwall Electric Distribution	514
Hydro One Networks Inc.	16,679
Hydro One Remote Communities Inc.	2,579
PUC Distribution Inc. (Sault Ste. Marie)	264
Thunder Bay Hydro Electricity Distribution	332
Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Fiscal Roll-Up

Fiscal Impact ($M)*	16-17	17-18	18-19	19-20	20-21
RRRP Enhancements**	-	454	450	446	444
Ontario Electricity Support Program, including the 50% Enhancement (**Note:** The fiscal impact does not include adding new categories to the OESP matrix. ENERGY will work with the OEB to forecast what the total costs could be)	-	178	239	290	334
On-Reserve First Nation Delivery Credit	-	20	20	20	20
LDC Affordability Fund***	200	-	-	-	-
Total	200	652	709	756	798

***Note:** GA Smoothing does not have a fiscal impact because it is assumed that both legal authority and accounting treatment are met. See GA Smoothing – Fiscal Considerations for fiscal impact of GA smoothing if legal and accounting treatment not met.

****Note: Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Does not include Algoma Power or Hydro One Remotes which would continue to be on the rate base. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Costs will decrease through 2023 due to rate making changes and are expected to increase post 2023 due to regular rate increases.

*****Note:** Funding for the LDC Affordability Fund is one-time in 2016/17.

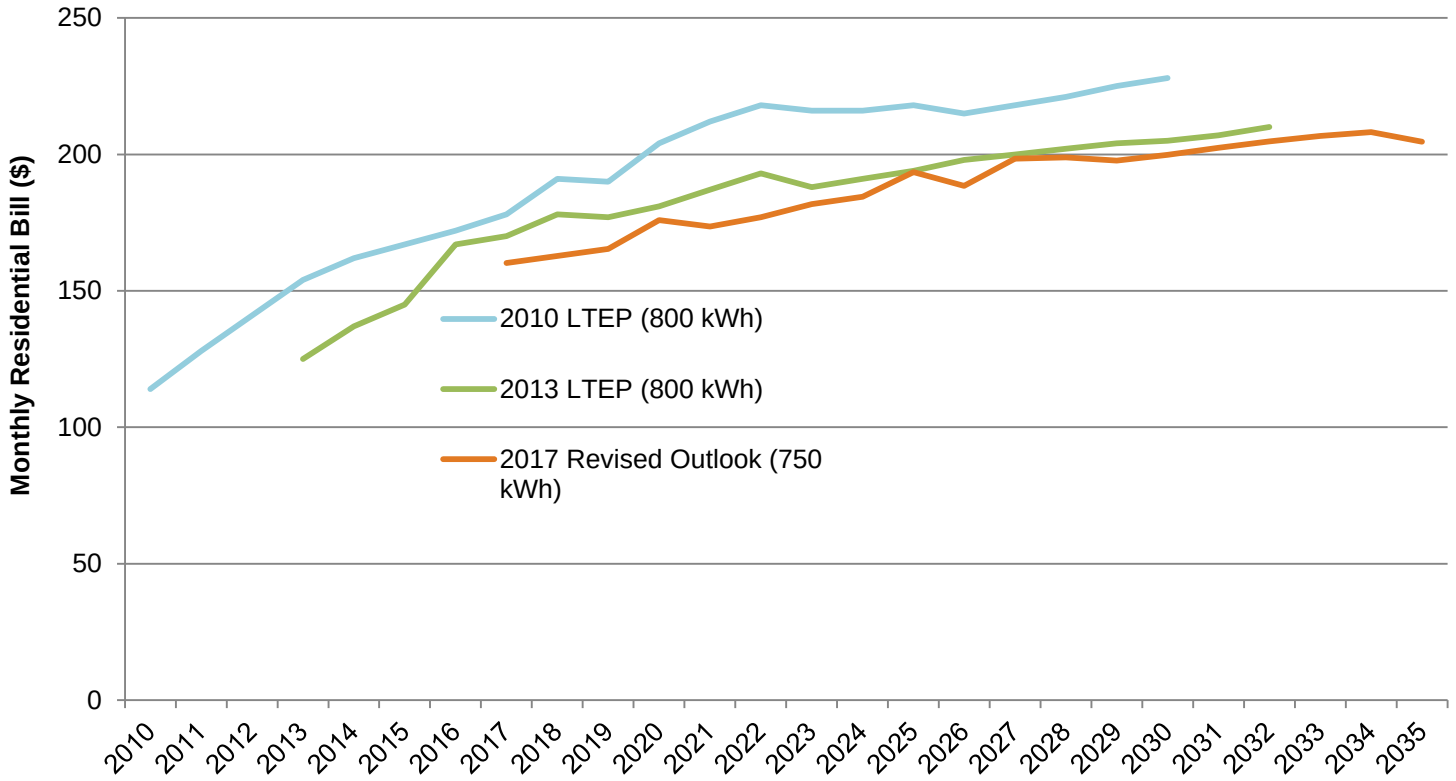
BENDING THE FUTURE COST CURVE OF ELECTRICITY

Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.

Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of December 2016) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

CONFIDENTIAL CABINET DOCUMENT

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

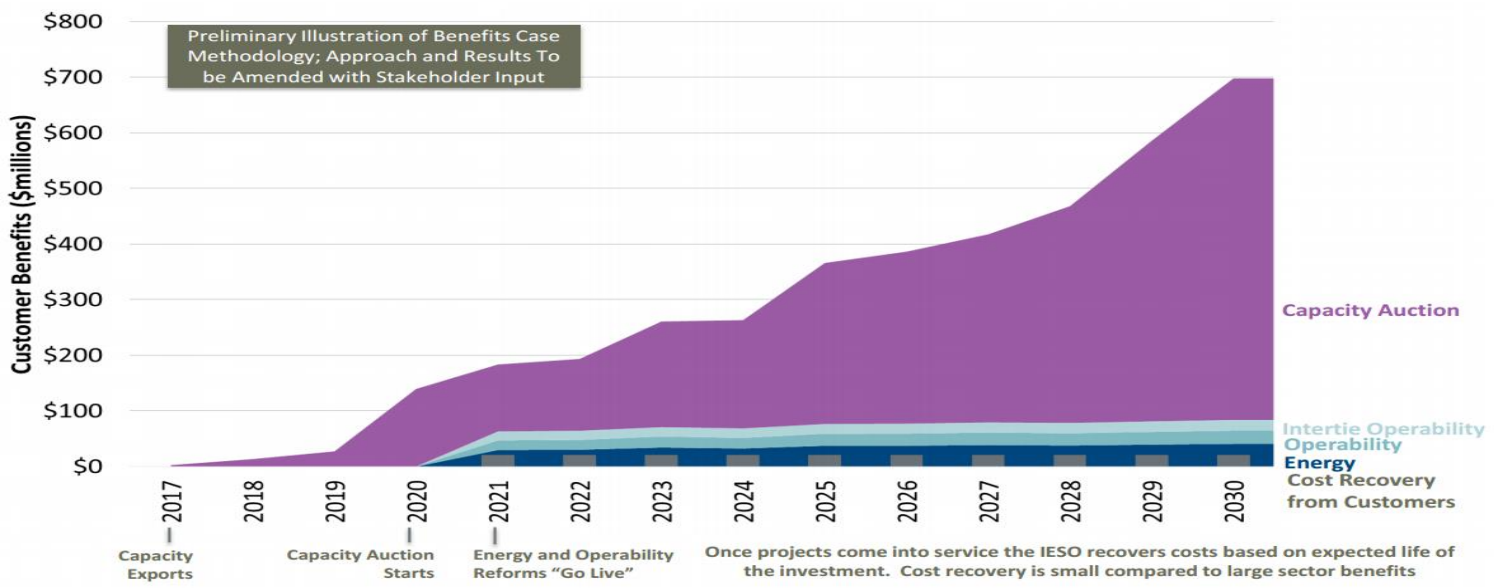
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.



GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing options under consideration are illustrative and show potential rate mitigation measures to meet a targeted 25%, 20% and 18% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to residential and small business customers (RPP).

CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

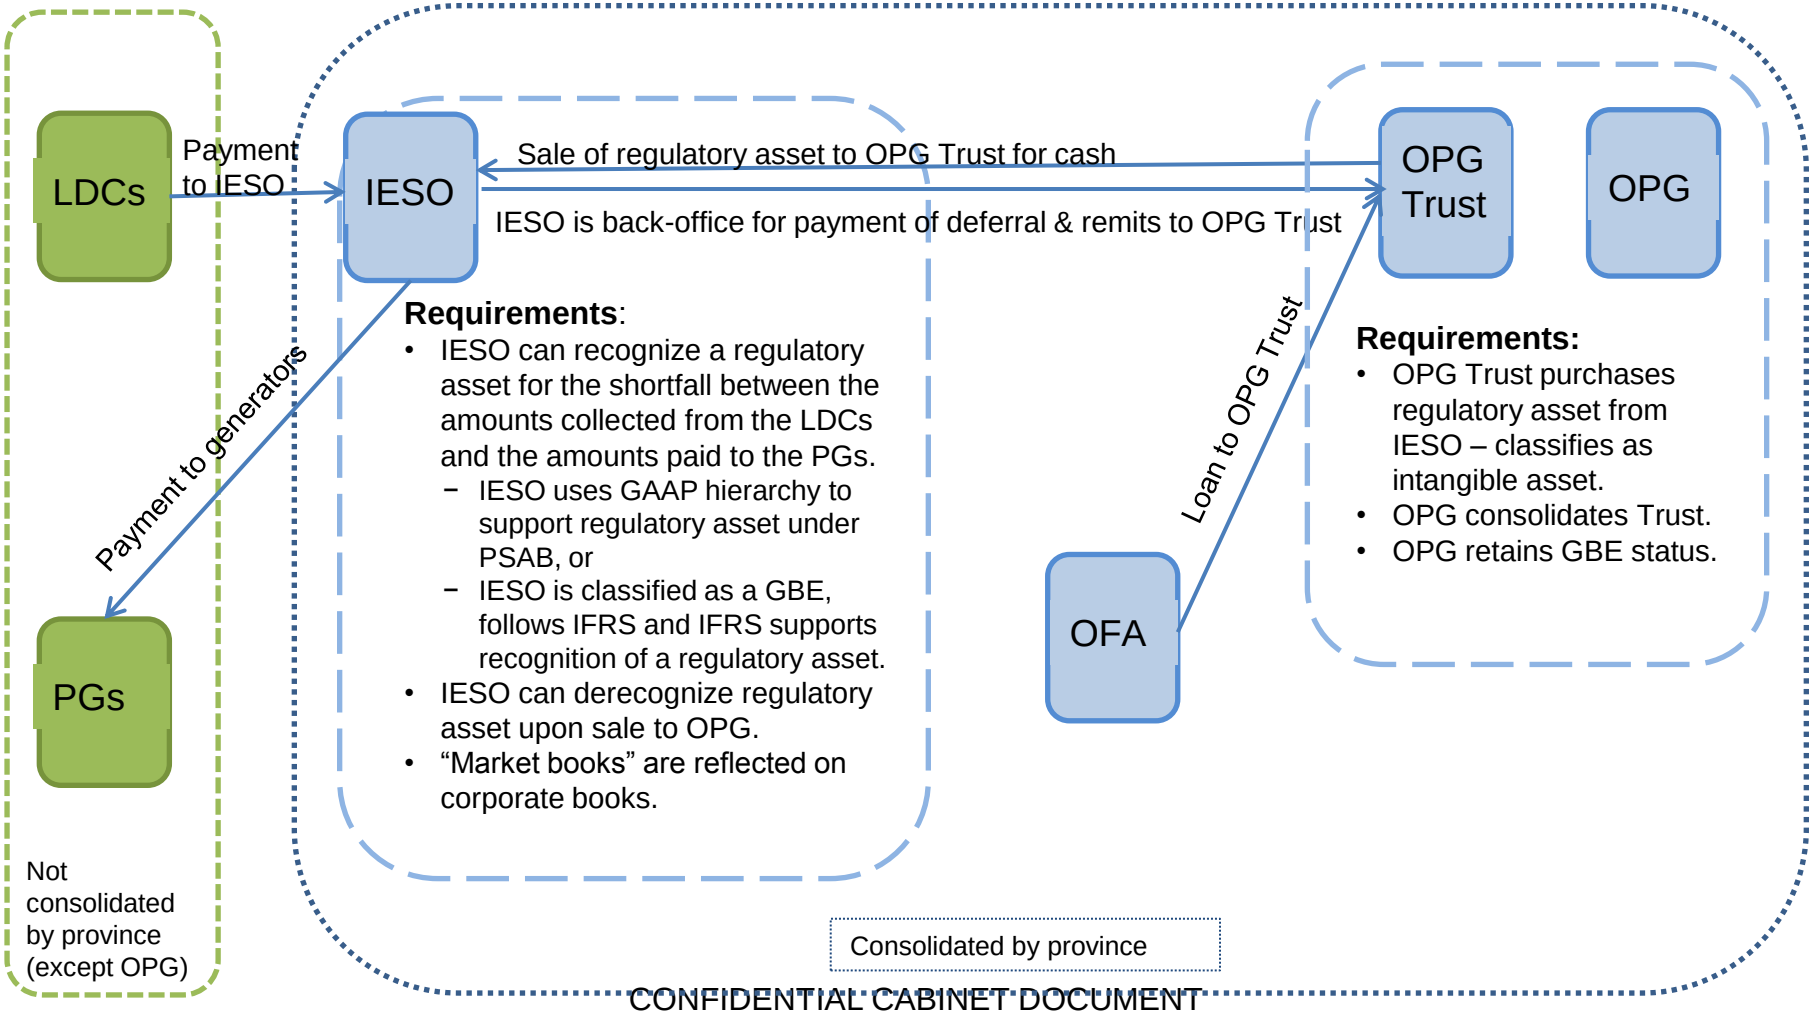
CONFIDENTIAL CABINET DOCUMENT

***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators.

**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

A. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



B. Option 1: GA Smoothing for RPP Only (Borrow $2.2 billion in 2017, Residential Bills Lowered 25%)

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048
Average Monthly Residential Bill Impact pre-tax *($/month)*	-27.0	-26.9	-26.9	-34.3	-28.1	-23.5	-16.6	-25.2	-15.7	-7.5	-17.4	-12.4	-0.1	5.7	21.1	21.4	30.7	38.1	37.6	37.5	37.3	37.2	37.0	36.8	36.7	36.5	36.4	36.2	36.1	35.9	35.8	0.0
Total Accumulated Debt *($ billion)*	2.2	4.6	7.0	10.2	13.1	15.7	17.8	20.8	23.2	25.0	27.7	30.1	31.7	32.8	32.7	32.6	31.7	30.1	28.4	26.6	24.8	22.8	20.8	18.6	16.3	13.9	11.4	8.8	6.0	3.1	0.0	0.0

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 at the rate of inflation with a limit of $3.2 billion above the true cost of GA in any given year. IESO forecast is based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. RPP does not include customers on retail contracts.

B. Option 1: GA Smoothing for RPP Only – Residential Bills Lowered 25% (with Tax-Base Funded 8% Rebate and Social Programs, 2% increase)

- Total bill below is based on a revised IESO forecast. See footnotes for more information.

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**163**	**172**	**175**	**178**	**189**	**187**
Total Bill (excludes HST)	145	153	155	158	168	165

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing. RPP does not include customers on retail contracts.

B. Option 2: GA Smoothing for RPP Only (Borrow $1.6 billion in 2017, Residential Bills Lowered 20%)

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048
Average Monthly Residential Bill Impact pre-tax *($/month)*	-18.8	-18.6	-18.4	-25.6	-20.5	-15.8	-8.8	-17.2	-7.5	0.9	-8.9	-3.7	8.7	14.7	20.9	20.7	20.6	20.4	20.2	20.1	20.0	19.9	19.8	19.7	19.7	19.6	19.5	19.4	19.3	19.3	19.2	0.0

Total Change in Accumulated Debt *($ billion)*	1.6	1.6	1.7	2.4	2.1	1.8	1.3	2.0	1.4	0.7	1.6	1.2	0.3	-0.2	-0.7	-0.8	-0.8	-0.9	-0.9	-0.9	-1.0	-1.0	-1.1	-1.2	-1.2	-1.3	-1.3	-1.4	-1.5	-1.6	-1.6	0.0

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 at the rate of inflation with a limit of $1.7 billion above the true cost of GA in any given year. IESO forecast is based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. RPP does not include customers on retail contracts.

B. Option 2: GA Smoothing for RPP Only (Borrow $1.6 billion in 2017, Residential Bills Lowered 20%)

- Total bill below is based on a revised IESO forecast. See footnotes for more information.

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**163**	**172**	**175**	**178**	**189**	**187**
Total Bill (excludes HST)	145	153	155	158	168	165
Impact of GA Financing		-19	-19	-18	-26	-21
Impact of Tax-Basing Social Programs		-2	-2	-2	-3	-3
Subtotal		131	134	137	139	142
8% rebate		-11	-11	-11	-11	-11
HST		17	17	18	18	18
Revised Bill (includes HST)	**163**	**138**	**141**	**144**	**146**	**149**
Year-over-Year Change		-16%	2%	2%	2%	2%
Change from Forecast		**-20%**	**-20%**	**-19%**	**-23%**	**-20%**

Commercial & Small Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class B Total (excludes HST)	**160**	**165**	**160**	**162**	**173**	**169**
Class B Revised Total (excludes HST)	**160**	**162**	**157**	**159**	**170**	**166**
Year-over-Year Change		1%	-3%	1%	7%	-2%
Change from Forecast		-2%	-2%	-2%	-2%	-2%

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing. RPP does not include customers on retail contracts.

B. Option 3: GA Smoothing for RPP Only (Borrow $1.4 billion in 2017, Residential Bills Lowered 18%)

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048
Average Monthly Residential Bill Impact pre-tax *($/month)*	-17.5	-18.5	-16.6	-15.7	-13.5	-12.9	-12.2	-12.2	-11.0	-9.7	-8.8	-6.9	-0.6	3.4	6.2	8.6	12.2	19.0	25.8	28.4	28.4	29.5	26.8	24.2	22.2	20.4	17.3	12.2	6.2	3.7	3.3	2.0

Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing. RPP does not include customers on retail contracts.

GA Smoothing – Accounting Considerations

- Analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure, including the number of entities involved increases risk in and of itself.
- If all requirements can be met, an accounting analysis can be supported that results in: (1) no fiscal impact; and (2) no increase in net debt.
- IESO requirements – IESO mgmt, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs;
    - IESO uses GAAP hierarchy to support regulatory asset under PSAB; or
    - IESO is classified as a GBE, follows IFRS and IFRS supports recognition of a regulatory asset.
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG mgmt, PwC (OPG auditor), KPMG (Energy advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

GA Smoothing – Legal Considerations

- The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation.

- In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax.

- Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- If Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA Smoothing (i.e., because it is only targeted to RPP consumers) – consideration could be given to provide tax-based measures to off-set electricity costs (e.g., tax-credits, programs, etc).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - Government is developing an option that would provide rate relief for Class B consumers.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there could be a negative impact on the province's fiscal plan, as shown below.

- The table below shows the projected fiscal savings /costs related to GA smoothing Options 1 and 2 under these two legal/accounting treatment scenarios

Fiscal Impact ($M)	**2017-18**	**2018-19**	**2019-20**	**2020-21**	**2021-22**
Without Proposed Legal/Accounting Treatment					
Option 1 - Bills Lowered by 25%, RPP Only*	2,266	2,372	2,633	3,096	2,775
Option 2 - Bills Lowered by 20%, RPP Only*	1,574	1,632	1,844	2,282	1,988
Option 3 - Bills Lowered by 18%, RRP Only*	1,487	1,585	1,524	1,503	1,429

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

Source: Ministry of Energy

Legislative Authority – Considerations

1. Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **LDC Affordability Fund (2c):** In order to implement new LDC affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

2. Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

3. GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The EA allows the Lieutenant Governor in Council to cause an OPG Holdco to be created under the *Business Corporations Act.*
  - The mandate and governance of the Financing Subsidiary will be addressed through amendments to the EA. Governance provisions will be designed to address the accounting control indicators.
  - The Financing Subsidiary will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the Financing Subsidiary and settle accounts with the Financing Subsidiary as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the Financing Subsidiary to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the Financing Subsidiary (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement.
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

Mike, I don't know how much you know about this, but maybe it's time to bring you up-to-speed if you're not aware of what the government is thinking of doing on electricity rate mitigation. I'd be happy to fill you in whenever it's convenient for you. Ken has been in the loop through the piece, as it's struck me from the beginning that this is far more of an accounting issue than a funding one.

Regards,
Gadi

Subject: RE: GA Financing Terms

I agree that from a funding perspective the Province, through the OFA (actually the OEFC, but that's just a detail), would be able to accommodate this, so I think it definitely becomes an accounting question. I'm under the impression that OPCD has already been linked in on this, but it would make sense to make sure that they are.

Subject: GA Financing Terms

Hi Gadi,

Energy was talking with OPG yesterday about GA Financing modelling. One of the simplifying assumptions in the model is the ability to build up interest without any payments for quite long periods of time (10 years +). This contributes to the debt build up, but allows for the large, early year rate reductions.

OPG is going to reality check this based on what it thinks a 3rd party lender would expect. At a high level, they have suggested that interest capitalization would be unrealistic beyond 1 year.

What do you think is realistic if OFA acts as lender? I assume the Province may have some more flexibility, but would require terms that meet the asset test for accounting purposes. Should we link in with OPCD as well on this question?

Thanks,
Scott

Hi Gadi, Ken,

On a separate but related issue, a thought on OEFC financing of OPG and the potential new use of those funds for the GA deferral.

You may have already contemplated this, but as the current modelling by Energy does not assume a commercial spread on the debt, but rather the discussion has been that, if financed by the Province, it would be financing at the Province's cost of funds.

As that would be at variance with the current practice of OEFC charging a commercial spread, I was wondering what options might have to be decided on.

- Two credit facilities, one as per the current practice and inclusive of a commercial spread, while the other is GA-financing specific with no commercial spread. But, that would seem to weaken the accounting issue that Ken discussed yesterday on OEFC lending directly to the new trust?
- One big OPG credit facility, and charging a commercial spread, which would raise the cost of the GA option, and likely then not desirable.
- One big OPG credit facility, with no commercial spread.
    - Would it be at the OEFC cost of funds (e.g., the Province's plus a debt guarantee fee)?
    - Or would the DGF be eliminated going-forward, so OPG would then borrow from OEFC at the Province's cost of funds going forward for the GA purposes as well as other purposes. Good for ratepayers (especially on Darlington refurb), but a forgone fiscal benefit, with the Province left with carrying the cost and risk without any spread.

The last option would likely be the one that the government would most prefer from a rate perspective. That said, to get asset treatment, does some kind of spread have to be charged, but smaller than 50 bps? Say 15 (like the union trusts loans from the Province)?

Subject: FW: GA Financing Terms

Mike, I don't know how much you know about this, but maybe it's time to bring you up-to-speed if you're not aware of what the government is thinking of doing on

electricity rate mitigation. I'd be happy to fill you in whenever it's convenient for you. Ken has been in the loop through the piece, as it's struck me from the beginning that this is far more of an accounting issue than a funding one.

Regards,
Gadi

Subject: RE: GA Financing Terms

I agree that from a funding perspective the Province, through the OFA (actually the OEFC, but that's just a detail), would be able to accommodate this, so I think it definitely becomes an accounting question. I'm under the impression that OPCD has already been linked in on this, but it would make sense to make sure that they are.

Regards,
Gadi

Subject: GA Financing Terms

Hi Gadi,

Energy was talking with OPG yesterday about GA Financing modelling. One of the simplifying assumptions in the model is the ability to build up interest without any payments for quite long periods of time (10 years +). This contributes to the debt build up, but allows for the large, early year rate reductions.

OPG is going to reality check this based on what it thinks a 3rd party lender would expect. At a high level, they have suggested that interest capitalization would be unrealistic beyond 1 year.

What do you think is realistic if OFA acts as lender? I assume the Province may have some more flexibility, but would require terms that meet the asset test for accounting purposes. Should we link in with OPCD as well on this question?

Thanks,
Scott

Ontario

Electricity Price Mitigation

Ministry of Energy

February 15, 2017

Minister

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate – $11/month savings, updating Rural or Remote Rate Protection (RRRP) – $45/month savings, expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants and suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

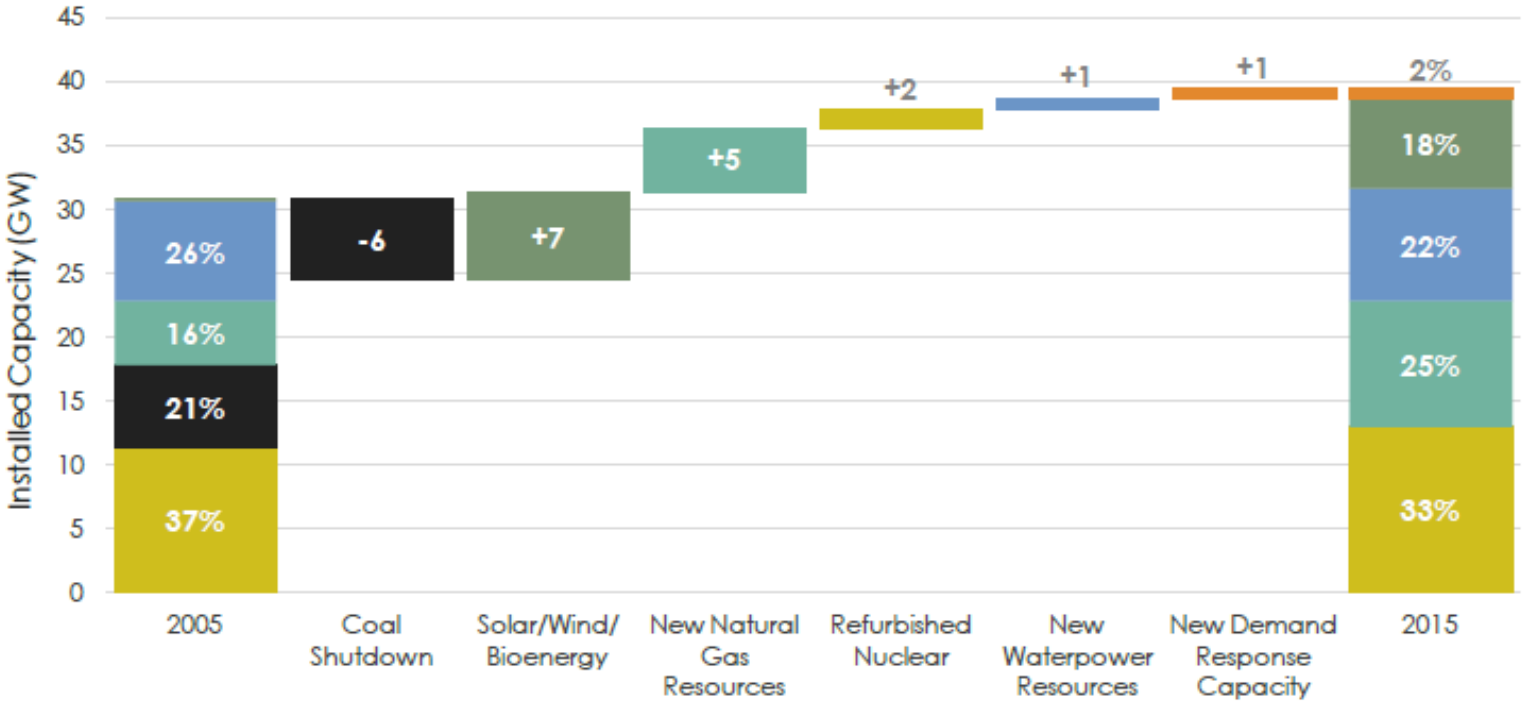
- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

CONFIDENTIAL CABINET DOCUMENT

Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



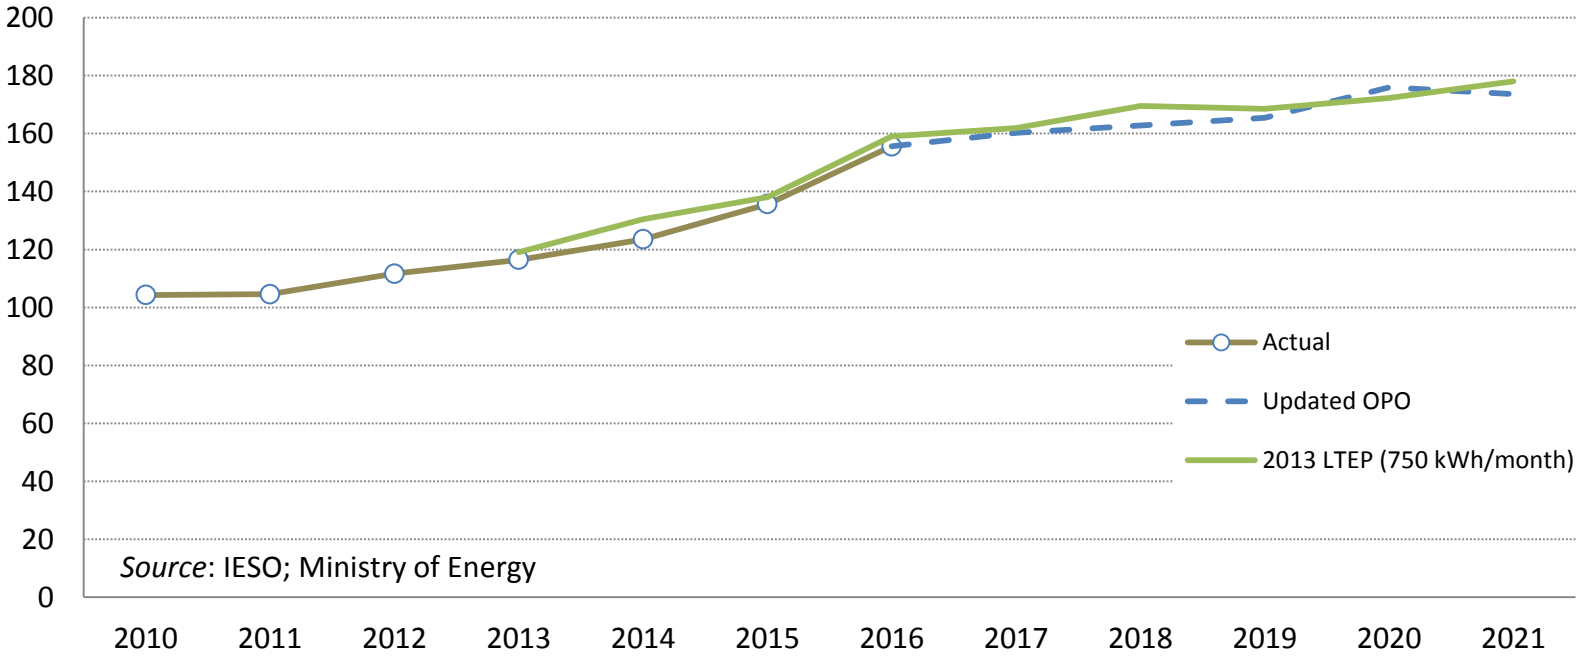
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



Rate Mitigation Proposal

- Three approaches are proposed:

  1) Helping the most vulnerable by enhancing electricity support programs and shifting cost onto the tax-base:
     - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
     - Ontario Electricity Support Program (OESP) Expansion;
     - LDC Affordability Fund; and
     - On-Reserve First Nations Delivery Credit.

  2) Ongoing activities to bend the future cost curve of electricity:
     - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates; and
     - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

  3) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
     - Implementation Model; and
     - Smoothing Mechanism.

- The following slides provide additional information on the above initiatives.

ELECTRICITY SUPPORT PROGRAMS TO HELP THE MOST VULNERABLE

Electricity Support Programs to Help the Most Vulnerable

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to delivery electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  a. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  b. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  c. **Establish an LDC Affordability Fund**, providing energy efficiency measures at no or minimal cost to those struggling to pay electricity bills and are ineligible for low-income conservation or support programs.

  d. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

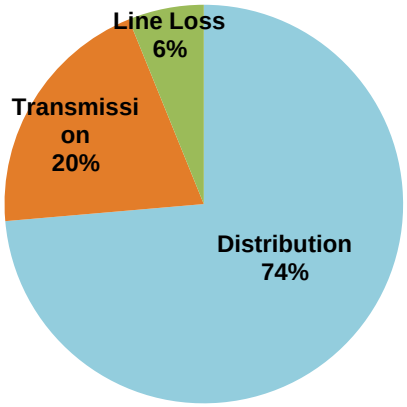
Total Amount	**$145.95**

Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

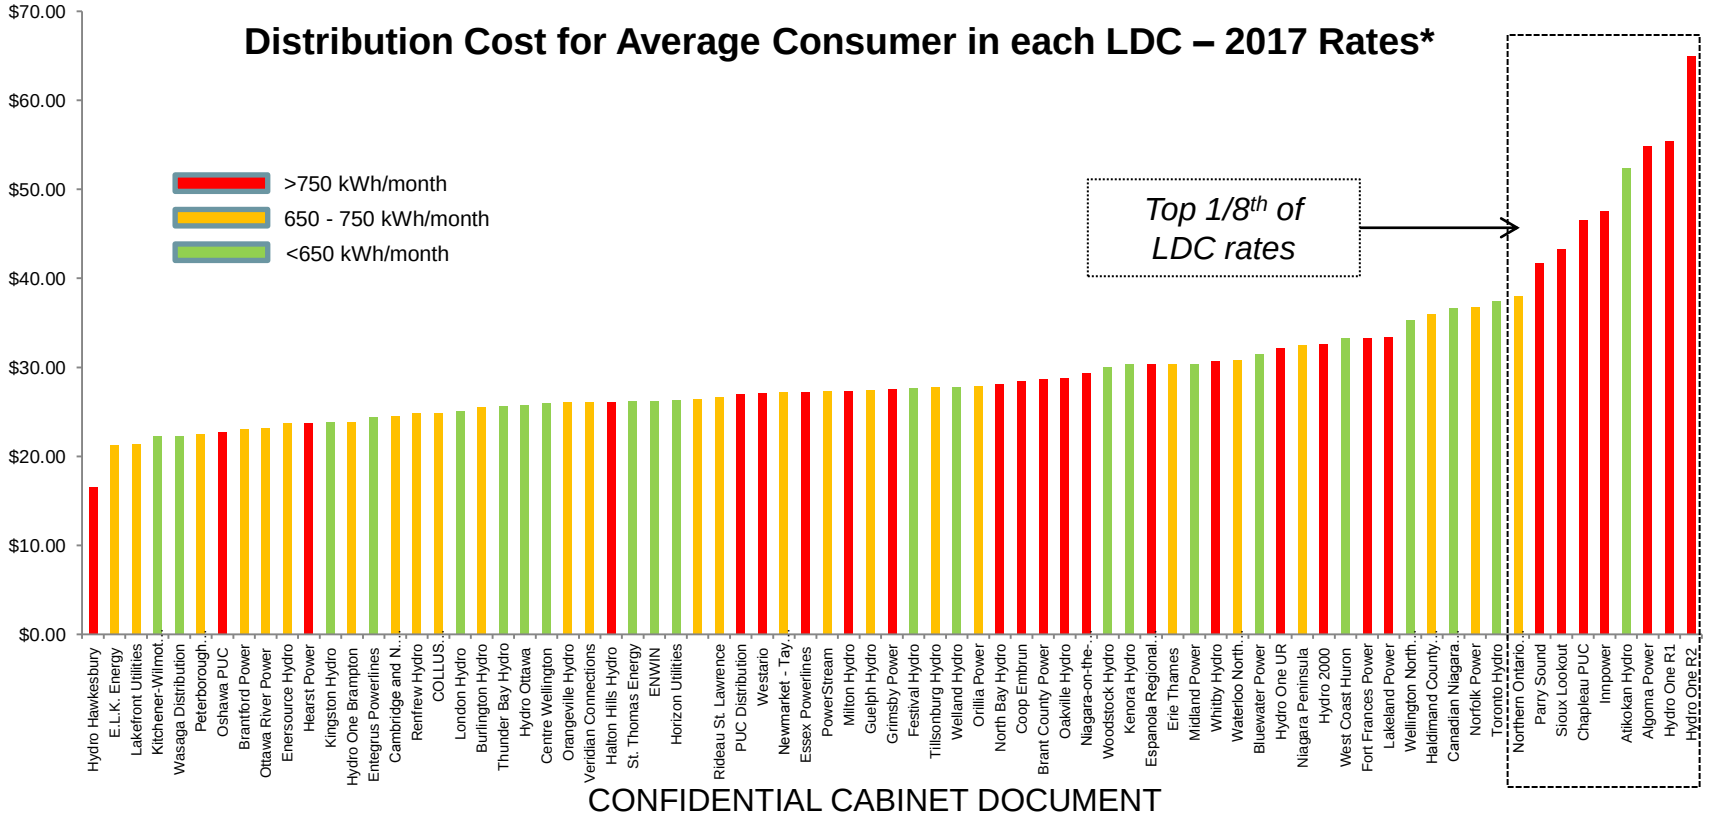
- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - An estimated 700,000 customers would benefit from these enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.



CONFIDENTIAL CABINET DOCUMENT

Note: *Rates are for 2017 (either approved or proposed)*

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program. Legal and regulatory risks (particularly with regards to legal authority and to the Ontario Energy Board's role in setting rates and incenting efficiencies) require further analysis
  - Some options may impact OEB rate-setting processes and create disincentives towards Hydro One productivity and performance improvements.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board.

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
TOTAL	**-**	**454**	**450**	**446**	**444**

Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Does not include Algoma Power or Hydro One Remotes which would continue to be on the rate base. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Costs will decrease through 2023 due to rate making changes and are expected to increase post 2023 due to regular rate increases.

B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP benefits vary by income level and family size, and there are two benefit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in benefits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

CONFIDENTIAL CABINET DOCUMENT

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced, including:
  - Working to get the OESP participation as close as possible to 100%:
    - Streamlining the application process to make it easier / quicker to get through (e.g., an alternative to the requirement to mail-in signed consent forms);
    - Putting in place a more aggressive communications strategy to make sure vulnerable communities are aware of the program; and
    - Exploring automatic OESP qualification for those who receive provincial programs (e.g., OW, ODSP).
  - Increasing the existing benefit scales by an additional 50% and expanding who benefits are provided to (see the following slide for details on what this enhancement would do).
- It is also recommended that the OESP be enhanced and also supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP benefit scales and how the scales would be enhanced if increased by 50% and benefits are extended to additional groups (represented in the circled boxes):

Existing OESP Benefit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000	-	-	$30	$34	$38	$42	$50
	$39,001 - $48,000	-	-	-	-	$30	$34	$38
	$48,001 - $52,000	-	-	-	-	-	-	$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000	-	-	$45	$50	$55	$60	$75
	$39,001 - $48,000	-	-	-	-	$45	$50	$55
	$48,001 - $52,000	-	-	-	-	-	-	$45

Proposed +50% OESP Benefit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000	-	$40	$45	$51	$57	$63	$75
	$39,001 - $48,000	-	-	$35	$40	$45	$51	$57
	$48,001 - $52,000	-	-	-	-	$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000	-	$60	$68	$75	$83	$90	$113
	$39,001 - $48,000	-	-	$52	$60	$68	$75	$83
	$48,001 - $52,000	-	-	-	-	$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-bas. The scope of changes would depend on the implementation / delivery mechanisms.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix require will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Ontario Electricity Support Program, including the 50% Enhancement (**Note:** The fiscal impact does not include adding new categories to the OESP matrix. ENERGY will work with the OEB to forecast what the total costs could be).	-	178	239	290	334

C. Establishing a New LDC Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as "low-income" but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000***** residential electricity accounts in arrears; of these about 19,900****** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.
- The Affordability Fund would not be used to provide grants or financial assistance to customers to forgive all or a portion of their arrears or electricity bill.

*** Note:** Unverified numbers reported by LDCs to the OEB
**** Note:** Low-income customers identified through participation in LEAP

C. Establishing a New LDC Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who are most in need, such as those who are facing disconnection and who cannot qualify for the low-income programs.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New LDC Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the feasibility of establishing a Fund and to identify a willing LDC(s) to administer the funds.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

- LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers that meet the targeted eligibility criteria.
  - Recipients could receive measures ranging from $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
    - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
    - Programmable thermostats, weather stripping, insulation (in homes with electric heating).
  - Consideration could also be given to including cold climate air source heat pumps for electrically heated homes, which can range in cost from $7,000 to $13,000.
  - As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New LDC Affordability Fund – Considerations

Considerations

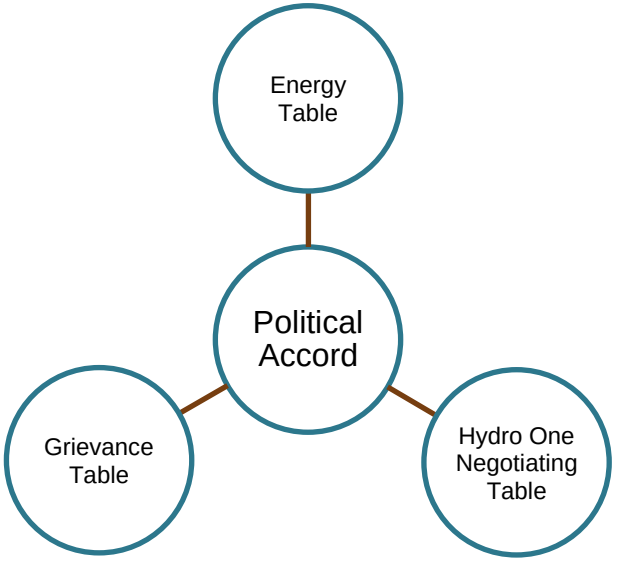
- The LDC Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to establish a Working Group, including the OEB, LDCs and potentially low income organizations to help develop funding criteria and allocation.
- LDCs need flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The LDC Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with one or several LDCs to administer the Fund and transfer money before end of fiscal year.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- In June 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by the energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million or 11 cents a month for a typical residential electricity consumer.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.

- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.

- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million or 11 cents a month for a typical residential electricity consumer.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473
Attawapiskat Power Corporation	336
Bluewater Power Distribution Corporation	237
Cat Lake Power Utility Ltd.	80
Cornwall Electric Distribution	514
Hydro One Networks Inc.	16,679
Hydro One Remote Communities Inc.	2,579
PUC Distribution Inc. (Sault Ste. Marie)	264
Thunder Bay Hydro Electricity Distribution	332
Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Fiscal Roll-Up

Fiscal Impact ($M)*	16-17	17-18	18-19	19-20	20-21
RRRP Enhancements**	-	454	450	446	444
Ontario Electricity Support Program, including the 50% Enhancement (**Note:** The fiscal impact does not include adding new categories to the OESP matrix. ENERGY will work with the OEB to forecast what the total costs could be)	-	178	239	290	334
On-Reserve First Nation Delivery Credit	-	20	20	20	20
LDC Affordability Fund***	200	-	-	-	-
Total	200	652	709	756	798

***Note:** GA Smoothing does not have a fiscal impact because it is assumed that both legal authority and accounting treatment are met. See GA Smoothing – Fiscal Considerations for fiscal impact of GA smoothing if legal and accounting treatment not met.

****Note: Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Does not include Algoma Power or Hydro One Remotes which would continue to be on the rate base. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Costs will decrease through 2023 due to rate making changes and are expected to increase post 2023 due to regular rate increases.

*****Note:** Funding for the LDC Affordability Fund is one-time in 2016/17.

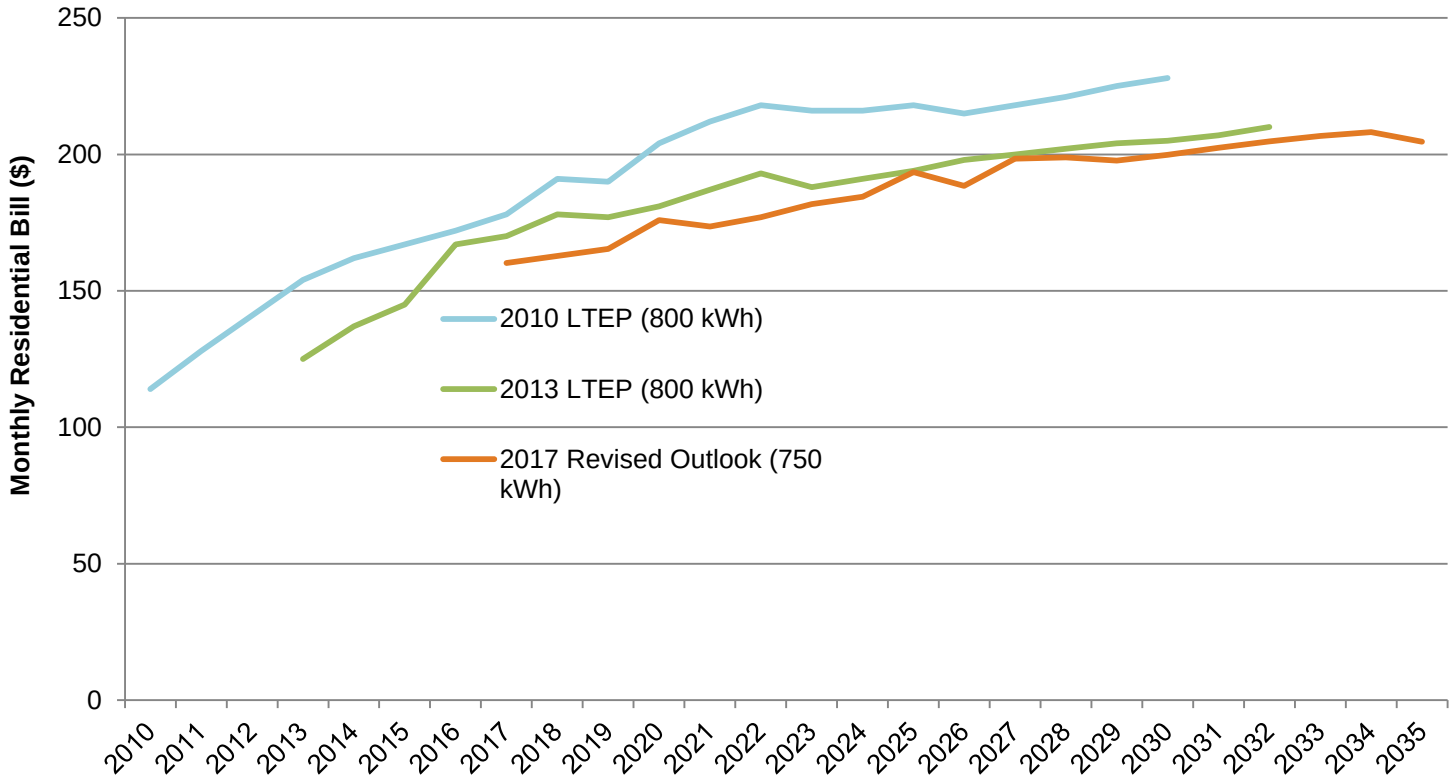
BENDING THE FUTURE COST CURVE OF ELECTRICITY

Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.

Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of December 2016) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

CONFIDENTIAL CABINET DOCUMENT

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

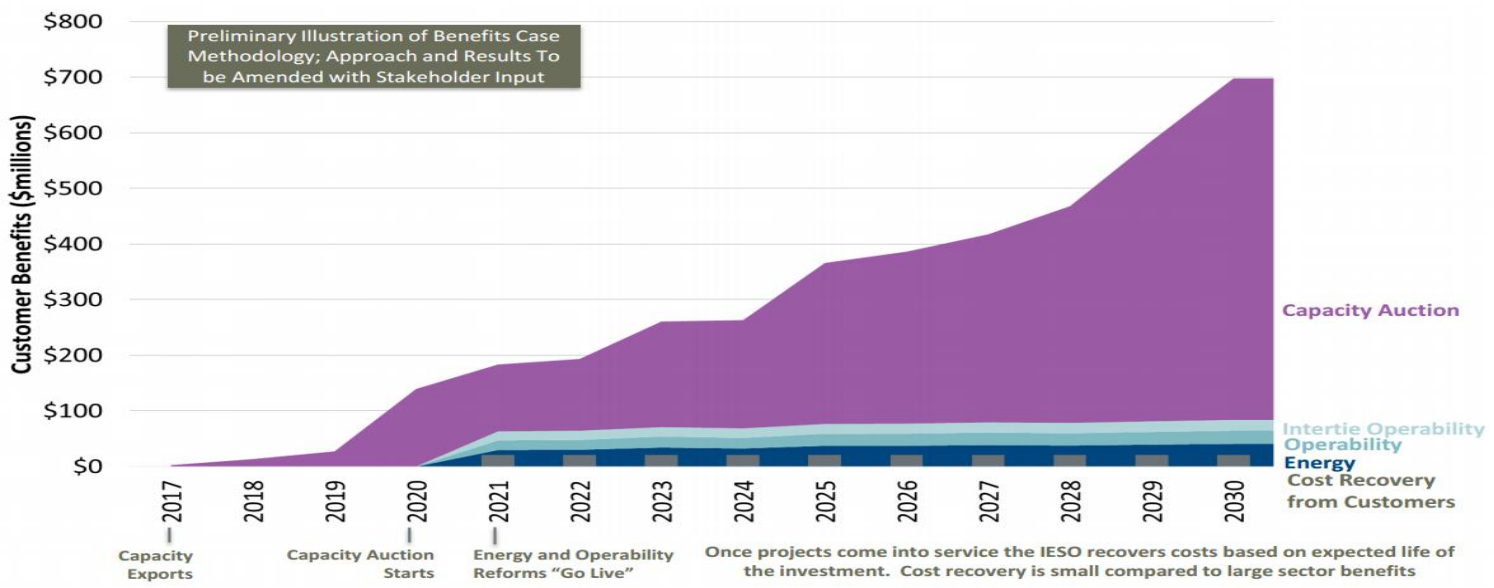
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.



GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing options under consideration are illustrative and show potential rate mitigation measures to meet a targeted 25%, 20% and 18% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to residential and small business customers (RPP).

CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

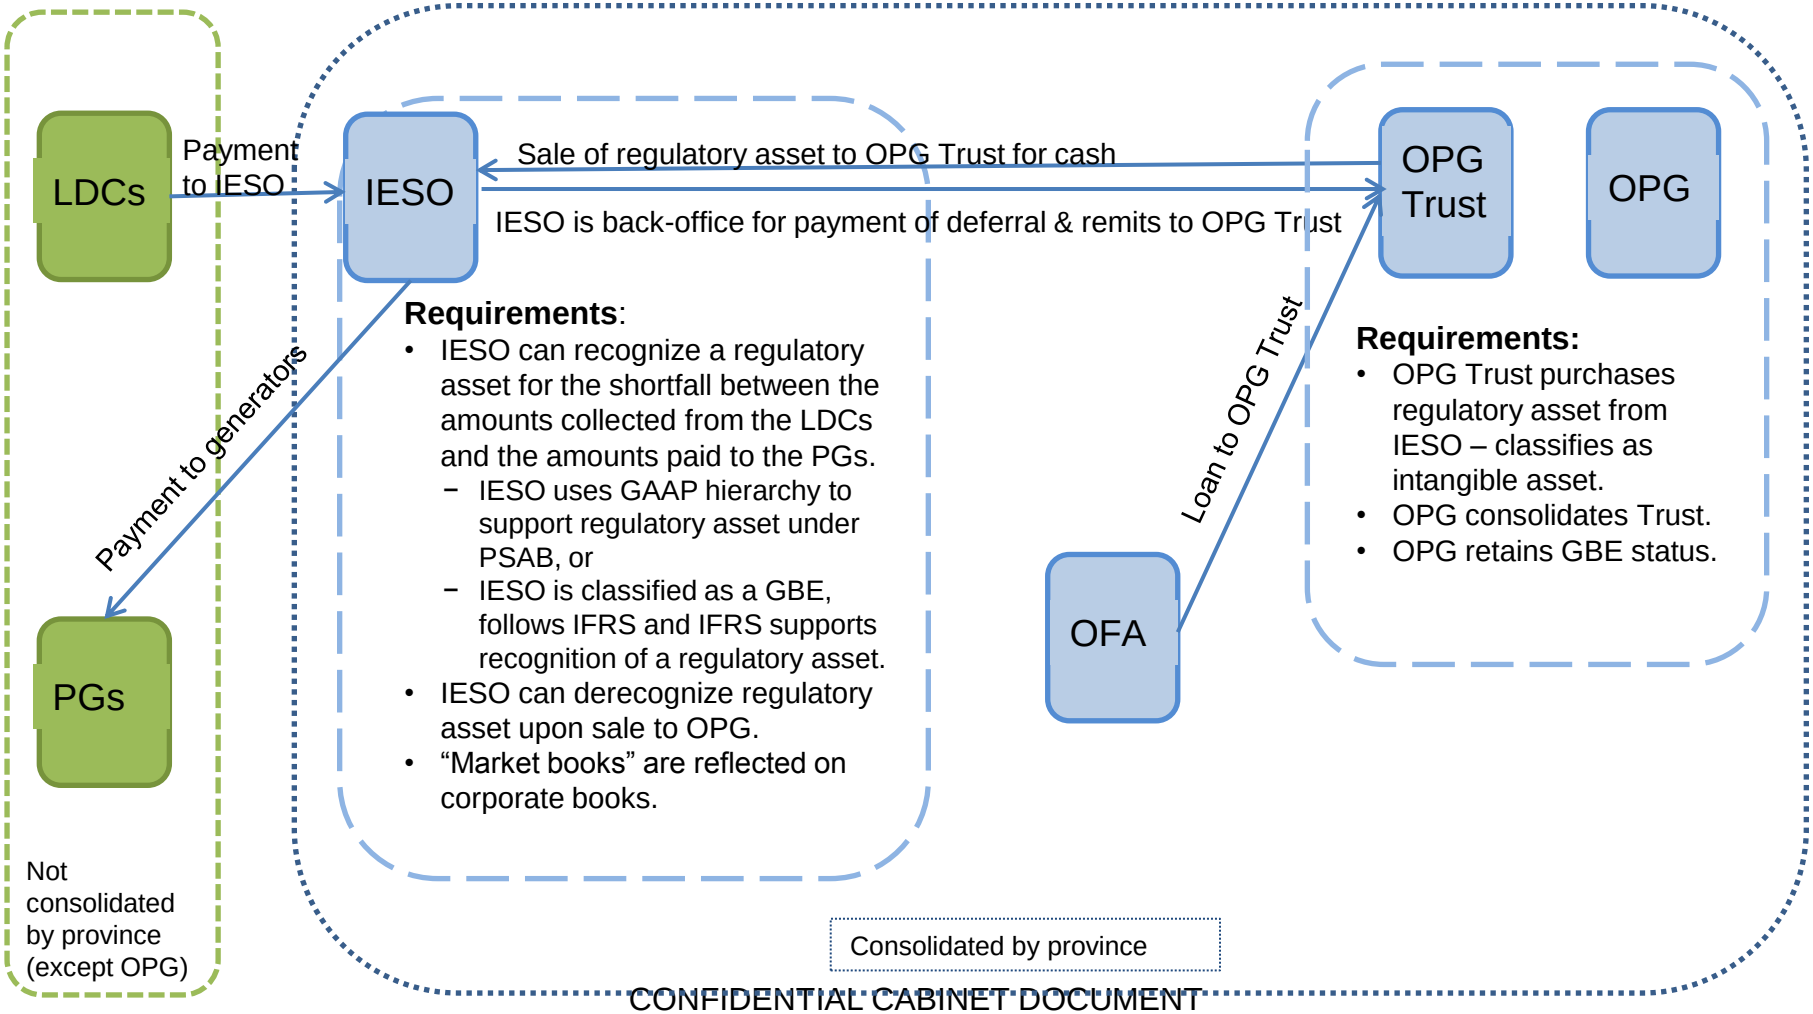
CONFIDENTIAL CABINET DOCUMENT

***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators.

**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

A. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



B. Option 1: GA Smoothing for RPP Only (Borrow $2.2 billion in 2017, Residential Bills Lowered 25%)

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048
Average Monthly Residential Bill Impact pre-tax *($/month)*	-27.0	-26.9	-26.9	-34.3	-28.1	-23.5	-16.6	-25.2	-15.7	-7.5	-17.4	-12.4	-0.1	5.7	21.1	21.4	30.7	38.1	37.6	37.5	37.3	37.2	37.0	36.8	36.7	36.5	36.4	36.2	36.1	35.9	35.8	0.0
Total Accumulated Debt *($ billion)*	2.2	4.6	7.0	10.2	13.1	15.7	17.8	20.8	23.2	25.0	27.7	30.1	31.7	32.8	32.7	32.6	31.7	30.1	28.4	26.6	24.8	22.8	20.8	18.6	16.3	13.9	11.4	8.8	6.0	3.1	0.0	0.0

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 at the rate of inflation with a limit of $3.2 billion above the true cost of GA in any given year. IESO forecast is based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. RPP does not include customers on retail contracts.

B. Option 1: GA Smoothing for RPP Only – Residential Bills Lowered 25% (with Tax-Base Funded 8% Rebate and Social Programs, 2% increase)

- Total bill below is based on a revised IESO forecast. See footnotes for more information.

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**163**	**172**	**175**	**178**	**189**	**187**

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing. RPP does not include customers on retail contracts.

B. Option 2: GA Smoothing for RPP Only (Borrow $1.6 billion in 2017, Residential Bills Lowered 20%)

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048
Average Monthly Residential Bill Impact pre-tax *($/month)*	-18.8	-18.6	-18.4	-25.6	-20.5	-15.8	-8.8	-17.2	-7.5	0.9	-8.9	-3.7	8.7	14.7	20.9	20.7	20.6	20.4	20.2	20.1	20.0	19.9	19.8	19.7	19.7	19.6	19.5	19.4	19.3	19.3	19.2	0.0

Notes: Based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing. RPP does not include customers on retail contracts.

B. Option 3: GA Smoothing for RPP Only (Borrow $1.4 billion in 2017, Residential Bills Lowered 18%)

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048

GA Smoothing – Accounting Considerations

- Analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure, including the number of entities involved increases risk in and of itself.
- If all requirements can be met, an accounting analysis can be supported that results in: (1) no fiscal impact; and (2) no increase in net debt.
- IESO requirements – IESO mgmt, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs;
    - IESO uses GAAP hierarchy to support regulatory asset under PSAB; or
    - IESO is classified as a GBE, follows IFRS and IFRS supports recognition of a regulatory asset.
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG mgmt, PwC (OPG auditor), KPMG (Energy advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

GA Smoothing – Legal Considerations

- The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation.

- In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax.

- Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- If Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA Smoothing (i.e., because it is only targeted to RPP consumers) – consideration could be given to provide tax-based measures to off-set electricity costs (e.g., tax-credits, programs, etc).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - Government is developing an option that would provide rate relief for Class B consumers.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there could be a negative impact on the province's fiscal plan, as shown below.

- The table below shows the projected fiscal savings /costs related to GA smoothing Options 1 and 2 under these two legal/accounting treatment scenarios

Fiscal Impact ($M)	**2017-18**	**2018-19**	**2019-20**	**2020-21**	**2021-22**
Without Proposed Legal/Accounting Treatment					
Option 1 - Bills Lowered by 25%, RPP Only*	2,266	2,372	2,633	3,096	2,775
Option 2 - Bills Lowered by 20%, RPP Only*	1,574	1,632	1,844	2,282	1,988
Option 3 - Bills Lowered by 18%, RRP Only*	1,487	1,585	1,524	1,503	1,429

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

Source: Ministry of Energy

Legislative Authority – Considerations

1. Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **LDC Affordability Fund (2c):** In order to implement new LDC affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

2. Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

3. GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The EA allows the Lieutenant Governor in Council to cause an OPG Holdco to be created under the *Business Corporations Act.*
  - The mandate and governance of the Financing Subsidiary will be addressed through amendments to the EA. Governance provisions will be designed to address the accounting control indicators.
  - The Financing Subsidiary will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the Financing Subsidiary and settle accounts with the Financing Subsidiary as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the Financing Subsidiary to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the Financing Subsidiary (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement.
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

---

3:30 today doesn't work, but I'm available between now and 11:45 if that works for you, or we could talk tomorrow. I'm also forwarding to you a rather lengthy submission that Energy is presenting to Cabinet today. The key issues from our perspective are the Global Adjustment, which starts on slide 41.

Subject: FW: GA Financing Terms

Mike, I don't know how much you know about this, but maybe it's time to bring you up-to-speed if you're not aware of what the government is thinking of doing on electricity rate mitigation. I'd be happy to fill you in whenever it's convenient for you. Ken has been in the loop through the piece, as it's struck me from the beginning that this is far more of an accounting issue than a funding one.
Regards,
Gadi

Subject: RE: GA Financing Terms

I agree that from a funding perspective the Province, through the OFA (actually the OEFC, but that's just a detail), would be able to accommodate this, so I think it definitely becomes an accounting question. I'm under the impression that OPCD has already been linked in on this, but it would make sense to make sure that they are.
Regards,
Gadi

Subject: GA Financing Terms

Hi Gadi,

Energy was talking with OPG yesterday about GA Financing modelling. One of the simplifying assumptions in the model is the ability to build up interest without any payments for quite long periods of time (10 years +). This contributes to the debt build up, but allows for the large, early year rate reductions.

OPG is going to reality check this based on what it thinks a 3rd party lender would expect. At a high level, they have suggested that interest capitalization would be unrealistic beyond 1 year.

What do you think is realistic if OFA acts as lender? I assume the Province may have some more flexibility, but would require terms that meet the asset test for accounting purposes. Should we link in with OPCD as well on this question?

Thanks,

Scott

Ontario

Electricity Price Mitigation

Ministry of Energy

February 15, 2017

Minister

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate – $11/month savings, updating Rural or Remote Rate Protection (RRRP) – $45/month savings, expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants and suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

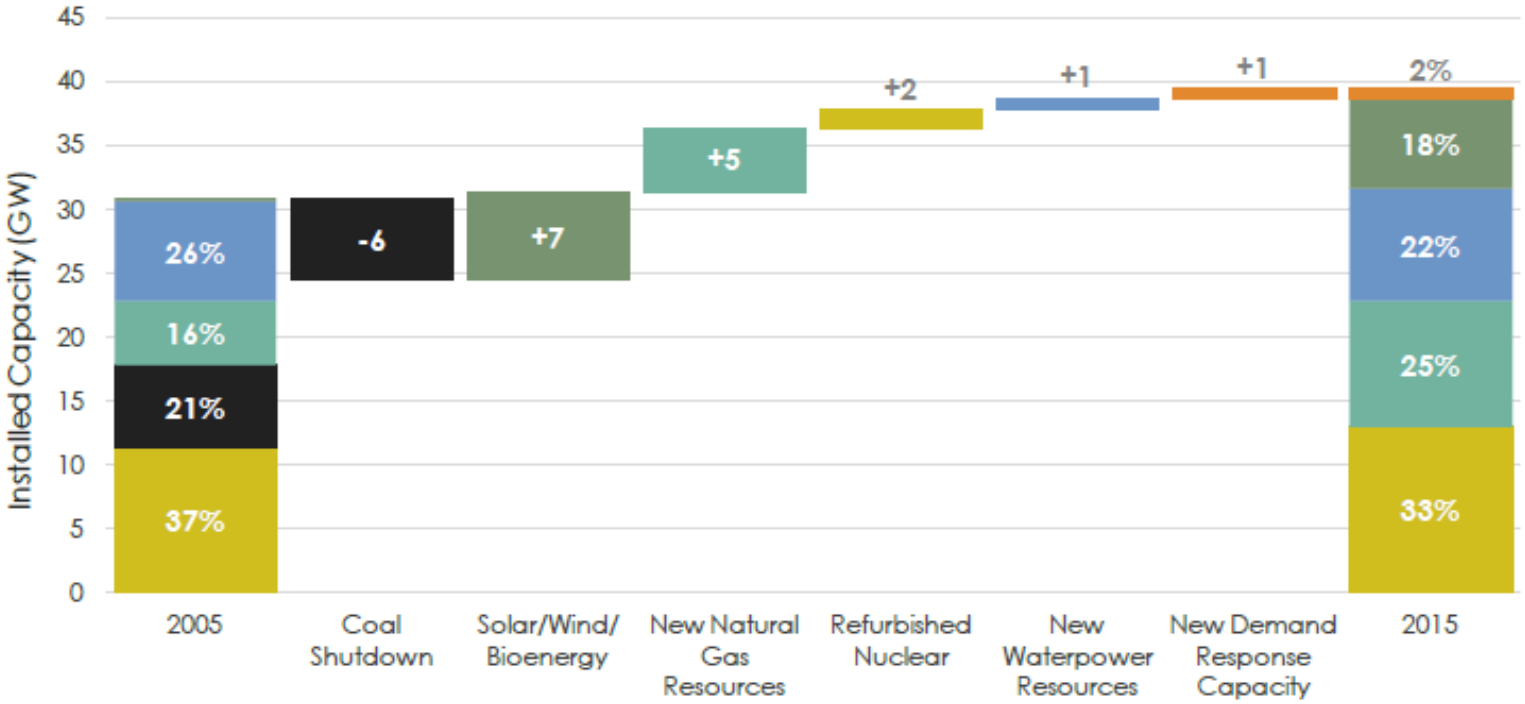
- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

CONFIDENTIAL CABINET DOCUMENT

Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



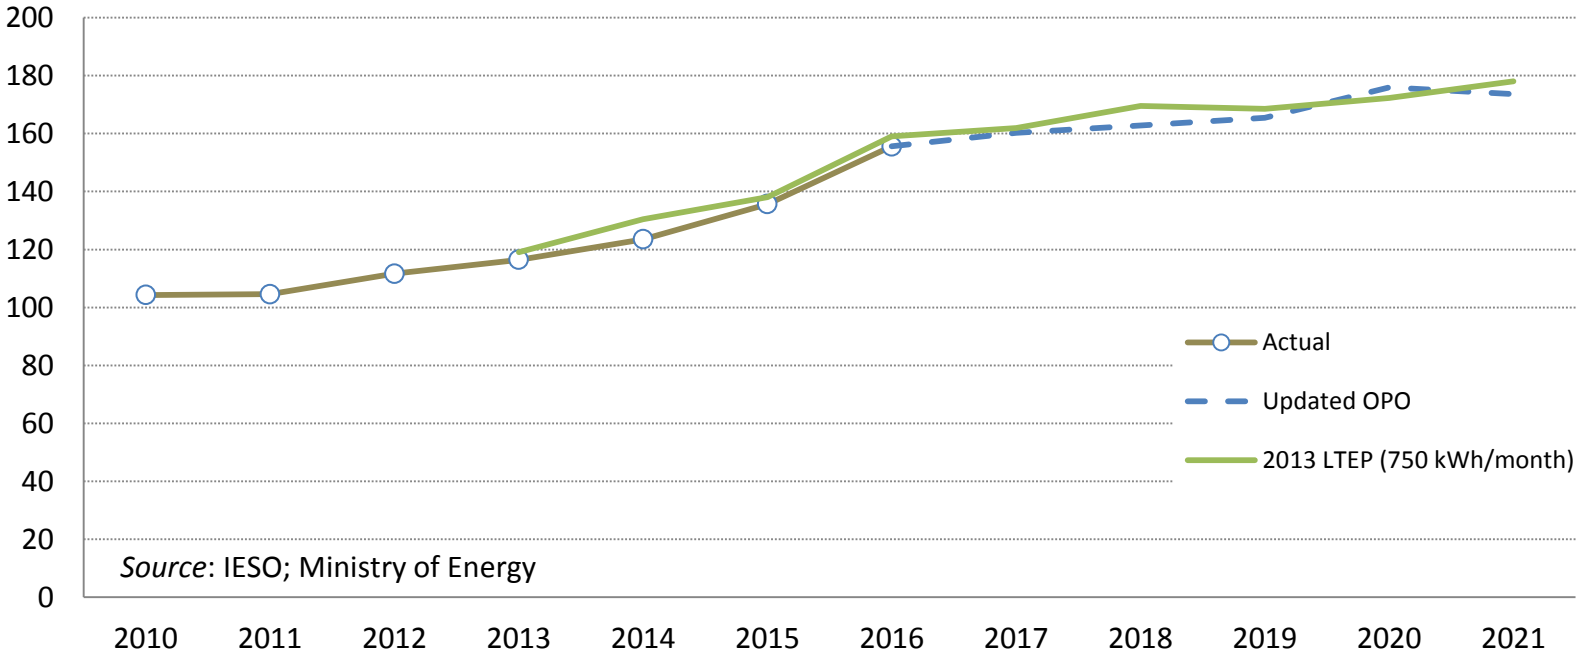
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



Rate Mitigation Proposal

- Three approaches are proposed:

  1) Helping the most vulnerable by enhancing electricity support programs and shifting cost onto the tax-base:
     - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
     - Ontario Electricity Support Program (OESP) Expansion;
     - LDC Affordability Fund; and
     - On-Reserve First Nations Delivery Credit.

  2) Ongoing activities to bend the future cost curve of electricity:
     - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates; and
     - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

  3) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
     - Implementation Model; and
     - Smoothing Mechanism.

- The following slides provide additional information on the above initiatives.

ELECTRICITY SUPPORT PROGRAMS TO HELP THE MOST VULNERABLE

Electricity Support Programs to Help the Most Vulnerable

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to delivery electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  a. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  b. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  c. **Establish an LDC Affordability Fund**, providing energy efficiency measures at no or minimal cost to those struggling to pay electricity bills and are ineligible for low-income conservation or support programs.

  d. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

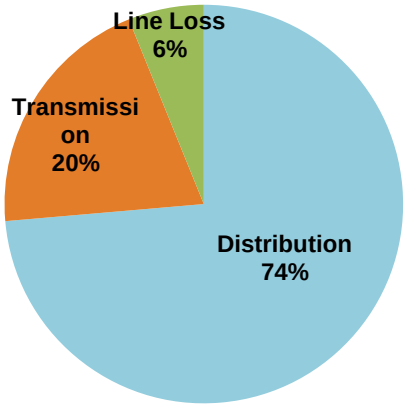
Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - An estimated 700,000 customers would benefit from these enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.

Note: *Rates are for 2017 (either approved or proposed)*

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program. Legal and regulatory risks (particularly with regards to legal authority and to the Ontario Energy Board's role in setting rates and incenting efficiencies) require further analysis
  - Some options may impact OEB rate-setting processes and create disincentives towards Hydro One productivity and performance improvements.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board.

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
TOTAL	**-**	**454**	**450**	**446**	**444**

Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Does not include Algoma Power or Hydro One Remotes which would continue to be on the rate base. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Costs will decrease through 2023 due to rate making changes and are expected to increase post 2023 due to regular rate increases.

B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP benefits vary by income level and family size, and there are two benefit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in benefits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

CONFIDENTIAL CABINET DOCUMENT

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced, including:
  - Working to get the OESP participation as close as possible to 100%:
    - Streamlining the application process to make it easier / quicker to get through (e.g., an alternative to the requirement to mail-in signed consent forms);
    - Putting in place a more aggressive communications strategy to make sure vulnerable communities are aware of the program; and
    - Exploring automatic OESP qualification for those who receive provincial programs (e.g., OW, ODSP).
  - Increasing the existing benefit scales by an additional 50% and expanding who benefits are provided to (see the following slide for details on what this enhancement would do).
- It is also recommended that the OESP be enhanced and also supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP benefit scales and how the scales would be enhanced if increased by 50% and benefits are extended to additional groups (represented in the circled boxes):

Existing OESP Benefit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000	-	-	$30	$34	$38	$42	$50
	$39,001 - $48,000	-	-	-	-	$30	$34	$38
	$48,001 - $52,000	-	-	-	-	-	-	$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000	-	-	$45	$50	$55	$60	$75
	$39,001 - $48,000	-	-	-	-	$45	$50	$55
	$48,001 - $52,000	-	-	-	-	-	-	$45

Proposed +50% OESP Benefit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000	-	$40	$45	$51	$57	$63	$75
	$39,001 - $48,000	-	-	$35	$40	$45	$51	$57
	$48,001 - $52,000	-	-	-	-	$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000	-	$60	$68	$75	$83	$90	$113
	$39,001 - $48,000	-	-	$52	$60	$68	$75	$83
	$48,001 - $52,000	-	-	-	-	$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-bas. The scope of changes would depend on the implementation / delivery mechanisms.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix require will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Ontario Electricity Support Program, including the 50% Enhancement (**Note:** The fiscal impact does not include adding new categories to the OESP matrix. ENERGY will work with the OEB to forecast what the total costs could be).	-	178	239	290	334

C. Establishing a New LDC Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as "low-income" but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000***** residential electricity accounts in arrears; of these about 19,900****** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.
- The Affordability Fund would not be used to provide grants or financial assistance to customers to forgive all or a portion of their arrears or electricity bill.

*** Note:** Unverified numbers reported by LDCs to the OEB
**** Note:** Low-income customers identified through participation in LEAP

C. Establishing a New LDC Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who are most in need, such as those who are facing disconnection and who cannot qualify for the low-income programs.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New LDC Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the feasibility of establishing a Fund and to identify a willing LDC(s) to administer the funds.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

- LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers that meet the targeted eligibility criteria.
  - Recipients could receive measures ranging from $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
    - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
    - Programmable thermostats, weather stripping, insulation (in homes with electric heating).
  - Consideration could also be given to including cold climate air source heat pumps for electrically heated homes, which can range in cost from $7,000 to $13,000.
  - As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New LDC Affordability Fund – Considerations

Considerations

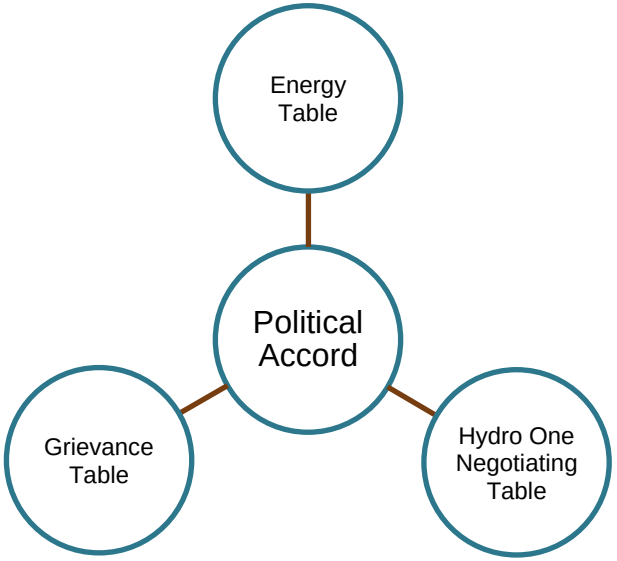
- The LDC Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to establish a Working Group, including the OEB, LDCs and potentially low income organizations to help develop funding criteria and allocation.
- LDCs need flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The LDC Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with one or several LDCs to administer the Fund and transfer money before end of fiscal year.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- In June 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by the energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million or 11 cents a month for a typical residential electricity consumer.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.

- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.

- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million or 11 cents a month for a typical residential electricity consumer.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473

Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**

***Note:** GA Smoothing does not have a fiscal impact because it is assumed that both legal authority and accounting treatment are met. See GA Smoothing – Fiscal Considerations for fiscal impact of GA smoothing if legal and accounting treatment not met.

****Note: Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Does not include Algoma Power or Hydro One Remotes which would continue to be on the rate base. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Costs will decrease through 2023 due to rate making changes and are expected to increase post 2023 due to regular rate increases.

*****Note:** Funding for the LDC Affordability Fund is one-time in 2016/17.

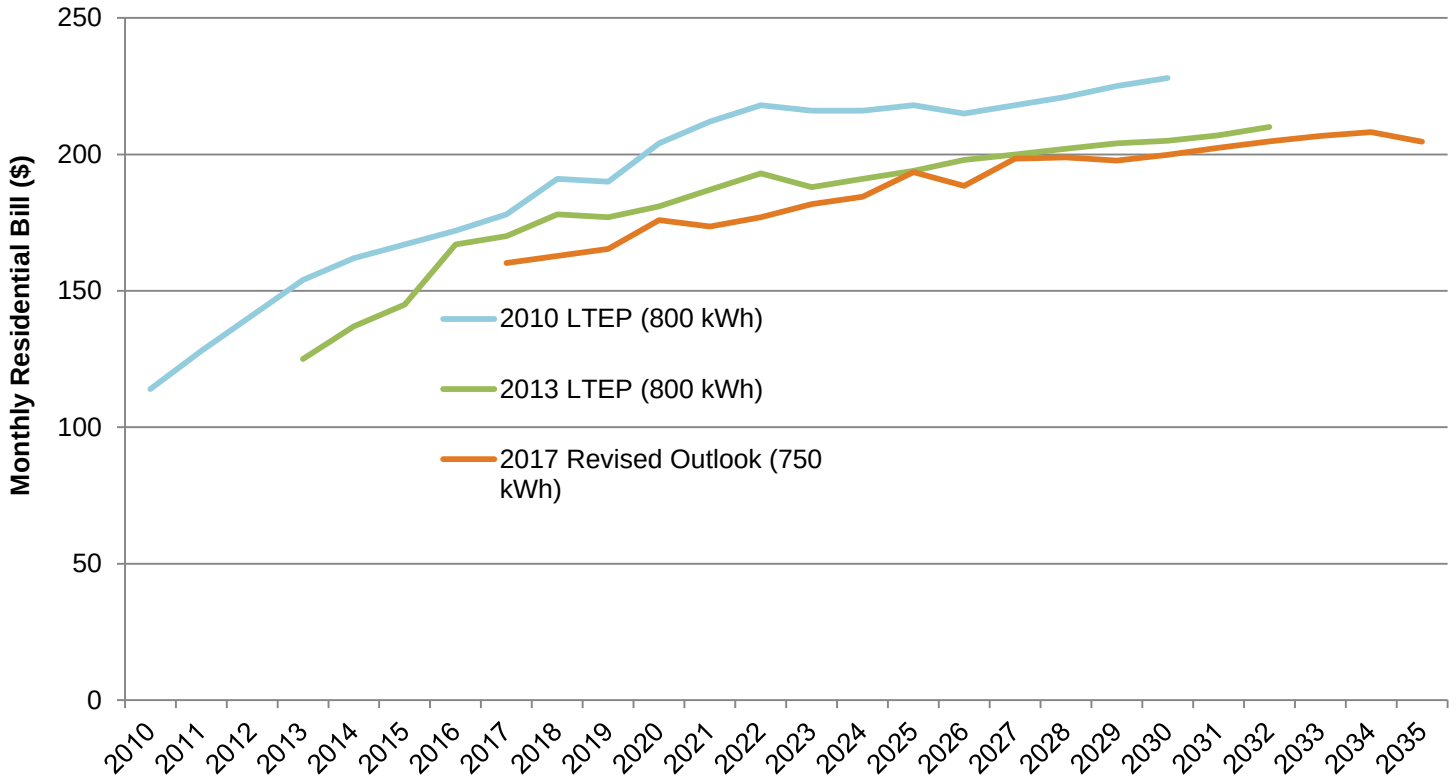
BENDING THE FUTURE COST CURVE OF ELECTRICITY

Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.

Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of December 2016) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

CONFIDENTIAL CABINET DOCUMENT

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

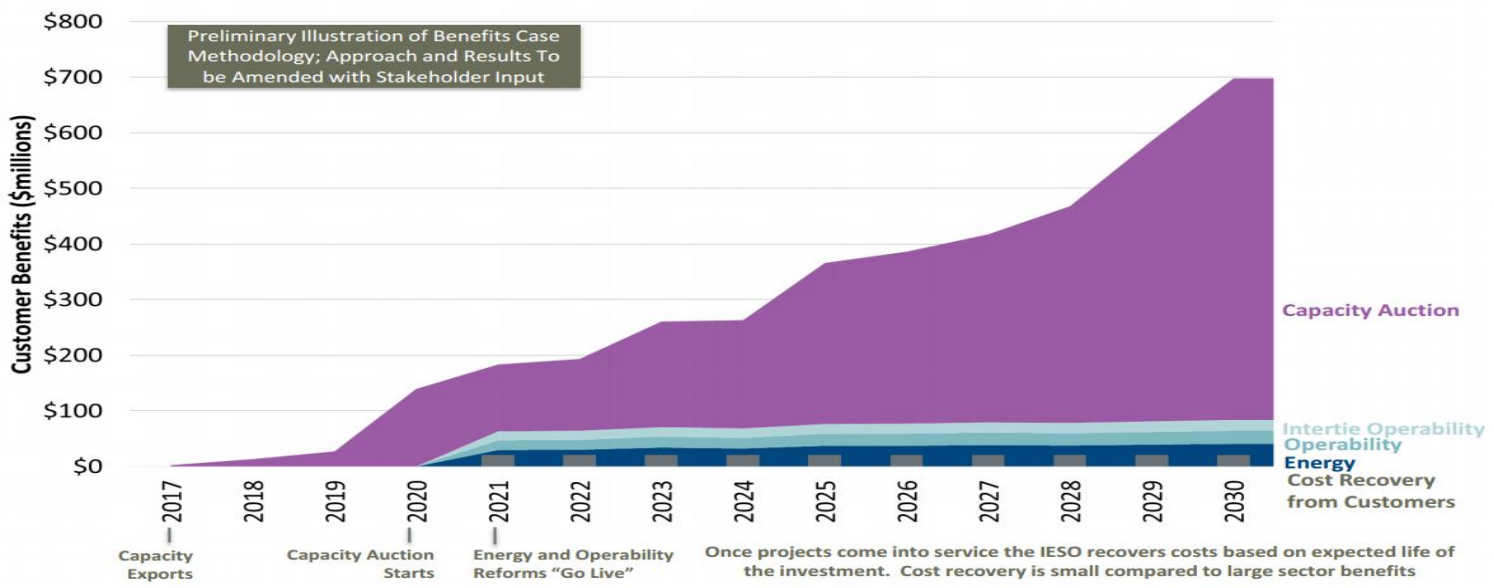
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.



GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing options under consideration are illustrative and show potential rate mitigation measures to meet a targeted 25%, 20% and 18% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to residential and small business customers (RPP).

CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

CONFIDENTIAL CABINET DOCUMENT

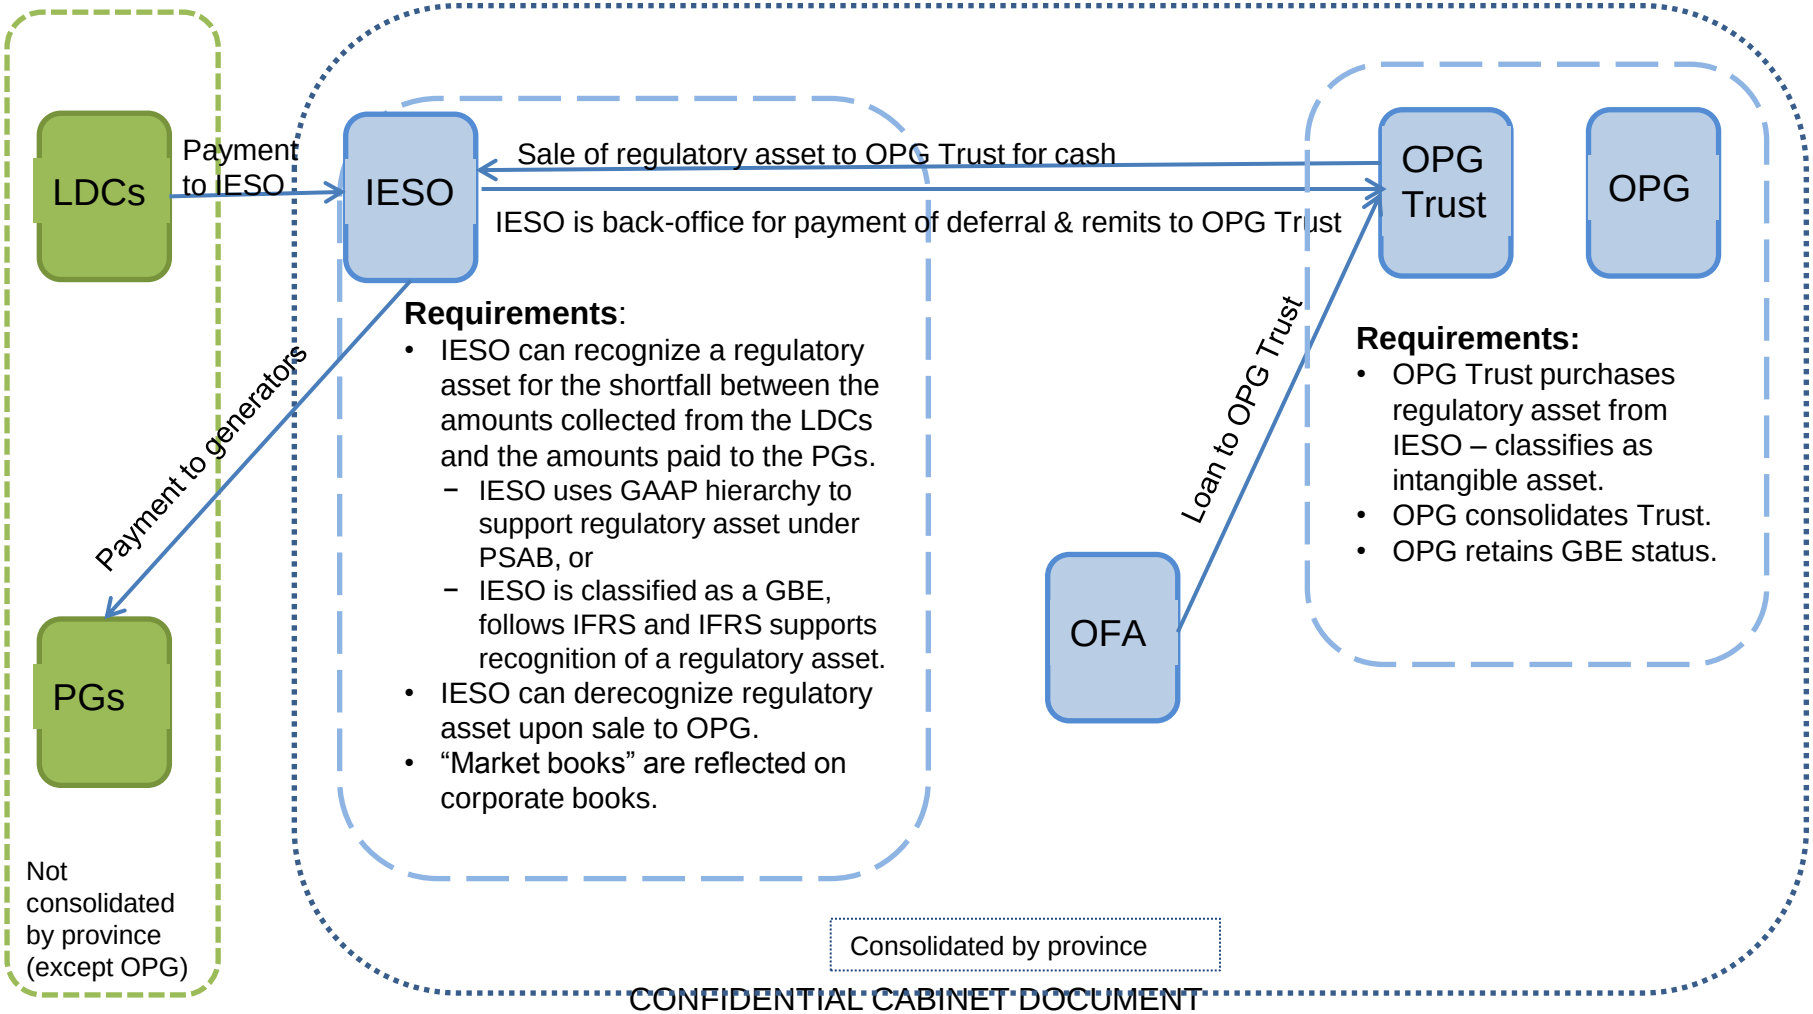
***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators.

**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

A. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



B. Option 1: GA Smoothing for RPP Only (Borrow $2.2 billion in 2017, Residential Bills Lowered 25%)

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 at the rate of inflation with a limit of $3.2 billion above the true cost of GA in any given year. IESO forecast is based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. RPP does not include customers on retail contracts.

B. Option 1: GA Smoothing for RPP Only – Residential Bills Lowered 25% (with Tax-Base Funded 8% Rebate and Social Programs, 2% increase)

- Total bill below is based on a revised IESO forecast. See footnotes for more information.

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**163**	**172**	**175**	**178**	**189**	**187**
Total Bill (excludes HST)	145	153	155	158	168	165

Large Industrial ($/MWh)	Actual 2016	2017	2018	2019	2020	2021
Class A Total (excludes HST)	**90**	**91**	**93**	**88**	**95**	**96**
Class A Revised Total (excludes HST)	**90**	**88**	**90**	**84**	**92**	**93**
Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing. RPP does not include customers on retail contracts.

B. Option 2: GA Smoothing for RPP Only (Borrow $1.6 billion in 2017, Residential Bills Lowered 20%)

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048
Average Monthly Residential Bill Impact pre-tax *($/month)*	-18.8	-18.6	-18.4	-25.6	-20.5	-15.8	-8.8	-17.2	-7.5	0.9	-8.9	-3.7	8.7	14.7	20.9	20.7	20.6	20.4	20.2	20.1	20.0	19.9	19.8	19.7	19.7	19.6	19.5	19.4	19.3	19.3	19.2	0.0

Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing. RPP does not include customers on retail contracts.

GA Smoothing – Accounting Considerations

- Analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure, including the number of entities involved increases risk in and of itself.
- If all requirements can be met, an accounting analysis can be supported that results in: (1) no fiscal impact; and (2) no increase in net debt.
- IESO requirements – IESO mgmt, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs;
    - IESO uses GAAP hierarchy to support regulatory asset under PSAB; or
    - IESO is classified as a GBE, follows IFRS and IFRS supports recognition of a regulatory asset.
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG mgmt, PwC (OPG auditor), KPMG (Energy advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

GA Smoothing – Legal Considerations

- The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation.

- In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax.

- Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- If Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA Smoothing (i.e., because it is only targeted to RPP consumers) – consideration could be given to provide tax-based measures to off-set electricity costs (e.g., tax-credits, programs, etc).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - Government is developing an option that would provide rate relief for Class B consumers.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there could be a negative impact on the province's fiscal plan, as shown below.

- The table below shows the projected fiscal savings /costs related to GA smoothing Options 1 and 2 under these two legal/accounting treatment scenarios

Fiscal Impact ($M)	**2017-18**	**2018-19**	**2019-20**	**2020-21**	**2021-22**
Without Proposed Legal/Accounting Treatment					
Option 1 - Bills Lowered by 25%, RPP Only*	2,266	2,372	2,633	3,096	2,775
Option 2 - Bills Lowered by 20%, RPP Only*	1,574	1,632	1,844	2,282	1,988
Option 3 - Bills Lowered by 18%, RRP Only*	1,487	1,585	1,524	1,503	1,429

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

Source: Ministry of Energy

Legislative Authority – Considerations

1. Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **LDC Affordability Fund (2c):** In order to implement new LDC affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

2. Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

3. GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The EA allows the Lieutenant Governor in Council to cause an OPG Holdco to be created under the *Business Corporations Act.*
  - The mandate and governance of the Financing Subsidiary will be addressed through amendments to the EA. Governance provisions will be designed to address the accounting control indicators.
  - The Financing Subsidiary will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the Financing Subsidiary and settle accounts with the Financing Subsidiary as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the Financing Subsidiary to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the Financing Subsidiary (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement.
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

Mike, I don't know how much you know about this, but maybe it's time to bring you up-to-speed if you're not aware of what the government is thinking of doing on electricity rate mitigation. I'd be happy to fill you in whenever it's convenient for you. Ken has been in the loop through the piece, as it's struck me from the beginning that this is far more of an accounting issue than a funding one.

Regards,
Gadi

Subject: RE: GA Financing Terms

I agree that from a funding perspective the Province, through the OFA (actually the OEFC, but that's just a detail), would be able to accommodate this, so I think it definitely becomes an accounting question. I'm under the impression that OPCD has already been linked in on this, but it would make sense to make sure that they are.

Regards,
Gadi

Subject: GA Financing Terms

Hi Gadi,

Energy was talking with OPG yesterday about GA Financing modelling. One of the simplifying assumptions in the model is the ability to build up interest without any payments for quite long periods of time (10 years +). This contributes to the debt build up, but allows for the large, early year rate reductions.

OPG is going to reality check this based on what it thinks a 3rd party lender would expect. At a high level, they have suggested that interest capitalization would be unrealistic beyond 1 year.

What do you think is realistic if OFA acts as lender? I assume the Province may have some more flexibility, but would require terms that meet the asset test for accounting purposes. Should we link in with OPCD as well on this question?

Thanks,
Scott

Subject: FW: GA Financing Terms

Mike, I don't know how much you know about this, but maybe it's time to bring you up-to-speed if you're not aware of what the government is thinking of doing on electricity rate mitigation. I'd be happy to fill you in whenever it's convenient for you. Ken has been in the loop through the piece, as it's struck me from the beginning that this is far more of an accounting issue than a funding one.

Regards,

Gadi

Subject: RE: GA Financing Terms

I agree that from a funding perspective the Province, through the OFA (actually the OEFC, but that's just a detail), would be able to accommodate this, so I think it definitely becomes an accounting question. I'm under the impression that OPCD has already been linked in on this, but it would make sense to make sure that they are.

Regards,

Gadi

Subject: GA Financing Terms

Hi Gadi,

Energy was talking with OPG yesterday about GA Financing modelling. One of the simplifying assumptions in the model is the ability to build up interest without any payments for quite long periods of time (10 years +). This contributes to the debt build up, but allows for the large, early year rate reductions.

OPG is going to reality check this based on what it thinks a 3rd party lender would expect. At a high level, they have suggested that interest capitalization would be unrealistic beyond 1 year.

What do you think is realistic if OFA acts as lender? I assume the Province may have some more flexibility, but would require terms that meet the asset test for accounting purposes. Should we link in with OPCD as well on this question?

Thanks,

Scott

Ontario

Electricity Price Mitigation

Ministry of Energy

February 15, 2017

Minister

Deputy Minister

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in transmission and local distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement (GEIA) renegotiation, decreasing Feed-In Tariff (FIT) prices, competitive Large Renewable Procurement (LRP)).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., no new NUG contracting and demand response).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate – $11/month savings, updating Rural or Remote Rate Protection (RRRP) – $45/month savings, expanding the Industrial Conservation Initiative (ICI) – up to one-third savings for participants and suspending the LRP II and the Energy from Waste Standard Offer Program (EFWSOP) – up to $3.8 billion in cost savings.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

- On a number of occasions the Premier has indicated publicly that further relief on electricity prices will be provided to consumers in the near term.

CONFIDENTIAL CABINET DOCUMENT

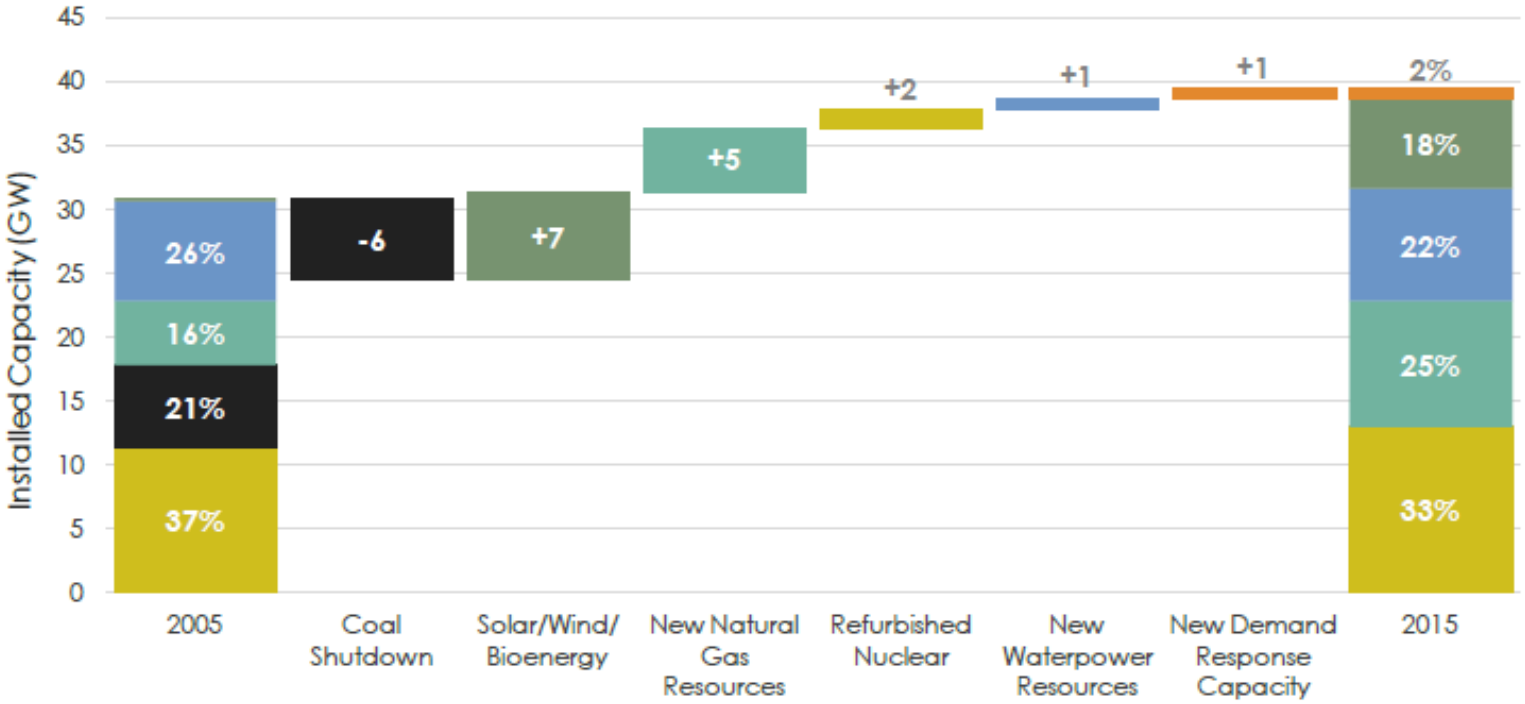
Context – Infrastructure Investments

- In the eleven year period between 2005 and 2015, government added new electrical capacity to Ontario's grid to restore reliability, replace coal and meet environmental objectives.



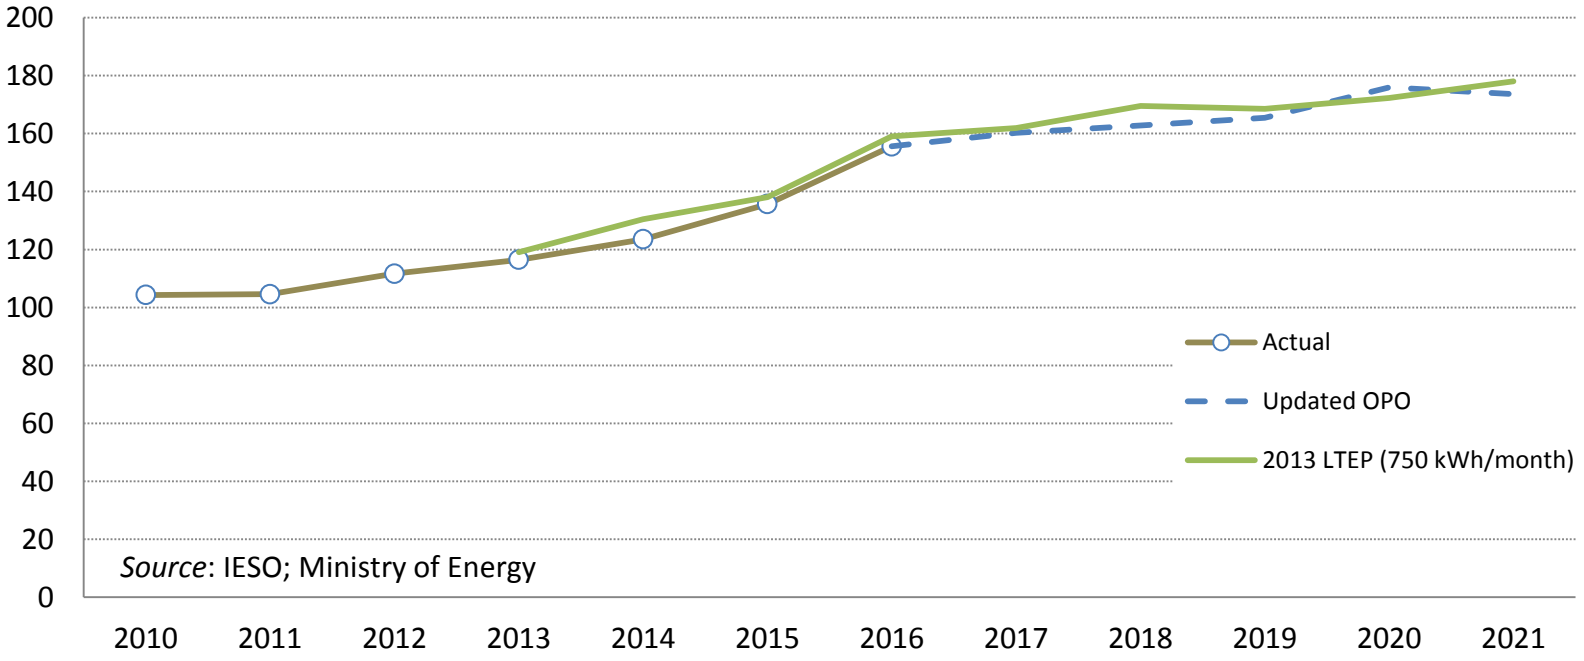
Source: IESO Ontario Planning Outlook

Context – Electricity Prices

- Electricity price increases have generally outpaced inflation. There have been several government policies that have impacted electricity prices over the past several years, including: HST, the Industrial Conservation Initiative, the Ontario Clean Energy Benefit (OCEB) and the Debt Retirement Charge (DRC).

Illustrative Typical Residential Electricity Bills

Historical and Forecast in $/month



Rate Mitigation Proposal

- Three approaches are proposed:

  1) Helping the most vulnerable by enhancing electricity support programs and shifting cost onto the tax-base:
     - Rural or Remote Electricity Rate Protection (RRRP) Enhancement (Delivery Charge Relief);
     - Ontario Electricity Support Program (OESP) Expansion;
     - LDC Affordability Fund; and
     - On-Reserve First Nations Delivery Credit.

  2) Ongoing activities to bend the future cost curve of electricity:
     - Ontario Energy Board (OEB) – Identify opportunities for future LDC efficiencies and rates; and
     - Independent Electricity System Operator (IESO) – Modernize Ontario's electricity market through electricity Market Renewal initiatives.

  3) Smoothing the global adjustment (GA) to provide significant and immediate rate relief through cost deferral of the GA:
     - Implementation Model; and
     - Smoothing Mechanism.

- The following slides provide additional information on the above initiatives.

ELECTRICITY SUPPORT PROGRAMS TO HELP THE MOST VULNERABLE

Electricity Support Programs to Help the Most Vulnerable

- To date, a number of electricity support programs are funded through the electricity rate-base. There is opportunity to provide support to a more targeted subset of customers who are disproportionately affected by increased electricity costs and to shift these costs to the tax base.

- These customers include:
  - **High Delivery Cost Customers:** Some customers in rural areas where the cost to delivery electricity is high can experience difficulty in reducing their electricity bill through conservation, particularly when reliant on electric heating.
  - **Low-Income Customers:** Rising electricity costs make up a disproportionally large amount of the household expenditures for low-income households.
  - **First Nation On-Reserve Customers:** On-Reserve First Nations customers experience challenges with energy affordability and are seeking to address historical grievances associated with electricity system infrastructure.

- To provide targeted assistance to the customers and alleviate electricity cost burden, ENERGY proposes to:

  a. **Enhance Rural or Remote Rate Protection** (RRRP) by funding its costs through the tax base and providing additional support to customers of designated Hydro One rate classes and other high distribution cost Local Distribution Companies (LDCs).

  b. **Enhance Ontario Electricity Support Program** (OESP) by funding its costs through the tax base and increasing eligible benefits by 50%.

  c. **Establish an LDC Affordability Fund**, providing energy efficiency measures at no or minimal cost to those struggling to pay electricity bills and are ineligible for low-income conservation or support programs.

  d. **Implementing On-Reserve First Nations Delivery Credit**, to remove Delivery charges for on-reserve First Nations customers.

A. Delivery and Distribution Charge – Background

- The **Delivery** line on a typical consumer bill is specific to a consumer's Local Distribution Company (LDCs) and accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.

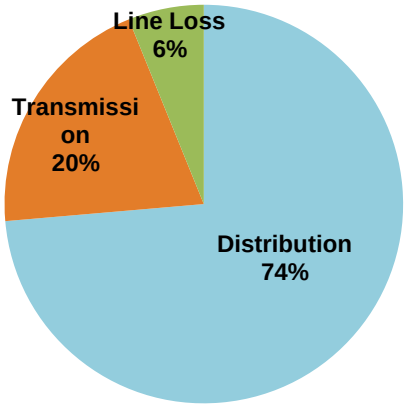
Cost breakdown of Delivery Line for an Average Residential Bill*



* Toronto Hydro Bill @ 750kWhs

A. Rural or Remote Rate Protection Program – Background

- Rural or Remote Rate Protection (RRRP) mitigates some of the high costs of electricity distribution in rural or remote areas of the Province. It is a legacy program of the old Ontario Hydro and has existed in its current form since 2001.
  - RRRP is funded by ratepayers in Ontario.
- Part of the program helps fund the costs of Hydro One customers classified into the "R2" residential rate class. There are 335,000 R2 customers across the Province. These customers have some of the highest Delivery costs in the Province.
  - From 2001-2016 the program provided $125.4 million annually to help defray these costs.
  - In the 2016 Speech from the Throne, this funding was expanded by $116.4M to a total of $241.9 million.
  - As of Jan 2017 R2 customers receive $60.50/month off their distribution costs.
- These customers still have high delivery and high distribution costs and are often faced with significantly higher than average bills.
  - The higher than average consumption patterns coupled with higher than average distribution rates has resulted in monthly bills many view as no longer affordable.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- While the RRRP helps mitigate some of the higher distribution costs for Hydro One R2 customers, there is an opportunity to provide further relief to consumers in relatively high-distribution cost outlier LDCs (top ~1/8th of distribution rate classes).
  - If expanded to the top 1/8th of distribution costs, this enhancement would also include Hydro One R1 customers (medium density), as well as LDCs with high distribution costs including: Northern Ontario Wires, Lakeland Parry Sound, Chapleau, Sioux Lookout, InnPower, Atikokan and Algoma.
- Mitigation could be provided by harmonizing distribution rates for these LDCs at the lowest distribution rate paid by an average consumer in this group.
  - Based on projected 2017 LDC rates, the lowest distribution rate paid by an average consumer in this group would be ~$38/month (with the highest being $65).
  - Is consistent with the OEB's mandated move to fully fixed distribution rates for all LDCs.
  - An estimated 700,000 customers would benefit from these enhancements.
  - Setting a lowest distribution rate across these LDCs would help mitigate geographic-based differences in rates for the consumers who are most impacted and often see such differences as inequitable.
- Mitigation for all electricity consumers would be provided by moving the existing RRRP program costs and the proposed enhancements from the electricity rate base to the tax-base.

A. Enhancing the Rural or Remote Protection Program (RRRP)

- The table below shows what 2017 distribution costs are projected to be for the average consumer within each LDC across the province, and highlights the highest-cost distribution rates.
- The charts on the following slides show what the benefits would be in each LDC if the fiscal plan was used to support harmonizing distribution costs for customers of the LDCs in the top ~1/8th of rate classes at $38/month.

A. RRRP Enhancement – Considerations

Implementation

- The Ministry will need to ensure that only the high distribution cost LDCs are captured within the program framework
  - LDCs may need to be named explicitly in the legislation/regulation
  - A mechanism would also need to be created to ensure the level of benefit changes year to year
- LDCs will need to change their billing and customer information systems. OEB estimates that the implementation would take at least 6 months or more, following finalized regulations
- New legislation would be required to establish this program. Legal and regulatory risks (particularly with regards to legal authority and to the Ontario Energy Board's role in setting rates and incenting efficiencies) require further analysis
  - Some options may impact OEB rate-setting processes and create disincentives towards Hydro One productivity and performance improvements.
- Providing a tax-based subsidy outside of exiting rate setting mechanism reduces incentives for customers and distributors to engage on operating costs and capital planning.
- A mechanism will need to be created to ensure that LDCs/OEB/IESO/Province are aligned in the year-to-year forecasting and costing of the RRRP program and the enhancements.

A. RRRP Enhancement – Considerations (cont'd)

Fiscal

- As distribution costs vary year to year, forecasting fiscal impacts are challenging:
  - Hydro One is expected to submit its cost of service application for 2018 and beyond (3-5 years) in spring 2017. The rate increases requested in this application could potentially increase the proposed fixed rate which could have a significant impact on fiscal requirements and ratepayer impacts.
  - The other high distribution cost LDCs generally have lower distribution cost increases, however, it is difficult to forecast fiscally the impact of the program until LDCs submit their cost of service applications to the Ontario Energy Board.

Fiscal Impact ($M)	16-17	17-18	18-19	19-20	20-21
TOTAL	**-**	**454**	**450**	**446**	**444**

Note: Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Does not include Algoma Power or Hydro One Remotes which would continue to be on the rate base. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Costs will decrease through 2023 due to rate making changes and are expected to increase post 2023 due to regular rate increases.

B. Ontario Electricity Support Program (OESP)

- The OESP is an income-tested, application based program that lowers electricity costs of the most vulnerable consumers by a rebate directly on bills. The OESP is currently funded by the rate base.
- OESP benefits vary by income level and family size, and there are two benefit scales that include:
  - The basic program credit ranges from $30/month to $50/month.
  - An enhanced credit that ranges from $45/month to $75/month for consumers that are either Indigenous, use electric heat or have certain medical devices.
- The OESP launched on January 1, 2016, and in just over a year:
  - Almost 180,000 have been enrolled in the program representing 30% of the total targeted low-income population and some 278,000 applications have been received.
  - Almost $50 million in benefits have been provided to vulnerable consumers.
  - Some 172 intake agencies have been mobilized to assist low income consumers to apply for the OESP.
- To drive this uptake, the OEB has engaged in extensive outreach, including advertising in multiple languages, and continuing to work with partner agencies to develop a model for “application clinics” across the province to increase program awareness and uptake across the province.

CONFIDENTIAL CABINET DOCUMENT

B. Ontario Electricity Support Program (OESP) (cont'd)

- There are a numbers of ways that the OESP program can be enhanced, including:
  - Working to get the OESP participation as close as possible to 100%:
    - Streamlining the application process to make it easier / quicker to get through (e.g., an alternative to the requirement to mail-in signed consent forms);
    - Putting in place a more aggressive communications strategy to make sure vulnerable communities are aware of the program; and
    - Exploring automatic OESP qualification for those who receive provincial programs (e.g., OW, ODSP).
  - Increasing the existing benefit scales by an additional 50% and expanding who benefits are provided to (see the following slide for details on what this enhancement would do).
- It is also recommended that the OESP be enhanced and also supported from the tax-base as part of the rate mitigation package.

B. Ontario Electricity Support Program (OESP) (cont'd)

- The tables below outline the existing OESP benefit scales and how the scales would be enhanced if increased by 50% and benefits are extended to additional groups (represented in the circled boxes):

Existing OESP Benefit Scales

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$30	$30	$34	$38	$42	$50	$50
	$28,001 - $39,000	-	-	$30	$34	$38	$42	$50
	$39,001 - $48,000	-	-	-	-	$30	$34	$38
	$48,001 - $52,000	-	-	-	-	-	-	$30

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$50	$55	$60	$75	$75
	$28,001 - $39,000	-	-	$45	$50	$55	$60	$75
	$39,001 - $48,000	-	-	-	-	$45	$50	$55
	$48,001 - $52,000	-	-	-	-	-	-	$45

Proposed +50% OESP Benefit Increase*

Sliding Scale #1		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$45	$45	$51	$57	$63	$75	$75
	$28,001 - $39,000	-	$40	$45	$51	$57	$63	$75
	$39,001 - $48,000	-	-	$35	$40	$45	$51	$57
	$48,001 - $52,000	-	-	-	-	$35	$40	$45

Sliding Scale #2		Household Size						
		1	2	3	4	5	6	7 +
Income Bracket	< $28,000	$68	$68	$75	$83	$90	$113	$113
	$28,001 - $39,000	-	$60	$68	$75	$83	$90	$113
	$39,001 - $48,000	-	-	$52	$60	$68	$75	$83
	$48,001 - $52,000	-	-	-	-	$52	$60	$68

CONFIDENTIAL CABINET DOCUMENT

***Note:** The proposed higher scale, including the amounts in circles are proposed and will be refined in consultation with the OEB.

B. Ontario Electricity Support Program (OESP) – Considerations

Fiscal Impact

- Changes to legislation / regulation may be required to establish and define the parameters for OESP to receive funding from the tax-bas. The scope of changes would depend on the implementation / delivery mechanisms.
- Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.
- If OESP amounts are increased, it will need to be confirmed that the credit is not treated as taxable income. This was addressed in the current iteration of the OESP.
- Adding additional categories to the OESP matrix require will take time to implement as it will require changes to the central system as well as LDCs' billing systems. As well, the matrix will no longer follow the Low Income Measure (LIM), which could put additional pressure on the OESP and other provincial programs.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
Ontario Electricity Support Program, including the 50% Enhancement (**Note:** The fiscal impact does not include adding new categories to the OESP matrix. ENERGY will work with the OEB to forecast what the total costs could be).	-	178	239	290	334

C. Establishing a New LDC Affordability Fund

- For eligible low-income customers, the Home Assistance Program (HAP), delivered by LDCs under the Conservation First Framework, provides efficiency upgrades and education, at no cost, to help improve the energy efficiency and comfort of their homes and help customers manage their electricity bills.

- HAP does not address the needs of those customers that do not qualify as "low-income" but could benefit from conservation programs.
  - At the end of 2015, there were over 560,000***** residential electricity accounts in arrears; of these about 19,900****** (~3.6%) accounts were eligible to participate in low-income conservation and support programs.
  - According to the Ontario Energy Board (OEB), in 2015 about 60,000 customers had their electricity service disconnected.

Proposal: Establish Affordability Fund to Provide Existing Low-Income Conservation Program to Other Electricity Customers

- The Ministry proposes establishing an Affordability Fund which would be available to LDCs to provide similar energy efficiency measures as provided under HAP to targeted customers.
- The Affordability Fund would not be used to provide grants or financial assistance to customers to forgive all or a portion of their arrears or electricity bill.

*** Note:** Unverified numbers reported by LDCs to the OEB
**** Note:** Low-income customers identified through participation in LEAP

C. Establishing a New LDC Affordability Fund (cont'd)

Fund Details:

- An Affordability Fund would be accessible to LDCs only, and would target those customers who are most in need, such as those who are facing disconnection and who cannot qualify for the low-income programs.
  - By providing support for energy efficiency improvements, the Fund could help these customers reduce their future bills and avoid future disconnections.
  - The Fund would provide LDCs with an additional tool to provide assistance to their customers.

Eligibility Criteria/Fund Principles:

- Determination of eligibility could involve a number of factors and metrics:
  - Do not meet the definition of "low-income";
  - May have triggered action by an LDC collection department (e.g., are in arrears, have been placed on one or more payment plans, are due to be disconnected, etc.);
  - Priority could be given to eligible customers in electrically-heated homes, or other unique circumstances; and
  - Require financial assistance to pay for energy efficiency measures.

C. Establishing a New LDC Affordability Fund (cont'd)

Implementation

- ENERGY is currently in discussions with several large LDCs to determine the feasibility of establishing a Fund and to identify a willing LDC(s) to administer the funds.
  - LDCs have over 10 years of experience in delivering conservation programs, including experience specific to contracting for programs that target low-income customers.
  - LDCs are best positioned to identify and target their customers who are most in need.

- Given the scope of the Fund, an LDC would need a firm financial commitment up front before implementation. LDCs rely on rate-payer funding for most of their activities. The Affordability Fund would be a unique venture from an LDC perspective given that it is tax funded.

- LDCs would apply for funding to the Fund administrator, to offer energy efficiency measures to those customers that meet the targeted eligibility criteria.
  - Recipients could receive measures ranging from $3,000 to $5,000 per customer, at no or minimal cost. For example, measures available in the Home Assistance Program include:
    - Energy-saving light bulbs (LEDs); power bars; energy efficient window ACs, refrigerators, freezers, dehumidifiers; low-flow showerheads, hot water blankets, pipe wrap and faucet aerators (in homes with electric water heating); and
    - Programmable thermostats, weather stripping, insulation (in homes with electric heating).
  - Consideration could also be given to including cold climate air source heat pumps for electrically heated homes, which can range in cost from $7,000 to $13,000.
  - As an illustration, with $200 million, the estimated reach of the fund could be 15,000 to 65,000 households, depending on measures and uptake.

C. Establishing a New LDC Affordability Fund – Considerations

Considerations

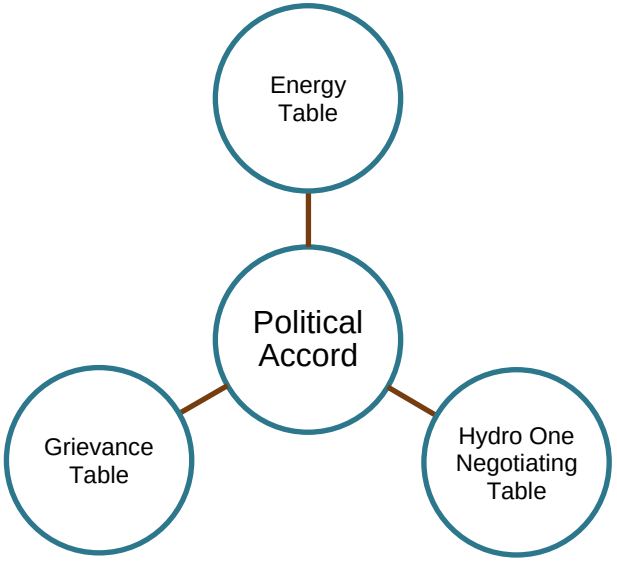
- The LDC Affordability Fund addresses a real need.
  - LDCs have expressed the need for an additional tool to provide assistance to their customers.
- Determining allocation of funds to LDCs:
  - Some LDCs may have a disproportionate number of customers in need of assistance; and
  - ENERGY is proposing to establish a Working Group, including the OEB, LDCs and potentially low income organizations to help develop funding criteria and allocation.
- LDCs need flexibility to target customers:
  - Not all customers who are in need will actively seek help;
  - Some customers in arrears may be "gaming the system" and not truly in need; and
  - LDCs recommend targeted outreach as opposed to broad marketing; a high volume of applications would limit the ability to deliver assistance to customers who need it most.

Fiscal Impact

- The LDC Affordability Fund would represent a fiscal impact of $200 million in fiscal year (FY) 2016/17.
- To allow for funds to flow in FY 2016/17, ENERGY would sign a Transfer Payment Agreement (TPA) with one or several LDCs to administer the Fund and transfer money before end of fiscal year.
- There is a fiscal risk if monies used for the Fund do not flow before FY year-end 2016/17 and for monies that are sitting in Hydro One at year-end (because of consolidation with province), and a corresponding fiscal pressure in the following years when the funds are flowed from Hydro One (H1) to ratepayers.

D. Implementing On-Reserve First Nations Delivery Credit

- ENERGY has a number of Tables with the Chiefs of Ontario (COO) and First Nations that include the Energy Table to discuss policy issues, the Hydro One Negotiating Table to discuss Hydro One shares, and the Grievance Table.
- The Grievance Table process was established at the request of COO as a means to avoid litigation to resolve historic grievances related to the energy sector and prevent these issues from impeding progress on broadening the ownership of Hydro One (H1).
- The cost of electricity and delivery charges were identified as the prevailing grievance at the First Nations-Ontario Energy Table meeting in Timmins in 2016, and the Minister of Energy agreed to explore options for a First Nations Rate through the Grievance Table process.



- In June 2016, following discussions on Hydro One shares and rates at COO's All Chiefs Conference, the Minister of Energy issued a letter directing the OEB to prepare a report providing "*advice on options for an appropriate electricity rate (or rate assistance) for on-reserve First Nations electricity consumers*".
  - OEB engaged with First Nations, including remote communities, the distributors serving them, and consumer groups such as the Low Income Energy Network. It also established an Advisory Committee with the Chiefs of Ontario's Grievance Committee.
- The Ontario Energy Board (OEB) has worked with COO to engage with First Nations to develop options for a First Nations electricity rate. The OEB provided a report to the Minister on December 29, 2016.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- On-reserve First Nations customers face unique challenges that impact electricity affordability, such as the poor quality of the housing stock on-reserve. These challenges result in significantly higher electricity consumption levels and costs.
- First Nations living on reserve are particularly vulnerable low-income consumers: the average income is considerably lower compared to First Nations living off reserve and compared to non-Indigenous populations:
  - Average income of First Nations on reserve in Ontario: $21,100;
  - Average income of First Nations off reserve in Ontario: $31,527;
  - Average income of Non-Indigenous people in Ontario: $42,506; and
  - Median incomes on smaller reserves can fall below $10,000 (e.g., Cat Lake FN).
- Employment rates also differ between on-reserve First Nations, off-reserve First Nations and Non-Indigenous individuals, as well as other indices of social vulnerability:
  - 54% of Indigenous people over 15 years old and living on-reserve in Ontario are unemployed or not in the labour force;
  - The on-reserve unemployment rate is 18.3% compared to 6.4% in Ontario generally; and
  - 67% of families residing on-reserve are single parent families, compared to the Canadian equivalent of 19%.
- First Nations are seeking redress for historic grievances related to lands affected by energy developments, such as transmission or distribution infrastructure built on reserve lands and traditional territories where, in some cases, they may not have been appropriately consulted.
- Further, in some circumstances, linear infrastructure corridors cut First Nation reserves in half, significantly disturbing the use and management of an already small land base; the First Nation communities disturbed by the energy infrastructure report having experienced long wait times (e.g., 20 years) for their communities to get connected and receive the benefits of the energy derived from the local infrastructure.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million or 11 cents a month for a typical residential electricity consumer.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.

- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.

- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

D. Implementing On-Reserve First Nations Delivery Credit (cont'd)

- The OEB report to the Minister of Energy on a First Nation on-reserve rate recommended:
  - Eliminate the delivery charge for all on-reserve First Nations residential customers and eliminate the monthly service charge for customers of licensed distributors which charge a bundled rate;
    - The OEB estimates this would provide residential customers an average monthly benefit of $85 at a total annual cost of $13 to $20 million or 11 cents a month for a typical residential electricity consumer.
  - Automatically qualify on-reserve First Nations residential customers (~21,500 customers);
  - Enable greater information sharing between distributors and band councils to identify all on-reserve First Nations customers; and
  - Continue to provide assistance through OESP and LEAP to eligible on-reserve First Nations customers.
- The OEB suggested the program should be funded from the tax base as it is targeted to a particular segment of the provincial population, or, if rate based, to use a province-wide charge.
- ENERGY recommends moving forward with the implementation of the OEB's recommendations as part of the wider electricity rate relief package and as the Hydro One share agreement with COO continues to be implemented.

Distributor	Number of On-Reserve Residential Customers
Algoma Power Inc.	473
Attawapiskat Power Corporation	336
Bluewater Power Distribution Corporation	237
Cat Lake Power Utility Ltd.	80
Cornwall Electric Distribution	514
Hydro One Networks Inc.	16,679
Hydro One Remote Communities Inc.	2,579
PUC Distribution Inc. (Sault Ste. Marie)	264
Thunder Bay Hydro Electricity Distribution	332
Total Number of Customers	**21,494**

Source: OEB Report to Minister: Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers (Page 5).

D. Implementing On-Reserve First Nations Delivery Credit – Considerations

- Legislative and regulatory will be required to implement this program.
- The OEB will need to work with the LDCs to identify on-reserve consumers to administer the delivery rebate.
- Development of a communications plan containing the following elements:
  - Public release of the OEB report;
  - Commitment to working with LDCs on implementation details; and
  - Advanced notice to the OEB and COO regarding the ministry's decision to move forward on the OEB's recommendation and indicate a willingness to work collaboratively with COO on ways in improve community-LDC communication to ease implementation.
- The rebate will appear on customer's electricity bills, either as a specific line item or a communicated call-out.
- Recipients would continue to be eligible for programs such as the Ontario Electricity Support Program (OESP) and the Low-Income Electricity Assistance Program (LEAP).
- There is a risk that either non-status Indigenous communities without reserves or Métis could challenge the program on the grounds that it discriminates against them contrary to section 15 of the Charter. This risk is mitigated by the ameliorative purpose of the program and because targeting First Nations communities for a reserve-based program corresponds to the distinct circumstances of reserve-based communities, relative to other Indigenous communities. A genuinely ameliorative program that targets some people but excludes others is shielded from a s. 15 challenge if it serves or advances the ameliorative goal.

Fiscal Impact ($M)	**16-17**	**17-18**	**18-19**	**19-20**	**20-21**
On-Reserve First Nation Delivery Credit	-	20	20	20	20

Fiscal Roll-Up

Fiscal Impact ($M)*	16-17	17-18	18-19	19-20	20-21
RRRP Enhancements**	-	454	450	446	444
Ontario Electricity Support Program, including the 50% Enhancement (**Note:** The fiscal impact does not include adding new categories to the OESP matrix. ENERGY will work with the OEB to forecast what the total costs could be)	-	178	239	290	334
On-Reserve First Nation Delivery Credit	-	20	20	20	20
LDC Affordability Fund***	200	-	-	-	-
Total	200	652	709	756	798

***Note:** GA Smoothing does not have a fiscal impact because it is assumed that both legal authority and accounting treatment are met. See GA Smoothing – Fiscal Considerations for fiscal impact of GA smoothing if legal and accounting treatment not met.

****Note: Note:** Current regulatory framework calls for RRRP to increase by average distribution rate increase. Forecast assumes 2.6% annually though is subject to OEB proceedings. Does not include Algoma Power or Hydro One Remotes which would continue to be on the rate base. Fiscal projection is subject to consumer consumption patterns that may change due to extreme weather or other factors. Costs will decrease through 2023 due to rate making changes and are expected to increase post 2023 due to regular rate increases.

*****Note:** Funding for the LDC Affordability Fund is one-time in 2016/17.

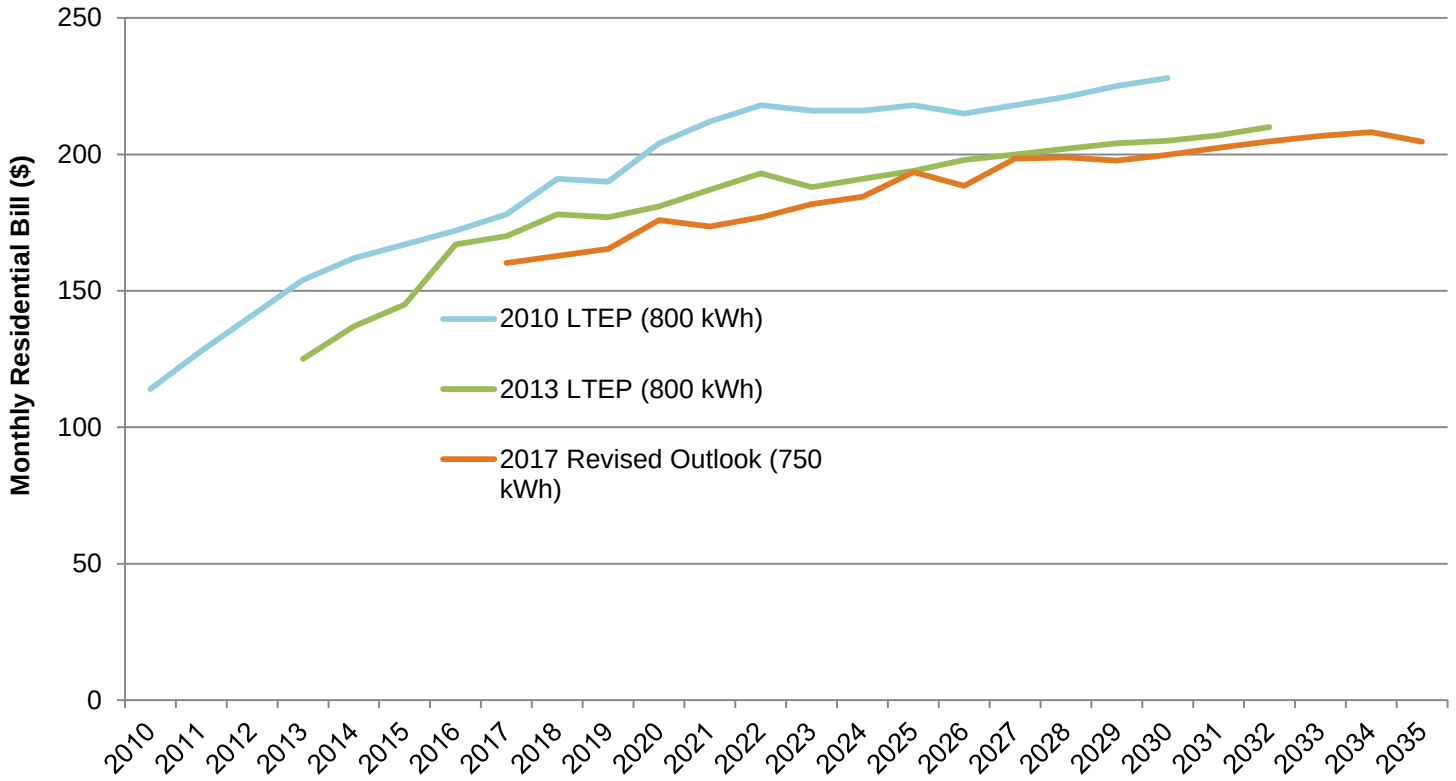
BENDING THE FUTURE COST CURVE OF ELECTRICITY

Existing Rate Mitigation Actions To Bend The Cost Curve

- Since 2013, the government has taken a number of actions to reduce electricity ratepayer costs, including:
  - Renegotiating the Green Energy Investment Agreement to reduce contract costs by $3.7 billion.
  - Reducing Feed-In Tariff (FIT) prices saving ratepayers at least $1.9 billion.
  - Introducing a competitive Large Renewable Procurement (LRP) process to drive down costs approximately $1.5 billion lower than the 2013 LTEP forecast.
  - Deferring the construction of two new nuclear reactors at Darlington, avoiding an estimated $15 billion in new construction costs.
  - Maximizing the value of our existing nuclear fleet by starting Bruce refurbishments in 2020 instead of 2016, thus helping to achieve $1.7 billion in savings and by continuing to operate Pickering up to 2024, pending regulatory approvals, which could save ratepayers about $600 million.
  - Suspending the second round of the LRP process and the Energy-from-Waste Standard Offer Program, which is expected to save up to $3.8 billion in costs.

Existing Rate Mitigation Actions To Bend The Cost Curve (cont'd)

- The chart below shows how electricity rate forecasts have trended down over time.



Sources: *2010 LTEP (800 kWh/month); 2013 LTEP (800 kWh/month); Revised Ontario Planning Outlook (750 kWh/month as of December 2016) which includes: ICI expansion, RRRP update, 8% rebate, HQ agreement, suspension of LRP II and EFWSOP.*

CONFIDENTIAL CABINET DOCUMENT

A. OEB – LDC Efficiencies and Rates

Leveraging the OEB

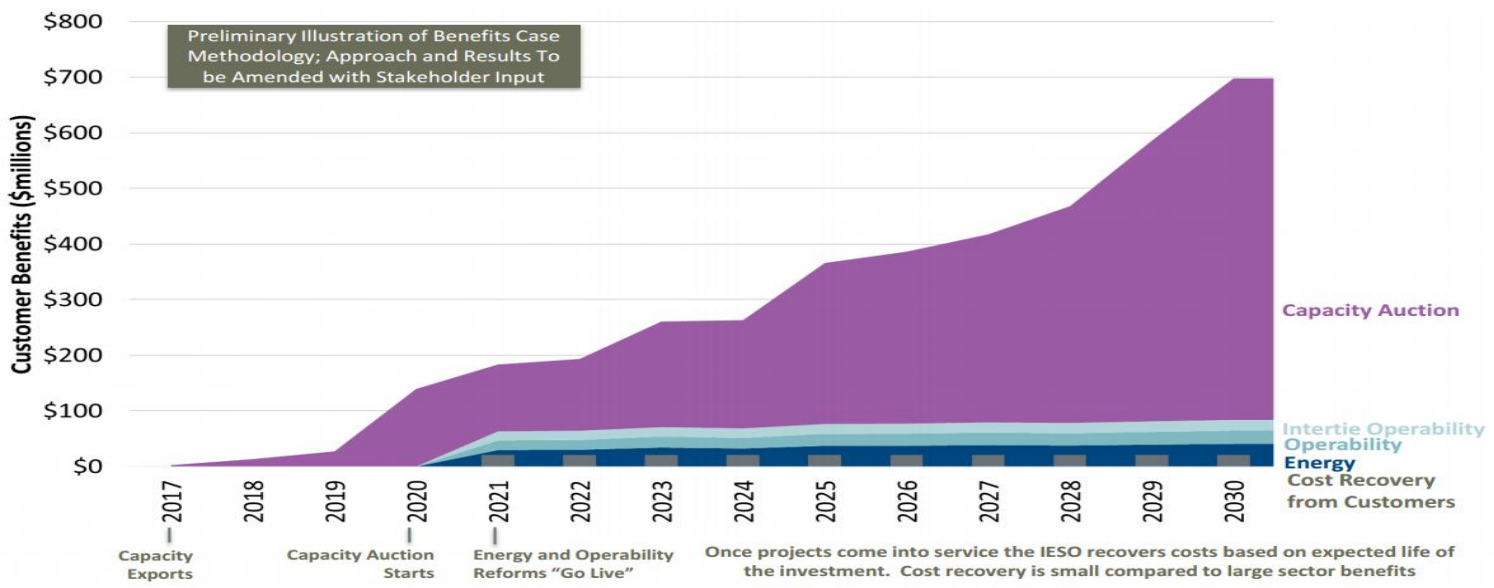
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- The OEB, through the Renewed Regulatory Framework for Energy (RRFE), has since 2012 attempted to move the distribution sector towards a performance/outcomes-based regulatory framework.
  - While new reporting requirements such as the LDC performance scorecard are positive developments, RRFE does not tie these system performance expectations to LDC financial performance.
- Encouraging shared partnerships on services between utilities will help reduce costs in the back end and encourage further innovation for small to medium sized utilities.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to make recommendations about how the distribution sector could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities.

Opportunities

- ENERGY could help promote and accelerate these efforts by asking the OEB to look at opportunities to further drive LDC efficiencies and productivity. This may indirectly incent LDC consolidation.
- In parallel, the OEB could be instructed to review business cases behind its own regulatory requirements to reduce “red tape” and eliminate costs that LDCs indicate are creating pressures on operating expenses.
- This could be done through the Minister's letter, the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes.

B. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.



GLOBAL ADJUSTMENT (GA) SMOOTHING

Overview – GA Smoothing

- The Global Adjustment (GA) has risen over the past decade as the province's electricity system has decarbonized.
  - The vast majority of GA costs now stem from greenhouse gas (GHG) emissions-free renewable and nuclear generation facilities, as well as natural gas plants that were constructed to restore system reliability and replace coal-fired capacity.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing, and fixed operations costs. The GA recovers these fixed costs of running the province's generation fleet, as well as the cost of conservation programs.
- The majority of the province's electricity generators are under 20-year contracts and account for less than half of the GA. Some of these generators will continue to provide value to the electricity system beyond their contract lives (i.e., beyond 20-years).
  - There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.
  - GA Smoothing would spread these costs over a longer period and provide immediate ratepayer relief (i.e., similar to re-financing a mortgage). By recognizing that generation assets are expected to continue to provide residual benefit to future ratepayers, beyond the term of current contracts, future ratepayers are expected to be able to utilize these assets and reduce the need to finance the development of new generation assets.
- The GA Smoothing options under consideration are illustrative and show potential rate mitigation measures to meet a targeted 25%, 20% and 18% reduction from the projected residential bill in 2017.
  - These residential impacts are based on a forecast for a household connected to Toronto Hydro that consumes 750 kWh per month.
  - Actual ratepayer savings would vary due to differences in consumption patterns.
  - Targeted to residential and small business customers (RPP).

CONFIDENTIAL CABINET DOCUMENT

GA Smoothing – Cost Breakout

- The Global Adjustment (GA) accounts for the fixed costs, including capital costs, of running Ontario's generation fleet, as well as the cost of conservation programs. The GA is instrumental in maintaining a reliable electricity system by ensuring that sufficient generating capacity is available.
  - Generators in Ontario received contracted or regulated rates, which are typically designed to recover capital, financing and fixed operations costs. Most generators are on 20-year contracts with the exception of hydroelectric and nuclear plants. They operate on longer contracts (or are regulated on a cost-of-service basis by the OEB) in recognition of the much longer operating lives of these facilities.
- Chart below shows the breakout of the GA by generator and program types. In 2016, the GA costs were $12.3 billion. These costs will evolve over time as 2,181 MW of previously contracted generation comes online in the coming years.

2016 GA Cost: $12.3 billion

	GA ($M)
Nuclear	5,053
Hydro	1,473
Natural Gas	985
Wind	1,552
Solar	1,630
Biomass, Landfill and Byproduct	278
Conservation	467
IEI Program	60
OEFC*	842

CONFIDENTIAL CABINET DOCUMENT

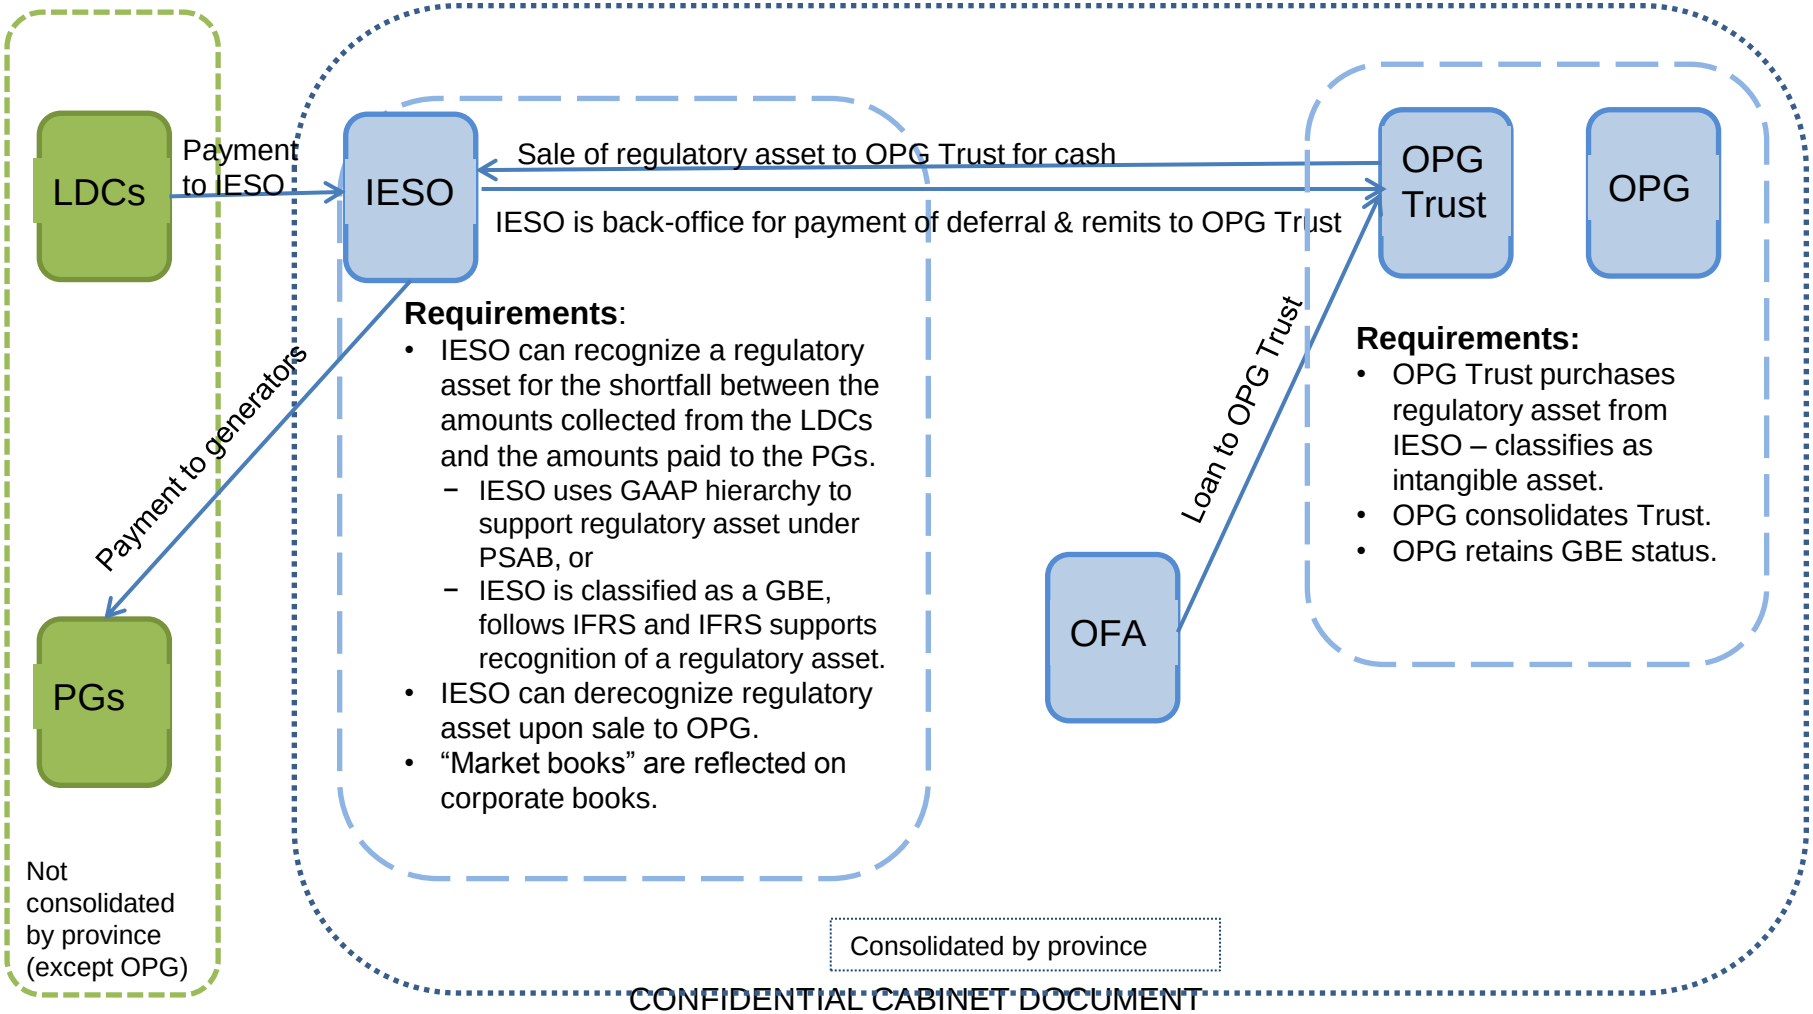
***Note:** OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators.

**** Note:** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

A. GA Smoothing – Potential Structure

- The following diagram provides an overview of a potential GA smoothing structure, as well as interactions between sector entities and elements required to meet accounting objectives.



B. Option 1: GA Smoothing for RPP Only (Borrow $2.2 billion in 2017, Residential Bills Lowered 25%)

	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048
Average Monthly Residential Bill Impact pre-tax *($/month)*	-27.0	-26.9	-26.9	-34.3	-28.1	-23.5	-16.6	-25.2	-15.7	-7.5	-17.4	-12.4	-0.1	5.7	21.1	21.4	30.7	38.1	37.6	37.5	37.3	37.2	37.0	36.8	36.7	36.5	36.4	36.2	36.1	35.9	35.8	0.0
Total Accumulated Debt *($ billion)*	2.2	4.6	7.0	10.2	13.1	15.7	17.8	20.8	23.2	25.0	27.7	30.1	31.7	32.8	32.7	32.6	31.7	30.1	28.4	26.6	24.8	22.8	20.8	18.6	16.3	13.9	11.4	8.8	6.0	3.1	0.0	0.0
Total Change in Accumulated Debt *($ billion)*	2.2	2.3	2.4	3.2	2.8	2.6	2.2	3.0	2.4	1.8	2.7	2.4	1.6	1.1	-0.1	-0.1	-0.9	-1.6	-1.7	-1.8	-1.9	-2.0	-2.1	-2.2	-2.3	-2.4	-2.5	-2.6	-2.8	-2.9	-3.1	0.0

Notes: Assumes 30 year financing period and a nominal interest rate of 5% (compounded monthly). Ratepayer GA payments increase annually beyond 2021 at the rate of inflation with a limit of $3.2 billion above the true cost of GA in any given year. IESO forecast is based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. RPP does not include customers on retail contracts.

B. Option 1: GA Smoothing for RPP Only – Residential Bills Lowered 25% (with Tax-Base Funded 8% Rebate and Social Programs, 2% increase)

- Total bill below is based on a revised IESO forecast. See footnotes for more information.

Residential (750 kWh/month)	Actual 2016	2017	2018	2019	2020	2021
Total Bill (includes HST)	**163**	**172**	**175**	**178**	**189**	**187**

Year-over-Year Change		-2%	2%	-6%	9%	1%
Change from Forecast		-4%	-4%	-4%	-4%	-4%

Notes: Based on IESO's revised OPO forecast as of December 2016. Includes the cancellation of LRP II and EFW, expansion of ICI. Does not include smoothed OPG rates. Above residential bill is based on a 750 kWh per month Toronto Hydro customer. Above Class B estimate based on a 1 MW customer connected to Toronto Hydro, assumes delivery charge escalates as per residential forecast. "Social programs" refers to existing RRRP and OESP. While initiatives would take several months to implement, the above estimate for 2017 reflects a full-year impact. The 8% rebate above represents savings compared to status quo due to the reduction in the sub-total from GA financing. RPP does not include customers on retail contracts.

GA Smoothing – Accounting Considerations

- Analysis is not complete; several requirements (below) are high risk re: satisfactory resolution.
- Complexity of the structure, including the number of entities involved increases risk in and of itself.
- If all requirements can be met, an accounting analysis can be supported that results in: (1) no fiscal impact; and (2) no increase in net debt.
- IESO requirements – IESO mgmt, KPMG (Energy advisor and IESO auditor), OPCD and EY (OPCD advisor) are evaluating accounting risks:
  - IESO can recognize a regulatory asset for the shortfall between the amounts collected from the LDCs and the amounts paid to the PGs;
    - IESO uses GAAP hierarchy to support regulatory asset under PSAB; or
    - IESO is classified as a GBE, follows IFRS and IFRS supports recognition of a regulatory asset.
  - IESO can derecognize regulatory asset upon sale to OPG; and
  - "Market books" are reflected on corporate books.
- OPG requirements – OPG mgmt, PwC (OPG auditor), KPMG (Energy advisor), and OPCD are evaluating accounting risks:
  - OPG Trust purchases regulatory asset from IESO – classifies as intangible asset;
  - OPG consolidates Trust; and
  - OPG retains GBE status.
- No discussion with OAG; in previous Annual Reports, the OAG has raised concerns about the appropriateness of recognizing rate regulated assets and liabilities.

GA Smoothing – Legal Considerations

- The current GA amount paid by consumers is a regulatory charge. One of the requirements of a valid regulatory charge (as opposed to a tax) is that the person paying the charge either benefits from the regulatory scheme or causes the need for regulation.

- In principle, refinancing the GA to spread the costs of generation and conservation assets over the useful life of the assets presents only a low risk of being a tax, as each cohort of consumers pays for a proportion of the GA cost roughly equal to the proportion of the benefit they receive from the useful life of the assets.

- A proposal for refinancing the GA that appears to cross-subsidize near-term consumers at the expense of long-term consumers by back-loading costs more than if costs were spread equally over the estimated lifespan of generation and conservation assets presents a moderately high risk (more likely than not) of constituting a tax.

- Were the charge characterized as a tax, in the event of a challenge, it would be struck down by a court as unconstitutional and consumers would be entitled to recover their payments. This risk could be eliminated, either up front or retroactively, by the imposition of a valid tax.

GA Smoothing – Policy Considerations

- Borrowing money to smooth the Global Adjustment (GA), while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - In addition, should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- The impacts are also based on a GA forecast. Since the GA fluctuates, actuals will vary based on demand, the addition of new generation and natural gas prices.
  - A "true-up" mechanism will be required to account for the difference between the "estimate" and "actual" GA costs.

- If Class B electricity consumers, such as commercial and small industries, do not receive the benefit of GA Smoothing (i.e., because it is only targeted to RPP consumers) – consideration could be given to provide tax-based measures to off-set electricity costs (e.g., tax-credits, programs, etc).
  - Class B consumers have raised concerns about the cost of electricity and its impact on their business competitiveness.
  - Government is developing an option that would provide rate relief for Class B consumers.

- Given the legal framework the amount of GA smoothing needs to be proportionate to the generating contracts (i.e., 20-year) and the additional years of generation services still available (i.e., additional 10-years of service).

- Rating agencies and investors in the Province's debt may view this borrowing as an obligation of the Province, regardless of accounting treatment. Depending on the magnitude of the debt to be incurred could have an impact on the Province's borrowing cost.

GA Smoothing – Fiscal Considerations

- If the proposed legal and accounting treatment of the GA financing smoothing proposal is not implemented, there could be a negative impact on the province's fiscal plan, as shown below.

- The table below shows the projected fiscal savings /costs related to GA smoothing Options 1 and 2 under these two legal/accounting treatment scenarios

Fiscal Impact ($M)	**2017-18**	**2018-19**	**2019-20**	**2020-21**	**2021-22**
Without Proposed Legal/Accounting Treatment					
Option 1 - Bills Lowered by 25%, RPP Only*	2,266	2,372	2,633	3,096	2,775
Option 2 - Bills Lowered by 20%, RPP Only*	1,574	1,632	1,844	2,282	1,988
Option 3 - Bills Lowered by 18%, RRP Only*	1,487	1,585	1,524	1,503	1,429

*Numerical values represent amount borrowed in indicated fiscal year plus accumulated interest from previous year's accumulated debt

Source: Ministry of Energy

Legislative Authority – Considerations

1. Electricity Support Programs

- **RRRP, OESP and First Nations Rate:** Moving costs to the tax base and creating a First Nations rate will require amendments to OEBA. Regulatory amendments (442/01, 314/15, 275/04) will be required to address program details.

- **LDC Affordability Fund (2c):** In order to implement new LDC affordability fund the Province would need to enter into Transfer Payment Agreements with qualified third parties to administer the fund.

2. Bending the Future Cost Curve of Electricity

- No specific legislative or regulatory amendments identified. IESO may need to amend market rules. Agency MOUs/MOAs may require amendment.

3. GA Smoothing

- **Amendments to *Electricity Act, 1998* (EA) and *Ontario Energy Board Act, 1998* (OEBA)**
  - The EA allows the Lieutenant Governor in Council to cause an OPG Holdco to be created under the *Business Corporations Act.*
  - The mandate and governance of the Financing Subsidiary will be addressed through amendments to the EA. Governance provisions will be designed to address the accounting control indicators.
  - The Financing Subsidiary will require authority to recover principle, interest and administrative costs through GA from customers.
  - Legislation would authorize IESO to collect amounts on behalf of the Financing Subsidiary and settle accounts with the Financing Subsidiary as a service provider. Regulatory amendments to GA Regulations would require IESO to:
    - Separately settle and track amounts received from the Financing Subsidiary to lower GA (including maintaining variance accounts).
    - Separately settle and track amounts paid back to the Financing Subsidiary (including maintaining variance accounts).
    - Distributors would continue to collect from consumers and settle with IESO. Generators would continue to be paid by IESO.
  - OEBA-related amendments would allow for OEB oversight. Light touch would focus on the borrowing entity's recovery of administrative costs and its calculation of amounts owing in a period. Heavy touch would give OEB the discretion to determine repayment over time.
  - The certainty of the legislative mechanism to recover the debt and interest, and the extent of discretion of the OEB to alter either amount over time, will have impacts on the availability and cost of capital.
  - Further legal analysis is required as the GA option is developed.

Communication Plan

Objective:

- Demonstrate Ontario's commitment to lower electricity costs for ratepayers through new rate relief initiatives.

Strategic Approach

- High-profile Premier's announcement.
- News release, backgrounders, QA's are being prepared.
- A multimedia marketing and advertising campaign is being prepared on the topic of rate mitigation for electricity consumers.

Thanks Gadi, read the article, very interesting and the second option listed is very similar, i.e., the use of debt to smooth the electricity bill with the debt incurred to be paid down by slightly higher prices in the future.

Hi Gadi,
I was thinking about the approach further and I think it would be best if I write to Len Hatzis (legal director at TBS) and Carolyn (so she is aware) first to let Len know the background that the DM of TBS is in favour of the Minister of Finance signing any required guarantee (although maybe he is well aware of this already) and also MOF/OFA view that we shouldn't exempt generally transactions under the new proposed Act from s. 28.
Then Len can let me know which TBS counsel are working on it as I think that it may be Nick and Paul but don't know for sure and don't know what their involvement on this file has been and I don't think I should send the email to TBS without letting Carolyn know.

Subject: RE: Guarantee

We have discussed this with the OFA, and we have endeavoured to provide a provision that we think should allow the financial guarantee being contemplated. Please let us know if you think it provides the necessary scope for what would be required to meet the Province's needs. We deleted the existing provision, although if you think that more general contractual authority is needed, something else could be considered. However, we don't think that it is appropriate to have a statutory appropriation for such general indemnity and guarantee provisions.

We would expect that the guarantee would be capped and only provide for the repayment of the principal and interest of the debt securities of the financial asset owner, and that would usually be done in the OIC.

We don't have any experience with performance guarantees. Is there a need for the Minister of Energy to require performance by the LDCs? We were also wondering if Blakes or another party involved in these discussions might have an example of what is being considered.

We also removed the exemption from s. 28 of the FAA. We have discussed this with OFA staff, and given the importance and breadth of this Act and Program, it doesn't seem appropriate to exempt the entire Act from s. 28 of the FAA.

Hi Carolyn,

Thanks for your email. Would it be possible to arrange a conference call today with yourself or your counsel most knowledgeable on this proposed securitization and transaction so that we can get an understanding of it and how it fits into any proposed authorizing legislation. Unfortunately we are not familiar with the proposed transaction although we have seen some general background information about the proposal. What role would a guarantee of investment dealers have in the transaction? We do have a copy of the legislation that we got via our clients at OFA and they were more engaged in the issue of a future proposed equity injection, but the most recent version that we have seen does not mention guarantees although there seems to be a very general contract authorization section. Of course, we have to generally think about s. 28 as well.

A call today to over the main elements of the proposed transaction and the legislation would be very helpful so that we can get back to Gadi.

Hi Michael & Malle – we will be sending you draft legislation to take a look at. Actual guarantees will follow later.

This relates to the government's Fair Hydro Plan and the promise to reduce rates by 25% by July. We are doing a sort of securitization, for which the legislation will provide a framework. We are contemplating provisions that allow "the Minister" to enter into agreements with respect to transactions contemplated by the legislation. Gadi and DM Angus are of the view that Minister should be MOF, as the agreements are likely to be guarantees to investment dealers. Indemnities for the boards of OPG and IESO will also be required, although we didn't talk about who would sign those.

Happy to answer your questions or walk you through the proposed bill.

Subject: FW: Guarantee

Hi Gadi, Anna,
We had a call with Carolyn Calwell and Paul Johnson at Energy Legal.
Please find attached a summary description of the guarantee for a number of obligations related to the proposed transaction that is being requested by OPG's investment dealers. There are 2 guarantees being requested: a guarantee of payment in certain situations as

well as a performance guarantee. Although the Province has provided payment guarantees in the past, I am not aware of the Province provided guarantees of performance so this would be a new type of guarantee. We understand that these guarantees would have to be authorized by the proposed legislation so the wording of the authorizing sections needs to be worked on. Right now the section is very general and doesn't yet include the word "guarantee". Also there should be some wording around the type or scope of the guarantee or what it is in relation to. As well, I am assuming that payment under the guarantee would have to be a charge on the CRF in order to provide sufficient support. I am not sure whether the Province's liability under these guarantees can be capped. Also I understand there is a section in the proposed legislation indicating s. 28 FAA does not apply so this is something for us to consider too.
I understand that Tory's (OPG's counsel) is working on a first draft of the guarantee, but it does not appear that the scope of the guarantee would be settled before legislation is introduced.
I don't' know if you have seen the attached document previously. Who would you like us to speak to at the OFA about this proposal?
Thanks.

Hi Michael & Malle – we will be sending you draft legislation to take a look at. Actual guarantees will follow later.
This relates to the government's Fair Hydro Plan and the promise to reduce rates by 25% by July. We are doing a sort of securitization, for which the legislation will provide a framework. We are contemplating provisions that allow "the Minister" to enter into agreements with respect to transactions contemplated by the legislation. Gadi and DM Angus are of the view that Minister should be MOF, as the agreements are likely to be guarantees to investment dealers. Indemnities for the boards of OPG and IESO will also be required, although we didn't talk about who would sign those.
Happy to answer your questions or walk you through the proposed bill.
Carolyn

Hi Carolyn,
Gadi Mayman gave us a heads up that you might be giving us a call about a proposed guarantee that the Minister of Finance may be required to sign in relation to the changes to the global adjustment.
We're happy to discuss this. This afternoon is busy but tomorrow afternoon may work.
Thanks!
Michael

Subject: FW: Guarantee

Hi Gadi, Anna,
We had a call with Carolyn Calwell and Paul Johnson at Energy Legal.
Please find attached a summary description of the guarantee for a number of obligations related to the proposed transaction that is being requested by OPG's investment dealers. There are 2 guarantees being requested: a guarantee of payment in certain situations as

well as a performance guarantee. Although the Province has provided payment guarantees in the past, I am not aware of the Province provided guarantees of performance so this would be a new type of guarantee. We understand that these guarantees would have to be authorized by the proposed legislation so the wording of the authorizing sections needs to be worked on. Right now the section is very general and doesn't yet include the word "guarantee". Also there should be some wording around the type or scope of the guarantee or what it is in relation to. As well, I am assuming that payment under the guarantee would have to be a charge on the CRF in order to provide sufficient support. I am not sure whether the Province's liability under these guarantees can be capped. Also I understand there is a section in the proposed legislation indicating s. 28 FAA does not apply so this is something for us to consider too.
I understand that Tory's (OPG's counsel) is working on a first draft of the guarantee, but it does not appear that the scope of the guarantee would be settled before legislation is introduced.
I don't' know if you have seen the attached document previously. Who would you like us to speak to at the OFA about this proposal?
Thanks.

Hi Carolyn,
Thanks for your email. Would it be possible to arrange a conference call today with yourself or your counsel most knowledgeable on this proposed securitization and transaction so that we can get an understanding of it and how it fits into any proposed authorizing legislation. Unfortunately we are not familiar with the proposed transaction although we have seen some general background information about the proposal. What role would a guarantee of investment dealers have in the transaction? We do have a copy of the legislation that we got via our clients at OFA and they were more engaged in the issue of a future proposed equity injection, but the most recent version that we have seen does not mention

guarantees although there seems to be a very general contract authorization section. Of course, we have to generally think about s. 28 as well.
A call today to over the main elements of the proposed transaction and the legislation would be very helpful so that we can get back to Gadi.

Subject: FW: Guarantee

Hi Gadi, Anna,

We had a call with Carolyn Calwell and Paul Johnson at Energy Legal.

Please find attached a summary description of the guarantee for a number of obligations related to the proposed transaction that is being requested by OPG's investment dealers. There are 2 guarantees being requested: a guarantee of payment in certain situations as well as a performance guarantee. Although the Province has provided payment guarantees in the past, I am not aware of the Province provided guarantees of performance so this would be a new type of guarantee. We understand that these guarantees would have to be authorized by the proposed legislation so the wording of the authorizing sections needs to be worked on. Right now the section is very general and doesn't yet include the word "guarantee". Also there should be some wording around the type or scope of the guarantee or what it is in relation to. As well, I am assuming that payment under the guarantee would have to be a charge on the CRF in order to provide sufficient support. I am not sure whether the Province's liability under these guarantees can be capped. Also I understand there is a section in the proposed legislation indicating s. 28 FAA does not apply so this is something for us to

consider too.
I understand that Tory's (OPG's counsel) is working on a first draft of the guarantee, but it does not appear that the scope of the guarantee would be settled before legislation is introduced.
I don't' know if you have seen the attached document previously. Who would you like us to speak to at the OFA about this proposal?
Thanks.

Hi Carolyn,
Thanks for your email. Would it be possible to arrange a conference call today with yourself or your counsel most knowledgeable on this proposed securitization and transaction so that we can get an understanding of it and how it fits into any proposed authorizing legislation. Unfortunately we are not familiar with the proposed transaction although we have seen some general background information about the proposal. What role would a guarantee of investment dealers have in the transaction? We do have a copy of the legislation that we got via our clients at OFA and they were more engaged in the issue of a future proposed equity injection, but the most recent version that we have seen does not mention guarantees although there seems to be a very general contract authorization section. Of course, we have to generally think about s. 28 as well.
A call today to over the main elements of the proposed transaction and the legislation would be very helpful so that we can get back to Gadi.

Subject: RE: Guarantee

Hi Michael & Malle – we will be sending you draft legislation to take a look at. Actual guarantees will follow later.

This relates to the government's Fair Hydro Plan and the promise to reduce rates by 25% by July. We are doing a sort of securitization, for which the legislation will provide a framework. We are contemplating provisions that allow "the Minister" to enter into agreements with respect to transactions contemplated by the legislation. Gadi and DM Angus are of the view that Minister should be MOF, as the agreements are likely to be guarantees to investment dealers. Indemnities for the boards of OPG and IESO will also be required, although we didn't talk about who would sign those.

Happy to answer your questions or walk you through the proposed bill.

Hi Carolyn,

Gadi Mayman gave us a heads up that you might be giving us a call about a proposed guarantee that the Minister of Finance may be required to sign in relation to the changes to the global adjustment.

We're happy to discuss this. This afternoon is busy but tomorrow afternoon may work.

Thanks!

Michael

Hi Gadi,
I was thinking about the approach further and I think it would be best if I write to Len Hatzis (legal director at TBS) and Carolyn (so she is aware) first to let Len know the background that the DM of TBS is in favour of the Minister of Finance signing any required guarantee (although maybe he is well aware of this already) and also MOF/OFA view that we shouldn't exempt generally transactions under the new proposed Act from s. 28.
Then Len can let me know which TBS counsel are working on it as I think that it may be Nick and Paul but don't know for sure and don't know what their involvement on this file has been and I don't think I should send the email to TBS without letting Carolyn know.

Subject: RE: Guarantee

We have discussed this with the OFA, and we have endeavoured to provide a provision that we think should allow the financial guarantee being contemplated. Please let us know if you think it provides the necessary scope for what would be required to meet the Province's needs. We deleted the existing provision, although if you think that more general contractual authority is needed, something else could be considered. However, we don't think that it is appropriate to have a statutory appropriation for such general indemnity and guarantee provisions.

We would expect that the guarantee would be capped and only provide for the repayment of the principal and interest of the debt securities of the financial asset owner, and that would usually be done in the OIC.

We don't have any experience with performance guarantees. Is there a need for the Minister of Energy to require performance by the LDCs? We were also wondering if Blakes or another party involved in these discussions might have an example of what is being considered.

We also removed the exemption from s. 28 of the FAA. We have discussed this with OFA staff, and given the importance and breadth of this Act and Program, it doesn't seem appropriate to exempt the entire Act from s. 28 of the FAA.

Sent: March 27, 2017 10:02 AM
To: Nelms, Scott (MOF); Manning, Mike (OFA)
Subject: RE: Key points / questions
Thanks Scott. This looks good to me. A few small thoughts:

1. First point… "electricity-related charges" rather than "electricity rates"
2. First point … "… it charges through to ratepayers …" (i.e., billings are through LDCs)
3. Second point … "principal"
4. Sixth point … " to help develop and review"
5. New language "… consider modifications to this structure …"
6. Timing … "the spring
7. Q3 … "cross-border,"
8. Q4 … "experience with financing legislatively …"

On the questions, you might consider:

1. What are the key considerations for investors in purchasing "AAA" debt issued from a structure backed by this sort of a variable asset? What features can address these considerations?
2. Do you have experience with government accounting rules applicable to non-controlled legal entities?

Hope that's somewhat useful.

From: Nelms, Scott (MOF)
Sent: March 27, 2017 8:33 AM
To: ASHBOURNE, STEPHEN; Manning, Mike (OFA)
Subject: Key points / questions

Good Morning,

In advance of our conversation, I thought I would pull together a few quick suggested points:

Background:

- Ontario electricity agencies, IESO and OPG, are supporting the Province's plan to reduce electricity related changes to ensure intergenerational fairness by establishing mechanisms to borrow as much as $2.5B per year for the next ten years. This borrowing would allow IESO to temporarily reduce the amounts it charges through to ratepayers (through what is called the Global Adjustment Mechansim) while continuing to pay electricity generators as per their contracts
- IESO plans to establish a regulatory asset (a right to collect from future ratepayers to cover all costs including principal, interest and administration, associated with Global Adjustment refinancing)
- OPG, through a special purpose vehicle, intends to purchase this asset from IESO on an ongoing basis, financed by 3rd party lenders
- The Province, OPG and IESO are currently working through mechanics of the arrangement
- OPG has engaged CIBC, RBC and Goldman to act as leads in developing the financing structure
- The Province is involved in developing legislation, regulation and other policies to enable this structure
    - the Province is seeking outside expertise to help develop and review the proposed structure and legislative requirements provided by OPG and its advisors
    - the Province is seeking support to ensure that the structure meets immediate objectives (e.g. financing at a reasonable cost), while also affording flexibility to review and consider modifications to this structure over time, as circumstances and objectives change
    - the advisor will have an opportunity to help guide the process, affording a deeper understanding of the asset and structure when participating in future syndications
- Timing: this commitment is expected to start immediately in order to support proceeding with legislation in the spring and continue through the fall of 2017
- Confidentiality: given the profile and sensitivity of this initiative, the Province anticipates signing a non-disclosure agreement with the successful candidate
- Based on this background and currently available public information, we would like to set up a conversation with you and your team to discuss the following questions in order to help us to select an advisor for this role:

Questions:

1) what are the key steps that you would take to establish the financing vehicle described

above?
2) what are the key challenges associated with this sort of structure and how would you suggest mitigating these challenges?
3) what is your experience with securitizations, asset backed securities, and alternative financing mechanisms, including cross-border, particularly involving the public sector and utilities?
4) What is your experience with financing legislatively created assets?
5) who (or what team) would you suggest as advisors to the Province for this engagement, and why?
6) What are the key considerations for investors in purchasing “AAA” debt issued from a structure backed by this sort of a variable asset? What features can address these considerations?
7) Do you have experience with government accounting rules applicable to non-controlled legal entities?

Thanks,
Scott

Subject: Key points / questions

Good Morning,

In advance of our conversation, I thought I would pull together a few quick suggested points:

Background:

- Ontario electricity agencies, IESO and OPG, are supporting the Province's plan to reduce electricity related changes to ensure intergenerational fairness by establishing mechanisms to borrow as much as $2.5B per year for the next ten years. This borrowing would allow IESO to temporarily reduce the amounts it charges through to ratepayers (through what is called the Global Adjustment Mechansim) while continuing to pay electricity generators as per their contracts
- IESO plans to establish a regulatory asset (a right to collect from future ratepayers to cover all costs including principal, interest and administration, associated with Global Adjustment refinancing)
- OPG, through a special purpose vehicle, intends to purchase this asset from IESO on an ongoing basis, financed by 3rd party lenders
- The Province, OPG and IESO are currently working through mechanics of the arrangement
- OPG has engaged CIBC, RBC and Goldman to act as leads in developing the financing structure
- The Province is involved in developing legislation, regulation and other policies to enable this structure
    - the Province is seeking outside expertise to help develop and review the proposed structure and legislative requirements provided by OPG and its advisors
    - the Province is seeking support to ensure that the structure meets immediate objectives (e.g. financing at a reasonable cost), while also affording flexibility to review and consider modifications to this structure over time, as circumstances and objectives change
    - the advisor will have an opportunity to help guide the process, affording a deeper understanding of the asset and structure when participating in future syndications
- Timing: this commitment is expected to start immediately in order to support proceeding with legislation in the spring and continue through the fall of 2017
- Confidentiality: given the profile and sensitivity of this initiative, the Province anticipates signing a non-disclosure agreement with the successful candidate
- Based on this background and currently available public information, we would like to set up a conversation with you and your team to discuss the following questions in order to help us to select an advisor for this role:

Questions:

1) what are the key steps that you would take to establish the financing vehicle described

above?
2) what are the key challenges associated with this sort of structure and how would you suggest mitigating these challenges?
3) what is your experience with securitizations, asset backed securities, and alternative financing mechanisms, including cross-border, particularly involving the public sector and utilities?
4) What is your experience with financing legislatively created assets?
5) who (or what team) would you suggest as advisors to the Province for this engagement, and why?
6) What are the key considerations for investors in purchasing “AAA” debt issued from a structure backed by this sort of a variable asset? What features can address these considerations?
7) Do you have experience with government accounting rules applicable to non-controlled legal entities?

Thanks,
Scott

Thanks guys, email looks good. I've talked to TD, Scotia & BMO and they are all ok to proceed. If I get scott's cleaned up email, then I can send it to the dealers. Hoping we are good to go. We can then arrange times for Wednesday.

Regards, Mike

Subject: RE: Key points / questions

Thanks Scott. This looks good to me. A few small thoughts:

1. First point… "electricity-related charges" rather than "electricity rates"
2. First point … "… it charges through to ratepayers …" (i.e., billings are through LDCs)
3. Second point … "principal"
4. Sixth point … " to help develop and review"
5. New language "… consider modifications to this structure …"
6. Timing … "the spring
7. Q3 … "cross-border."
8. Q4 … "experience with financing legislatively …"

On the questions, you might consider:

1. What are the key considerations for investors in purchasing "AAA" debt issued from a structure backed by this sort of a variable asset? What features can address these considerations?
2. Do you have experience with government accounting rules applicable to non-controlled legal entities?

Hope that's somewhat useful.

To: Nelms, Scott (MOF); Manning, Mike (OFA)
Subject: RE: Key points / questions

Thanks Scott. This looks good to me. A few small thoughts:

1. First point… "electricity-related charges" rather than "electricity rates"

2. First point … "… it charges through to ratepayers …" (i.e., billings are through LDCs)
3. Second point … "principal"
4. Sixth point … " to help develop and review"
5. New language "… consider modifications to this structure …"
6. Timing … "the spring
7. Q3 … "cross-border."
8. Q4 … "experience with financing legislatively …"

On the questions, you might consider:

1. What are the key considerations for investors in purchasing "AAA" debt issued from a structure backed by this sort of a variable asset? What features can address these considerations?
2. Do you have experience with government accounting rules applicable to non-controlled legal entities?

Hope that's somewhat useful.

Regards, Steve

Sent: March 27, 2017 8:33 AM
To: ASHBOURNE, STEPHEN; Manning, Mike (OFA)
Subject: Key points / questions

Good Morning,

In advance of our conversation, I thought I would pull together a few quick suggested points:

Background:

- Ontario electricity agencies, IESO and OPG, are supporting the Province's plan to reduce electricity related changes to ensure intergenerational fairness by establishing mechanisms to borrow as much as $2.5B per year for the next ten years. This borrowing would allow IESO to temporarily reduce the amounts it charges through to ratepayers (through what is called the Global Adjustment Mechansim) while continuing to pay electricity generators as per their contracts
- IESO plans to establish a regulatory asset (a right to collect from future ratepayers to cover all costs including principal, interest and administration, associated with Global Adjustment refinancing)
- OPG, through a special purpose vehicle, intends to purchase this asset from IESO on an ongoing basis, financed by 3rd party lenders
- The Province, OPG and IESO are currently working through mechanics of the arrangement
- OPG has engaged CIBC, RBC and Goldman to act as leads in developing the financing structure
- The Province is involved in developing legislation, regulation and other policies to enable this structure
    - the Province is seeking outside expertise to help develop and review the proposed structure and legislative requirements provided by OPG and its advisors
    - the Province is seeking support to ensure that the structure meets immediate objectives (e.g. financing at a reasonable cost), while also affording flexibility to review and consider modifications to this structure over time, as circumstances and objectives change
    - the advisor will have an opportunity to help guide the process, affording a deeper understanding of the asset and structure when participating in future syndications
- Timing: this commitment is expected to start immediately in order to support proceeding with legislation in the spring and continue through the fall of 2017
- Confidentiality: given the profile and sensitivity of this initiative, the Province anticipates signing a non-disclosure agreement with the successful candidate
- Based on this background and currently available public information, we would like to set up a conversation with you and your team to discuss the following questions in order to help us to select an advisor for this role:

Questions:

1) what are the key steps that you would take to establish the financing vehicle described above?
2) what are the key challenges associated with this sort of structure and how would you suggest mitigating these challenges?
3) what is your experience with securitizations, asset backed securities, and alternative financing mechanisms, including cross-border, particularly involving the public sector and utilities?
4) What is your experience with financing legislatively created assets?
5) who (or what team) would you suggest as advisors to the Province for this

engagement, and why?

6) What are the key considerations for investors in purchasing “AAA” debt issued from a structure backed by this sort of a variable asset? What features can address these considerations?
7) Do you have experience with government accounting rules applicable to non-controlled legal entities?

Thanks,
Scott

> Hi both –

SCOPA is still very much about the 2014-15 PA, thus current QAs do not need updating. However, additional QAs reflecting 2015-16 PA release are also now required. For this, we are asking TBS to share the QA package that was put together (with MOF input) for the 2015-16 PA release. This would be added to the SCOPA binders in addition to the QAs on 2014-15 PA.

Following up on strategy for remarks.

Thanks,

OFFICE OF THE BUDGET

Q. Will you still be able to balance if Ontario's economy does not perform as strongly as you forecast? Even the FAO has said that your forecast is optimistic.

A. The government is dedicated to a fiscally sound approach to managing the Province's finances, and remains committed to balancing the budget in 2017-18 and 2018-19.

The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the U.S. and all other G7 countries.

While uncertainty in the global economy has increased, along with increased volatility in global financial and currency markets, Ontario has a diversified economy – meaning the Province is well positioned to respond to changing global economic conditions.

From a fiscal planning perspective, Ontario incorporates prudence in its projections.

- As required by the Fiscal Transparency and Accountability Act, 2004 (FTAA), the fiscal plan incorporates includes a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance. The reserve has been set at $1.0 billion in 2016–17, $1.1 billion in 2017–18, and $1.2 billion in 2018–19.

- The fiscal plan also includes contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance.

With the economy expected to continue to growth, and the Province's ongoing commitment to transform government programs and services, Ontario is well positioned to achieve balance.

Q. From your perspective, why is it important that the government has consistently beaten its deficit targets, in terms of the province's finances?

A. The government remains committed to balancing the budget by 2017-18 and is taking deliberate and responsible steps to achieve this goal.

The government recognizes that a fiscally sound approach to managing the Province's finances will:

- Provide the foundation for the long-term well-being and prosperity of Ontarians; and

- Protect the public services that Ontarians rely on.

For 2015-16, Ontario is on track to beat its deficit target for the seventh year in a row. By continuing to beat its fiscal targets, Ontario's accumulated deficit is $30 billion lower than it otherwise would have been.

Beating our deficit targets helps to keep interest on debt at a manageable level and protects future generations from rising interest costs, which could otherwise crowd out spending on government priorities.

OFFICE OF ECONOMIC POLICY

Revenue Questions and Answers

2014-15 Actual Vs. 2015 Budget Interim

	2015 Budget Interim ($M)	2014-15 Actual ($M)	Variance ($M)	Variance (%)
Taxation Revenue	82,654	82,275	-379	-0.5
Government of Canada Transfers	21,713	21,615	-98	-0.5
Income from Government Business Enterprise	5,311	5,615	304	5.7
Other Non-Tax Revenue	8,839	9,041	202	2.3
Total Revenue	**118,517**	**118,546**	**29**	**0.0**

Q. Can you explain the $29 million increase in revenue since your 2015 Budget?

A. The modest $29 million improvement in revenues is largely due to higher net income of Government Enterprises and revenues from Other Non-Tax Revenues mainly offset by lower Taxation Revenues and Federal Payments.

- Net income from Government Enterprises is $304 million higher mainly due to higher revenue from OPG (including favourable nuclear fund financial market performance) and OLG's higher numbers of large jackpots late in the fiscal year.
- Higher Other Non-Tax revenues of $202 million came from a variety of sources, including consolidated agencies and electricity sector.
- Taxation revenues are $379 million lower largely due to lower Corporations Tax revenue (-$591M) partially offset by higher Personal Income Tax revenue (+$285M).
- Lower Federal Payments (-$98M) is largely due to a decline in transfers to consolidated government agencies.

Q. **Why are Taxation revenues $379 million below your Interim estimate?**

A. Most of the weakness in Taxation revenues is due to lower Corporations Tax (-$591M) because 2014 corporate profits turned out to be lower than estimated at the time of the 2015 Budget. This is partially offset by higher Personal Income Tax revenue (+$285M) based on results from the processing of tax returns for 2014 and prior years.

2014-15 Actual Vs. 2014 Budget Plan

	2014 Budget Plan ($M)	2014-15 Actual ($M)	Variance ($M)	Variance (%)
Taxation Revenue	83,365	82,275	-1,090	-1.3
Government of Canada Transfers	21,882	21,615	-267	-1.2
Income from Government Business Enterprise	5,026	5,615	589	11.7
Other Non-Tax Revenue	8,598	9,041	443	5.2
Total Revenue	**118,871**	**118,546**	**-325**	**-0.3**

Q. Why are revenues $325 million lower than your 2014 Budget projection?

A. Revenues were $325 million below the 2014 Budget Plan largely due to lower Taxation revenues and lower Federal Payments partially offset by higher net income from Government Business Enterprises (mainly OPG) and higher Other Non-Tax Revenues.

- Taxation revenues were $1,090 million lower and Federal Payments were $267 million weaker than projected.
- Partially offset came from higher net income from Government Business Enterprises (+$589M) and Other Non-Tax Revenues ($443M).

Q. What accounts for the $1,090 million decrease in Taxation revenues from your 2014 Budget projection?

A. Taxation revenues were $1,090 million lower due mostly to lower Corporations Tax (-$697M) and lower Sales Tax (-$248M).

- The $697 million decrease in Corporations Tax revenue is due mainly to lower 2014 profits, lower 2013 corporate income tax assessments and higher refunds to corporations for years prior to 2009.
- The $248 million decrease in Sales Tax Revenue is due largely to revisions to HST entitlement estimates for 2013 and prior years.

Q. **Why were Federal transfers $267 million lower than your 2014 Budget projection?**

A. Lower Federal transfers were largely due to revised timelines for Building Canada Fund projects and lower transfers to government agencies, including Agricorp and Toronto 2015. These lower transfers are largely offset by lower spending associated with these transfer programs.

Q: How did net income from Government Business Enterprises increase by $589 million from your 2014 Budget projection?

A: This was mostly attributable to Ontario Power Generation Inc., reflecting lower operating costs and better financial market performance of its nuclear funds.

Q: What accounts for the $1.1 billion decrease in taxation revenues from your 2014 Budget projection?

A: Taxation revenues were $1.1 billion lower due largely to lower corporations tax revenue (-$0.7 billion) and lower sales tax revenue (-$0.2 billion).

- Lower 2013 corporate income tax assessments resulted in a higher repayment to the Canada Revenue Agency for amounts already paid to the Province for the 2013 tax year and, refunds to corporations for tax years prior to 2009 were also higher.
- Sales tax revenue was lower due to revisions to harmonized sales tax entitlement estimates for 2013 and prior tax years.

2014-15 Actual Vs. 2013-14 Actual

	2013-14 Actual ($M)	2014-15 Actual ($M)	Variance ($M)	Variance (%)
Taxation Revenue	79,966	82,275	2,309	2.9
Government of Canada Transfers	22,276	21,615	-661	-3.0
Income from Government Business Enterprise	5,337	5,615	278	5.2
Other Non-Tax Revenue	8,331	9,041	710	8.5
Total Revenue	**115,911**	**118,546**	**2,635**	**2.3**

Q: How did revenues perform in 2014-15 compared to 2013-14?

A: In 2014-15, revenues increased by $2.6 billion or, or 2.3 per cent, from 2013-14.

- Taxation revenue increased by $2.3 billion over the previous year. The increase was across most taxation revenue sources, partially offset by a $1.9 billion decrease in Corporations Tax reflecting adjustments in respect of prior years.
- The combined net incomes of Government Business Enterprises were up $0.3 billion from the previous year.
- Federal Payments declined by $0.7 billion mainly because of a reduction in Equalization Payments, partially offset by increased health and social transfers
- Other Non-Tax revenue increased by $0.7 billion largely due to the gain of the sale of the Province's remaining General Motors shares during 2014-15.

Q: **Why is year-over-year growth in Taxation revenue 2.9 per cent when nominal GDP growth was 3.6 per cent?**

A: Growth in Taxation revenue of 2.9 per cent is lower than 2014 nominal GDP growth of 3.6 per cent largely due to a $1.9 billion decrease in Corporations Tax reflecting prior year adjustments. This included:

- a repayment of -$1.3B, due to a Federal government overpayment of 2013 corporate income tax during 2013, and
- a projected repayment to the Federal government of $0.5B for an overpayment to the Province for the 2014 tax year.

Q: **What explains the fairly strong year-over-year growth in Personal Income tax revenues of 8.9 per cent?**

A: The higher Personal Income Tax revenues growth reflects growth in personal incomes as well as the impact of the high-income measure introduced in the 2014 Budget and the net impacts of one-time prior-year adjustments in both 2013-14 and 2014-15.

Q: **Given the recent poor results for Quebec and California allowances auctions, is the Government still expecting to meet revenue targets set out in the 2016 Budget?**

A: The poor auction results suggest a risk to cap and trade revenues. However, it is too early to determine what actual impact on revenues will be.

In three joint WCI auctions held so far in 2016, allowances have gone unsold.

- In February, 94% of the allowances offered by Quebec were sold; California sold 95% of the total allowances it offered.
- In May, both Quebec and California sold about 11% of the total allowances they each offered.
- The August auction performed relatively better though still undersubscribed, selling 35% of offered allowances.

It is possible, however, that emitters are holding off on buying allowances until they get closer to the end of the compliance period (current compliance period from 2015 through 2017).

The uncertainty related to legal challenges to California`s cap and trade program may have contributed to the poor sale of allowances at the May and August auction. In joint auctions prior to 2016, all the allowances that were offered for sales were sold.

Ontario is planning to hold stand-alone auctions starting in March 2017 before linking with California and Quebec in 2018. Initial stand-alone auctions could result in a higher-than-WCI domestic carbon price.

The medium-term revenue outlook includes projected cap-and-trade proceeds from the auctioning of carbon allowanced beginning in 2017. The current estimate for proceeds is:

- $478 million in 2016-17; and
- Between $1.8 billion and $1.9 billion annually starting in 2017-18.

Friendly Questions

Debt Burden

Q. Our government has a target for reducing the net-debt-to-GDP ratio. Can you tell us more about the target and how our government is doing in terms of reaching that target?

A. Net debt, as of March 31, 2016, is forecast to be $296.1 billion, $2.8 billion lower than forecasted in the *2015 Budget*. Net debt was $284.6 billion as of March 31, 2015. The net debt-to-GDP ratio is forecast to peak at 39.6 per cent in 2015-16, remain level in 2016-17, and decline to 38.9 per cent in 2017-18 and 38.5 per cent in 2018-19.

Ontario conducts a robust and responsible borrowing program that protects the public interest. The government successfully completed its annual borrowing program in 2015-16, borrowing $32.1 billion. Long-term borrowing for 2016-17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015-16. This will be the Province's smallest borrowing program since 2007-08.

As of August 31, 2016, the Province had borrowed $12.5 billion for the fiscal year. Approximately 71per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies primarily through U.S. dollar global bonds, and two small Australian dollar Kangaroo bond issues.

Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The *2010 Budget* forecast that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 2.7 cents lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018-19.

Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010-11, Ontario has issued $59.1 billion of bonds longer than 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.6 years as of August 31.

~~**Q. Noting that a key indicator of the government's ability to carry its debt entails examining the level of debt relative to the size of the economy, can you please explain further what the forecasted net debt-to-GDP ratio is for Ontario?**~~

~~**What effect does this have on the government's commitment to balancing the budget by 2017-18?**~~

~~A. The Province's net debt-to-GDP ratio is expected to peak in 2015-16 at 39.6 per cent, remain unchanged in 2016-17 and begin to decline in 2017-18.~~

~~The government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level. Net Debt increases primarily for two reasons: to finance deficits and invest in capital assets. In the first few years after the global recession in 2008-09, the increase in net debt was primarily due to the deficit. However, the government is on track to eliminate the deficit and balance the budget by 2017-18. Once a balanced budget is achieved, the increase in net debt will be limited to the net investment in tangible capital assets.~~

Q: Moody's just released a report noting that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy. Can you explain how your conservative debt management policies are keeping debt service costs manageable?

Formatted: Font: Bold

A: Investor demand has allowed the Province to extend the term of its debt in recent years and lock in low interest rates for a longer period. This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 23 per cent lower, at only 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 14 fiscal years from 1992–93 to 2005–06, and is forecast to remain lower through the period to balance in 2017–18.

Q: Moody's just released a report noting that Ontario's policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices has helped to support the province's Aa2 rating. Can you explain how borrowing for infrastructure helps support the province's credit rating?

Formatted: Font: Bold

A: We are making the biggest investment in public infrastructure in Ontario's history. We have a plan to invest more than $137 billion over the next 10 years, or about $160 billion over 12 years, starting in 2014–15. This is a strategic investment will grow the economy and create jobs.

Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.

With capital investments, the net debt-to-GDP ratio will come down more quickly than it would have without these investments in capital assets.

Capital investments are amortized over the useful life of the assets. Once a balanced budget is achieved, the increase in debt will be limited to the difference between the cash investment to build assets, and the amortization, which is a non-cash amount.

This historic investment in public infrastructure is critical to Ontario – today and tomorrow. From an economic perspective – these infrastructure investments will certainly pay off. Our investments will support an average of 110,000 jobs per year in Ontario, as well as creating significant GDP growth.

Interest Rates

Q. Chapter 2 of the Auditor General's 2014 annual report speaks to the increased vulnerability of Ontario with respect to interest rates. She points to the possible rise in rates related to borrowing.

However, I am also aware that the Province has consistently kept interest on debt costs below budget projections.

What steps has the government taken to reduce borrowing and keep interest on debt costs low?

A. Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents on interest for every revenue dollar received. The current forecast is 23 per cent lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 14 fiscal years from 1992–93 to 2005–06, and is forecast to remain lower through the period to balance in 2017–18.

Extending the term of the debt that the Province issues has locked in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010–11, Ontario has issued $59.1 billion of bonds that do not mature for at least 30 years to lock in low rates. As a result, the

weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.~~3~~6 years as of ~~August 31.~~September 30.

Financial Instruments Standard

Q. I understand that proposed new standards by the Public Sector Accounting Board on Financial Instruments would affect interest on debt. Would it also affect other financial indicators of the provincial government?

A. The use of financial indicators helps the public and other readers of the Annual Report assess the financial health of the Province. Through the indicators' levels and trends, readers are able to gauge the impacts of economic and other events on the Province's finances, as well as how the government is responding to these.

The Public Sector Accounting Board's (PSAB) new standard on Financial Instruments, if implemented in its current form, would have a significant impact on how the Province uses derivatives to convert its current exposure in foreign currency debt into Canadian-dollar obligations. The proposed standard, which does not allow for hedge accounting, would introduce significant and difficult-to-forecast volatility in the accounting treatment of the Province's IOD, net debt and deficit. This is contrary to the current PSAB standard, comparable international and U.S. accounting standards, and Canadian private-sector accounting standards, all of which allow for hedge accounting.

Update to 2016 Budget, as of July 31, 2016

- The Province used derivatives to hedge approximately 98 per cent of its $61 billion in foreign currency debt into Canadian dollars.
- While $43 billion of this hedging would remain unaffected under the new standards, IOD and the deficit would become subject to significant swings entirely due to the type of derivative used on the remaining $18 billion.
- The derivative instruments used to hedge this $18 billion currently provide savings of up to 35 basis points, or over $60 million annually, relative to the cost of instruments that would otherwise have to be used under the new standard to eliminate volatility.
- From April 1st, 2016 to July 30th, 2016, the Canadian dollar depreciated by 0.7 cents against the U.S. dollar. Under the new standard, this would have resulted in a $1.3 billion accounting impact to the Province's IOD and deficit.

Ontario, supported by the borrowing communities of the majority of the provinces, has communicated its outstanding concerns with the standard to PSAB. It has requested that PSAB consider hedge accounting as an option, in line with comparable international, U.S. and Canadian private-sector accounting

standards. This approach would eliminate the potential accounting swings in IOD, the deficit and net debt. This would allow Ontario to continue to use the most economically efficient means of hedging its foreign exchange exposure and also ensure that the Province's financial results reflect the economic substance underlying its use of derivative instruments.

Borrowing and Debt Management – General

Q. Why was total long-term public borrowing $32.1 billion in 2015–16 when the deficit was $5.7 billion?

A. In addition to financing the deficit, long-term public borrowing refinances debt maturities and debt redemptions, funds the Province's investments in capital assets, and loans to agencies. The Province also pre-borrowed $2.0 billion of its 2016-17 requirements.

~~**Q. Why did the Net Debt-to-GDP ratio decline to 39.6 per cent at the end of fiscal 2015–16, compared to the 39.8 per cent forecast in the 2015 Budget?**~~

~~A. The reduction in the Net Debt-to-GDP ratio was primarily due to lower than forecast deficits and investment in capital assets in 2015–16.~~

Q. The Province is projected to borrow $24.4 billion in 2016–17. That's approximately $1,753 for every person in Ontario. When will the Province eventually run into a debt wall like Greece, Portugal and Ireland and be forced to raise taxes and cut services?

A. There is strong demand for Ontario bonds in both the domestic and international markets. Last fiscal year Ontario was able to borrow $32.1 billion in long-term debt while our spread, or the margin that we have to pay over the equivalent Government of Canada bond, tightened, indicating ongoing strong demand for Ontario bonds.

We expect that the liquidity of Ontario benchmark bonds and continuing confidence in the value of Ontario debt will allow us to cost-effectively complete the 2016–17 borrowing program. As of ~~August 31~~September 30, 2016, $13.3~~2.5~~ billion or 5~~4~~1 per cent, of this year's long-term borrowing requirement has been completed.

Q. Has it been difficult to complete the Province's borrowing program?

A. The Province continues to have steady access to both domestic and international bond markets. As of ~~August 31~~September 30, 2016, the Province had borrowed $13.3~~2.5~~ billion for the fiscal year. Approximately 69~~71~~ per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies primarily through U.S. dollar global bonds, and two small Australian dollar

Kangaroo bond issues. In 2015–16, the Province borrowed $32.1 billion, with $2.0 billion in pre-borrowing.

Q. What is the difference between total debt, net debt and accumulated deficit?

A. Total debt represents all borrowing.

Net debt is all borrowing plus other liabilities, minus the Province's financial assets.

By analogy, think of a family's finances. A mortgage, car loans and lines of credit represent total debt. Total debt partially offset by money the family has in the bank, in RRSPs and in RESPs represents the family's net debt.

Accumulated deficit is the sum of all past Provincial surpluses and deficits, adjusted for changes in accounting rules.

Q. Is the Province planning to issue any more Green Bonds in the future?

A. On January 22, 2016, the Province of Ontario successfully priced its second Global Canadian Dollar (CAD) Green Bond for $750 million. There was strong demand for Ontario's second Green Bond issue, with 52 investors participating in the trade. Eight projects were selected as eligible and are expected to receive funding from the second Green Bond, with an emphasis on clean transportation and energy efficiency and conservation.

To date, total Green Bond financing amounts to $1.25 billion, with up to $1.2 billion allocated to Metrolinx for clean transportation projects.

As the first Canadian province to issue Green Bonds, Ontario continues to lead the way in establishing and developing a Canadian dollar Green Bond market with investor participation from around the world.

Q. What are unrestricted liquid reserves, and how do they ensure that Ontario will have sufficient liquidity to meet its financial obligations?

A. The Province maintains liquid reserves in the form of cash and temporary investments, which can immediately be converted to cash.

In the normal course of doing business, the Province enters into transactions that may require it or its counterparties to pledge short term investments. Although the pledged investments are technically owned by the Province, they are deducted from the total liquid reserves figure to arrive at unrestricted liquid reserves. This provides a more conservative measure of the liquidity available to meet the Province's financial obligations.

The Province ensures it always has a prudent level of unrestricted liquid reserves to cover all obligations in the short term.

Interest on Debt (IOD)

Q. What is the impact on IOD of a $1.0 billion change in the deficit?

A. The 2016-17 impact is forecast to be approximately $30 million.

Q. What is the impact on IOD of a one percentage point change in interest rates?

A. The 2016-17 impact is approximately $350 million.

Q. What is your assumed interest rate for the IOD forecast in the 2016 Budget?

A. The assumed ten-year interest rates are 3.1 per cent for 2016-17 and 3.8 per cent for 2017-18, based on the forecast for Government of Canada bonds that OEP collects from the private sector, plus a spread for the Ontario credit. For 2018-19, the forecast is 4.8 per cent and is based on the average Ontario interest rates over the past 15 years. This is the same methodology that we have used for the last number of years in putting together our IOD forecast. These rates are cautious and prudent, above current market rates.

Q. Will IOD costs crowd out other expenditures as interest rates rise and debt continues to climb? How can you address this problem?

A. Ontario has a realistic plan to balance its budget while investments are made in the priorities of Ontario families – health care, education, the environment and infrastructure.

Investor demand has allowed the Province to extend the term of its debt in recent years and lock in low interest rates for a longer period. This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs. The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 23 per cent lower, at only 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 14 fiscal years from 1992–93 to 2005–06, and is forecast to remain lower through the period to balance in 2017–18.

Q. We understand that the proposed new standards by the Public Sector Accounting Board on Financial Instruments would affect IOD. Would it also affect other financial indicators of the provincial government?

A. Yes, Annual Deficit, Net Debt, Accumulated Deficit and their ratios as a percent to GDP would also be affected.

Q. If the proposed accounting change indicates savings, will the government be able to spend them?

A. The proposed accounting change introduces fair value measurement and prohibits hedge accounting. If implemented as planned, the Province's reported financial results would not accurately take into account the value of its derivatives. As a result, substantial accounting gains or losses could occur. These changes in value would be accounting changes only and not real changes in cash. This gain would only have been reflected in the Province's accounting statements, with no actual change in the cash available for program spending.

Credit Ratings

Q. What are the Province's current credit ratings?

A. The Province is rated:

	Long Term	Short Term
Moody's Investors Service:	Aa2	P-1
Standard & Poor's:	A+	A-1+
DBRS:	AA (low)	R-1 (mid)
Fitch	AA-	F1+

Q. What impact did Moody's removal of the negative outlook have on your borrowing costs?

A. Credit ratings are one of a number of factors that contribute to borrowing costs. Since the 2016 Ontario Budget was released, Ontario's credit spreads have narrowed modestly. This in part reflects the fact that all four credit rating agencies have affirmed Ontario's ratings reflecting their confidence in our plan to eliminate the deficit, with Moody's improving their outlook for Ontario's credit rating.

ONTARIO ELECTRICITY FINANCIAL CORPORATION

Friendly Question

Electricity Sector Stranded Debt

Q: The stranded debt arose under the *Energy Competition Act of 1998*, and its schedule, the *Electricity Act, 1998*. The *Electricity Act, 1998*, also enabled the implementation of the Debt Retirement Charge (DRC) on electricity ratepayers.

Since May 2002, residential and other electricity users have been paying the DRC of 0.7 cents per kilowatt hour (kWh) on their electricity bills. The DRC is paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down the stranded debt that arose because of the restructuring of Ontario's electricity sector under the *Energy Competition Act, 1998*.

However, I know that the government eliminated the DRC from residential bills as of January 1, 2016.

This legacy charge from the Harris government was eliminated from residential bills about 2 years earlier than previously estimated – saving the average residential user about $70/year.

Can you please inform the committee of the commitment that the government has to eliminating the debt retirement charge cost for commercial, industrial and all other electricity users by 2018?

A. Thank you for the question.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*, as originally enacted. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

- A large industrial using 3,000 megawatt-hours (MWh) per month could save $21,000 per month, or about seven per cent off its electricity bills;

- For a large northern industrial in the Northern Industrial Electricity Rate program, this could be more than an eight per cent savings; and

- A small business using 20,000 kilowatt-hours (kWh) per month could save $140 per month, or about four per cent.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

I would note the following context. The government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. Based on interim numbers in *Budget 2016*, this is projected to be the twelfth consecutive year that the stranded debt has been reduced, to under $5 billion as at March 31, 2016, from $20.6 billion as at March 31, 2004. This allowed the government to follow through on its commitment to reduce electricity cost pressures.

Stranded Debt and Residual Stranded Debt Qs&As

Q. What is the impact of broadening ownership of H1 on Stranded Debt?

A. The interim 2015–16 results reflect the upfront benefits to OEFC of broadening the ownership of Hydro One through an initial public offering (IPO). This includes the OEFC receiving in fiscal 2015-16 – that is after March 31, 2015 -- $2.6 billion in departure tax and about $200 million in one-time additional payments in lieu of taxes (PILs), as Hydro One exited the PILs regime and will no longer pay corporate tax PILs to the OEFC.

The upfront impact on OEFC of the departure tax and one-time PILs payments on the OEFC's unfunded liability was partly offset by lower Electricity Sector Dedicated Income. In addition, the one-time departure tax reflects that Hydro One is now a taxable corporation, so it will no longer pay payments-in-lieu of corporate taxes (PILs) to OEFC, which reduces the estimated present value of future dedicated revenues to OEFC.

The government recognizes its commitment to electricity ratepayers under section 50.3 of the *Electricity Act, 1998*, and has taken steps to clarify and ensure that the benefits of selling shares in Hydro One are recognized by OEFC to contribute to the continuing reduction of its unfunded liability.

As part of the government's commitment to using the proceeds from broadening Hydro One ownership for infrastructure investments and paying down debt, proceeds related to the book value of the shares sold and the pre-IPO special dividend payment of $800 million paid by Hydro One to the Province will be used to pay down the Province's electricity sector debt and other payables.

This will allow the OEFC to reduce its overall debt, and contribute towards the Province's targeted $5 billion debt paydown. This debt paydown does not affect OEFC's stranded debt, as OEFC's receivables from the Province will be reduced by an equivalent amount.

[Note, Provincial payables to OEFC are notes payable to OEFC from the Province's acquisition of the equity in Hydro One in 1999, and in respect of cumulative net income since 1999.

Note this portion of the proceeds would have no net impact on OEFC's unfunded liability, as the cash asset would be offset by the reduction in the OEFC's receivable from the Province.]

Additional details

Under a Hydro One disposition, two future dedicated streams are affected:

1. Lower Hydro One earnings: The Province has committed to direct the income it earns from Hydro One (and OPG) in excess of the interest cost of its investment in the company. Upon a divestment, the Province would only be able to dedicate the portion of the net income that reflects its ownership stake. For example, in the case of a 15 per cent divestment, only 85 per cent of Hydro One's earnings less the associated interest cost, would be dedicated to OEFC. Currently, the Province owns about 70 per cent of Hydro One.

   Loss of federal portion of Payments in Lieu of Taxes: Prior to the IPO, Hydro One was exempted from regular federal and Ontario income tax and instead made payments in lieu of taxes to OEFC which helped service and paid down the stranded debt of the electricity sector. Payments in lieu of taxes to OEFC were equal to the federal and Ontario income tax Hydro One would pay if it were a taxable corporation. Following the beginning of broadening of ownership in Hydro One in November 2015, the Province's ownership of Hydro One fell below 90 per cent and the company ceased to be exempt from federal and Ontario income taxes and started to pay actual federal and provincial corporate income tax (CIT). As a result, OEFC would no longer receive the PILs from Hydro One equivalent to federal CIT. Under the amendments made to the *Electricity Act, 1998* in the *Budget Measures Act, 2015*, the Minister of Finance will pay the OEFC an amount equal to tax payable under the *Taxation Act, 2007* (i.e., the provincial CIT) by Hydro One Inc. (HOI), to continue to help service and pay down the electricity sector stranded debt. HOI is composed of Hydro One Ltd.'s regulated Ontario distribution, transmission and remotes businesses.

Q. What is the status of the old Ontario Hydro's stranded debt?

A. The government dedicates the revenues it receives from the electricity sector to the Ontario Electricity Financial Corporation (OEFC). All OEFC revenues, including the Debt Retirement Charge (DRC) paid by electricity consumers, are used to service and retire its debt and other obligations, as provided for under the *Electricity Act, 1998*.

For the twelfth consecutive year, the stranded debt is projected to be reduced, based on the interim 2015–16 results for the OEFC showing a projected excess of revenue over expense of more than $3 billion. The OEFC has paid down stranded debt by an estimated total of more than $15 billion from its peak in 2003-04, reducing stranded debt to under $5 billion as at March 31, 2016, based on interim numbers.

- The following table shows the unfunded liability (or "stranded debt") of OEFC since the opening amount of $19,433 million on April 1, 1999.

At March 31 ($M unless noted)	April 1, 1999	2000	2001	2002	2003	2004	2005	2006	2007
Unfunded Liability	$19,433	$20,034	$20,016	$20,085	$20,183	$20,550	$20,363	$19,293	$18,289
Increase / (Decrease)		$601	($18)	$69	$98	$367	($187)	($1,070)	($1,004)
At March 31 ($M unless noted)	2008	2009	2010	2011	2012	2013	2014	2015	Interim 2015-16
Unfunded Liability	$17,225	$16,182	$14,810	$13,448	$12,321	$11,257	$9,781	$8,185	<$5Bn
Increase / (Decrease)	($1,064)	($1,043)	($1,372)	($1,362)	($1,127)	($1,064)	($1,476)	($1,596)	>$3Bn

Residual Stranded Debt

Q. What is the residual stranded debt as at March 31, 2016?

A. The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* (Bill 144) and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. What is the current status of the residual stranded debt or what was the residual stranded debt the last time it was determined or estimated?

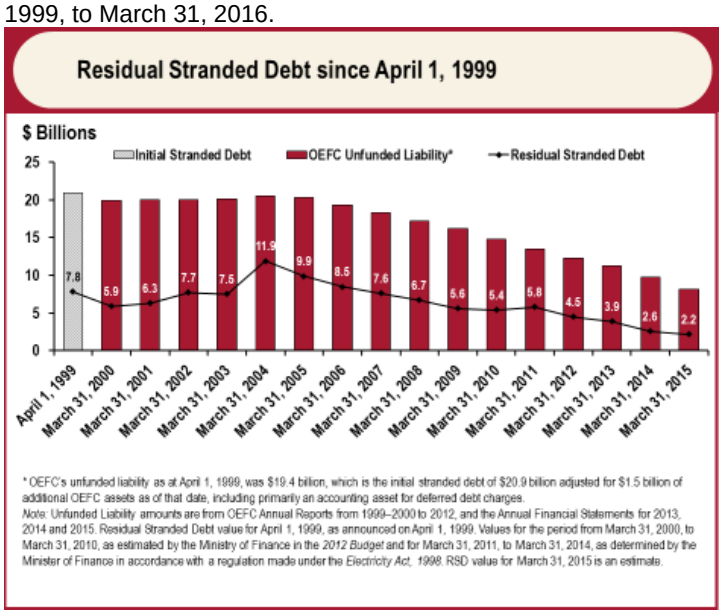
A. Prior to amendments in the *Budget Measures Act, 2015* under the *Electricity Act, 1998* the residual stranded debt was defined as the stranded debt minus the present value of projected future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC.

In the *2015 Ontario Economic Outlook and Fiscal Review*, the residual stranded debt was estimated to be $2.2 billion as at March 31, 2015. This was a decrease of $0.4 billion compared to residual stranded debt of $2.6 billion as at March 31, 2014, and was a total estimated decrease of $9.7 billion from an estimated peak of residual stranded debt of $11.9 billion as at March 31, 2004. Residual stranded debt was initially estimated as $7.8 billion as at April 1, 1999.

Residual stranded debt is estimated to have increased to a peak of $11.9 billion as at March 31, 2004, primarily due to the electricity price freeze, the downward revision in 2004 of the previous overestimation of future financial performance of Ontario Power Generation (OPG) which lowered the estimated future dedicated revenues to OEFC from the sector, and lower tax rates, resulting in lower projected future PILs to OEFC. OPG had significantly underperformed compared to its plans over the previous period of 1999 to 2004.

The estimated residual stranded debt amount and timing for its retirement were subject to uncertainty in forecasting future OEFC results and dedicated revenues to OEFC, which depend on the financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, and other factors such as interest rates and electricity consumption. The changes to the levels of unfunded liability to-date, based in part on the upfront impact on OEFC of the departure tax and one-time PILs payments, also reflect the fact that OEFC will have reduced dedicated revenues as a result of reduced ownership in Hydro One going forward.

The following chart illustrates the path of residual stranded debt from April 1, 1999, to March 31, 2016.



Q. When will the residual stranded debt be retired and the DRC end?

A. The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* (Bill 144) and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt" were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.As originally enacted, the *Electricity Act, 1998*, previously allowed for the Debt Retirement Charge (DRC) to be paid by consumers until the Minister of Finance determines that the residual stranded debt is retired.

The residual stranded debt determination was not a one-time determination. It was based on actual financial performance to-date and forecasting future OEFC results and future dedicated revenues to OEFC, which was subject to uncertainty and depended on the future financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, as well as other factors such as interest rates and electricity consumption.

As part of its commitment to reduce electricity cost pressures, the government has removed the DRC from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and would mean ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.

As a further step to mitigate electricity cost pressures for non-residential users, the government introduced legislation the *Budget Measures Act, 2015*, passed in December 2015, to end the DRC for all other users on April 1, 2018, nine months earlier than previously estimated.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge.

Q. Why did the residual stranded debt only fall from $2.6 billion to $2.2 billion between March 31, 2014, and March 31, 2015, if the Ontario Electricity Financial Corporation's (OEFC) unfunded liability fell by about $1.6 billion and the DRC collected the same year was $0.956 billion?

A. Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998* and the revocation of Ontario Regulation 89/12, the residual stranded debt was defined under the *Electricity Act, 1998* as the stranded debt minus the estimated present value of future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The Debt Retirement Charge would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

The residual stranded debt fell by less than the decrease in OEFC's unfunded liability due to a reduction in the estimated present value of future dedicated revenues to OEFC from $7.2 billion as at March 31, 2014, to $6.0 billion as at March 31, 2015, which reflected the uncertainty of and update to the forecast of future dedicated revenues to OEFC. These forecasted revenues depend on the financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, regulatory decisions by the Ontario Energy Board, as well as other factors such as interest rates and electricity consumption.

The residual stranded debt was not a fixed, one-time determination. Under the *Electricity Act, 1998*, and Ontario Regulation 89/12, the estimated amount of residual stranded debt depended on actual OEFC results to-date and a forecast of future revenues to OEFC.

Q. Why has the residual stranded debt only declined by $5.6 billion since April 1, 1999, to March 31, 2015?

A. The residual stranded debt increased from $7.8 billion as at April 1, 1999, to an estimated $11.9 billion as at March 31, 2004, as a result of an increase in stranded debt primarily due to the electricity price freeze, as well as a reduction in the estimated present value of future dedicated revenues to the Ontario Electricity Financial Corporation (OEFC), mainly reflecting the downward revision in 2004 of the previous overestimation of future financial performance of Ontario Power Generation (OPG), and lower tax rates. OPG had significantly underperformed compared to its plans over the previous period of 1999 to 2004.

Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The residual stranded debt has been reduced by an estimated $9.3 billion, from an estimated peak of $11.9 billion as at March 31, 2004, to $2.2 billion as at March 31, 2015.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998* and the revocation of Ontario Regulation 89/12, the residual stranded debt was defined under the *Electricity Act, 1998* as the stranded debt minus the estimated present value of future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The Debt Retirement Charge would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt" were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. Since you have collected more than $12.5 billion in Debt Retirement Charge (DRC) revenue to March 31, 2015, why hasn't stranded debt declined by more?

A. Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The Ontario Electricity Financial Corporation (OEFC) has paid down stranded debt by an estimated total of about $12.3 billion from its peak in 2003-04, reducing stranded debt to $8.2 billion as at March 31, 2015.

- As confirmed in the Auditor General's 2011 Annual Report, the DRC is used exclusively by OEFC to meet its mandate, as provided for under the *Electricity Act, 1998*, which includes servicing and retiring its debt and other liabilities.

- Servicing costs to the OEFC include interest expense, which is currently about $1.4 billion per year and has totalled about $30.5 billion between April 1, 1999 and March 31, 2015.

- Stranded debt increased by over $1 billion between April 1, 1999, and March 31, 2004, primarily as a result of the 4.3 ¢/kilowatt-hour (kWh) price freeze, which cost OEFC about $900 million.

- The Auditor General audits OEFC's annual financial statements and has provided an unqualified opinion every year since the initial 1999–2000 financial statements.

Q. After the removal of the DRC what is the government's plan to pay into the OEFC, to make up for that money? With the lower revenue going into the OEFC, isn't there a danger of it becoming insolvent?

A. The government has removed the Debt Retirement Charge (DRC) from residential users' electricity bills as of January 1, 2016. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998*, the DRC would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge. The government expects that the stranded debt will continue to decline following the end of the DRC.

Background

Q. What is OEFC?

A. The Ontario Electricity Financial Corporation (OEFC) is an agency of the Province and was established by the *Electricity Act, 1998* as the legal continuation of the former Ontario Hydro.

OEFC's mandate includes servicing and retiring the former Ontario Hydro's debt and certain other liabilities.

- OEFC inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. The debt was accumulated by building Ontario's electricity generation and transmission infrastructure.

- A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets

OEFC receives dedicated revenues to service and retire the stranded debt from a number of sources, including payments in lieu of taxes (PILs) from Ontario Power Generation (OPG), Hydro One and municipal electricity utilities (MEUs); Electricity Sector Dedicated Income from the Province in respect of the net incomes of OPG and Hydro One; and the Debt Retirement Charge paid by electricity users, as provided for by the *Electricity Act, 1998*.

Q. When will the OEFC's 2015-16 Annual Report be released publicly?

A. The 2015-16 Annual Report is currently being prepared. Under the Electricity Act, 1998, the time frame for preparing and submitting the Annual Report may be extended to reflect the timeframe for Public Accounts. Given the changes to the Electricity Act and significant activities during 2015-16 that affected OEFC, it was prudent to take additional time to review the impacts on OEFC in preparing the financial results for 2015-16..

- OEFC’s annual reports contain OEFC’s audited financial statements which are also released as part of the Province’s Public Accounts

    - OEFC's audited 2014-2015 financial statements, including the notes to the financial statements, were released on Sep 28, 2015 in Volume Two of the 2014-15 Public Accounts.

- The Auditor General audits OEFC’s annual financial statements and has provided an unqualified opinion every year since the initial 1999-2000 financial statements.

- Public Accounts may be downloaded from the Ministry of Finance web site (http://www.fin.gov.on.ca/en/budget/paccts/).

- OEFC’s past Annual Reports (1999-2000 to 2014-2015) can be downloaded from the OEFC website. (http://www.oefc.on.ca/publications.html).

- A spreadsheet containing OEFC's historical financial statements can be accessed on OEFC’s website (http://www.oefc.on.ca/pdf/OEFC_financials_historicals_en.xls)

Q. What is the difference between stranded debt and unfunded liability?

A. The Ontario Electricity Financial Corporation (OEFC) inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. The debt was accumulated by building Ontario's electricity generation and transmission infrastructure. This amount included $30.5 billion in total debt.

A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets.

OEFC's initial unfunded liability of $19.4 billion as at April 1, 1999, was the stranded debt adjusted for $1.5 billion of additional assets, including primarily an accounting asset for deferred debt charges.

Q. What was the origin of the residual stranded debt?

A. The Ontario Electricity Financial Corporation (OEFC) is one of five entities established by the *Electricity Act, 1998*, as part of the restructuring of the former Ontario Hydro. OEFC's mandate includes servicing and retiring the debt and other liabilities of the former Ontario Hydro.

- OEFC inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets.

- As of April 1, 1999, the present value of future payments-in-lieu of taxes and electricity sector dedicated income was estimated at $13.1 billion. Subtracting the $13.1 billion from stranded debt of $20.9 billion resulted in a difference of $7.8 billion, the initial estimated residual stranded debt.

The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", including the regulation-making authority of Ontario Regulation 89/12, were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. How does OEFC provide financial assistance to the successor corporations of Ontario Hydro? Are these loans added to residual stranded debt/outstanding liabilities?

A. Consistent with its mandate, OEFC provides financial assistance to the successor corporations of Ontario Hydro, namely Ontario Power Generation (OPG) and the Independent Electricity System Operator (IESO). For example, financing is provided by OEFC for new generation development projects such as the Niagara tunnel project.

OEFC borrows to provide these loans, thereby increasing its debt portfolio, but with an offsetting asset (Notes and Loan Receivables) from the companies, thereby not affecting the unfunded liability ("stranded debt") on OEFC's balance sheet.

Q. What is the "due from the Province of Ontario" payment?

A. Due from Province

The Due from Province of Ontario that appears in OEFC's financial statements represents the cumulative value of the Electricity Sector Dedicated Income (ESDI) since April 1, 1999.

ESDI reflects the Province's commitment to dedicate its cumulative combined net income of OPG and Hydro One in excess of the Province's interest cost of its investment in its electricity subsidiaries to OEFC.

- For example, the combined net incomes of OPG and Hydro One in 2014-15 was $1,558M, and the Province's interest cost in acquiring the equity in the two companies totals about $520 million annually. This resulted in an ESDI of $1,038 million in 2014-15, so the ESDI Due from Province of Ontario increased from $3,865 million as of March 31, 2014, to $4,903 million as of March 31, 2015.

The ESDI commitment is reflected in Public Accounts as a transfer payment to OEFC from the Province's Consolidated Revenue Fund and is authorized by a voted appropriation.

CORPORATE AND ELECTRICITY FINANCE DIVISION

Asset Optimization and the Trillium Trust

Q: What asset optimization initiatives did the Province move forward with in 2014-15?

A: On February 4, 2015, the Province completed the sale of its remaining 36.7 million GM common shares for total proceeds of $1.55 billion, resulting in a fiscal gain of $1.08 billion.

General Motors also redeemed the Province's preferred shares on December 31, 2014, for total proceeds of $0.16 billion, including a gain of $0.02 billion.

The $1.1 billion gain on the sale of the common and preferred shares exceeded the $900 million asset optimization target included in the 2014 Budget for 2014–15 Net Revenue Gains from Asset Optimization.

The Ontario government directed the gain from the sale, including the additional $200 million generated above the 2014 target, to the Trillium Trust. The Province also directed to the Trillium Trust the $249 million net proceeds from the September 2013 sale of the Province's interest in 10 million shares of GM.

Q: The 2014-15 Public Accounts showed that the sale of GM shares provided revenue benefits to the Province. Is the Province selling assets to improve the path to balance?

A: The government's plan to balance the budget is centred on:

- Responsibly Managing Spending
- Transforming and Modernizing Government
- Addressing the Underground Economic and Tax Compliance
- Investing Strategically to Grow the Economy

The government's plan to eliminate the deficit does not depend on the revenues from asset sales. Maximizing the value of these assets is part of the government's economic plan for Ontario. The net revenue gains from these transactions are helping the government to deliver on its plan by investing in infrastructure.

The *Trillium Trust Act, 2014*, provides for the dedication of net revenue gains associated with the sale of designated assets to the Trust to help fund investments in transit, transportation and other priority infrastructure under Moving Ontario Forward.

Q: What's the status of the funds in the Trillium Trust?

A: The Public Accounts of Ontario 2014-2015, published in September 2015, show that $1.35 billion has been dedicated to the Trillium Trust.

These are the net proceeds from the sale of the Province's remaining General Motors common shares in early 2015, combined with net proceeds from a September 2013 GM share sale and the redemption of preferred shares in late 2014.

On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust.

This brings the total balance of the Trillium Trust to over $4.5 billion, to help fund further investments in transit, transportation and other priority infrastructure as part of Moving Ontario Forward.

- The $3.2 billion credit to the Trillium Trust comes from:
    - About $0.8 billion in gains on sale from the sale of Hydro One shares in November 2015.
    - The net benefit to the Province of about $2.4 billion from Hydro One's recognition of the deferred tax benefit.

Q: When will the government actually start using funds from the Trillium Trust to pay for transit and infrastructure?

A: As outlined in the 2016 Budget, the government plans to begin drawing down on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history. Based on planned expenditures, in 2016-17 the Trillium Trust would support Moving Ontario Forward initiatives, such as

- Regional Express Rail (RER);
- Hurontario Light Rail Transit (LRT); and
- Ontario Community Infrastructure Fund.

Like most large infrastructure investments, initial spending on Moving Ontario Forward projects is focused on planning, design, property acquisition and other activities to get projects construction-ready. This will allow for identification for expenditures, as this preliminary work is completed and construction activity

becomes underway, and for cash flow timing requirements from the Trillium Trust during 2016-17 and subsequent years.

Q: What is the current status of broadening Hydro One ownership?

A: The Province completed the Hydro One initial public offering (IPO) in November 2015 and raised approximately $1.83 billion in gross proceeds and about $116 million from related share sales. As announced in early May, a secondary offering of Hydro One shares raised approximately $1.97 billion in gross proceeds, and as announced in July, the Province has an agreement in principle to sell to First Nations in Ontario up to 2.5% of Hydro One shares at a price of $18 per share.

There were other associated benefits in connection with the IPO, including a positive impact to the Province's income from Hydro One as a result of a deferred tax benefit recorded by Hydro One. The Province also received cash of $1 billion in special payments from Hydro One, including $800 million in a special dividend paid prior to the IPO, and about $200 million in additional payments in lieu of taxes to the Ontario Electricity Financial Corporation (OEFC).

On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust, bringing total balance of the Trillium Trust to over $4.5 billion. The net revenue gains from the secondary offering in April 2016 will be credited to the Trillium Trust in the future.

The Province will proceed with future offerings in a staged and prudent manner, over time reducing its stake to 40 per cent while remaining the largest shareholder.

Through this initiative, the Province expects to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: In April 2015, the Premier's Advisory Council on Government Assets estimated Hydro One's valuation at between $13.5 billion and $15 billion; using this estimate, the province could realize up to $9 billion from the sale of 60% of Hydro One. Does the Province still expect these benefits?

A: The Province is on track to generate approximately $9 billion in gross proceeds and other revenue benefits from broadening the ownership of Hydro One, while remaining the largest single shareholder.

Through this initiative, the Province expects to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: In moving forward with broadening Hydro One ownership, isn't the government giving up future revenues from the company?

A: While broadening ownership in a revenue generating asset means that there may be an impact on revenues over the longer term, the fiscal impact of an asset sale includes upfront gains that the government will reinvest into public infrastructure, improving the lives of Ontarians where they live, work and play. In turn, this will create jobs, generate economic growth and additional revenues for the Province.

- The Province would also retain 40 per cent of Hydro One, following the IPO and subsequent share offerings, which would continue generating revenue for the Province.

Q: Why did the government remove certain oversight powers of the Office of the Auditor General over Hydro One?

A: To support Hydro One's transition from being wholly-owned by the Province to being publicly traded, the government agreed with the Premier Advisory Council's recommendations that the company should operate, to the extent possible, in the same legislative and regulatory environment as other publicly–traded, rate-regulated entities.

However, the Province has ensured Hydro One oversight measures are in place. Hydro One continues to be subject rate regulation by the Ontario Energy Board (OEB) and as a publicly traded company Hydro One is subject to requirements of the Business Corporations Act (Ontario) and the Securities Act (Ontario).

To further ensure the protection of ratepayers, the government required Hydro One to create a dedicated Ombudsperson, similar to those found at other publicly traded companies. The Ombudsperson is able to receive and investigate customer complaints.

The government has also put in place a governance agreement and registration rights agreement with Hydro One to clarify the Province's role as investor, including the process through which the Province nominates 40 per cent of the board of directors and the Province's rights related to future share sales by the Province or Hydro One.

The government will remain, by law, the largest single shareholder in Hydro One – and no other single shareholder or group of shareholders will be permitted to hold more than 10 per cent of the company's shares.

Q: What is the status of the potential merger between Hydro One Brampton and a group of urban local distribution companies (LDCs)?

A: The proposed merger of Hydro One Brampton with PowerStream, Enersource, and Horizon Utilities, continues to move forward.

The municipal councils for the cities of Barrie, Markham, Vaughan, Mississauga, Hamilton and St. Catharines have all voted to proceed with the merger. Ontario has also executed a Share Purchase Agreement with PowerStream, Enersource, and Horizon.

Commercial closing of the transaction would be subject to certain closing conditions, including Ontario Energy Board (OEB) approval. The proposed merger is currently being reviewed by the OEB.

- The proposed merger of these three strong performing utilities with Hydro One Brampton would create the second-largest electricity distributor in Ontario by number of customers. The merged entity would deliver efficiencies and economies of scale while continuing to provide safe, reliable and clean electricity.

Q: Will the Province realize any up-front benefit from the sale / merger of Hydro One Brampton with other local distribution companies (LDCs)? Would these benefits go to the Trillium Trust or to the Ontario Electricity Financial Corporation (OEFC)?

A: The purchasers have agreed to pay $607 million for Hydro One Brampton, subject to post-closing adjustments and regulatory approval from the Ontario Energy Board (OEB).

The *Trillium Trust Act, 2014*, ensures that net revenue gains from the sale of Hydro One Brampton shares would be credited to the Trillium Trust. Under the Act, the net revenue gains would take into account the gross proceeds less the book value of the asset and costs incurred in the disposition of the asset.

The *Electricity Act, 1998*, also allows the Province to meet its obligations to OEFC by, for example, relieving OEFC of certain debt obligations that it currently owes to the Province.

Q: Why is Hydro One Brampton being merged with three other urban local distribution companies – Powerstream, Horizon Utilities, and Enersource? Why wasn't there a competitive process for the sale/merger of Hydro One Brampton?

Together these utilities can take advantage of efficiencies of scale and resources sharing, which in turn could translate into savings for their respective ratepayers.

In the course of its Phase 2 consultations, the Premier's Advisory Council received a strong pre-emptive bid from the consortium of local distribution companies (LDCs) at the higher end of the indicative values identified in the Council's market soundings.

Such a merger will provide a much needed catalyst for wider Local Distribution Company consolidation.

As noted by the Auditor General in her 2015 Annual Report, based on information provided to the Office of the Auditor General (OAG) by Hydro One and the Ministry of Energy, the OAG's estimates that the purchase price is reasonable for Hydro One Brampton Networks, and would provide the province with a fair return on its investment.

Subject: Meeting tomorrow

Hi Mike
The team is confirmed for 11 AM tomorrow if that changes please coordinate with Mark. Coming from Scotia Bank will be Mark Hadden, Doug Noe managing director, head of securitization Greg Lawrence, managing director head of DCM energy And Derrick Chu Energy representative from investment banking.

Good luck and we'll chat on Friday.

Cheers

Tim

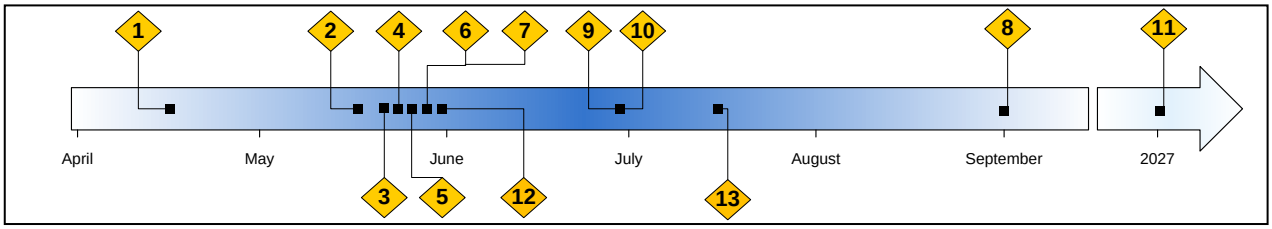
Summary of Work Plan

Below is an overview of the elements of the draft workplan to set up a trust special purpose financing vehicle (SPV) that would hold the claim on future customers and the debt issued to fund the payment to the IESO in accordance with Ontario's Fair Hydro Plan. All elements of the work plan will consider the key requirements of OPG with respect to elimination or mitigation of risks.

Workplan Overview

The draft workplan below is divided into major components required to set up the trust SPV as part of Ontario's Fair Hydro Plan. Each major component is divided into sub-components that provide further aspects / characteristics / requirements.



[Note deleted #13]

1. Legislative Requirements [Stakeholders: OPG, IESO, OEB, MOE]

a. Characteristics of Regulatory Asset

Key aspects will include collection rights, claim/counterclaim protection, future governmental action protection, saleability into SPV, protection from seller's creditors, OEB regulatory asset recognition, oversight of administration costs and recovery mechanism, and true-up process.

b. *Legislative amendments to implement the structure*

- Provisions in the Electricity Act (and OPG's articles) will be amended/updated to allow flexibility in OPG's corporate structure.
  1. These amendments would be similar in nature to previous amendments made to Hydro One's governing provisions in the Electricity Act.
  2. The amendments would, for example, allow OPG to create and operate through subsidiaries, and also enable OPG to raise financing through public offering of debt. (OPG may need to raise some financing to fund a portion of the subordinated debt going into the trust.)
- The electricity legislation will be amended to implement the deferral and financing of the GA, including amendments:
  1. to reflect that the IESO may defer collection of a portion of the GA;
  2. to create a "regulatory asset" consisting of the right to recover, over time, the amount GA being deferred, together with interest and other financing costs;
  3. to allow the IESO to sell that regulatory asset to a third party (the trust/financing vehicle);
  4. that authorizes the OEB to recognize the regulatory asset (which will likely comprise a deferral account) and allows the owner of the asset to recover the principal amount and financing costs for the GA deferral over time; and
  5. that also provides the OEB with no rights (or very limited rights) to review the terms on which the GA deferral is recovered (i.e. the interest rate, other financing costs and the amortization period). (This is needed to make the GA deferral financeable in the capital markets.)

2. Financing Process [Stakeholders: OPG, IESO]

a. Set up Financing Vehicle

The SPV will be established with a simplified trust indenture to facilitate flexible financing (issue short and long term debt in Canadian and US markets, ability to warehouse, ability to enter into cross currency swaps). The sole purpose of the SPV will be to acquire the

regulatory asset and raise debt. A financial service and management agreement with OPG will also be required.

b. Oversight

Appropriate oversight structure to be established independent of OPG management to review and monitor financing strategies, operating budgets and results of SPV. Reporting and monitoring requirements of Province, IESO and OEB and OPG to be determined.

c. Operations

Processes will be established for deal execution, operating cash management, regulatory reviews and credit rating agency reviews. Agreements will be established to define relationships with IESO (sales & servicing), billing payment and other administrative services, banking arrangements, subordinated debt agreement with OPG.

3. Equity Injection Process [Stakeholders: OPG, Ministry of Energy, Ministry of Finance]

The Province will require Treasury Board approval for periodic appropriations to fund equity injections into OPG. OPG Board approval will be required to issue a specified number of shares that can be periodically issued to the Province. The actual number of shares issued will be based on IESO forecast of funds required.

4. IESO and Trust Operational Process [Stakeholders: OPG, IESO]

Establish processes to facility the SPV's purchase of the IESO's regulatory asset, including timing (notice periods), frequency, fund flows, GA shortfall forecasts and true-up mechanisms.

5. Debt Issuance – General Planning [Stakeholders: OPG, MOF]

Develop debt issuance plan considering need for liquidity/working capital, debt profile (short/long term), debt composition (senior/subordinated), marketing plan (Canada and US), financing amounts and timing, credit rating agency legal opinions and required approvals.

6. Debt Issuance – Subordinated [Stakeholders: OPG]

Establish subordinated debt characteristics (risk, return, cash flows), repayment terms, issue frequency/timing and required approvals.

7. Debt Issuance – Short Term [Stakeholders: OPG]

Ability to aggregate and warehouse using short term CP / ABCP.

8. Debt Issuance – Long Term [Stakeholders: OPG]

Key steps in establishing OPG external long term debt financing include the following:

- Select bank advisor for Canadian market
- Select bank advisor for US market
- Select credit rating agency and establish high investment grade requirements
- Seek credit rating agency legal opinions (identified above in section 5)
- Ongoing financial and legal due diligence
- Credit rating agency presentation and follow-up Q&A
- Obtain preliminary or pre-sale rating
- Develop maturity profile if flexibility available
- Draft and execute offering memorandum, agency agreement and other legal documents
- Prepare marketing materials
- Marketing, road shows, investor one-on-ones
- Investor due diligence and collection of expression of interest
- USD denominated debt - ISDA contracts for swap arrangements and potential collateral requirements

9. **Recovering Interest, Administration and Other Financing Costs from IESO [Stakeholders: OPG, IESO]**

   Establish basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency.

10. **Paying Interest, Administration and Other Financing Costs to Providers [Stakeholders: OPG, IESO]**

    Establish bank accounts, basis of cost (actual or accrued), documentation requirements, funds flow timing and frequency, required approvals and administration agreements (either with trust administrator or OPG).

11. **Recovering Principal from IESO [Stakeholders: OPG, IESO]**

    Establish basis of recovery (regulatory asset schedule / actual financing amortization or maturity / other method), documentation requirements, approvals, timing and frequency.

12. **Accounting Requirements and Process [Stakeholders: OPG]**

    Establish overall accounting requirements for trust, regulated asset, consolidation with OPG, operational control of trust and restrictions on regulated asset. See further details in Appendix A – Terms Necessary for OPG to Consolidate the Global Adjustment Trust.

ONTARIO'S FAIR HYDRO PLAN

Draft Financing Workplan

Item # Structures / Components / Processes

1 Legislative Requirements

[Stakeholders: OPG, IESO, OEB, MOE]
[Primary process owner:]
[Key contributor:]

Characteristics of Regulatory Asset

- Purchaser has right to require IESO to collect amount in accordance with repayment/amortization schedule including financing & administration costs
- Regulatory asset not subject to claim or counterclaim by IESO or successor entity
- Any action taken by Province or regulator that limits, alters or impairs regulatory asset or reduces ability of IESO to recover amounts - the purchaser or trustee will have right of action against the Province for damages
- Legislation must allow IESO to sell regulatory assets to a third party (Trust) and supports sales & service agreement
- True sale - right, title and interest in regulatory asset is not property of the seller and could not be otained by creditors of the seller
- Trust has unencumbered ownership / security interest in the regulatory asset and no outstanding liens or security interests in the regulatory asset that could compromise trustee's interest
- OEB will recognize such regulatory assets and allows asset owner to recover related principal, financing & administration costs over time
- True-up mechanism required to recover all actual principal, financing & administration cost

Financing Process

2 *Set up financing vehicle*

[Stakeholders: OPG, IESO]
[Primary process owner:]
[Key contributor:]

- Declaration of Trust
- Simplified trust indenture for flexible financing including:
  - ability to warehouse
  - issue short-term debt (ABCP, bank facility)
  - issue long-term debt (notes, corporate bonds, ABS)
  - issue in Canadian and US markets
  - enter into cross currency swaps
    - collateral issues may arise
- Sole purpose is to acquire regulatory asset and raise debt
  Trust governance
  - narrow scope for enhanced financeability
  - no precedence for "operating trust" as cost recovery vehicle
- Trust authority structure
- Financial services and management agreement with OPG
  Oversight
  - review of management plan by oversight committee
  - oversight committee responsibilities includes:
    - approval of financial strategy
    - overall assessment of performance
    - review of operating budget
    - periodic review of management reports
  Operations (see Ford Trust example)
  - deal execution
  - operating cash management (IESO)
  - regulatory reporting (OEB)
  - coordinate credit rating agency reviews
- Sales & servicing (passthrough) agreement with IESO
- Administrative services agreement
  - billing and other administrative services
  - administrative payment services
- Banking arrangements
- Subordinated debt agreement with OPG
- Credit rating agency requirements considered
- OEB role - oversight on administration costs of the trust - see White Paper for process

ONTARIO'S FAIR HYDRO PLAN

Draft Financing Workplan

Item # Structures / Components / Processes

3 **Equity injection process**
[Stakeholders: OPG, MOE, MOF]
[Primary process owner:]
[Key contributor:]

- Determine the parties required to be involved - MOE, OEFC, Corp Secretary, Treasury, etc.
- Approvals
- Frequency
- Develop process to obtain injection
- Requirements from Province
- OPG Board approval - approval for specified number of shares
  - Approved amount sufficient for 1-2 years
  - Shares approved but not issued
  - Actual # issued based on IESO forecast for funds
- Shareholder approval

IESO & Trust Operational Process

4 *Purchase (Trust) and sale (IESO) of regulatory asset*
[Stakeholders: OPG, IESO]
[Primary process owner:]
[Key contributor:]

- Timing - notice period to trust
- Frequency
- Flow of funds
- Basis of regulatory asset - GA shortfall, proposed recovery profile, true-up mechanism
- Executed under sales & servicing agreement
- Approvals - requirements to support financing
- Trust administrator requirements
- Source of funds for the trust
- Provide GA funding forecast for planning purposes

5 *Debt issuance - general planning*
[Stakeholders: OPG, MOF]
[Primary process owner:]
[Key contributor:]

- Need for liquidity/working capital facility
- Determine debt profile - short / long / combination
- Determine debt composition - senior / subordinated
- Identify market to access - Canada and US
- Determine debt issuance plan - how much, when, what market
- Potential credit rating agency legal opinions:
  - True sale
  - Bankruptcy remoteness
  - Non-consolidation
  - Legal existence, power & authority of seller, SPV/trust, etc.
  - Tax implications
- Final and irrevocable - recovery / regulatory asset not exposed to legislation changes
- Board approval of financing plan

6 *Debt issuance - subordinated*
[Stakeholders: OPG]
[Primary process owner:]
[Key contributor:]

- Subordinated debt characteristics - risk, return, cash flows
- Ability to repay sub debt - need to ensure no restriction in trust indenture
- Approvals
- Frequency
- Timing

ONTARIO'S FAIR HYDRO PLAN

Draft Financing Workplan

Item # Structures / Components / Processes

7 *Debt issuance - short term*
[Stakeholders: OPG]
[Primary process owner:]
[Key contributor:]

- Initial funding - OPG to fund via subordinated debt - need 50% external in OPG by quarter end (CP?)
- Can trust issue CP to an ABCP conduit?
- Ongoing funding - issue in accordance with plan
- Any involvement of trust administrator in subordinated debt for short term requirements?

8 *Debt issuance - long term*
[Stakeholders: OPG]
[Primary process owner:]
[Key contributor:]

- Select bank advisor for Canadian market
- Select bank advisor for US market
- Select credit rating agency and discuss high investment grade requirements
- Legal opinions required - the opinions identified above in section 5
- Ongoing financial and legal due diligence
- Credit rating agency presentation and follow-up Q&A
- Obtain preliminary or pre-sale rating
- Develop maturity profile if flexibility available
- Draft and execute offering memorandum, agency agreement and other legal documents
- Prepare marketing materials
- Marketing, road shows, investor one-on-ones
- Investor due diligence and collection of expression of interest
- Roadshow presentation and one-on-one investor meetings
- Assume standard role for trust administrator
- USD denominated debt - ISDA contracts for swap arrangements and potential collateral requirements

9 *Recovering interest, administration and other financing costs from IESO*
[Stakeholders: OPG, IESO]
[Primary process owner:]
[Key contributor:]

- Basis of cost - actual or accrued
- Documentation requirements - invoice / statement / other
- Timing - day of month issued to IESO / day of month paid to trust
- Approvals - IESO requirements / trust requirements
- Frequency - monthly
- GA recovery rights assumed to be pari passu

10 *Paying interest, administration and other financing costs to providers*
[Stakeholders: OPG, IESO]
[Primary process owner:]
[Key contributor:]

- Basis of cost - who reviews
- Documentation requirements - invoice / statement / other
- Timing - dependent on financing? Does trust pay first and then recovers from IESO?
- Approvals - does service agreement establish?
- Bank accounts - who controls accounts and has access?
- Payments - who executes payments - trust administrator or OPG through administrative services agreement?
- Frequency - as required

ONTARIO'S FAIR HYDRO PLAN

Draft Financing Workplan

Item # Structures / Components / Processes

11 *Recovering principal from IESO*
[Stakeholders: OPG, IESO]
[Primary process owner:]
[Key contributor:]

- Basis of recovery - regulatory asset schedule / actual financing amortization or maturity / other method
- Documentation requirements - invoice / statement / other
- Timing - day of month issued to IESO / day of month paid to trust
- Approvals - does service agreement establish?
- Frequency - monthly

Accounting Process

12 *Establish overall accounting requirements for trust, regulated asset, consolidation with OPG, operational control of trust, restrictions on regulated asset*
[Stakeholders: OPG]
[Primary process owner:]
[Key contributor:]

- Requirements to capture regulated asset in trust
  - IESO recognition
  - Control / restriction on recovery characteristics of regulatory asset
- Requirements to consolidate trust with OPG
  - See separate Accounting tab for detailed characteristics
- Regular accounting - who does and how captured. May depend on reporting / performance requirements identified in item 13 below.

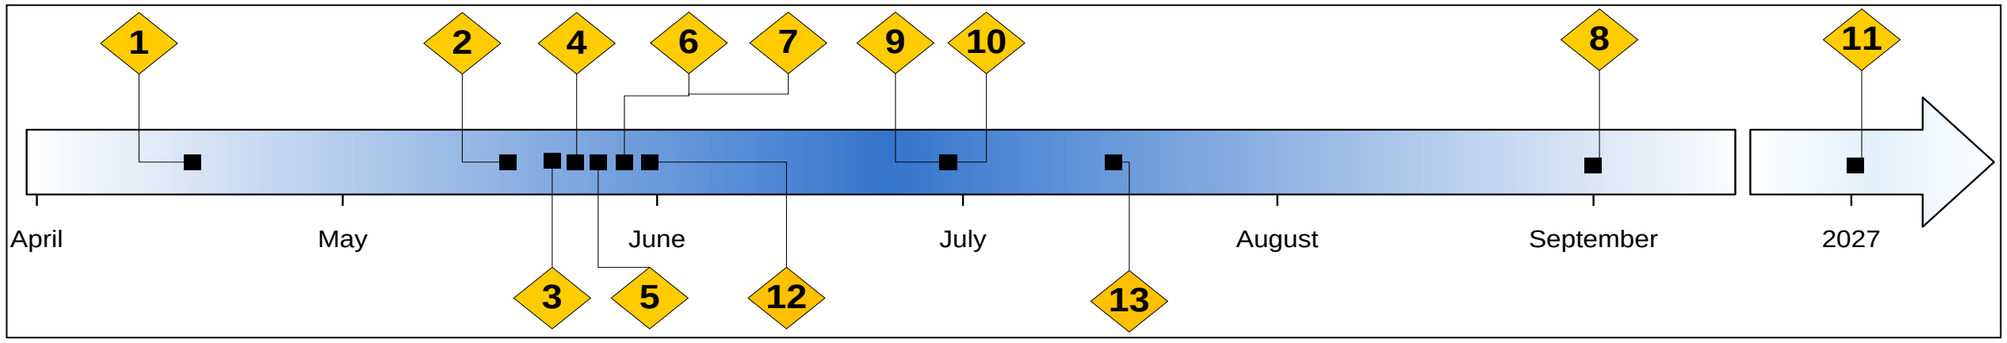
Reporting / Monitoring Process

13 *Establish reporting requirements for trust, regulated asset, and financing*
[Stakeholders: OPG]
[Primary process owner:]
[Key contributor:]

- Reporting requirements of -
  OPG Board, OEB, IESO, OPG management, Province, etc.
- Management and performance reporting - interest rate, administration cost, etc.

ONTARIO'S FAIR HYDRO PLAN

Draft Financing Timeline



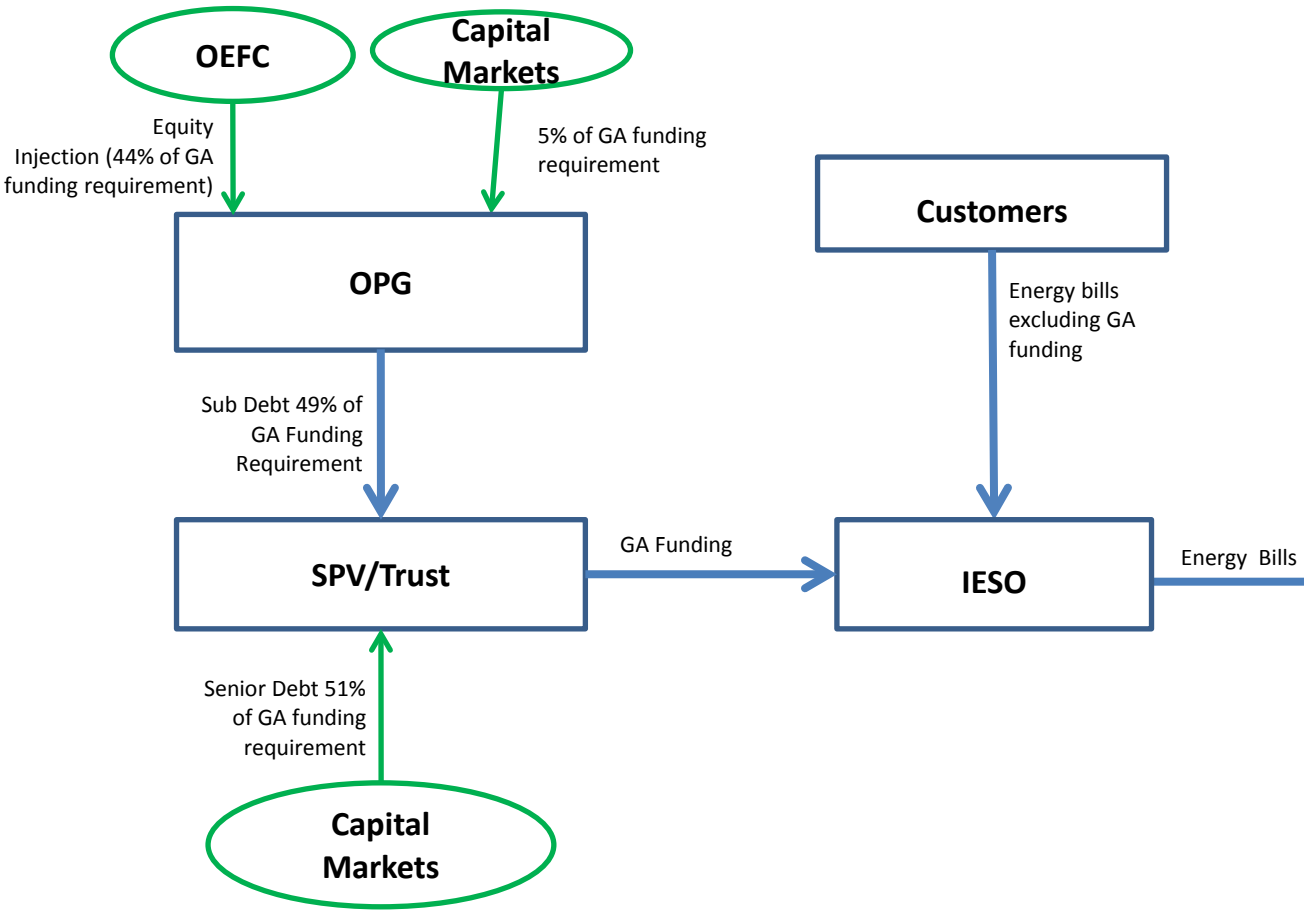
1 Legislative Requirements
2 Set up financing vehicle
3 Equity injection process
4 Purchase (Trust) and sale (IESO) of regulatory asset
5 Debt issuance - general planning
6 Debt issuance - subordinated
7 Debt issuance - short term
8 Debt issuance - long term
9 Recovering interest, administration and other financing costs from IESO
10 Paying interest, administration and other financing costs to providers
11 Recovering principal from IESO
12 Establish overall accounting requirements for trust, regulated asset, consolidation with OPG, operational control of trust, restrictions on regulated asset
13 Establish reporting requirements for trust, regulated asset, and financing

CONFIDENTAL **21-Feb-17**

Terms necessary for OPG to consolidate the Global Adjustment Trust

Issue	No.	Requirements
Directive	1	The Trust must be undertaken by OPG as a business initiative on its merits. A Shareholder Directive is to be limited to direct OPG to investigate the option of establishing a Trust vehicle to administer, finance and operate the Global Adjustment plan and the operation of that Trust and the control, risk and rewards of that Trust will determine its consolidation into OPG as a business enterprise
Trust	2	The Trust should not operate in a predetermined way such that OPG does not have decision-making authority over the Trust's ongoing activities after its formation (i.e. should not operate on 'autopilot').
	3	OPG must have the ability to appoint and remove the Trustee (or Board of Trustees), with no veto right by the Province.
	4	No party shall have the ability to remove OPG from its role and authority in the Trust.
	5	The Province cannot have the right to be able to veto OPG's decisions about the relevant activities of the Trust. OPG must have the power over the relevant activities of the Trust and be compensated. The relevant activities of the Trust include (but are not limited to) the evaluation and decisions on financing alternatives, duration, and the strategy to minimize financing costs.
	6	OPG must have the power to determine or change operating and financing policies of the Trust, which will affect the variability of risks and returns.
	7	OPG must have the power to establish operating and capital budgets of the Trust.
	8	The Province or its agencies must not directly or indirectly fund (through debt or equity) more than 50% of the following: a. The Trust b. Any of OPG's investments in the Trust c. The most subordinated debt of the Trust
	9	OPG must own greater than 50% of the most subordinated debt and must be no less than 5% of the subordinated debt of the Trust. Such ownership must be financed entirely by OPG through operating cash flows or external debt, without assistance from Provincial sources.
	10	OPG must have the ability to earn variable returns by exercising its authority, which shall be accomplished as follows: a. The cash flow from the restructured asset shall include interest determined based on a relevant benchmark that is appropriate relative to the restructured asset, plus an appropriate margin consistent with the relevant market and other risks b. OPG shall have the authority to determine the financing strategy, which will vary the financing costs with the objective of enabling the Trust to achieve a more favourable return compared to the benchmark for interest on the restructured asset c. The Trust shall establish classes of liabilities (senior, subordinated and the most subordinated). The classes would allow the Trust to delineate financing of lower risk investment and investment that would bear higher residual risk. The delineation would limit OPG's self-funded investment to a reasonable level in order to allow OPG to remain a self-sustaining entity. d. OPG shall, through its ownership of the most subordinated liability, be able to capture and retain the pricing difference between cost of financing and benchmark for interest on the restructured asset, or any residual risk of restructured asset. The targeted return of the subordinated liability should be reflective of the underlying risks and compensate holders for active management that would be required. e. OPG should participate in the detailed design of the above and the Trust documentation to ensure that it has substantive power and variability, which will allow OPG's Board of Directors to evaluate the opportunity as a business initiative instead of through a shareholder directive. Defined Forced Majeure for emergency events (e.g. unlikely credit market event or disruption where it is not possible to borrow from the market at a reasonable rate), OEFC may provide bridge financing beyond the designated percentage.

Issue	No.	Requirements
Legislation	11	The Legislation must require interest, carrying and administrative costs to be paid to the Trust on a monthly basis, so that the Trust is able to recognize appropriate revenue to offset any ongoing costs.
	12	The Legislation must dictate the manner in which the restructured asset would be determined, collected, and the period of collection, so that the determination of the restructured asset will not be subject to the Province's decisions on an ongoing basis, but determined based on a formula. Alternatively, the Legislation may allow for an adjustment to the pre-determined deferral formula based on specific parameters that would limit the adjustment to the restructured asset. Adjustments beyond the specific parameters would require approval by the Board of Trustee.
	13	The Legislation must be written to avoid legal or constitutional challenges and be seen as virtually unchangeable to reduce the cost of borrowing and with a specific formula which determines the deferral amount. Should a future government alter or repeal the legislation, the debt held in support of the deferred amounts would become payable by the Province directly, not by OPG or the Trust.
	14	The spirit of the above terms should be reflected in the Trust Indenture Agreement as well as Legislation, wherever possible.



OEFC
Capital Markets
Equity Injection (44% of GA funding requirement)
5% of GA funding requirement
Customers
OPG
Energy bills excluding GA funding
Sub Debt 49% of GA Funding Requirement
SPV/Trust
GA Funding
IESO
Energy Bills
Senior Debt 51% of GA funding requirement
Capital Markets

Generators & Other
Industry Participants

1 **EQUITY INJECTION**

Determine optimal method of issuing shares (treasury, subscription, etc)	
Determine which branch of Province is the Shareholder	
Obtain authority from Board and Shareholder to issue new shares	
Establish process with Shareholder (or other) to issue shares on continual basis	
Determine timing for issuances (monthly, quarterly, yearly)	Requires Sub Debt and GA Funding Processes to be complete

2 **CAPITAL MARKETS BORROWING FOR GA FUNDING**

Determine borrowing vehicle (CP?)	
Will process be any different than issuing CP for regular corporate purposes?	
Determine timing for issuances (monthly, quarterly, yearly)	Requires Sub Debt and GA Funding Processes to be complete

3 **SETUP TRUST/SPV**

Declaration of Trust	
Trust governance	
Hire trust administrator?	
Services agreement with OPG	
Banking arrangements	

4 **SUB DEBT FUNDING FOR TRUST**

Determine Sub Debt characteristics (risk, return, cashflows)	
Ability to unwind explicitly or implicitly	
Interest rate setting process	
Sub Debt agreement with OPG	Requires Trust to be setup / Reg Asset Legislation
Determine timing for funding	Requires GA Funding Process to be complete

5 **CAPITAL MARKETS FUNDING FOR TRUST**

Determine Debt characteristics (risk, return, cashflows)	Requires Reg Asset Legislation
Determine which markets to issue debt in (capacity of markets)	Requires Trust to be setup / Reg Asset Legislation
Master Trust Indenture and Supplemental - CAN and US?	
Select Rating Agency	
Select CAN market advisor	
Select US market advisor	
Develop roadshow presentations	
Determine timing for funding	Requires GA Funding Process to be complete
Arrange for cross currency swaps for US debt	
Ability to unwind explicitly or implicitly	

6 **CREATION OF REGULATORY ASSET/COLLECTION RIGHTS**

Determine characteristics of Regulatory Asset (principal only, principal + forecast interest, principal + actual interest)

Establish mechanism for IESO to create Regulatory Asset
Get necessary attributes (property rights) of Regulatory Asset into legislation (protect asset's value, monthly draws)
Establish OEB's involvement in the process

7 **GA FUNDING / COLLECTION RIGHT PURCHASE**
Establish process with IESO to purchase Regulatory Asset
Purchase and Sale agreement between Trust and IESO
IESO gives Trust Purchase Request in return for funds (principal amount)
Regulatory Asset - right to collect principal (and interest?) in future
Determine how to handle interest and management fees

Hi Mike,

Here are two documents that OPG shared last night. Later today, I will send around a few more documents along with a summary of a meeting taking place this morning.

For the working level group discussed with OPG yesterday, would you like to be invited? Anyone else from your group?

Thanks,
Scott

Subject: Re: OFA : IESO

Thanks, this came up at this morning's rate mitigation meeting, and the IESO people were happy to hear that we're on this, as they're a little nervous about how they're going to finance the regulatory asset until OPG is set up to take it on and pay for it.
I'm adding Ken to close the loop on the exchange that we had last night about the OPG letter - I asked Serge to add in the OFA, and he instructed Steen to do so, and, yes, the letter will be posted, at some point, on OPG's website.
In the half hour that I was able to attend the meeting, the discussion was around the legislation. The biggest point of contention was about OPG's need to have a direct recourse to ratepayers, and the legislative need for a thread directly from individual ratepayers to the lenders to the GA smoothing. The OEB doesn't like that concept at all. The other point that is of interest to us is that they are not looking at putting the guarantee mechanism into the legislation - although there will be some description in the legislation about what, I think they called indemnification will be needed, and then they will leave the guarantee to a commercial one. No surprise that OPG's dealer advisors are saying they need a full provincial guarantee, which OPG is pushing back on, and saying that the guarantee can only be if a future government changes the value of the regulatory asset (this is where the indemnification language in the legislation is necessary). Cindy, of course, as well as me for different reasons, is fussed about the nature of that guarantee, so we asked if they could sort that out with the dealers before the legislation is tabled. We don't want to end up with the dealers holding OPG hostage six months from now - not that they'd ever do that, would they Mike ?
I'm sure Scott will send out his fuller synopsis later today, and that'll also cover what happened in the last hour, after I'd left.

Hi Gadi,
All very interesting.
On one point, how would a thread directly from individual ratepayers to the lenders to the GA smoothing work? That would seem particularly challenging.

Hi Anthony,

Gadi asked if Mike and I could get back to you on this. When would be a good time for you for a call.

I'm free this morning until about 11:45.

Regards,

Ron

Mr. Mayman,

Kim and I would like to set up a 30min call with you to discuss the proposed Fair Hydro rollout and the potential impact on the IESO credit needs.

Would you be available next week/preferred date? Let me know and I will send out a meeting invite.

Regards

It would be good to call with you. As you know we have two other facilities that are coming up but don't expect they would be part of the discussion. I think we would need to get an idea of their potential credit needs and then go from there.

Subject: Re: OFA : IESO

Thanks, this came up at this morning's rate mitigation meeting, and the IESO people were happy to hear that we're on this, as they're a little nervous about how they're going to finance the regulatory asset until OPG is set up to take it on and pay for it.
I'm adding Ken to close the loop on the exchange that we had last night about the OPG letter - I asked Serge to add in the OFA, and he instructed Steen to do so, and, yes, the letter will be posted, at some point, on OPG's website.
In the half hour that I was able to attend the meeting, the discussion was around the legislation. The biggest point of contention was about OPG's need to have a direct recourse to ratepayers, and the legislative need for a thread directly from individual ratepayers to the lenders to the GA smoothing. The OEB doesn't like that concept at all. The other point that is of interest to us is that they are not looking at putting the guarantee mechanism into the legislation - although there will be some description in the legislation about what, I think they called indemnification will be needed, and then they will leave the guarantee to a commercial one. No surprise that OPG's dealer advisors are saying they need a full provincial guarantee, which OPG is pushing back on, and saying that the guarantee can only be if a future government changes the value of the regulatory asset (this is where the indemnification language in the legislation is necessary). Cindy, of course, as well as me for different reasons, is fussed about the nature of that guarantee, so we asked if they could sort that out with the dealers before the legislation is tabled. We don't want to end up with the dealers holding OPG hostage six months from now - not that they'd ever do that, would they Mike ?
I'm sure Scott will send out his fuller synopsis later today, and that'll also cover what happened in the last hour, after I'd left.

Subject: Re: OFA : IESO

Thanks, this came up at this morning's rate mitigation meeting, and the IESO people were

happy to hear that we're on this, as they're a little nervous about how they're going to finance the regulatory asset until OPG is set up to take it on and pay for it.
I'm adding Ken to close the loop on the exchange that we had last night about the OPG letter - I asked Serge to add in the OFA, and he instructed Steen to do so, and, yes, the letter will be posted, at some point, on OPG's website.
In the half hour that I was able to attend the meeting, the discussion was around the legislation. The biggest point of contention was about OPG's need to have a direct recourse to ratepayers, and the legislative need for a thread directly from individual ratepayers to the lenders to the GA smoothing. The OEB doesn't like that concept at all. The other point that is of interest to us is that they are not looking at putting the guarantee mechanism into the legislation - although there will be some description in the legislation about what, I think they called indemnification will be needed, and then they will leave the guarantee to a commercial one. No surprise that OPG's dealer advisors are saying they need a full provincial guarantee, which OPG is pushing back on, and saying that the guarantee can only be if a future government changes the value of the regulatory asset (this is where the indemnification language in the legislation is necessary). Cindy, of course, as well as me for different reasons, is fussed about the nature of that guarantee, so we asked if they could sort that out with the dealers before the legislation is tabled. We don't want to end up with the dealers holding OPG hostage six months from now - not that they'd ever do that, would they Mike ?
I'm sure Scott will send out his fuller synopsis later today, and that'll also cover what happened in the last hour, after I'd left.

Thanks, this came up at this morning's rate mitigation meeting, and the IESO people were happy to hear that we're on this, as they're a little nervous about how they're going to finance the regulatory asset until OPG is set up to take it on and pay for it.

I'm adding Ken to close the loop on the exchange that we had last night about the OPG letter - I asked Serge to add in the OFA, and he instructed Steen to do so, and, yes, the letter will be posted, at some point, on OPG's website.

In the half hour that I was able to attend the meeting, the discussion was around the legislation. The biggest point of contention was about OPG's need to have a direct recourse to ratepayers, and the legislative need for a thread directly from individual ratepayers to the lenders to the GA smoothing. The OEB doesn't like that concept at all. The other point that is of interest to us is that they are not looking at putting the guarantee mechanism into the legislation - although there will be some description in the legislation about what, I think they called indemnification will be needed, and then they will leave the guarantee to a commercial one. No surprise that OPG's dealer advisors are saying they need a full provincial guarantee, which OPG is pushing back on, and saying that the guarantee can only be if a future government changes the value of the regulatory asset (this is where the indemnification language in the legislation is necessary). Cindy, of course, as well as me for different reasons, is fussed about the nature of that guarantee, so we asked if they could sort that out with the dealers before the legislation is tabled. We don't want to end up with the dealers holding OPG hostage six months from now - not that they'd ever do that, would they Mike ?

I'm sure Scott will send out his fuller synopsis later today, and that'll also cover what happened in the last hour, after I'd left.

Mr. Mayman,

Kim and I would like to set up a 30min call with you to discuss the proposed Fair Hydro rollout and the potential impact on the IESO credit needs.

Would you be available next week/preferred date? Let me know and I will send out a meeting invite.

Regards

I agree with your perspective on this. The Newfoundland guarantee for the Churchill Falls dam is a good point that I'd forgotten about.

I'm copying Ron and Gavin, as they're preparing a slide for Energy on this.

Just a few random thoughts:

- I would think OPG borrowing with a guarantee is a game changer. As we've seen with Newfoundland, guarantees can be expensive, and I expect this one would be too, relative to Ontario's regular borrowing costs. If it is going on the Province's balance sheet, shouldn't that be done in the most efficient way. In addition, I'm surprised the Ontario borrowing and on-lending approach doesn't have more traction as it certainly provides more cost-savings potential, and this might definitely be required.
- I'm also unclear of the benefits of OPG direct borrowing, given that it appears to be direct government policy to me, and is anyone going to think otherwise? Again I don't have the full perspective and may be missing some of the rationale.

It would be great to discuss when you have the time.

Mike

Subject: FW: Provincial Guarantee

Hi Mike,

Ken is familiar with what I'm asking about here, so either he or I could fill you in on more details if you'd like. The bottom line is that OPG has now determined, not surprisingly to me, that the debt that they issue to public markets for the GA smoothing option, would require a provincial guarantee. Not a full guarantee, they pointed out this morning, but just a guarantee that investors would be made whole, and have all of their costs covered, if a future government were to change the legislation under which this structure would be created. To me, that is pretty much equivalent to a full guarantee, as that's likely the only way the system fails, and investors would take on any risk.

My question is why that guarantee, and therefore the diminishment of risk to investors, is treated differently from an accounting perspective than the simpler process of us just borrowing and on-lending to them.
Please let me know if you have any questions, or would like to discuss this further.
Thanks,
Gadi

Subject: Provincial Guarantee

Hi Ken, we all had to rush off to our next meetings following our meeting this morning, so we didn't get a chance to have a discussion about why a Provincial guarantee of all of OPG's debt related to the trust isn't a problem for the accounting treatment that we'd need to get to in order to make the GA smoothing plan work, while direct borrowing and on-lending from the Province would be, if it's greater than 49% of the total borrowing (actually 44% in your current model).
From a capital markets, investor and rating agency perspective, the guarantee is extremely likely to be lumped in with the rest of the Province's debt, and the guaranteed debt would be considered just as much of a provincial obligation as the rest of our debt, particularly in this case where the reason that the guarantee is needed is because investors will demand it in order to protect themselves from legislative amendments by a future government. For that reason, it could be hard to justify, from a capital markets or cost perspective, having OPG borrowing in its own name with a government guarantee, so is it possible to revisit the potential accounting treatment and determine whether, now that we've effectively moved to a guaranteed structure, we could just have the Province, through the OFA or OEFC, do all of the borrowing and on-lend to OPG? Is this something that you'd been planning to address in the accounting material that you're sending over today?
Thanks,
Gadi

Steen/Mike/Ron:

Further to our call, can you identify a member from your team who can work with OPG (Clara Greco) on this joint initiative to establish a process to facilitate the equity injection requirements necessary to support the GA deferral financing.

Thanks

John

Cc: James Devine <James.Devine@ofina.on.ca>; Carlos Yep <Carlos.Yep@ofina.on.ca>
Subject: RE: Tomorrow's meetings

Scott and Mike, here are some initial thoughts on the potential scope of the advisor role:
Advisor Role

- *Review the proposal to issue "AAA" asset-backed securities serviced by cash flows from legislatively-created receivables owing by present and future electricity customers in Ontario*
- *Identify key requirements that should be contemplated in the legislation that creates the receivables and provides for their sale, collection and enforcement*
- *Advise on alternative ways to structure the cash flows from the receivables in order to optimize funding alternatives under a flexible capital markets funding platform*
- *Provide input into the treasury funding model, including based on alternative capital market and rating agency scenarios (including commenting on OPG's specific funding proposals)*
- *Assess target capital markets based on the size and nature of the offerings and existing appetites for similar structured securities.*

I hope that's somewhat useful. Feel free to call if a discussion makes sense.

Subject: Wednesday meetings

Hi Guys:

I've arranged for 3 dealer meetings and a follow-up selection meeting as follows:

1:30 TD
2:00 Scotia
2:30 BMO
3:00 Selection Mtg

All meetings will be held at the OFA (1 Dundas Street West 14 th floor) in the Capital Markets Boardroom.

I look forward to seeing you both then. My number is 416 325 8930 and I will let you in when you arrive. Please let me know if these times work. The dealers are still confirming, so could have some changes. There is some flexibility if these times are problematic.

Mike

Subject: Re: EXTERNAL – Provincial Guarantee for Fair Hydro Program
Date: Tuesday, April 18, 2017 11:13:14 AM

Thanks. Has TD seen this, or commented on it? The make whole provision, rather than just moving the outstanding bonds up to being provincial debt could be extremely expensive if the guarantee is triggered and exercised.

I assume the challenge to the rating is that we're not AAA, so the debt would be downgraded to our level, but this shows the flaw in the ratings methodology, because why would you want a guarantee from someone who is supposedly less credit worthy? This is definitely, in my mind, worth pushing back on.

Regards,
Gadi

Here is the initial view of the dealers on their ask. We can discuss further tomorrow. Maybe more efficient that we discuss prior to the group meeting in the afternoon

Subject: EXTERNAL – Provincial Guarantee for Fair Hydro Program

*** Exercise caution. This is an EXTERNAL email. DO NOT open attachments or click links from unknown senders or unexpected email. *** _____

Hey John, Ken,

Further to our discussion earlier today, please see the note below which outlines our collective views on the Provincial guarantee that would be required for the Fair Hydro Program. Happy to discuss further.

There are two types of “guarantees” that we are looking for from the Province in relation to this program on the basis that any debt issued under the Fair Hydro Program will be AAA-rated. In addition, the following is based on the understanding that the transition charges collected from prescribed consumers will begin upon the commencement of the program and will not be subject to any cap or restrictions.

The legislation must include a specific reference to the Province being required to provide a guarantee on debt repayment and servicing in certain circumstances.

The first is “Springing Guarantee”, which would be via a legal agreement put in place when establishing the program and would require the Province to step in and assume responsibility for paying all amounts that are or become due in respect of (i) any of the outstanding funding obligations; (ii) the operation and maintenance of the financing entity; and (iii) any other amounts due in relation to the program that have not yet been paid (collectively, the “Fair Hydro Program Costs”). This Springing Guarantee would kick in should any of the following happen:

(1) There is any change in the legislation or regulations that is, or could be, adverse to finance entity noteholders or the legislation is determined to be ultra vires. In this situation, the Springing Guarantee would require the immediate repayment of all Fair Hydro Program Costs (including any makewhole prepayment obligations).

(2) There is a market disruption (i.e. there is a period of time when capital markets term funding is not available to take out the warehouse facilities (bank facility or ABCP)). In this situation, either (i) we start to charge ratepayers for principal recovery via transition charges; or (ii) the Province must be responsible for the immediate repayment of those warehouse facilities.

The period of time that must lapse before this Springing Guarantee becomes applicable with respect to the warehouse facilities can be set to accommodate a short term dislocation in the term funding market (6-18 months). We would note that depending on the size of the warehouse facility, if there is no term takeout for an extended period of time, it is likely that the warehouse facilities will also quickly reach their credit limits and the province would likely have to fund any future shortfalls if they wished to continue the program.

To the extent that the Springing Guarantee does not require the Province to make the repayment contemplated under scenario (1), but simply requires the Province to repay the debt in accordance with its original repayment terms, this may adversely impact the rating of the Fair Hydro Program.

The second type of guarantee we are looking for from the province is a performance guarantee. This is not a credit guarantee. The performance guarantee would require the Province to stand behind certain obligations of the Servicer (initially IESO) in the program. This performance guarantee would be included as part of the Securitization documents for the program. It would, amongst other things, require the province to stand behind (including taking responsibility for helping remedy any breaches in) the representations, warranties, or covenants made by the servicer. It would also require the province to ensure that the servicer performs its servicing activities as set out in the securitization documents and if it does not, put in place an alternative servicer who would perform those servicing activities. The performance guarantee would also include standing behind any indemnities that may be owing by the servicer.

Hmmm. If I understand this chain correctly, and I'm likely missing something important, would we have a non-regulated entity making hundreds of millions of dollars a year that the ratepayers ultimately have to cover in the future? Or would it be OPG, not the trust, making that profit from the interest on their loan to the trust, and if it's OPG making the profit, can't the OEB weigh in? If either's the case, it would be kind of contrary to the very robust language the government has been using about the OEB providing ratepayer protection with privatized electrical utilities.

I may be wrong on this, so correct me if so, as I have not been at the accounting meetings on this structure.

But, based on the Energy submission, I took it as IESO would have the regulatory asset. As such, I took it that the Trust would be outside of OPG's OEB regulated entity.

Ron

On Feb 15, 2017, at 10:21 PM, Gadi Mayman <Gadi.Mayman@ofina.on.ca> wrote:

> First getting it past their auditors will be a challenge, as you've said, and secondly getting the OEB to accept that OPG should be earning the extra $750 million per year that we'd need at the peak of the debt accumulation will be even more challenging. It would have to be a hit to ratepayers. That would be even harder to explain than a hit to them from an ROE to the Province, which, as you've seen, I've had trouble wrapping my mind around in earlier emails.
>
> On Feb 15, 2017, at 10:11 PM, Ken Kandeepan <Ken.Kandeepan@ofina.on.ca> wrote:
>
> > Not entirely, though the underlying concept is similar. This is just logical speculation on my part but what John is probably driving at is the Trust pays OPG the interest but instead of

expensing same it's capitalized.

As such when the Trust is consolidated with OPG the interest income remains in OPG's books since there is no expense to offset it in the books of the Trust.

Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.

The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.

Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.

Thanks

Ken k

Thanks
John,
it
seems
that
what
you
are
saying
is
OPG's
net
income
will
increase,

all
else
being
equal,
by
the
amount
of
the
interest
relating
to
the
equity
injection.

In
which
case
upon
consolidation
there
will
be
no
fiscal
impact
to
the
Province.

As
you
work
through
the
options
this
needs
to
be
fleshed
out
since
the
Trust
will
be

consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Ken
k

RE:
EXTERNAL
–
RE:
OEFC
Funding
of
the
Global
Adjustment
Deferral

Hi
John
and
Cindy

I
just
realized
that
in
the
event
of
an
equity
injection
by
the
Province
to
OPG
for
a
maximum
of
49%,

will
as
we
discussed,
have
no
impact
on
the
Province's
net
debt.

Unfortunately
there
will
be
an
IOD
impact.
John,
I
remember
you
mentioning
that
OPG
will
increase
the
dividends
it
pays
to
the
Province
by
an
amount
equivalent
to
the
interest
on
the
equity
injection

to
date,
however,
that
will
only
provide
a
cash
and
not
a
fiscal
offset.

The
only
way
a
fiscal
offset
can
be
provided
is
if
OPG's
net
income
increases
by
an
amount
equal
to
the
increase
in
the
Province's
IOD
(
all
else
being
equal).
In

which
case
the
Province
will
be
fiscally
whole
upon
consolidation.

But
I
am
not
sure
that
going
to
happen
since
the
Trust
will
not
contribute
to
OPG's
bottom
line,
or
at
least
that's
my
understanding.

As
such
the
potential
fiscal
impact
from
the

increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken
k

Subject:
RE:
OEFC
Funding
of
the
Global
Adjustment
Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to

avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources

outside
of
the
government
reporting
entity.”
I
understanding
from
Alec
Cheng
(OPG
accounting)
who
was
on
yesterday
accounting
call
with
Nadine
(Controllers
Office)
that
OPG
GBE
status
would
be
put
at
high
risk
under
the
proposed
scheme
due
to
the
proposed
quantum
of
lending
from
the
OEFC.
Our
accounting
group

along
with
Treasury
will
be
performing
some
further
assessment
on
this
but
it
may
be
worth
arranging
another
call
with
you
and
your
accounting
group
to
layout
the
issues
since
the
Province
seems
to
be
driven
by
very
tight
and
uncertain
timelines
and
I
want
everyone
to
be
up
to

speed.

We
can
make
ourselves
available
for
a
call
this
morning.
Please
advise.

John

No, I was informed by OPCD that IESO will set up the reg asset as you point out but will promptly sell same to the Trust. So the expectation is that at the end of each fiscal year the reg asset set up in that year would be sold to the OPG Trust.

Thanks

Ken k

expense to offset it in the books of the Trust.

Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.

The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.

Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.

Thanks

Thanks John, it seems that what you are saying is OPG's net income will increase, all else being equal, by the amount of the interest relating to the equity injection.

In which case upon consolidation there will be no fiscal impact to the Province.

As you work through the options this needs to be fleshed out since the Trust will be consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Hi John and Cindy

I just realized that in the event of an equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Subject: RE: OEFC Funding of the Global Adjustment Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain

Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting entity.” I understanding from Alec Cheng (OPG accounting) who was on yesterday accounting call with Nadine (Controllers Office) that OPG GBE status would be put at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

We can make ourselves available for a call this morning. Please advise.

John

Subject: RE: OEFC Funding of the Global Adjustment Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain

Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting entity.” I understanding from Alec Cheng (OPG accounting) who was on yesterday accounting call with Nadine (Controllers Office) that OPG GBE status would be put at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

We can make ourselves available for a call this morning. Please advise.

John

Hi,

I may be wrong on this, so correct me if so, as I have not been at the accounting meetings on this structure.

But, based on the Energy submission, I took it as IESO would have the regulatory asset. As such, I took it that the Trust would be outside of OPG's OEB regulated entity.

Thanks John, it seems that what you are saying is OPG's net income will increase, all else being equal, by the amount of the interest relating to the equity injection.

In which case upon consolidation there will be no fiscal impact to the Province.

As you work through the options this needs to be fleshed out since the Trust will be consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

RE: OEFC Funding of the
Global Adjustment Deferral

Hi John and Cindy

I just realized that in the event of an equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount

equal to the increase in the Province's IOD (all else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting entity.” I understanding from Alec Cheng (OPG accounting) who was on yesterday accounting call with Nadine (Controllers Office) that OPG GBE status would be put at high risk under the proposed scheme due to the proposed

quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

We can make ourselves available for a call this morning. Please advise.

John

First getting it past their auditors will be a challenge, as you've said, and secondly getting the OEB to accept that OPG should be earning the extra $750 million per year that we'd need at the peak of the debt accumulation will be even more challenging. It would have to be a hit to ratepayers. That would be even harder to explain than a hit to them from an ROE to the Province, which, as you've seen, I've had trouble wrapping my mind around in earlier emails.

Hi John and Cindy

I just realized that in the event of an equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be an IOD impact.

John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Date: Wednesday, February 15, 2017 10:11:47 PM

Not entirely, though the underlying concept is similar. This is just logical speculation on my part but what John is probably driving at is the Trust pays OPG the interest but instead of expensing same it's capitalized.

As such when the Trust is consolidated with OPG the interest income remains in OPG's books since there is no expense to offset it in the books of the Trust.

Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.

The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.

Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.

Thanks

Ken k

Hi John and Cindy

I just realized that in the event of an equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's

my understanding.

As such the potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken k

Subject: RE: OEFC Funding of the Global Adjustment Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting entity.” I understanding from Alec Cheng (OPG accounting) who was on yesterday accounting call with Nadine (Controllers Office) that OPG GBE status would be put at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

We can make ourselves available for a call this morning. Please advise.

John

Thanks John, it seems that what you are saying is OPG's net income will increase, all else being equal, by the amount of the interest relating to the equity injection.

In which case upon consolidation there will be no fiscal impact to the Province.

As you work through the options this needs to be fleshed out since the Trust will be consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Subject: RE: OEFC Funding of the Global Adjustment Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting entity.” I understanding from Alec Cheng (OPG accounting) who was on yesterday accounting call with Nadine (Controllers Office) that OPG GBE status would be put

at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

We can make ourselves available for a call this morning. Please advise.

John

Hi John and Cindy

I just realized that in the event of an equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken k

And IESO gets the cost of debt from the OEB rate order, but doesn't actually pay interest, it sells at a discount to OPG and gets recovery of its cost from OPG on the sale plus the interest through the OEB process. But, happy to be corrected on that, as i don't have the deck in front of me and don't recall if that is explicit or. Was just my trying to read between the lines.

I may be wrong on this, so correct me if so, as I have not been at the accounting meetings on this structure.

But, based on the Energy submission, I took it as IESO would have the regulatory asset. As such, I took it that the Trust would be outside of OPG's OEB regulated entity.

Ron

On Feb 15, 2017, at 10:21 PM, Gadi Mayman <Gadi.Mayman@ofina.on.ca> wrote:

> First getting it past their auditors will be a challenge, as you've said, and secondly getting the OEB to accept that OPG should be earning the extra $750 million per year that we'd need at the peak of the debt accumulation will be even more challenging. It would have to be a hit to ratepayers. That would be even harder to explain than a hit to them from an ROE to the Province, which, as you've seen, I've had trouble wrapping my mind around in earlier emails.
>
> On Feb 15, 2017, at 10:11 PM, Ken Kandeepan <Ken.Kandeepan@ofina.on.ca> wrote:
>
> > Not entirely, though the underlying concept is similar. This is just logical speculation on my part but what John is probably driving at is the Trust pays OPG the interest but instead of

expensing same it's capitalized.

As such when the Trust is consolidated with OPG the interest income remains in OPG's books since there is no expense to offset it in the books of the Trust.

Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.

The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.

Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.

Thanks

RE:
OEFC
Funding
of
the
Global
Adjustment
Deferral

Hi
John
and
Cindy

I
just
realized
that
in
the
event
of
an
equity
injection
by
the
Province
to
OPG
for
a
maximum
of
49%,

will
as
we
discussed,
have
no
impact
on
the
Province's
net
debt.

Unfortunately
there
will
be
an
IOD
impact.
John,
I
remember
you
mentioning
that
OPG
will
increase
the
dividends
it
pays
to
the
Province
by
an
amount
equivalent
to
the
interest
on
the
equity
injection

to
date,
however,
that
will
only
provide
a
cash
and
not
a
fiscal
offset.

The
only
way
a
fiscal
offset
can
be
provided
is
if
OPG's
net
income
increases
by
an
amount
equal
to
the
increase
in
the
Province's
IOD
(
all
else
being
equal).
In

which
case
the
Province
will
be
fiscally
whole
upon
consolidation.

But
I
am
not
sure
that
going
to
happen
since
the
Trust
will
not
contribute
to
OPG's
bottom
line,
or
at
least
that's
my
understanding.

As
such
the
potential
fiscal
impact
from
the

increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken
k

Subject:
RE:
OEFC
Funding
of
the
Global
Adjustment
Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to

avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources

outside
of
the
government
reporting
entity.”
I
understanding
from
Alec
Cheng
(OPG
accounting)
who
was
on
yesterday
accounting
call
with
Nadine
(Controllers
Office)
that
OPG
GBE
status
would
be
put
at
high
risk
under
the
proposed
scheme
due
to
the
proposed
quantum
of
lending
from
the
OEFC.
Our
accounting
group

along
with
Treasury
will
be
performing
some
further
assessment
on
this
but
it
may
be
worth
arranging
another
call
with
you
and
your
accounting
group
to
layout
the
issues
since
the
Province
seems
to
be
driven
by
very
tight
and
uncertain
timelines
and
I
want
everyone
to
be
up
to

speed.

We
can
make
ourselves
available
for
a
call
this
morning.
Please
advise.

John

Thanks John, it seems that what you are saying is OPG's net income will increase, all else being equal, by the amount of the interest relating to the equity injection.

In which case upon consolidation there will be no fiscal impact to the Province.

As you work through the options this needs to be fleshed out since the Trust will be consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Subject: RE: EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral

Hi John and Cindy

I just realized that in the event of an equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken k

Subject: RE: OEFC Funding of the Global Adjustment Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations,

maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting entity." I understanding from Alec Cheng (OPG accounting) who was on yesterday accounting call with Nadine (Controllers Office) that OPG GBE status would be put at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

We can make ourselves available for a call this morning. Please advise.

John

Sounds to me that they're going where Scott Nelms alluded to in his email with an ROE for the Province that would offset our borrowing cost?

Adding Ron and Mike so that all of us at the OFA are aware of the same facts, as this is moving quickly, and any of us may be asked at any time about it, including on Friday when you and I are away, Ken.

Unfortunately there will be an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken k

And IESO gets the cost of debt from the OEB rate order, but doesn't actually pay interest, it sells at a discount to OPG and gets recovery of its cost from OPG on the sale plus the interest through the OEB process. But, happy to be corrected on that, as i don't have the deck in front of me and don't recall if that is explicit or. Was just my trying to read between the lines.

Ron

I may be wrong on this, so correct me if so, as I have not been at the accounting meetings on this structure.

But, based on the Energy submission, I took it as IESO would have the regulatory asset. As such, I took it that the Trust would be outside of OPG's OEB regulated entity.

Ron

>
> > Not entirely, though the underlying concept is similar. This is just logical speculation on my part but what John is probably driving at is the Trust pays OPG the interest but instead of

expensing same it's capitalized.

As such when the Trust is consolidated with OPG the interest income remains in OPG's books since there is no expense to offset it in the books of the Trust.

Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.

The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.

Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.

Thanks

Thanks
John,
it
seems
that
what
you
are
saying
is
OPG's
net
income
will
increase,

all
else
being
equal,
by
the
amount
of
the
interest
relating
to
the
equity
injection.

In
which
case
upon
consolidation
there
will
be
no
fiscal
impact
to
the
Province.

As
you
work
through
the
options
this
needs
to
be
fleshed
out
since
the
Trust
will
be

consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Ken
k

RE:
EXTERNAL
–
RE:
OEFC
Funding
of
the
Global
Adjustment
Deferral

Hi
John
and
Cindy

I
just
realized
that
in
the
event
of
an
equity
injection
by
the
Province
to
OPG
for
a
maximum
of
49%,

will
as
we
discussed,
have
no
impact
on
the
Province's
net
debt.

Unfortunately
there
will
be
an
IOD
impact.
John,
I
remember
you
mentioning
that
OPG
will
increase
the
dividends
it
pays
to
the
Province
by
an
amount
equivalent
to
the
interest
on
the
equity
injection

to
date,
however,
that
will
only
provide
a
cash
and
not
a
fiscal
offset.

The
only
way
a
fiscal
offset
can
be
provided
is
if
OPG's
net
income
increases
by
an
amount
equal
to
the
increase
in
the
Province's
IOD
(
all
else
being
equal).
In

which
case
the
Province
will
be
fiscally
whole
upon
consolidation.

But
I
am
not
sure
that
going
to
happen
since
the
Trust
will
not
contribute
to
OPG's
bottom
line,
or
at
least
that's
my
understanding.

As
such
the
potential
fiscal
impact
from
the

increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken
k

Subject:
RE:
OEFC
Funding
of
the
Global
Adjustment
Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to

avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources

outside
of
the
government
reporting
entity.”
I
understanding
from
Alec
Cheng
(OPG
accounting)
who
was
on
yesterday
accounting
call
with
Nadine
(Controllers
Office)
that
OPG
GBE
status
would
be
put
at
high
risk
under
the
proposed
scheme
due
to
the
proposed
quantum
of
lending
from
the
OEFC.
Our
accounting
group

along
with
Treasury
will
be
performing
some
further
assessment
on
this
but
it
may
be
worth
arranging
another
call
with
you
and
your
accounting
group
to
layout
the
issues
since
the
Province
seems
to
be
driven
by
very
tight
and
uncertain
timelines
and
I
want
everyone
to
be
up
to

speed.

We
can
make
ourselves
available
for
a
call
this
morning.
Please
advise.

John

Deferral

Hi
John
and

Cindy

I
just
realized
that
in
the
event
of
an
equity
injection
by
the
Province
to
OPG
for
a
maximum
of
49%,
will
as
we
discussed,
have
no
impact
on
the
Province's
net
debt.

Unfortunately
there
will
be
an
IOD
impact.
John,
I

remember
you
mentioning
that
OPG
will
increase
the
dividends
it
pays
to
the
Province
by
an
amount
equivalent
to
the
interest
on
the
equity
injection
to
date,
however,
that
will
only
provide
a
cash
and
not
a
fiscal
offset.

The
only
way
a
fiscal
offset
can

be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the

Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken
k

Subject:
RE:
OEFC
Funding
of
the
Global
Adjustment
Deferral

Ken:

Got
your
voice
message
with
respect
to
your
proposal
to
have
OEFC
fund
the
Global
Adjustment
deferral
indirectly
by
lending
to
OPG
and
having
OPG
subsequently

lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE,

we
must
be
able
to
“in
the
normal
course
of
its
operations,
maintain
its
operations
and
meet
its
liabilities
from
revenue
received
from
sources
outside
of
the
government
reporting
entity.”
I
understanding
from
Alec
Cheng
(OPG
accounting)
who
was
on
yesterday
accounting
call
with
Nadine
(Controllers
Office)
that
OPG
GBE

status would be put at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to

layout
the
issues
since
the
Province
seems
to
be
driven
by
very
tight
and
uncertain
timelines
and
I
want
everyone
to
be
up
to
speed.

We
can
make
ourselves
available
for
a
call
this
morning.
Please
advise.

John

First getting it past their auditors will be a challenge, as you've said, and secondly getting the OEB to accept that OPG should be earning the extra $750 million per year that we'd need at the peak of the debt accumulation will be even more challenging. It would have to be a hit to ratepayers. That would be even harder to explain than a hit to them from an ROE to the Province, which, as you've seen, I've had trouble wrapping my mind around in earlier emails.

On Feb 15, 2017, at 10:11 PM, Ken Kandeepan <Ken.Kandeepan@ofina.on.ca> wrote:

> Not entirely, though the underlying concept is similar. This is just logical speculation on my part but what John is probably driving at is the Trust pays OPG the interest but instead of expensing same it's capitalized.
>
> As such when the Trust is consolidated with OPG the interest income remains in OPG's books since there is no expense to offset it in the books of the Trust.
>
> Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.
>
> The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.

Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.

Thanks

Thanks
John, it
seems
that
what
you are
saying
is
OPG's
net
income
will
increase,
all else
being
equal,
by the
amount
of the
interest
relating
to the
equity

injection.

In
which
case
upon
consolidation
there
will be
no
fiscal
impact
to the
Province.

As you
work
through
the
options
this
needs
to be
fleshed
out
since
the
Trust
will be
consolidated
with
OPG
we
need to
understand
how
OPG
will
show a
net
interest
income.

Thanks

Ken k

Subject:
RE:
OEFC
Funding
of
the
Global
Adjustment
Deferral

Ken:

Got
your
voice
message
with
respect
to
your
proposal
to
have
OEFC
fund
the
Global
Adjustment
deferral
indirectly
by
lending
to
OPG
and
having
OPG
subsequently

lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE,

we
must
be
able
to
“in
the
normal
course
of
its
operations,
maintain
its
operations
and
meet
its
liabilities
from
revenue
received
from
sources
outside
of
the
government
reporting
entity.”
I
understanding
from
Alec
Cheng
(OPG
accounting)
who
was
on
yesterday
accounting
call
with
Nadine
(Controllers
Office)
that
OPG
GBE

status would be put at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to

layout
the
issues
since
the
Province
seems
to
be
driven
by
very
tight
and
uncertain
timelines
and
I
want
everyone
to
be
up
to
speed.

We
can
make
ourselves
available
for
a
call
this
morning.
Please
advise.

Subject: Re: EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral
Date: Wednesday, February 15, 2017 10:34:39 PM

Hi. Ken, emails crossed. I agree, but it would mean OPG is not being regulated by the OEB on this.

Ron

On Feb 15, 2017, at 10:32 PM, Ken Kandeepan <Ken.Kandeepan@ofina.on.ca> wrote:

> No, I was informed by OPCD that IESO will set up the reg asset as you point out but will promptly sell same to the Trust. So the expectation is that at the end of each fiscal year the reg asset set up in that year would be sold to the OPG Trust.

> >
> > > First getting it past their auditors will be a challenge, as you've said, and secondly getting the OEB to accept that OPG should be earning the extra $750 million per year that we'd need at the peak of the debt accumulation will be even more challenging. It would have to be a hit to ratepayers. That would be even harder to explain than a hit to them from an ROE to the Province, which, as you've seen, I've had trouble wrapping my mind around in earlier emails.

On Feb 15, 2017, at 10:11 PM, Ken Kandeepan <Ken.Kandeepan@ofina.on.ca> wrote:

> Not entirely, though the underlying concept is similar. This is just logical speculation on my part but what John is probably driving at is the Trust pays OPG the interest but instead of expensing same it's capitalized.
>
> As such when the Trust is consolidated with OPG the interest income remains in OPG's books since there is no expense to offset it in the books of the Trust.
>
> Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.
>
> The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.
>
> Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.

Thanks John, it seems that what you are saying is OPG's net income will increase, all else being equal, by the amount of the interest relating to the equity injection.

In which case upon consolidation there will be no fiscal impact to the Province.

As you work through the options this needs to be fleshed out since the Trust will be consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Subject: RE:

EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral

Hi John and Cindy

I just realized that in the event of an equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be

an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount

equal
to the
increase
in the
Province's
IOD (
all else
being
equal).
In
which
case
the
Province
will be
fiscally
whole
upon
consolidation.

But I
am not
sure
that
going
to
happen
since
the
Trust
will
not
contribute
to
OPG's
bottom
line, or
at least
that's
my
understanding.

As
such
the

potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken k

Adjustment
Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to

avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting

entity.”
I
understanding
from
Alec
Cheng
(OPG
accounting)
who
was on
yesterday
accounting
call
with
Nadine
(Controllers
Office)
that
OPG
GBE
status
would
be put
at high
risk
under
the
proposed
scheme
due to
the
proposed
quantum
of
lending
from
the
OEFC.
Our

Subject: Re: EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral
Date: Wednesday, February 15, 2017 10:34:39 PM

Hi. Ken, emails crossed. I agree, but it would mean OPG is not being regulated by the OEB on this.

Ron

Thanks John, it seems that what you are saying is OPG's net income will increase, all else being equal, by the amount of the interest relating to the equity injection.

In which case upon consolidation there will be no fiscal impact to the Province.

As you work through the options this needs to be fleshed out since the Trust will be consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Subject: RE:

EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral

Hi John and Cindy

I just realized that in the event of an equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be

an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount

equal
to the
increase
in the
Province's
IOD (
all else
being
equal).
In
which
case
the
Province
will be
fiscally
whole
upon
consolidation.

But I
am not
sure
that
going
to
happen
since
the
Trust
will
not
contribute
to
OPG's
bottom
line, or
at least
that's
my
understanding.

As
such
the

potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken k

Subject:
RE:
OEFC
Funding
of the
Global
Adjustment
Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to

avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting

entity.”
I
understanding
from
Alec
Cheng
(OPG
accounting)
who
was on
yesterday
accounting
call
with
Nadine
(Controllers
Office)
that
OPG
GBE
status
would
be put
at high
risk
under
the
proposed
scheme
due to
the
proposed
quantum
of
lending
from
the
OEFC.
Our
accounting
group
along
with
Treasury
will be
performing
some
further
assessment
on this

but it
may be
worth
arranging
another
call
with
you
and
your
accounting
group
to
layout
the
issues
since
the
Province
seems
to be
driven
by
very
tight
and
uncertain
timelines
and I
want
everyone
to be
up to
speed.

We
can
make
ourselves
available
for a
call
this
morning.
Please
advise.

John

In the structure in the submission, OPG buys the regulatory asset from IESO, which I took to mean it buys the future right to recovery, and would pay a discount to get its ROE. Still, a cost to ratepayers, of course, but not through an OPG OEB rate order per se.

Ron

Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.

The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.

Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.

Thanks

Subject: RE: OEFC Funding of the Global Adjustment Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government

Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources outside of the government reporting entity.” I understanding from Alec Cheng (OPG accounting) who was on yesterday accounting call with Nadine (Controllers Office) that OPG GBE status would be put at high risk under the proposed scheme due to the proposed quantum of lending from the OEFC. Our accounting group along with Treasury will be performing some further assessment on this but it may be worth arranging another call with you and your accounting group to layout the issues since the Province seems to be driven by very tight and uncertain timelines and I want everyone to be up to speed.

We can make ourselves available for a call this morning. Please advise.

John

In the structure in the submission, OPG buys the regulatory asset from IESO, which I took to mean it buys the future right to recovery, and would pay a discount to get its ROE. Still, a cost to ratepayers, of course, but not through an OPG OEB rate order per se.

Ergo, OPG has a net interest income which all else being equal increases its net income, which in turn when consolidated with Province, provides the required fiscal offset to the increase in the Province's IOD.

The problem here would be how willing OPG's auditors will be in recognizing an interest income on OPG books that will be paid in about 15 years time and that too on a piecemeal basis.

Having said all of this let me repeat I may be quite mistaken and John may have a more feasible solution in mind.

Thanks

Thanks John, it seems that what you are saying is OPG's net income will increase, all else being equal, by the amount of the interest relating to the equity injection.

In which case upon consolidation there will be no fiscal impact to the Province.

As you work through the options this needs to be fleshed out since the Trust will be consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

Ken k

Subject: RE: EXTERNAL – RE: OEFC Funding of the Global Adjustment Deferral

Hi John and Cindy

I just realized that in the event of an equity injection by the Province to OPG for a maximum of 49%, will as we discussed, have no impact on the Province's net debt.

Unfortunately there will be an IOD impact. John, I remember you mentioning that OPG will increase the dividends it pays to the Province by an amount equivalent to the interest on the equity injection to date, however, that will only provide a cash and not a fiscal offset.

The only way a fiscal offset can be provided is if OPG's net income increases by an amount equal to the increase in the Province's IOD (all else being equal). In which case the Province will be fiscally whole upon consolidation.

But I am not sure that going to happen since the Trust will not contribute to OPG's bottom line, or at least that's my understanding.

As such the potential fiscal impact from the increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Hmmm. If I understand this chain correctly, and I'm likely missing something important, would we have a non-regulated entity making hundreds of millions of dollars a year that the ratepayers ultimately have to cover in the future? Or would it be OPG, not the trust, making that profit from the interest on their loan to the trust, and if it's OPG making the profit, can't the OEB weigh in? If either's the case, it would be kind of contrary to the very robust language the government has been using about the OEB providing ratepayer protection with privatized electrical utilities.

Thanks
John,
it
seems
that
what
you
are
saying
is
OPG's
net
income
will
increase,

all
else
being
equal,
by
the
amount
of
the
interest
relating
to
the
equity
injection.

In
which
case
upon
consolidation
there
will
be
no
fiscal
impact
to
the
Province.

As
you
work
through
the
options
this
needs
to
be
fleshed
out
since
the
Trust
will
be

consolidated with OPG we need to understand how OPG will show a net interest income.

Thanks

realized
that
in
the
event
of
an
equity
injection
by
the
Province
to
OPG
for
a
maximum
of
49%,

will
as
we
discussed,
have
no
impact
on
the
Province's
net
debt.

Unfortunately
there
will
be
an
IOD
impact.
John,
I
remember
you
mentioning
that
OPG
will
increase
the
dividends
it
pays
to
the
Province
by
an
amount
equivalent
to
the
interest
on
the
equity
injection

to
date,
however,
that
will
only
provide
a
cash
and
not
a
fiscal
offset.

The
only
way
a
fiscal
offset
can
be
provided
is
if
OPG's
net
income
increases
by
an
amount
equal
to
the
increase
in
the
Province's
IOD
(
all
else
being
equal).
In

which
case
the
Province
will
be
fiscally
whole
upon
consolidation.

But
I
am
not
sure
that
going
to
happen
since
the
Trust
will
not
contribute
to
OPG's
bottom
line,
or
at
least
that's
my
understanding.

As
such
the
potential
fiscal
impact
from
the

increased IOD may be an issue for the Province re this option. In any event I will check with Gadi and circle back.

Thanks

Ken

Subject:
RE:
OEFC
Funding
of
the
Global
Adjustment
Deferral

Ken:

Got your voice message with respect to your proposal to have OEFC fund the Global Adjustment deferral indirectly by lending to OPG and having OPG subsequently lend to a Financing Trust. I agree that this would be the simplest funding mechanism. However since the key objective for the Province to

avoid having to recognize the debt and writeoff the Global Adjustment deferral OPG must maintain Government Business Entity (GBE) status. In order to remain a GBE, we must be able to “in the normal course of its operations, maintain its operations and meet its liabilities from revenue received from sources

outside
of
the
government
reporting
entity.”
I
understanding
from
Alec
Cheng
(OPG
accounting)
who
was
on
yesterday
accounting
call
with
Nadine
(Controllers
Office)
that
OPG
GBE
status
would
be
put
at
high
risk
under
the
proposed
scheme
due
to
the
proposed
quantum
of
lending
from
the
OEFC.
Our
accounting
group

along
with
Treasury
will
be
performing
some
further
assessment
on
this
but
it
may
be
worth
arranging
another
call
with
you
and
your
accounting
group
to
layout
the
issues
since
the
Province
seems
to
be
driven
by
very
tight
and
uncertain
timelines
and
I
want
everyone
to
be
up
to

speed.

We
can
make
ourselves
available
for
a
call
this
morning.
Please
advise.

John

From: Gadi Mayman
To: Scott Nelms (ENERGY)
Cc: Nancy Kennedy (MOHLTC); Mike Manning
Subject: Re: Financial Advisor
Date: Friday, March 24, 2017 10:25:32 AM

TD did the Muskrat Falls deal, and structured it in what, at the time, was the most cost-effective way of doing it, but I don't think there was any legislation involved so it didn't have the same complexities. I don't know if there's a particularly big difference between any of the six banks, and they'll all likely push for the most iron clad guarantee that we're able to give, so maybe my idea isn't a great one on reflection, and we should fall back on a Blair Franklin type. Mike, any thoughts?

In the end, it's really about what the accountants say is acceptable or not, so I'm not sure having a second opinion from a financial advisor is of as much value as a second opinion on the direction that E&Y is giving OPG.

Original Message

Sent: Friday, March 24, 2017 9:55 AM
To: Gadi Mayman
Cc: Nancy Kennedy (MOHLTC); Mike Manning
Subject: RE: Financial Advisor

Serge talked to Alan yesterday, and apparently Alan feels he is conflicted given his ongoing involvement with OPG. I will float the idea of going to the other banks, as a check. Is there one of the 4 that has a particularly strong team?

-----Original Message-----

Sent: March 24, 2017 9:34 AM
To: Nelms, Scott (MOF)
Cc: Kennedy, Nancy (MOF); Manning, Mike (OFA)
Subject: Re: Financial Advisor

I'm not sure how much value added that any of these boutiques would provide. The people that know the markets are the investment bankers that are actually going to be part of the syndicate that will have to market, sell and trade these bonds. Why not have one of TD, Scotia, National or BMO provide this double-checking? If we're worried about the conflict that they are going to give advice that will make it easier to sell the bonds to ultimately make their life as syndicate members easier, then I can see the potential attraction of an advisor that isn't in that business, but why can't Alan be that guy? I don't see that any of those that you've named would provide better external advice to the Province than he would, unless we're concerned that he's too embedded with OPG, but I don't think so.

As for the names you've mentioned, Hansel, if that turns out to be the third one, is run by a lawyer which might be helpful, but I don't know if they know much about bonds, maybe that's where Bill Gula comes in, Blair Franklin definitely knows bonds, as Fred Mifflin used to be head of government Finance at BMO many years ago and they advised the Feds on Muskrat Falls, and I haven't heard of Origin.

I've added Mike, because he knows way more about the bond market and what investors will want than anyone we've talked about in this exchange, so he may have some ideas as to where the Province should go for external advice.

Hope that helps.

Subject: RE: Financial Advisor

Hi Gadi,

Energy and Blakes suggest that the Province needs its own financial advisor to test what we are hearing from OPG. As I understand it, there are some elements that OPG believes are requirements in the legislation. The Province would like someone with a market perspective (in addition to your team) that can test the need for each of those requirements as they arise. Given timing, they need someone who can be available in real time to provide this advice.

I will circle back as to whether that is Hansell and not Hanslep. Let me know if there are other names that you might suggest.

Scott

Subject: Re: Financial Advisor

Hi Scott, what is it that we're looking for from a financial advisor? Is this to help with the structuring of OPG Trust's debt issuance? I know Blair Franklin, and they advised Canada on Muskrat Falls. I'm not familiar with Origin, and I don't know Bill Gula, but is that Hansell LLP, not Hanslep?

In any case, I'm not sure what any of them bring to the table beyond what the three banks already engaged would provide, with Alan and the OFA weighing in when their inevitable conflicts get in the way?

I'd be happy to discuss further to get more colour on what you're looking for.

Mike, thanks for the update. This is not really surprising. A couple of thoughts. First, they should not overstate the amount of work - I think it will mostly be at the front-end, commenting on the legislation. Second, they may be realizing there's a possibility of becoming cross-threaded with OPG through the advisor role, leading to a lesser allocation in the future OPG syndicate. I think you might be able to reassure them this should be collaborative and that while the Province is looking for an independent view, TD should not be put into an anti-OPG spot through our process. Happy to discuss further if useful. Regards, Steve

Hi Guys:

I didn’t get back to the three dealers yesterday but was planning to do it first thing this morning,. TD sent me an email early this morning expressing some concern over compensation. This boils down to their expected role in future OPG syndicates, and I think that they recognized that this is a bigger resource commitment than they first thought based on our meeting yesterday. I cannot give them an guaranteed syndicate allocation. I explained that to Trevor and he will come back to me shortly based on his conversation with the senior TD team. Thoughts appreciated and I will get back to you shortly.

Mike

Hi Gadi,
I was thinking about the approach further and I think it would be best if I write to Len Hatzis (legal director at TBS) and Carolyn (so she is aware) first to let Len know the background that the DM of TBS is in favour of the Minister of Finance signing any required guarantee (although maybe he is well aware of this already) and also MOF/OFA view that we shouldn't exempt generally transactions under the new proposed Act from s. 28.
Then Len can let me know which TBS counsel are working on it as I think that it may be Nick and Paul but don't know for sure and don't know what their involvement on this file has been and I don't think I should send the email to TBS without letting Carolyn know.

Subject: RE: Guarantee

We have discussed this with the OFA, and we have endeavoured to provide a provision that we think should allow the financial guarantee being contemplated. Please let us know if you think it provides the necessary scope for what would be required to meet the Province's needs. We deleted the existing provision, although if you think that more general contractual authority is needed, something else could be considered. However, we don't think that it is appropriate to have a statutory appropriation for such general indemnity and guarantee provisions.

We would expect that the guarantee would be capped and only provide for the repayment of the principal and interest of the debt securities of the financial asset owner, and that would usually be done in the OIC.

We don't have any experience with performance guarantees. Is there a need for the Minister of Energy to require performance by the LDCs? We were also wondering if Blakes or another party involved in these discussions might have an example of what is being considered.

We also removed the exemption from s. 28 of the FAA. We have discussed this with OFA staff, and given the importance and breadth of this Act and Program, it doesn't seem appropriate to exempt the entire Act from s. 28 of the FAA.

Hi Carolyn,

Thanks for your email. Would it be possible to arrange a conference call today with yourself or your counsel most knowledgeable on this proposed securitization and transaction so that we can get an understanding of it and how it fits into any proposed authorizing legislation. Unfortunately we are not familiar with the proposed transaction although we have seen some general background information about the proposal. What role would a guarantee of investment dealers have in the transaction? We do have a copy of the legislation that we got via our clients at OFA and they were more engaged in the issue of a future proposed equity injection, but the most recent version that we have seen does not mention guarantees although there seems to be a very general contract authorization section. Of course, we have to generally think about s. 28 as well.

A call today to over the main elements of the proposed transaction and the legislation would be very helpful so that we can get back to Gadi.

Hi Michael & Malle – we will be sending you draft legislation to take a look at. Actual guarantees will follow later.

This relates to the government's Fair Hydro Plan and the promise to reduce rates by 25% by July. We are doing a sort of securitization, for which the legislation will provide a framework. We are contemplating provisions that allow "the Minister" to enter into agreements with respect to transactions contemplated by the legislation. Gadi and DM Angus are of the view that Minister should be MOF, as the agreements are likely to be guarantees to investment dealers. Indemnities for the boards of OPG and IESO will also be required, although we didn't talk about who would sign those.

Happy to answer your questions or walk you through the proposed bill.

Hi Gadi, Anna,

We had a call with Carolyn Calwell and Paul Johnson at Energy Legal.

Please find attached a summary description of the guarantee for a number of obligations related to the proposed transaction that is being requested by OPG's investment dealers. There are 2 guarantees being requested: a guarantee of payment in certain situations as well as a performance guarantee. Although the Province has provided payment guarantees in the past, I am not aware of the Province provided guarantees of performance so this would be a new type of guarantee. We understand that these guarantees would have to be authorized by the proposed legislation so the wording of the authorizing sections needs to be worked on. Right now the section is very general and doesn't yet include the word "guarantee". Also there should be some wording around the type or scope of the guarantee or what it is in relation to. As well, I am assuming that payment under the guarantee would have to be a charge on the CRF in order to provide sufficient support. I am not sure whether the Province's liability under these guarantees can be capped. Also I understand there is a section in the proposed legislation indicating s. 28 FAA does not apply so this is something for us to consider too.

I understand that Tory's (OPG's counsel) is working on a first draft of the guarantee, but it does not appear that the scope of the guarantee would be settled before legislation is introduced.

I don't' know if you have seen the attached document previously. Who would you like us to speak to at the OFA about this proposal?

Thanks.

Hi Carolyn,
Thanks for your email. Would it be possible to arrange a conference call today with yourself or your counsel most knowledgeable on this proposed securitization and transaction so that we can get an understanding of it and how it fits into any proposed authorizing legislation. Unfortunately we are not familiar with the proposed transaction although we have seen some general background information about the proposal. What role would a guarantee of investment dealers have in the transaction? We do have a copy of the legislation that we got via our clients at OFA and they were more engaged in the issue of a future proposed equity injection, but the most recent version that we have seen does not mention guarantees although there seems to be a very general contract authorization section. Of course, we have to generally think about s. 28 as well.
A call today to over the main elements of the proposed transaction and the legislation would be very helpful so that we can get back to Gadi.

Hi Michael & Malle – we will be sending you draft legislation to take a look at. Actual guarantees will follow later.

This relates to the government's Fair Hydro Plan and the promise to reduce rates by 25% by July. We are doing a sort of securitization, for which the legislation will provide a framework. We are contemplating provisions that allow "the Minister" to enter into agreements with respect to transactions contemplated by the legislation. Gadi and DM Angus are of the view that Minister should be MOF, as the agreements are likely to be guarantees to investment dealers. Indemnities for the boards of OPG and IESO will also be required, although we didn't talk about who would sign those.

Happy to answer your questions or walk you through the proposed bill.

Carolyn

Hi Carolyn,

Gadi Mayman gave us a heads up that you might be giving us a call about a proposed guarantee that the Minister of Finance may be required to sign in relation to the changes to the global adjustment.

We're happy to discuss this. This afternoon is busy but tomorrow afternoon may work.

Thanks!

Michael

Hi Gadi, Anna,

We had a call with Carolyn Calwell and Paul Johnson at Energy Legal.

Please find attached a summary description of the guarantee for a number of obligations related to the proposed transaction that is being requested by OPG's investment dealers. There are 2 guarantees being requested: a guarantee of payment in certain situations as well as a performance guarantee. Although the Province has provided payment guarantees in the past, I am not aware of the Province provided guarantees of performance so this would be a new type of guarantee. We understand that these guarantees would have to be authorized by the proposed legislation so the wording of the authorizing sections needs to be worked on. Right now the section is very general and doesn't yet include the word "guarantee". Also there should be some wording around the type or scope of the guarantee or what it is in relation to. As well, I am assuming that payment under the guarantee would have to be a charge on the CRF in order to provide sufficient support. I am not sure whether the Province's liability under these guarantees can be capped. Also I understand there is a section in the proposed legislation indicating s. 28 FAA does not apply so this is something for us to consider too.

I understand that Tory's (OPG's counsel) is working on a first draft of the guarantee, but it does not appear that the scope of the guarantee would be settled before legislation is introduced.

I don't' know if you have seen the attached document previously. Who would you like us to speak to at the OFA about this proposal?

Thanks.

Subject: RE: Guarantee

We have discussed this with the OFA, and we have endeavoured to provide a provision that we think should allow the financial guarantee being contemplated. Please let us know if you think it provides the necessary scope for what would be required to meet the Province's needs. We deleted the existing provision, although if you think that more general contractual authority is needed, something else could be considered. However, we don't think that it is appropriate to have a statutory appropriation for such general indemnity and guarantee provisions.

We would expect that the guarantee would be capped and only provide for the repayment of the principal and interest of the debt securities of the financial asset owner, and that would usually be done in the OIC.

We don't have any experience with performance guarantees. Is there a need for the Minister of Energy to require performance by the LDCs? We were also wondering if Blakes or another party involved in these discussions might have an example of what is being considered.

We also removed the exemption from s. 28 of the FAA. We have discussed this with OFA staff, and given the importance and breadth of this Act and Program, it doesn't seem appropriate to exempt the entire Act from s. 28 of the FAA.

Hi Carolyn,

Thanks for your email. Would it be possible to arrange a conference call today with yourself or your counsel most knowledgeable on this proposed securitization and transaction so that we can get an understanding of it and how it fits into any proposed authorizing legislation. Unfortunately we are not familiar with the proposed transaction although we have seen some general background information about the proposal. What role would a guarantee of investment dealers have in the transaction? We do have a copy of the legislation that we got via our clients at OFA and they were more engaged in the issue of a future proposed equity injection, but the most recent version that we have seen does not mention guarantees although there seems to be a very general contract authorization section. Of course, we have to generally think about s. 28 as well.

A call today to over the main elements of the proposed transaction and the legislation would be very helpful so that we can get back to Gadi.

Subject: RE: Guarantee

Hi Michael & Malle – we will be sending you draft legislation to take a look at. Actual guarantees will follow later.

This relates to the government's Fair Hydro Plan and the promise to reduce rates by 25% by July. We are doing a sort of securitization, for which the legislation will provide a framework. We are contemplating provisions that allow "the Minister" to enter into agreements with respect to transactions contemplated by the legislation. Gadi and DM Angus are of the view that Minister should be MOF, as the agreements are likely to be guarantees to investment dealers. Indemnities for the boards of OPG and IESO will also be required, although we didn't talk about who would sign those.

Happy to answer your questions or walk you through the proposed bill.

Carolyn

Hi Carolyn,

Gadi Mayman gave us a heads up that you might be giving us a call about a proposed guarantee that the Minister of Finance may be required to sign in relation to the changes to the global adjustment.

We're happy to discuss this. This afternoon is busy but tomorrow afternoon may work.

Thanks!

Michael

Hi Gadi

I think that would be fine. I don't know who in particular at TBS legal might be looking at this although it might be Nick Smook and Paul Kaufman

Subject: RE: Guarantee

We have discussed this with the OFA, and we have endeavoured to provide a provision that we think should allow the financial guarantee being contemplated. Please let us know if you think it provides the necessary scope for what would be required to meet the Province's needs. We deleted the existing provision, although if you think that more general contractual authority is needed, something else could be considered. However, we don't think that it is appropriate to have a statutory appropriation for such general indemnity and guarantee provisions.

We would expect that the guarantee would be capped and only provide for the repayment of the principal and interest of the debt securities of the financial asset owner, and that would usually be done in the OIC.

We don't have any experience with performance guarantees. Is there a need for the Minister of Energy to require performance by the LDCs? We were also wondering if Blakes or another party involved in these discussions might have an example of what is

being considered.

We also removed the exemption from s. 28 of the FAA. We have discussed this with OFA staff, and given the importance and breadth of this Act and Program, it doesn't seem appropriate to exempt the entire Act from s. 28 of the FAA.

Hi Carolyn,

Thanks for your email. Would it be possible to arrange a conference call today with yourself or your counsel most knowledgeable on this proposed securitization and transaction so that we can get an understanding of it and how it fits into any proposed authorizing legislation. Unfortunately we are not familiar with the proposed transaction although we have seen some general background information about the proposal. What role would a guarantee of investment dealers have in the transaction? We do have a copy of the legislation that we got via our clients at OFA and they were more engaged in the issue of a future proposed equity injection, but the most recent version that we have seen does not mention guarantees although there seems to be a very general contract authorization section. Of course, we have to generally think about s. 28 as well.

A call today to over the main elements of the proposed transaction and the legislation would be very helpful so that we can get back to Gadi.

Hi Michael & Malle – we will be sending you draft legislation to take a look at. Actual guarantees will follow later.

This relates to the government's Fair Hydro Plan and the promise to reduce rates by 25% by July. We are doing a sort of securitization, for which the legislation will provide a framework. We are contemplating provisions that allow "the Minister" to enter into agreements with respect to transactions contemplated by the legislation. Gadi and DM Angus are of the view that Minister should be MOF, as the agreements are likely to be guarantees to investment dealers. Indemnities for the boards of OPG and IESO will also be required, although we didn't talk about who would sign those.

Happy to answer your questions or walk you through the proposed bill.

Hi Carolyn,

Gadi Mayman gave us a heads up that you might be giving us a call about a proposed guarantee that the Minister of Finance may be required to sign in relation to the changes to the global adjustment.

We're happy to discuss this. This afternoon is busy but tomorrow afternoon may work.

Thanks!

Michael

Subject: FW: Guarantee

Hi Gadi, Anna,
We had a call with Carolyn Calwell and Paul Johnson at Energy Legal.
Please find attached a summary description of the guarantee for a number of obligations related to the proposed transaction that is being requested by OPG's investment dealers. There are 2 guarantees being requested: a guarantee of payment in certain situations as well as a performance guarantee. Although the Province has provided payment guarantees in the past, I am not aware of

the Province provided guarantees of performance so this would be a new type of guarantee. We understand that these guarantees would have to be authorized by the proposed legislation so the wording of the authorizing sections needs to be worked on. Right now the section is very general and doesn't yet include the word "guarantee". Also there should be some wording around the type or scope of the guarantee or what it is in relation to. As well, I am assuming that payment under the guarantee would have to be a charge on the CRF in order to provide sufficient support. I am not sure whether the Province's liability under these guarantees can be capped. Also I understand there is a section in the proposed legislation indicating s. 28 FAA does not apply so this is something for us to consider too.
I understand that Tory's (OPG's counsel) is working on a first draft of the guarantee, but it does not appear that the scope of the guarantee would be settled before legislation is introduced.
I don't' know if you have seen the attached document previously. Who would you like us to speak to at the OFA about this proposal?
Thanks.

Hi Gadi,
I was thinking about the approach further and I think it would be best if I write to Len Hatzis (legal director at TBS) and Carolyn (so she is aware) first to let Len know the background that the DM of TBS is in favour of the Minister of Finance signing any required guarantee (although maybe he is well aware of this already) and also MOF/OFA view that we shouldn't exempt generally transactions under the new proposed Act from s. 28.
Then Len can let me know which TBS counsel are working on it as I think that it may be Nick and Paul but don't know for sure and don't know what their involvement on this file has been and I don't think I should send the email to TBS without letting Carolyn know.

Subject: RE: Guarantee

We have discussed this with the OFA, and we have endeavoured to provide a provision that we think should allow the financial guarantee being contemplated. Please let us know if you think it provides the necessary scope for what would be required to meet the Province's needs. We deleted the existing provision, although if you think that more general contractual authority is needed, something else could be considered. However, we don't think that it is appropriate to have a statutory appropriation for such general indemnity and guarantee provisions.

We would expect that the guarantee would be capped and only provide for the repayment of the principal and interest of the debt securities of the financial asset owner, and that would usually be done in the OIC.

We don't have any experience with performance guarantees. Is there a need for the Minister of Energy to require performance by the LDCs? We were also wondering if Blakes or another party involved in these discussions might have an example of what is being considered.

We also removed the exemption from s. 28 of the FAA. We have discussed this with OFA staff, and given the importance and breadth of this Act and Program, it doesn't seem appropriate to exempt the entire Act from s. 28 of the FAA.

Yes, that was the crux of the OEB's concern, given that's not how the system currently works when a ratepayer doesn't pay their bill.

Hi Gadi,
All very interesting.
On one point, how would a thread directly from individual ratepayers to the lenders to the GA smoothing work? That would seem particularly challenging.

Thanks, this came up at this morning's rate mitigation meeting, and the IESO people were happy to hear that we're on this, as they're a little nervous about how they're going to finance the regulatory asset until OPG is set up to take it on and pay for it.
I'm adding Ken to close the loop on the exchange that we had last night about the OPG letter - I asked Serge to add in the OFA, and he instructed Steen to do so, and, yes, the letter will be posted, at some point, on OPG's website.
In the half hour that I was able to attend the meeting, the discussion was around the legislation. The biggest point of contention was about OPG's need to have a direct recourse to ratepayers, and the legislative need for a thread directly from individual ratepayers to the lenders to the GA smoothing. The OEB doesn't like that concept at all. The other point that is of interest to us is that they are not looking at putting the guarantee mechanism into the legislation - although there will be some description in the legislation about what, I think they called indemnification will be needed, and then they will leave the guarantee to a commercial one. No surprise that OPG's dealer advisors are saying they need a full provincial guarantee, which OPG is pushing back on, and saying that the guarantee can only be if a future government changes the value of the regulatory asset (this is where the indemnification language in the legislation is necessary). Cindy, of course, as well as me for different reasons, is fussed about the nature of that guarantee, so we asked if they could sort that out with the dealers before the legislation is tabled. We don't want to end up with the dealers holding OPG hostage six months from now - not that they'd ever do that, would they Mike ?
I'm sure Scott will send out his fuller synopsis later today, and that'll also cover what happened in the last hour, after I'd left.

Subject: RE: Tomorrow's meetings

Scott and Mike, here are some initial thoughts on the potential scope of the advisor role:

Advisor Role

· Review the proposal to issue “AAA” asset-backed securities serviced by cash flows from legislatively-created receivables owing by present and future electricity customers in Ontario

· Identify key requirements that should be contemplated in the legislation that creates the receivables and provides for their sale, collection and enforcement

· Advise on alternative ways to structure the cash flows from the receivables in order to optimize funding alternatives under a flexible capital markets funding platform

· Provide input into the treasury funding model, including based on alternative capital market and rating agency scenarios (including commenting on OPG’s specific funding proposals)

· Assess target capital markets based on the size and nature of the offerings and existing appetites for similar structured securities.

I hope that’s somewhat useful. Feel free to call if a discussion makes sense.

Hi Guys:
Always challenging to arrange meetings, so will give you the current schedule which differs a bit from yesterday's:

• 11:00 Scotia

• 1:00 BMO

• 1:30 TD

• 2:00 Recap & selection
Sorry for the changes. I'm hoping that these times work for everyone. Let me know if thre is a problem.
Thanks, Mike

Hi all

As promised, John and I have tried to keep it as short as possible, feel free to edit.

Thanks

Ken k

Options for Equity Injection from TD Securities

When developing options for structuring the equity injection from the Province to OPG amounting to 44% of the debt incurred by the OPG Trust set up to purchase the regulatory asset from IESO the following underlying principles need to be addressed.

- The equity injection will be provided on a monthly/quarterly basis to OPG by the Province.
- The equity injection results in the Province, the sole shareholder of OPG receiving shares from OPG whose valuation is based on a determined and agreed upon methodology.
- This methodology can be as simple as book value or can be based on some kind of a DCF.
- Given the time limited nature of the equity injection the Province anticipates repayment at a future date.
- The potential for repayment can be implemented as follows:
    - The Province as the sole shareholder, as well as having vested legislative authority, can require OPG to issue dividends annually.
- The shares issues by OPG can include some kind of optionality to be exercised by the Province as and when repayment is required. The nature of the repayment should be flexible enough to request payment at a much earlier date than anticipated, given the potentiality of a new government's different policies subsequent to future elections.
    - OPG can issue preference shares again with some kind of optionality for repayment. Preference shares, especially those with a specified annual dividend will ensure that the Province remains whole in terms of the incremental interest costs it incurs on the equity injection.
- Other factors to be considered for repayment:
    - Should the senior and subordinated debt be ranked as the same and if so does this impact market access
    - Should the senior debt be repaid first or should repayment be on a pari-passu basis
    - OPG may have concerns about their own credit rating if the number of shares issued to the Province substantially dilutes key ratios.

Hi Ken, Mike,

Let me know if this works.

I'm on the fence about the last bullet I added.

Thanks,

John

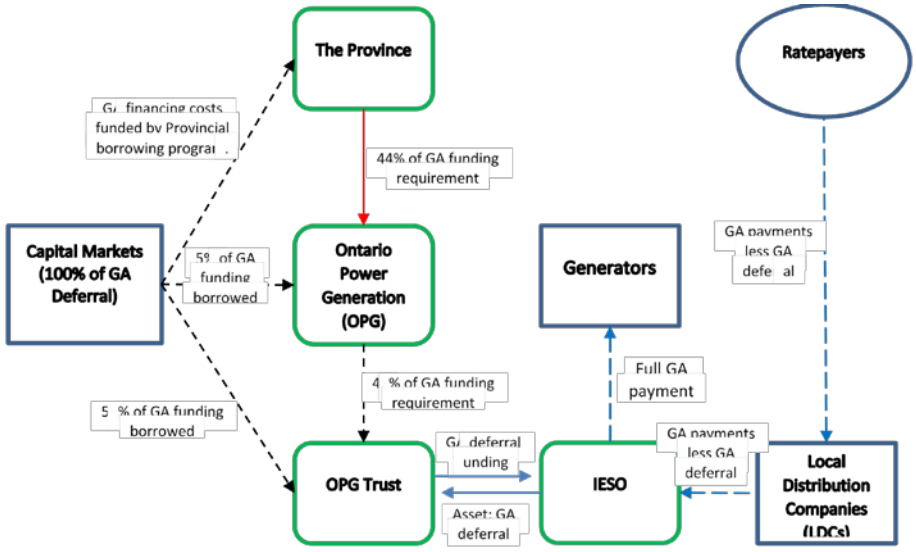
GA FINANCING – TD'S ADVICE SOUGHT ON CAPITAL CONTRIBUTION MECHANISM

The Capital Markets Division of the Ontario Financing Authority require TD advisors' recommendations and detailed descriptions of options vis-à-vis the proposal to provide capital ~~equity injection~~ to the Global Adjustment (GA) deferral proposal as part of the larger Ontario's Fair Hydro Plan, as announced on March 2, 2017.

Context

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses recovery deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers versus the cost of full payment to~~in order to fully compensate~~ generators.



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its capital

contributions ~~equity injection~~ through its annual borrowing program - from issuing debt into the capital markets.

Options for Equity Injection from TD Securities

The advice sought from TD could be summarized as follows:

When developing options for structuring the capital contributions ~~equity injection~~ from the Province to OPG for the~~amounting to~~ 44% of the ~~debt incurred~~financing requirement ~~-~~by the OPG Trust ~~set up~~ to purchase the regulatory asset from IESO, a number of ~~the following~~ underlying principles need to be addressed.

- While the Province is a sole shareholder of OPG, advice is sought to address potentially higher degrees of complexity of shareholder structure.
    - For example, options should include options for mechanism to create a level of certainty for recovering the capital ~~money~~ provided to OPG ~~no matter if~~whether this is done as common equity or through other mechanisms, including the potential use~~d~~ of preferred shares.~~as 'equity injection' for the purpose of the GA deferral proposal.~~
- Under the current state of discussion, t~~T~~he capital contribution ~~equity injection~~ would~~ill~~ be provided on a monthly/quarterly basis to OPG by the Province.
- The capital contribution ~~equity injection~~ results in the Province, the sole shareholder of OPG receiving common shares, or another type of security, from OPG whose valuation is based on a determined and agreed upon methodology. The Province will require an internal discussion before proceeding with a dialogue with OPG on the details.
- This methodology can be as simple as book value or can be based on some ~~kind~~ form of a discounted cash flow (DCF) mechanism but TD's expertise in structuring deals is sought in this request [keeping in mind the first bullet above].
- Given the time limited nature of the capital contribution ~~equity injection~~ the Province would anticipate~~s~~ repayment at a future date.
- The potential for repayment can be implemented as follows:
    - The Province as the sole shareholder~~, as well as having vested legislative authority~~, can require OPG to issue dividends annually.
- The shares issues by OPG can include some ~~kind~~ form of optionality to be exercised by the Province as and when repayment is ~~required~~due under the GA deferral plan. The nature of the repayment should be flexible enough to request payment at a much earlier date than anticipated, ~~given the potentiality of a new government's different policies subsequent to future elections~~with any number of possible causes, e.g. changes in government policy.

Commented [1]:
I suggest we delete this and have TD opine on options.

- ~~OPG c~~Could~~an~~ the structure involve issuing~~e preference~~ preferred shares ~~again~~ with some ~~kind~~ form of optionality for repayment. Preferredence shares, especially those with a specified annual dividend schedule could potentially~~will~~ ensure that the Province remain~~s~~ whole in terms of the incremental interest costs it would incur~~s~~ on the ~~equity injection~~capital contribution.

- Other factors to be considered for repayment:
  - Should the senior and subordinated debt be ranked as the same and if so does this impact market access
  - Should the senior debt be repaid first or should repayment be on a pari-passu basis
  - OPG may have concerns about their own credit rating if the number of shares issued to the Province substantially dilutes key ratios.
  - Eventually, the Province would need to have a discussion with OPG on the path forward.

Commented [2]:
Not sure if this is needed here.

Summarizing Issues to Work Around [Pls. Add More CMD and FTD]

- The Province will need to consider various levels of options for certainty in being able to recover its capital ~~getting the money back,~~ as stipulated in the GA deferral plan.
- The Province needs to be kept whole with respect to any financial cost that may arise from making and carrying forward the capital contributions.
- For regulatory purposes, there may be an interest in insuring that the capital contributions ~~equity injection is~~are considered a true equity in OPG's capital structure [TBD but still require consideration].
- The plan require that OPG operates on a commercial basis for the SPV with its Board needing to make independent decisions[, thus the need to have a discussion].
- In order to ensure continued treatment of OPG as a government business enterprise (GBE), the Province would want to avoid the appearance of providing zero or low interest loan.

Hi Ken, Mike,

Let me know if this works.

I'm on the fence about the last bullet I added.

Thanks,

John

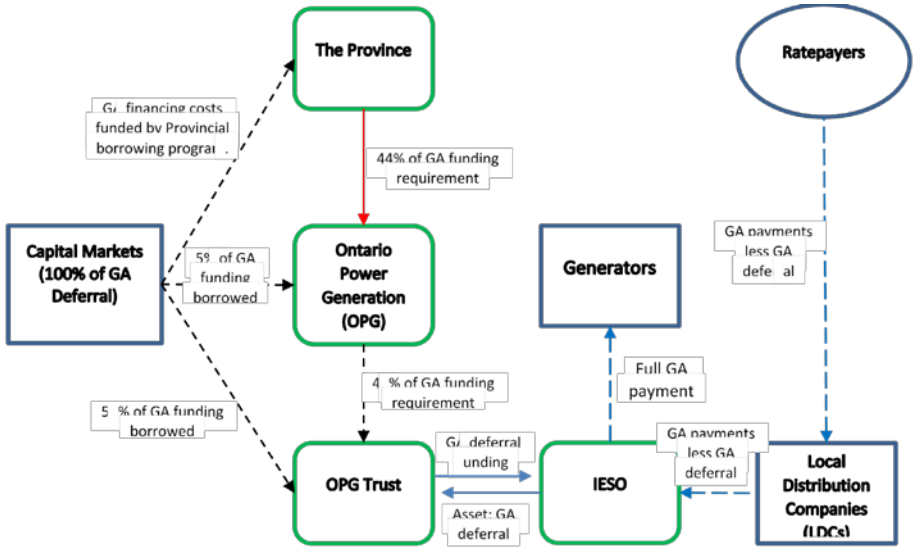
GA FINANCING – TD'S ADVICE SOUGHT ON CAPITAL CONTRIBUTION MECHANISM

The Capital Markets Division of the Ontario Financing Authority require TD advisors' recommendations and detailed descriptions of options vis-à-vis the proposal to provide capital ~~equity injection~~ to the Global Adjustment (GA) deferral proposal as part of the larger Ontario's Fair Hydro Plan, as announced on March 2, 2017.

Context

The Ministry of Energy, Ministry of Finance and the Ontario Financing Authority (OFA) are coordinating with OPG to implement a Global Adjustment (GA) smoothing mechanism.

Under the current proposal, OPG would develop a Special Purpose Vehicle (SPV) referred to as "OPG Trust" which will use 100% debt financing to purchase regulatory assets from the IESO. These regulatory assets represent the portion of RPP GA expenses recovery deferred to future years. IESO would use the cash from the OPG Trust to make up the shortfall in GA recoveries from ratepayers versus the cost of full payment to~~in order to fully compensate~~ generators.



OPG Trust would finance 51% of its funding requirements through the capital markets as senior debt with the remaining 49% being provided by OPG as subordinated debt. The 49% subordinated debt from OPG will be financed through debt OPG issues in its own corporate capacity, from the capital markets (5%) and through equity injections from the Province (44%). The Province will finance its capital

contributions ~~equity injection~~ through its annual borrowing program - from issuing debt into the capital markets.

Options for Equity Injection from TD Securities

The advice sought from TD could be summarized as follows:

When developing options for structuring the capital contributions ~~equity injection~~ from the Province to OPG for the~~amounting to~~ 44% of the ~~debt incurred~~financing requirement ~~-~~by the OPG Trust ~~set up~~ to purchase the regulatory asset from IESO, a number of ~~the following~~ underlying principles need to be addressed.

- While the Province is a sole shareholder of OPG, advice is sought to address potentially higher degrees of complexity of shareholder structure.
    - For example, options should include options for mechanism to create a level of certainty for recovering the capital ~~money~~ provided to OPG ~~no matter if~~whether this is done as common equity or through other mechanisms, including the potential use~~d~~ of preferred shares.~~as 'equity injection' for the purpose of the GA deferral proposal.~~
- Under the current state of discussion, t~~T~~he capital contribution ~~equity injection~~ would~~ill~~ be provided on a monthly/quarterly basis to OPG by the Province.
- The capital contribution ~~equity injection~~ results in the Province, the sole shareholder of OPG receiving common shares, or another type of security, from OPG whose valuation is based on a determined and agreed upon methodology. The Province will require an internal discussion before proceeding with a dialogue with OPG on the details.
- This methodology can be as simple as book value or can be based on some ~~kind~~ form of a discounted cash flow (DCF) mechanism but TD's expertise in structuring deals is sought in this request [keeping in mind the first bullet above].
- Given the time limited nature of the capital contribution ~~equity injection~~ the Province would anticipate~~s~~ repayment at a future date.
- The potential for repayment can be implemented as follows:
    - The Province as the sole shareholder~~, as well as having vested legislative authority~~, can require OPG to issue dividends annually.
- The shares issues by OPG can include some ~~kind~~ form of optionality to be exercised by the Province as and when repayment is ~~required~~due under the GA deferral plan. The nature of the repayment should be flexible enough to request payment at a much earlier date than anticipated, ~~given the potentiality of a new government's different policies subsequent to future elections~~with any number of possible causes, e.g. changes in government policy.

Commented [1]:
I suggest we delete this and have TD opine on options.

- ~~OPG c~~Could~~an~~ the structure involve issuing~~e preference~~ preferred shares ~~again~~ with some ~~kind~~ form of optionality for repayment. Preferredence shares, especially those with a specified annual dividend schedule could potentially~~will~~ ensure that the Province remain~~s~~ whole in terms of the incremental interest costs it would incur~~s~~ on the ~~equity injection~~capital contribution.

- Other factors to be considered for repayment:
  - Should the senior and subordinated debt be ranked as the same and if so does this impact market access
  - Should the senior debt be repaid first or should repayment be on a pari-passu basis
  - OPG may have concerns about their own credit rating if the number of shares issued to the Province substantially dilutes key ratios.
  - Eventually, the Province would need to have a discussion with OPG on the path forward.

Commented [2]:
Not sure if this is needed here.

Summarizing Issues to Work Around [Pls. Add More CMD and FTD]

- The Province will need to consider various levels of options for certainty in being able to recover its capital ~~getting the money back,~~ as stipulated in the GA deferral plan.
- The Province needs to be kept whole with respect to any financial cost that may arise from making and carrying forward the capital contributions.
- For regulatory purposes, there may be an interest in insuring that the capital contributions ~~equity injection is~~are considered a true equity in OPG's capital structure [TBD but still require consideration].
- The plan require that OPG operates on a commercial basis for the SPV with its Board needing to make independent decisions[, thus the need to have a discussion].
- In order to ensure continued treatment of OPG as a government business enterprise (GBE), the Province would want to avoid the appearance of providing zero or low interest loan.

Hi Guys:

Always challenging to arrange meetings, so will give you the current schedule which differs a bit from yesterday's:

- 11:00 Scotia
- 1:00 BMO
- 1:30 TD
- 2:00 Recap & selection

Sorry for the changes. I'm hoping that these times work for everyone. Let me know if thre is a problem.

Thanks, Mike

Subject: Wednesday meetings
Date: Monday, March 27, 2017 12:29:09 PM

Hi Guys:
I've arranged for 3 dealer meetings and a follow-up selection meeting as follows:
1:30 TD
2:00 Scotia
2:30 BMO
3:00 Selection Mtg

All meetings will be held at the OFA (1 Dundas Street West 14 th floor) in the Capital Markets Boardroom.
I look forward to seeing you both then. My number is 416 325 8930 and I will let you in when you arrive. Please let me know if these times work. The dealers are still confirming, so could have some changes. There is some flexibility if these times are problematic.

Mike
