Woodstock Hydro Services Inc.	11.43
Hydro One Networks Inc.	

Individual Electricity Distributors	Atikokan Hydro Inc.
Statistics by Customer Class	
Residential Customers	

Number of Customers		1,416
kWh Billed		11,183,350
Distribution Revenue	$	614,677
kWh Billed per customer		7,898
Distribution Revenue per Customer	$	434
General Service <50kW Customers		
Number of Customers		238
kWh Billed		5,817,379
Distribution Revenue	$	218,539
kWh Billed per customer		24,443
Distribution Revenue per Customer	$	918
General Service >50kW and Larger User (>5000kW) Customers		
Number of General Service Customers		22
Number of Larger User		0
kWh Billed		9,026,226
Distribution Revenue	$	60,318
kWh Billed per customer		410,283
Distribution Revenue per Customer	$	2,742

2008 Yearbook of Electricity Distributors

Ontario Energy Board

Published on September 10, 2009

Background on 2008 Yearbook of Electricity Distributors

The Ontario Energy Board is the regulator of Ontario's natural gas and electricity industries. In the electricity sector, the Board sets transmission and distribution rates, and approves the Independent Electricity System Operator's (IESO) and Ontario Power Authority's (OPA) budgets and fees. The Board also sets the rate for the Standard Supply Service for distribution utilities that supply electricity (commodity) directly to consumers.

The Board provides this 2008 Yearbook of Electricity Distributors to inform interested parties and the general public with financial and operational information collected from Electricity Distributors. It is compiled from data submitted by the Distributors through the Reporting and Record-Keeping Requirements. Hydro One Remotes and direct connections to the transmission grid are not presented.

Table of Contents

	Page
Overview of Ontario Electricity Distributors	3
Individual Ontario Electricity Distributors	
Balance Sheet	13
Income Statement	27
Financial Ratios	41
General information	55
Unitized Statistics and Service Quality Indicators	69
Statistics by Customer Class	83
Glossary of Terms	97

*The following distributors have not filed RRR information for 2008: Clinton Power Corporation, Dutton Hydro Limited, Newbury Power Inc., Attawapiskat First Nation, Fort Albany First Nation and Kashechewan First Nation. Revised versions of this yearbook may be posted once additional reporting data is received. It should also be noted that Newbury Power Inc. and Dutton Hydro were acquired by Middlesex Power Distribution in 2009.

Individual Electricity Distributors As of December 31st, 2008 (Alphabetically Listed)	Atikokan Hydro Inc.	Barrie Hydro Distribution Inc.	Bluewater Power Distribution Corporation	Brant County Power Inc.	Brantford Power Inc.	Burlington Hydro Inc.

FINANCIAL RATIOS

Liquidity Ratios measure the availability of cash to pay debt.

Current Ratio is a financial ratio that measures whether or not a firm has enough resources to pay its debts over the next 12 months.

Leverage Ratios are the financial statement ratios which show the degree to which the business is leveraging itself through its use of borrowed money. Long-term debt only.

Debt Ratio indicates what proportion of long-term debt a company has relative to its assets.

Debt to Equity Ratio is a financial ratio indicating the relative proportion of equity and long-term debt used to finance a company's assets.

Interest Coverage Ratio is used to determine a firm's ability to pay interest on outstanding debt.

Profitability Ratios measure the firm's use of its assets and control of its expenses to generate an acceptable rate of return.

Return on Equity measures the rate of return on the ownership interest (shareholders' equity) of the common stock owners and a firm's efficiency at generating profits from every dollar of net assets, and shows how well a company uses investment dollars to generate earnings growth. This is not regulatory return.

GENERAL STATISTICS

Population Served is the estimated number of people served as customers of the utility.

Municipal Population is the Stats Canada population of the municipalities served. May not equal Population Served as other utilities may also serve the same community.

Seasonal Population represents cottagers etc.

Total kWh Purchased equals "Total kWh sold (excluding losses)" plus "Distribution System Losses".

Total kWh sold (excluding losses) is the total kWh consumed within service territory.

Distribution System Losses is the sum of distribution system line losses, metering error, and energy theft.

Residential Customers applies to an account taking electricity at 750 volts or less where the electricity is used exclusively in a separate metered living accommodation.

General Service < 50 kW Customers applies to a non residential account taking electricity at 750 volts or less whose average monthly maximum demand is less than, or is forecast to be less than, 50 kW.

General Service > 50 to 5,000 kW Customers applies to a non residential account whose average monthly maximum demand used for billing purposes is greater than, or is forecast to be greater than, 50 kW but less than 5,000 kW.

Large User Customers applies to an account whose average monthly maximum demand used for billing purposes is greater than, or is forecast to be greater than, 5,000 kW.

Winter Peak (kW) is the peak load on the distributor system from October to March.

Summer Peak (kW) is the peak load on the distributor system from April to September.

Average Peak (kW) is the average of daily peaks throughout the year.

Capital Additions represents the investment for assets placed in-service.

Glossary of Terms

SERVICE QUALITY INDICATORS

Low Voltage Connections is the percentage of new low voltage (<750 Volts) connection requests where the connection is made within 5 working days of all prerequisites (engineering, safety, etc.) being met.

High Voltage Connections is the percentage of new high voltage (>=750 Volts) connection requests where the connection is made within 10 working days of all prerequisites (engineering, safety, etc.) being met.

Cable Locates is the percentage of requests for cable locates that are completed within 5 working days (of the initial date of the request or, if the customer so designates, a specific requested date).

Phone Calls is the percentage of calls to the utility's general inquiry number that are answered in person within 30 seconds.

Annual Appointments is the percentage of appointments involving a customer premises visit where the appointment date and time (morning or afternoon) is met.

Annual Written Response is the percentage of customer inquiries relating to a customer's account and requiring a written response where the response is provided within 10 working days of receipt of the inquiry.

Emergency Urban Response is the percentage of emergency (fire, police, etc.) trouble calls where a qualified service person is on site within 60 minutes of the call. Urban areas are defined by the respective municipality.

Emergency Rural Response is the percentage of emergency (fire, police, etc.) trouble calls where a qualified service person is on site within 120 minutes of the call. Rural areas are defined by the respective municipality.

SAIDI is the average forced sustained interruption duration per customer served per year (measured in hours). Calculation is "Total Customer Hours of Interruptions" divided by "Total Number of Customers".

SAIFI is the average number of forced sustained interruptions experienced per customer served per year (measured in outages). Calculation is the "Total Customer Interruptions" divided by "Total Number of Customers".

CAIDI is the average forced sustained interruption duration experienced by interrupted customers per year (measured in hours). Calculation is SAIDI divided by SAIFI.

NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

DRAFT

Background on Taxpayer-funded Electricity Price Mitigation

Program	Annual Fiscal Impacts ($M)	Date	Details
Ontario Clean Energy Benefit (OCEB)	~1,000	Jan 1 2011 to Dec 31, 2015	OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month, and provided a full 10 per cent benefit to almost all residential customers and most small retail businesses. OCEB expired December 31, 2015, as planned. OCEB was put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base.
Ending DRC from Residential Bills	~330	Jan 1, 2016 to Mar 31, 2018	The government removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.
Ontario Rebate for Electricity Consumers (OREC)	~1,200	Jan 1, 2017 onward	This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST).
Northern Industrial Electricity Rate Program	120	March 2010	As announced in 2015 Budget, the government committed to ongoing support for northern industrials with $120 million allocated annually. The Northern Industrial Electricity Rate (NIER) was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company. NIER was initially established as a three-year program in Budget 2010, effective April 1, 2010,.
Northern Ontario Energy Credit	~25	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1]
Ontario Energy Property Tax Credit	~445	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families, and up to $1,148 for qualifying seniors. [1]

1. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

Timeline – Taxpayer-funded Electricity Price Mitigation

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.

2010 2011 2012 2013 2014 2015 2016 2017

History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

DRAFT

Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

Timeline – Taxpayer-funded Electricity Price Mitigation

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.

2010 2011 2012 2013 2014 2015 2016 2017

History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

DRAFT

Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

Cost Shifts in Ontario's Electricity Sector

Working Draft

November 2016

CONFIDENTIAL DRAFT

Context

- Necessary investments in Ontario's electricity system have led to increased prices, prompting government to introduced a number of price mitigation programs for all consumer types.
  - In addition to existing rate mitigation programs, the 2016 Throne Speech announced a package of rate mitigation initiatives to address electricity prices for residential, commercial and industrial consumers.

- Ontario has a number of programs in place to manage residential electricity prices, including:
  - Ontario Electricity Support Program (OESP);
  - Rural or Remote Rate Protect (RRRP);
  - Northern Ontario Energy Credit (NOEC); and
  - Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also has a number of programs in place to manage industrial electricity prices, including:
  - Industrial Conservation Initiative (ICI);
  - Industrial Electricity Incentive (IEI);
  - Industrial Accelerator Program (IAP);
  - saveONenergy for Business Program; and
  - Demand Response.

Context (cont'd)

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

Cost Shifts in Ontario's Electricity Sector

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.88	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Conservation	1.85	1.92	2.00	1.58	2.43	2.45
IEI	-	-	0.08	0.09	0.11	0.12
Total	**5.41**	**5.99**	**6.81**	**6.13**	**8.21**	**9.12**

Cost Shift Impacts - Industrial Bill

Typical Class A consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	-22.17	-26.36	-30.29	-25.91	-33.79	-33.92
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Conservation	1.53	1.59	1.66	1.31	2.01	2.02
IEI	-	-	0.07	0.08	0.09	0.10
Total	**-19.43**	**-23.67**	**-27.44**	**-23.29**	**-30.45**	**-29.43**

Note: OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

Cost Shifts in Ontario's Electricity Sector (cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

Cost of Programs

By government program

$M	2011	2012	2013	2014	2015	2016
ICI	506	615	736	670	890	893
RRRP	172	156	159	176	174	176
OESP	-	-	-	-	-	158
Conservation	329	339	354	280	425	428
IEI	-	-	15	16	18	19

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

Note: OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).

Source: Corporate and Electricity Finance Division, OFA, as calculated from Ontario Energy Board (OEB) Regulated Price Plan (RPP) information.
OEB Electricity Distribution Rate Decisions, 2005-2009 and Rate Applications, 2010

Notes: * Electricity costs in 2005-2010 based on average RPP prices, as set by the OEB, and as adjusted for annual average line loss factor.
RPP prices in 2010 are assumed the same as of Nov 1, 2009. The annual average line loss factor in 2005 is assumed the same as in 2006 and that in 2010 is assumed the same as in 2009.
LTEP projections use a different consumption base, i.e. 800kWh of billed consumption.
** Delivery cost in 2005-2010 includes transmission and distribution cost. Delivery cost in 2006-2008 based on the average delivery charges by individual distributors from OEB rate decisions, weighted by residential consumption from the OEB's 2006, 2007, and 2008 Yearbook of Electricity Distributors. Delivery cost in 2009 and 2010 is based on the average of delivery charges by individual distributors from OEB rate decisions, weighted by estimated consumption.
*** Regulatory costs in 2005-2009 are based on actuals. Regulatory costs in 2010 are assumed the same as in 2009.

DATA REQUEST – ONTARIO REBATE FOR ELECTRICITY CONSUMERS

ISSUE

CONTEXT

The Ontario Rebate for Electricity Consumers Act proposes to rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.

Like the previous Ontario Clean Energy Benefit (OCEB), the proposed Ontario Rebate for Electricity Consumers would serve as a transfer from the tax base to the rate base. The proposal would rebate the provincial portion of the HST (8%) from the electricity bills of Regulated Price Plan eligible consumers.

Under the prior OCEB program, Local Distribution Companies (LDCs) were requested to provide a variety of data on electricity consumption, rebates and through a centrally reporting mechanism (henceforth referred to as the 'OCEB Portal'). In order to effectively assess the fiscal impact of this proposed initiative and forecast future costs, accurate data would be required from Local Distribution Companies.

However due to issues with data consistency and accuracy, the resulting data across LDCs were insufficiently calibrated for fiscal projection purposes.

This note serves to inform the data request.

DATA REQUEST

The following data is requested from the LDCs, Submeter Providers, Retailers. See Column 3 of Appendix A for a detailed breakdown.

- Name of each LDC / Submeter provider (SMP) / Retailer
    - For each class of customer: Residential, Multi-Unit Residential, Small Business and Farms:
        - Volume of Electricity
        - Rebated amount
            - Nice to have: Information on the portion of the rebate that is directed to offsetting the 8% of *Electricity, Delivery, Regulatory*
        - Number of Customers/Eligible Accounts
    - Information on the billing period/cycle the volume/rebated amount/customers data relates.
    - Contact information or an ability to get in touch with the person inputting the data to confirm minor typos and other transcription errors.

CURRENT DATA REQUEST RELATIVE TO PRIOR REQUEST

- The prior OCEB Portal had a request for a wide assortment of data (See Table in Appendix A, Columns 1 and 2). However, only a portion of that data was utilized for OCEB fiscal forecasting.

    - To alleviate the workload of the reporting requirements for LDCs and enable accurate data entry, LDCs and Submeter providers are requested to provide a breakdown of only the above information, see column 3 of table in Appendix A.
- Prior data from LDCs and SMPs had minor errors and typos. Providing an ability to contact the individual – via email, phone or internal portal messaging system – would allow the correction/clarification of this suspect information.
- This reduced reporting requirement will be sufficient for OFA/MOF/CEFD for fiscal projection purposes. However ENERGY may have additional data requirements from the LDCs.

Corporate and Electricity Finance Division, Ontario Financing Authority

DATA REQUEST – ONTARIO REBATE FOR ELECTRICITY CONSUMERS

The following note provides details of data request related to the proposals under the Ontario Rebate for the Ontario Rebate for Electricity Consumers Act if the central reporting mechanism or the portal used for the Ontario Clean Energy Benefit (OCEB) is to be revived for the new rebate program proposed in September 2016.

~~**ISSUE**~~

CONTEXT

- The Ontario Rebate for Electricity Consumers Act proposes to rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
- ~~Like~~ Similar to the previous ~~Ontario Clean Energy Benefit (~~OCEB~~)~~ program, which ended on December 31, 2015, the proposed rebate under the Ontario Rebate for Electricity Consumers Act would serve to provide electricity rate mitigation from~~as a transfer from the tax base to~~ the ~~rate~~ tax base. The proposal would rebate the provincial portion of the HST (8%) from the electricity bills of Regulated Price Plan eligible consumers.
- Under the prior OCEB program, Local Distribution Companies (LDCs) were requested to provide a variety of data on electricity consumption~~,~~ and rebates ~~and~~ through a central~~ly~~ reporting mechanism ~~(henceforth referred to as~~ the 'OCEB Portal'). In order to effectively assess the fiscal impact of this proposed initiative and forecast future costs, accurate data would be required from Local Distribution Companies.
- However due to issues with data consistency and accuracy, the resulting data across LDCs were insufficiently calibrated for fiscal projection purposes.
- This note serves to inform the data request.

DATA REQUEST

The following data is requested from the LDCs, Submeter Providers, Retailers. See Column 3 of Appendix A for a detailed breakdown.

- Name of each LDC / Submeter provider (SMP) / Retailer
  - For each class of customer: Residential, Multi-Unit Residential, Small Business and Farms:
    - Volume of Electricity
    - Rebated amount
      - Nice to have: Information on the portion of the rebate that is directed to offsetting the 8% of *Electricity, Delivery, Regulatory*
    - Number of Customers/Eligible Accounts
  - Information on the billing period/cycle the volume/rebated amount/customers data relates.

Formatted: List Paragraph, Bulleted + Level: 1 + Aligned at: 0" + Indent at: 0.25"

Commented [JK1]: Can we say when it started, etc. Also provide a flavor of the portal data as it existed before.

- Contact information or an ability to get in touch with the person inputting the data to confirm minor typos and other transcription errors.

CURRENT DATA REQUEST RELATIVE TO PRIOR REQUEST

- The prior OCEB Portal had a request for a wide assortment of data (See Table in Appendix A, Columns 1 and 2). However, only a portion of that data was utilized for OCEB fiscal forecasting.
  - To alleviate the workload of the reporting requirements for LDCs and enable accurate data entry, LDCs and Submeter providers are requested to provide a breakdown of only the above information, see column 3 of table in Appendix A.
- Prior data from LDCs and SMPs had minor errors and typos. Providing an ability to contact the individual – via email, phone or internal portal messaging system – would allow the correction/clarification of this suspect information.
- This reduced reporting requirement will be sufficient for OFA/MOF/CEFD for fiscal projection purposes. However ENERGY may have additional data requirements from the LDCs.

DATA REQUEST – ONTARIO REBATE FOR ELECTRICITY CONSUMERS

The following note provides details of data request related to the proposals under the Ontario Rebate ~~for the Ontario Rebate~~ for Electricity Consumers Act if the central reporting mechanism or the portal used for the Ontario Clean Energy Benefit (OCEB) is to be revived for the new rebate program proposed in September 2016.

~~**ISSUE**~~

CONTEXT

- The Ontario Rebate for Electricity Consumers Act proposes to rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
- ~~Like~~ Similar to the previous ~~Ontario Clean Energy Benefit (~~OCEB~~)~~ program, which started on January 1, 2011 and ended on December 31, 2015, the proposed rebate under the Ontario Rebate for Electricity Consumers Act would serve to provide electricity rate mitigation from~~as a transfer from the tax base to~~ the ~~rate~~ tax base. The proposal would rebate the provincial portion of the HST (8%) from the electricity bills of Regulated Price Plan eligible consumers. More details on the OCEB program in Appendix B.
- Under the prior OCEB program, Local Distribution Companies (LDCs) were requested to provide a variety of data on electricity consumption~~,~~ and rebates ~~and~~ through a central~~ly~~ reporting mechanism, ~~(henceforth referred to as~~ the 'OCEB Portal'~~)~~.
- Accurate data was required from LDCs ~~In~~ in order to effectively assess the fiscal impact of ~~this~~ the proposed initiative and forecast future program costs~~, accurate data would be required from Local Distribution Companies~~.
-
    - However due to issues with data consistency and accuracy, the resulting data from the OCEB Portal across LDCs were insufficiently calibrated for fiscal projection purposes.
    - Some issues with the data include:
        - Typos in the portal data required records from the 70+ LDCs needing to be individually reviewed and compared to prior months' data.
        - LDCs routinely entered in the wrong data in fields, requiring manual correction prior to fiscal projections.
        - An inability to accurately account for OCEB eligible and total consumption once the 3,000 kWh cap was put in place. Data provided by LDCs did not provide total consumption nor total OCEB-eligible consumption. General calculations were performed based on out-of-date Statistics Canada to attempt to assess the impact of the cap and the amount that was OCEB eligible.
        - LDCs varied in whether certain customer classes overlapped or were mutually exclusive. Decisions trees were developed into the fiscal projections to assess whether the numbers provided included or excluded certain groups of customers.

Commented [JK1]: Can we say when it started, etc. Also provide a flavor of the portal data as it existed before.

Commented [SK22R1]: Done. Also provided details on prior OCEB portal data in the last section.

Commented [JK3]: So let's elaborate what we did to work around and how we used the data.

        - The amount invoiced from the IESO and the amount claimed in the OCEB portal varied. This required an investigation to assess the reason for the divergence.
        - Adjustments and assumptions had to be made to assess for the discrepancy between actuals and invoices. In particular assumptions had to be made on the lag between the times electricity was consumed from the end customer to the time the OCEB was billed to the Province.
        -
    - In addition, delays in setting up the data request process meant the **first 8 months of the OCEB program did not have data available in the Portal**.

- This note serves to inform the data request for the proposed Ontario Rebate for Electricity Consumers (OREC).
    - **Should the nature of the OREC program change (eg. the introduction of caps, inclusion/exclusion of certain customer classes), the data requested will change. This note relates to the data request only under the current proposal of the OREC.**

Commented [JK4]: Is the current request easily scalable? If not, should we not account for that scenario given the permanence of the program?

Commented [SK25R4]: Good point. For now, the only way I can foresee changes are:
-Caps of some sort, whether it be in a $ basis, or kWh basis.
-Inclusions/Exclusions of customers

DATA REQUEST

The following data is requested from the LDCs, Submeter Providers (SMP), Retailers. See Column 3 of Appendix A for a detailed breakdown.

- Name of each LDC / Submeter provider ~~(SMP)~~ / Retailer
    - ~~For each class of customer~~Details broken by each class of customer. Note, at the outset of the program this consists of ~~:~~ Residential, Multi-Unit Residential, Small Business and Farms, but would vary based on changes in the program eligibility:
        - Volume of Electricity
        - Rebated amount
            - Nice to have: Information on the portion of the rebate that is directed to offsetting the 8% of *Electricity, Delivery, Regulatory* charges
        - Number of Customers/Eligible Accounts
            - Note: at the outset of the program there is no limit to the amount rebated. However, should a cap of some sort be introduced – whether it be on a volume or rebated amount basis – additional detail would be requested eg. eligible amount within the cap, and total amount.
    - Information on the billing period/cycle that the ~~the~~ volume, ~~/~~rebate, and ~~d amount/~~customer~~s~~ data relates.
        - If this varies by Customer Class, provide details.
    - Contact information or an ability to get in touch with the person inputting the data to confirm minor typos and other transcription errors.

CURRENT DATA REQUEST RELATIVE TO PRIOR REQUEST

- The prior OCEB Portal had a request for a wide assortment of data (See Table in Appendix A, Columns 1 and 2). However, only a portion of that data was utilized for OCEB fiscal forecasting.

- To alleviate the workload of the reporting requirements for LDCs and enable accurate data entry, LDCs and ~~Submeter providers~~ SMPs are requested to provide a breakdown of only the above information (in section 'DATA REQUEST'), see column 3 of table in ~~Appendix~~ Appendix A.

- Prior data from LDCs and SMPs had minor errors and typos. Providing an ability to contact the individual – via email, phone or internal portal messaging system – would allow the correction/clarification of this suspect information.
- ~~This~~ The reduced reporting requirement under the OREC proposal will be sufficient for OFA/MOF/CEFD for fiscal projection purposes. However the Ministry of ~~ENERGY~~ Energy may have additional data requirements from the LDCs.
- The OCEB data request made an initial questionnaire for data from LDCs and SMPs, such as the number of customers, proportion of customers on a billing cycle and methodology to forecast OCEB payments for the upcoming months.
  - Note: Though LDC developed OCEB forecasts for the upcoming months may have been useful, due to the discrepancy in the OCEB forecasts across LDCs and the longer term nature of the OCEB model, these distributor provided forecasts were not utilized.
- Some of the information from the questionnaires was not needed for fiscal reporting purposes. Other information would vary over time, and as a result would be out-of-date shortly after the initial questionnaire.
  - The current data request asks for specific data – all for fiscal projection purposes – to be provided on a regular basis rather than on an initial detailed questionnaire.

APPENDIX B – BACKGROUND: ONTARIO CLEAN ENERGY BENEFIT

- OCEB was in effect from 2011 to 2015, and provided residential, farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax.
    - Effective September 2012 electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month.
- OCEB helped Ontario families through the transition to a more reliable and cleaner electricity system, with the monthly cap balancing the fiscal implications of providing electricity relief.
- OCEB costs totalled $1,006 million in 2013-14 and $1,078 million in 2014-15, with a projected cost for 2015-16 of $860 million (for the 9 months remaining in the program).

Eligible Consumers	
Categories Listed in Legislation (coincides with categories eligible for RPP)	
Residential	• a dwelling • a property within the meaning of the Condominium Act, 1998 • a residential complex, within the meaning of the Residential Tenancies Act, 2006 • a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the Co-operative Corporations Act
Farms	• carries on a business that is a farming business for the purposes of the Farm Registration and Farm Organizations Funding Act, 1993, and • holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act
Demand for electricity of 50 kW or less, or consumes not more than 250,000 kWh annually	Would include small business, smaller broader- public-sector entities, and other small users.
Special Cases (not eligible for RPP, but eligible for OCEB)	
Consumers On Retail Contracts	Includes consumers with existing retail contracts and those who sign them during the duration of the program.
Cornwall Electric and Hydro One Remote Communities Inc.	Included since they are licensed distributors.
Other Consumers Prescribed by Regulation	10 First Nations remote unlicensed distributors have been added by regulation.
Exclusions	
Generators	Generation station service and the microFIT distribution service charge are excluded in legislation.

DATA REQUEST – ONTARIO REBATE FOR ELECTRICITY CONSUMERS

The following note provides details of data request related to the proposals under the Ontario Rebate for Electricity Consumers Act if the central reporting mechanism or the portal used for the Ontario Clean Energy Benefit (OCEB) is to be revived for the new rebate program proposed in September 2016.

CONTEXT

- The Ontario Rebate for Electricity Consumers Act proposes to rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
- Similar to the previous OCEB program, which started on January 1, 2011 and ended on December 31, 2015, the proposed rebate under the Ontario Rebate for Electricity Consumers Act would serve to provide electricity rate mitigation from the tax base. The proposal would rebate the provincial portion of the HST (8%) from the electricity bills of Regulated Price Plan eligible consumers. More details on the OCEB program in Appendix B.
- Under the prior OCEB program, Local Distribution Companies (LDCs) were requested to provide a variety of data on electricity consumption and rebates through a central reporting mechanism, the 'OCEB Portal'.
- Accurate data was required from LDCs in order to effectively assess the fiscal impact of the proposed initiative and forecast future program costs.
    - However due to issues with data consistency and accuracy, the resulting data from the OCEB Portal across LDCs were insufficiently calibrated for fiscal projection purposes.
    - Some issues with the data include:
        - Typos in the portal data required records from the 70+ LDCs needing to be individually reviewed and compared to prior months' data.
        - LDCs routinely entered in the wrong data in fields, requiring manual correction prior to fiscal projections.
        - An inability to accurately account for OCEB eligible and total consumption once the 3,000 kWh cap was put in place. Data provided by LDCs did not provide total consumption nor total OCEB-eligible consumption. General calculations were performed based on out-of-date Statistics Canada to attempt to assess the impact of the cap and the amount that was OCEB eligible.
        - LDCs varied in whether certain customer classes overlapped or were mutually exclusive. Decisions trees were developed into the fiscal projections to assess whether the numbers provided included or excluded certain groups of customers.
        - The amount invoiced from the IESO and the amount claimed in the OCEB portal varied. This required an investigation to assess the reason for the divergence.
        - Adjustments and assumptions had to be made to assess for the discrepancy between actuals and invoices. In particular assumptions had to be made on the lag between the times electricity was consumed from the end customer to the time the OCEB was billed to the Province.

    - In addition, delays in setting up the data request process meant the **first 8 months of the OCEB program did not have data available in the Portal**.
- This note serves to inform the data request for the proposed Ontario Rebate for Electricity Consumers (OREC).
    - **Should the nature of the OREC program change (eg. the introduction of caps, inclusion/exclusion of certain customer classes), the data requested will change. This note relates to the data request only under the current proposal of the OREC.**

DATA REQUEST

The following data is requested from the LDCs, Submeter Providers (SMP), Retailers. See Column 3 of Appendix A for a detailed breakdown.

- Name of each LDC / Submeter provider / Retailer
    - Details broken by each class of customer. Note, at the outset of the program this consists of Residential, Multi-Unit Residential, Small Business and Farms, but would vary based on changes in the program eligibility:
        - Volume of Electricity
        - Rebated amount
            - Nice to have: Information on the portion of the rebate that is directed to offsetting the 8% of *Electricity, Delivery, Regulatory* charges
        - Number of Customers/Eligible Accounts
            - Note: at the outset of the program there is no limit to the amount rebated. However, should a cap of some sort be introduced – whether it be on a volume or rebated amount basis – additional detail would be requested eg. eligible amount within the cap, and total amount.
    - Information on the billing period/cycle that the volume, rebate, and customer data relates.
        - If this varies by Customer Class, provide details.
    - Contact information or an ability to get in touch with the person inputting the data to confirm minor typos and other transcription errors.

CURRENT DATA REQUEST RELATIVE TO PRIOR REQUEST

- The prior OCEB Portal had a request for a wide assortment of data (See Table in Appendix A, Columns 1 and 2). However, only a portion of that data was utilized for OCEB fiscal forecasting.
    - To alleviate the workload of the reporting requirements for LDCs and enable accurate data entry, LDCs and SMPs are requested to provide a breakdown of only the above information (in section 'DATA REQUEST'), see column 3 of table in Appendix A.
- Prior data from LDCs and SMPs had minor errors and typos. Providing an ability to contact the individual – via email, phone or internal portal messaging system – would allow the correction/clarification of this suspect information.

- The reduced reporting requirement under the OREC proposal will be sufficient for OFA/MOF/CEFD for fiscal projection purposes. However the Ministry of Energy may have additional data requirements from the LDCs.
- The OCEB data request made an initial questionnaire for data from LDCs and SMPs, such as the number of customers, proportion of customers on a billing cycle and methodology to forecast OCEB payments for the upcoming months.
    - Note: Though LDC developed OCEB forecasts for the upcoming months may have been useful, due to the discrepancy in the OCEB forecasts across LDCs and the longer term nature of the OCEB model, these distributor provided forecasts were not utilized.
- Some of the information from the questionnaires was not needed for fiscal reporting purposes. Other information would vary over time, and as a result would be out-of-date shortly after the initial questionnaire.
    - The current data request asks for specific data – all for fiscal projection purposes – to be provided on a regular basis rather than on an initial detailed questionnaire.

Corporate and Electricity Finance Division, Ontario Financing Authority

APPENDIX B – BACKGROUND: ONTARIO CLEAN ENERGY BENEFIT

- OCEB was in effect from 2011 to 2015, and provided residential, farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax.
    - Effective September 2012 electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month.
- OCEB helped Ontario families through the transition to a more reliable and cleaner electricity system, with the monthly cap balancing the fiscal implications of providing electricity relief.
- OCEB costs totalled $1,006 million in 2013-14 and $1,078 million in 2014-15, with a projected cost for 2015-16 of $860 million (for the 9 months remaining in the program).

Eligible Consumers	
Categories Listed in Legislation (coincides with categories eligible for RPP)	
Residential	• a dwelling • a property within the meaning of the Condominium Act, 1998 • a residential complex, within the meaning of the Residential Tenancies Act, 2006 • a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the Co-operative Corporations Act
Farms	• carries on a business that is a farming business for the purposes of the Farm Registration and Farm Organizations Funding Act, 1993, and • holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act
Demand for electricity of 50 kW or less, or consumes not more than 250,000 kWh annually	Would include small business, smaller broader- public-sector entities, and other small users.
Special Cases (not eligible for RPP, but eligible for OCEB)	
Consumers On Retail Contracts	Includes consumers with existing retail contracts and those who sign them during the duration of the program.
Cornwall Electric and Hydro One Remote Communities Inc.	Included since they are licensed distributors.
Other Consumers Prescribed by Regulation	10 First Nations remote unlicensed distributors have been added by regulation.
Exclusions	
Generators	Generation station service and the microFIT distribution service charge are excluded in legislation.

Ontario

MINISTRY OF
ENERGY

Electricity Price Mitigation

Working Draft

August 18, 2016

Context

- Since 2003, we have invested more than $35 B in new and refurbished generation, over 16,000 MW of cleaner power for– about 40% of our current supply.

- Prices are increasing because we are making the necessary investments to modernize the province's electricity infrastructure. We chose to replace coal-fired generation with cleaner sources of energy

- Emissions have declined by approximately 80% since 2003.

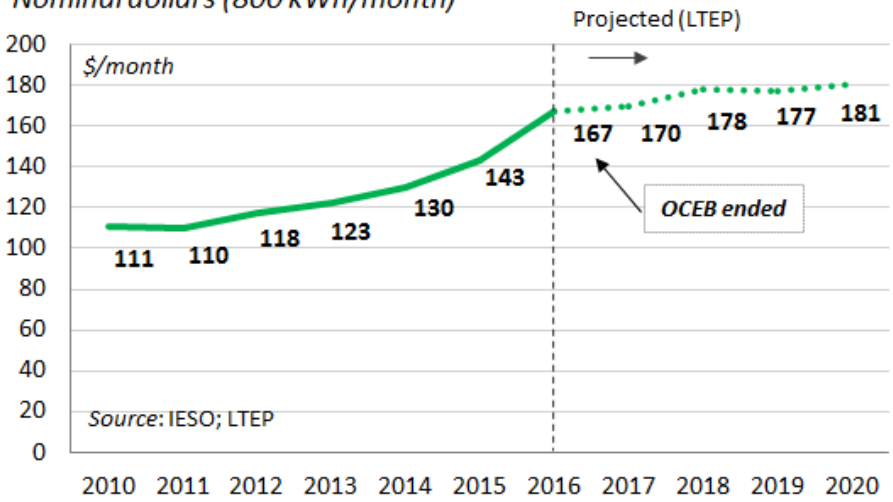
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as renewable projects come online.

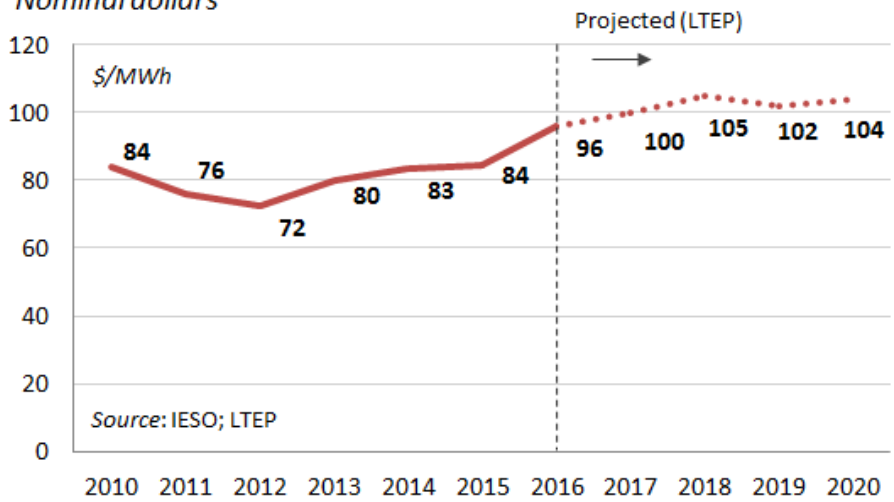
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Consumer Classes

Regulated Price Plan	Class B	Class A
< 0.05 MW	0.05 – 3 MW	3+ MW

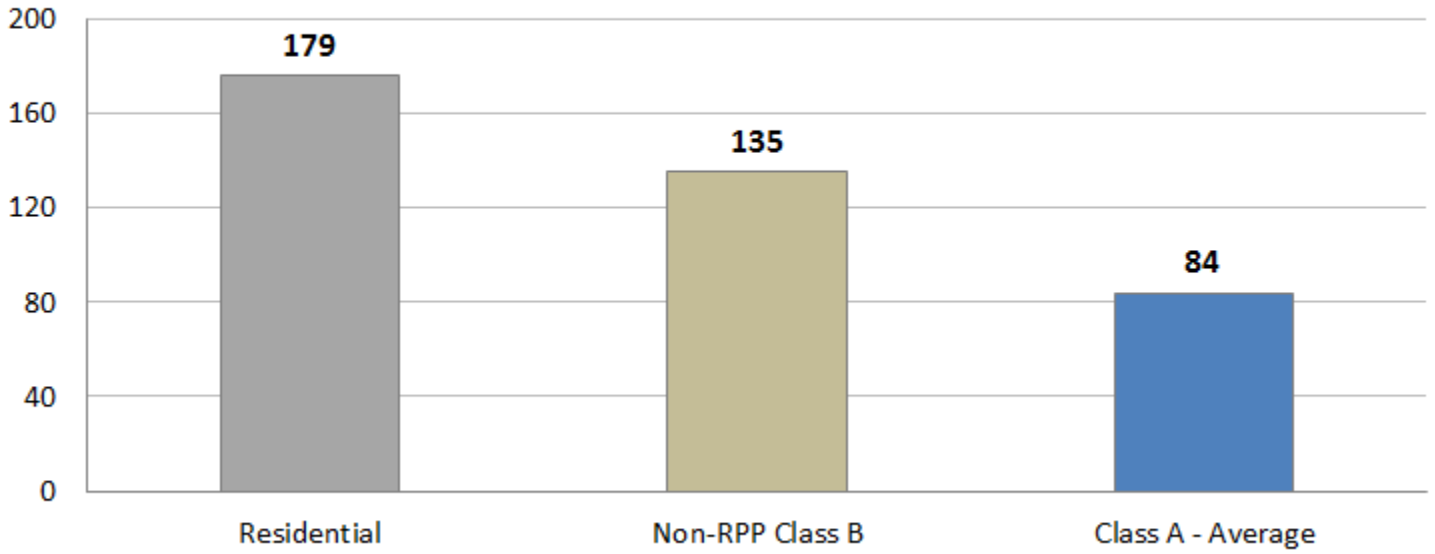
- The Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB).
- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated.
- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 megawatts (MW)).

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



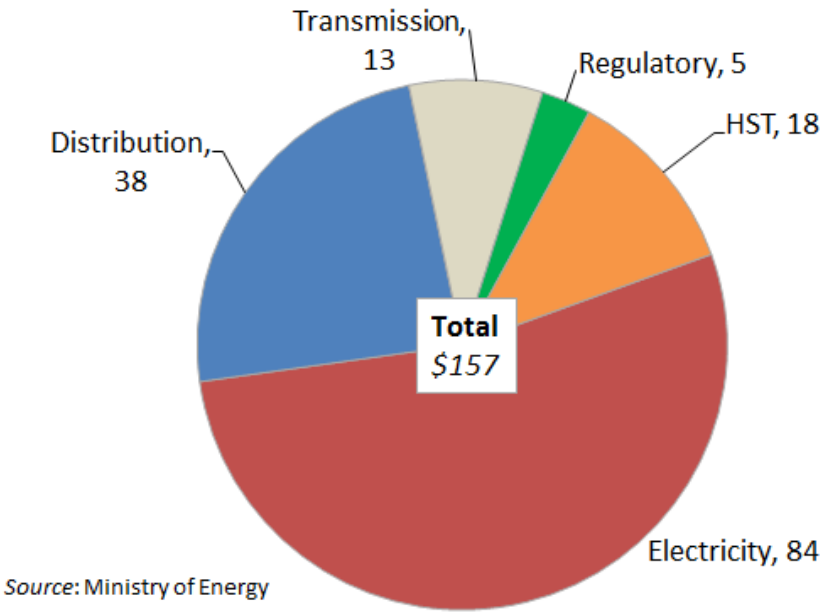
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5,000,000 residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



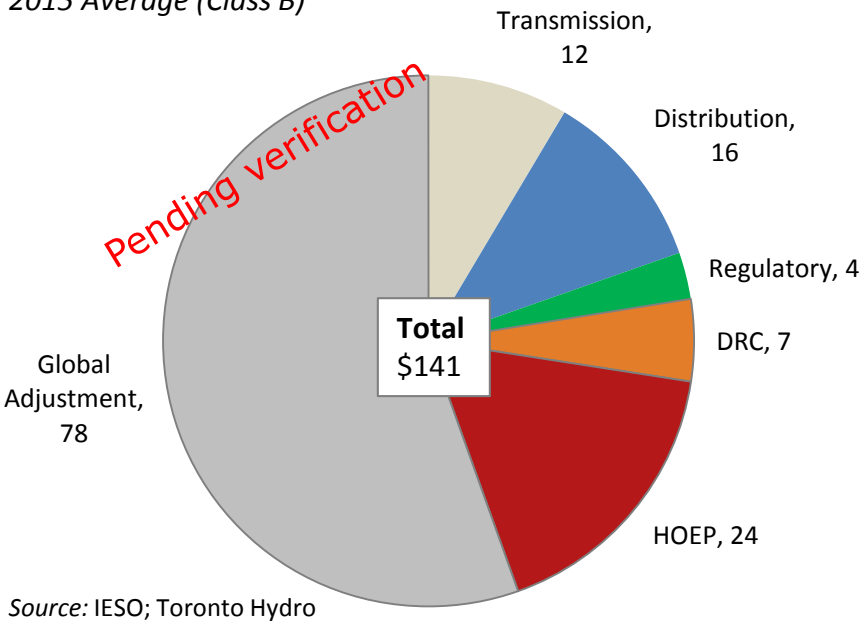
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and Global Adjustment (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Class B)

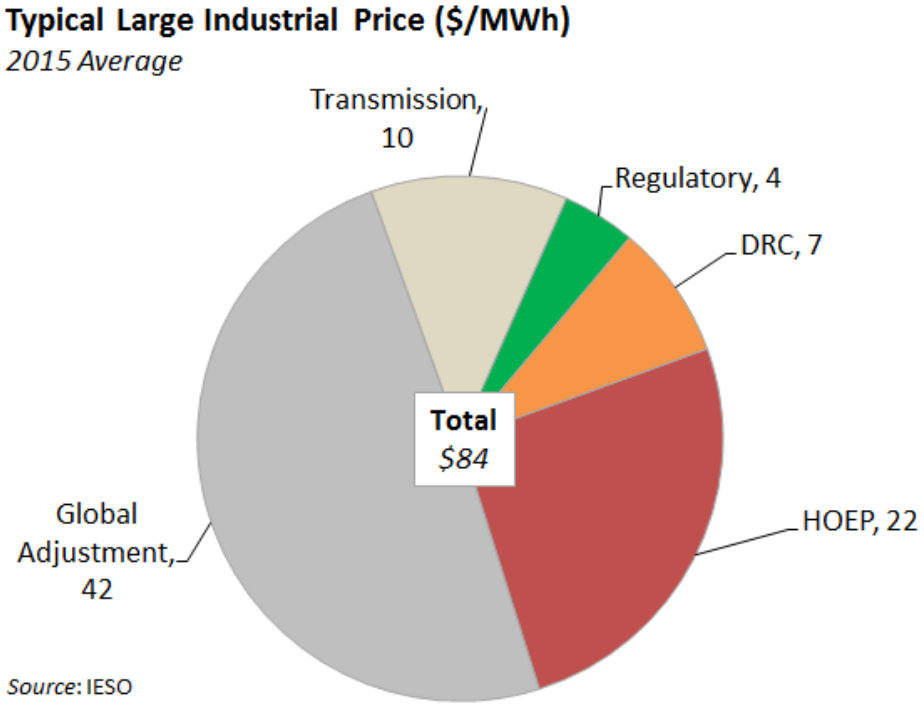


Source: IESO; Toronto Hydro

- Unlike residential and many industrial consumers, consumers in the commercial sector do not pay time of use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

2016 Budget Commitments

- The current proposal for recycling auction proceeds will offsets the impact of cap and trade for industrial consumers though a volumetric mechanism and provide a rebate via the Regulated Price Plan to ensure the average residential consumer receives a reduction of $2/month.
  - To meet the 2016 Budget commitment, about $90 million per year would be required for industrial consumers and about $150 million per year is required for residential consumers.
  - If HST is effectively removed, consumer savings will be significantly higher than the 2016 Budget commitment.

- The Climate Change Action Plan (CCAP) outlined the goals of achieving economy-wide reductions in GHGs, to “keep electricity rates affordable” by stating that cap and trade auction proceeds will be used to offset the cost of greenhouse gas (GHG) emission reduction initiatives that are currently funded by residential and industrial consumers through their bills and supporting initiatives that enable fuel-switching away from GHG emitting fuels.

HST – Background

Placeholder for MOF

Options

- Three options have been identified that could provide rate relief to various customer classes.

- These three options are outlined below. Option 3 is not mutually exclusive and could be combined with Option 1 or 2. Should a combination of options be pursued, it could reduce or eliminate the required GGRA proceeds identified under Option 3:

    1) Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial and residential).

    2) Provide an 8% rebate to Regulated Price Plan consumers.

    3) Provide rate-based relief to certain electricity consumers by shifting costs within the electricity sector.
        a) Expand ICI eligibility threshold to customers above 1MW in all sectors. Consideration may also be given to expand Regulated Price Plan to include all Class B consumers under 1 MW.
        b) Expand Rural and Remote Rate Protection (RRRP) to increase the benefit to rural customers.

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

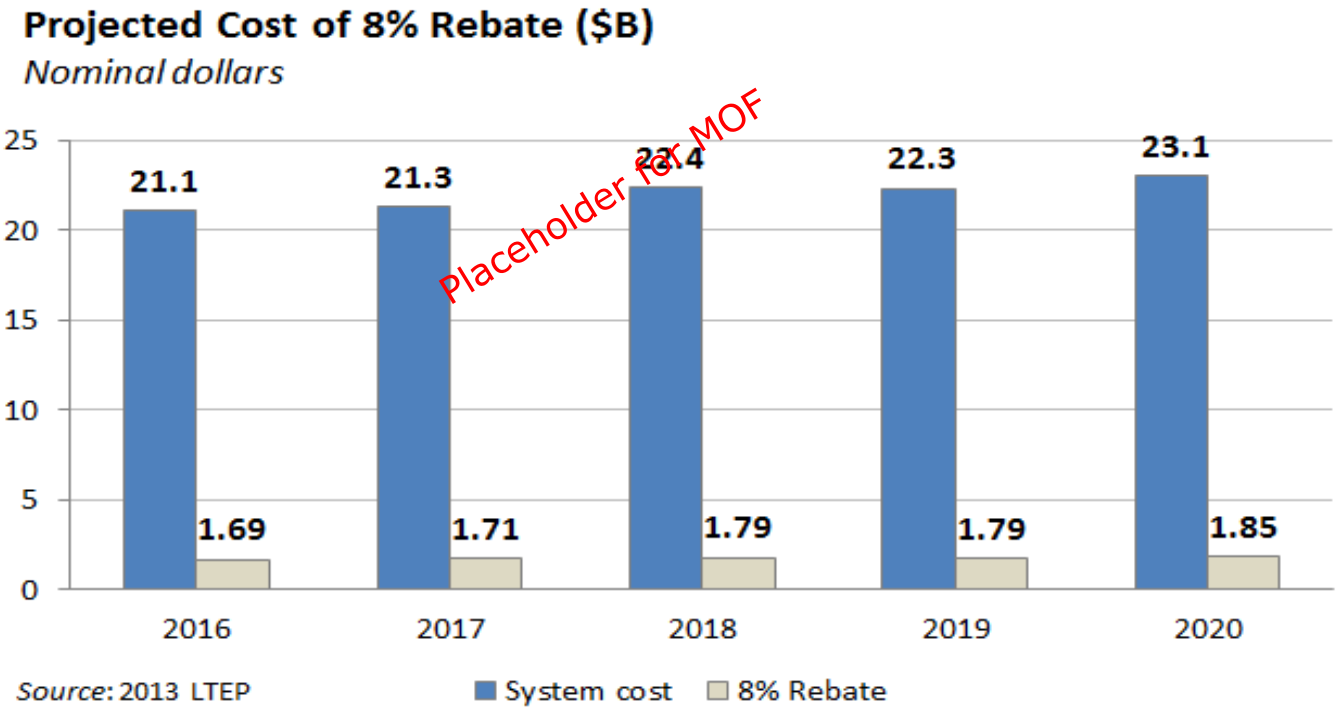
- This option would provide an 8% rebate for all consumers, which would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Based upon implementation of the Ontario Clean Energy Benefit (OCEB), some LDCs require lead time of at least six months for billing, system, and process changes.

8% Rebate for All Consumers – Projected Cost

- The cost of electricity service would influence the cost of providing an 8% rebate. System cost is expected to increase over the next five years.

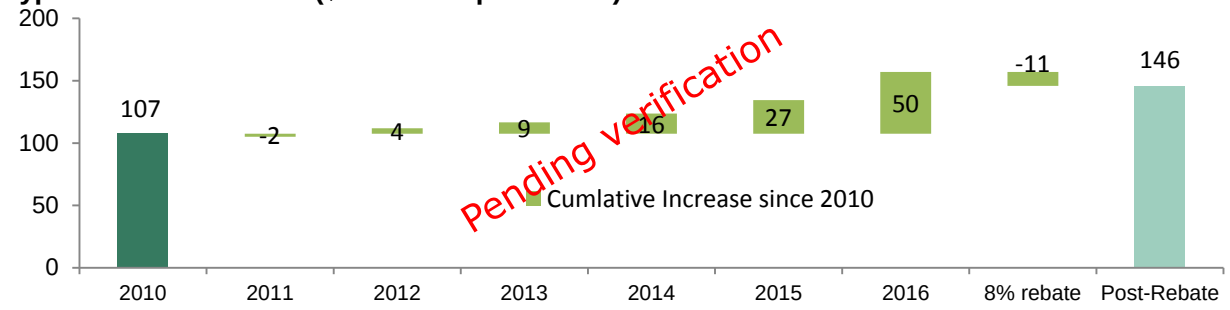
- [MOF continuing to conduct analysis to estimate the fiscal impact.]



Bill Impacts by Sector

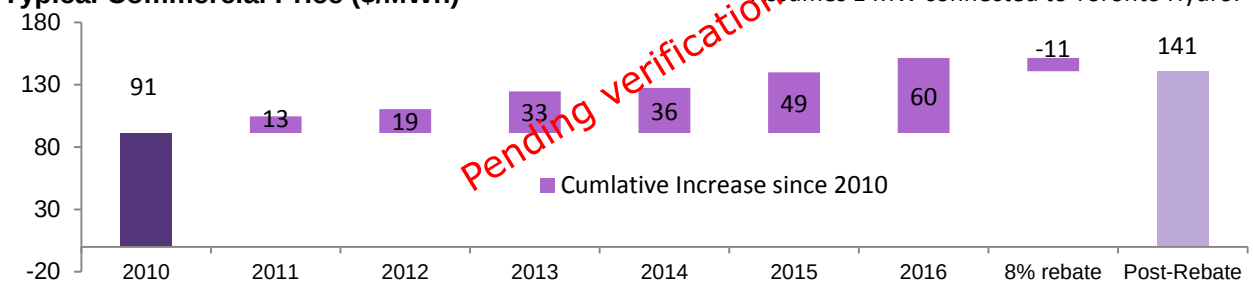
- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $11/MWh rebate.
- A $6/MWh rebate for industrial consumers would bring all-in prices back to 2010 levels.

Typical Residential Bill ($ / 750kWh per month)

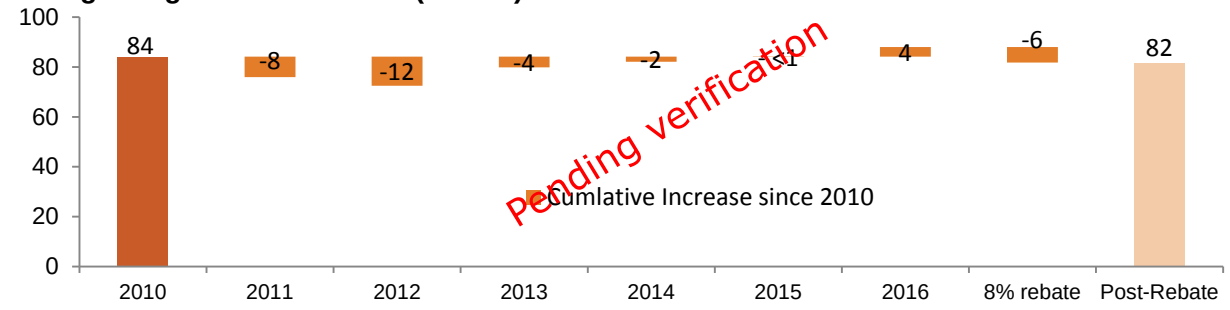


Typical Commercial Price ($/MWh)

Assumes 1 MW connected to Toronto Hydro.



Average Large Industrial Price ($/MWh)



8% Rebate for All Consumers – Considerations

- Commercial and industrial consumers would continue to receive benefit related to input tax credits.
- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.
- Detailed messaging on bills (for “low-volume” consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

Option 2 – 8% Rebate for Regulated Price Plan Consumers

8% Rebate for Regulated Price Plan Consumers – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.

- This option would provide an 8% rebate for Regulated Price Plan consumers, which would be equal to provincial portion of HST and funded by the tax base.

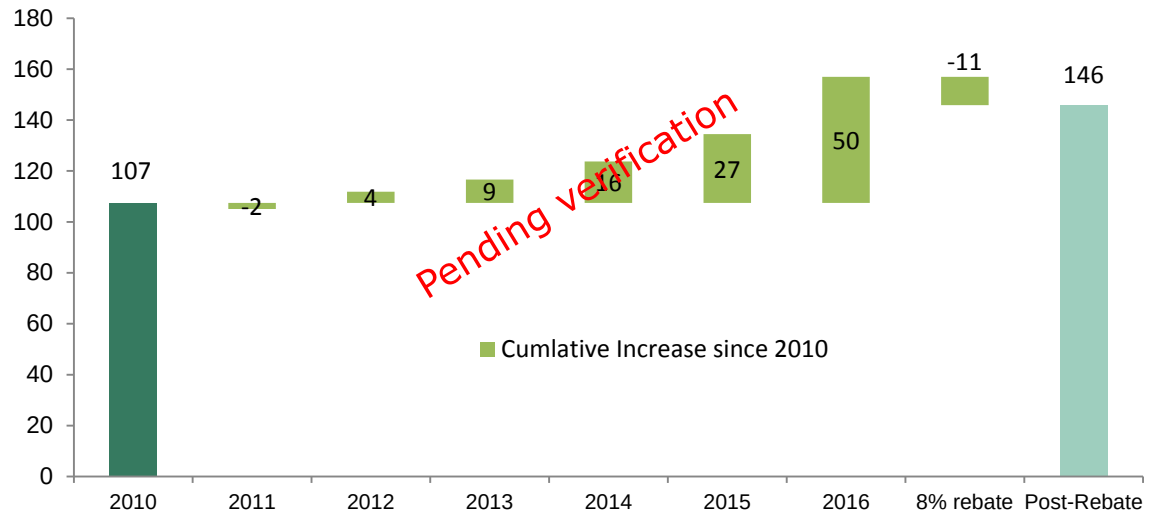
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Based upon implementation of the OCEB, some LDCs require lead time of at least six months for billing, system, and process changes.

Bill Impacts for Regulated Price Plan Consumers

- The chart on the right show the cumulative increase in residential bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.

- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.

Typical Residential Bill ($ / 750kWh per month)



Placeholder

[Monthly bill for consumer with electrical heating]

8% Rebate to Regulated Price Plan consumers – Projected Cost

- [MOF and ENERGY to develop estimate of fiscal impact]

- [**Note:** Former OESP, which provided 10% rebate at a limit of 3,000 kWh/month to all Regulated Price Plan consumers, cost $1billion. Therefore new program with no consumption limit is expected to cost in the range of $1billion.]

Placeholder for MOF

8% Rebate for Regulated Price Plan Consumers – Considerations

- Commercial and industrial consumers would continue to receive benefit related to input tax credits.
- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.
- Detailed messaging on bills (for “low-volume” consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to Regulated Price Plan consumers, recycling of cap and trade proceeds to industrial consumers would still be required to meet the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.
  - The amount of proceeds required is forecast to be about $90 million, which represents a reduction of $160 million from the current proceeds recycling proposal, to offset the impact for all industrial consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

Option 3 – Rate Based Options

Option 3 – Context

- Additional rate-based relief could be provided to certain electricity consumers by shifting costs within the electricity sector.

- Below are two options to expand existing programmes which provide relief to small industrial, large commercial and rural customers, who pay some of the highest electricity rates in the province.

    a) Targeted business and industry support: Expand ICI eligibility threshold to customers above 1MW in all sectors. Consideration may also be given to expand the Regulated price plan to include all remaining class B consumers below the 1 MW threshold not covered in the ICI expansion.

    a) Expand Rural and Remote Rate Protection (RRRP) to increase the benefit to rural customers.

- It should be noted that options 3a and 3b are not mutually exclusive and could be pursued in concert and/or combined with options 1/2 outlined previously.

Option 3 – Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Typical non-RPP Class B consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	3.54	4.33	4.02	4.71	6.33	6.35
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Total	***4.74***	***5.43***	***5.14***	***5.94***	***7.57***	***8.73***

Cost Shift Impacts - Industrial Bill

Typical Class A consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	-22.17	-26.36	-23.50	-25.91	-33.79	-33.92
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Total	***-20.97***	***-25.26***	***-22.38***	***-24.68***	***-32.56***	***-31.55***

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Option 3a – Targeted Business and Industry Support – Overview

- Rate relief could be provided in two components:

1. ICI expansion: Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
   - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially.

2. Regulated price plan expansion: If the Class B consumer base is further reduced with an expansion of ICI, it could be accompanied by an expansion of Regulated Price Plan for Class B consumers below the 1 MW threshold.
   - This would address public criticism associated with the non-blended rate (complaints about high Global Adjustment (GA) charges), increase efficiency by implementing time-of-use rates for all small consumers, and simplify bills. Remaining Class B below the 1 MW threshold to pay blended prices via Regulated Price Plan time-of-use (TOU).

Option 3a – Targeted Business and Industry Support – ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

Option 3a – Targeted Business and Industry Support – ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

Option 3a – Targeted Business and Industry Support – Regulated Price Plan Expansion

- Current non-Regulated Price Plan Class B consumers are billed average HOEP along with the Class B rate (in $/MWh) monthly by the IESO. With an expansion of the Regulated Price Plan, these same consumers would pay Regulated Price Plan time-of-use (TOU) prices.

- As a result, the expected bill impacts for newly eligible Regulated Price Plan consumers would vary according to the type of consumer. For example, an medium size office building has a different hourly load shape throughout the year compared to a small hospital.

- The chart shows the estimated annual bill impacts for four commercial consumer types: grocery store, full service restaurant, elementary school and street lighting.

Annual total cost for typical class B consumer under expanded Regulated Price Plan

	Full service restaurant	Primary school	Super market	Street lighting
Current cost	33,440	90,280	176,602	382,024
RRP cost (12m actual)	34,252	101,468	186,190	307,361
% change (12m actual)	2.4%	12.4%	5.4%	-19.5%

Option 3a – Targeted Business and Industry Support – Considerations

ICI expansion:

- Compared to a 8% tax funded rebate for all consumers, combining this option with Option 2 would represents a lower fiscal impact.
- Relative to status quo, existing Class A consumers would experience a small increase in the price they pay.
- Amendments to *O. Reg. 429/04* (made under the Electricity Act, 1998) would be required.
- Expanding ICI to 1 MW is expected to increase consumption from Class A consumers by about 10%. This would require an increase of an estimated average of $10million per year in proceeds recycling from the current proposal of $90 million per year in order to offset the impact for all industrial consumers.

Regulated Price Plan expansion:

- Amendments to *O. Reg. 442/04* (made under the Electricity Act, 1998) would be required.
- Some consumers would see price increases compared to their current Class B rates. Combining an Regulated Price Plan expansion with Option 2 could alleviate concerns over these potential increases, but would increase the impact on the fiscal plan **(amount of impact TBD)**.

Rural or Remote Rate Protection (RRRP)

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations. The cost of distributing power to lower-density rural and remote areas is much higher than for urban and higher-density areas.
- Today, RRRP is a $175 million program collected via a 0.13 cents/kWh charge to all Ontario consumers (e.g. residential, commercial, industrial).
  - For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. (There are approximately 329,000 R2 customers).
  - The current program provides a monthly subsidy for R2 customers of $31.50. Even with the RRRP subsidy, R2 customers have one of the highest monthly bills in the province. An average bill (based on the median consumption level for R2 customers of 1,000kWh/month) is $229.
  - In comparison, the provincial average (using 1,000kWh) is ~$169 – a $60 difference.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen. There may be opportunity to evaluate current levels of support and increase subsidy levels to bring R2 customers bills closer in line with average costs across the province.
  - New support levels could range from an additional $10-$60 per month for R2 customers –which would result a monthly impact for an average residential consumer of ~$1.30 up to $3.50.

Impact Summary (Numbers to be confirmed)

Option	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Avg Regulated Price Plan (Residential)	Hydro One Rural Residential Consumer	Avg Class B (Commercial)	Avg Class A (Industrial)
1. 8% rebate to all consumers	$1.6 billion (B)	Residential: -$160 million (M) Industrial: -$90M	-$11/month	-$14.50/month	-$11/MWh	-$6/MWh
2. 8% rebate to RPP consumers	TBD (former OCEB budget was $1 billion)	Residential: -$160M Industrial: status quo ($90M)	-$11/month	-$14.50/month	No impact	-$1.90/MWh
3. Rate-based options						
a. ICI/Regulated Price Plan expansion	TBD (if bundled with option 2 would increase fiscal impact)	Residential: TBD Industrial: +$10M ($100M)	-$1.26/month**	-$1.67/month	+0.99/MWh	-$0.91/MWh***
b. RRRP Update	N/A	Residential: status quo ($160M) Industrial: status quo ($90M)	-$1.26/month	-$30.20/month	+$0.99/MWh	-$0.91/MWh

Placeholder for Updated Data

*Change in proceeds is relative to current volumetric option, CCAP included $1.3B over the first compliance period.
**New Regulated Price Plan consumers would see an increase or decrease depending on load shape/responsiveness to TOU rates.
***New ICI participants could see a significant decrease in the range of 35% in the long term.

Impact of Combined Options

Option	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Avg Regulated Price Plan (Residential)	Hydro One Rural Residential Consumer	Avg Class B (Commercial)	Avg Class A (Industrial)
8% rebate to all consumers + ICI/Regulated Price Plan + RRRP Update	$1.6B	Residential: -$160M Industrial: -$90M	-$11.52/month*	-$43.70/month	-$9.02/MWh	-$4.02/MWh**
8% rebate to RPP consumers + ICI/Regulated Price Plan Expansion + RRRP Update	TBD (former OCEB budget was $1B, this option would expand eligibility)	Residential: -$160M Industrial: status quo	-$11.52/month*	-$43.70/month	+$1.98/MWh	+$0.08/MWh*

Placeholder for Updated Data

*New Regulated Price Plan consumers would see an increase or decrease depending on load shape/responsiveness to TOU rates.
**New ICI participants could see a significant decrease in the range of 35% in the long term.

Next Steps

- [ENERGY and MOF to continue analysis]
- [Prepare legislation / regulatory amendments as required. Proceed to Cabinet and Treasury Board .]
- [Develop roll-out plan.]

Placeholder for SNAP

Appendix – ICI

Industrial Conservation Initiative

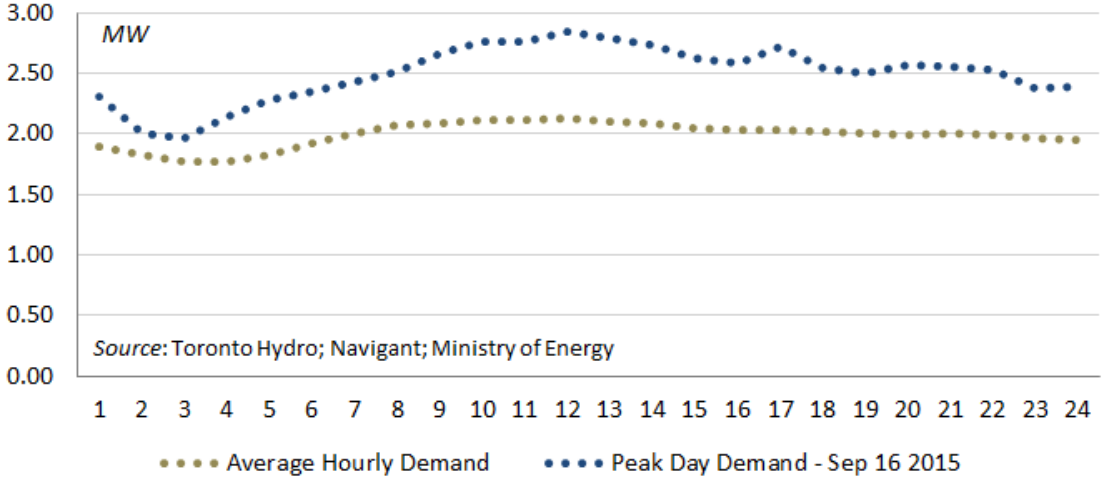
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

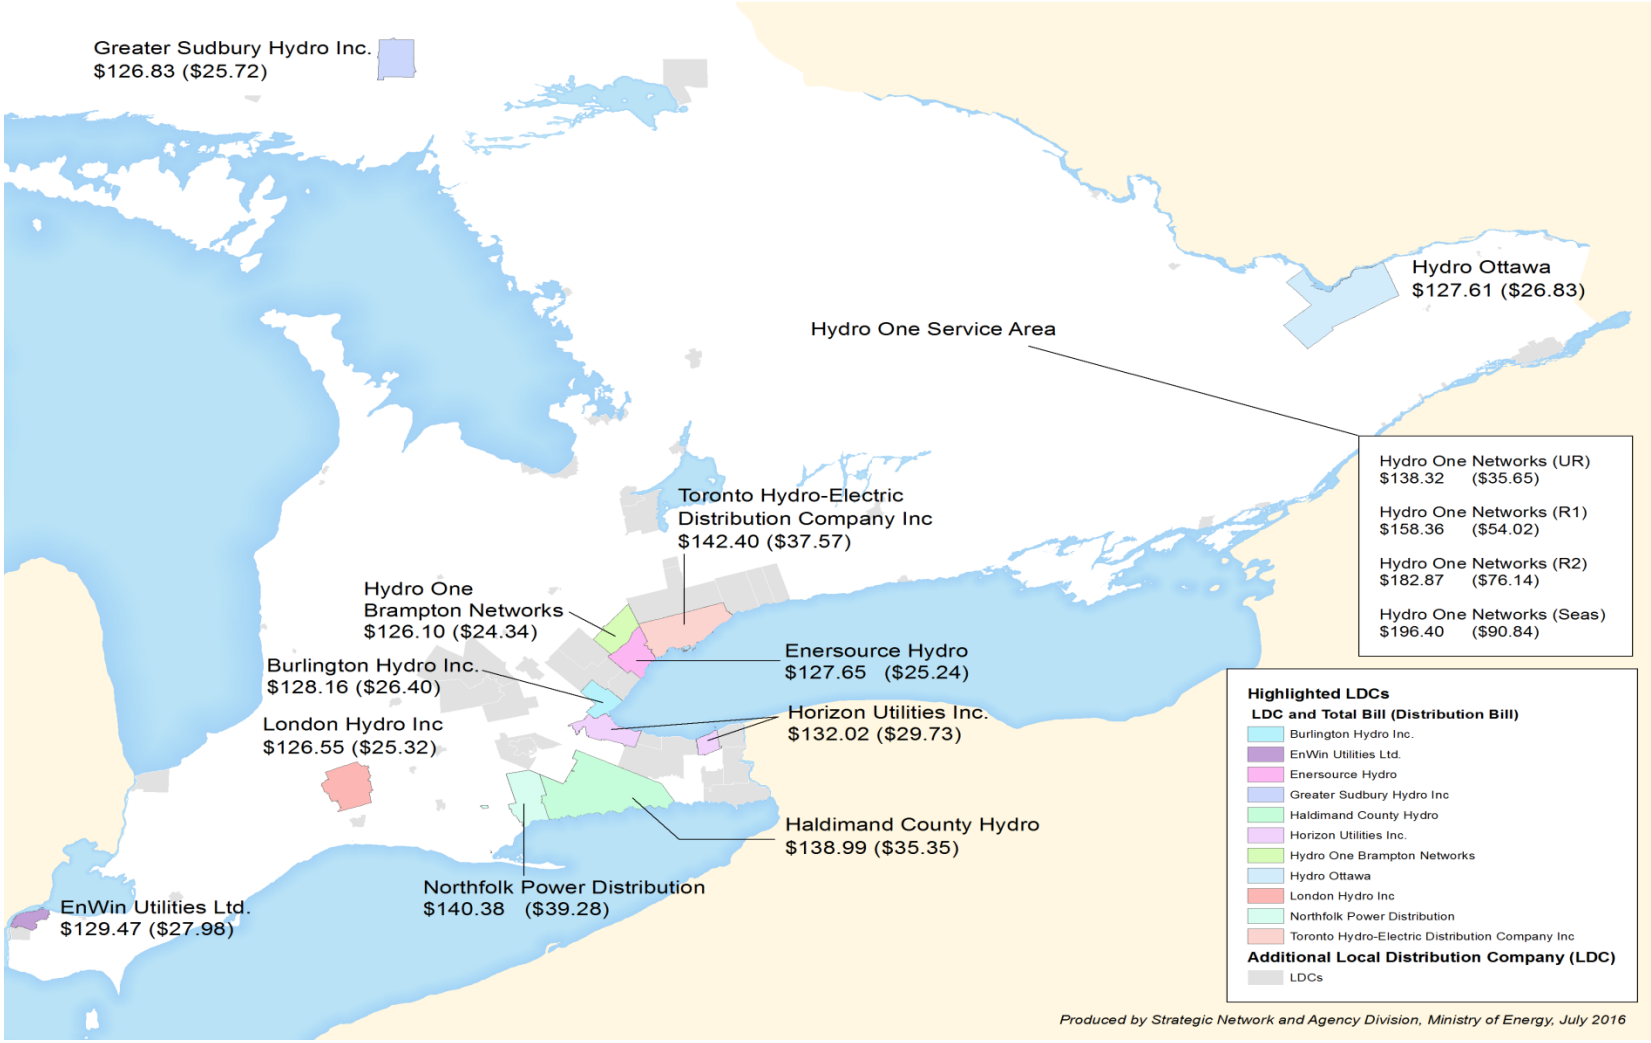
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

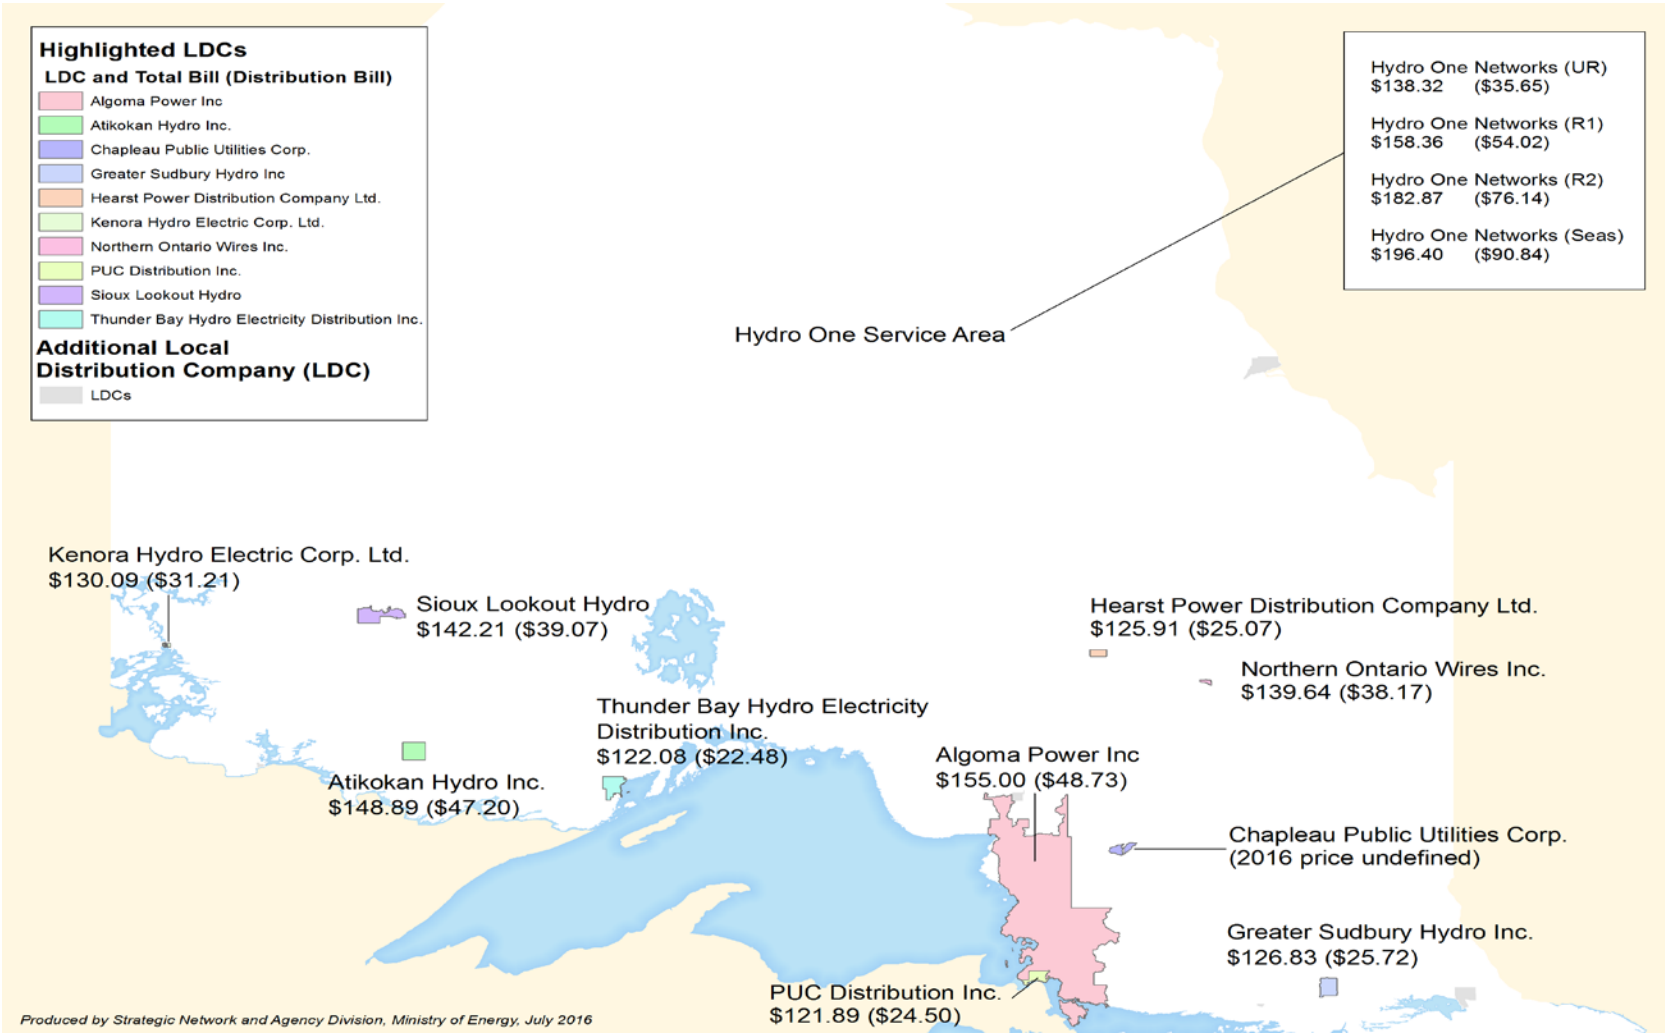
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental Costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism (see slide 25)
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Ontario

MINISTRY OF
ENERGY

Electricity Price Mitigation

Working Draft

August 18, 2016

Context

- Since 2003, we have invested more than $35 B in new and refurbished generation, over 16,000 MW of cleaner power for– about 40% of our current supply.

- Prices are increasing because we are making the necessary investments to modernize the province's electricity infrastructure. We chose to replace coal-fired generation with cleaner sources of energy

- Emissions have declined by approximately 80% since 2003.

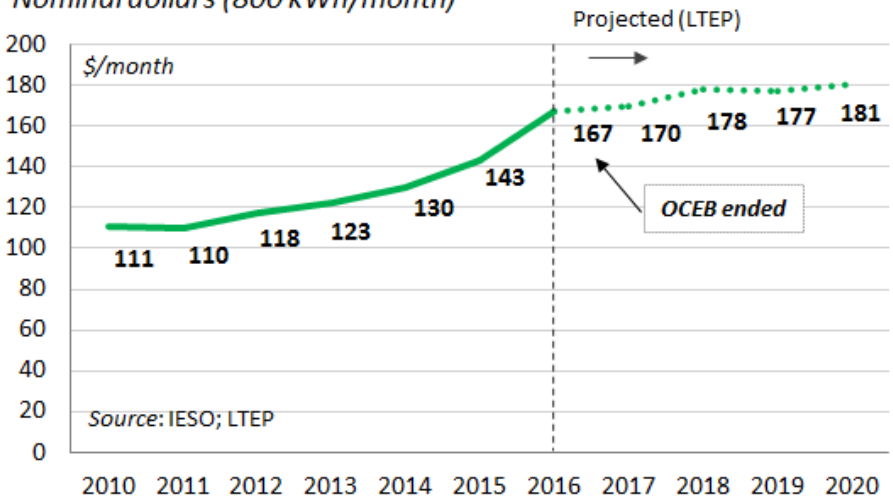
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as renewable projects come online.

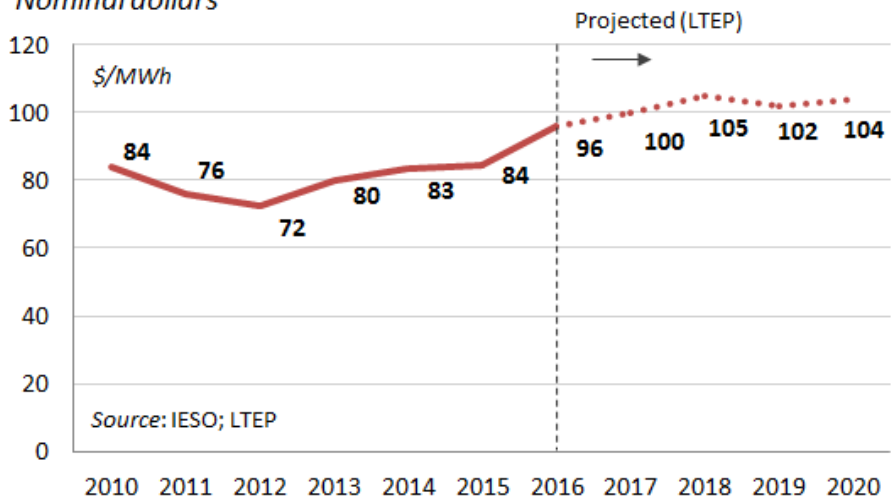
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Consumer Classes

Regulated Price Plan	Class B	Class A
< 0.05 MW	0.05 – 3 MW	3+ MW

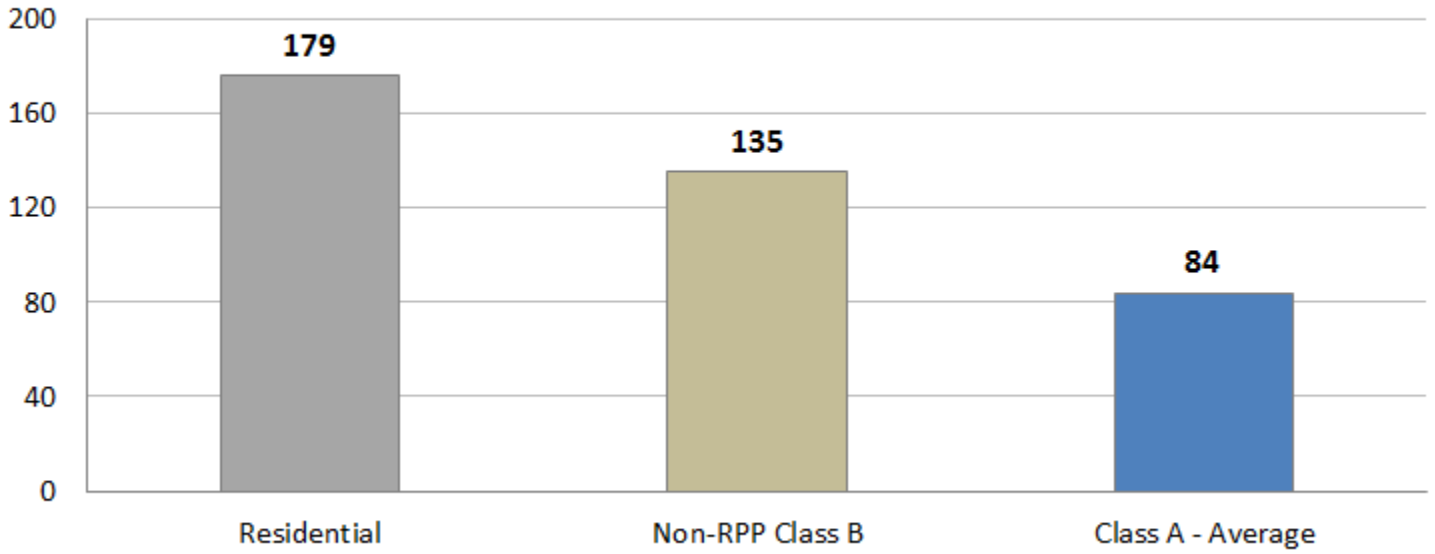
- The Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB).
- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated.
- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 megawatts (MW)).

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



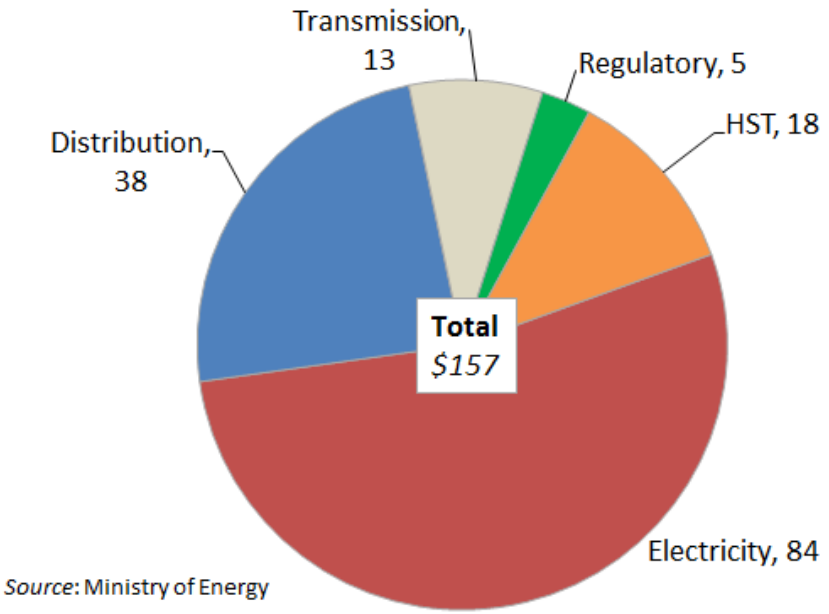
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5,000,000 residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



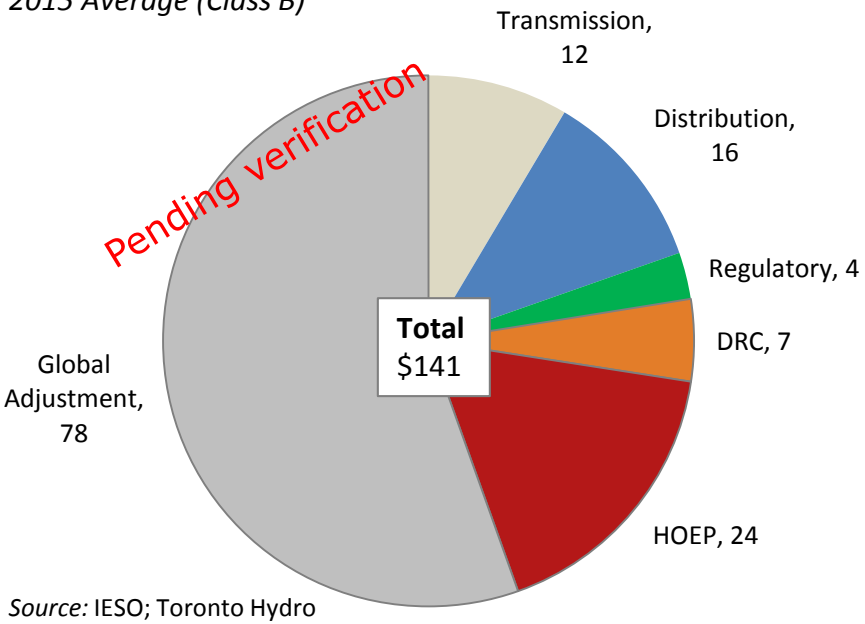
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and Global Adjustment (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Class B)

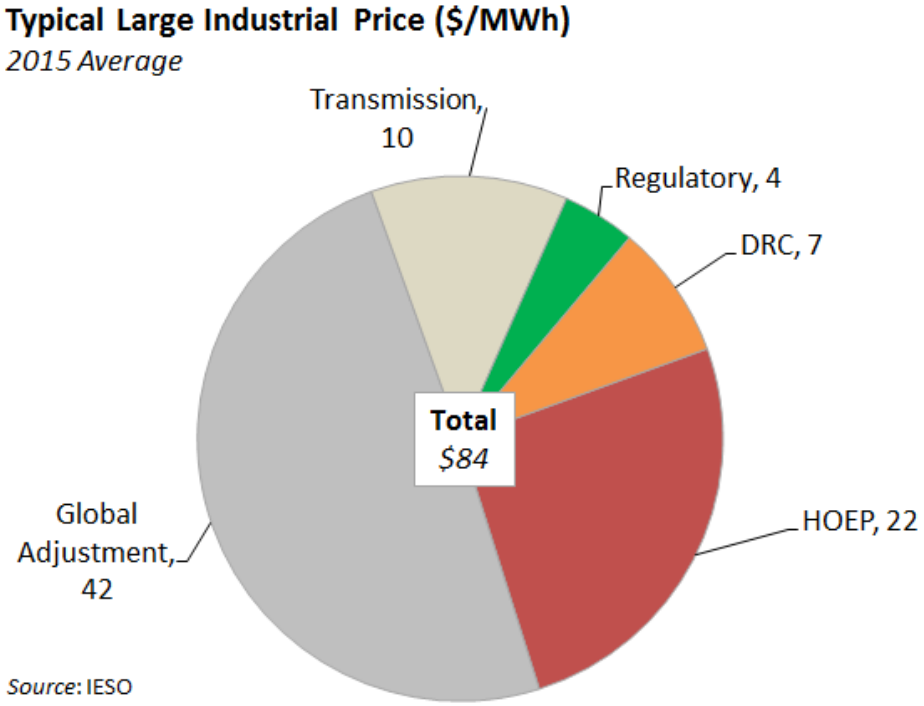


Source: IESO; Toronto Hydro

- Unlike residential and many industrial consumers, consumers in the commercial sector do not pay time of use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

2016 Budget Commitments

- The current proposal for recycling auction proceeds will offsets the impact of cap and trade for industrial consumers though a volumetric mechanism and provide a rebate via the Regulated Price Plan to ensure the average residential consumer receives a reduction of $2/month.
  - To meet the 2016 Budget commitment, about $90 million per year would be required for industrial consumers and about $150 million per year is required for residential consumers.
  - If HST is effectively removed, consumer savings will be significantly higher than the 2016 Budget commitment.

- The Climate Change Action Plan (CCAP) outlined the goals of achieving economy-wide reductions in GHGs, to “keep electricity rates affordable” by stating that cap and trade auction proceeds will be used to offset the cost of greenhouse gas (GHG) emission reduction initiatives that are currently funded by residential and industrial consumers through their bills and supporting initiatives that enable fuel-switching away from GHG emitting fuels.

HST – Background

Placeholder for MOF

Options

- Three options have been identified that could provide rate relief to various customer classes.

- These three options are outlined below. Option 3 is not mutually exclusive and could be combined with Option 1 or 2. Should a combination of options be pursued, it could reduce or eliminate the required GGRA proceeds identified under Option 3:

    1) Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial and residential).

    2) Provide an 8% rebate to Regulated Price Plan consumers.

    3) Provide rate-based relief to certain electricity consumers by shifting costs within the electricity sector.
        a) Expand ICI eligibility threshold to customers above 1MW in all sectors. Consideration may also be given to expand Regulated Price Plan to include all Class B consumers under 1 MW.
        b) Expand Rural and Remote Rate Protection (RRRP) to increase the benefit to rural customers.

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

- This option would provide an 8% rebate for all consumers, which would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Based upon implementation of the Ontario Clean Energy Benefit (OCEB), some LDCs require lead time of at least six months for billing, system, and process changes.

8% Rebate for All Consumers – Projected Cost

- The cost of electricity service would influence the cost of providing an 8% rebate. System cost is expected to increase over the next five years.
- [MOF continuing to conduct analysis to estimate the fiscal impact.]

Placeholder for MOF

Internal CEFD Calculations

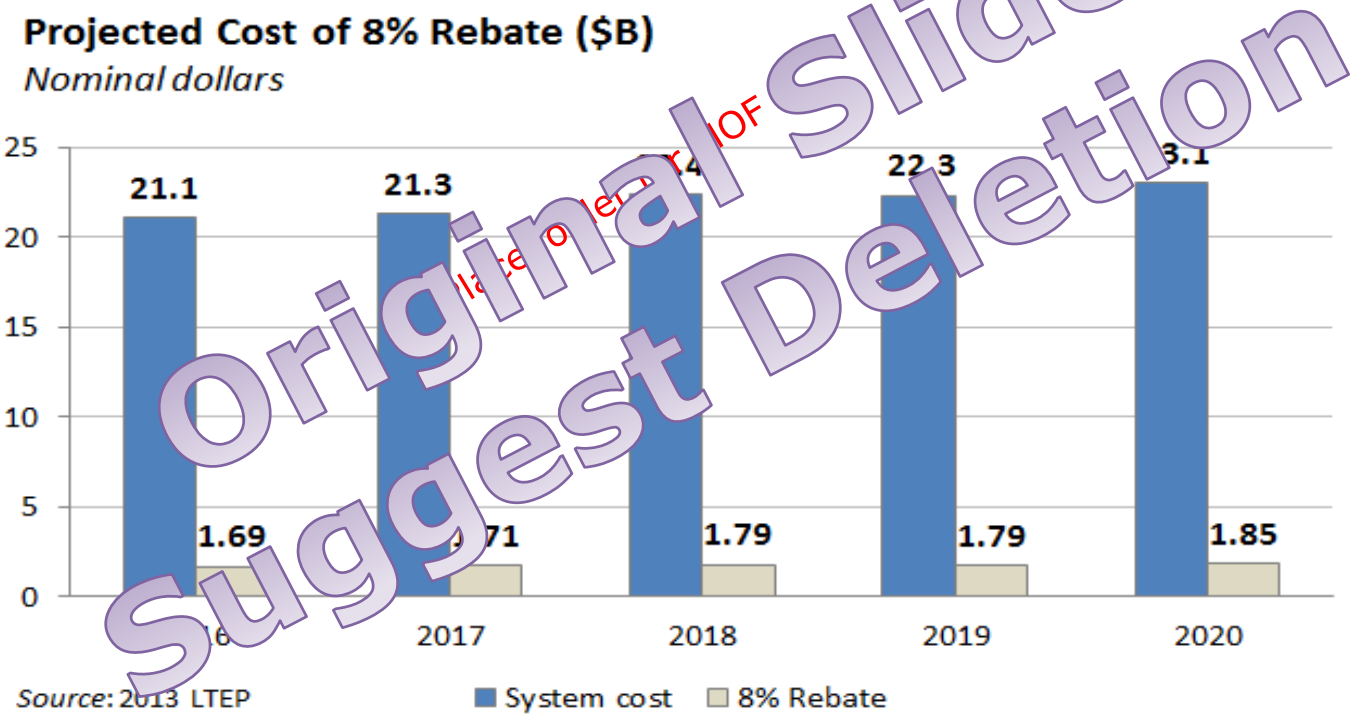
8% Rebate for All Consumers – Projected Cost

- The cost of electricity service would influence the cost of providing an 8% rebate. System cost is expected to increase over the next five years.

- [MOF continuing to conduct analysis to estimate the fiscal impact.]

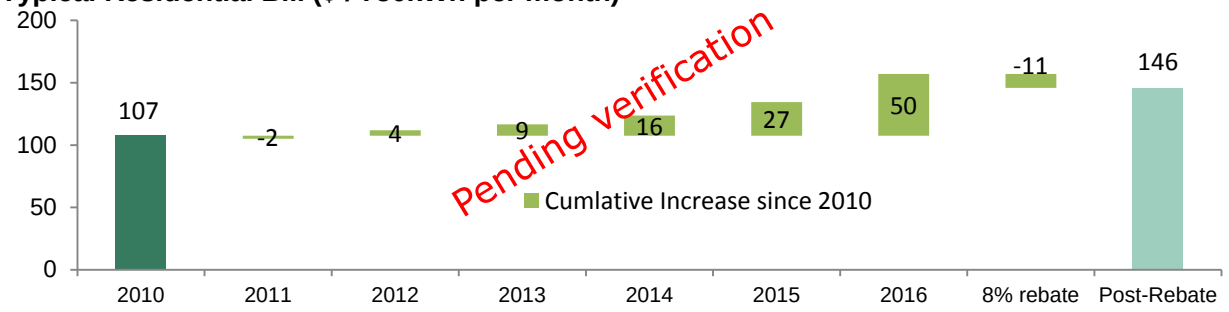


Original Slide Suggest Deletion

Bill Impacts by Sector

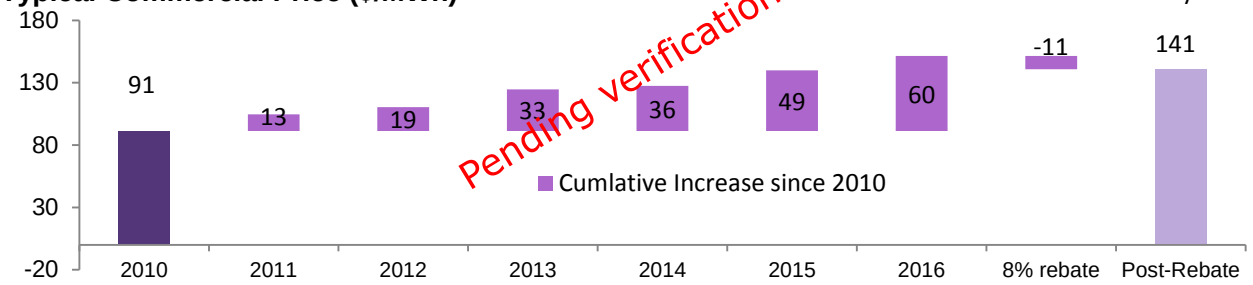
- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $11/MWh rebate.
- A $6/MWh rebate for industrial consumers would bring all-in prices back to 2010 levels.

Typical Residential Bill ($ / 750kWh per month)

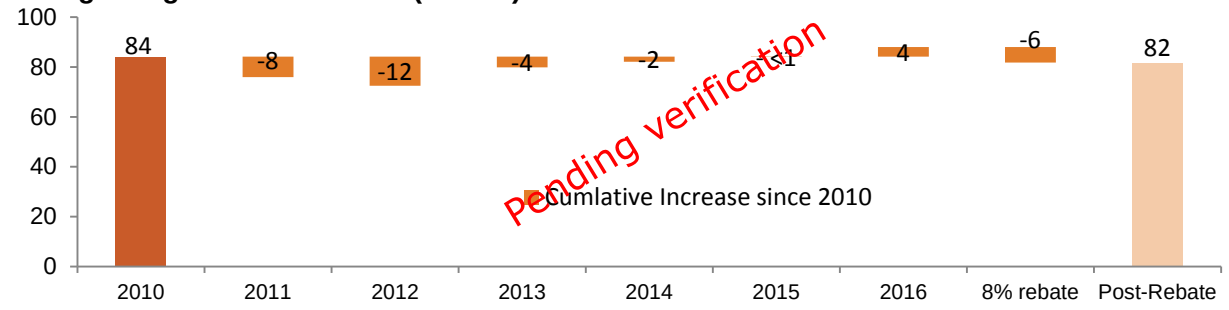


Typical Commercial Price ($/MWh)

Assumes 1 MW connected to Toronto Hydro.



Average Large Industrial Price ($/MWh)



8% Rebate for All Consumers – Considerations

- Commercial and industrial consumers would continue to receive benefit related to input tax credits.
- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.
- Detailed messaging on bills (for “low-volume” consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

Option 2 – 8% Rebate for Regulated Price Plan Consumers

8% Rebate for Regulated Price Plan Consumers – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.

- This option would provide an 8% rebate for Regulated Price Plan consumers, which would be equal to provincial portion of HST and funded by the tax base.

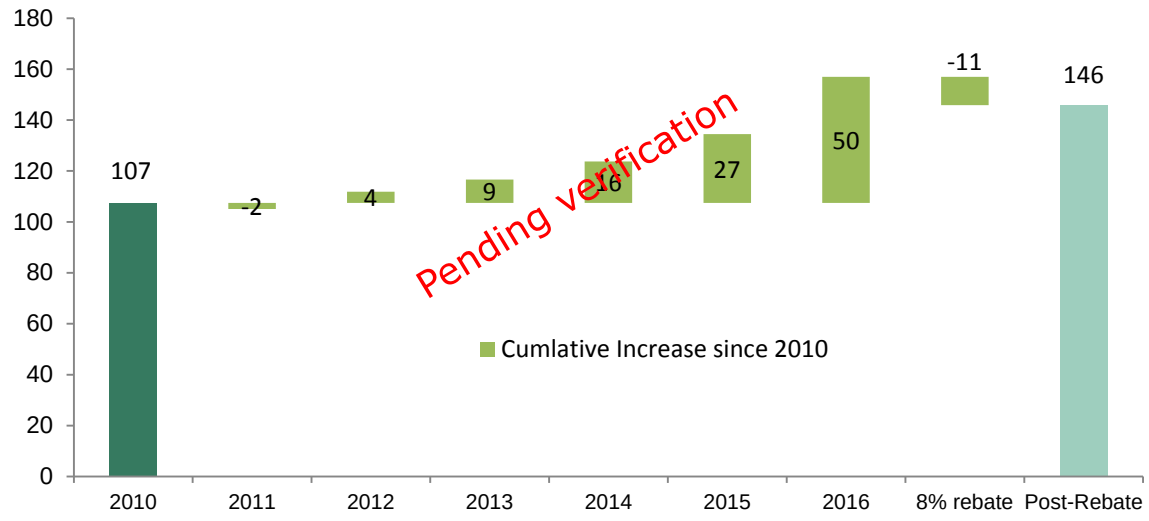
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Based upon implementation of the OCEB, some LDCs require lead time of at least six months for billing, system, and process changes.

Bill Impacts for Regulated Price Plan Consumers

- The chart on the right show the cumulative increase in residential bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.

- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.

Typical Residential Bill ($ / 750kWh per month)



Placeholder

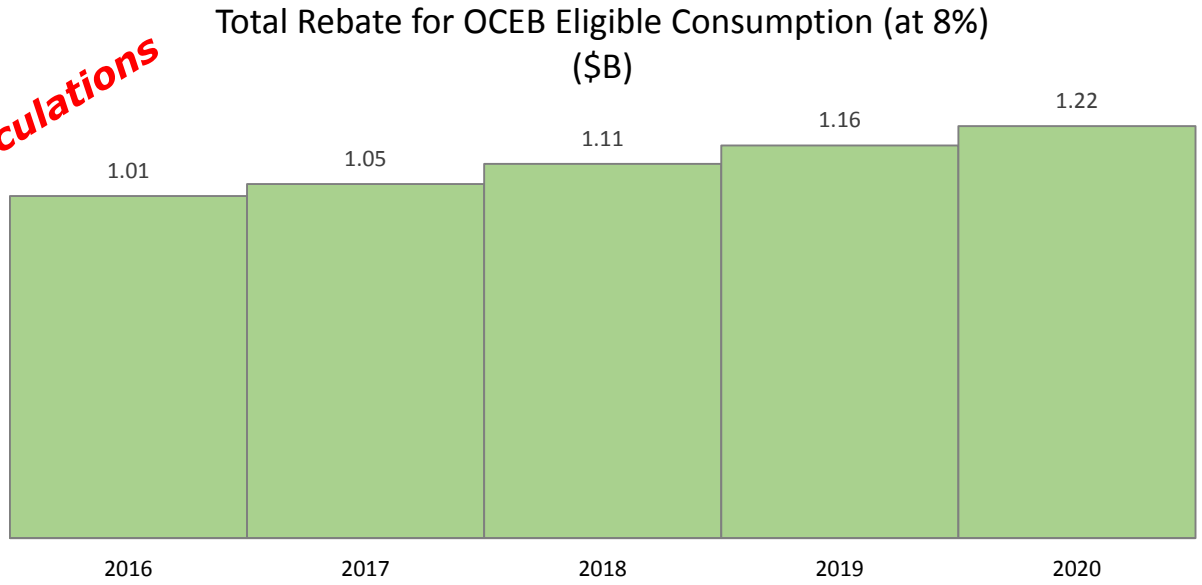
[Monthly bill for consumer with electrical heating]

8% Rebate to Regulated Price Plan consumers – Projected Cost

- [MOF and ENERGY to develop estimate of fiscal impact]

- [**Note:** Former OCEB, which provided 10% rebate at a limit of 3,000 kWh/month to all Regulated Price Plan consumers, cost about $1.2 billion, annualised, in its final year. Therefore new program, at 8% rebate, with no consumption limit is expected to cost in the range of $1-1.2 billion per year.]

Internal CEFD Calculations



Source: CEFD Internal OCEB Model with Long-Term Energy Plan Residential Price forecasts adjusted for removal of DRC for Residential users beginning January 1, 2016.
Note: Assume 8% Reduction applied to Total Bill Before Taxes, unlike OCEB which was applied after taxes.

8% Rebate for Regulated Price Plan Consumers – Considerations

- Commercial and industrial consumers would continue to receive benefit related to input tax credits.
- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.
- Detailed messaging on bills (for “low-volume” consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to Regulated Price Plan consumers, recycling of cap and trade proceeds to industrial consumers would still be required to meet the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.
  - The amount of proceeds required is forecast to be about $90 million, which represents a reduction of $160 million from the current proceeds recycling proposal, to offset the impact for all industrial consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

Option 3 – Rate Based Options

Option 3 – Context

- Additional rate-based relief could be provided to certain electricity consumers by shifting costs within the electricity sector.

- Below are two options to expand existing programmes which provide relief to small industrial, large commercial and rural customers, who pay some of the highest electricity rates in the province.

    a) Targeted business and industry support: Expand ICI eligibility threshold to customers above 1MW in all sectors. Consideration may also be given to expand the Regulated price plan to include all remaining class B consumers below the 1 MW threshold not covered in the ICI expansion.

    a) Expand Rural and Remote Rate Protection (RRRP) to increase the benefit to rural customers.

- It should be noted that options 3a and 3b are not mutually exclusive and could be pursued in concert and/or combined with options 1/2 outlined previously.

Option 3 – Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Typical non-RPP Class B consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	3.54	4.33	4.02	4.71	6.33	6.35
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Total	***4.74***	***5.43***	***5.14***	***5.94***	***7.57***	***8.73***

Cost Shift Impacts - Industrial Bill

Typical Class A consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	-22.17	-26.36	-23.50	-25.91	-33.79	-33.92
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Total	***-20.97***	***-25.26***	***-22.38***	***-24.68***	***-32.56***	***-31.55***

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Option 3a – Targeted Business and Industry Support – Overview

- Rate relief could be provided in two components:

1. ICI expansion: Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
   - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially.

2. Regulated price plan expansion: If the Class B consumer base is further reduced with an expansion of ICI, it could be accompanied by an expansion of Regulated Price Plan for Class B consumers below the 1 MW threshold.
   - This would address public criticism associated with the non-blended rate (complaints about high Global Adjustment (GA) charges), increase efficiency by implementing time-of-use rates for all small consumers, and simplify bills. Remaining Class B below the 1 MW threshold to pay blended prices via Regulated Price Plan time-of-use (TOU).

Option 3a – Targeted Business and Industry Support – ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

Option 3a – Targeted Business and Industry Support – ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

Option 3a – Targeted Business and Industry Support – Regulated Price Plan Expansion

- Current non-Regulated Price Plan Class B consumers are billed average HOEP along with the Class B rate (in $/MWh) monthly by the IESO. With an expansion of the Regulated Price Plan, these same consumers would pay Regulated Price Plan time-of-use (TOU) prices.

- As a result, the expected bill impacts for newly eligible Regulated Price Plan consumers would vary according to the type of consumer. For example, an medium size office building has a different hourly load shape throughout the year compared to a small hospital.

- The chart shows the estimated annual bill impacts for four commercial consumer types: grocery store, full service restaurant, elementary school and street lighting.

Annual total cost for typical class B consumer under expanded Regulated Price Plan

	Full service restaurant	Primary school	Super market	Street lighting
Current cost	33,440	90,280	176,602	382,024
RRP cost (12m actual)	34,252	101,468	186,190	307,361
% change (12m actual)	2.4%	12.4%	5.4%	-19.5%

Option 3a – Targeted Business and Industry Support – Considerations

ICI expansion:

- Compared to a 8% tax funded rebate for all consumers, combining this option with Option 2 would represents a lower fiscal impact.
- Relative to status quo, existing Class A consumers would experience a small increase in the price they pay.
- Amendments to *O. Reg. 429/04* (made under the Electricity Act, 1998) would be required.
- Expanding ICI to 1 MW is expected to increase consumption from Class A consumers by about 10%. This would require an increase of an estimated average of $10million per year in proceeds recycling from the current proposal of $90 million per year in order to offset the impact for all industrial consumers.

Regulated Price Plan expansion:

- Amendments to *O. Reg. 442/04* (made under the Electricity Act, 1998) would be required.
- Some consumers would see price increases compared to their current Class B rates. Combining an Regulated Price Plan expansion with Option 2 could alleviate concerns over these potential increases, but would increase the impact on the fiscal plan **(amount of impact TBD)**.

Rural or Remote Rate Protection (RRRP)

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations. The cost of distributing power to lower-density rural and remote areas is much higher than for urban and higher-density areas.
- Today, RRRP is a $175 million program collected via a 0.13 cents/kWh charge to all Ontario consumers (e.g. residential, commercial, industrial).
  - For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. (There are approximately 329,000 R2 customers).
  - The current program provides a monthly subsidy for R2 customers of $31.50. Even with the RRRP subsidy, R2 customers have one of the highest monthly bills in the province. An average bill (based on the median consumption level for R2 customers of 1,000kWh/month) is $229.
  - In comparison, the provincial average (using 1,000kWh) is ~$169 – a $60 difference.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen. There may be opportunity to evaluate current levels of support and increase subsidy levels to bring R2 customers bills closer in line with average costs across the province.
  - New support levels could range from an additional $10-$60 per month for R2 customers –which would result a monthly impact for an average residential consumer of ~$1.30 up to $3.50.

Average monthly Bill @1000 kWh (before HST)

Impact Summary (Numbers to be confirmed)

Option	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Avg Regulated Price Plan (Residential)	Hydro One Rural Residential Consumer	Avg Class B (Commercial)	Avg Class A (Industrial)
1. 8% rebate to all consumers	$1.6 billion (B)	Residential: -$160 million (M) Industrial: -$90M	-$11/month	-$14.50/month	-$11/MWh	-$6/MWh
2. 8% rebate to RPP consumers	TBD (former OCEB budget was $1 billion)	Residential: -$160M Industrial: status quo ($90M)	-$11/month	-$14.50/month	No impact	-$1.90/MWh
3. Rate-based options						
a. ICI/Regulated Price Plan expansion	TBD (if bundled with option 2 would increase fiscal impact)	Residential: TBD Industrial: +$10M ($100M)	-$1.26/month**	-$1.67/month	+0.99/MWh	-$0.91/MWh***
b. RRRP Update	N/A	Residential: status quo ($160M) Industrial: status quo ($90M)	-$1.26/month	-$30.20/month	+$0.99/MWh	-$0.91/MWh

Placeholder for Updated Data

*Change in proceeds is relative to current volumetric option, CCAP included $1.3B over the first compliance period.
**New Regulated Price Plan consumers would see an increase or decrease depending on load shape/responsiveness to TOU rates.
***New ICI participants could see a significant decrease in the range of 35% in the long term.

Impact of Combined Options

Option	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Avg Regulated Price Plan (Residential)	Hydro One Rural Residential Consumer	Avg Class B (Commercial)	Avg Class A (Industrial)
8% rebate to all consumers + ICI/Regulated Price Plan + RRRP Update	$1.6B	Residential: -$160M Industrial: -$90M	-$11.52/month*	-$43.70/month	-$9.02/MWh	-$4.02/MWh**
8% rebate to RPP consumers + ICI/Regulated Price Plan Expansion + RRRP Update	TBD (former OCEB budget was $1B, this option would expand eligibility)	Residential: -$160M Industrial: status quo	-$11.52/month*	-$43.70/month	+$1.98/MWh	+$0.08/MWh*

Placeholder for Updated Data

*New Regulated Price Plan consumers would see an increase or decrease depending on load shape/responsiveness to TOU rates.
**New ICI participants could see a significant decrease in the range of 35% in the long term.

Next Steps

- [ENERGY and MOF to continue analysis]
- [Prepare legislation / regulatory amendments as required. Proceed to Cabinet and Treasury Board .]
- [Develop roll-out plan.]

Placeholder for SNAP

Appendix – ICI

Industrial Conservation Initiative

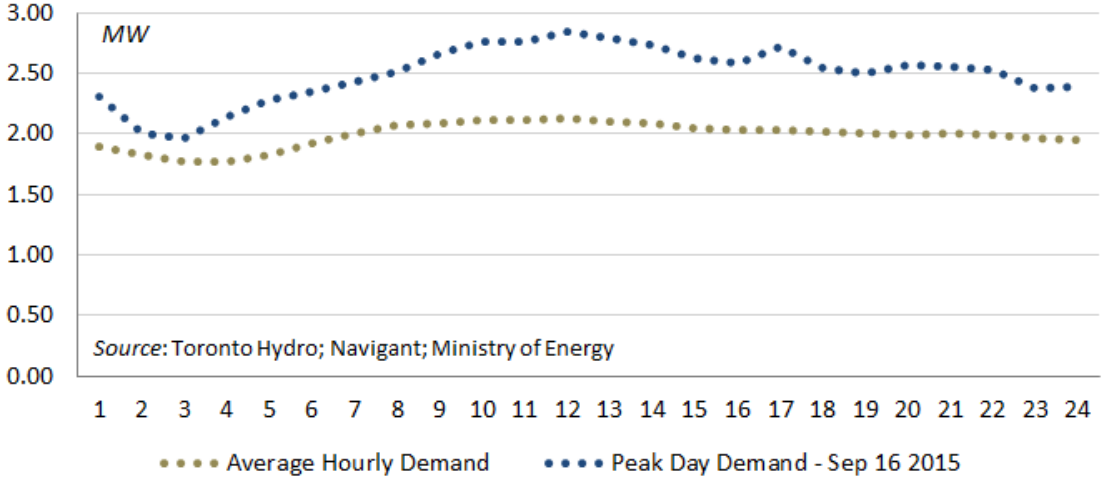
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

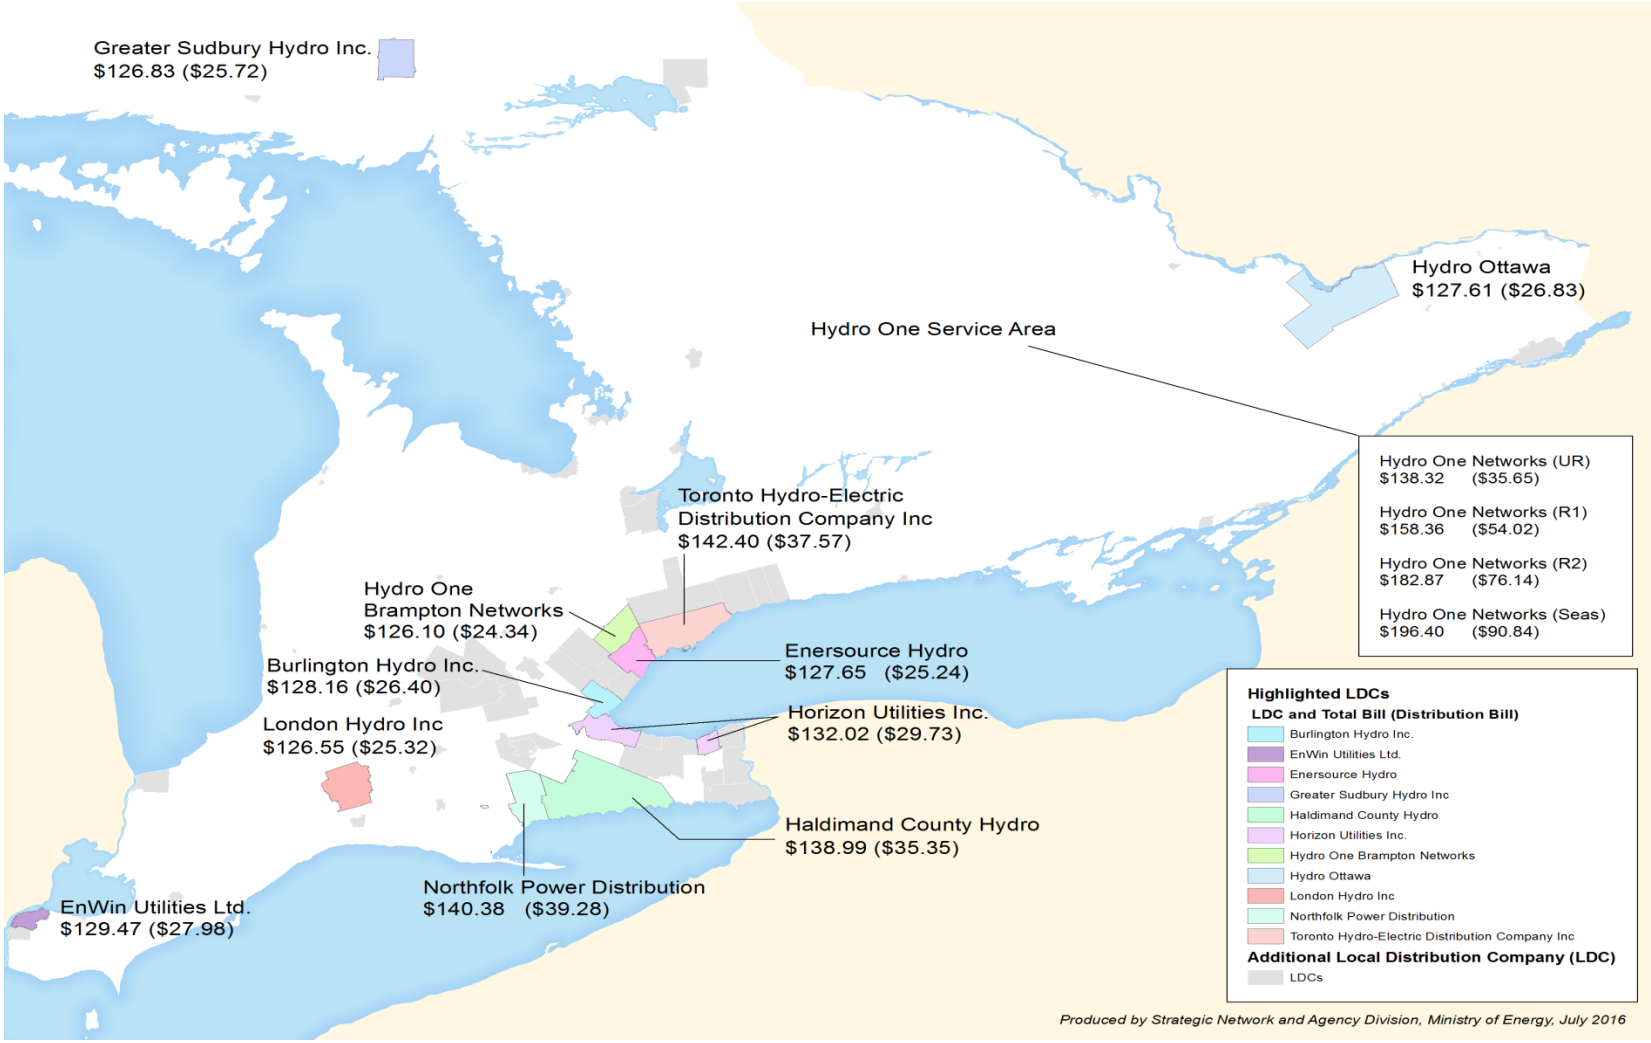
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

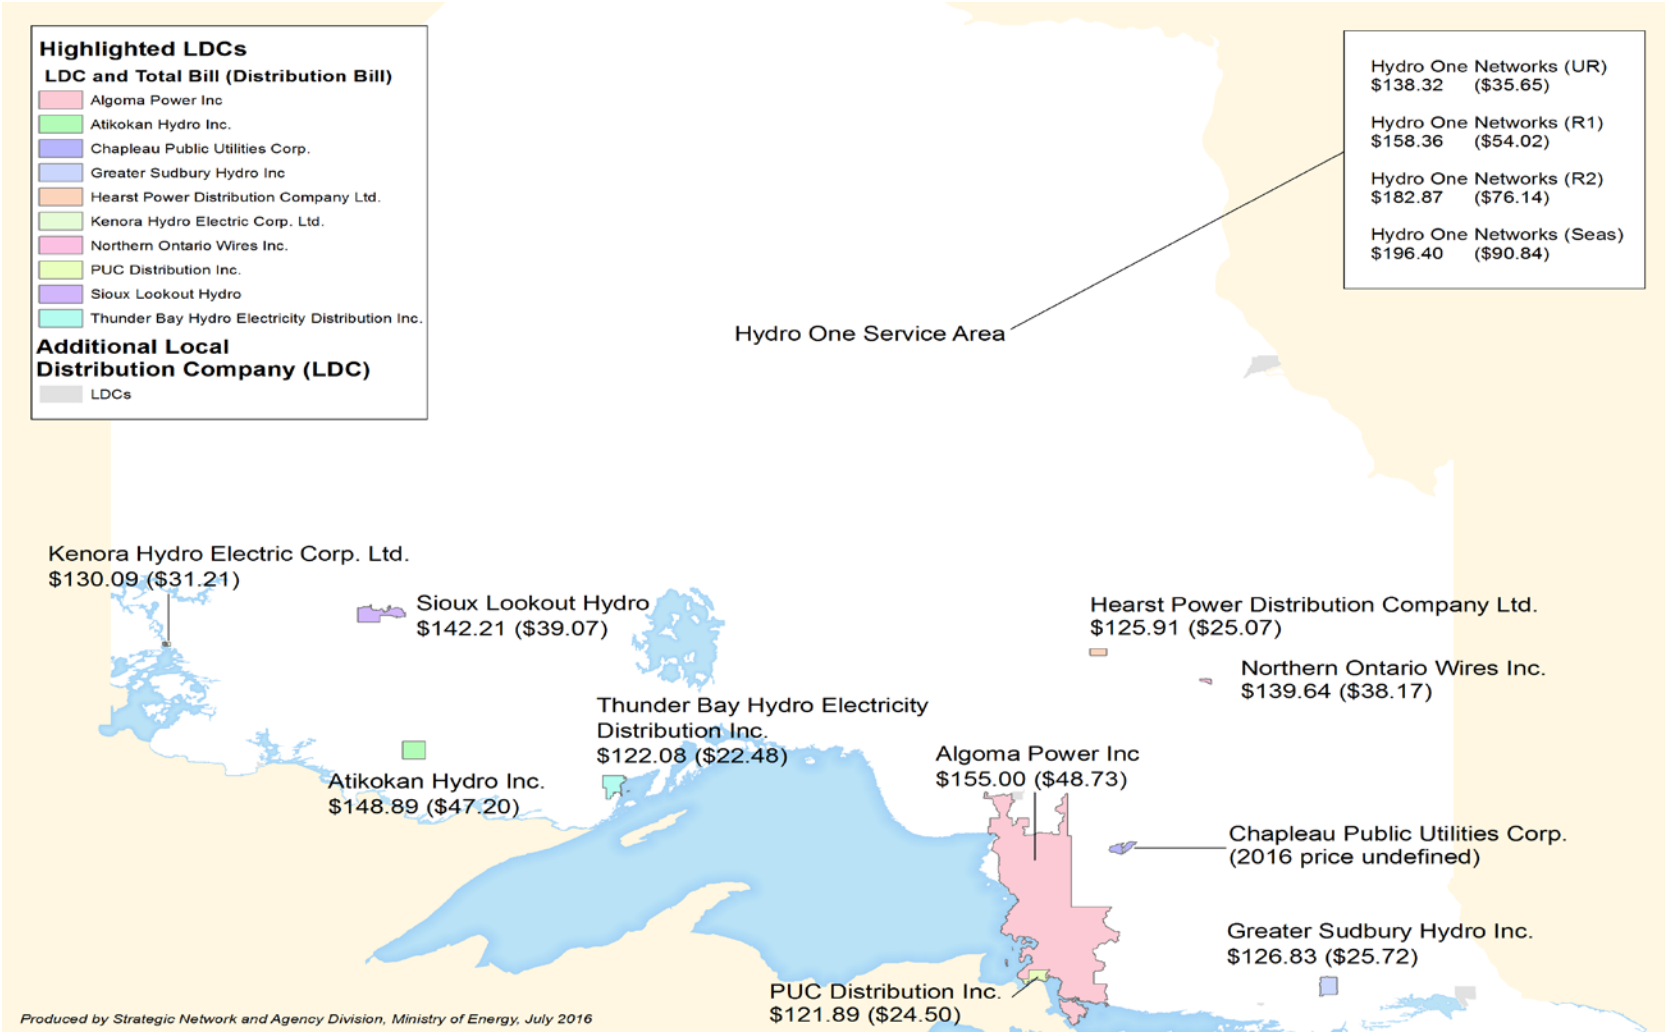
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental Costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism (see slide 25)
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Ontario

MINISTRY OF
ENERGY

Electricity Price Mitigation

Working Draft

August 18, 2016

Context

- Since 2003, we have invested more than $35 B in new and refurbished generation, over 16,000 MW of cleaner power for– about 40% of our current supply.

- Prices are increasing because we are making the necessary investments to modernize the province's electricity infrastructure. We chose to replace coal-fired generation with cleaner sources of energy

- Emissions have declined by approximately 80% since 2003.

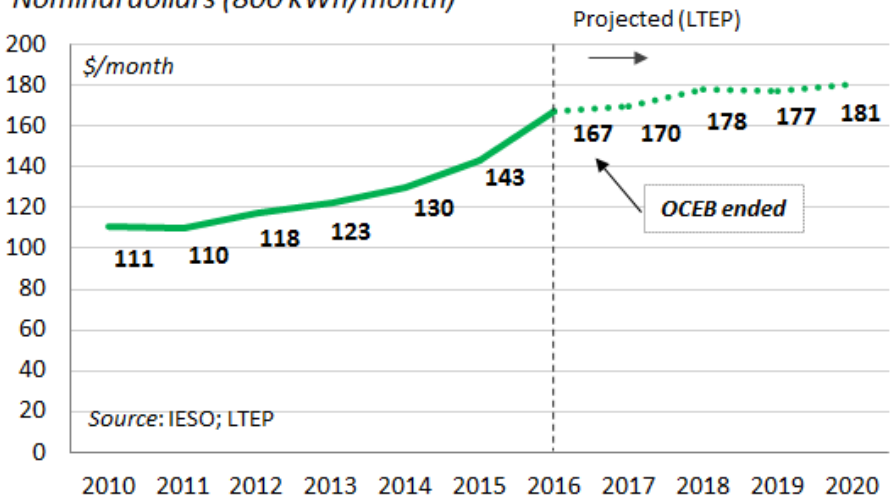
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as renewable projects come online.

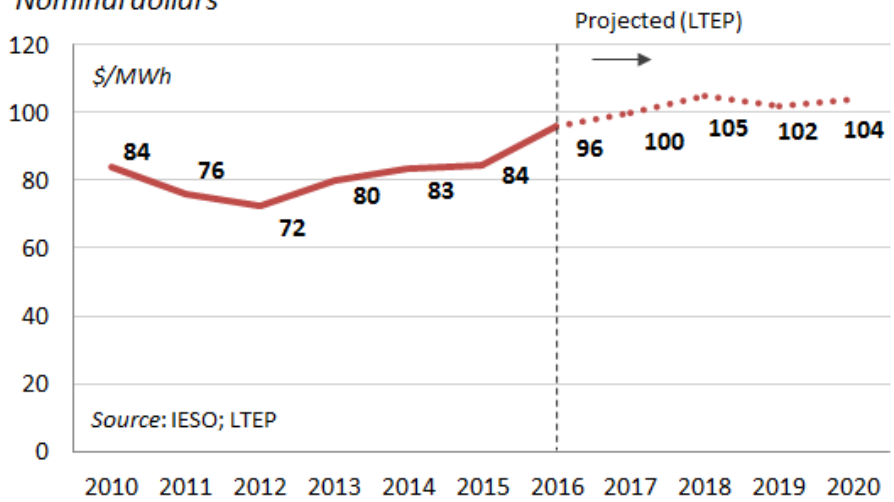
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Consumer Classes

Regulated Price Plan	Class B	Class A
< 0.05 MW	0.05 – 3 MW	3+ MW

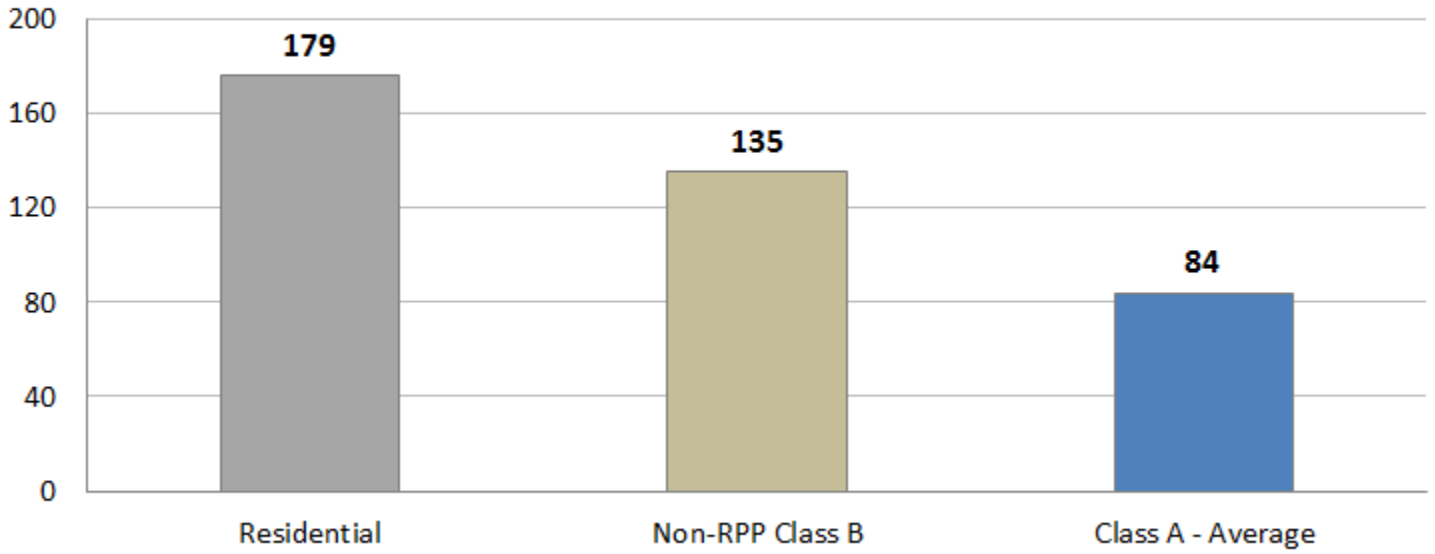
- The Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB).
- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated.
- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 megawatts (MW)).

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



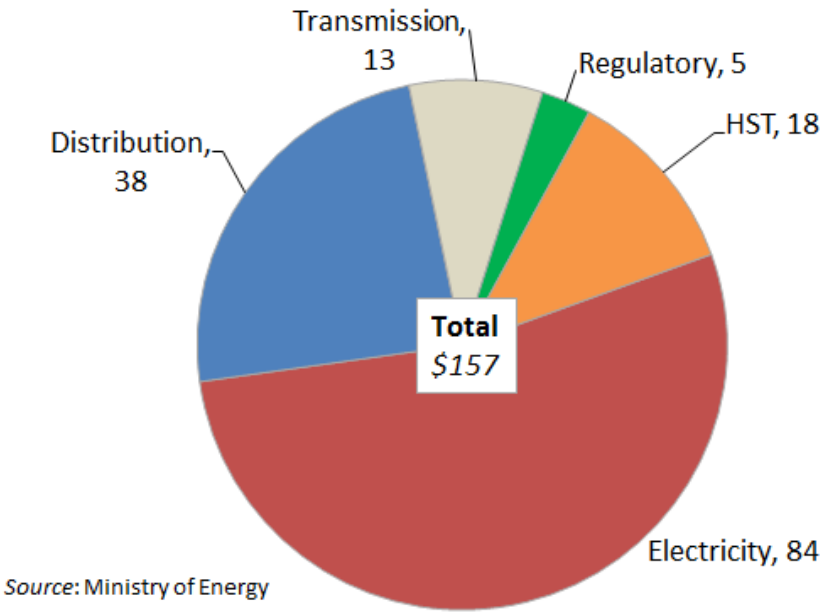
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5,000,000 residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



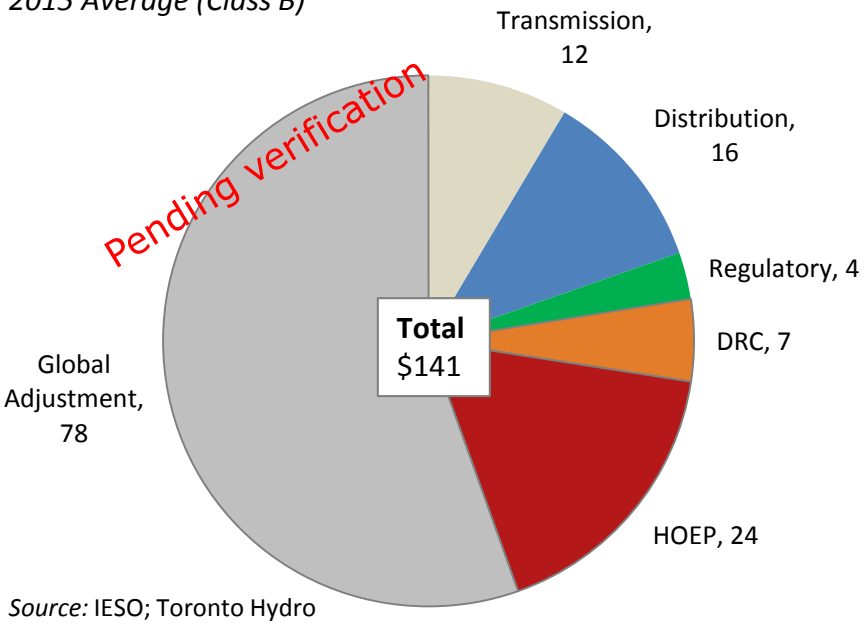
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and Global Adjustment (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Class B)

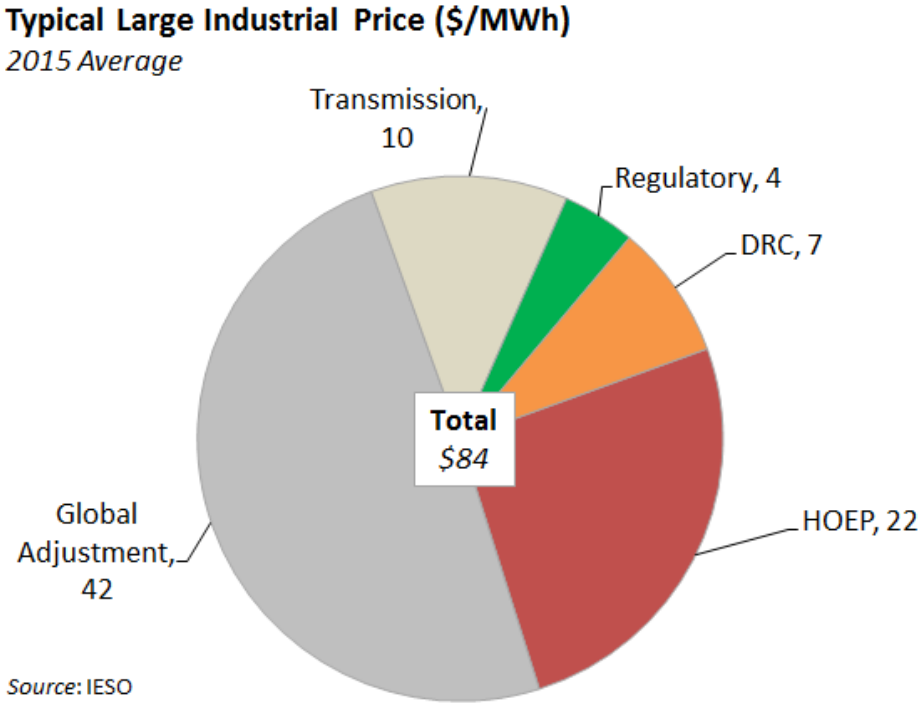


Source: IESO; Toronto Hydro

- Unlike residential and many industrial consumers, consumers in the commercial sector do not pay time of use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

2016 Budget Commitments

- The current proposal for recycling auction proceeds will offsets the impact of cap and trade for industrial consumers though a volumetric mechanism and provide a rebate via the Regulated Price Plan to ensure the average residential consumer receives a reduction of $2/month.
  - To meet the 2016 Budget commitment, about $90 million per year would be required for industrial consumers and about $150 million per year is required for residential consumers.
  - If HST is effectively removed, consumer savings will be significantly higher than the 2016 Budget commitment.

- The Climate Change Action Plan (CCAP) outlined the goals of achieving economy-wide reductions in GHGs, to “keep electricity rates affordable” by stating that cap and trade auction proceeds will be used to offset the cost of greenhouse gas (GHG) emission reduction initiatives that are currently funded by residential and industrial consumers through their bills and supporting initiatives that enable fuel-switching away from GHG emitting fuels.

HST – Background

Placeholder for MOF

Options

- Three options have been identified that could provide rate relief to various customer classes.

- These three options are outlined below. Option 3 is not mutually exclusive and could be combined with Option 1 or 2. Should a combination of options be pursued, it could reduce or eliminate the required GGRA proceeds identified under Option 3:

    1) Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial and residential).

    2) Provide an 8% rebate to Regulated Price Plan consumers.

    3) Provide rate-based relief to certain electricity consumers by shifting costs within the electricity sector.
        a) Expand ICI eligibility threshold to customers above 1MW in all sectors. Consideration may also be given to expand Regulated Price Plan to include all Class B consumers under 1 MW.
        b) Expand Rural and Remote Rate Protection (RRRP) to increase the benefit to rural customers.

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

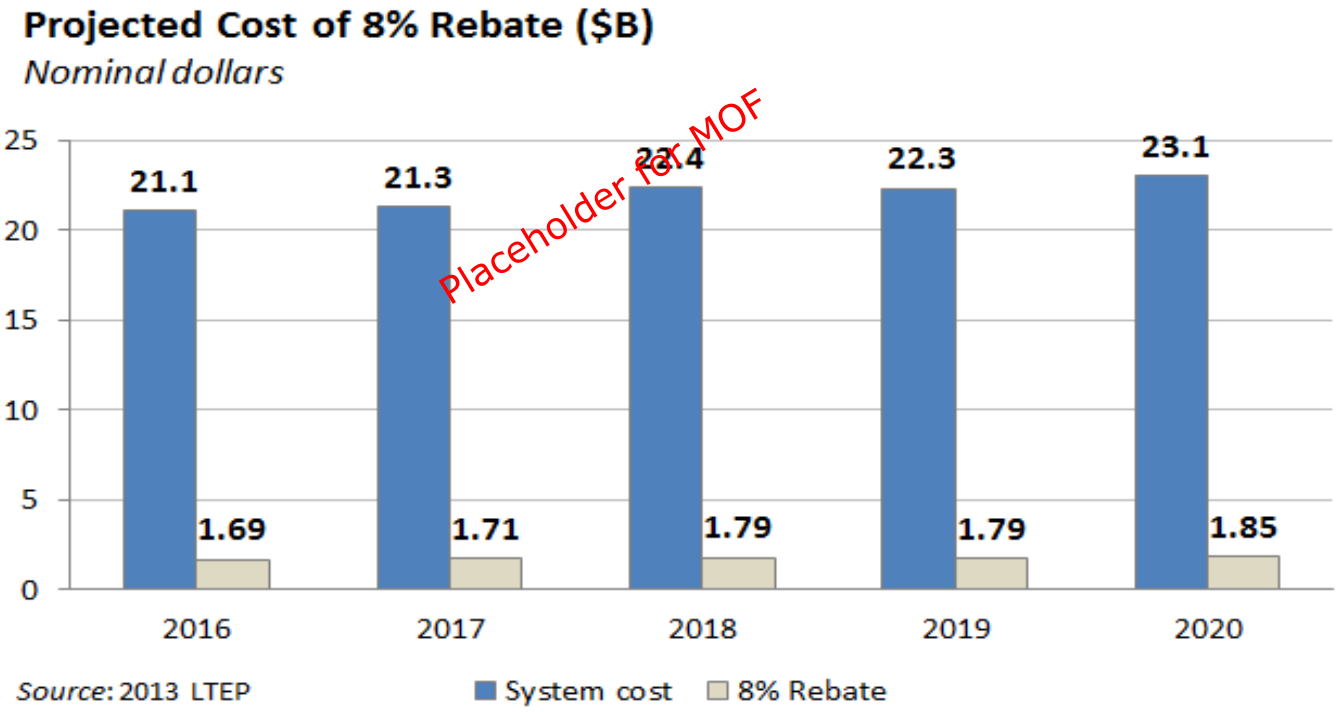
- This option would provide an 8% rebate for all consumers, which would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Based upon implementation of the Ontario Clean Energy Benefit (OCEB), some LDCs require lead time of at least six months for billing, system, and process changes.

8% Rebate for All Consumers – Projected Cost

- The cost of electricity service would influence the cost of providing an 8% rebate. System cost is expected to increase over the next five years.

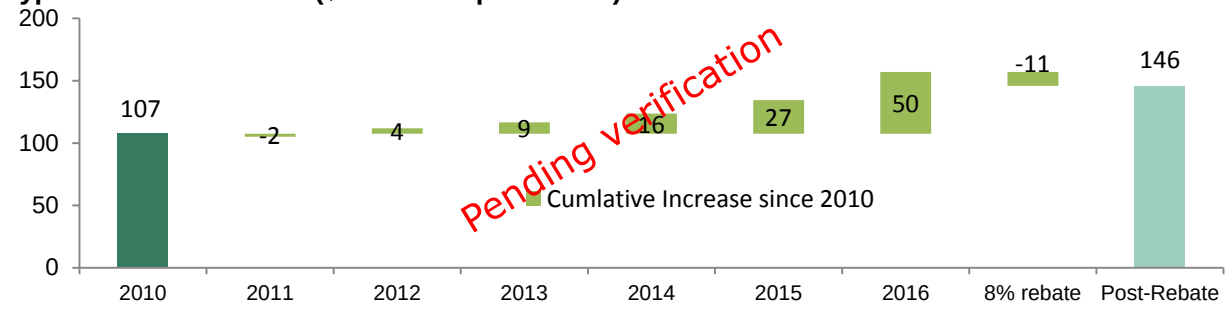
- [MOF continuing to conduct analysis to estimate the fiscal impact.]



Bill Impacts by Sector

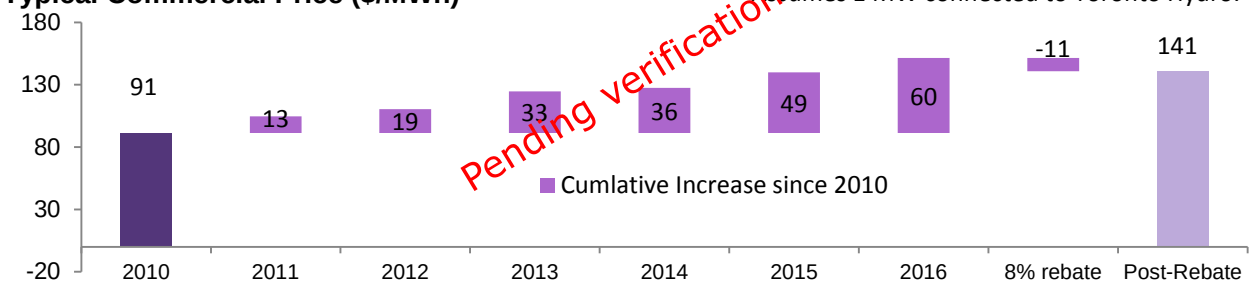
- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $11/MWh rebate.
- A $6/MWh rebate for industrial consumers would bring all-in prices back to 2010 levels.

Typical Residential Bill ($ / 750kWh per month)

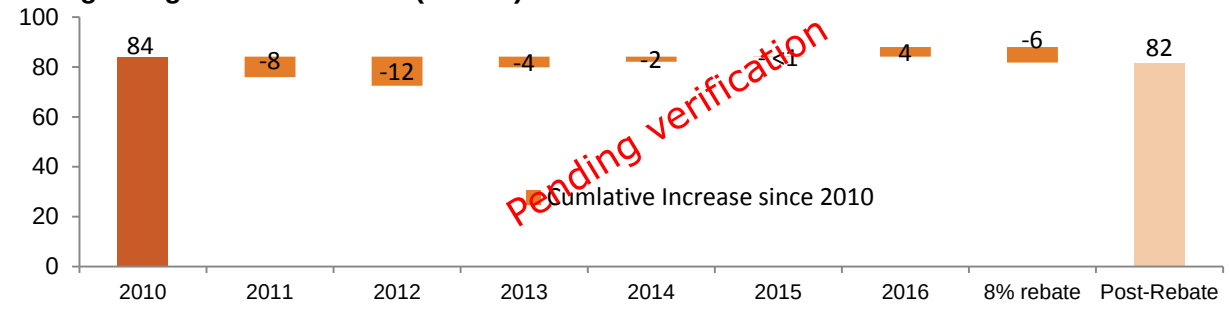


Typical Commercial Price ($/MWh)

Assumes 1 MW connected to Toronto Hydro.



Average Large Industrial Price ($/MWh)



8% Rebate for All Consumers – Considerations

- Commercial and industrial consumers would continue to receive benefit related to input tax credits.
- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.
- Detailed messaging on bills (for “low-volume” consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

Option 2 – 8% Rebate for Regulated Price Plan Consumers

8% Rebate for Regulated Price Plan Consumers – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.

- This option would provide an 8% rebate for Regulated Price Plan consumers, which would be equal to provincial portion of HST and funded by the tax base.

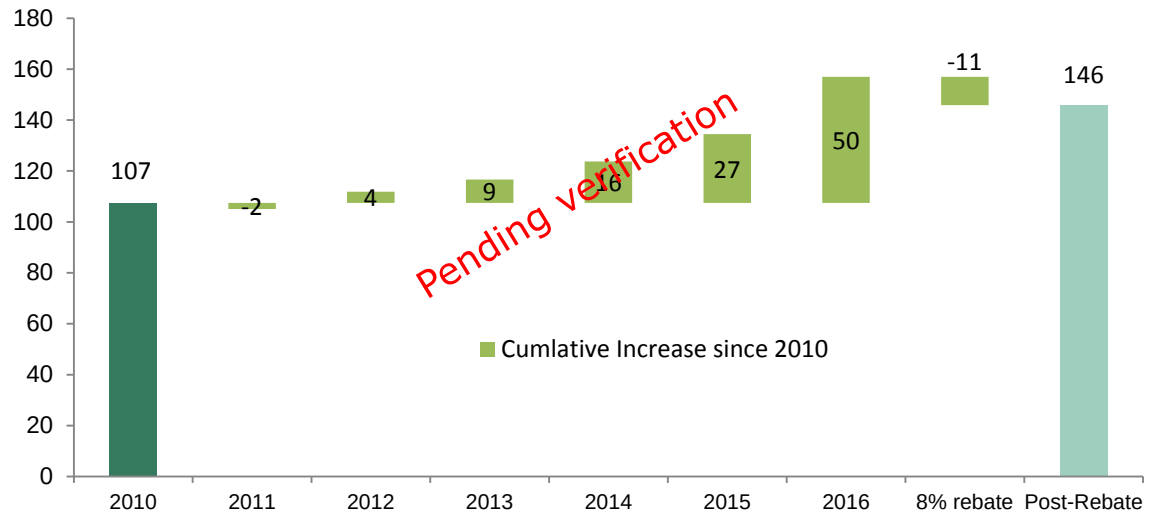
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Based upon implementation of the OCEB, some LDCs require lead time of at least six months for billing, system, and process changes.

Bill Impacts for Regulated Price Plan Consumers

- The chart on the right show the cumulative increase in residential bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.

- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.

Typical Residential Bill ($ / 750kWh per month)



Placeholder

[Monthly bill for consumer with electrical heating]

8% Rebate to Regulated Price Plan consumers – Projected Cost

- [MOF and ENERGY to develop estimate of fiscal impact]

- [**Note:** Former ~~OESP~~ OCEB, which provided 10% rebate at a limit of 3,000 kWh/month to all Regulated Price Plan consumers, cost about $1.2 billion, annualised, in its final year. Therefore, new program with no consumption limit is expected to cost in the range of $1billion.]

Placeholder for MOF

8% Rebate for Regulated Price Plan Consumers – Considerations

- Commercial and industrial consumers would continue to receive benefit related to input tax credits.
- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.
- Detailed messaging on bills (for “low-volume” consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to Regulated Price Plan consumers, recycling of cap and trade proceeds to industrial consumers would still be required to meet the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.
  - The amount of proceeds required is forecast to be about $90 million, which represents a reduction of $160 million from the current proceeds recycling proposal, to offset the impact for all industrial consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

Option 3 – Rate Based Options

Option 3 – Context

- Additional rate-based relief could be provided to certain electricity consumers by shifting costs within the electricity sector.

- Below are two options to expand existing programmes which provide relief to small industrial, large commercial and rural customers, who pay some of the highest electricity rates in the province.

    a) Targeted business and industry support: Expand ICI eligibility threshold to customers above 1MW in all sectors. Consideration may also be given to expand the Regulated price plan to include all remaining class B consumers below the 1 MW threshold not covered in the ICI expansion.

    a) Expand Rural and Remote Rate Protection (RRRP) to increase the benefit to rural customers.

- It should be noted that options 3a and 3b are not mutually exclusive and could be pursued in concert and/or combined with options 1/2 outlined previously.

Option 3 – Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Typical non-RPP Class B consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	3.54	4.33	4.02	4.71	6.33	6.35
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Total	***4.74***	***5.43***	***5.14***	***5.94***	***7.57***	***8.73***

Cost Shift Impacts - Industrial Bill

Typical Class A consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	-22.17	-26.36	-23.50	-25.91	-33.79	-33.92
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Total	***-20.97***	***-25.26***	***-22.38***	***-24.68***	***-32.56***	***-31.55***

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Option 3a – Targeted Business and Industry Support – Overview

- Rate relief could be provided in two components:

1. ICI expansion: Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
   - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially.

2. Regulated price plan expansion: If the Class B consumer base is further reduced with an expansion of ICI, it could be accompanied by an expansion of Regulated Price Plan for Class B consumers below the 1 MW threshold.
   - This would address public criticism associated with the non-blended rate (complaints about high Global Adjustment (GA) charges), increase efficiency by implementing time-of-use rates for all small consumers, and simplify bills. Remaining Class B below the 1 MW threshold to pay blended prices via Regulated Price Plan time-of-use (TOU).

Option 3a – Targeted Business and Industry Support – ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

Option 3a – Targeted Business and Industry Support – ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

Option 3a – Targeted Business and Industry Support – Regulated Price Plan Expansion

- Current non-Regulated Price Plan Class B consumers are billed average HOEP along with the Class B rate (in $/MWh) monthly by the IESO. With an expansion of the Regulated Price Plan, these same consumers would pay Regulated Price Plan time-of-use (TOU) prices.

- As a result, the expected bill impacts for newly eligible Regulated Price Plan consumers would vary according to the type of consumer. For example, an medium size office building has a different hourly load shape throughout the year compared to a small hospital.

- The chart shows the estimated annual bill impacts for four commercial consumer types: grocery store, full service restaurant, elementary school and street lighting.

Annual total cost for typical class B consumer under expanded Regulated Price Plan

	Full service restaurant	Primary school	Super market	Street lighting
Current cost	33,440	90,280	176,602	382,024
RRP cost (12m actual)	34,252	101,468	186,190	307,361
% change (12m actual)	2.4%	12.4%	5.4%	-19.5%

Option 3a – Targeted Business and Industry Support – Considerations

ICI expansion:

- Compared to a 8% tax funded rebate for all consumers, combining this option with Option 2 would represents a lower fiscal impact.
- Relative to status quo, existing Class A consumers would experience a small increase in the price they pay.
- Amendments to *O. Reg. 429/04* (made under the Electricity Act, 1998) would be required.
- Expanding ICI to 1 MW is expected to increase consumption from Class A consumers by about 10%. This would require an increase of an estimated average of $10million per year in proceeds recycling from the current proposal of $90 million per year in order to offset the impact for all industrial consumers.

Regulated Price Plan expansion:

- Amendments to *O. Reg. 442/04* (made under the Electricity Act, 1998) would be required.
- Some consumers would see price increases compared to their current Class B rates. Combining an Regulated Price Plan expansion with Option 2 could alleviate concerns over these potential increases, but would increase the impact on the fiscal plan **(amount of impact TBD)**.

Rural or Remote Rate Protection (RRRP)

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations. The cost of distributing power to lower-density rural and remote areas is much higher than for urban and higher-density areas.
- Today, RRRP is a $175 million program collected via a 0.13 cents/kWh charge to all Ontario consumers (e.g. residential, commercial, industrial).
  - For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. (There are approximately 329,000 R2 customers).
  - The current program provides a monthly subsidy for R2 customers of $31.50. Even with the RRRP subsidy, R2 customers have one of the highest monthly bills in the province. An average bill (based on the median consumption level for R2 customers of 1,000kWh/month) is $229.
  - In comparison, the provincial average (using 1,000kWh) is ~$169 – a $60 difference.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen. There may be opportunity to evaluate current levels of support and increase subsidy levels to bring R2 customers bills closer in line with average costs across the province.
  - New support levels could range from an additional $10-$60 per month for R2 customers –which would result a monthly impact for an average residential consumer of ~$1.30 up to $3.50.

Impact Summary (Numbers to be confirmed)

Option	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Avg Regulated Price Plan (Residential)	Hydro One Rural Residential Consumer	Avg Class B (Commercial)	Avg Class A (Industrial)
1. 8% rebate to all consumers	$1.6 billion (B)	Residential: -$160 million (M) Industrial: -$90M	-$11/month	-$14.50/month	-$11/MWh	-$6/MWh
2. 8% rebate to RPP consumers	TBD (former OCEB budget was $1 billion)	Residential: -$160M Industrial: status quo ($90M)	-$11/month	-$14.50/month	No impact	-$1.90/MWh
3. Rate-based options

b. RRRP Update	N/A	Residential: status quo ($160M) Industrial: status quo ($90M)	-$1.26/month	-$30.20/month	+$0.99/MWh	-$0.91/MWh

Placeholder for Updated Data

*Change in proceeds is relative to current volumetric option, CCAP included $1.3B over the first compliance period.
**New Regulated Price Plan consumers would see an increase or decrease depending on load shape/responsiveness to TOU rates.
***New ICI participants could see a significant decrease in the range of 35% in the long term.

Impact of Combined Options

Option	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Avg Regulated Price Plan (Residential)	Hydro One Rural Residential Consumer	Avg Class B (Commercial)	Avg Class A (Industrial)
8% rebate to all consumers + ICI/Regulated Price Plan + RRRP Update	$1.6B	Residential: -$160M Industrial: -$90M	-$11.52/month*	-$43.70/month	-$9.02/MWh	-$4.02/MWh**
8% rebate to RPP consumers + ICI/Regulated Price Plan Expansion + RRRP Update	TBD (former OCEB budget was $1B, this option would expand eligibility)	Residential: -$160M Industrial: status quo	-$11.52/month*	-$43.70/month	+$1.98/MWh	+$0.08/MWh*

Placeholder for Updated Data

*New Regulated Price Plan consumers would see an increase or decrease depending on load shape/responsiveness to TOU rates.
**New ICI participants could see a significant decrease in the range of 35% in the long term.

Next Steps

- [ENERGY and MOF to continue analysis]
- [Prepare legislation / regulatory amendments as required. Proceed to Cabinet and Treasury Board .]
- [Develop roll-out plan.]

Placeholder for SNAP

Appendix – ICI

Industrial Conservation Initiative

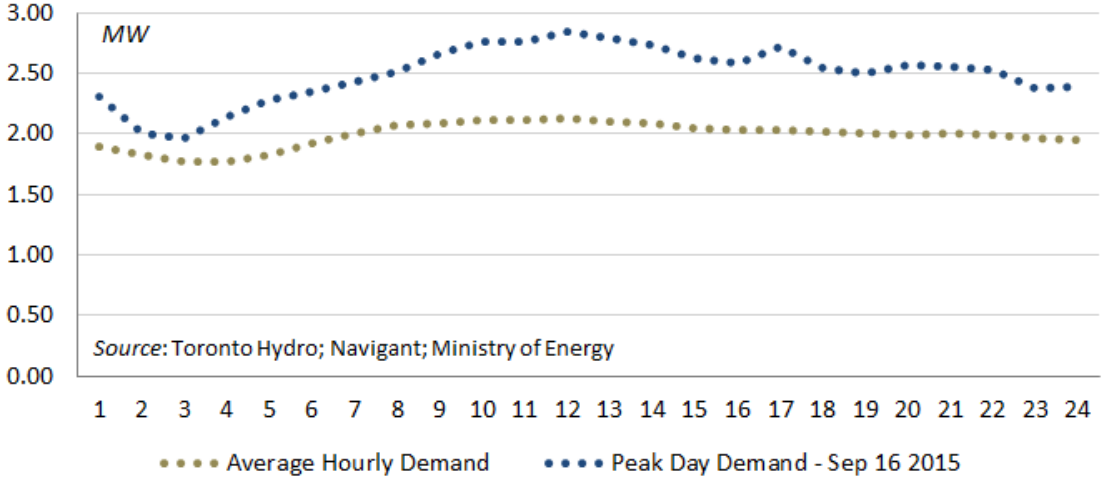
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

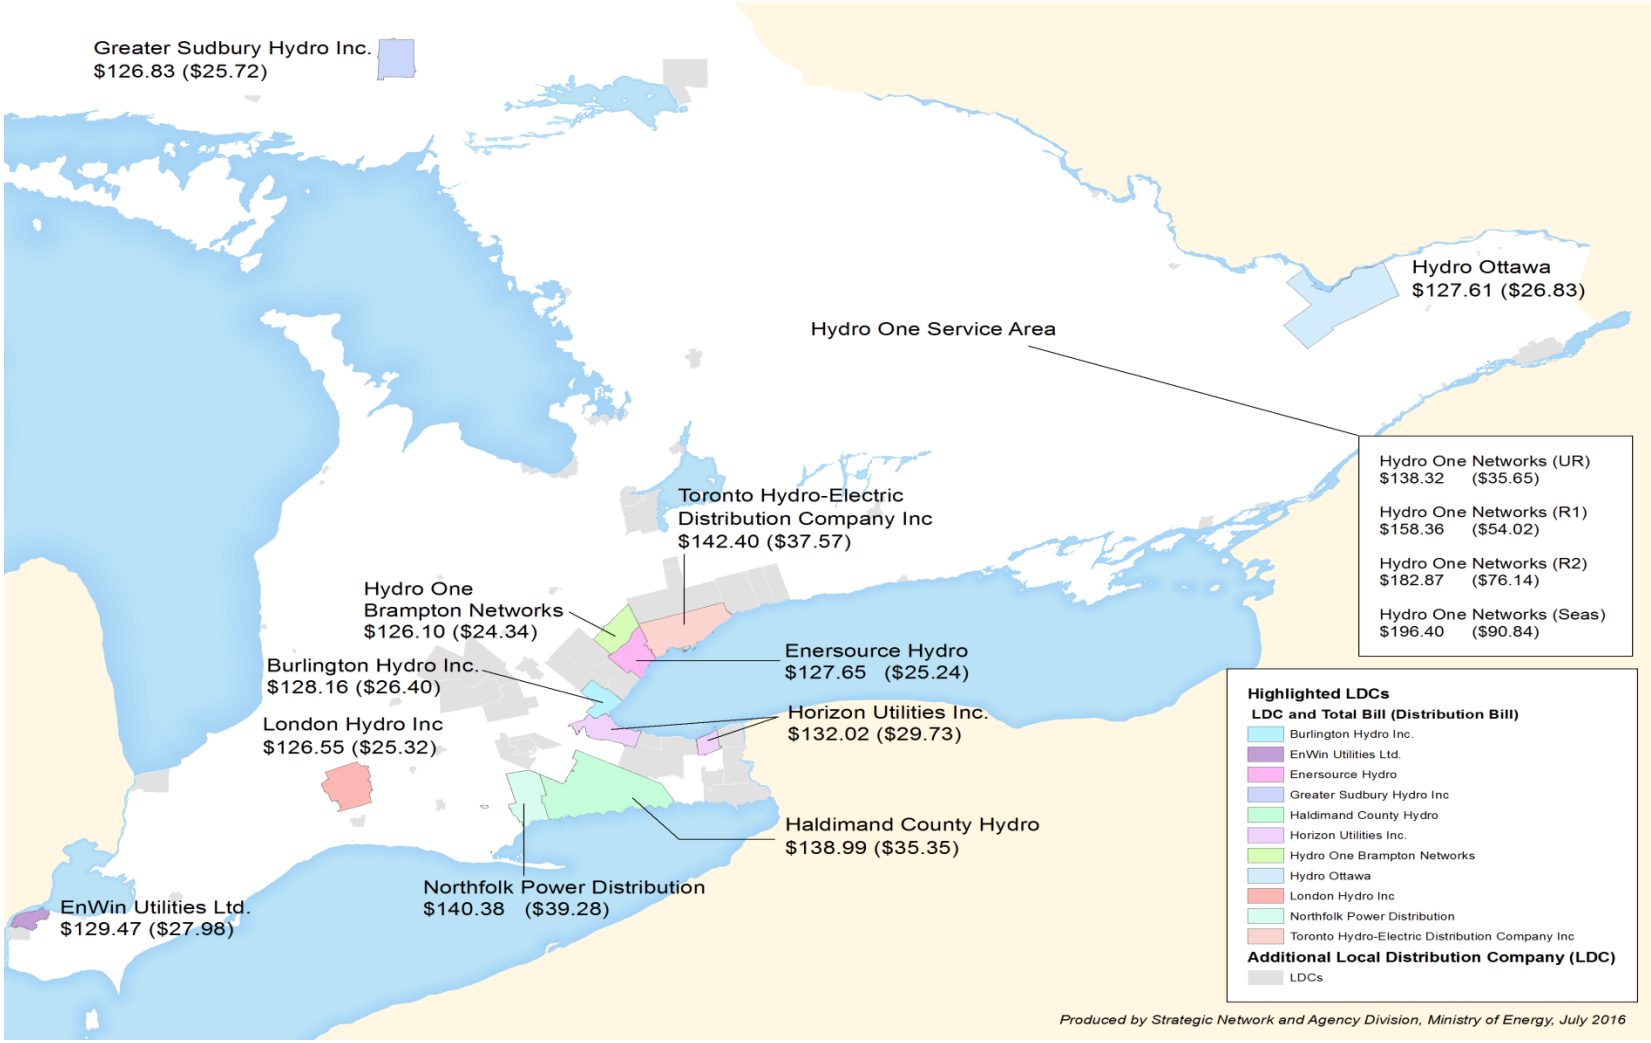
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

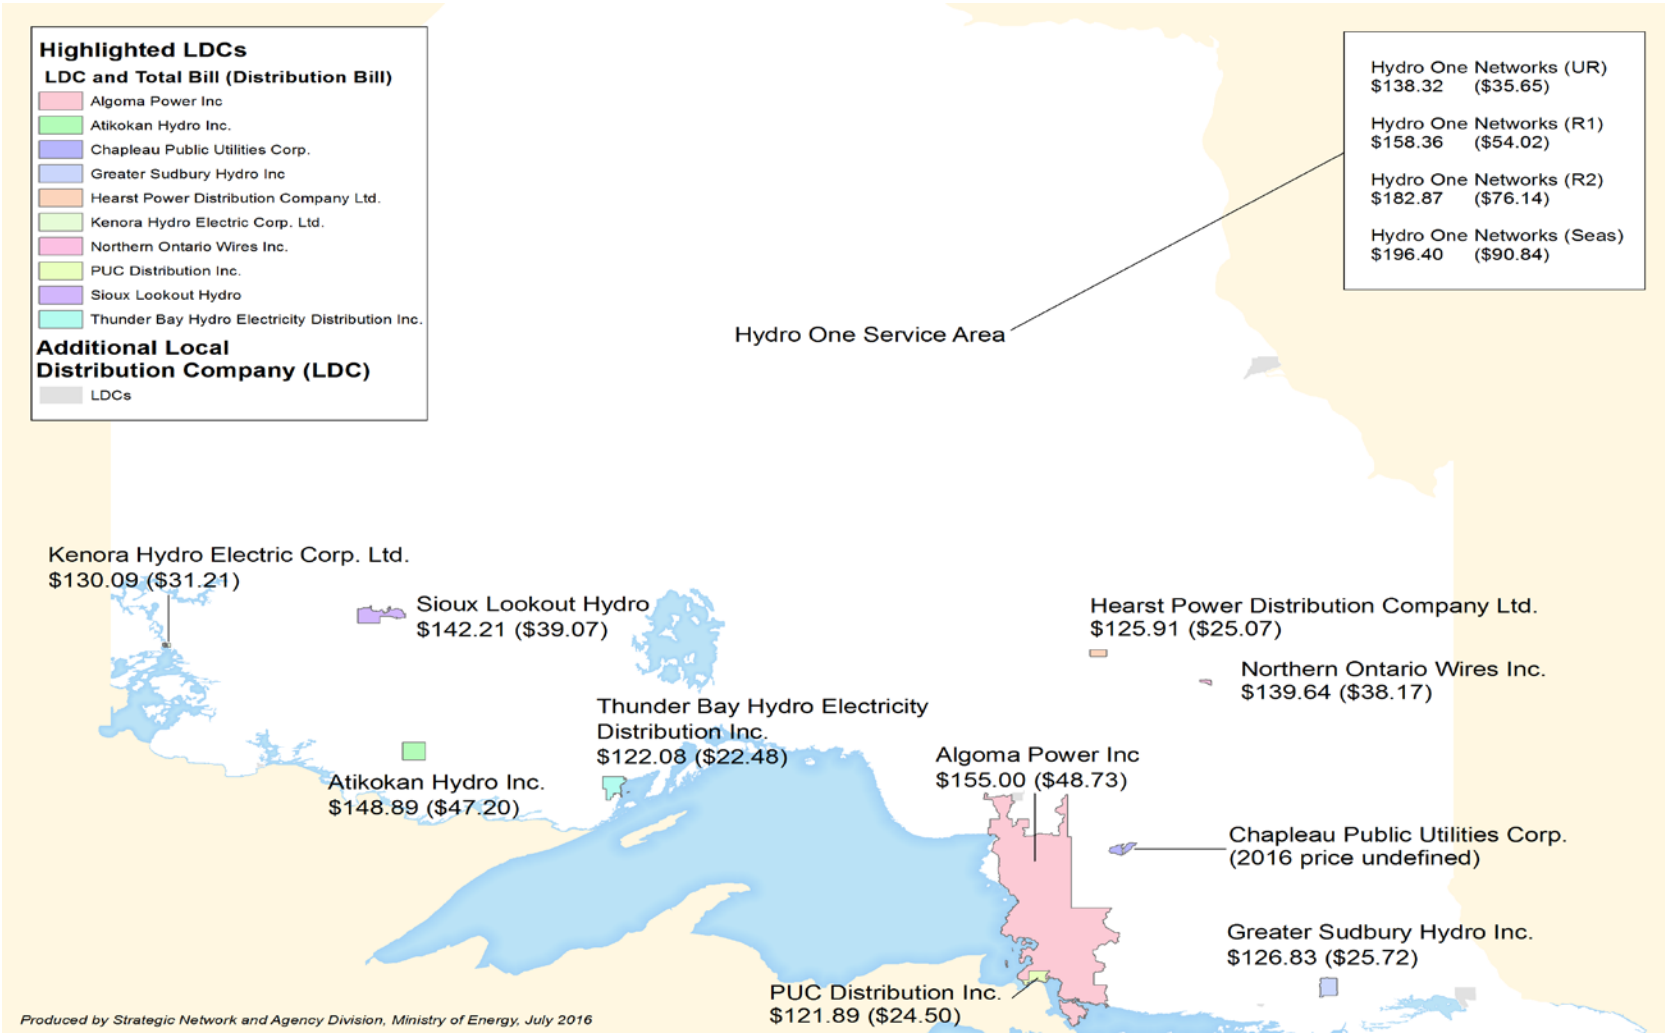
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental Costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism (see slide 25)
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Ontario

MINISTRY OF
ENERGY

Electricity Price Mitigation

Working Draft

August , 2016

Context

- Since 2003, we have invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Electricity costs are increasing because we are making the necessary investments to modernize the province's electricity infrastructure.

- We chose to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

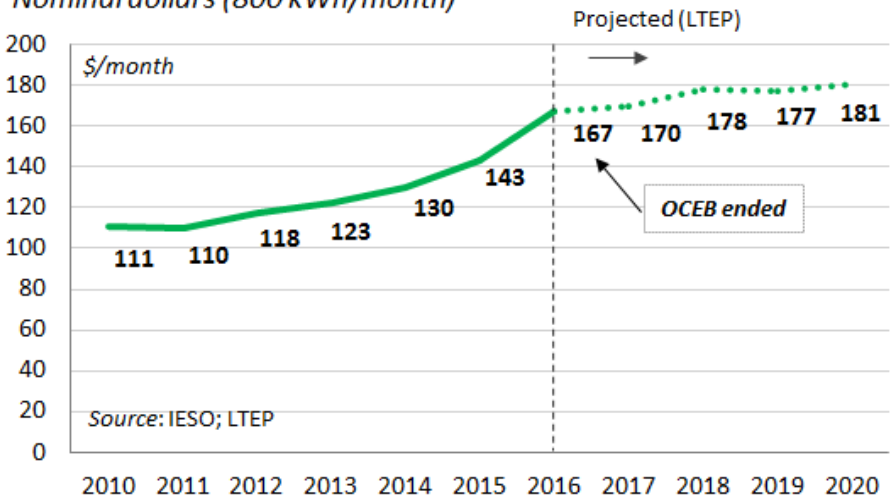
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

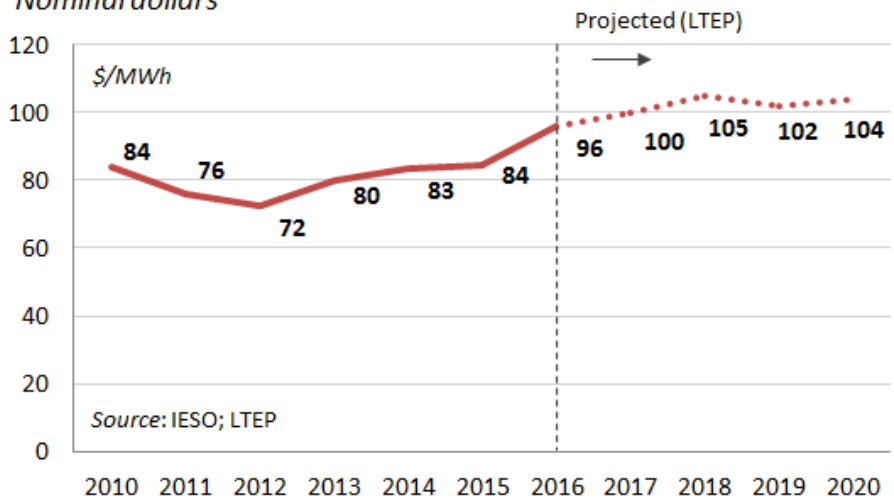
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
< 0.05 MW	0.05 – 3 MW	3+ MW

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

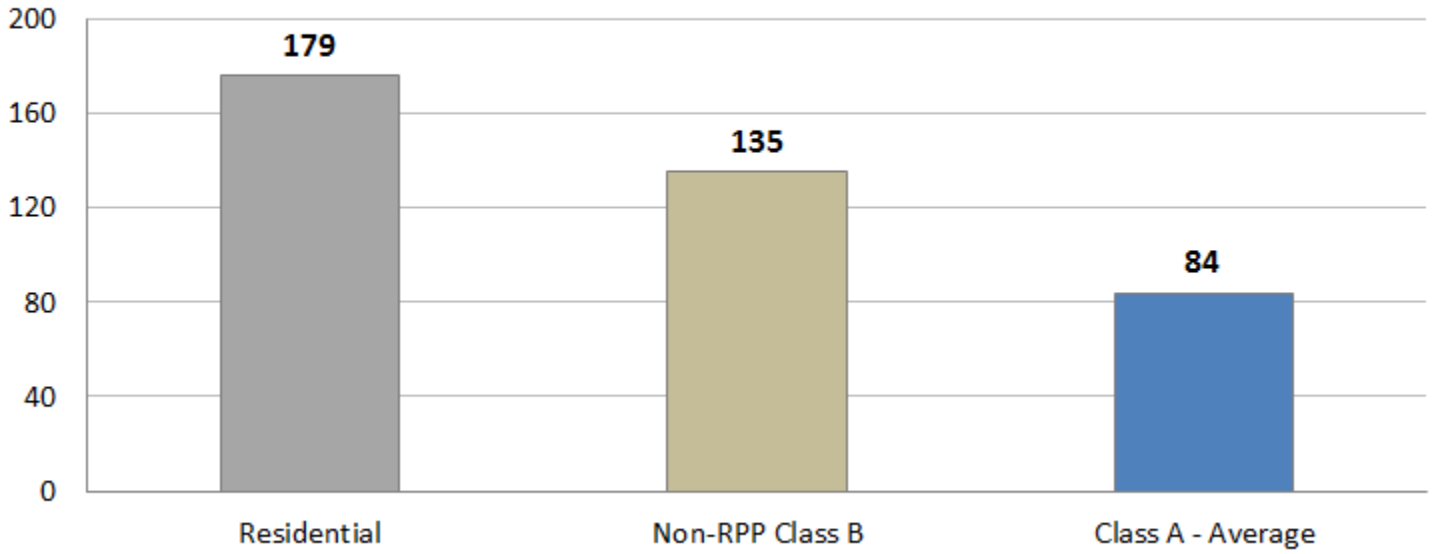
- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



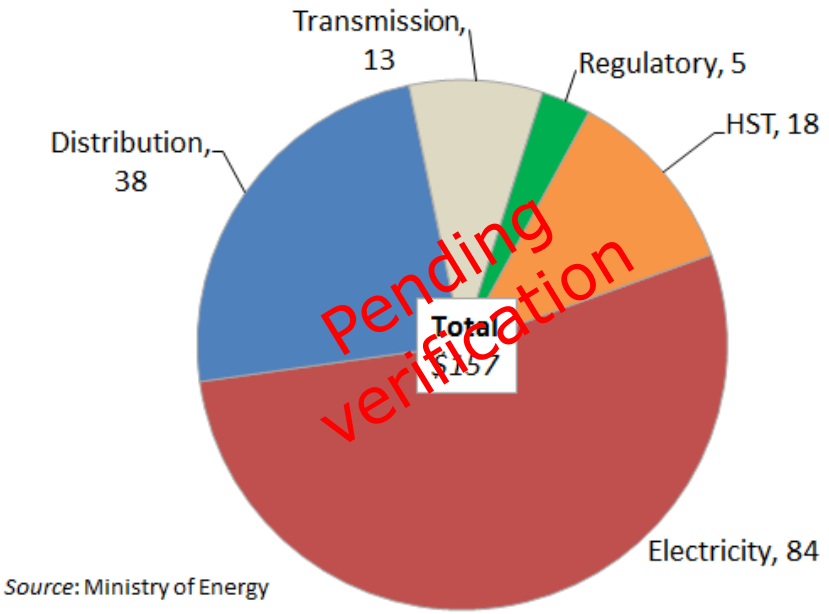
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



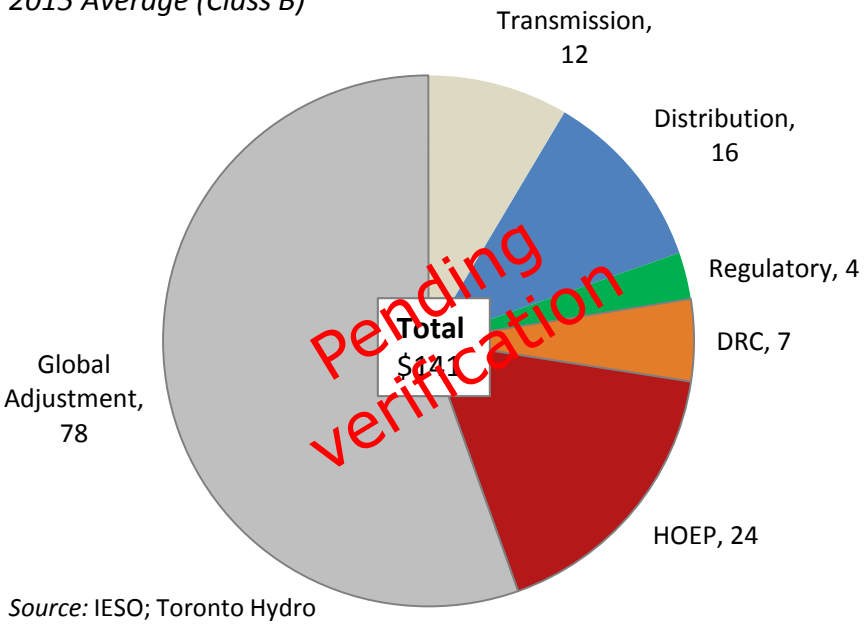
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Class B)

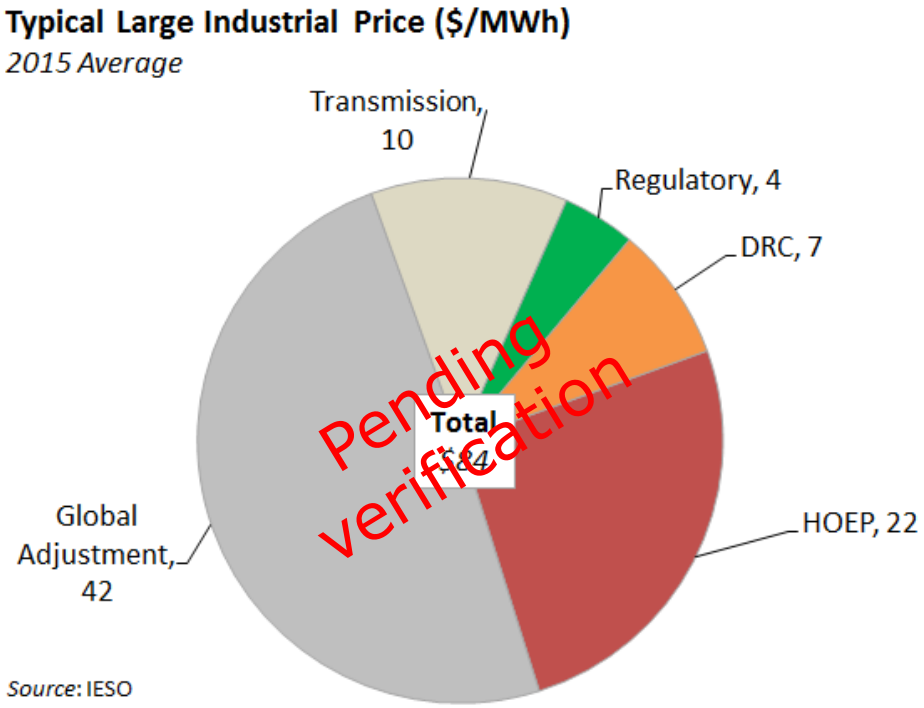


Source: IESO; Toronto Hydro

- Unlike residential and many industrial consumers, consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

2016 Budget Commitments

- The current proposal for recycling auction proceeds from the Greenhouse Gas Reduction Account (GGRA) will offsets the impact of cap and trade for industrial consumers though a volumetric mechanism and provide a rebate via the Regulated Price Plan to ensure the average residential consumer receives a reduction of $2/month.
  - To meet the 2016 Budget commitment, about $360 million would be required over the first compliance period (2017-2020) for industrial consumers and about $640 million would be required for residential consumers over the first compliance period.
  - If HST is effectively removed, consumer savings will be significantly higher than the 2016 Budget commitment.

- The Climate Change Action Plan (CCAP) outlined the goals of achieving economy-wide reductions in GHGs, to “keep electricity rates affordable” by stating that cap and trade auction proceeds will be used to offset the cost of greenhouse gas (GHG) emission reduction initiatives that are currently funded by residential and industrial consumers through their bills and supporting initiatives that enable fuel-switching away from GHG emitting fuels.

HST – Key Facts

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).
- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

Rate Mitigation Levers

- Two sets of levers have been identified that could provide rate relief to various customer classes.

- These levers are outlined below. The levers are not mutually exclusive and could be pursued in various configurations. Should a combination of levers be pursued, it could reduce or eliminate the required GGRA proceeds identified under the rate-based levers.

  - **HST Levers**
    1. Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
    2. Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms).

  - **Rate-based Levers**
    1. Provide targeted business and industry support by expanding the ICI eligibility threshold to customers above 1MW in all sectors. Consideration could also be given to expanding Regulated Price Plan eligibility to include all consumers under 1 MW.
    2. Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).

Consumer Impact Summary (data to be confirmed)

Levers	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
HST Levers			*Average (750 kWh)*	*Rural (1000 kWh)*	*0.05 - 1 MW*	*1-3MW*	*Existing*	*New*
1. 8% rebate to all consumers	$1.8 billion (avg over 2017-2020)	Residential: -$440 million (2017-2020) Industrial: -$360 million (2017-2020)	-$11/ month	-$18/ month	-$12/ MWh		-$6/ MWh	
2. 8% rebate to RPP consumers	TBD (former OCEB budget was $1 billion)	Residential: -$440 million Industrial: no change	-$11/ month	-$18/ month	No impact		-$1.90/ MWh	
Rate-based levers								
1. ICI/Regulated Price Plan expansion	N/A	Residential: TBD Industrial: +$40 million (2017-2020)	-$1.26/ month	-$1.67/ month	N/A	N/A	+$0.92/ MWh	Up to $50/ MWh
2. RRRP Update	N/A	Residential: no change Industrial: no change	-$0.76 – 1.83/ month	-$12.49 – 61.42/ month	+$0.23 – 1.65/MWh		-$0.25 – 1.67/MWh	

Placeholder for Updated Data

*Change in proceeds is relative to current volumetric option, CCAP included $1.3B over the first compliance period.

Consumer Impact of Combined Levers (data to be confirmed)

Option	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
			Average (750 kWh)	*Rural (1000 kWh)*	*0.05 – 1 MW*	*1-3 MW*	*Existing*	*New*
8% rebate to all consumers + ICI/Regulated Price Plan + RRRP Update	$1.8 billion (avg over 2017-2020)	Residential: -$440 million (2017-2020) Industrial: -$360 million (2017-2020)	TBD	TBD	TBD	TBD	TBD	TBD)
8% rebate to RPP consumers + ICI/Regulated Price Plan Expansion + RRRP Update	TBD (former OCEB budget was $1B, this option would expand eligibility)	Residential: -$440 million (2017-2020) Industrial: No change	TBD	TBD	TBD	TBD	TBD	TBD

Placeholder for Updated Data

*Change in proceeds is relative to current volumetric option, CCAP included $1.3B over the first compliance period.

.

HST Levers

HST Levers – General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates.
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates.
- Providing an 8% rebate of the provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.
- The Province may also need to change the reporting for the cost of a portion of the Ontario Sales Tax Credit (OSTC) and the energy component of the Ontario Energy and Property Tax Credit (OEPTC) to prevent overlapping revenue offsets.
  - Confirmation from Provincial Controllership is needed.
- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

HST Lever 1: 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

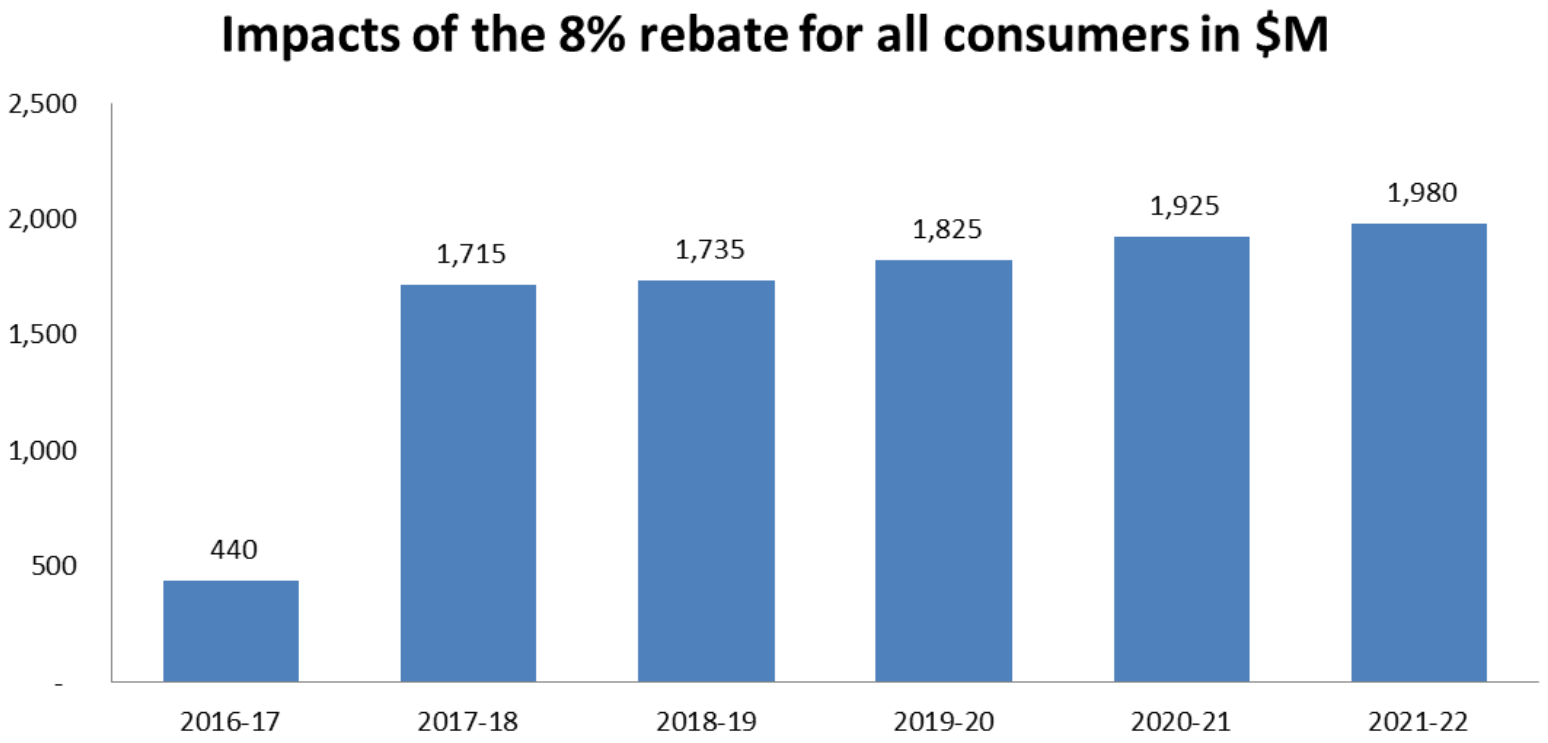
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.
  - This option would avoid stakeholder issues associated with OCEB (e.g., long-term care homes).

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

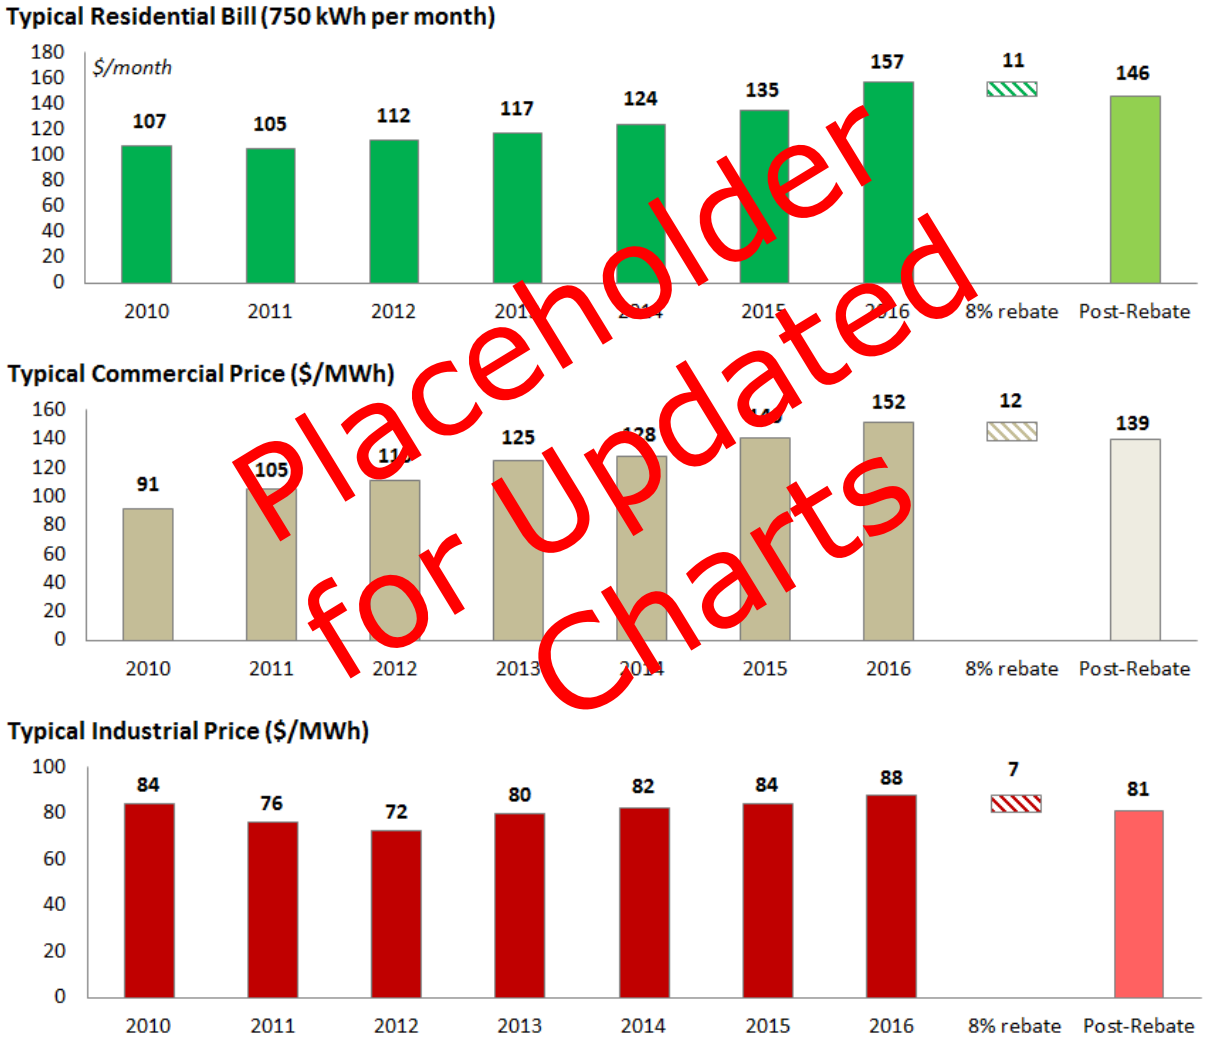
8% Rebate for All Consumers – Projected Cost

- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.



Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $11/MWh rebate.
- A $6/MWh rebate for industrial consumers would bring all-in prices below to 2010 levels.



Placeholder for Updated Charts

8% Rebate for All Consumers – Considerations

- ~~Commercial and industrial consumers would continue to receive benefit related to input tax credits~~.
- New legislation would be required.
- Detailed messaging on bills (for “low-volume” consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.
- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government’s ability to achieve fiscal balance.

HST Lever 2: 8% Rebate for Regulated Price Plan Consumers

8% Rebate for Regulated Price Plan Consumers – Overview

- The Regulated Price Plan includes most residential, small businesses and small farms.
  - This option would have similar stakeholder issues to those under OCEB (e.g., long-term care homes).

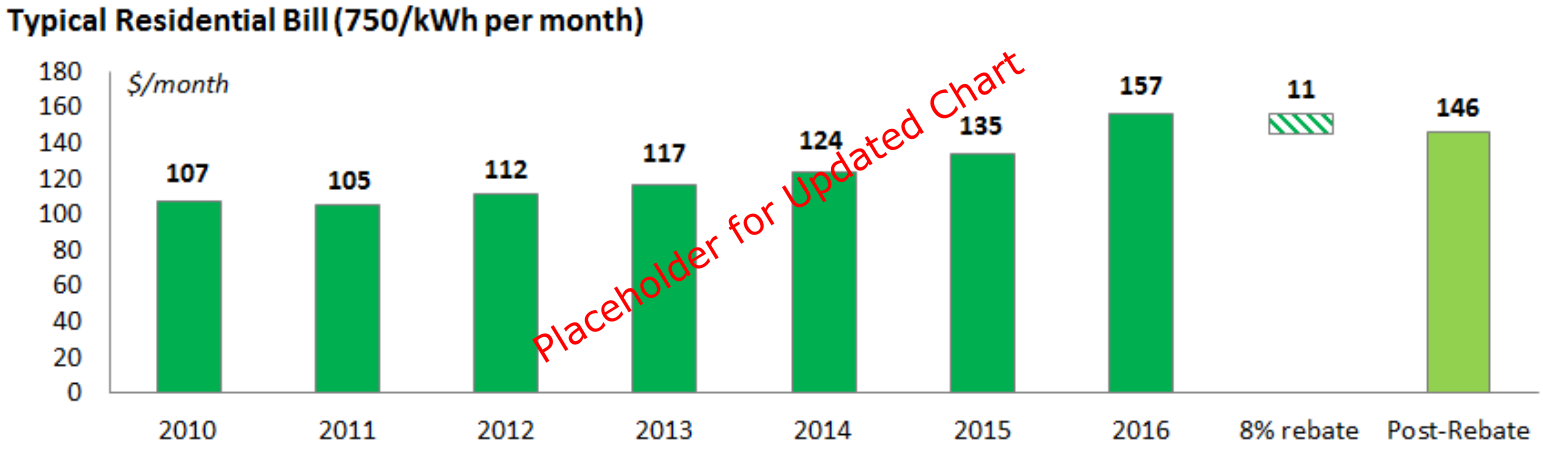
- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

Bill Impacts for Regulated Price Plan Consumers

- The chart on the right show the cumulative increase in residential bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.

- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.



Placeholder

[Monthly bill for consumer with electrical heating]

8% Rebate to Regulated Price Plan consumers – Projected Cost

- [MOF and ENERGY to develop estimate of fiscal impact]

- [**Note:** Former OCEB, which provided 10% rebate at a limit of 3,000 kWh/month to all Regulated Price Plan consumers, cost $1billion. Therefore new program with no consumption limit is expected to cost in the range of $1billion.]

Placeholder for MOF

8% Rebate for Regulated Price Plan Consumers – Considerations

- ~~Commercial and industrial consumers would continue to receive benefit related to input tax credits~~.
- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.
- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to Regulated Price Plan consumers, recycling of cap and trade proceeds to industrial consumers would still be required to meet the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.
  - The amount of proceeds required is forecast to be about $360 million over the first compliance period, which represents a reduction of $640 million from the current proceeds recycling proposal, to offset the impact for all industrial consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.
- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Rate-based Levers

Rate-based Levers – Context

- Additional rate-based relief could be provided to certain electricity consumers by shifting costs within the electricity sector.

- Below are two levers to expand existing programmes which provide relief to small industrial, large commercial and rural customers, who pay some of the highest electricity rates in the province.

    1. Targeted business and industry support: Expand ICI eligibility threshold to customers above 1MW in all sectors. Consideration may also be given to expand the Regulated price plan to include all remaining class B consumers below the 1 MW threshold not covered in the ICI expansion.

    2. Expand Rural and Remote Rate Protection (RRRP) to increase the benefit to rural customers.

- It should be noted that these levers are not mutually exclusive and could be pursued in concert and/or combined with either HST lever.

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Rate-based Lever 1 – Targeted Business and Industry Support

Targeted Business and Industry Support – Overview

- Rate relief could be provided in two components:

1. ICI expansion: Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
   - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially.

2. Regulated Price Plan expansion: If the Class B consumer base is further reduced with an expansion of ICI, it could be accompanied by an expansion of Regulated Price Plan to consumers up to 1 MW.
   - This would address public criticism associated with the non-blended rate (e.g., complaints about high Global Adjustment (GA) charges), increase efficiency by implementing time-of-use rates for all small consumers, and simplify bills.

Targeted Business and Industry Support – ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

Targeted Business and Industry Support – ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

Targeted Business and Industry Support – Regulated Price Plan Expansion

- Current non-Regulated Price Plan Class B consumers are billed average HOEP along with the Class B GA rate (in $/MWh) monthly by the IESO. With an expansion of the Regulated Price Plan to 1MW, these consumers would pay time-of-use (TOU) prices.

- The expected bill impacts for newly eligible Regulated Price Plan consumers would vary according to the type of consumer. For example, an medium size office building has a different hourly load shape throughout the year compared to a small hospital.

- While some consumers would be worse off under TOU rates, consumers that shift consumption away from peak periods will be able to achieve cost reductions that are not possible with volumetric Class B GA charges.

- The OEB has previously stated a preference for shaping the GA charges for Class B consumers as it would promote more efficient behaviour and better reflect the cost of electricity during different periods. Moving the RPP threshold up to 1MW could help achieve this goal.

Targeted Business and Industry Support – Considerations

ICI expansion:

- Compared to a 8% tax funded rebate for all consumers, combining this option with HST Lever 2 would represent a lower fiscal impact.
- Relative to the status quo, existing Class A consumers would experience a small increase in the price they pay.
- Amendments to *O. Reg. 429/04* (made under the Electricity Act, 1998) would be required.
- Expanding ICI to 1 MW is expected to increase consumption from Class A consumers by about 10%. This would require an increase of an estimated $40 million in proceeds recycling over the first compliance period, in addition to the current $360 million in order to offset the impact for all large industrial consumers.

Regulated Price Plan expansion:

- Amendments to *O. Reg. 442/04* (made under the Electricity Act, 1998) would be required.
- Some consumers would see price increases compared to their current Class B rates. Combining an Regulated Price Plan expansion with HST Lever 2 could alleviate concerns over these potential increases, but would increase the impact on the fiscal plan **(amount of impact TBD)**.

Rate-based Lever 2 – RRRP Update

Rural or Remote Rate Protection (RRRP) Update

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations. The cost of distributing power to lower-density rural and remote areas is much higher than for urban and higher-density areas.
- Today, RRRP is a $175 million program collected via a 0.13 cents/kWh charge to all Ontario consumers (e.g. residential, commercial, industrial).
  - For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. (There are approximately 329,000 R2 customers).
  - The current program provides a monthly subsidy for R2 customers of $31.50. Even with the RRRP subsidy, R2 customers have one of the highest monthly bills in the province. An average bill (based on the median consumption level for R2 customers of 1,000kWh/month) is $229.
  - In comparison, the provincial average (using 1,000kWh) is ~$169 – a $60 difference.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen. There may be opportunity to evaluate current levels of support and increase subsidy levels to bring R2 customers bills closer in line with average costs across the province.
  - New support levels could range from an additional $10-$60 per month for R2 customers –which would result an incremental monthly impact for an average residential consumer of $0.17 up to $1.24.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan.

Appendix – ICI

Industrial Conservation Initiative

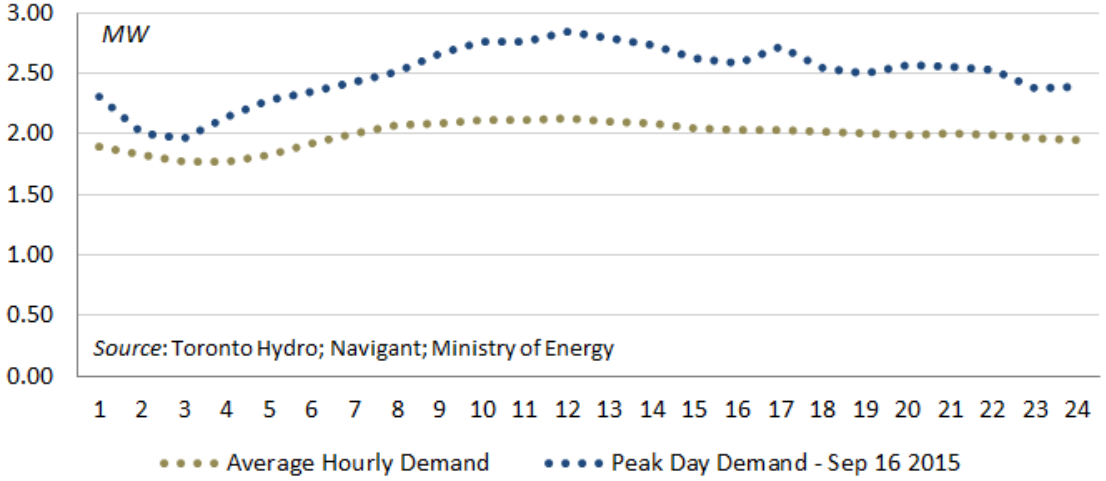
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

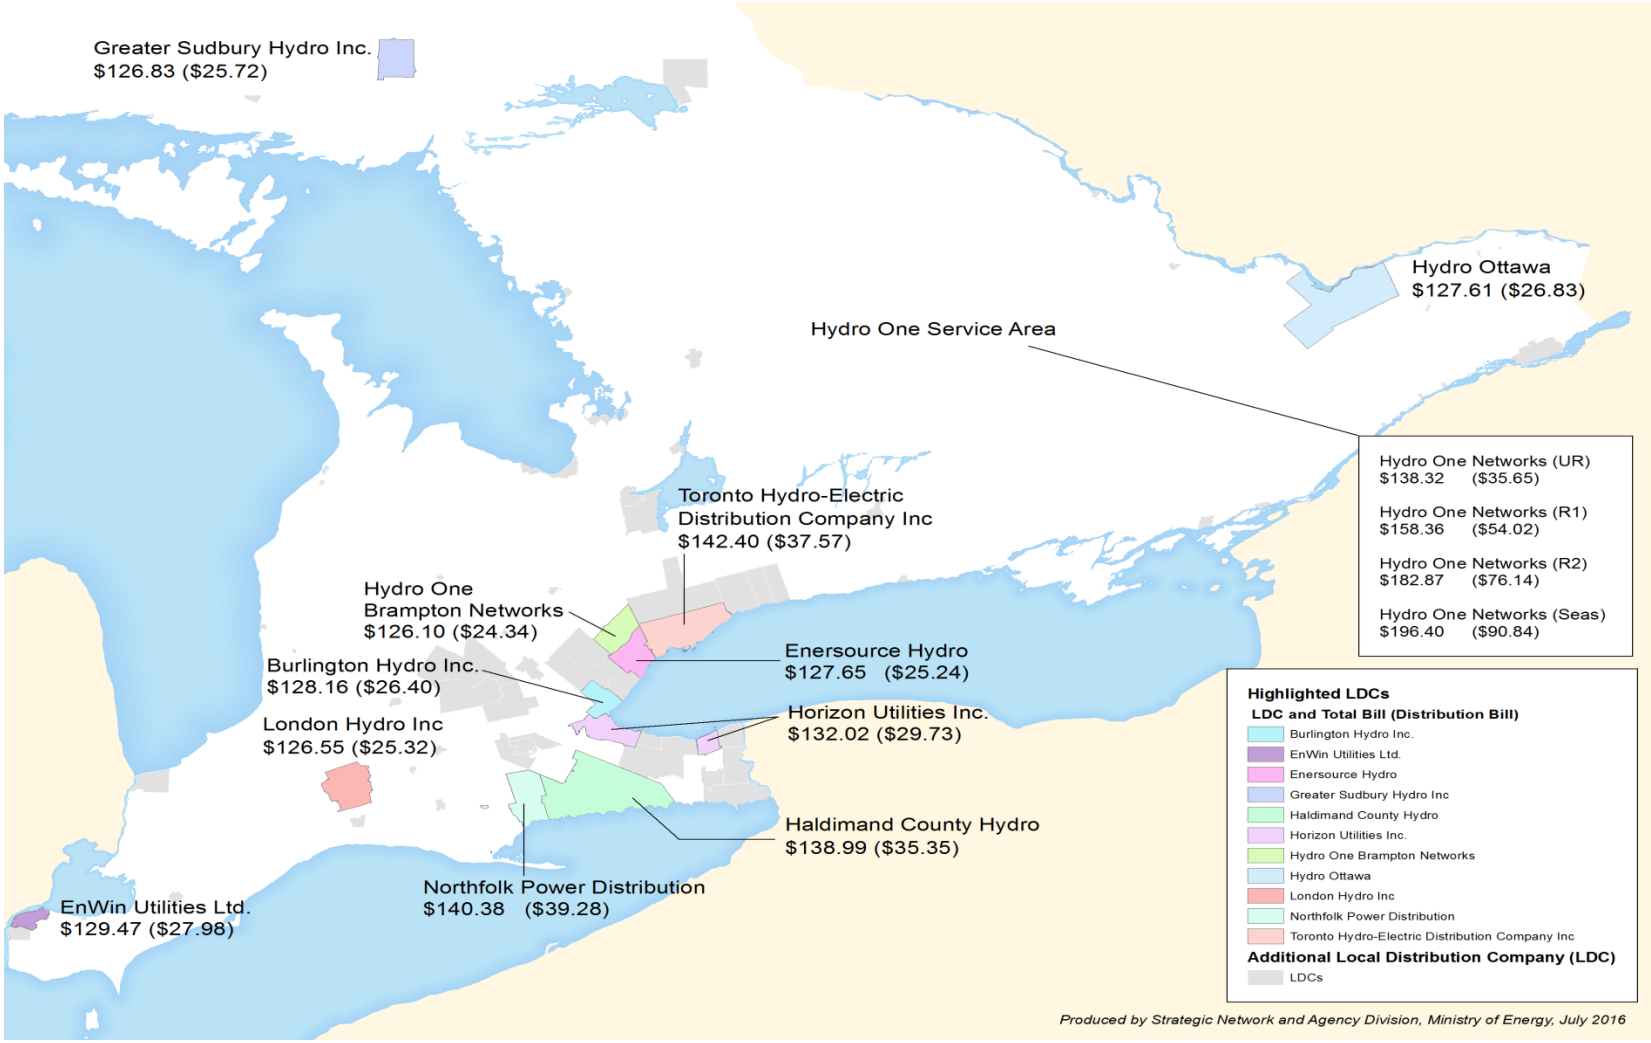
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

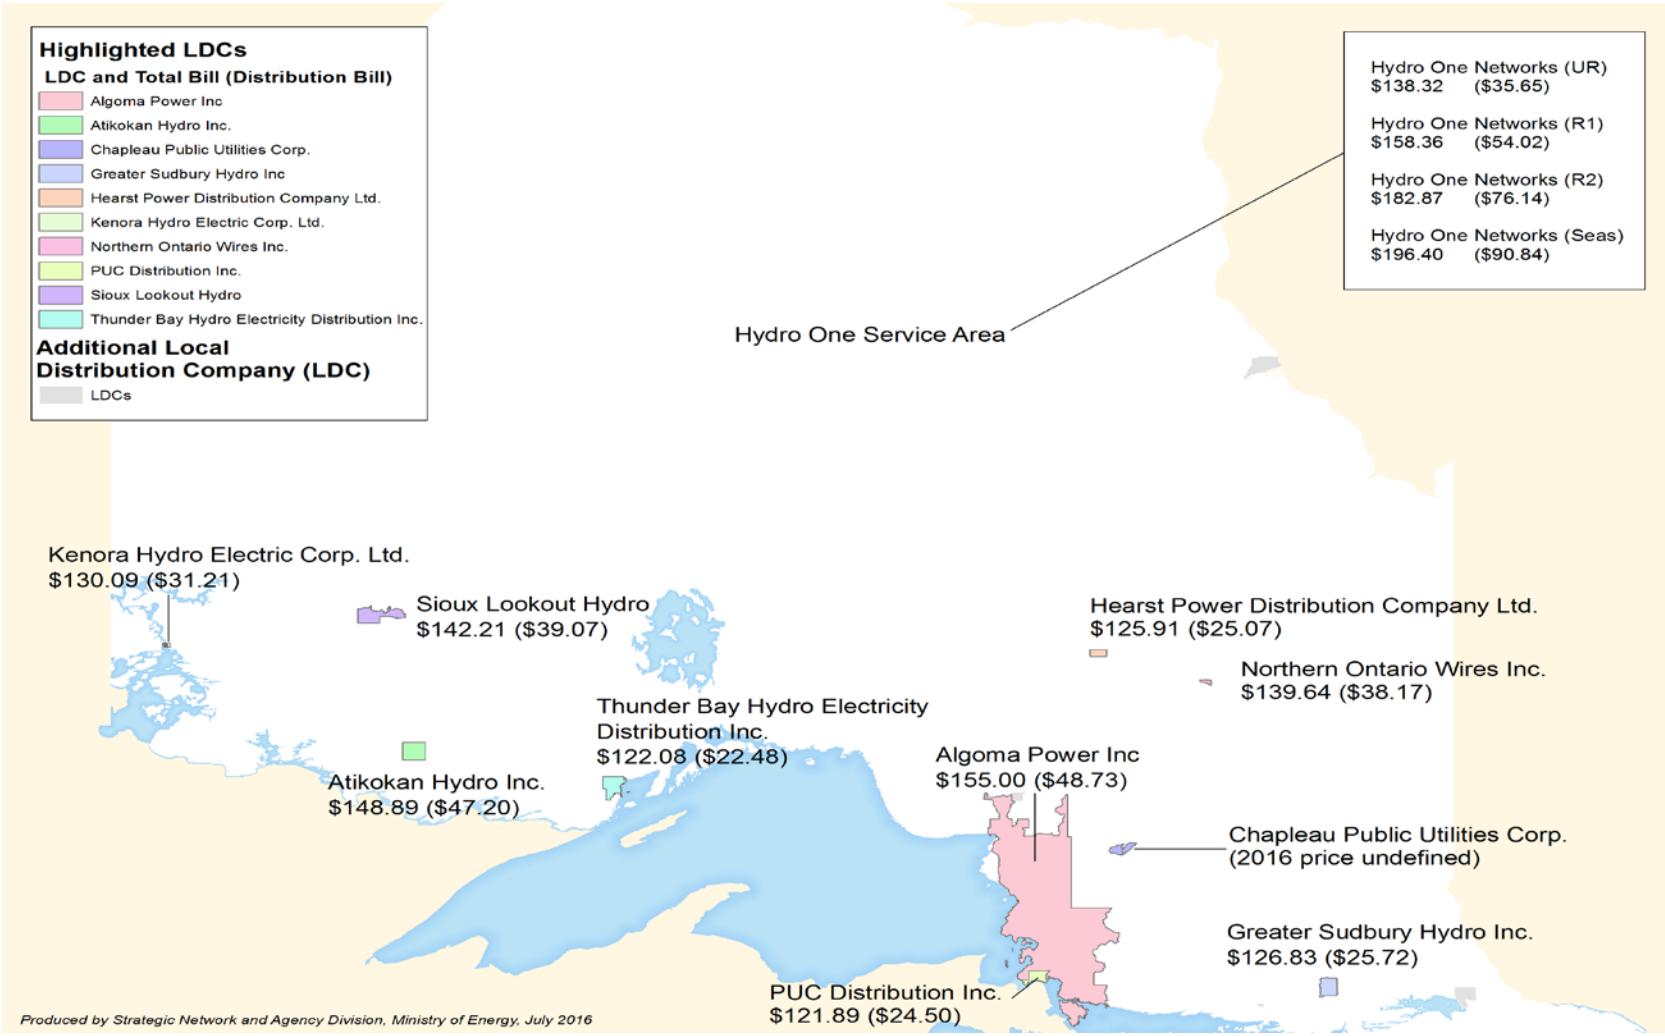
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental Costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism (see slide 25)
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Ontario

MINISTRY OF
ENERGY

Electricity Price Mitigation

Working Draft

August , 2016

Context

- Since 2003, we have invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Electricity costs are increasing because we are making the necessary investments to modernize the province's electricity infrastructure.

- We chose to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

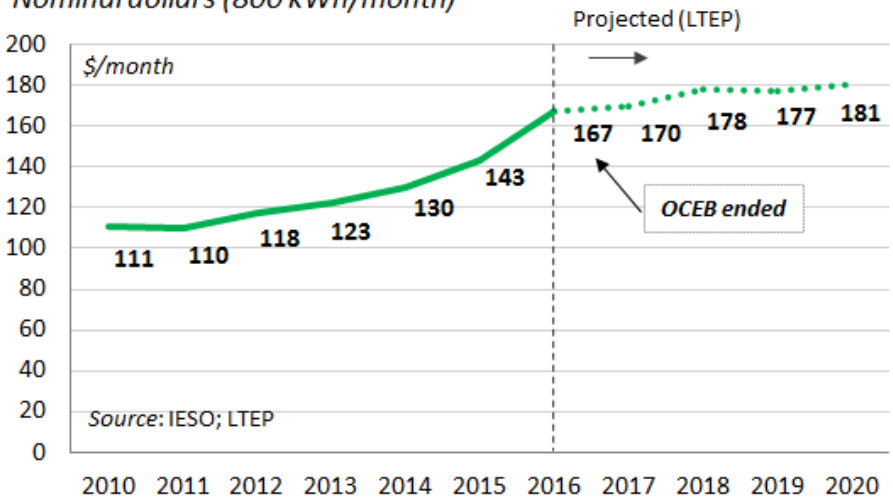
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

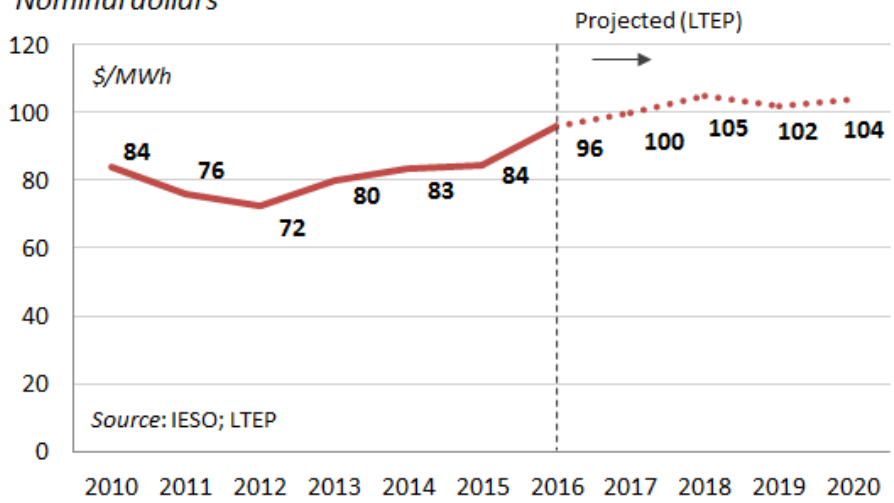
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
< 0.05 MW	0.05 – 3 MW	3+ MW

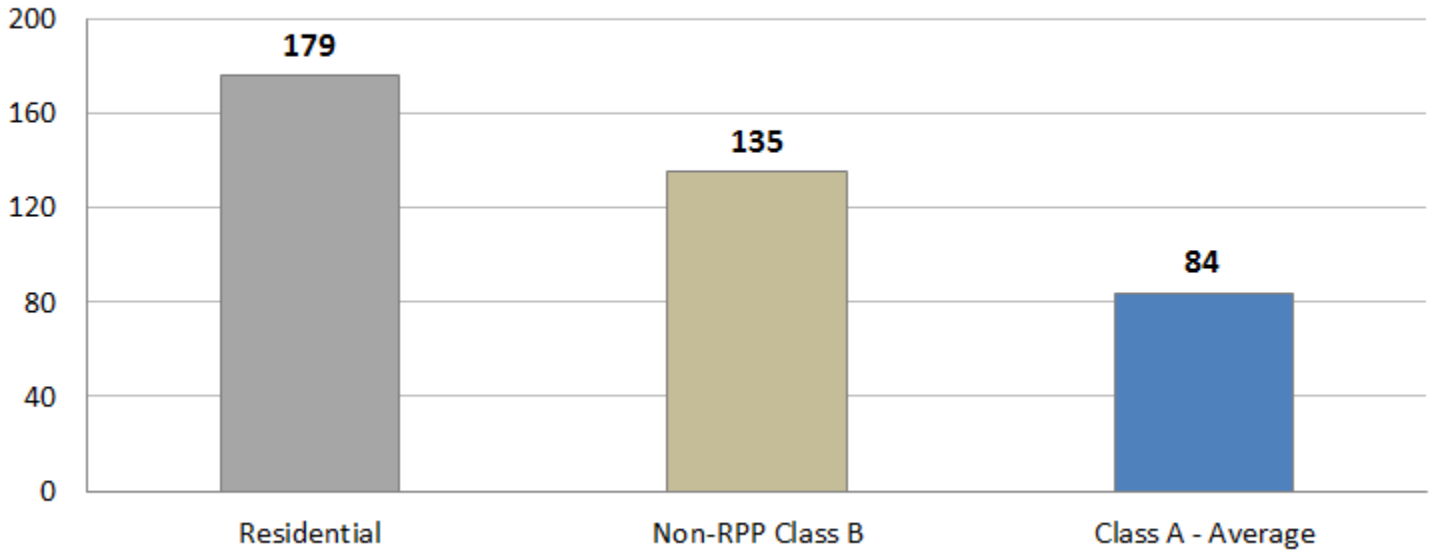
- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.
  - They account for about x% of electricity load, and pay about y% of total electricity system costs.
- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.
  - They account for about x% of electricity load, and pay about y% of total electricity system costs.
- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.
  - They account for about x% of electricity load, and pay about y% of total electricity system costs.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



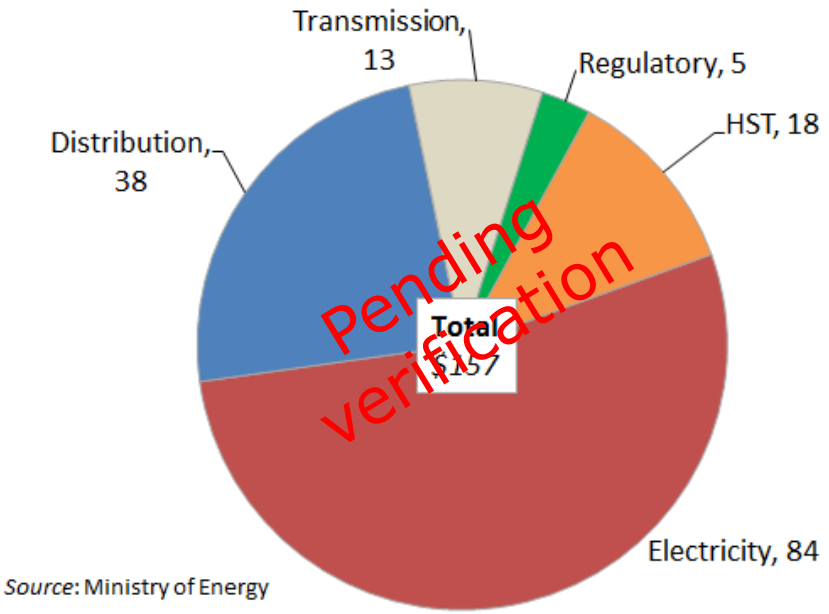
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016, to help mitigate the end of OCEB.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base, and began as of January 1, as of the end of OCEB.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



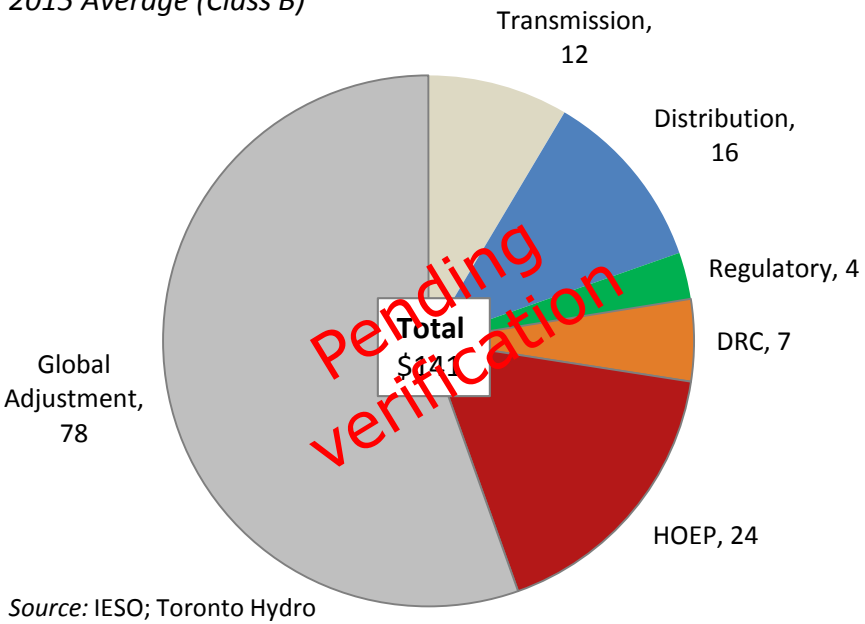
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Class B)

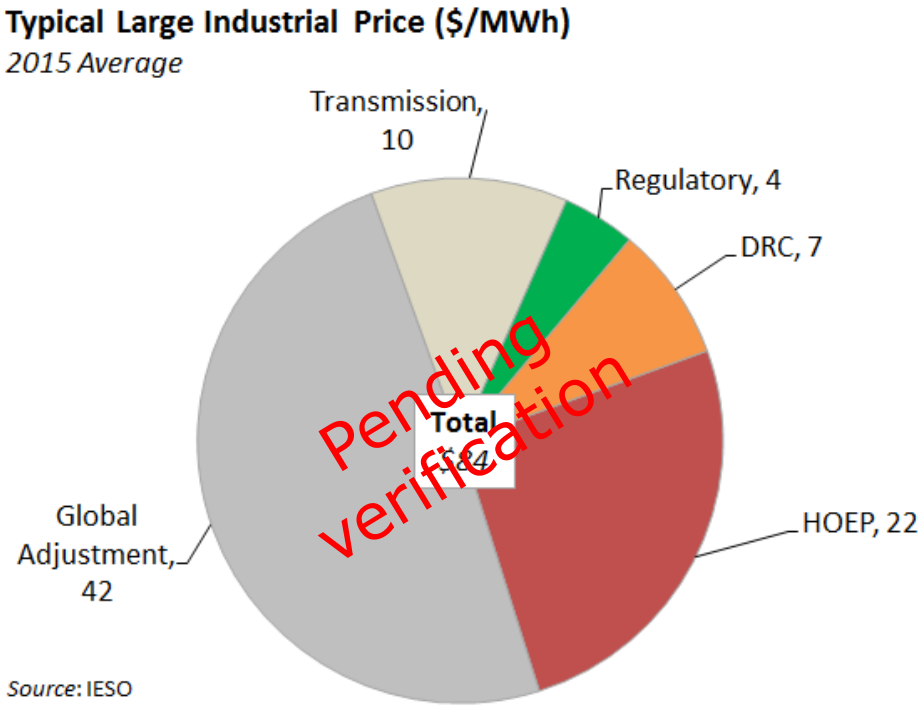


Source: IESO; Toronto Hydro

- Unlike residential and many industrial consumers, consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

2016 Budget Commitments

- The current proposal for recycling auction proceeds from the Greenhouse Gas Reduction Account (GGRA) will offsets the impact of cap and trade for industrial consumers though a volumetric mechanism and provide a rebate via the Regulated Price Plan to ensure the average residential consumer receives a reduction of $2/month.
  - To meet the 2016 Budget commitment, about $360 million would be required over the first compliance period (2017-2020) for industrial consumers and about $640 million would be required for residential consumers over the first compliance period.
  - If provincial HST is effectively removed, consumer savings will be significantly higher than the 2016 Budget commitment.

- The Climate Change Action Plan (CCAP) outlined the goals of achieving economy-wide reductions in GHGs, to “keep electricity rates affordable” by stating that cap and trade auction proceeds will be used to offset the cost of greenhouse gas (GHG) emission reduction initiatives that are currently funded by residential and industrial consumers through their bills and supporting initiatives that enable fuel-switching away from GHG emitting fuels.

HST – Key Facts

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).
- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

Rate Mitigation Levers

- Two sets of levers have been identified that could provide rate relief to various customer classes.

- These levers are outlined below. The levers are not mutually exclusive and could be pursued in various configurations. Should a combination of levers be pursued, it could reduce or eliminate the required GGRA proceeds identified under the rate-based levers.

  - **HST Levers**
    1. Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
    2. Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms).

  - **Rate-based Levers**
    1. Provide targeted business and industry support by expanding the ICI eligibility threshold to customers above 1MW in all sectors. Consideration could also be given to expanding Regulated Price Plan eligibility to include all consumers under 1 MW.
    2. Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).

Consumer Impact Summary (data to be confirmed)

Levers	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
HST Levers			*Average (750 kWh)*	*Rural (1000 kWh)*	*0.05 - 1 MW*	*1-3MW*	*Existing*	*New*
1. 8% rebate to all consumers	$1.8 billion (avg over 2017-2020)	Residential: -$440 million (2017-2020) Industrial: -$360 million (2017-2020)	-$11/ month	-$18/ month	-$12/ MWh		-$6/ MWh	
2. 8% rebate to RPP consumers	TBD (former OCEB budget was >$1 billion, annualised)	Residential: -$440 million Industrial: no change	-$11/ month	-$18/ month	No impact		-$1.90/ MWh [No Impact?]	
Rate-based levers								
1. ICI/Regulated Price Plan expansion	N/A	Residential: TBD Industrial: +$40 million (2017-2020)	-$1.26/ month	-$1.67/ month	N/A	N/A	+$0.92/ MWh	Up to $50/ MWh
2. RRRP Update	N/A	Residential: no change Industrial: no change	-$0.76 – 1.83/ month	-$12.49 – 61.42/ month	+$0.23 – 1.65/MWh		-$0.25 – 1.67/MWh	

Placeholder for Updated Data

*Change in proceeds is relative to current volumetric option, CCAP included $1.3B over the first compliance period.

Consumer Impact of Combined Levers (data to be confirmed)

Option	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
			Average (750 kWh)	*Rural (1000 kWh)*	*0.05 – 1 MW*	*1-3 MW*	*Existing*	*New*
8% rebate to all consumers + ICI/Regulated Price Plan + RRRP Update	$1.8 billion (avg over 2017-2020)	Residential: -$440 million (2017-2020) Industrial: -$360 million (2017-2020)	TBD	TBD	TBD	TBD	TBD	TBD)
8% rebate to RPP consumers + ICI/Regulated Price Plan Expansion + RRRP Update	TBD (former OCEB budget was >$1B, annualised, this option would expand eligibility)	Residential: -$440 million (2017-2020) Industrial: No change	TBD	TBD	TBD	TBD	TBD	TBD

Placeholder for Updated Data

*Change in proceeds is relative to current volumetric option, CCAP included $1.3B over the first compliance period.

.

HST Levers

HST Levers – General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates.
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates.
- Providing an 8% rebate of the provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.
- The Province may also need to change the reporting for the cost of a portion of the Ontario Sales Tax Credit (OSTC) and the energy component of the Ontario Energy and Property Tax Credit (OEPTC) to prevent overlapping revenue offsets.
  - Confirmation from Provincial Controllership is needed.
- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

HST Lever 1: 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

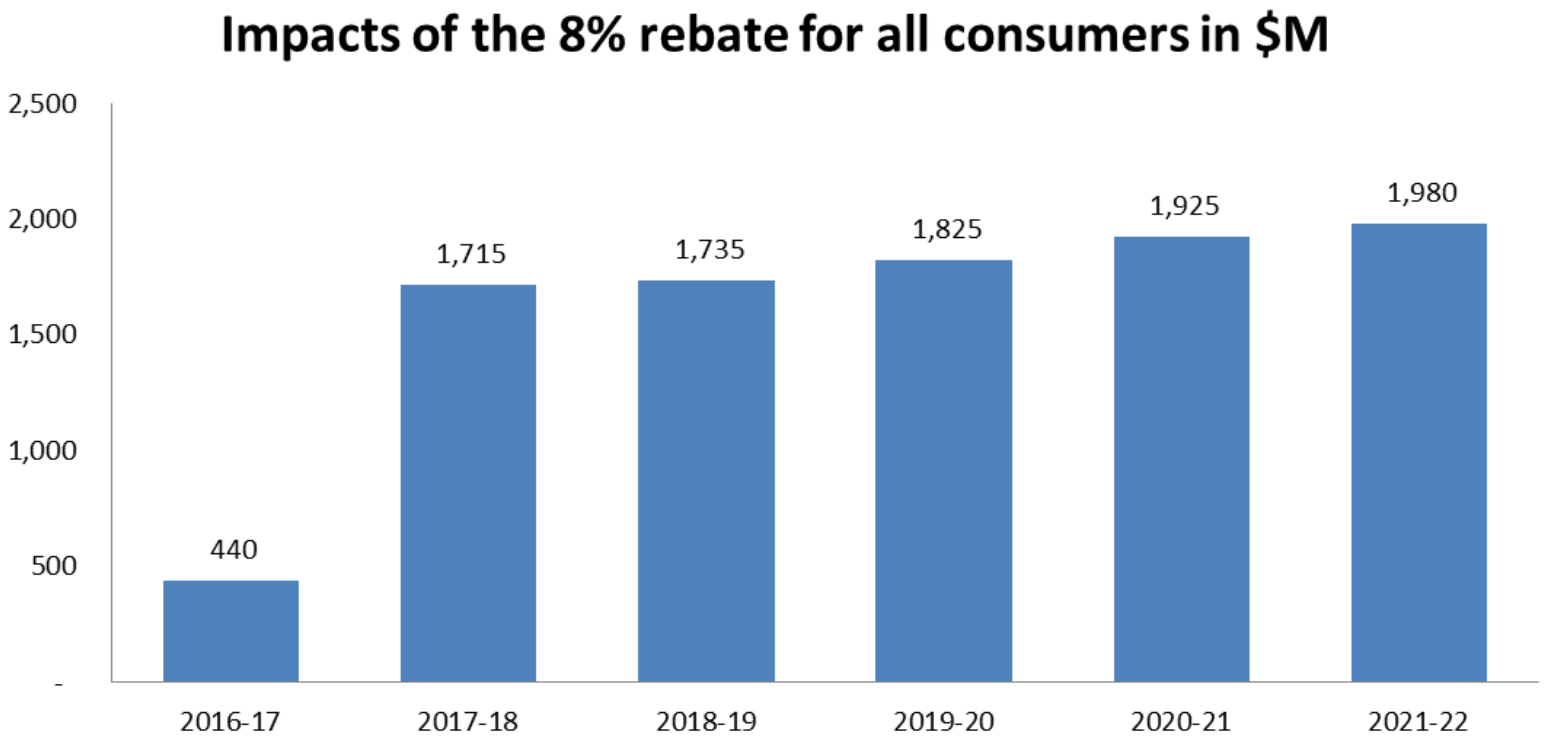
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.
  - This option would avoid stakeholder issues associated with OCEB (e.g., long-term care homes).

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

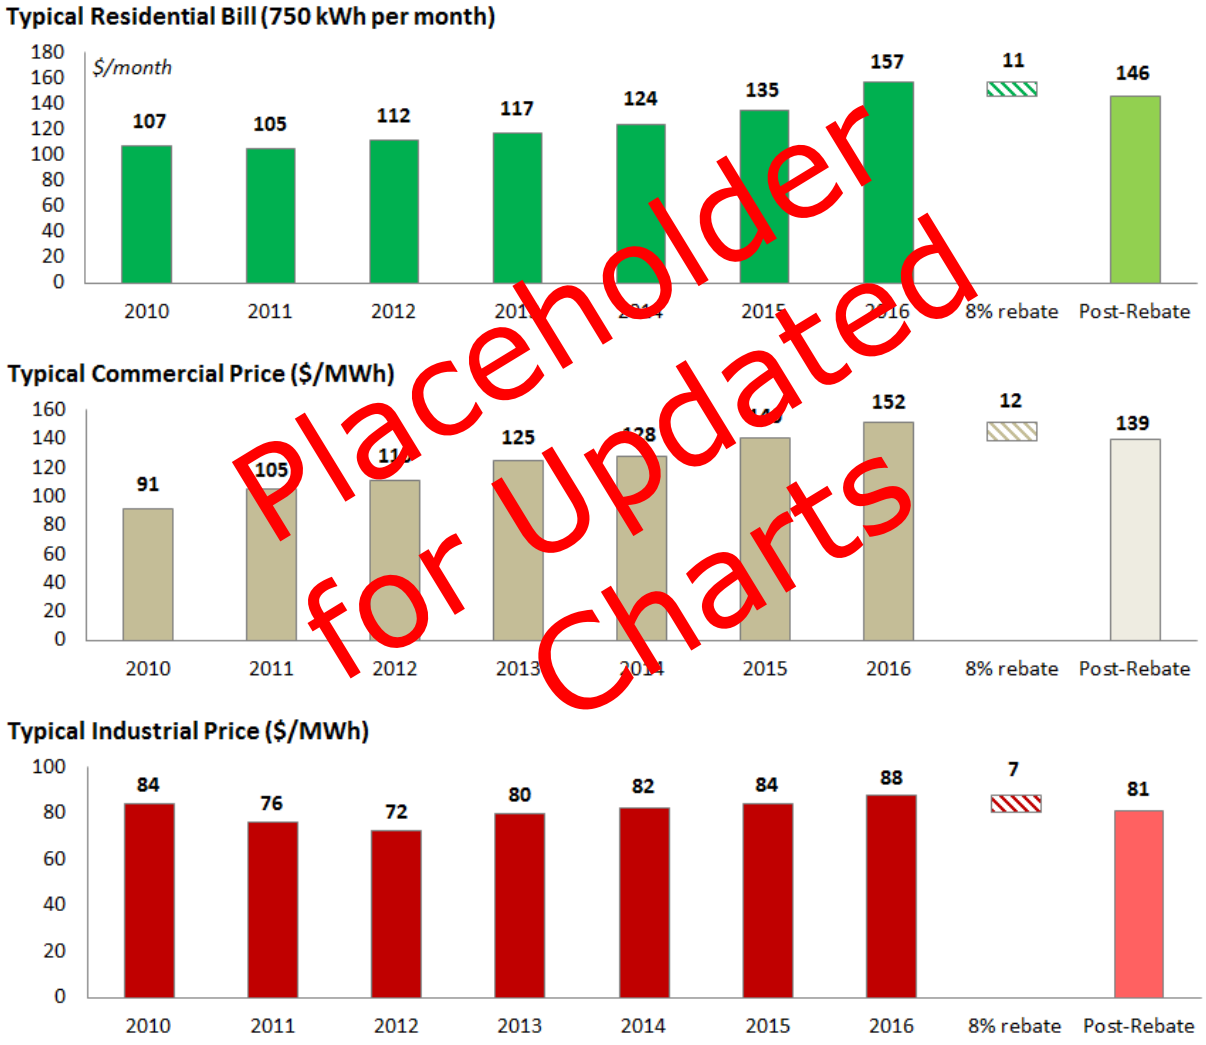
8% Rebate for All Consumers – Projected Cost

- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.



Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $11/MWh rebate.
- A $6/MWh rebate for industrial consumers would bring all-in prices below to 2010 levels.



Placeholder for Updated Charts

8% Rebate for All Consumers – Considerations

- ~~Commercial and industrial consumers would continue to receive benefit related to input tax credits~~.
- New legislation would be required.
- Detailed messaging on bills (for “low-volume” consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.
- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government’s ability to achieve fiscal balance.
  - [Rising cost of electricity over time may overshadow provincial HST price mitigation, while resulting in significant on-going fiscal costs.]

HST Lever 2: 8% Rebate for Regulated Price Plan Consumers

8% Rebate for Regulated Price Plan Consumers – Overview

- The Regulated Price Plan includes most residential, small businesses and small farms.
  - This option would have similar stakeholder issues to those under OCEB (e.g., long-term care homes).

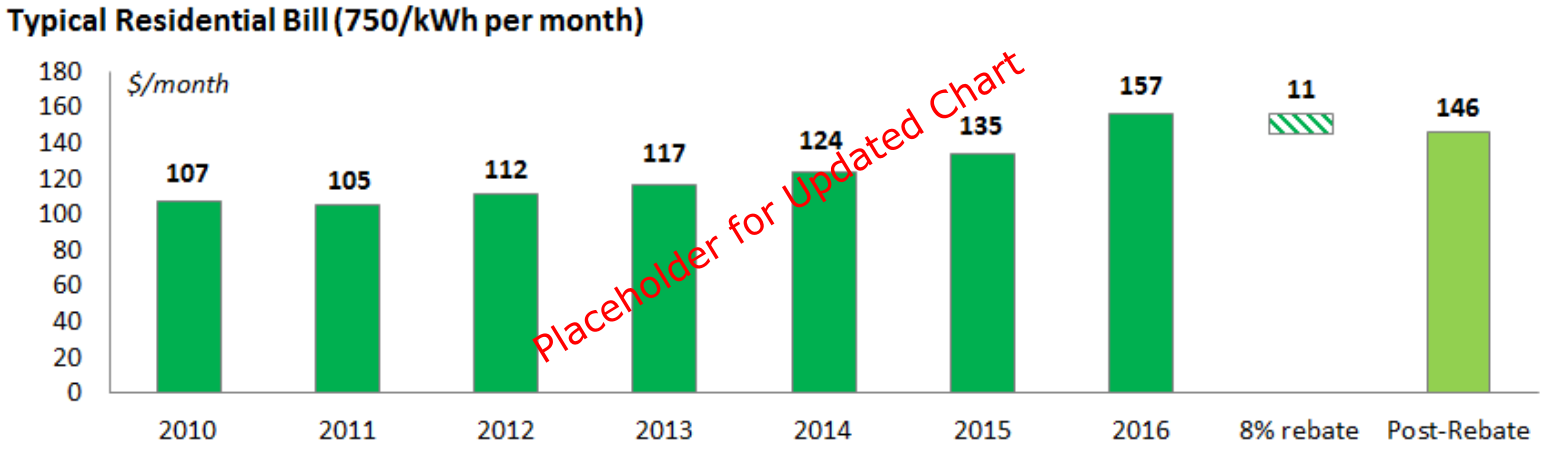
- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

Bill Impacts for Regulated Price Plan Consumers

- The chart on the right show the cumulative increase in residential bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.

- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.



Placeholder

[Monthly bill for consumer with electrical heating]

8% Rebate to Regulated Price Plan consumers – Projected Cost

- [MOF and ENERGY to develop estimate of fiscal impact]

- [**Note:** Former OCEB, which provided 10% rebate at a limit of 3,000 kWh/month to all Regulated Price Plan consumers, cost more than $1.1billion, annualised in its final year.
- Without a cap, OCEB would have cost about 30% more [TBC].
- Therefore, new program, at an 8% rebate, with on-going underlying bill increases and with no consumption limit, is expected to cost in the range of $1.1 – 1.2 billion per year. [TBC]]

Placeholder for MOF

8% Rebate for Regulated Price Plan Consumers – Considerations

- ~~Commercial and industrial consumers would continue to receive benefit related to input tax credits~~.
- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.
- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to Regulated Price Plan consumers, recycling of cap and trade proceeds to industrial consumers would still be required to meet the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.
  - The amount of proceeds required is forecast to be about $360 million over the first compliance period, which represents a reduction of $640 million from the current proceeds recycling proposal, to offset the impact for all industrial consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.
- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer and would reduce fiscal cost savings.

Rate-based Levers

Rate-based Levers – Context

- Additional rate-based relief could be provided to certain electricity consumers by shifting costs within the electricity sector.

- Below are two levers to expand existing programmes which provide relief to small industrial, large commercial and rural customers, who pay some of the highest electricity rates in the province.

    1. Targeted business and industry support: Expand ICI eligibility threshold to customers above 1MW in all sectors. Consideration may also be given to expand the Regulated price plan to include all remaining class B consumers below the 1 MW threshold not covered in the ICI expansion.

    2. Expand Rural and Remote Rate Protection (RRRP) to increase the benefit to rural customers.

- It should be noted that these levers are not mutually exclusive and could be pursued in concert and/or combined with either HST lever.

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Rate-based Lever 1 – Targeted Business and Industry Support

Targeted Business and Industry Support – Overview

- Rate relief could be provided in two components:

1. ICI expansion: Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
   - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially.

2. Regulated Price Plan expansion: If the Class B consumer base is further reduced with an expansion of ICI, it could be accompanied by an expansion of Regulated Price Plan to consumers up to 1 MW.
   - This would address public criticism associated with the non-blended rate (e.g., complaints about high Global Adjustment (GA) charges), increase efficiency by implementing time-of-use rates for all small consumers, and simplify bills.
   - Combining a Regulated Price Plan expansion with HST Lever 2 would substantially increase the impact on the fiscal plan **(amount of impact TBD ≈ 80-90% increase, TBC)**

Targeted Business and Industry Support – ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

Targeted Business and Industry Support – ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

Targeted Business and Industry Support – Regulated Price Plan Expansion

- Current non-Regulated Price Plan Class B consumers are billed average HOEP along with the Class B GA rate (in $/MWh) monthly by the IESO. With an expansion of the Regulated Price Plan to 1MW, these consumers would pay time-of-use (TOU) prices.

- The expected bill impacts for newly eligible Regulated Price Plan consumers would vary according to the type of consumer. For example, an medium size office building has a different hourly load shape throughout the year compared to a small hospital.

- While some consumers would be worse off under TOU rates, consumers that shift consumption away from peak periods will be able to achieve cost reductions that are not possible with volumetric Class B GA charges.

- The OEB has previously stated a preference for shaping the GA charges for Class B consumers as it would promote more efficient behaviour and better reflect the cost of electricity during different periods. Moving the RPP threshold up to 1MW could help achieve this goal.

Targeted Business and Industry Support – Considerations

ICI expansion:

- Compared to a 8% tax funded rebate for all consumers, combining this option with HST Lever 2 would represent a lower fiscal impact.
- Relative to the status quo, existing Class A consumers would experience a small increase in the price they pay.
- Amendments to *O. Reg. 429/04* (made under the Electricity Act, 1998) would be required.
- Expanding ICI to 1 MW is expected to increase consumption from Class A consumers by about 10%. This would require an increase of an estimated $40 million in proceeds recycling over the first compliance period, in addition to the current $360 million in order to offset the impact for all large industrial consumers.

Regulated Price Plan expansion:

- Amendments to *O. Reg. 442/04* (made under the Electricity Act, 1998) would be required.
- Some consumers would see price increases compared to their current Class B rates. Combining an Regulated Price Plan expansion with HST Lever 2 could alleviate concerns over these potential increases, but would increase the impact on the fiscal plan **(amount of impact TBD)**.

Rate-based Lever 2 – RRRP Update

Rural or Remote Rate Protection (RRRP) Update

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations. The cost of distributing power to lower-density rural and remote areas is much higher than for urban and higher-density areas.
- Today, RRRP is a $175 million program collected via a 0.13 cents/kWh charge to all Ontario consumers (e.g. residential, commercial, industrial).
  - For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. (There are approximately 329,000 R2 customers).
  - The current program provides a monthly subsidy for R2 customers of $31.50. Even with the RRRP subsidy, R2 customers have one of the highest monthly bills in the province. An average bill (based on the median consumption level for R2 customers of 1,000kWh/month) is $229.
  - In comparison, the provincial average (using 1,000kWh) is ~$169 – a $60 difference.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen. There may be opportunity to evaluate current levels of support and increase subsidy levels to bring R2 customers bills closer in line with average costs across the province.
  - New support levels could range from an additional $10-$60 per month for R2 customers –which would result an incremental monthly impact for an average residential consumer of $0.17 up to $1.24.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan.

Appendix – ICI

Industrial Conservation Initiative

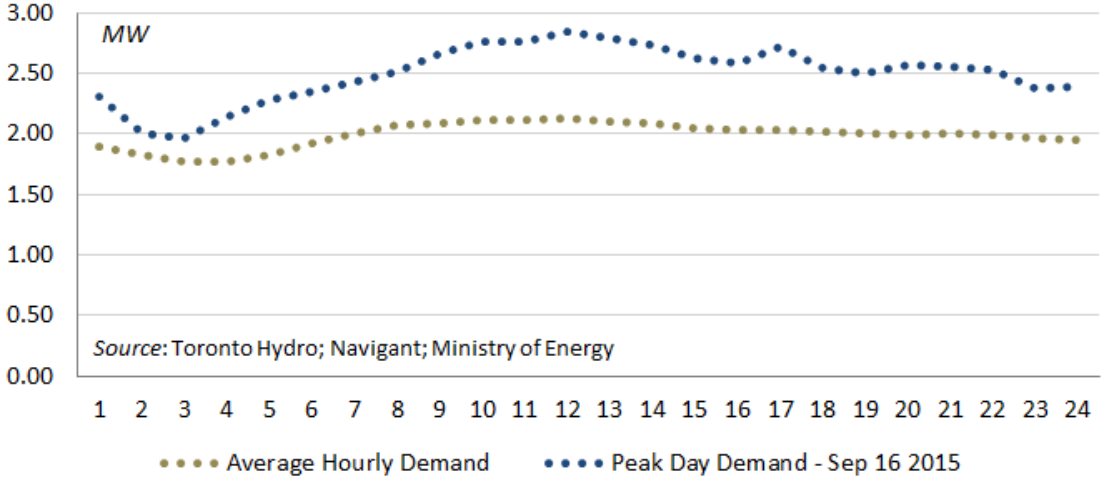
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

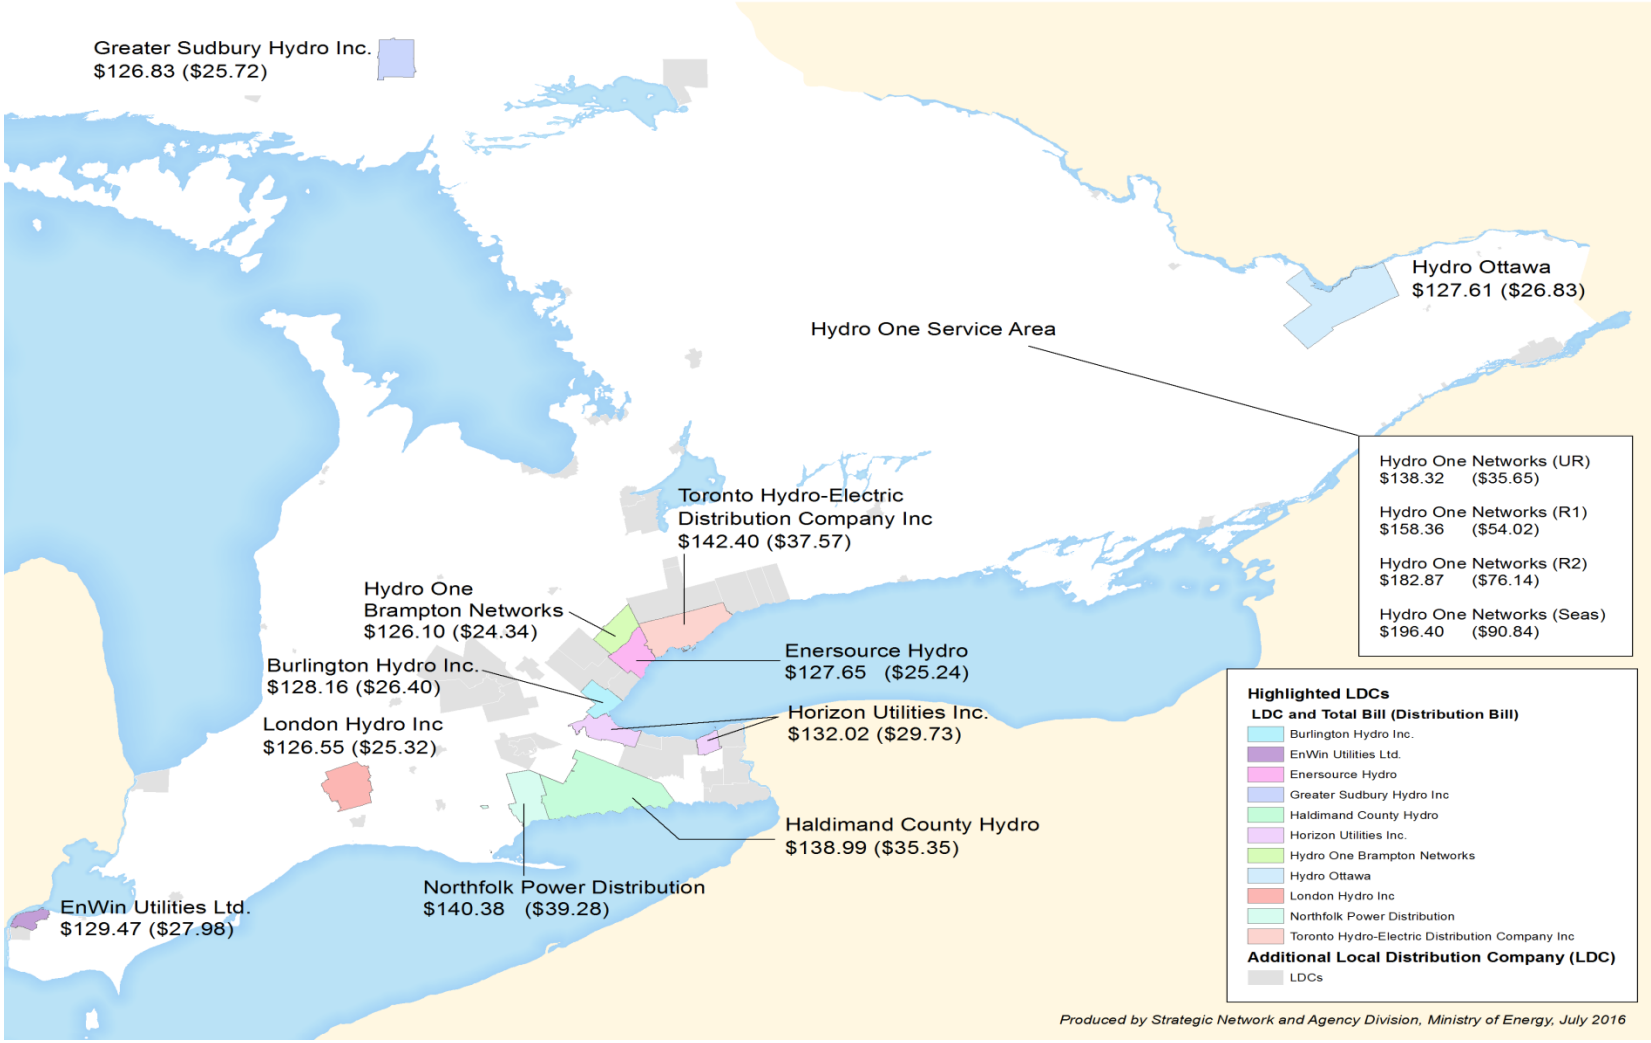
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

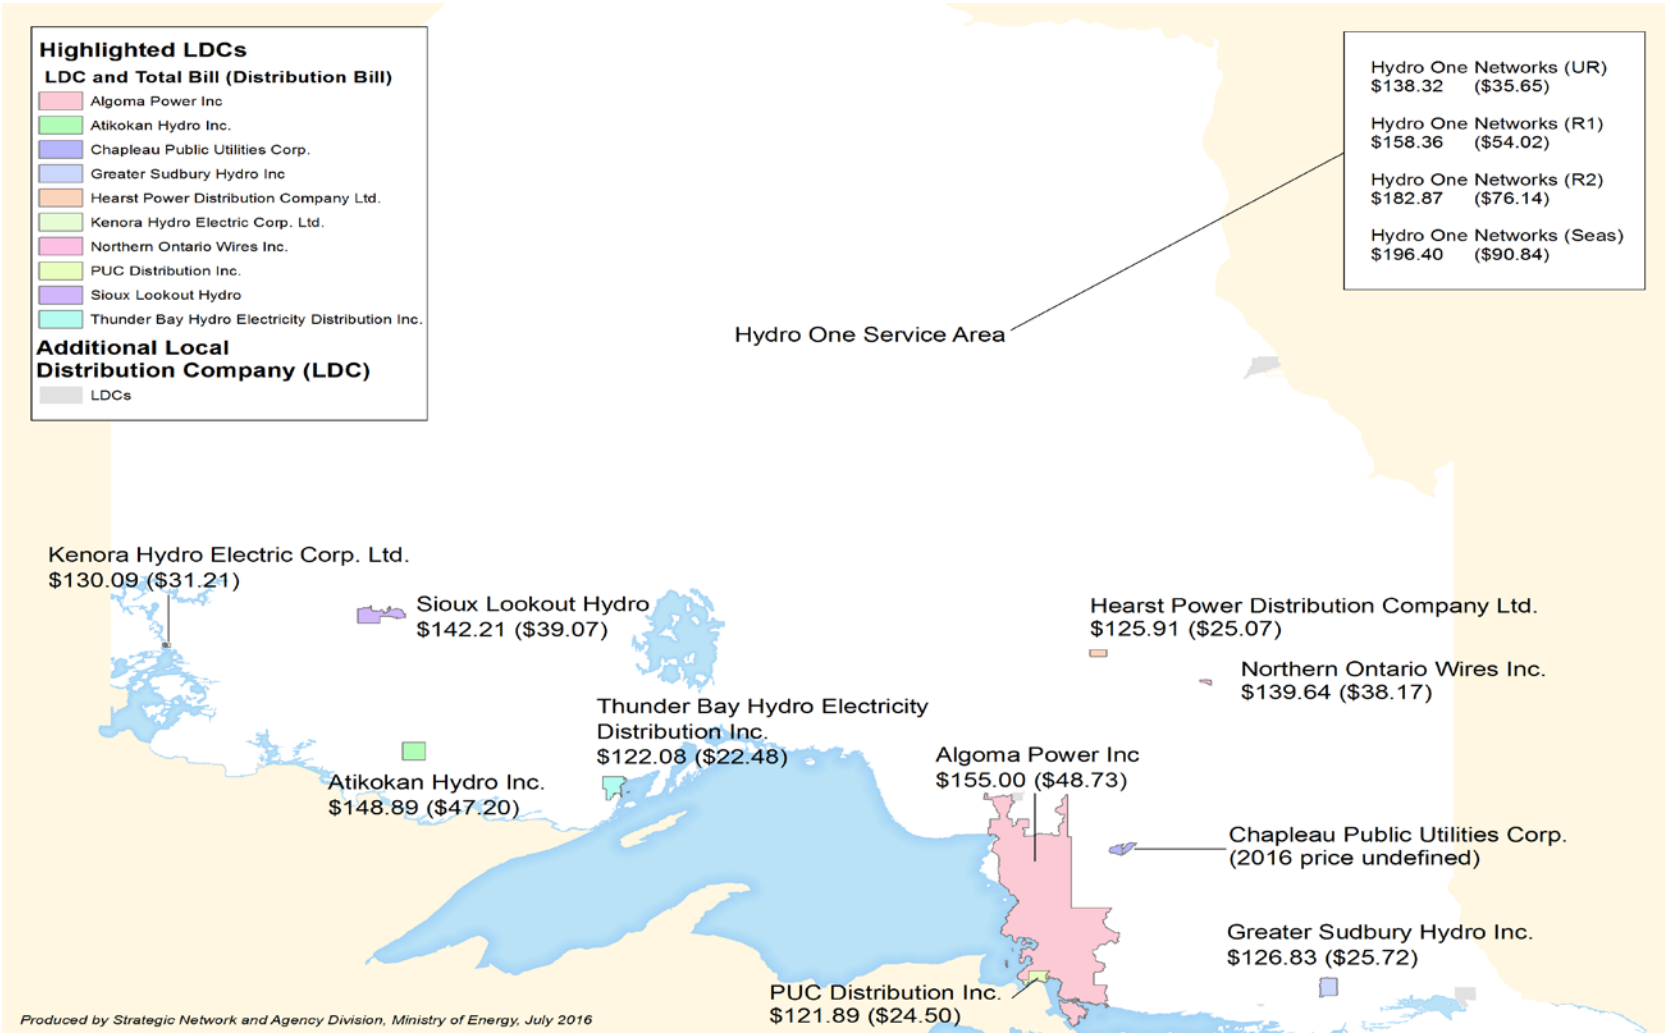
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental Costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism (see slide 25)
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Ontario

MINISTRY OF
ENERGY

Electricity Price Mitigation

Working Draft

August , 2016

Context

- Since 2003, we have invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Electricity costs are increasing because we are making the necessary investments to modernize the province's electricity infrastructure.

- We chose to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

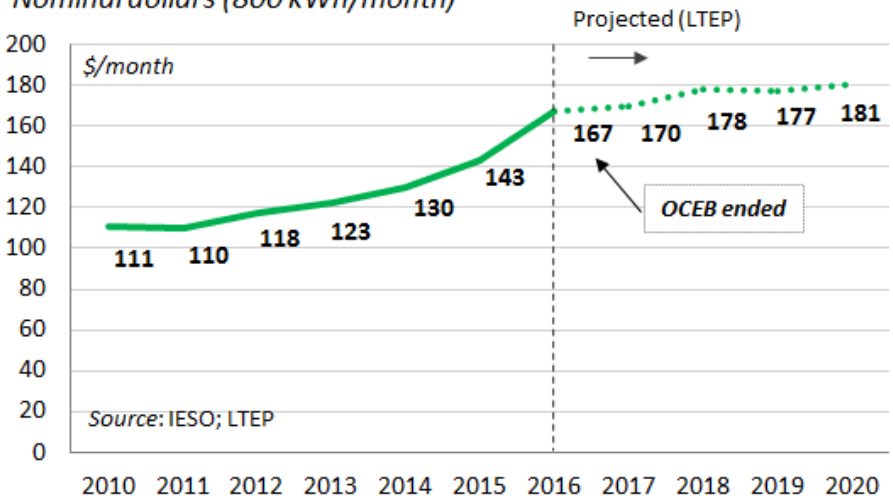
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

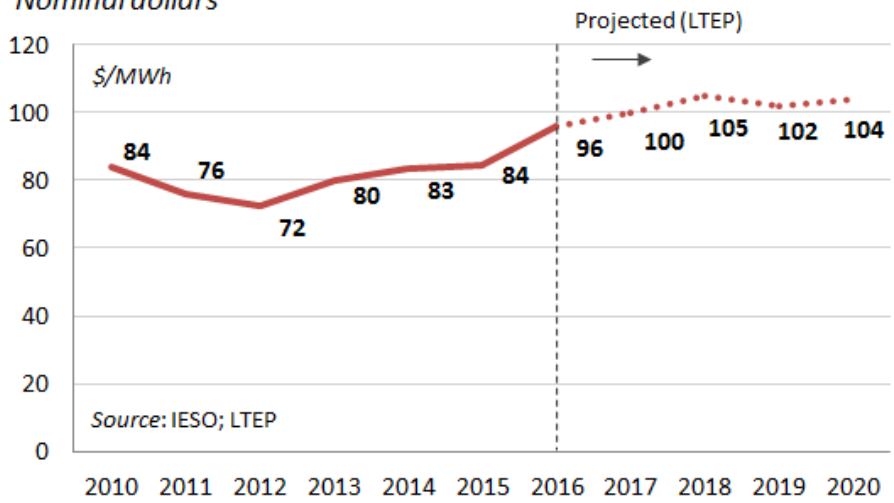
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
< 0.05 MW	0.05 – 3 MW	3+ MW

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

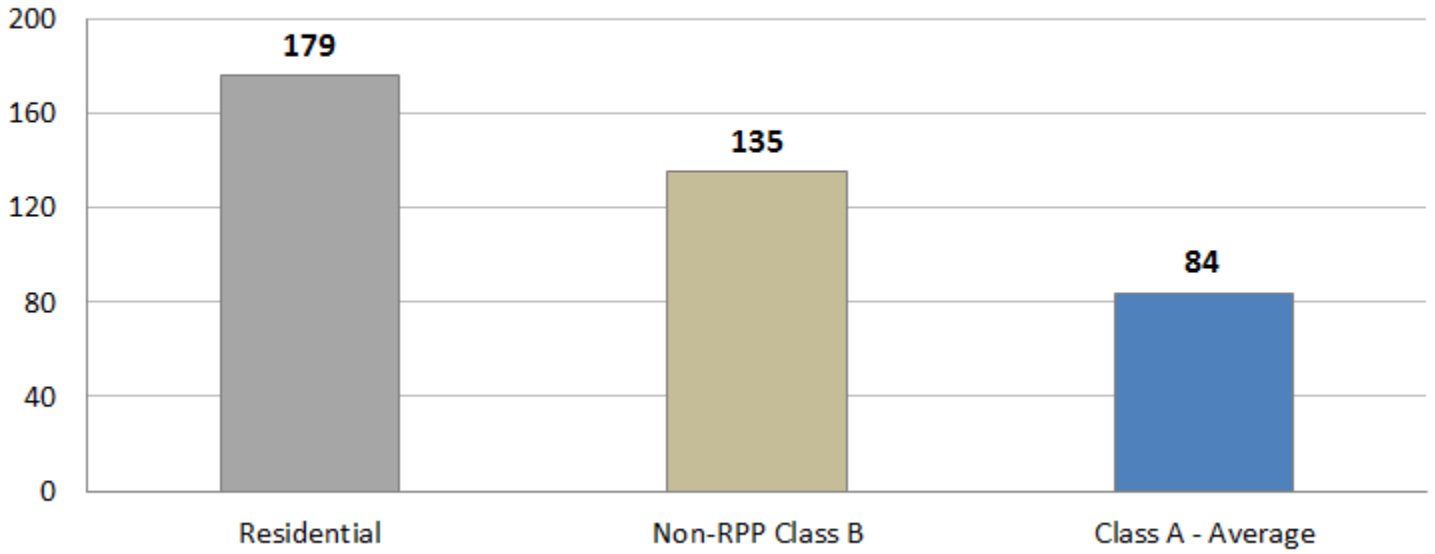
- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



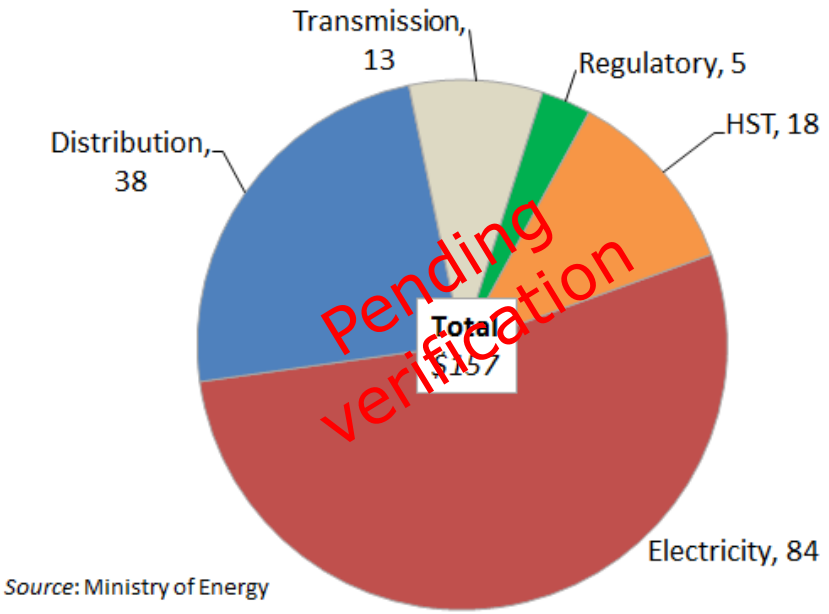
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



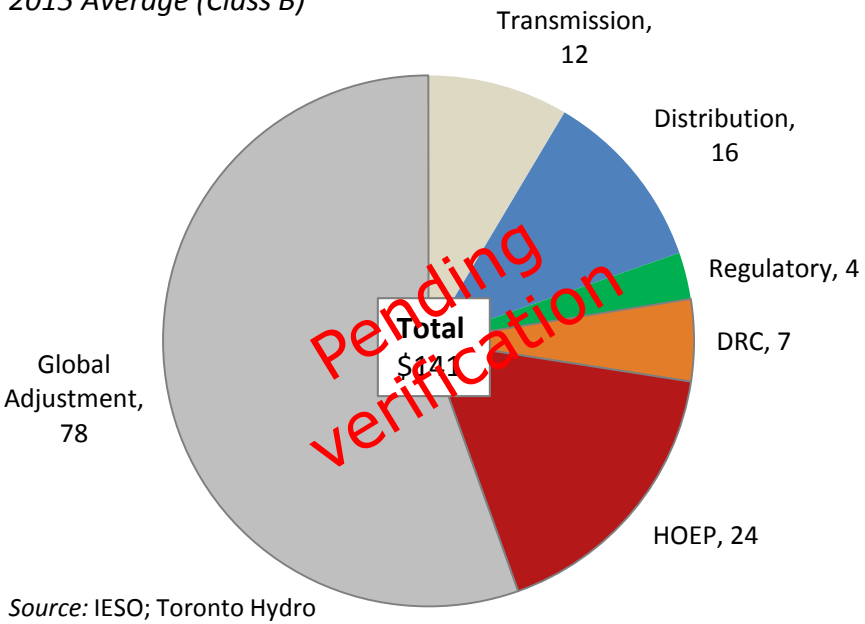
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Class B)

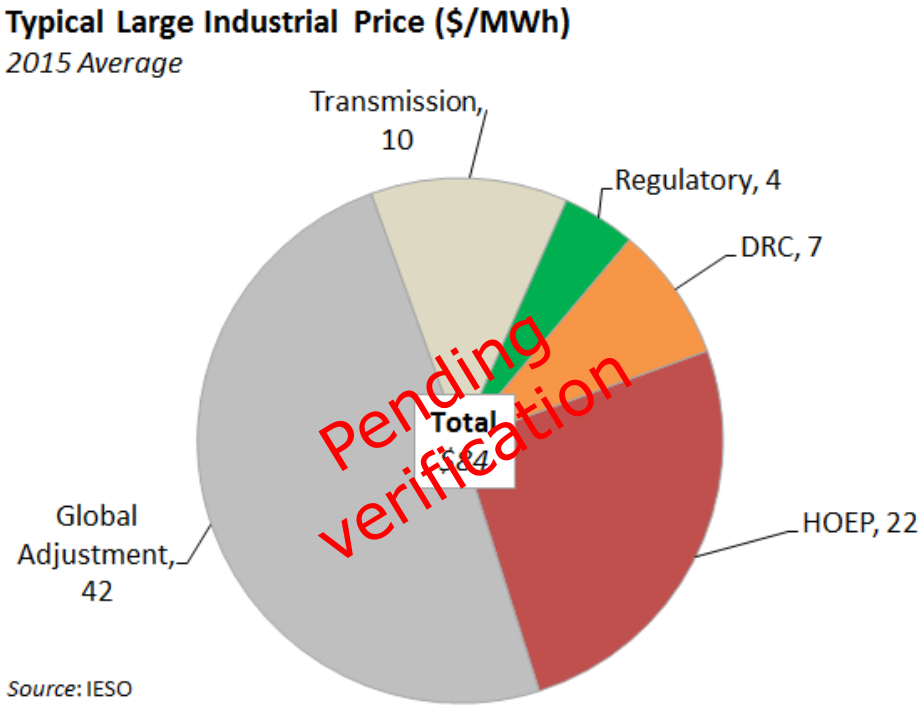


Source: IESO; Toronto Hydro

- Unlike residential and many industrial consumers, consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

2016 Budget Commitments

- The current proposal for recycling auction proceeds from the Greenhouse Gas Reduction Account (GGRA) will offsets the impact of cap and trade for industrial consumers though a volumetric mechanism and provide a rebate via the Regulated Price Plan to ensure the average residential consumer receives a reduction of $2/month.
  - To meet the 2016 Budget commitment, about $360 million would be required over the first compliance period (2017-2020) for industrial consumers and about $640 million would be required for residential consumers over the first compliance period.
  - If HST is effectively removed, consumer savings will be significantly higher than the 2016 Budget commitment.

- The Climate Change Action Plan (CCAP) outlined the goals of achieving economy-wide reductions in GHGs, to “keep electricity rates affordable” by stating that cap and trade auction proceeds will be used to offset the cost of greenhouse gas (GHG) emission reduction initiatives that are currently funded by residential and industrial consumers through their bills and supporting initiatives that enable fuel-switching away from GHG emitting fuels.

HST – Key Facts

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).
- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

Rate Mitigation Levers

- Two sets of levers have been identified that could provide rate relief to various customer classes.

- These levers are outlined below. The levers are not mutually exclusive and could be pursued in various configurations. Should a combination of levers be pursued, it could reduce or eliminate the required GGRA proceeds identified under the rate-based levers.

  - **HST Levers**
    1. Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
    2. Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms).

  - **Rate-based Levers**
    1. Provide targeted business and industry support by expanding the ICI eligibility threshold to customers above 1MW in all sectors. Consideration could also be given to expanding Regulated Price Plan eligibility to include all consumers under 1 MW.
    2. Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).

Consumer Impact Summary (data to be confirmed)

Levers	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
HST Levers			*Average (750 kWh)*	*Rural (1000 kWh)*	*0.05 - 1 MW*	*1-3MW*	*Existing*	*New*
1. 8% rebate to all consumers	$1.8 billion (avg over 2017-2020)	Residential: -$440 million (2017-2020) Industrial: -$360 million (2017-2020)	-$11/ month	-$18/ month	-$12/ MWh		-$6/ MWh	
2. 8% rebate to RPP consumers	TBD (former OCEB budget was $1 billion)	Residential: -$440 million Industrial: no change	-$11/ month	-$18/ month	No impact		-$1.90/ MWh	
Rate-based levers								
1. ICI/Regulated Price Plan expansion	N/A	Residential: TBD Industrial: +$40 million (2017-2020)	-$1.26/ month	-$1.67/ month	N/A	N/A	+$0.92/ MWh	Up to $50/ MWh
2. RRRP Update	N/A	Residential: no change Industrial: no change	-$0.76 – 1.83/ month	-$12.49 – 61.42/ month	+$0.23 – 1.65/MWh		-$0.25 – 1.67/MWh	

Placeholder for Updated Data

*Change in proceeds is relative to current volumetric option, CCAP included $1.3B over the first compliance period.

Consumer Impact of Combined Levers (data to be confirmed)

Option	Avg Annual Fiscal Impact	GGRA Proceeds Impact*	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
			Average (750 kWh)	*Rural (1000 kWh)*	*0.05 – 1 MW*	*1-3 MW*	*Existing*	*New*
8% rebate to all consumers + ICI/Regulated Price Plan + RRRP Update	$1.8 billion (avg over 2017-2020)	Residential: -$440 million (2017-2020) Industrial: -$360 million (2017-2020)	TBD	TBD	TBD	TBD	TBD	TBD)
8% rebate to RPP consumers + ICI/Regulated Price Plan Expansion + RRRP Update	TBD (former OCEB budget was $1B, this option would expand eligibility)	Residential: -$440 million (2017-2020) Industrial: No change	TBD	TBD	TBD	TBD	TBD	TBD

Placeholder for Updated Data

*Change in proceeds is relative to current volumetric option, CCAP included $1.3B over the first compliance period.

.

HST Levers

HST Levers – General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates.
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates.
- Providing an 8% rebate of the provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.
- The Province may also need to change the reporting for the cost of a portion of the Ontario Sales Tax Credit (OSTC) and the energy component of the Ontario Energy and Property Tax Credit (OEPTC) to prevent overlapping revenue offsets.
  - Confirmation from Provincial Controllership is needed.
- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

HST Lever 1: 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

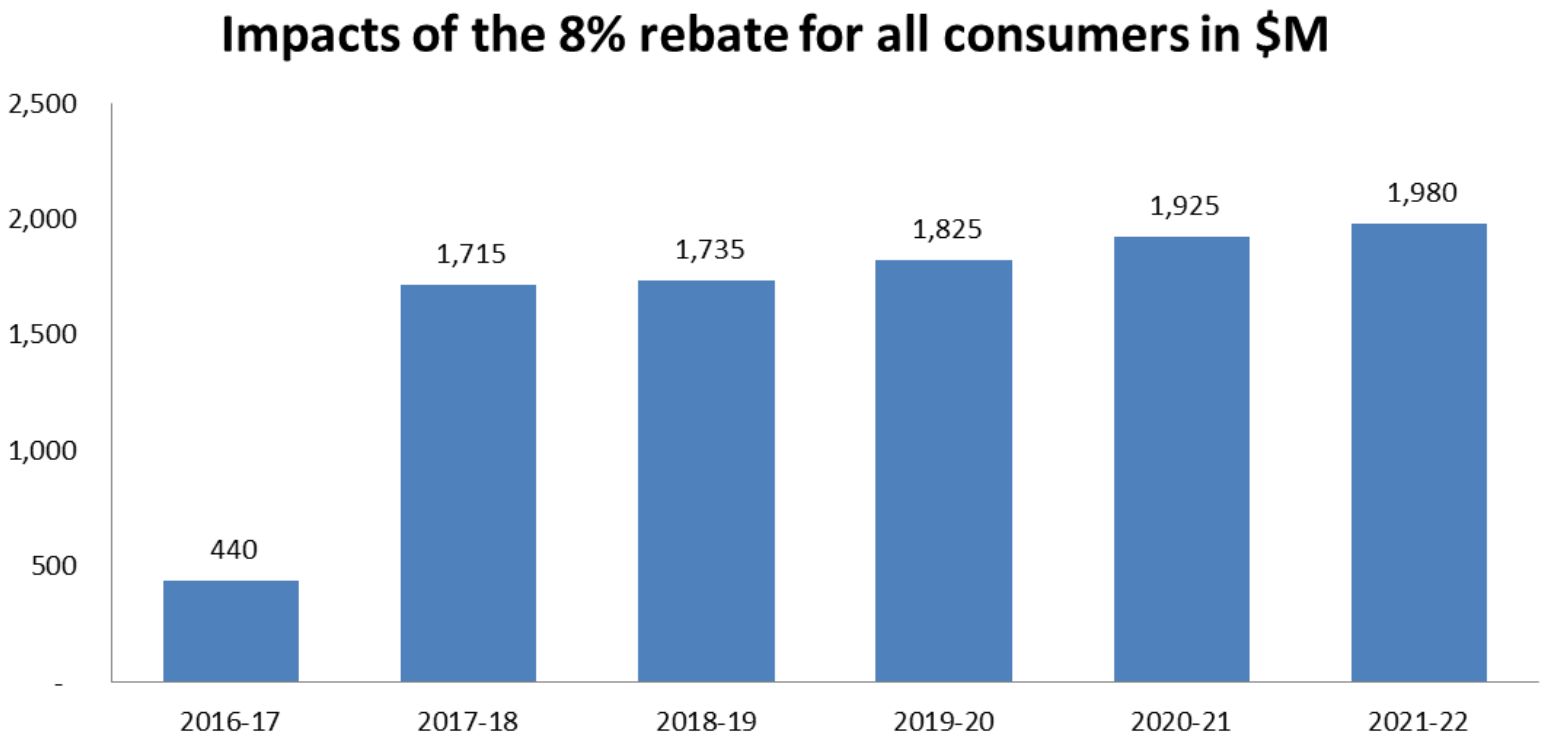
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.
  - This option would avoid stakeholder issues associated with OCEB (e.g., long-term care homes).

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

8% Rebate for All Consumers – Projected Cost

- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.

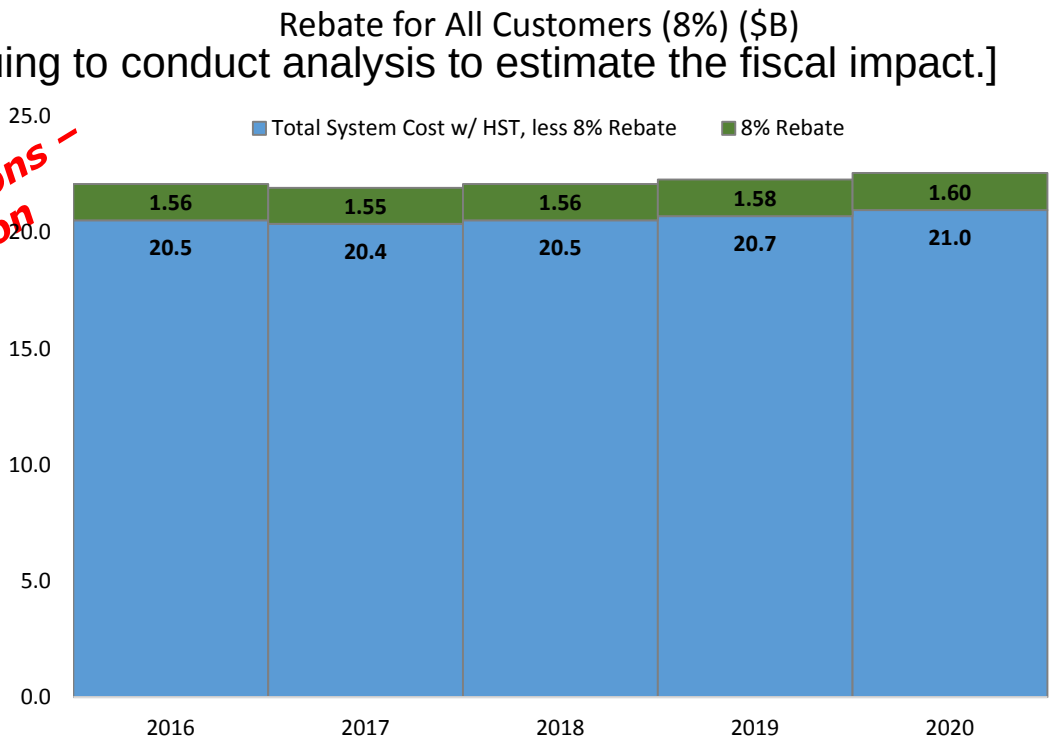


8% Rebate for All Consumers – Projected Cost

- The cost of electricity service would influence the cost of providing an 8% rebate. System cost is expected to increase over the next five years.
- [MOF continuing to conduct analysis to estimate the fiscal impact.]

Placeholder for MOF

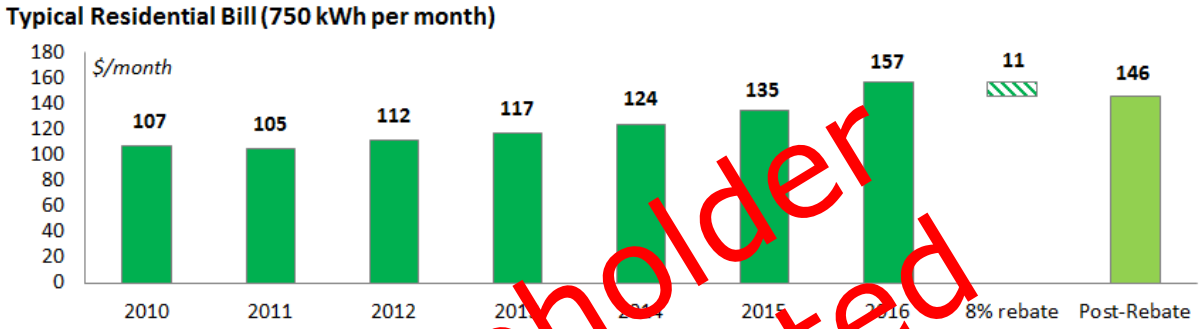
Internal CEFD Calculations – Require Fiscalization

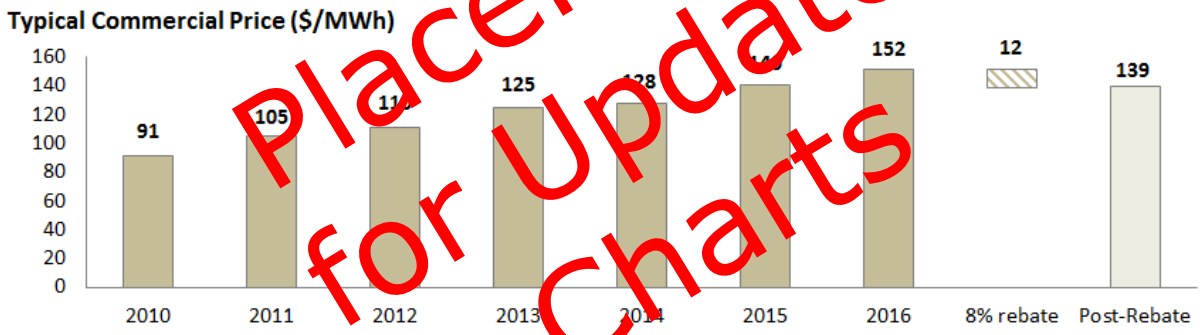


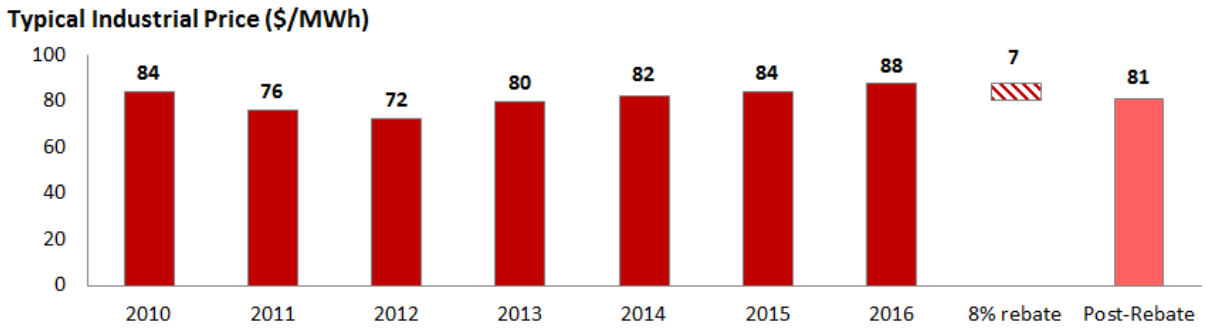
Source: Long-Term Energy Plan Module, Total Cost of Electricity Service, with adjustments from OEFC Outlook for the removal of DRC for Residential beginning January 1, 2016 and all other users April 1, 2018

Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $11/MWh rebate.
- A $6/MWh rebate for industrial consumers would bring all-in prices below to 2010 levels.







Placeholder for Updated Charts

8% Rebate for All Consumers – Considerations

- ~~Commercial and industrial consumers would continue to receive benefit related to input tax credits~~.
- New legislation would be required.
- Detailed messaging on bills (for “low-volume” consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.
- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government’s ability to achieve fiscal balance.
  - [Rising cost of electricity is likely to overwhelm any efforts at price mitigation while resulting in significant fiscal costs and/or risk to path to balance efforts.]

HST Lever 2: 8% Rebate for Regulated Price Plan Consumers

8% Rebate for Regulated Price Plan Consumers – Overview

- The Regulated Price Plan includes most residential, small businesses and small farms.
  - This option would have similar stakeholder issues to those under OCEB (e.g., long-term care homes).

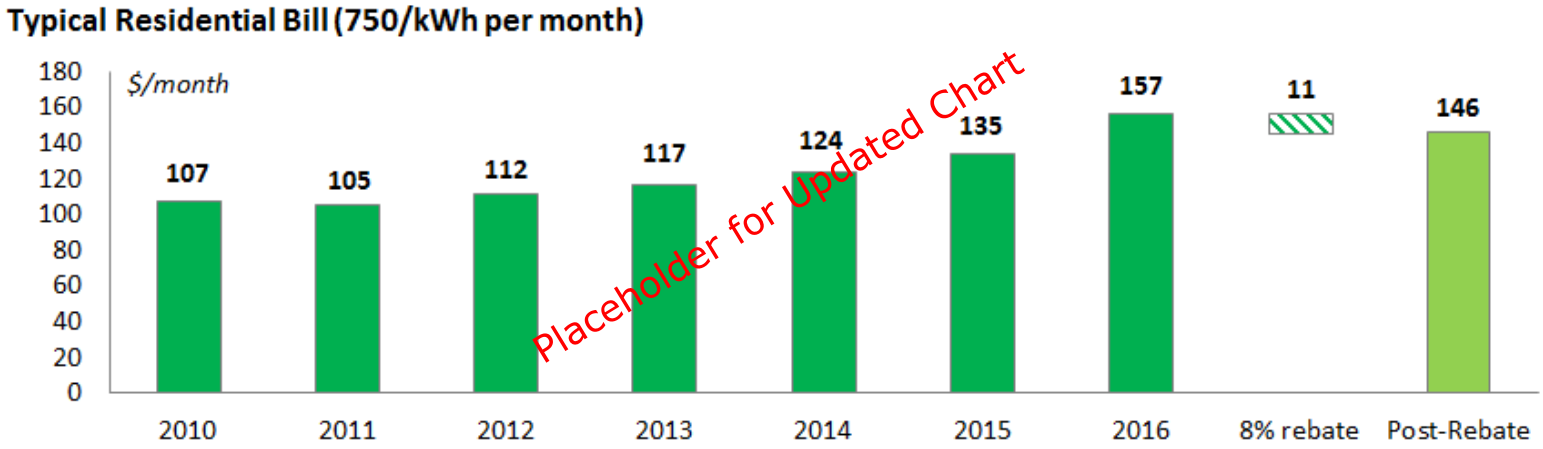
- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

Bill Impacts for Regulated Price Plan Consumers

- The chart on the right show the cumulative increase in residential bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.

- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.



Placeholder

[Monthly bill for consumer with electrical heating]

8% Rebate to Regulated Price Plan consumers – Projected Cost

- [MOF and ENERGY to develop estimate of fiscal impact]

- [**Note:** Former OCEB, which provided 10% rebate at a limit of 3,000 kWh/month to all Regulated Price Plan consumers, cost $1billion. Therefore new program with no consumption limit is expected to cost in the range of $1billion.]

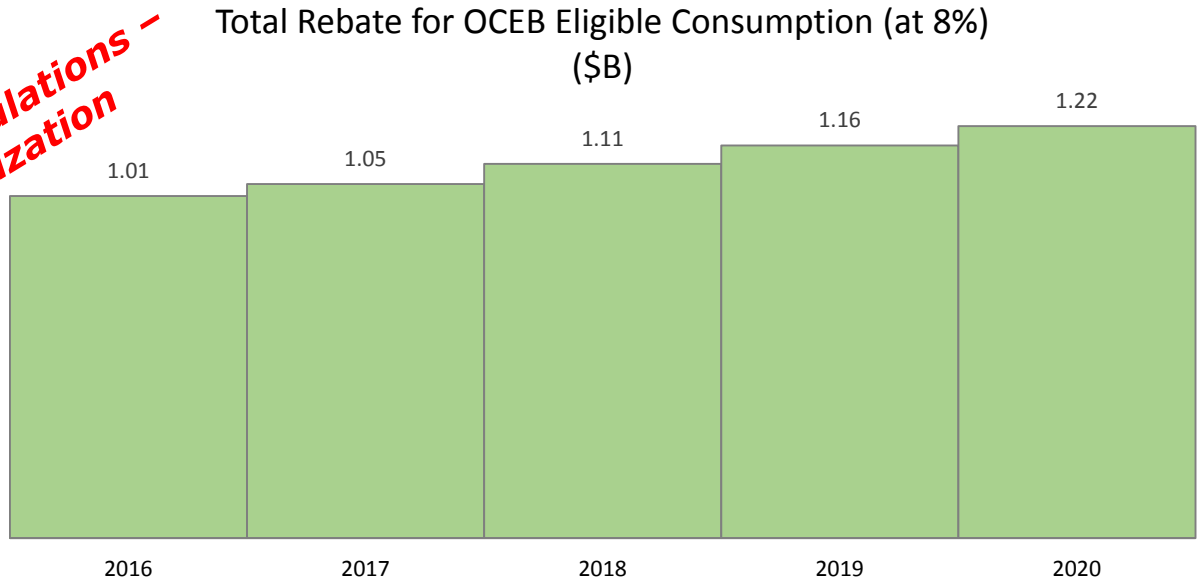
Placeholder for MOF

8% Rebate to Regulated Price Plan consumers – Projected Cost

- [MOF and ENERGY to develop estimate of fiscal impact]

- [**Note:** Former OCEB, which provided 10% rebate at a limit of 3,000 kWh/month to all Regulated Price Plan consumers, cost about $1.2 billion, annualised, in its final year. Therefore new program, at 8% rebate, with no consumption limit is expected to cost in the range of $1-1.2 billion per year.]

Internal CEFD Calculations – Require Fiscalization



Source: CEFD Internal OCEB Model with Long-Term Energy Plan Residential Price forecasts adjusted for removal of DRC for Residential users beginning January 1, 2016.
Note: Assume 8% Reduction applied to Total Bill Before Taxes, unlike OCEB which was applied after taxes.

8% Rebate for Regulated Price Plan Consumers – Considerations

- ~~Commercial and industrial consumers would continue to receive benefit related to input tax credits~~.
- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.
- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)
- Under this option, which would provide a benefit to Regulated Price Plan consumers, recycling of cap and trade proceeds to industrial consumers would still be required to meet the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.
  - The amount of proceeds required is forecast to be about $360 million over the first compliance period, which represents a reduction of $640 million from the current proceeds recycling proposal, to offset the impact for all industrial consumers.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.
- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Rate-based Levers

Rate-based Levers – Context

- Additional rate-based relief could be provided to certain electricity consumers by shifting costs within the electricity sector.

- Below are two levers to expand existing programmes which provide relief to small industrial, large commercial and rural customers, who pay some of the highest electricity rates in the province.

    1. Targeted business and industry support: Expand ICI eligibility threshold to customers above 1MW in all sectors. Consideration may also be given to expand the Regulated price plan to include all remaining class B consumers below the 1 MW threshold not covered in the ICI expansion.

    2. Expand Rural and Remote Rate Protection (RRRP) to increase the benefit to rural customers.

- It should be noted that these levers are not mutually exclusive and could be pursued in concert and/or combined with either HST lever.

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Rate-based Lever 1 – Targeted Business and Industry Support

Targeted Business and Industry Support – Overview

- Rate relief could be provided in two components:

1. ICI expansion: Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
   - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially.

2. Regulated Price Plan expansion: If the Class B consumer base is further reduced with an expansion of ICI, it could be accompanied by an expansion of Regulated Price Plan to consumers up to 1 MW.
   - This would address public criticism associated with the non-blended rate (e.g., complaints about high Global Adjustment (GA) charges), increase efficiency by implementing time-of-use rates for all small consumers, and simplify bills.

Targeted Business and Industry Support – ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

Targeted Business and Industry Support – ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

Targeted Business and Industry Support – Regulated Price Plan Expansion

- Current non-Regulated Price Plan Class B consumers are billed average HOEP along with the Class B GA rate (in $/MWh) monthly by the IESO. With an expansion of the Regulated Price Plan to 1MW, these consumers would pay time-of-use (TOU) prices.

- The expected bill impacts for newly eligible Regulated Price Plan consumers would vary according to the type of consumer. For example, an medium size office building has a different hourly load shape throughout the year compared to a small hospital.

- While some consumers would be worse off under TOU rates, consumers that shift consumption away from peak periods will be able to achieve cost reductions that are not possible with volumetric Class B GA charges.

- The OEB has previously stated a preference for shaping the GA charges for Class B consumers as it would promote more efficient behaviour and better reflect the cost of electricity during different periods. Moving the RPP threshold up to 1MW could help achieve this goal.

Targeted Business and Industry Support – Considerations

ICI expansion:

- Compared to a 8% tax funded rebate for all consumers, combining this option with HST Lever 2 would represent a lower fiscal impact.
- Relative to the status quo, existing Class A consumers would experience a small increase in the price they pay.
- Amendments to *O. Reg. 429/04* (made under the Electricity Act, 1998) would be required.
- Expanding ICI to 1 MW is expected to increase consumption from Class A consumers by about 10%. This would require an increase of an estimated $40 million in proceeds recycling over the first compliance period, in addition to the current $360 million in order to offset the impact for all large industrial consumers.

Regulated Price Plan expansion:

- Amendments to *O. Reg. 442/04* (made under the Electricity Act, 1998) would be required.
- Some consumers would see price increases compared to their current Class B rates. Combining an Regulated Price Plan expansion with HST Lever 2 could alleviate concerns over these potential increases, but would increase the impact on the fiscal plan **(amount of impact TBD)**.

Rate-based Lever 2 – RRRP Update

Rural or Remote Rate Protection (RRRP) Update

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations. The cost of distributing power to lower-density rural and remote areas is much higher than for urban and higher-density areas.
- Today, RRRP is a $175 million program collected via a 0.13 cents/kWh charge to all Ontario consumers (e.g. residential, commercial, industrial).
  - For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. (There are approximately 329,000 R2 customers).
  - The current program provides a monthly subsidy for R2 customers of $31.50. Even with the RRRP subsidy, R2 customers have one of the highest monthly bills in the province. An average bill (based on the median consumption level for R2 customers of 1,000kWh/month) is $229.
  - In comparison, the provincial average (using 1,000kWh) is ~$169 – a $60 difference.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen. There may be opportunity to evaluate current levels of support and increase subsidy levels to bring R2 customers bills closer in line with average costs across the province.
  - New support levels could range from an additional $10-$60 per month for R2 customers –which would result an incremental monthly impact for an average residential consumer of $0.17 up to $1.24.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan.

Appendix – ICI

Industrial Conservation Initiative

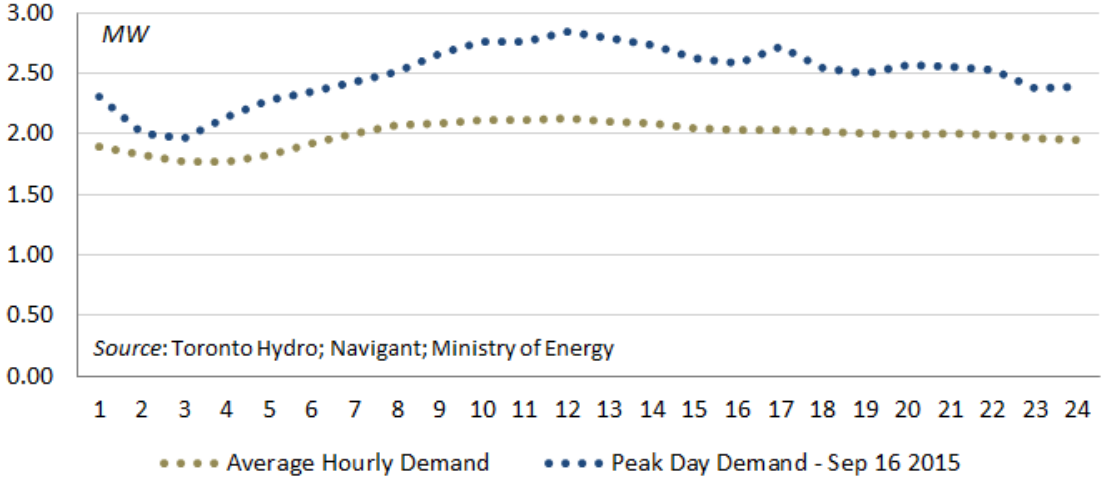
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

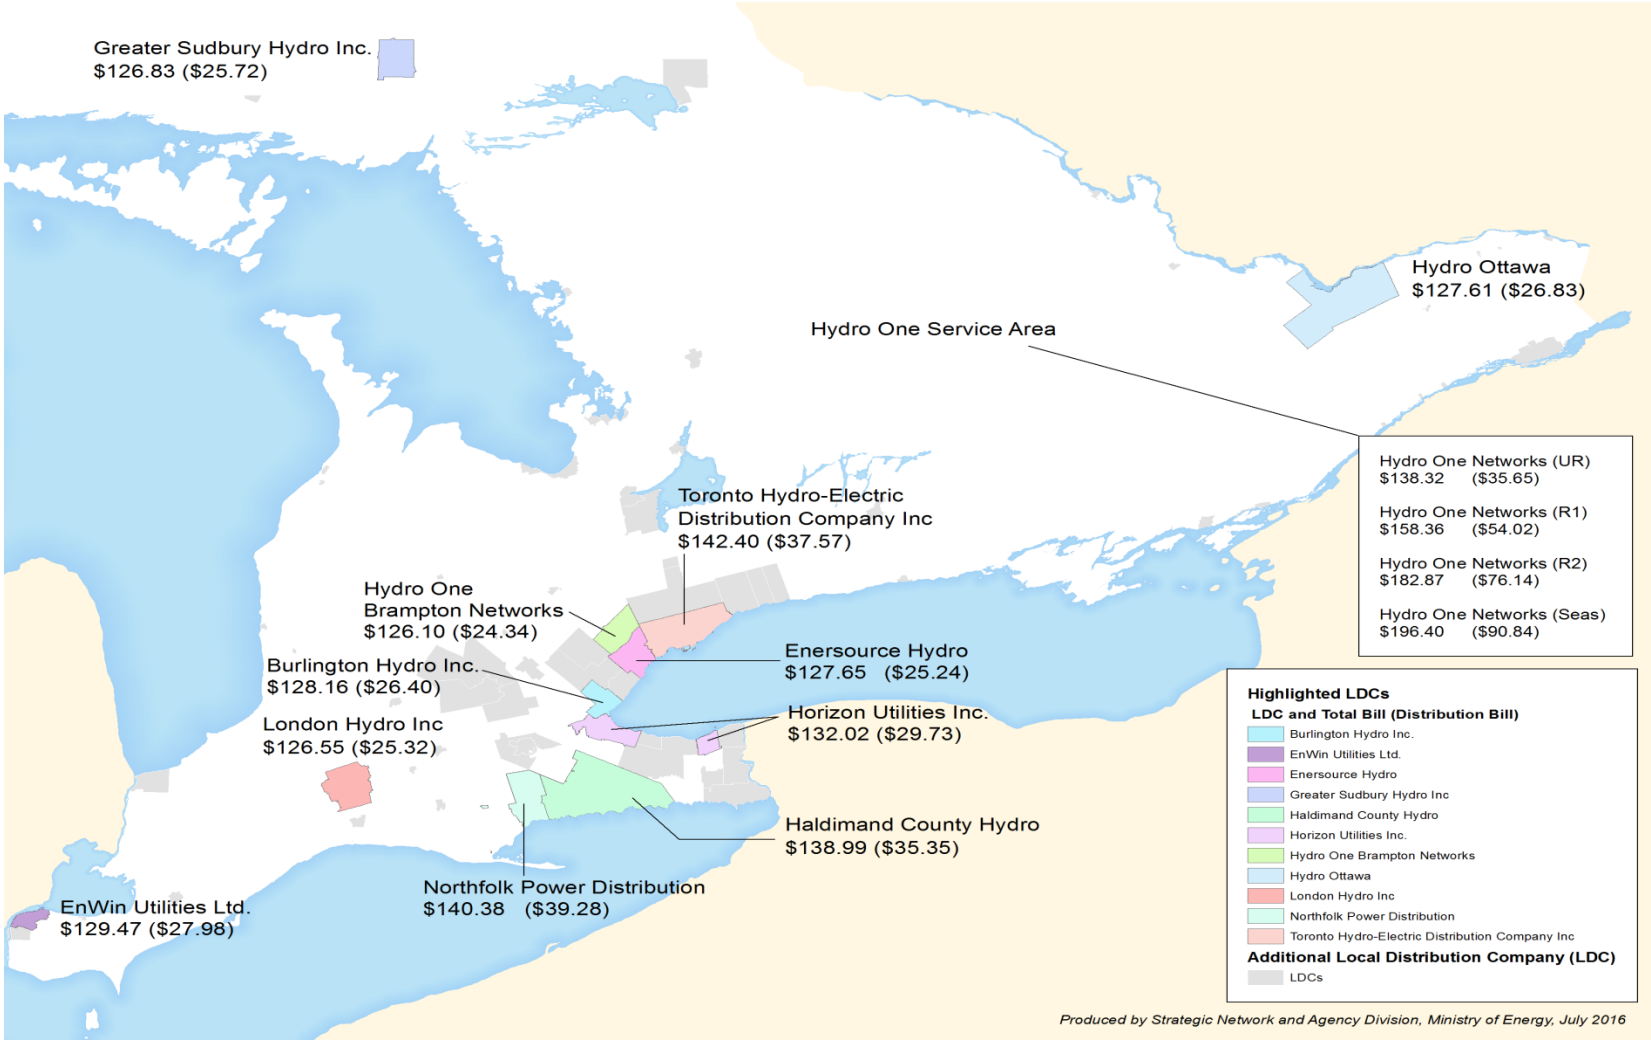
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

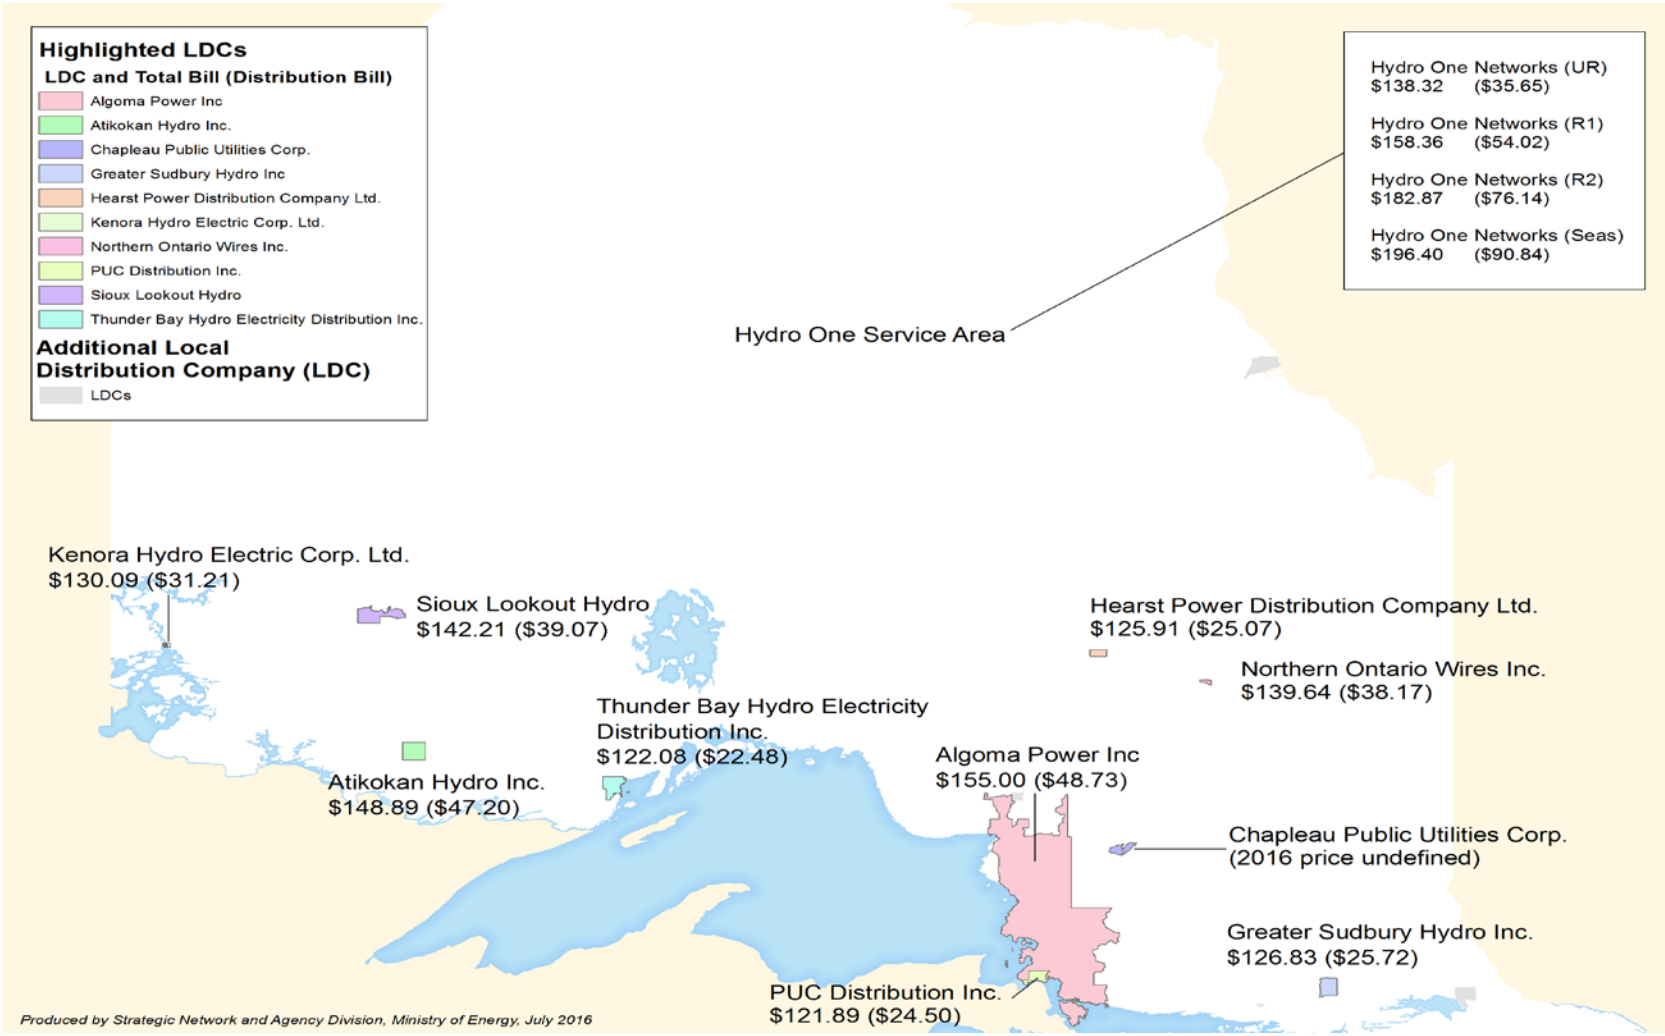
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental Costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism (see slide 25)
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Ontario

MINISTRY OF
ENERGY

Electricity Price Mitigation

Working Draft

August 22, 2016 – 8:00pm

Context

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Ontario has also taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

- As a result, electricity costs are increasing as the necessary investments are made to modernize the province's electricity infrastructure.

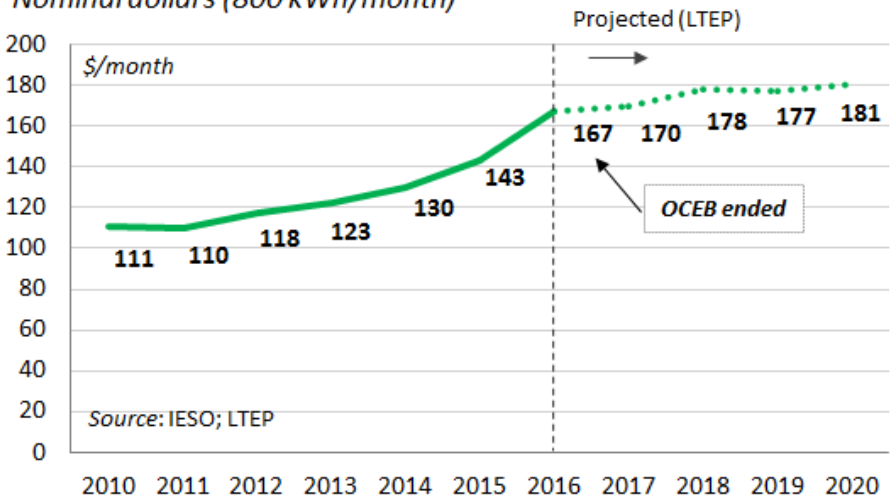
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

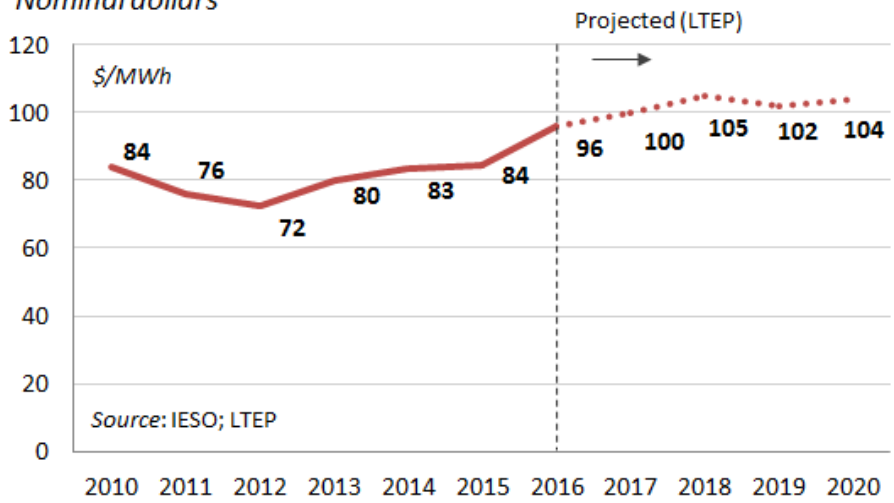
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
below 0.05 MW	0.05–3 MW	*above* 3 MW*
58 TWh (41.1%)	57 TWh (40.4%)	26 TWh (18.4%)

Source: OEB, Navigant, IESO

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

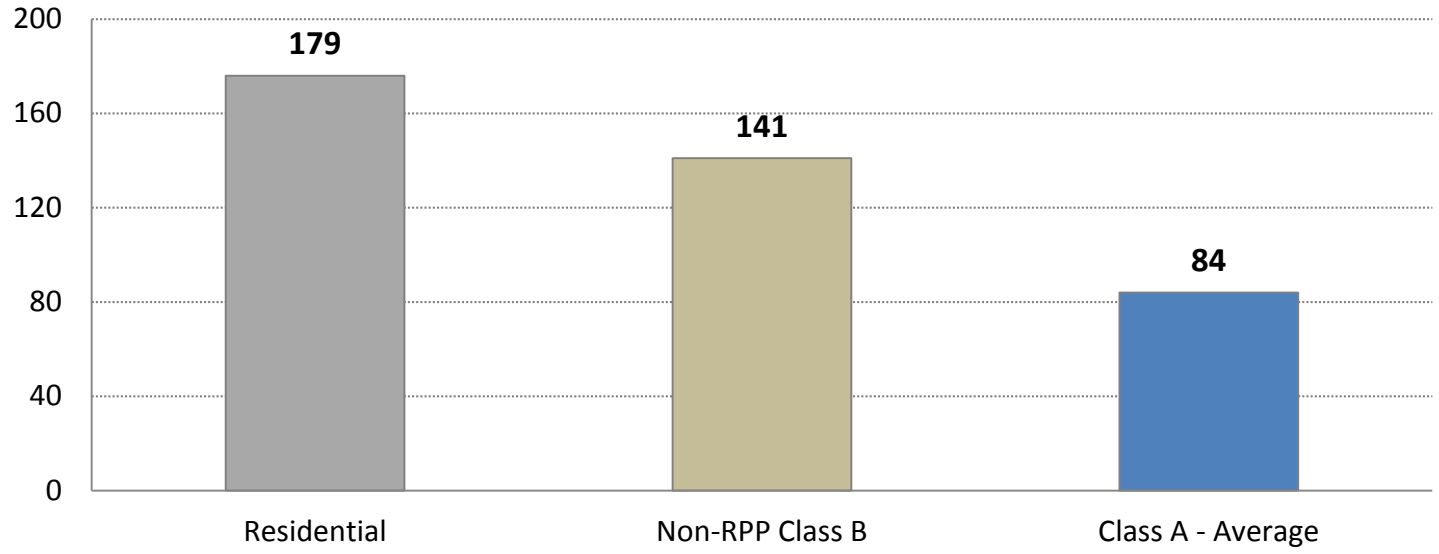
*Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data processing are currently eligible for Class A.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



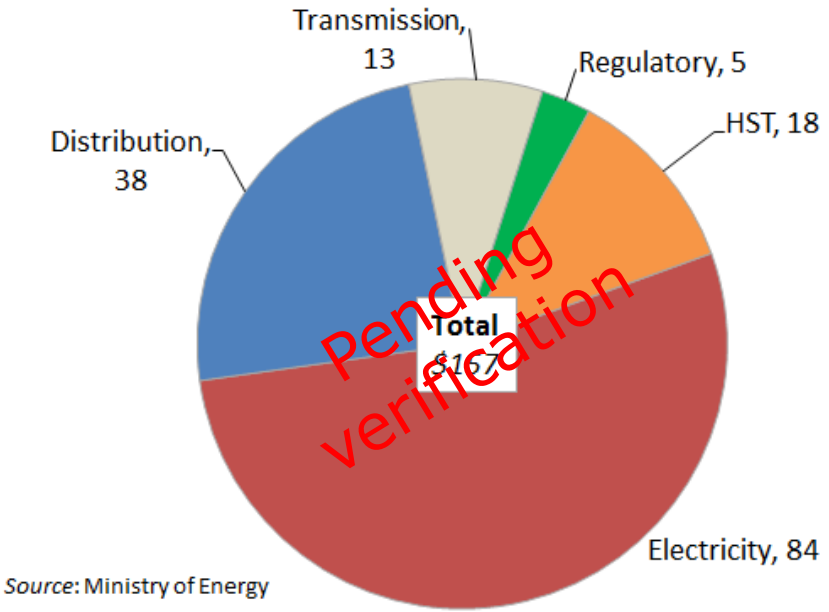
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



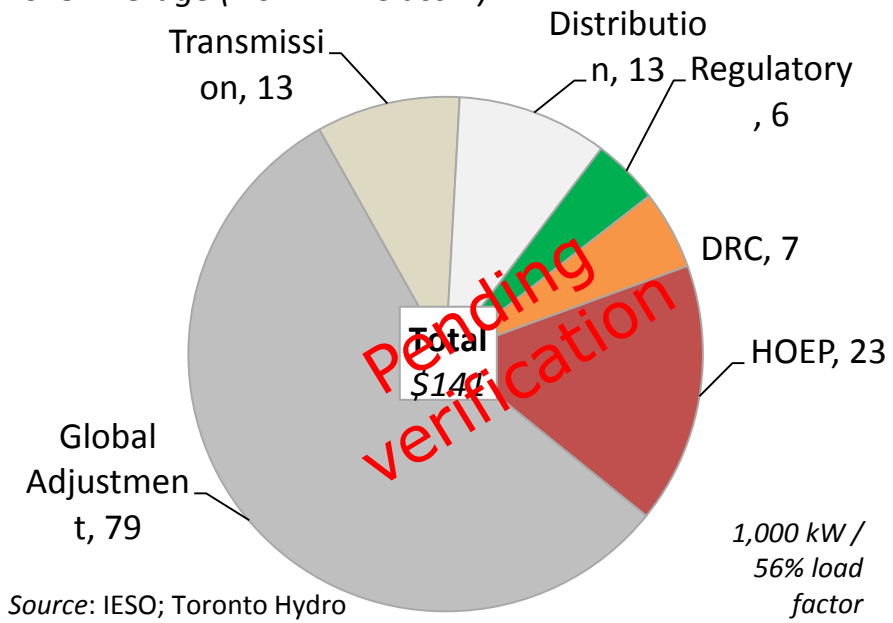
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Non-RPP Class B)

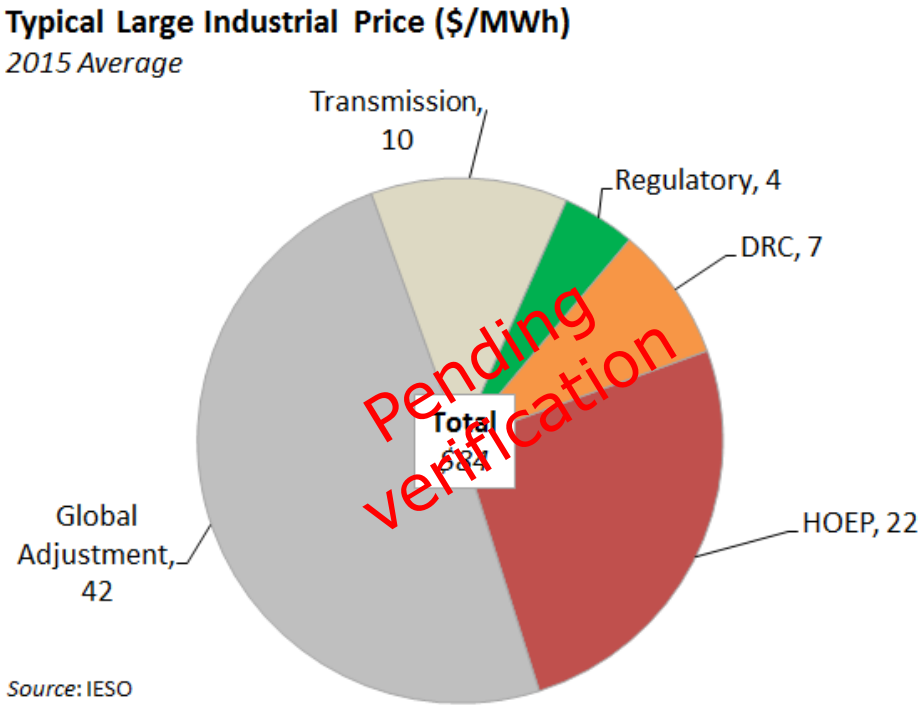


Source: IESO; Toronto Hydro

- Unlike residential and many industrial consumers, consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

2016 Budget Commitments

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also provide a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, The Climate Change Action Plan (CCAP), committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- If HST is effectively removed for all or some consumers, the resulting savings could be significantly greater than the 2016 Budget commitment and, therefore, the required GGRA proceeds may be reduced further.

Alignment with CCAP

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3B over 4 years to greenhouse gas reduction initiatives, funded by Cap and Trade proceeds.

- The CCAP includes up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas by 2020.

$ Billions	2017-18	2018-19	2019-20	2020-21	Total
Total Committed in CCAP	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**6.0 – 8.3**
Electricity Price Mitigation	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 1.3*

- Ontario's Climate *Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail
  - Hamilton LRT
  - Hurontario LRT
  - Energy efficiency in schools

HST Background

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

HST General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates.
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates.

- Providing an 8% rebate of the provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The Province may also need to change the reporting for the cost of a portion of the Ontario Sales Tax Credit (OSTC) and the energy component of the Ontario Energy and Property Tax Credit (OEPTC) to prevent overlapping revenue offsets.
  - Confirmation from Provincial Controllership is needed.

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

Rate Mitigation Options

- Two options have been identified that could provide relief to various customer classes. These options are outlined below.

1. **HST Rebate for All Consumers and Eliminate Proceeds Recycling**
   - Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
   - Eliminate planned GGRA proceeds recycling to electricity consumers.

2. **HST Rebate for RPP Consumers + Targeted Ratebase Support and Modified Proceeds Recycling**
   - Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms).
   - Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
   - Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
   - Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

Consumer Impact Summary (data to be confirmed)

Option	Average Annual Fiscal Impact	Average Annual GGRA Proceeds Impact	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*	*0.05 - 1 MW*	*1-3MW*	*Existing*	*New*
8% rebate to all consumers and Eliminate Proceeds Recycling	$1.8 billion	-$330 million ($1.3 billion over first compliance period)	-$11/ month	-$18/ month	-$12/ MWh		-$7/ MWh	
8% rebate to RPP consumers + Targeted Ratebase Support and Modified Proceeds Recycling *	$0.9 – 1.0 billion	No change ($1.3 billion required over first compliance period)	$9.70/ month	-$45/ month	-$2/MWh		-$0.90/ MWh	Up to -$52/ MWh

Pending verification

* Due to the natural impact on GA from cap and trade, large industrials would not see an impact from ICI expansion.

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

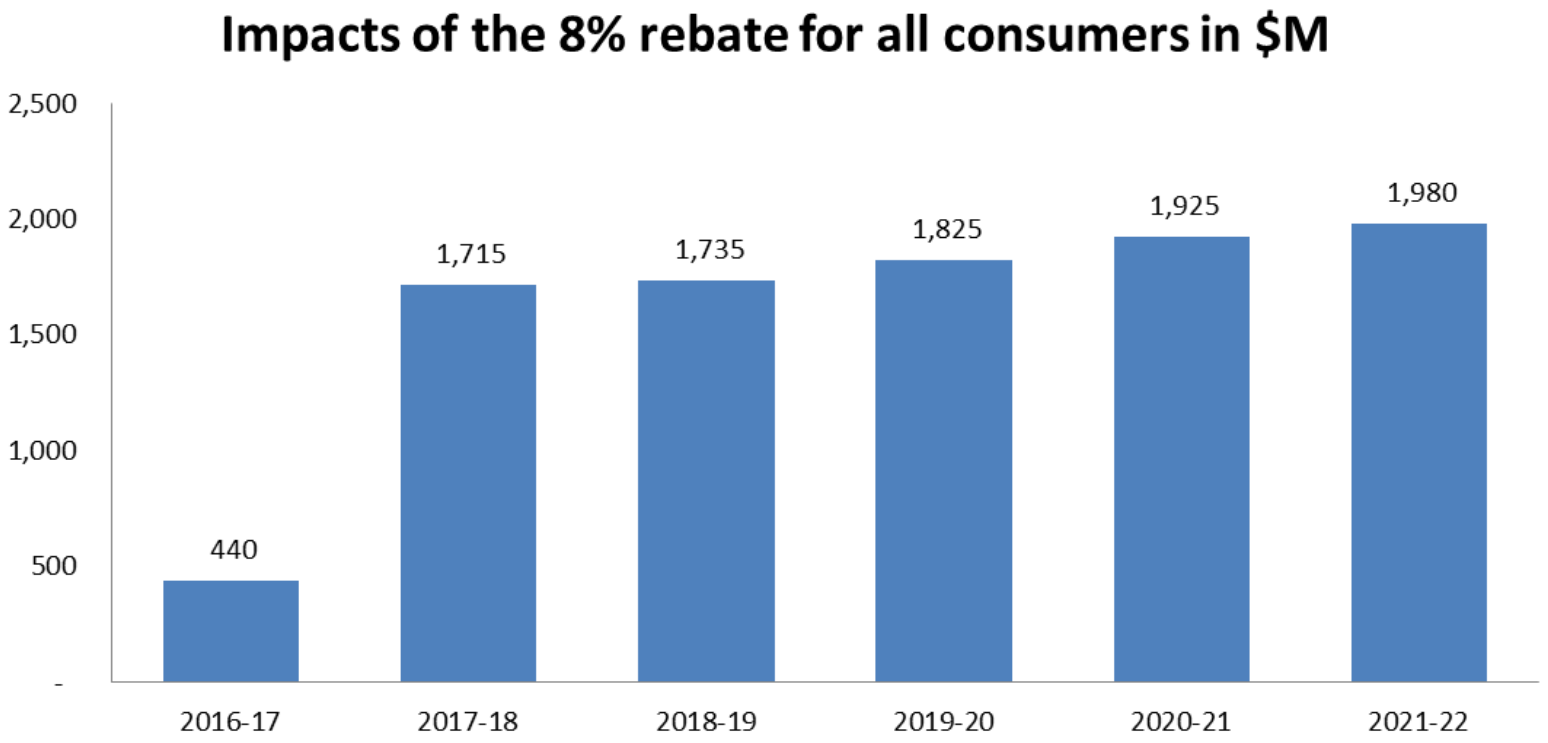
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.
  - This option would avoid stakeholder issues associated with OCEB (e.g., long-term care homes).

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

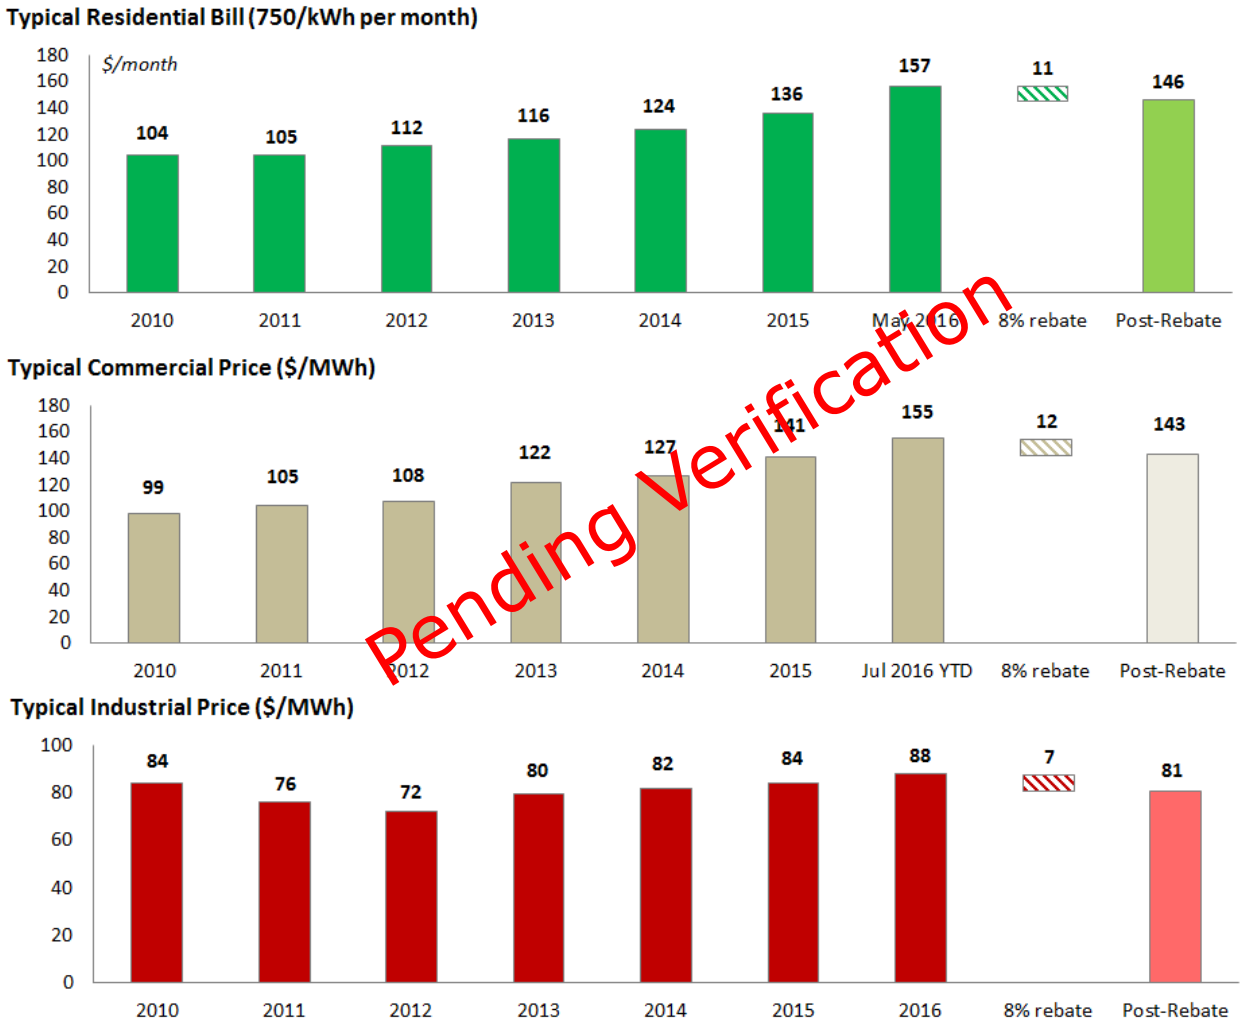
8% Rebate for All Consumers – Projected Cost

- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.



Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $12/MWh rebate.
- A $7/MWh rebate for industrial consumers would bring all-in prices below to 2010 levels.



8% Rebate for All Consumers – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)

8% Rebate for All Consumers – Considerations Cont'd

- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers, potentially eliminating $1.3 billion in required GGRA proceeds over the first compliance period.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.
- Additionally, commercial and industrial consumers would continue to receive benefit related to input tax credits.
- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government's ability to achieve fiscal balance.
- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Option 2 – 8% Rebate for Regulated Price Plan Consumers + Targeted Ratebase Support and Modified Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + Targeted Support and Modified Proceeds Recycling – Overview

- Rate relief could be provided in three components:

1. 8% Rebate for Regulated Price Plan Consumers

2. Targeted Support through the Ratebase:

   – Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.

   – Increase RRRP benefit for rural customers.
     – Rural consumers would see a benefit of x, while all other consumers would see a cost of y.

3. Modified proceeds recycling
   – Redirecting the forecast $1.3 billion in GGRA proceeds to commercial and industrial consumers would ensure that the impact of cap and trade, ICI expansion and RRRP expansion do not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.
  - This option would have similar stakeholder issues to those under OCEB (e.g., long-term care homes).

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

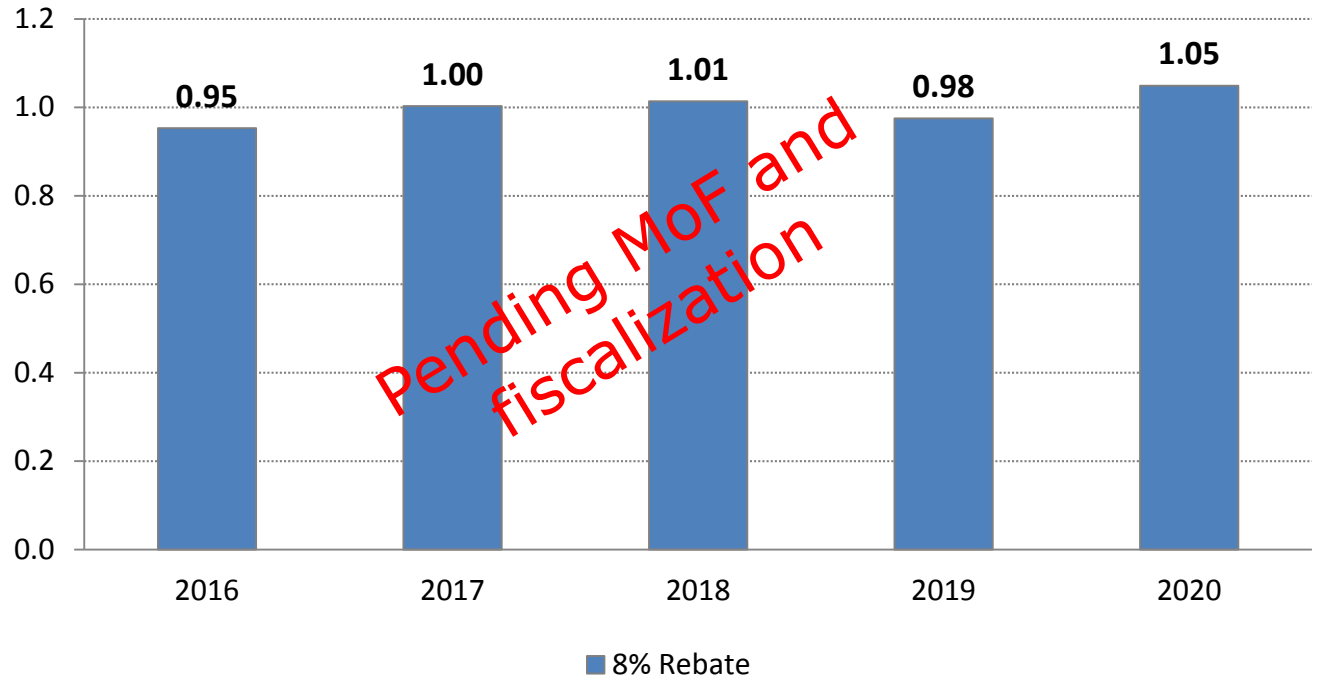
8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers only would be approximately $1 billion between 2017 and 2020.

Projected Cost of 8% Rebate to Regulated Price Plan ($B)

Nominal dollars

Source: OPO (Aug 19 2016)



Targeted Support – ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

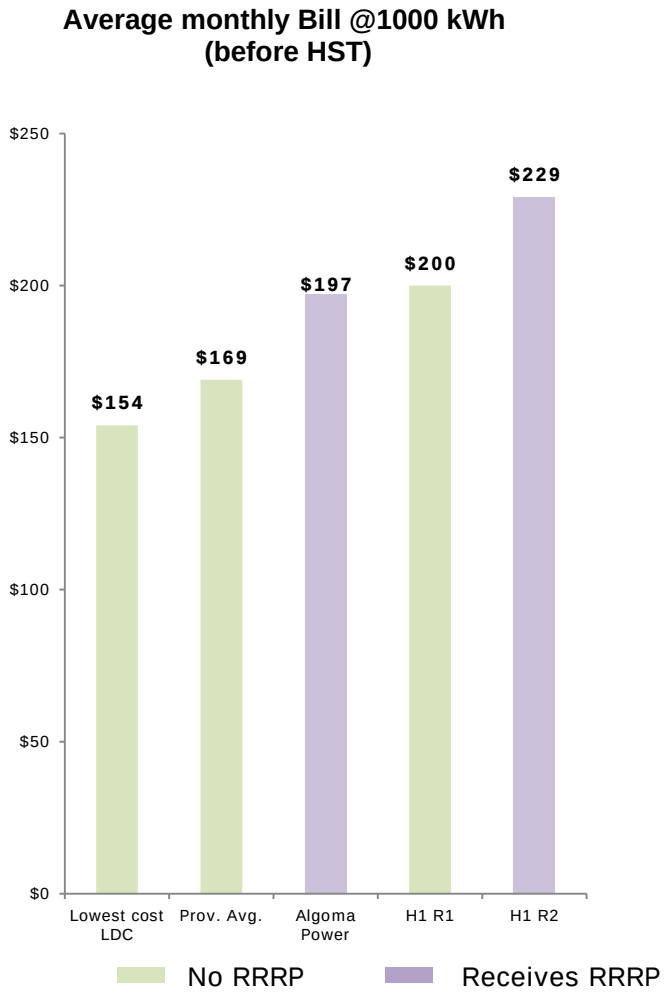
Targeted Support – ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

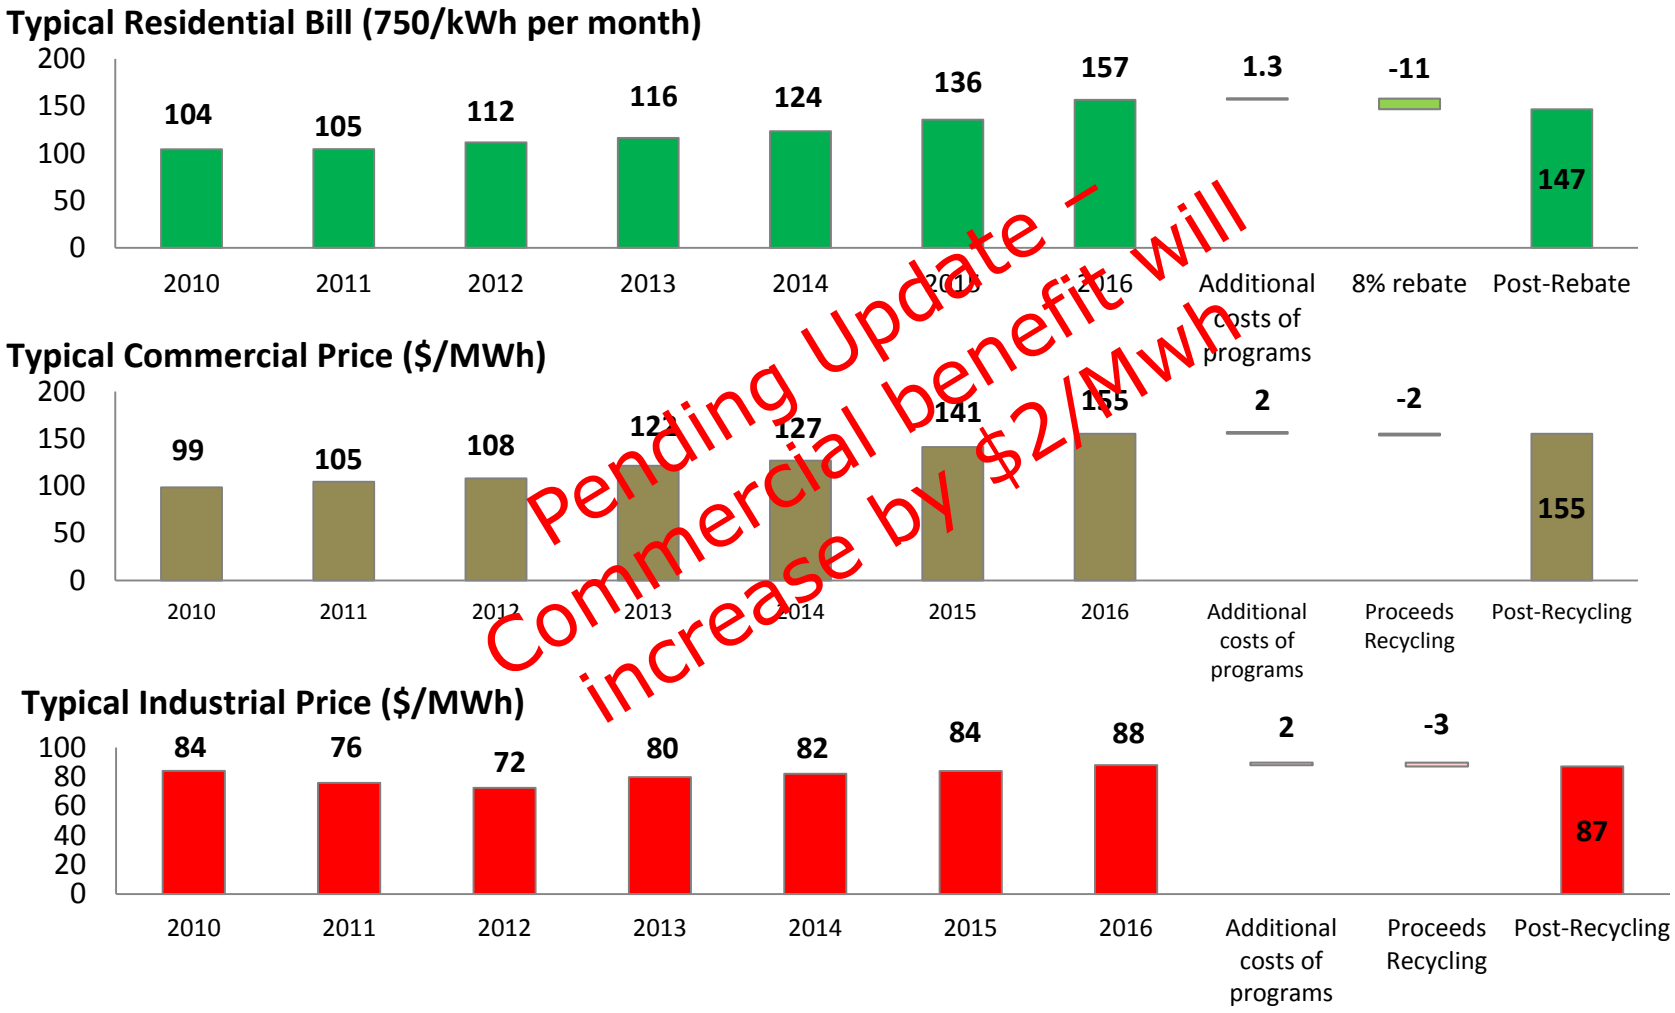
- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.
- The above bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh.

Targeted Support – Rural or Remote Rate Protection (RRRP)

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers.
  - There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.
- There may be opportunity to evaluate current levels of support to enhance rate assistance available to R2 customers.
  - An additional $28.53/month would equalize R2 bills with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 RRRP to $235M with a monthly impact on an average residential consumer of $0.57.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.



Bill Impacts by Sector



8% Rebate for Regulated Price Plan Consumers + Targeted Support and Modified Proceeds Recycling – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + Targeted Support and Modified Proceeds Recycling – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Commercial and industrial consumers would also continue to receive benefit related to input tax credits.

- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

- Amendments would also be required to various regulations to expand ICI and RRRP.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan, including consultation with LDCs, the OEB and IESO.

Appendix – Background on Rate-Based Initiatives

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Typical non-RPP Class B consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	3.54	4.33	4.02	4.71	6.33	6.35
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Total	***4.74***	***5.43***	***5.14***	***5.94***	***7.57***	***8.73***

Cost Shift Impacts - Industrial Bill

Typical Class A consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	-22.17	-26.36	-23.50	-25.91	-33.79	-33.92
RRRP	1.20	1.10	1.12	1.23	1.24	1.25

Total	***-20.97***	***-25.26***	***-22.38***	***-24.68***	***-32.56***	***-31.55***

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Appendix A – ICI

Industrial Conservation Initiative

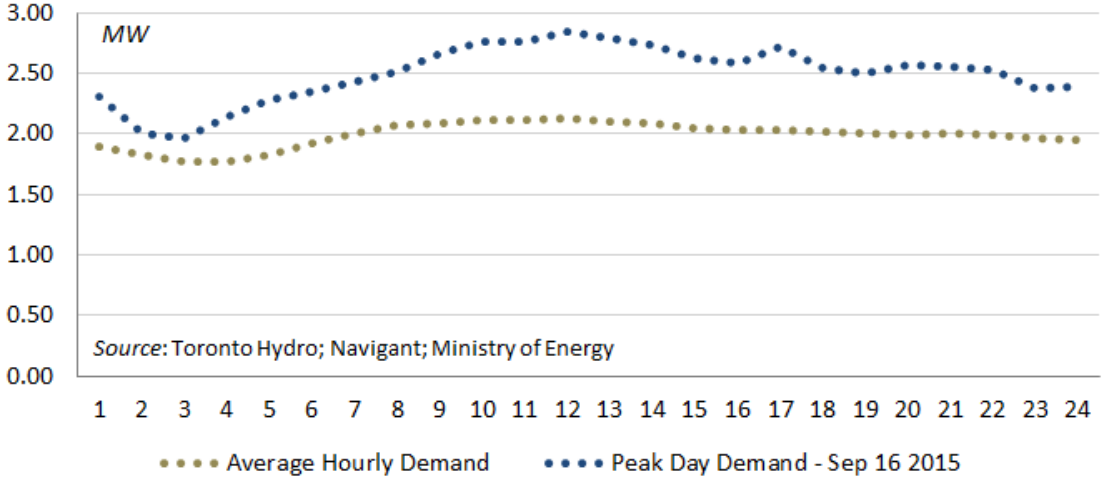
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

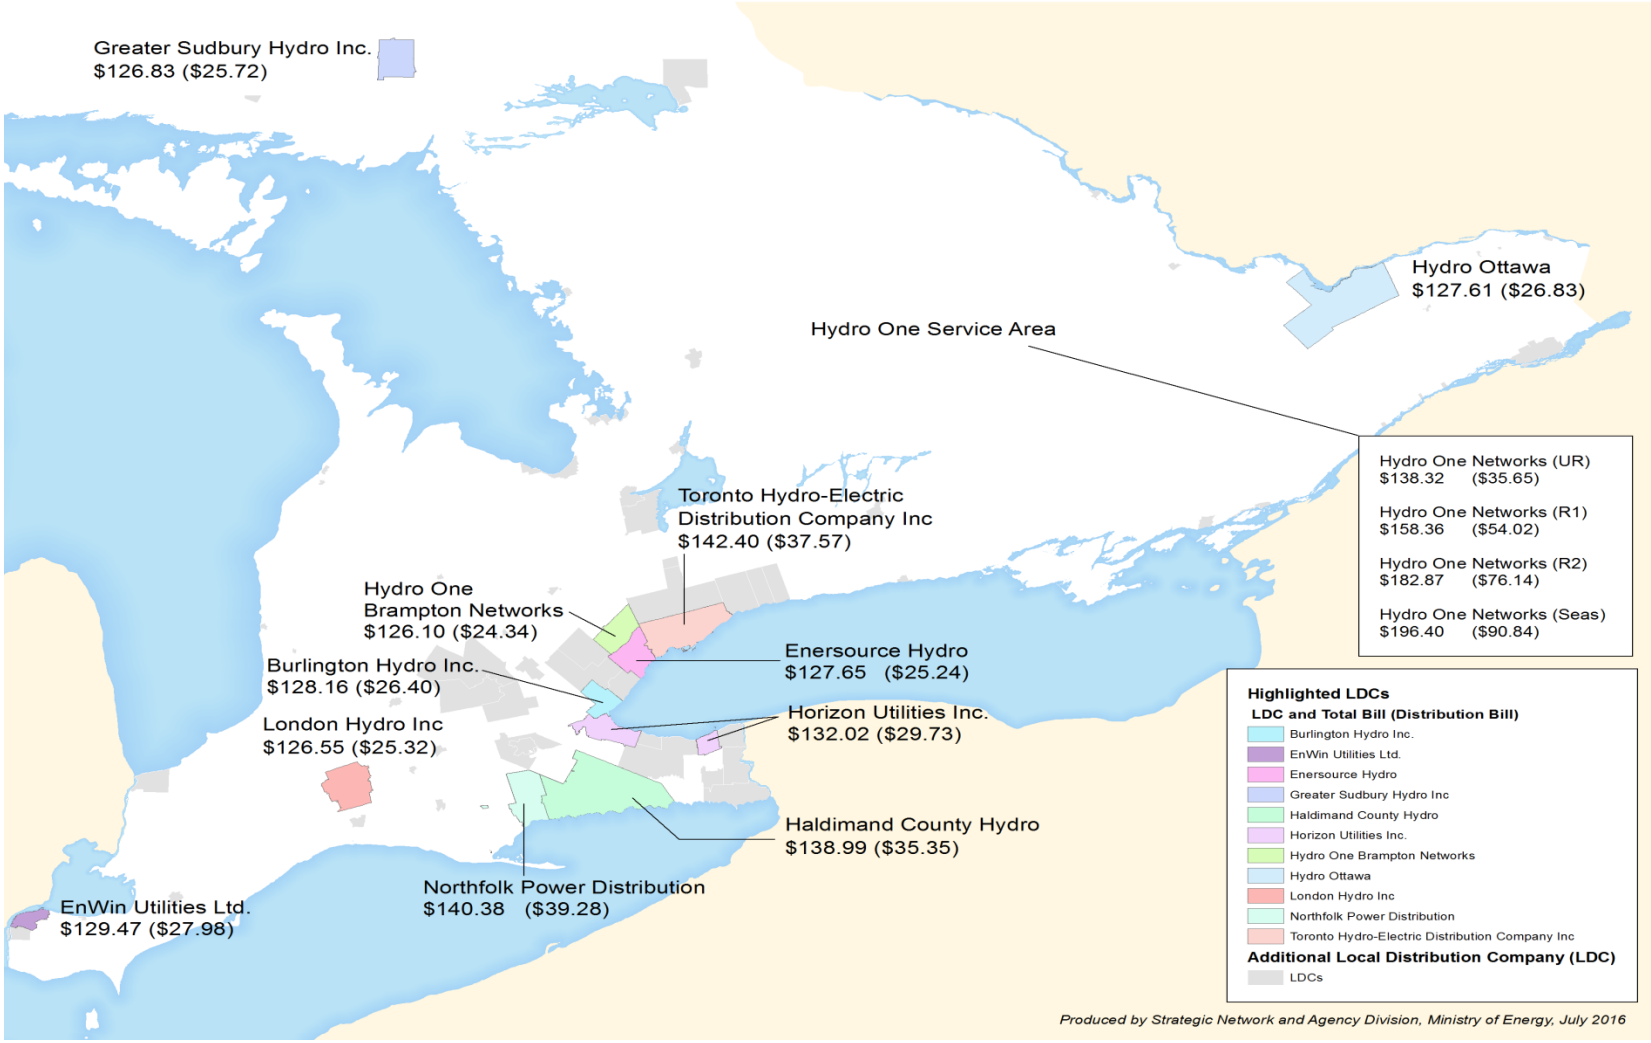
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

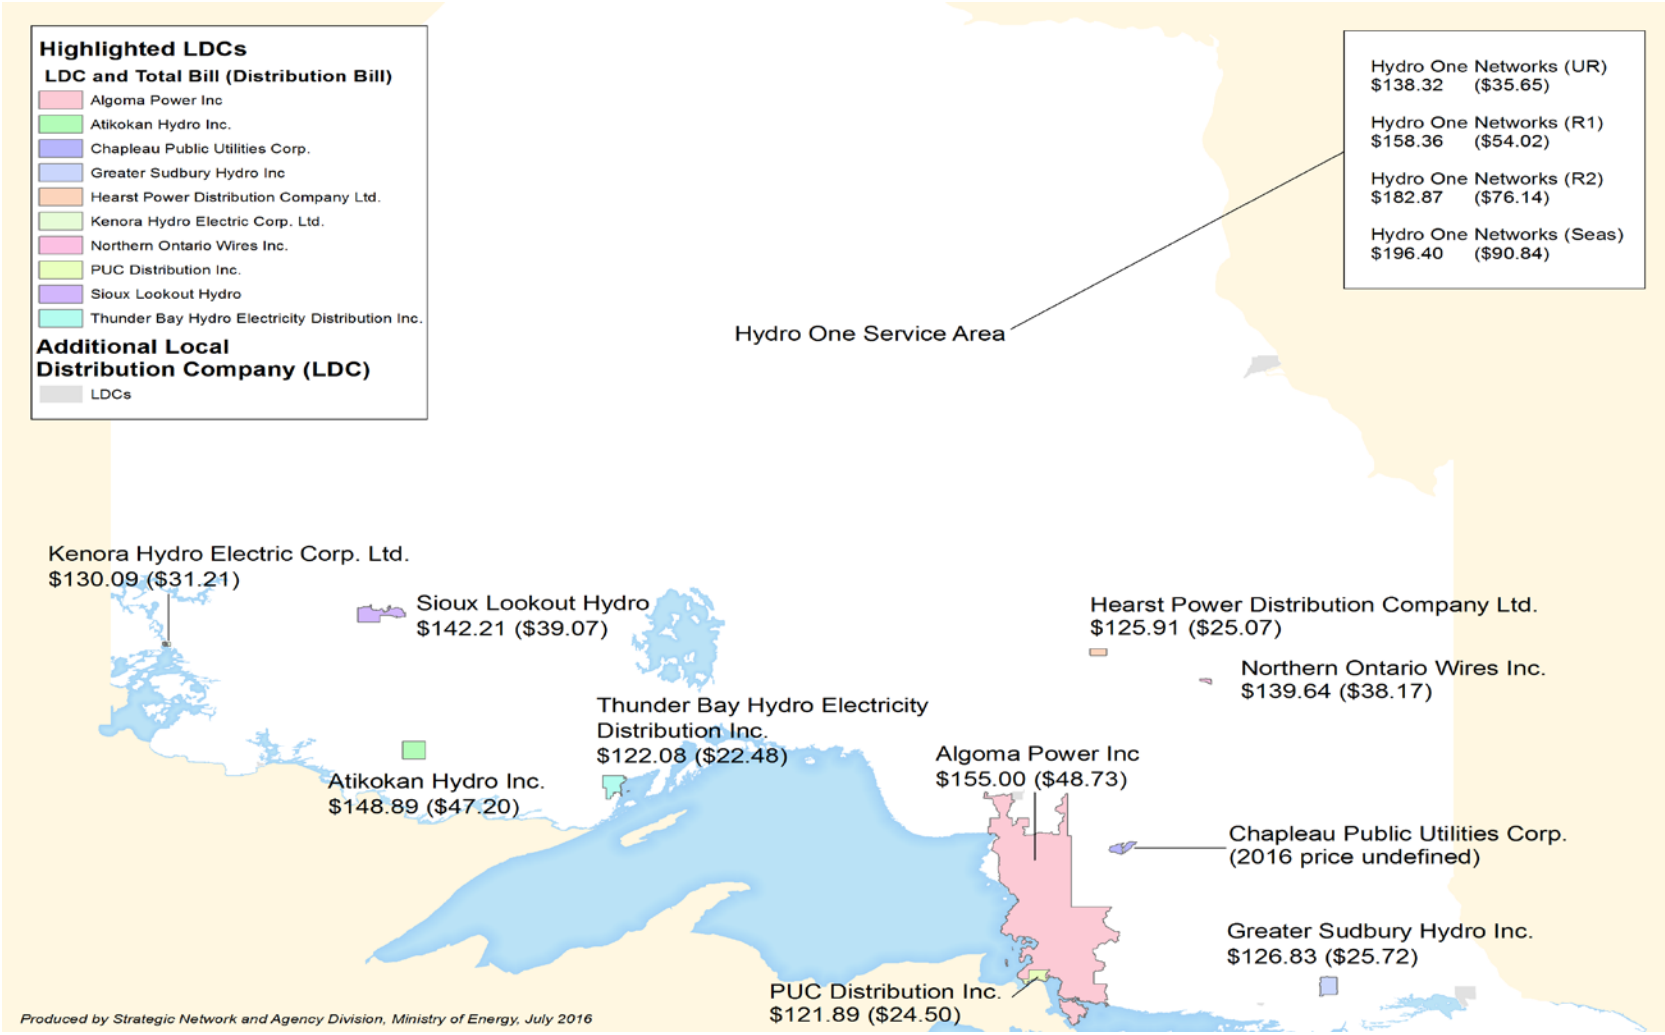
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix B – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Ontario

MINISTRY OF
ENERGY

Electricity Price Mitigation

Working Draft

August 22, 2016 – 8:00pm

Context

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Ontario has also taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

- As a result, electricity costs are increasing as the necessary investments are made to modernize the province's electricity infrastructure.

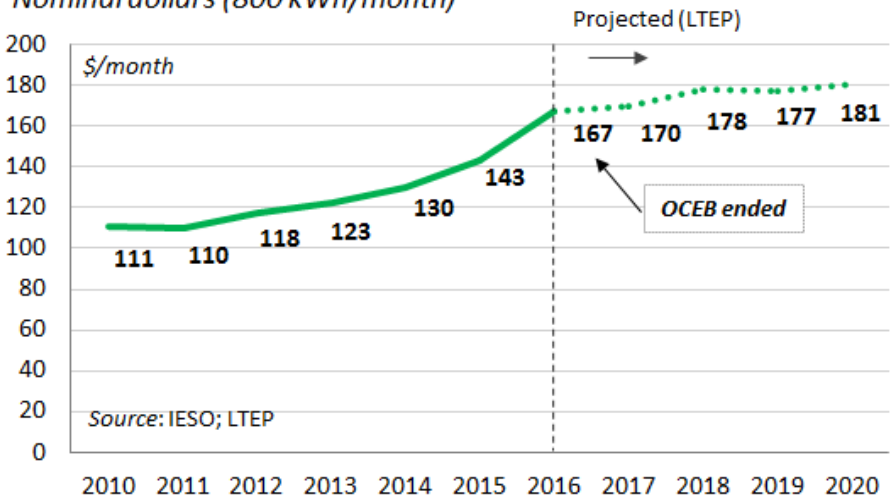
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

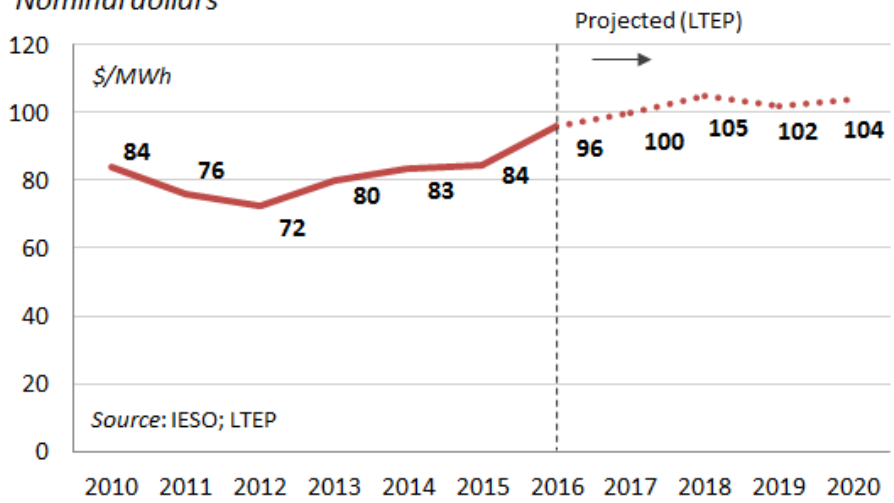
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
below 0.05 MW	0.05–3 MW	*above* 3 MW*
58 TWh (41.1%)	57 TWh (40.4%)	26 TWh (18.4%)

Source: OEB, Navigant, IESO

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

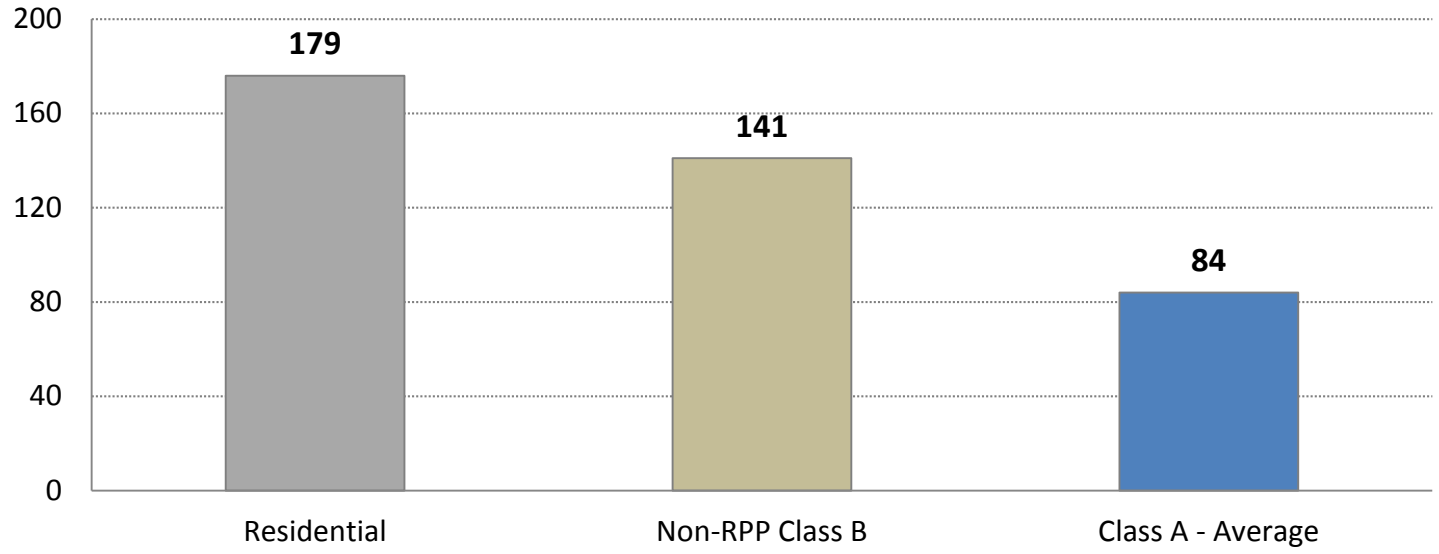
*Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data processing are currently eligible for Class A.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



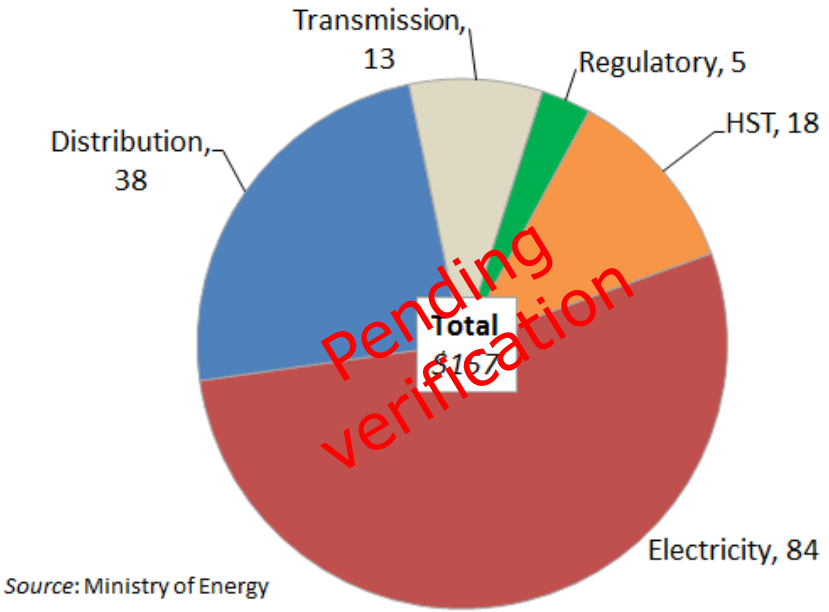
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016 to help mitigate the end of OCEB..
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base and began as of January 1, as of the end of OCEB.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



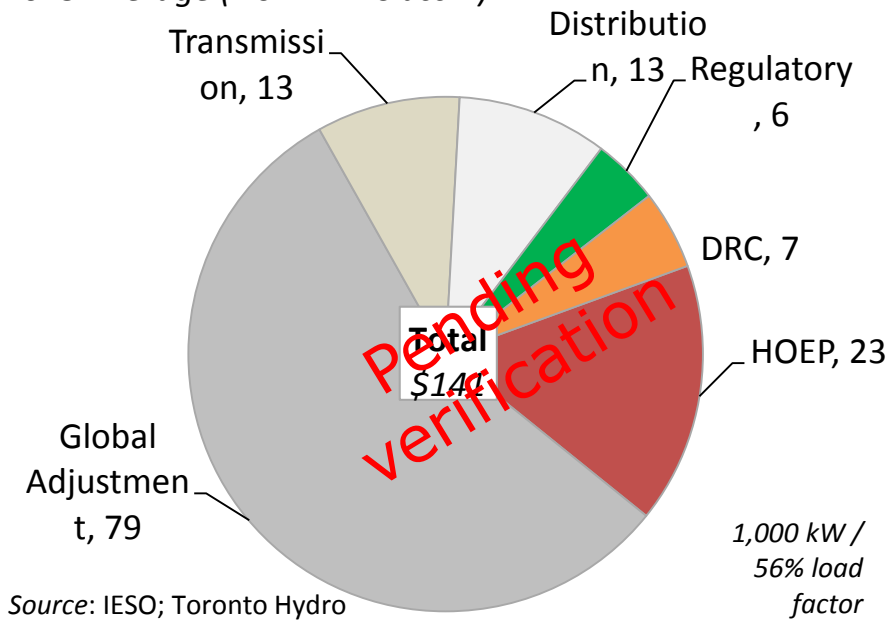
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Non-RPP Class B)

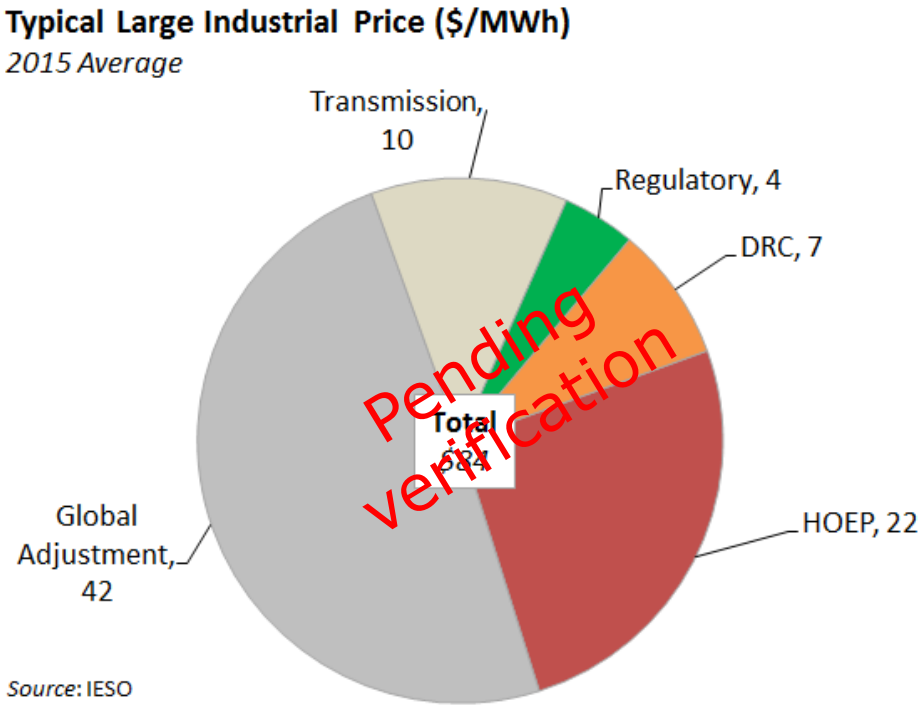


Source: IESO; Toronto Hydro

- Unlike residential and many industrial consumers, consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

2016 Budget Commitments

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also provide a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, The Climate Change Action Plan (CCAP), committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- If provincial portion of HST is effectively removed for all or some consumers, the resulting savings could be significantly greater than the 2016 Budget commitment and, therefore, the required GGRA proceeds may be reduced further.

Alignment with CCAP

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3B over 4 years to greenhouse gas reduction initiatives, funded by Cap and Trade proceeds.

- The CCAP includes up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas by 2020.

$ Billions	2017-18	2018-19	2019-20	2020-21	Total
Total Committed in CCAP	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**6.0 – 8.3**
Electricity Price Mitigation	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 1.3*

- Ontario's Climate *Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail
  - Hamilton LRT
  - Hurontario LRT
  - Energy efficiency in schools

HST Background

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

HST General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates.
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates.

- Providing an 8% rebate of the provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The Province may also need to change the reporting for the cost of a portion of the Ontario Sales Tax Credit (OSTC) and the energy component of the Ontario Energy and Property Tax Credit (OEPTC) to prevent overlapping revenue offsets.
  - Confirmation from Provincial Controllership is needed.

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

Rate Mitigation Options

- Two options have been identified that could provide relief to various customer classes. These options are outlined below.

1. **HST Rebate for All Consumers and Eliminate Proceeds Recycling**
   - Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
   - Eliminate planned GGRA proceeds recycling to electricity consumers.

2. **HST Rebate for RPP Consumers + Targeted Ratebase Support and Modified Proceeds Recycling**
   - Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms).
   - Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
   - Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
   - Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

Consumer Impact Summary (data to be confirmed)

Option	Average Annual Fiscal Impact	Average Annual GGRA Proceeds Impact	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*	*0.05 - 1 MW*	*1-3MW*	*Existing*	*New*
8% rebate to all consumers and Eliminate Proceeds Recycling	$1.8 billion	-$330 million ($1.3 billion over first compliance period)	-$11/ month	-$18/ month	-$12/ MWh		-$7/ MWh	
8% rebate to RPP consumers + Targeted Ratebase Support and Modified Proceeds Recycling *	$~~0.9 –~~ 1.0 billion	No change ($1.3 billion required over first compliance period)	$9.70/ month	-$45/ month	-$2/MWh		-$0.90/ MWh	Up to -$52/ MWh

Pending verification

* Due to the natural impact on GA from cap and trade, large industrials would not see an impact from ICI expansion.

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

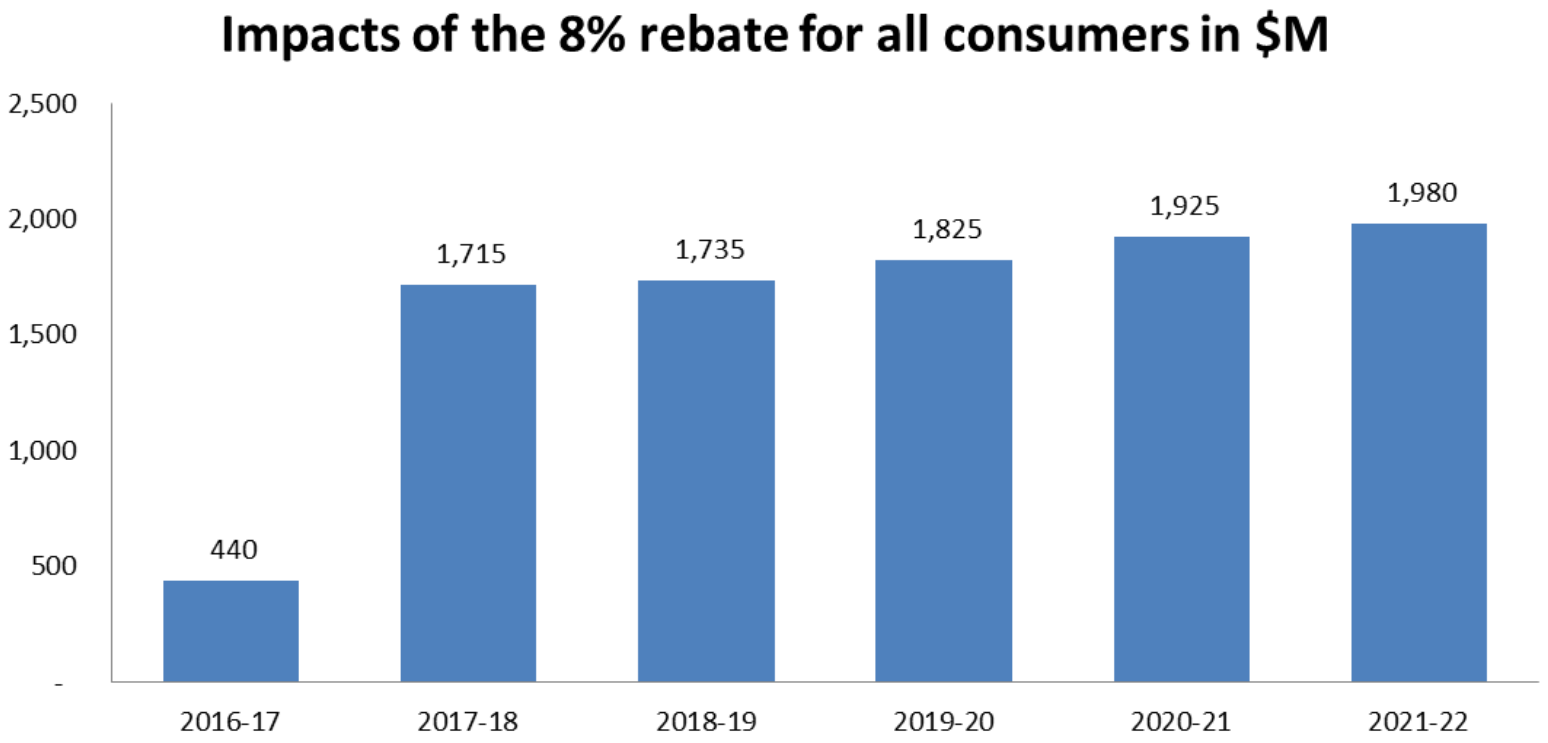
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.
  - This option would avoid stakeholder issues associated with OCEB (e.g., long-term care homes).

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

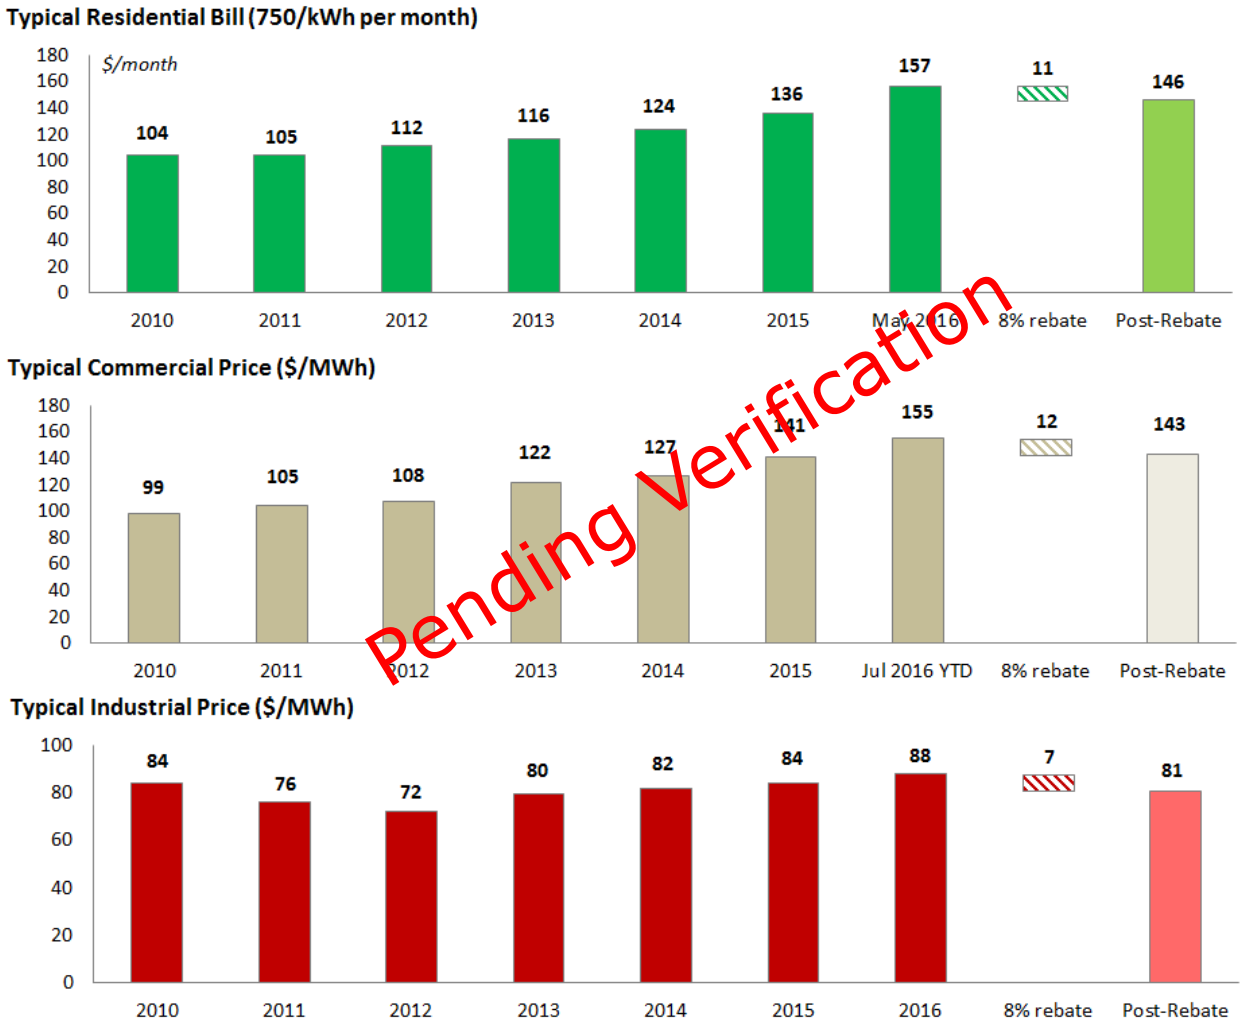
8% Rebate for All Consumers – Projected Cost

- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.



Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $12/MWh rebate.
- A $7/MWh rebate for industrial consumers would bring all-in prices below to 2010 levels.



8% Rebate for All Consumers – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)

8% Rebate for All Consumers – Considerations Cont'd

- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers, potentially eliminating $1.3 billion in required GGRA proceeds over the first compliance period.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.
- Additionally, commercial and industrial consumers would continue to receive benefit related to input tax credits.
- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government's ability to achieve fiscal balance.
- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB, which would reduce the cost (@3,000 kWh/month, about 20 – 25%, TBC).
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer, and could substantially decrease cost savings.

Option 2 – 8% Rebate for Regulated Price Plan Consumers + Targeted Ratebase Support and Modified Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + Targeted Support and Modified Proceeds Recycling – Overview

- Rate relief could be provided in three components:

1. 8% Rebate for Regulated Price Plan Consumers

2. Targeted Support through the Ratebase:

   – Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.

   – Increase RRRP benefit for rural customers.
     – Rural consumers would see a benefit of x, while all other consumers would see a cost of y.

3. Modified proceeds recycling
   – Redirecting the forecast $1.3 billion in GGRA proceeds to commercial and industrial consumers would ensure that the impact of cap and trade, ICI expansion and RRRP expansion do not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.
  - This option would have similar stakeholder issues to those under OCEB (e.g., long-term care homes).

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

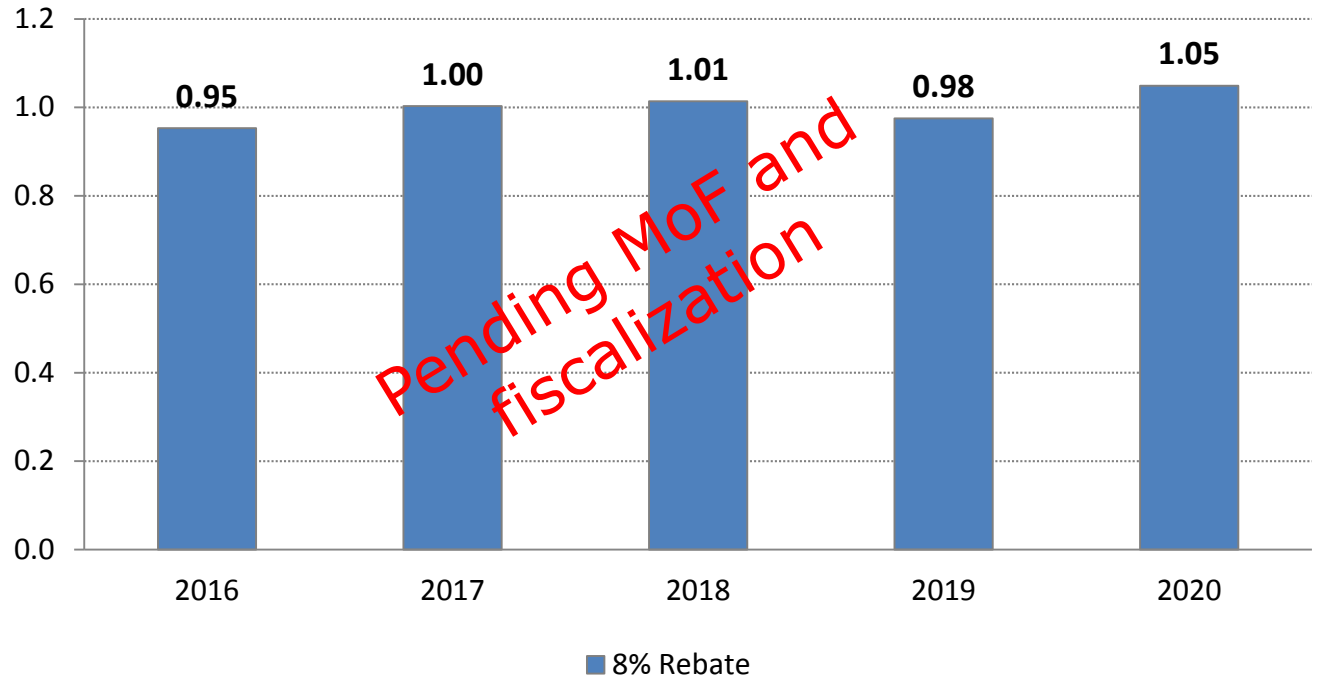
8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers only would be approximately $1 billion between 2017 and 2020.

Projected Cost of 8% Rebate to Regulated Price Plan ($B)

Nominal dollars

Source: OPO (Aug 19 2016)



Targeted Support – ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

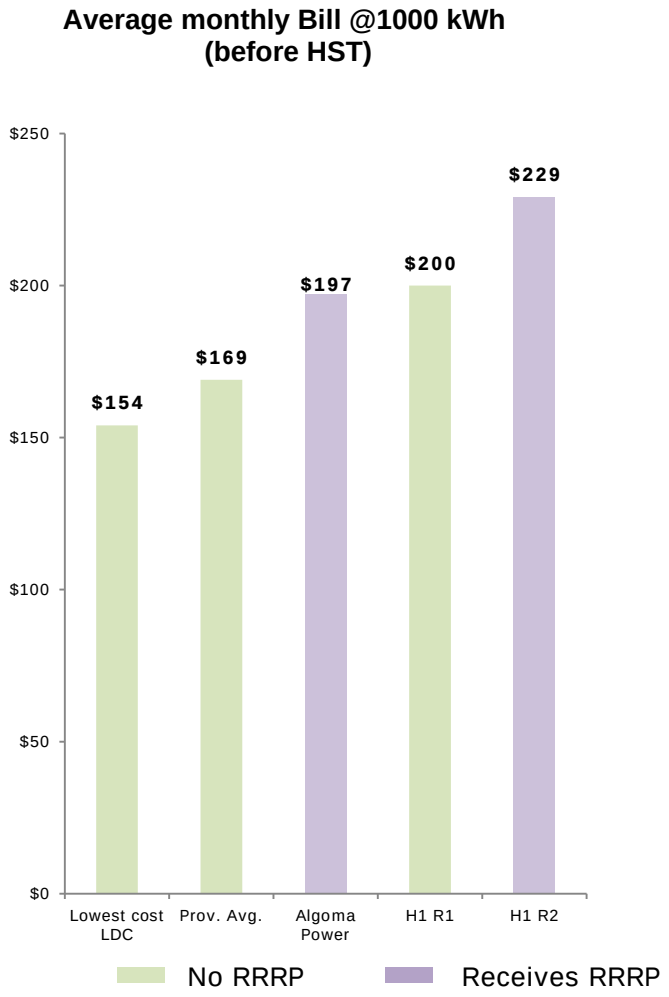
Targeted Support – ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

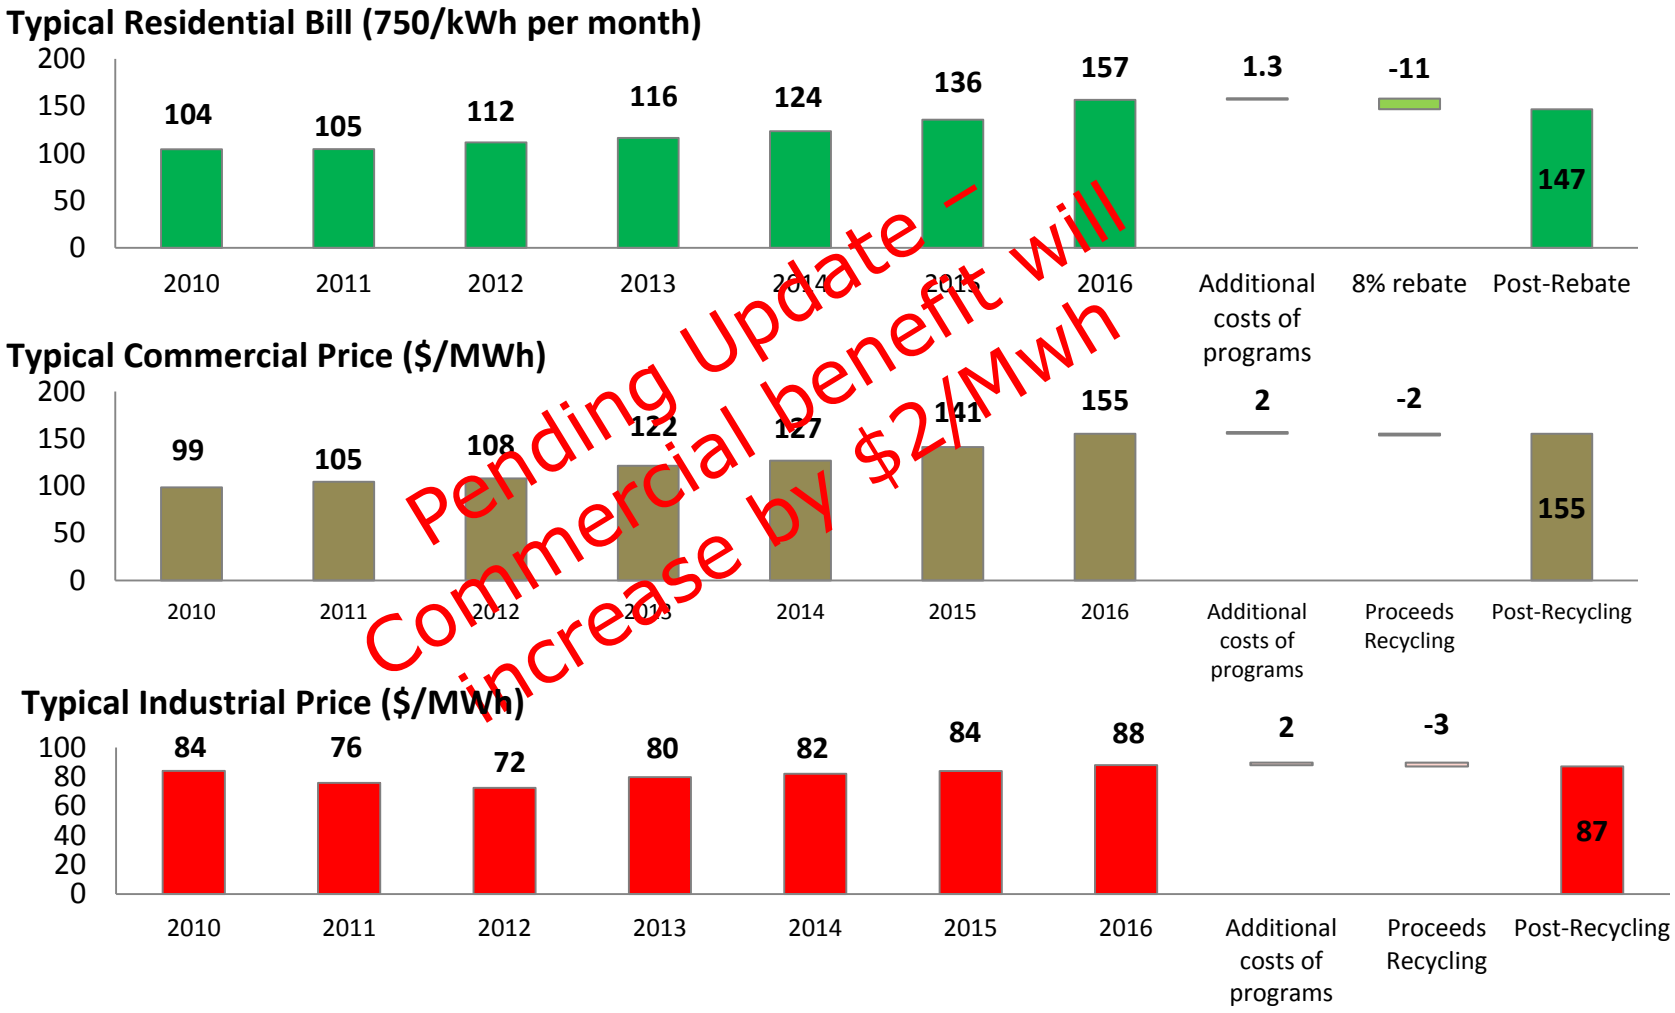
- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.
- The above bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh.

Targeted Support – Rural or Remote Rate Protection (RRRP)

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers.
  - There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.
- There may be opportunity to evaluate current levels of support to enhance rate assistance available to R2 customers.
  - An additional $28.53/month would equalize R2 bills with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 RRRP to $235M with a monthly impact on an average residential consumer of $0.57.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.



Bill Impacts by Sector



8% Rebate for Regulated Price Plan Consumers + Targeted Support and Modified Proceeds Recycling – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + Targeted Support and Modified Proceeds Recycling – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.
- Commercial and industrial consumers would also continue to receive benefit related to input tax credits.
- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.
- Amendments would also be required to various regulations to expand ICI and RRRP.
- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB, which would reduce the cost (@3,000 kWh/month, could save ≈ 20-25%, TBC).
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer, and could substantially reduce fiscal cost savings.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan, including consultation with LDCs, the OEB and IESO.

Appendix – Background on Rate-Based Initiatives

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Typical non-RPP Class B consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	3.54	4.33	4.02	4.71	6.33	6.35
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Total	***4.74***	***5.43***	***5.14***	***5.94***	***7.57***	***8.73***

Cost Shift Impacts - Industrial Bill

Typical Class A consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	-22.17	-26.36	-23.50	-25.91	-33.79	-33.92
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Total	***-20.97***	***-25.26***	***-22.38***	***-24.68***	***-32.56***	***-31.55***

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Appendix A – ICI

Industrial Conservation Initiative

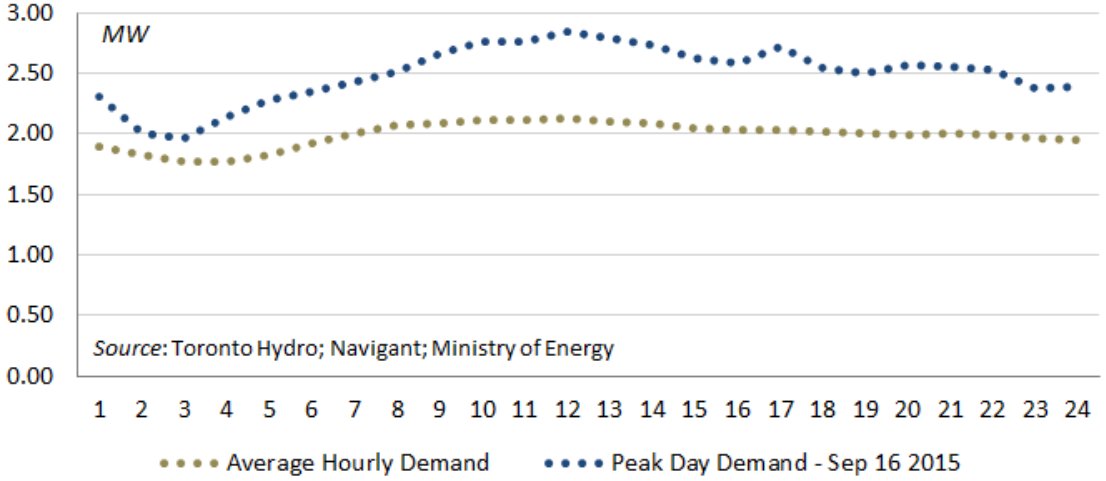
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

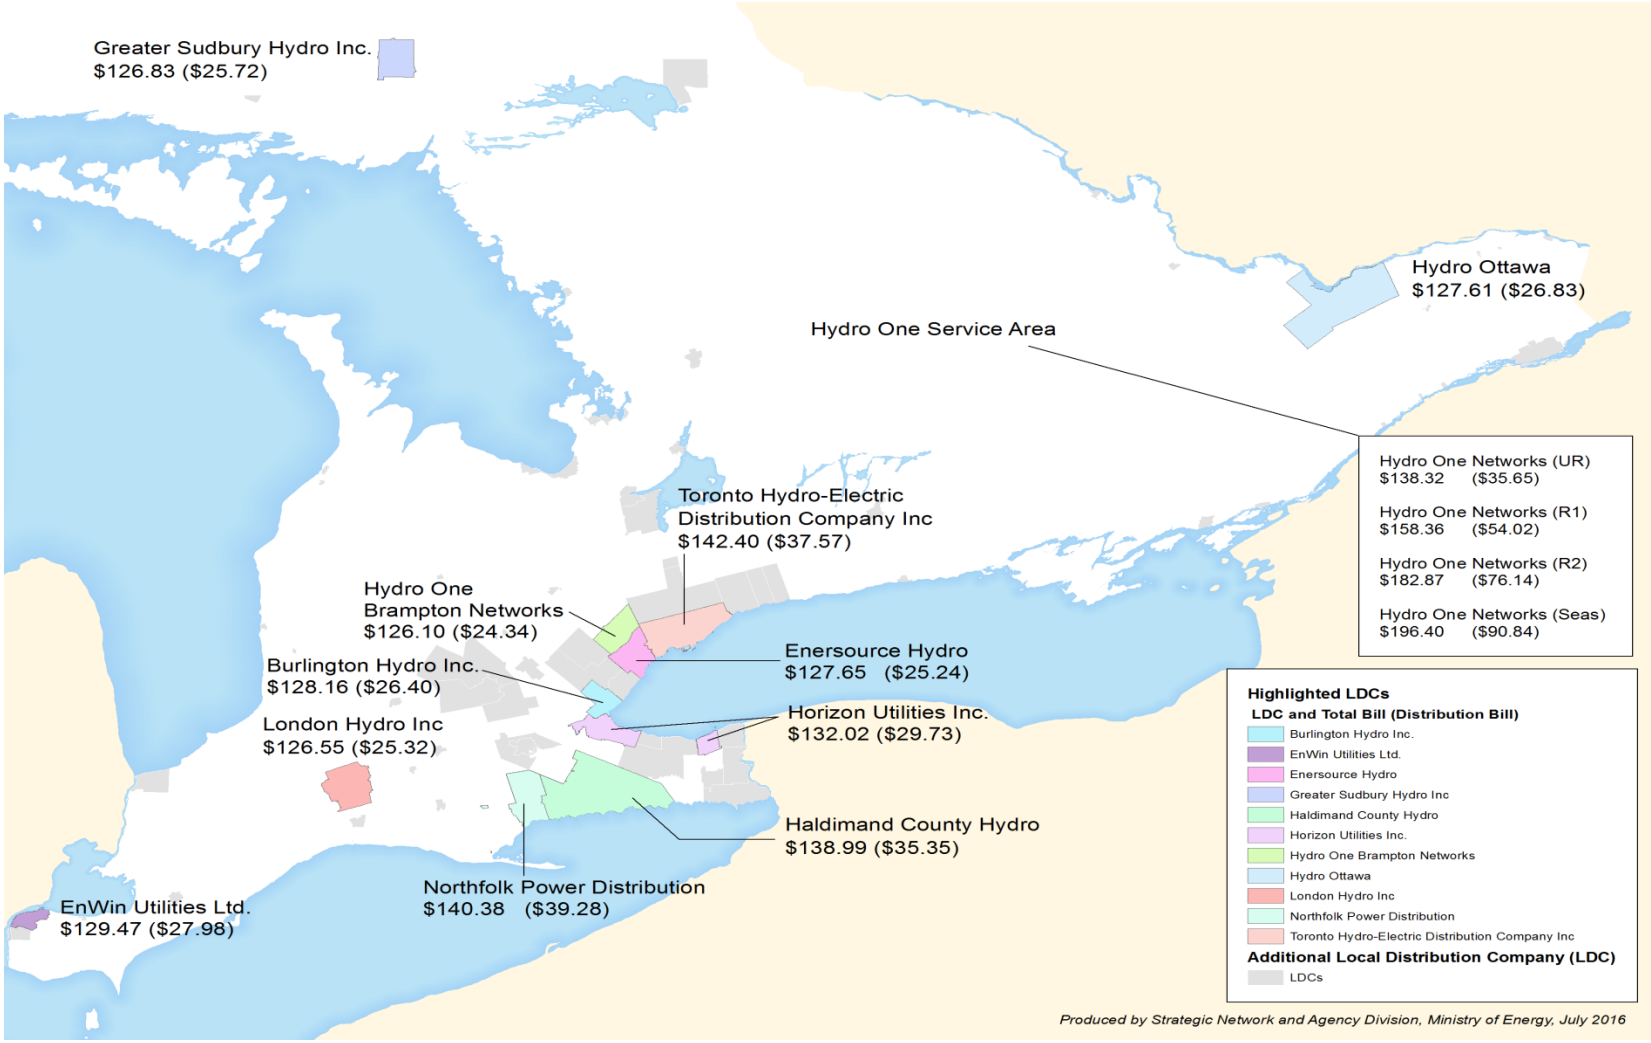
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

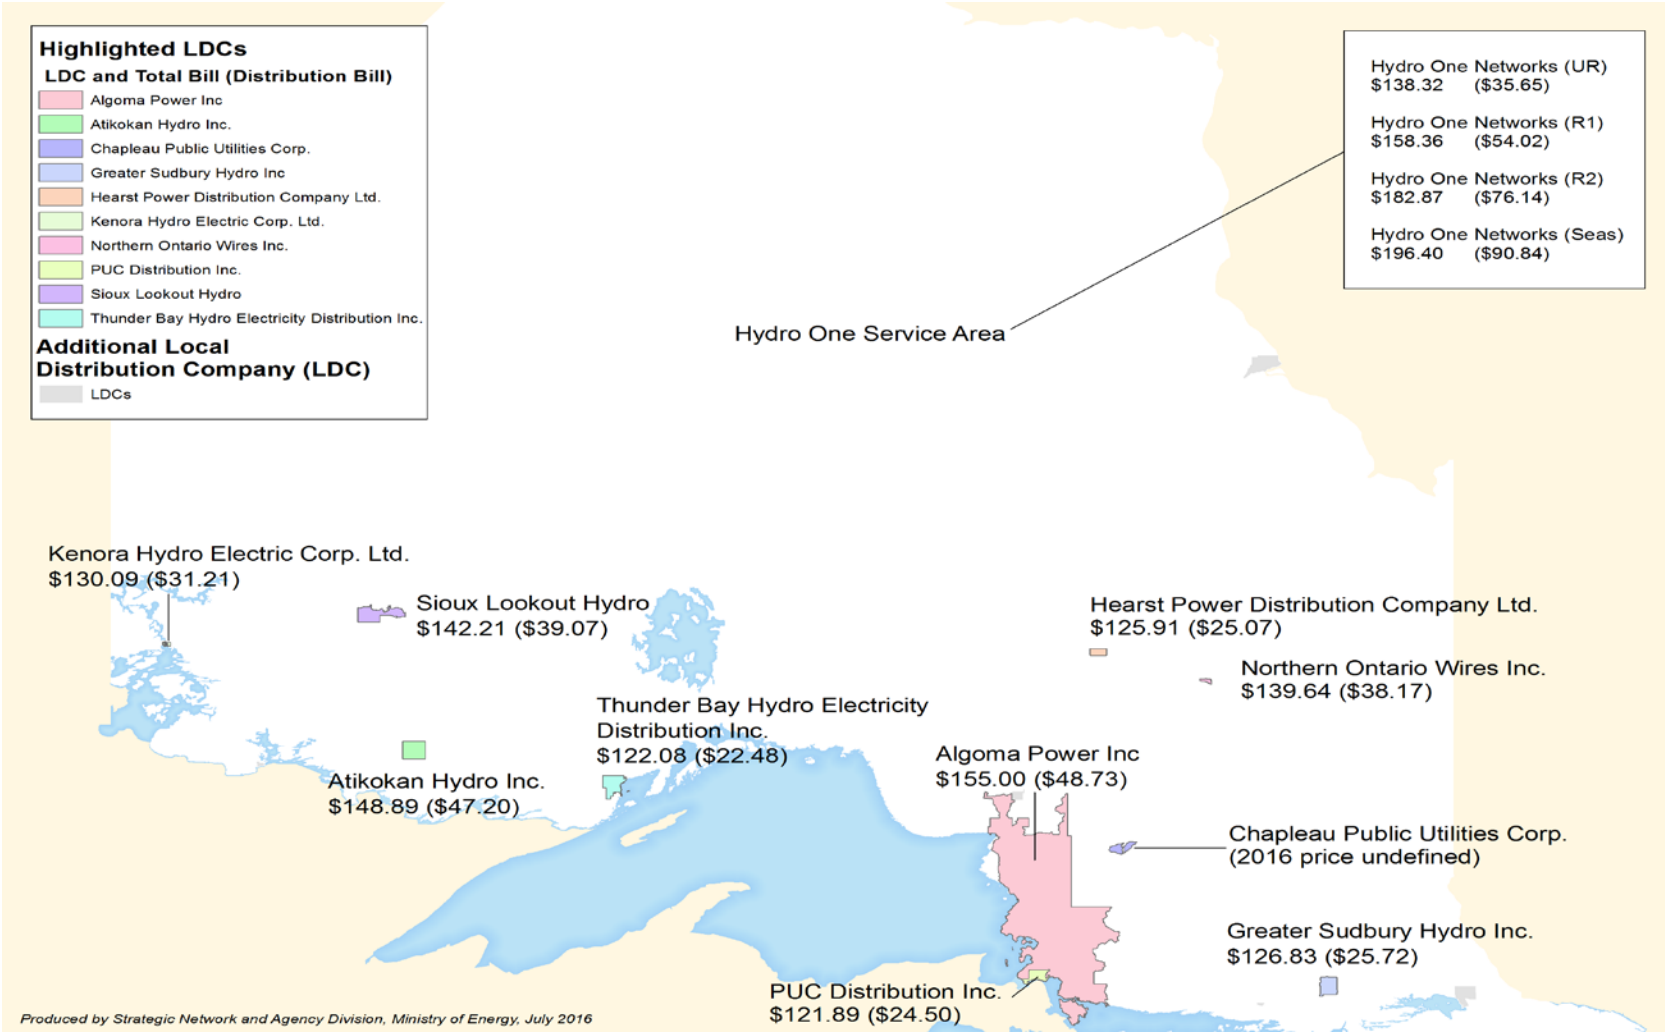
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix B – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Ontario

Electricity Price Mitigation

Working Draft

August 23, 2016

Context

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

- As a result, electricity costs are increasing as the necessary investments are made to modernize the province's electricity infrastructure.

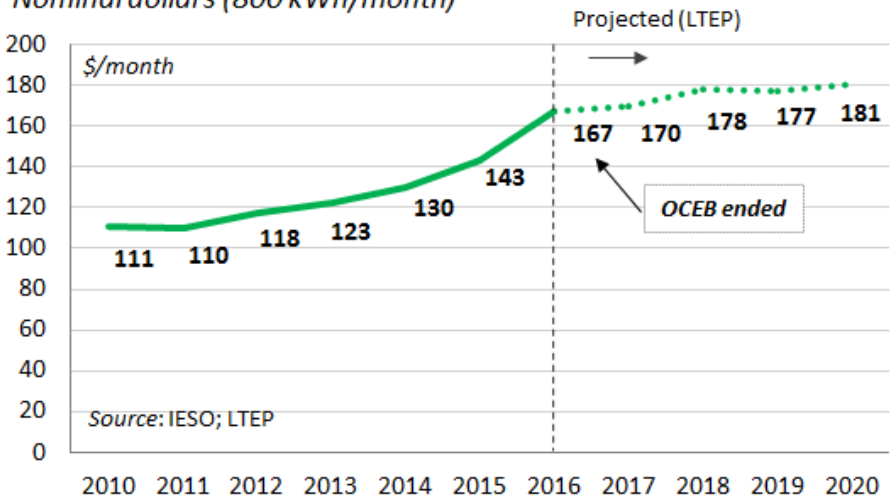
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

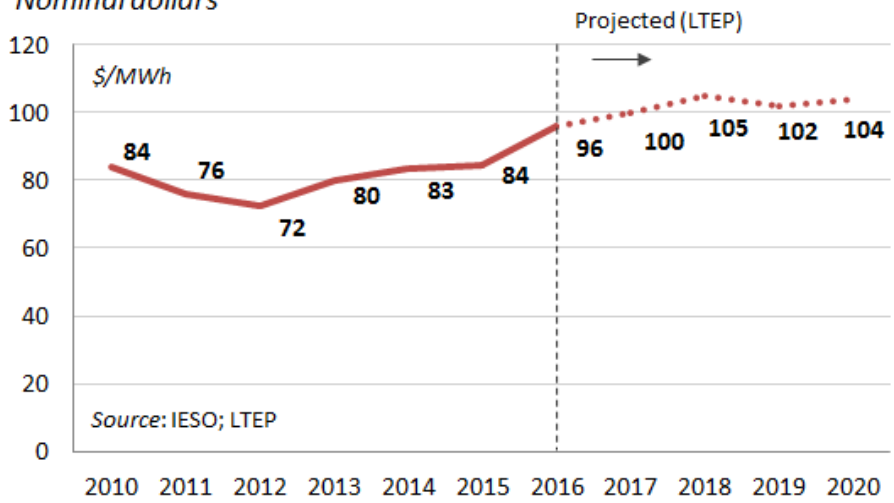
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
below 0.05 MW	0.05–3 MW	*above* 3 MW*
58 TWh (41.1%)	57 TWh (40.4%)	26 TWh (18.4%)

Source: OEB, Navigant, IESO

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

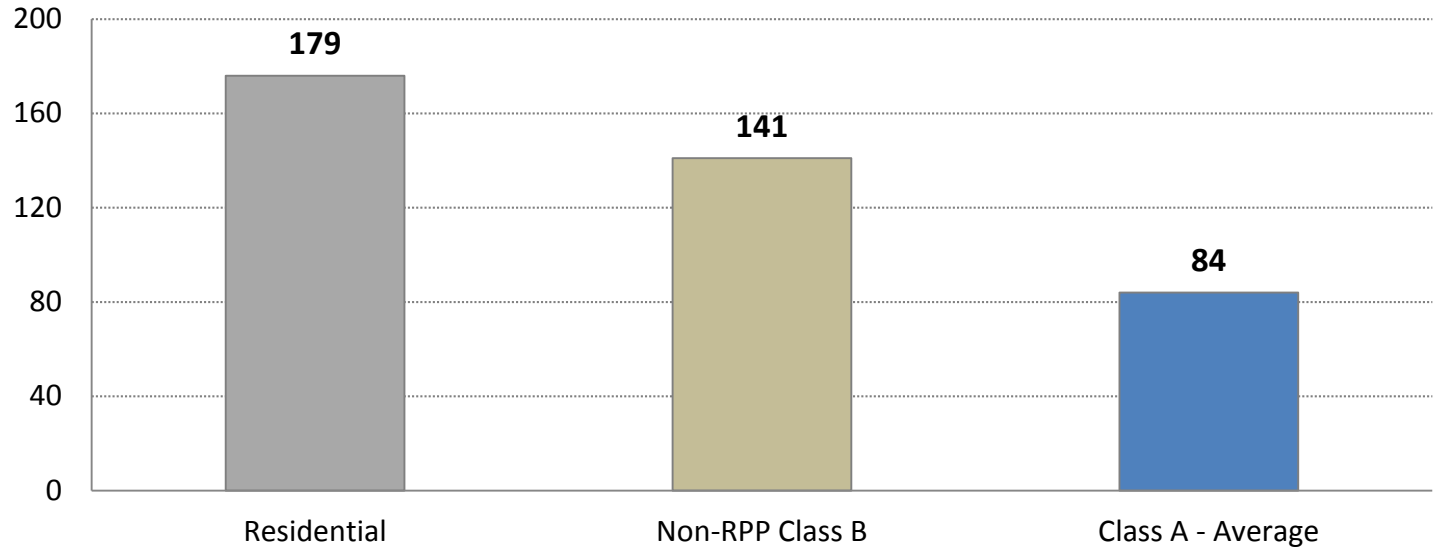
*Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data processing are currently eligible for Class A. All other 3-5MW consumers are Class B.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



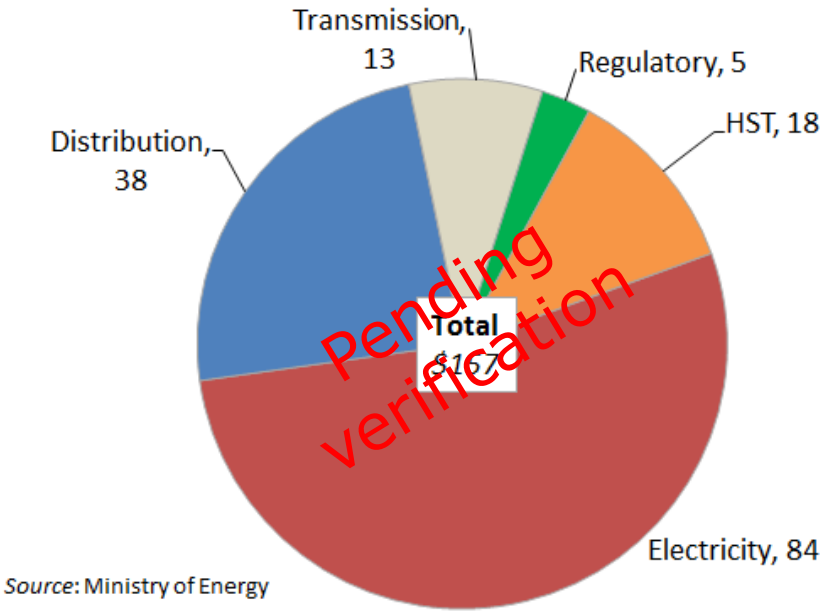
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



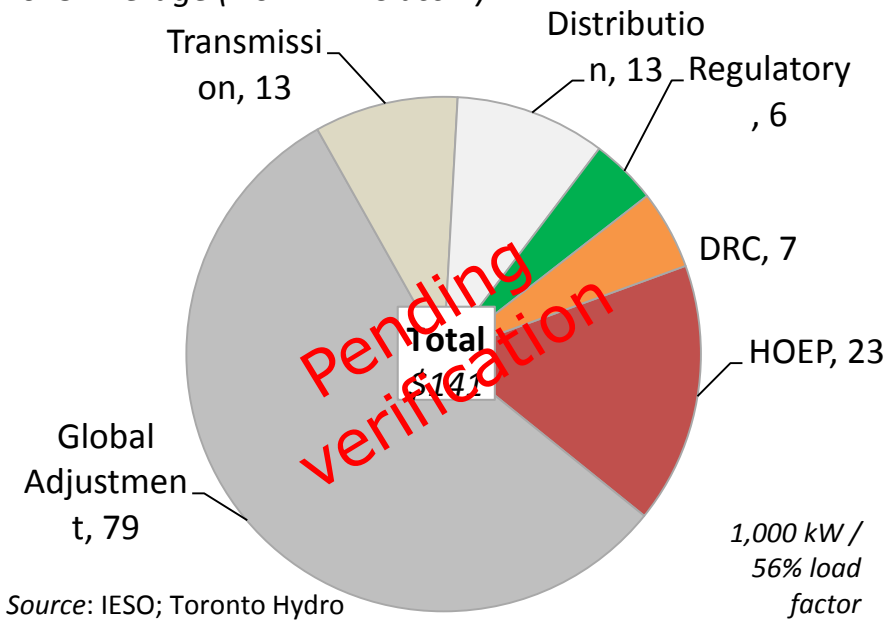
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Non-RPP Class B)

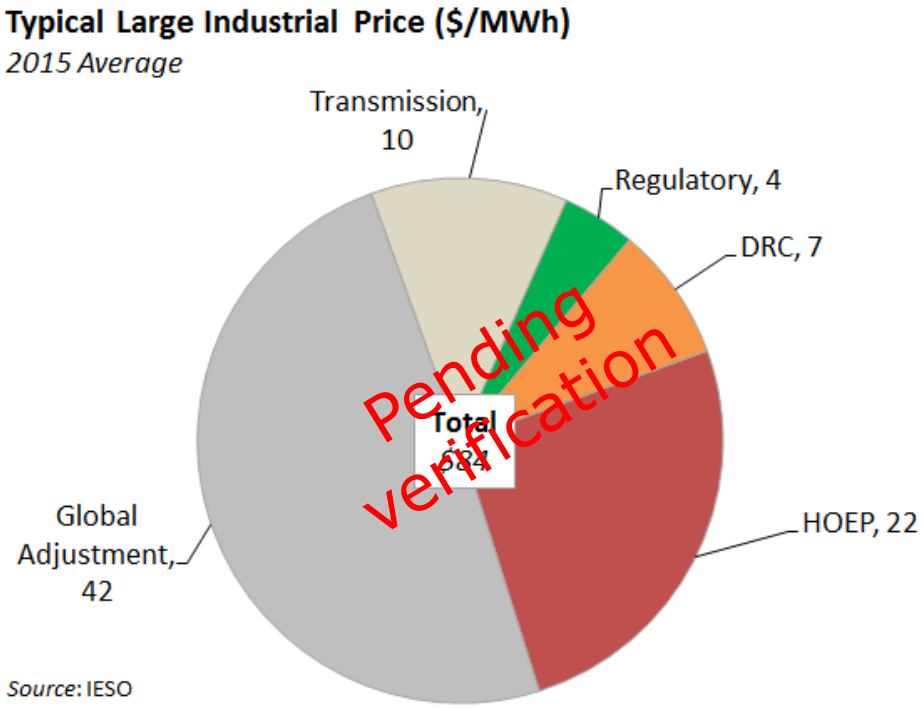


Source: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

Rate Mitigation Levers - Overview

- Tax-based Lever (Shifts costs from the rate-base to the tax base):
  - **HST rebate:** providing a rebate equal to provincial portion of the HST to all consumers or specific classes of consumers.
- Cap and Trade Proceeds Lever (Could shift costs to either reduce impact on the rate base or the tax base):
  - **Modified proceeds recycling:** redirecting proceeds towards other consumer classes or funding other existing initiatives that help reduce GHG emissions.

- Rate-based Levers (Shifts costs within the rate-base, i.e. from one customer group to another):
  - **ICI expansion:** expanding eligibility for the ICI program to all consumers over 1 MW. Currently eligibility is limited to consumers over 5 MW and consumers in certain energy intensive sectors between 3-5 MW.
  - **RRRP Update:** increasing the benefit currently paid to rural customers in recognition of the higher cost of delivery.

- The following slides provide additional detail on the above levers.

Tax-based Lever

HST Background

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

HST General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates.
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates.

- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.

- The Province may also need to change the reporting for the cost of a portion of the Ontario Sales Tax Credit (OSTC) and the energy component of the Ontario Energy and Property Tax Credit (OEPTC) to prevent overlapping revenue offsets.
  - Confirmation from Provincial Controllership is needed.

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

Cap and Trade Proceeds Lever

2016 Budget Commitment

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, The Climate Change Action Plan (CCAP), committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- If a rebate equivalent to the 8% provincial portion of HST is provided for all or some consumers, the resulting savings could be significantly greater than the 2016 Budget commitment and, therefore, the required GGRA proceeds may be reduced further.
  - These savings could be used for additional rate mitigation by further offsetting the cost of investments in renewables and conservation or redirected to other emissions reduction initiatives, as discussed on the next slide.

Alignment with CCAP

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3B over 4 years to greenhouse gas reduction initiatives, funded by Cap and Trade proceeds.

- The CCAP includes up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas by 2020.

$ Billions	2017-18	2018-19	2019-20	2020-21	Total
Total Committed in CCAP	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**6.0 – 8.3**
Electricity Price Mitigation	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 1.3*

- Ontario's Climate *Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail
  - Hamilton LRT
  - Hurontario LRT
  - Energy efficiency in schools

Rate-Based Levers

ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.
- The above bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh.

Rural or Remote Rate Protection (RRRP)

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers.
  - There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.
- There may be opportunity to evaluate current levels of support to enhance rate assistance available to R2 customers.
  - An additional $28.53/month would equalize R2 bills with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 RRRP to $235M with a monthly impact on an average residential consumer of $0.57.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

Rate Mitigation Options

Rate Mitigation Options

- Three options have been identified that could provide relief to various consumer classes. These options are outlined below.

1. 8% Rebate for All Consumers and Eliminate Proceeds Recycling

- Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
- Eliminate planned GGRA proceeds recycling to electricity consumers.

2. 8% Rebate for RPP Consumers + ICI Expansion

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms).
- Provide support to small industrial and commercial consumers by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

3. HST Rebate for RPP Consumers + ICI Expansion and RRRP Update

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms).
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

Consumer Impact Summary (data to be confirmed)

Option	Average Annual Fiscal Impact	Average Annual GGRA Proceeds Impact	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*	*0.05 - 1 MW*	*1 - 3 MW*	*Existing*	*New*
8% rebate to all consumers and Eliminate Proceeds Recycling	$1.8 billion	-$330 million (-$1.32 billion over first compliance period)	-$11/ month	-$18/ month	-$12/ MWh		-$7/ MWh	
8% rebate to RPP consumers + ICI Expansion	$1.0 billion	-$125 million (-$0.50 billion over first compliance period)	-$10.3/ month	-$17/ month	-$1/MWh		-$0.9/ MWh	Up to -$52/ MWh
8% rebate to RPP consumers + ICI Expansion and RRRP Update	$1.0 billion	-$60 million (-$0.24 billion over the first compliance period)	-$9.7/ month	-$45/ month	-$1/MWh		-$0.9/ MWh	Up to -$52/ MWh

Pending verification

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

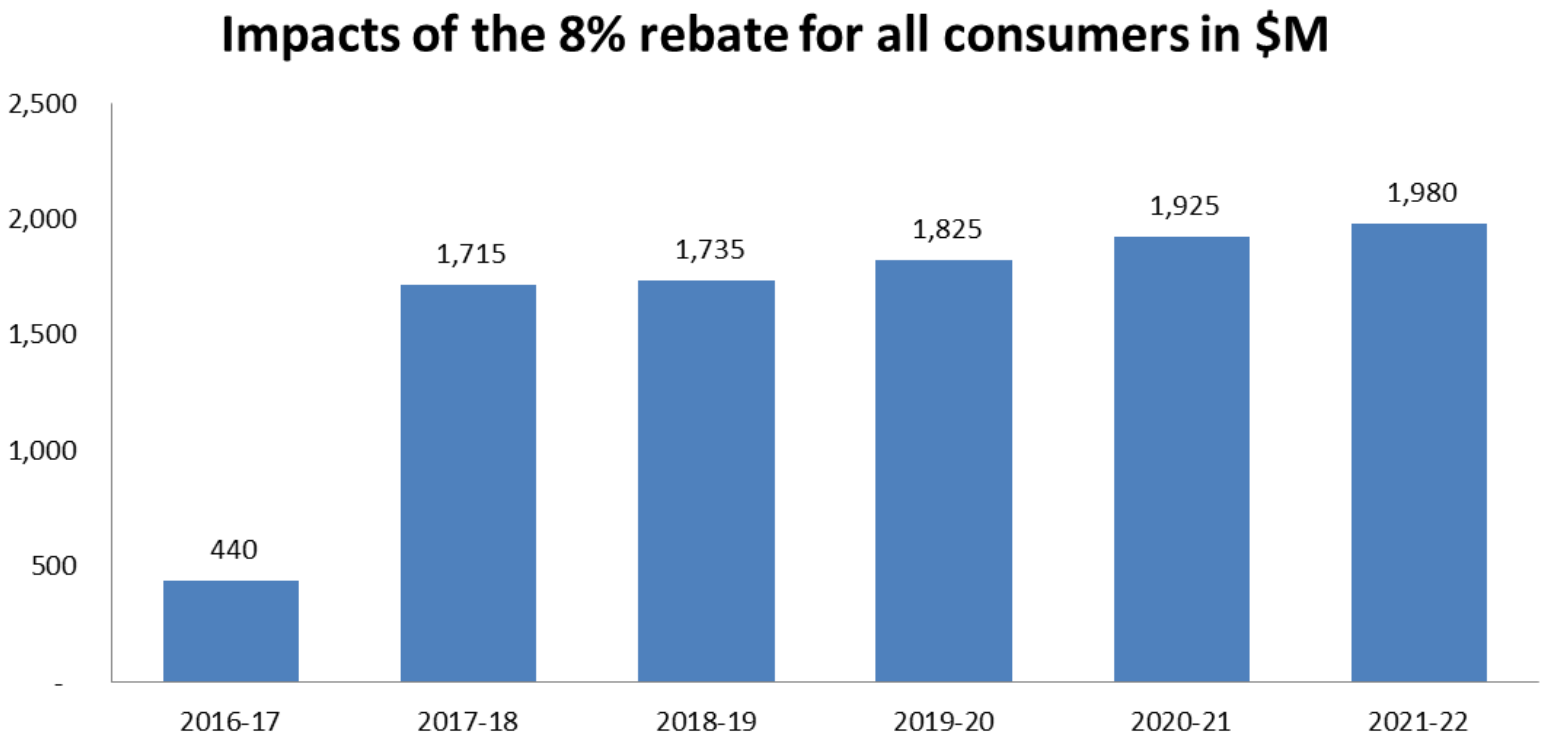
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.
  - This option would avoid stakeholder issues associated with OCEB (e.g., long-term care homes).

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

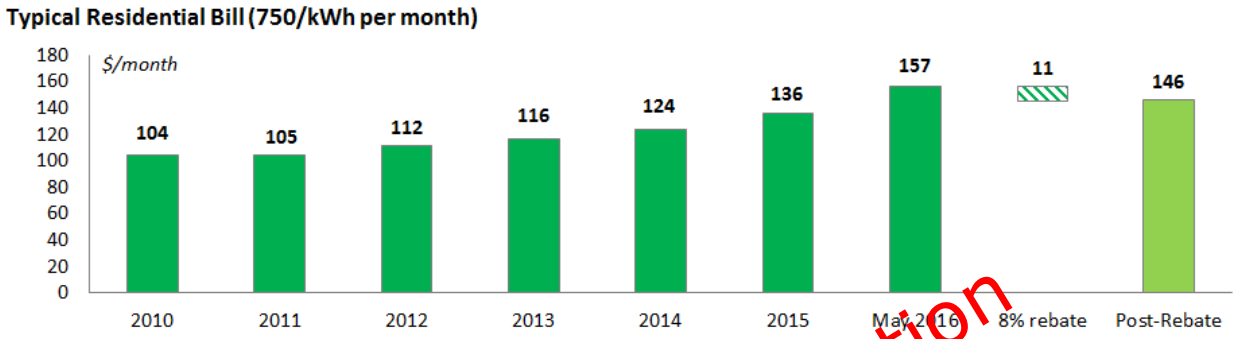
8% Rebate for All Consumers – Projected Cost

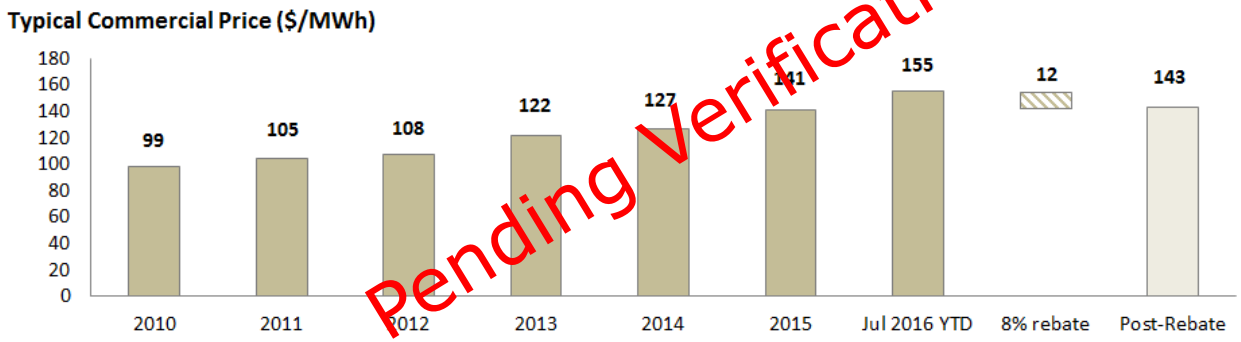
- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.



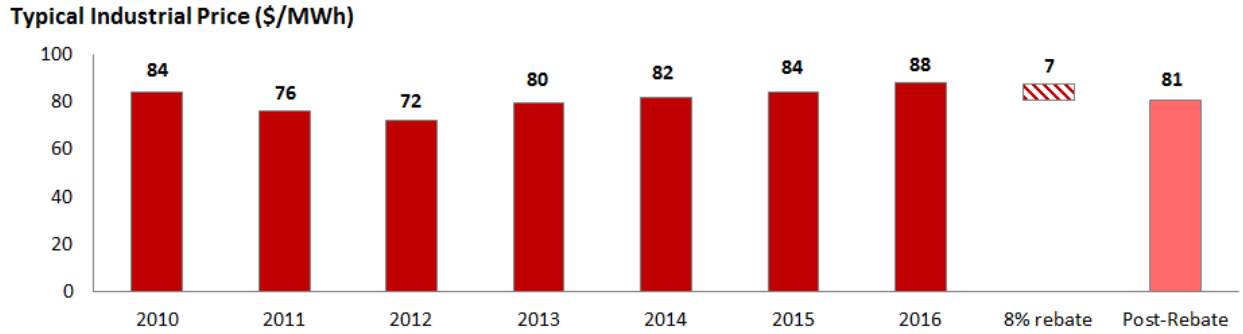
Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $12/MWh rebate.
- A $7/MWh rebate for industrial consumers would bring all-in prices below 2010 levels.





Pending Verification



8% Rebate for All Consumers – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)

8% Rebate for All Consumers – Considerations Cont'd

- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers, potentially eliminating $1.3 billion in required GGRA proceeds over the first compliance period.

- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

- Additionally, commercial and industrial consumers would continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government's ability to achieve fiscal balance.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Option 2 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion

8% Rebate for Regulated Price Plan Consumers + ICI Expansion – Overview

1. 8% Rebate for Regulated Price Plan Consumers

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.
     - Those who decide to opt-in would not see a benefit until July 2018.

3. Modified proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.
  - This option would have similar stakeholder issues to those under OCEB (e.g., long-term care homes).

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

- While non-RPP consumers would not see a benefit from the provincial HST rebate under this option, support would be provided to small industrial and commercial consumers through the ICI expansion and all industrial and commercial consumers would receive proceeds recycling through the GGRA.

- Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers only would be approximately $1 billion between 2017 and 2020.

Projected Cost of 8% Rebate ($B)

Nominal dollars

  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + ICI Expansion – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Consideration could be given to a Regulated Price Plan rebate that decreases over time, eventually being fully phased out.

- Amendments would also be required to O. Reg. 429/04 to expand ICI.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Option 3 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion and RRRP Update

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and RRRP Update – Overview

1. 8% Rebate for Regulated Price Plan Consumers

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.

3. RRRP Update
   - Rural consumers would see a benefit of $27.96, while all other consumers would see a cost of $0.57.

4. Modified proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and RRRP Update – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.
  - This option would have similar stakeholder issues to those under OCEB (e.g., long-term care homes).

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

- While non-RPP consumers would not see a benefit from the provincial HST rebate under this option, all industrial and commercial consumers would receive proceeds recycling through the GGRA.
  - Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Additionally, support would be provided to small industrial and commercial consumers through the ICI expansion, while rural customers would see a significant benefit through updates to the RRRP program.

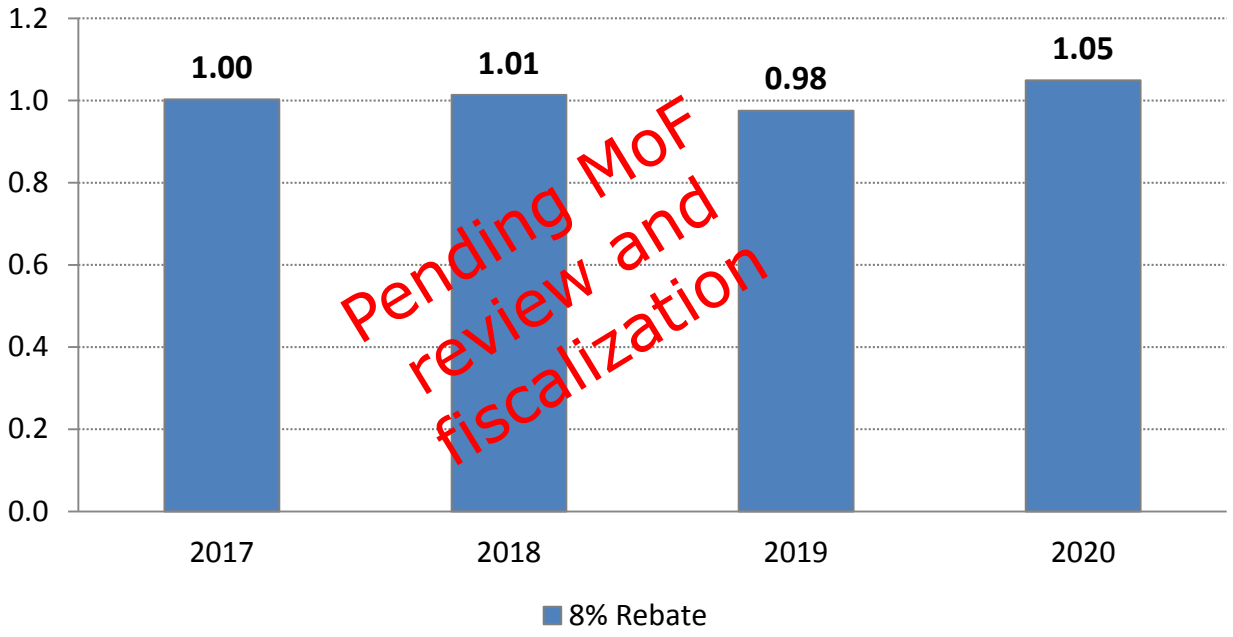
8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers only would be approximately $1 billion between 2017 and 2020.

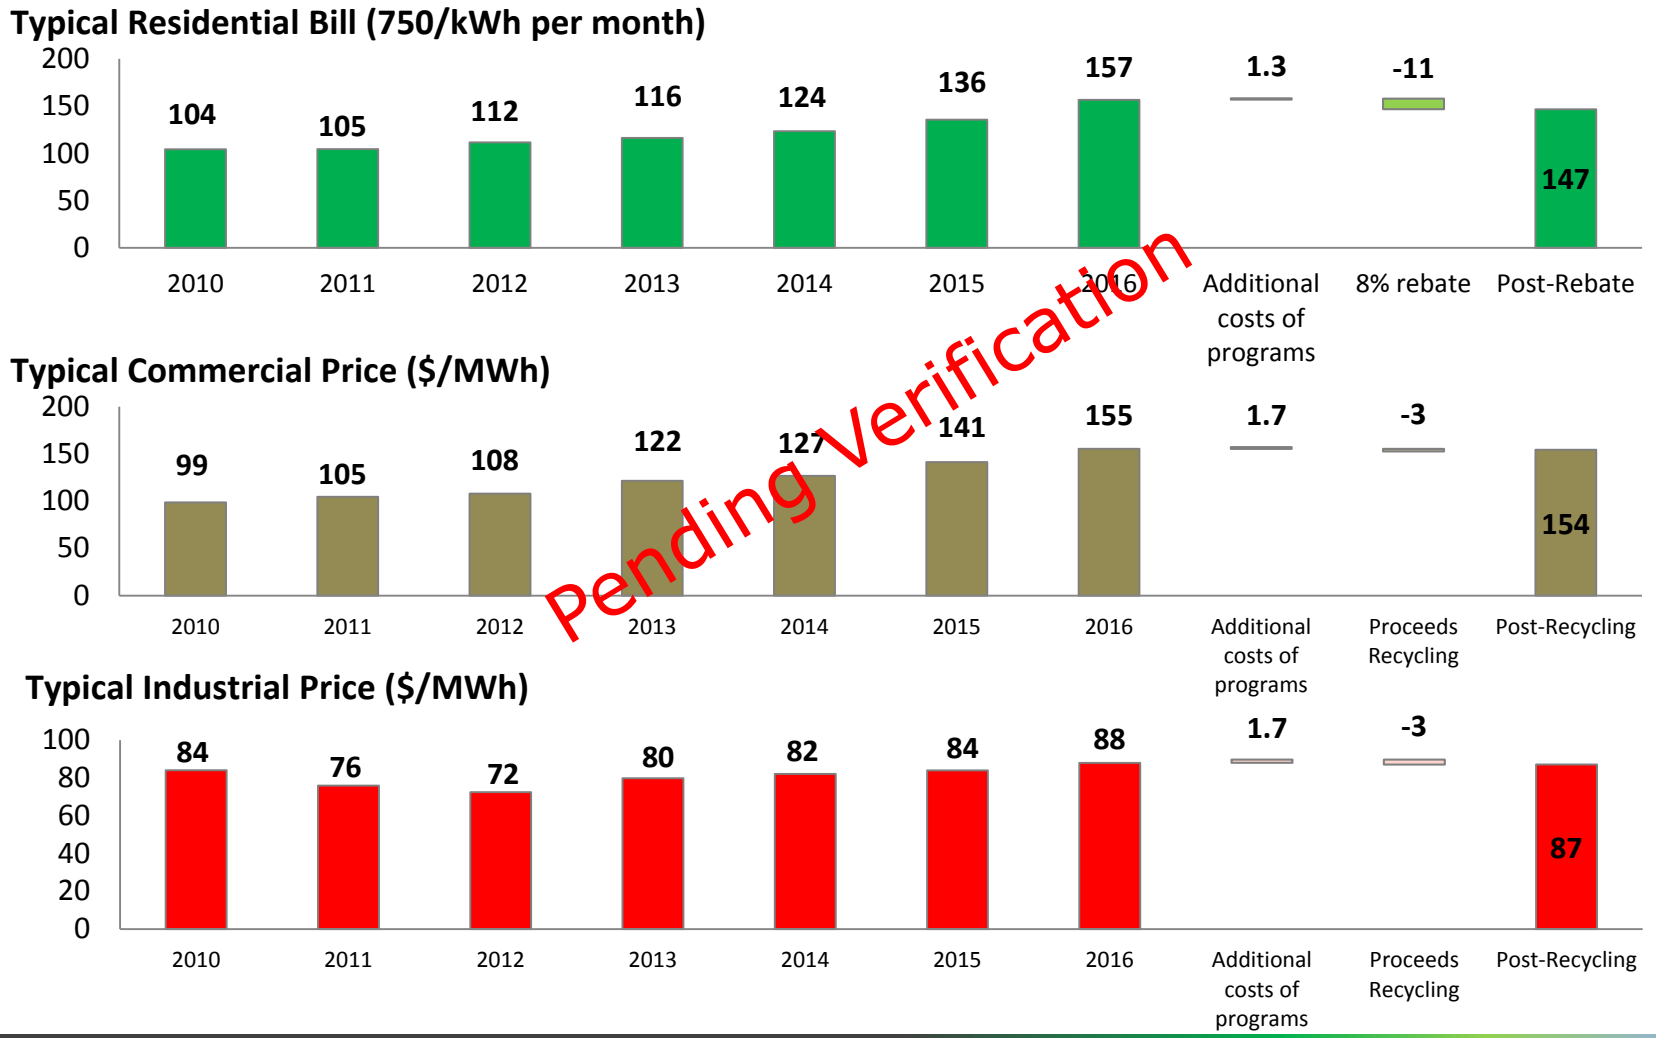
Projected Cost of 8% Rebate to Regulated Price Plan ($B)

Nominal dollars

Source: OPO (Aug 19 2016)



Bill Impacts by Sector



8% Rebate for Regulated Price Plan Consumers + ICI Expansion and RRRP Update – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and RRRP Update – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Consideration could be given to a Regulated Price Plan rebate that decreases over time, eventually being fully phased out.

- Amendments would also be required to various regulations to expand ICI and RRRP.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan, including consultation with LDCs, the OEB and IESO.

Appendix – Background on Rate-Based Initiatives

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Typical non-RPP Class B consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	3.54	4.33	4.02	4.71	6.33	6.35
RRRP	1.20	1.10	1.12	1.23	1.24	1.25

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Appendix A – ICI

Industrial Conservation Initiative

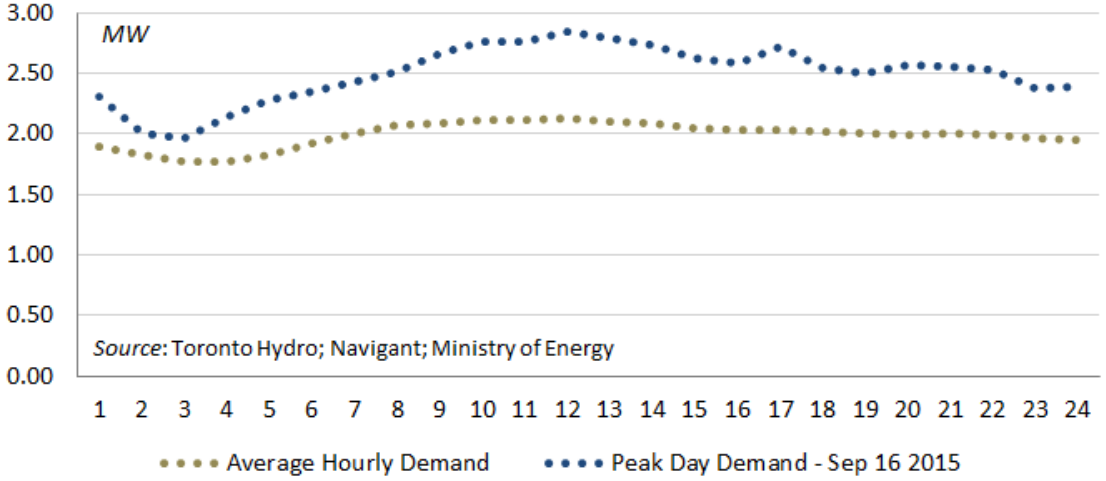
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

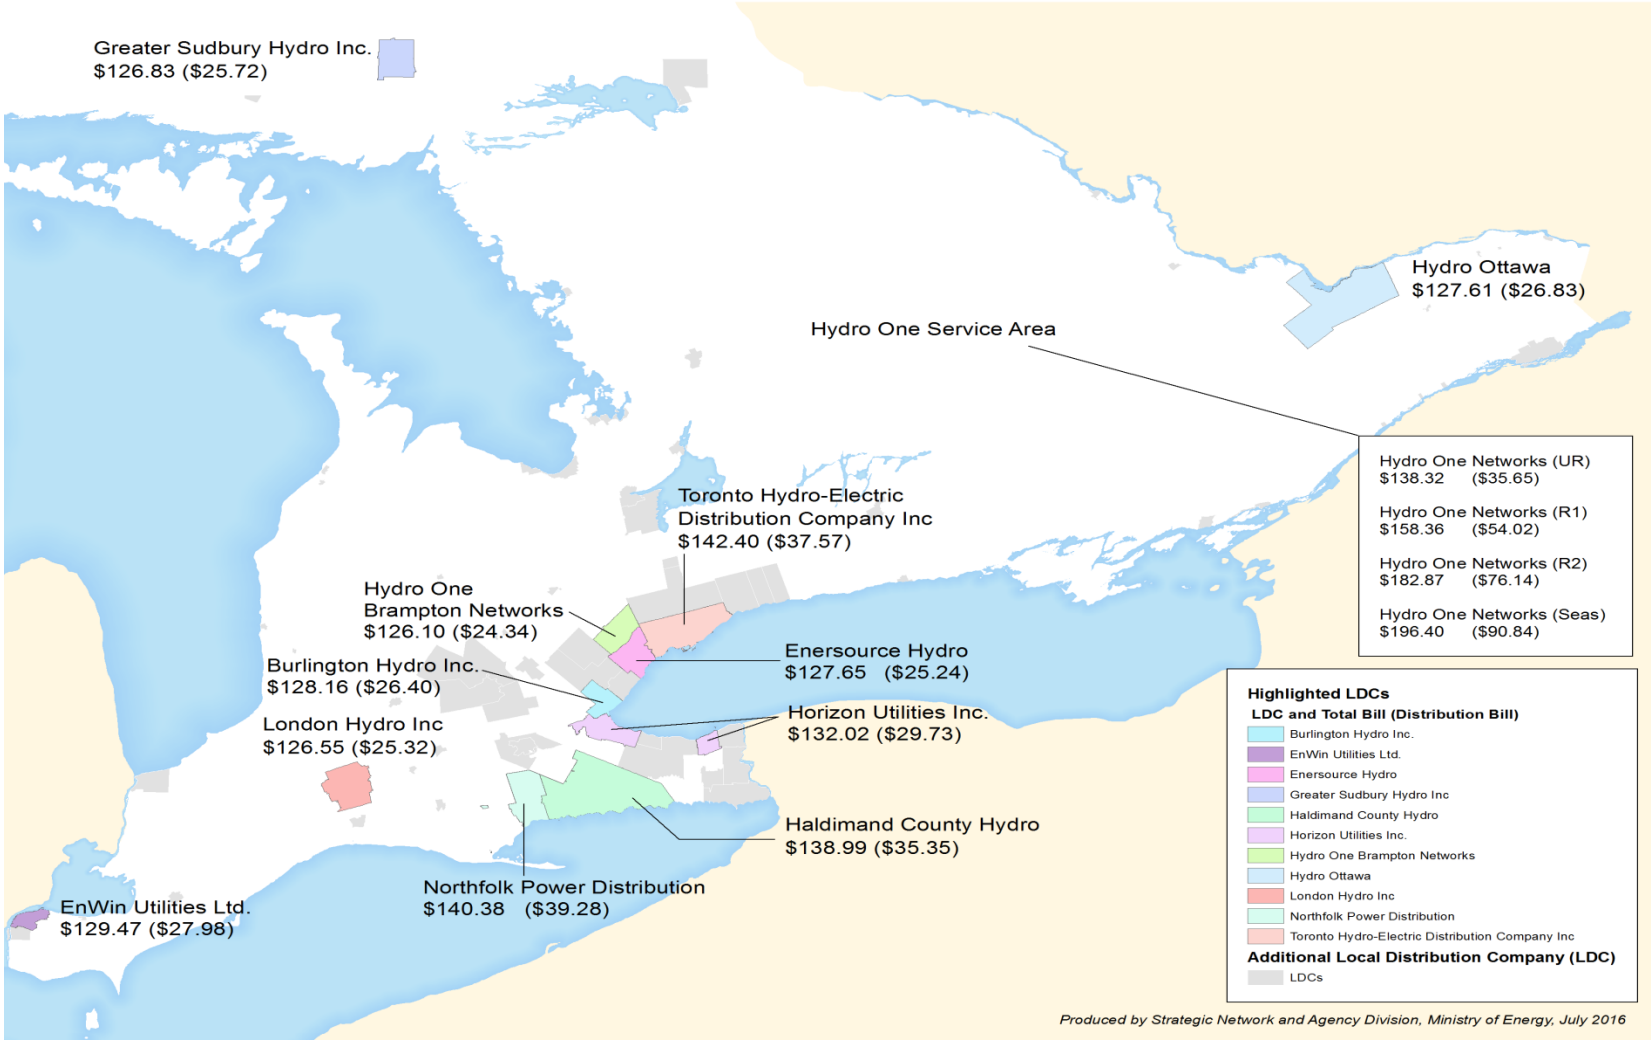
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

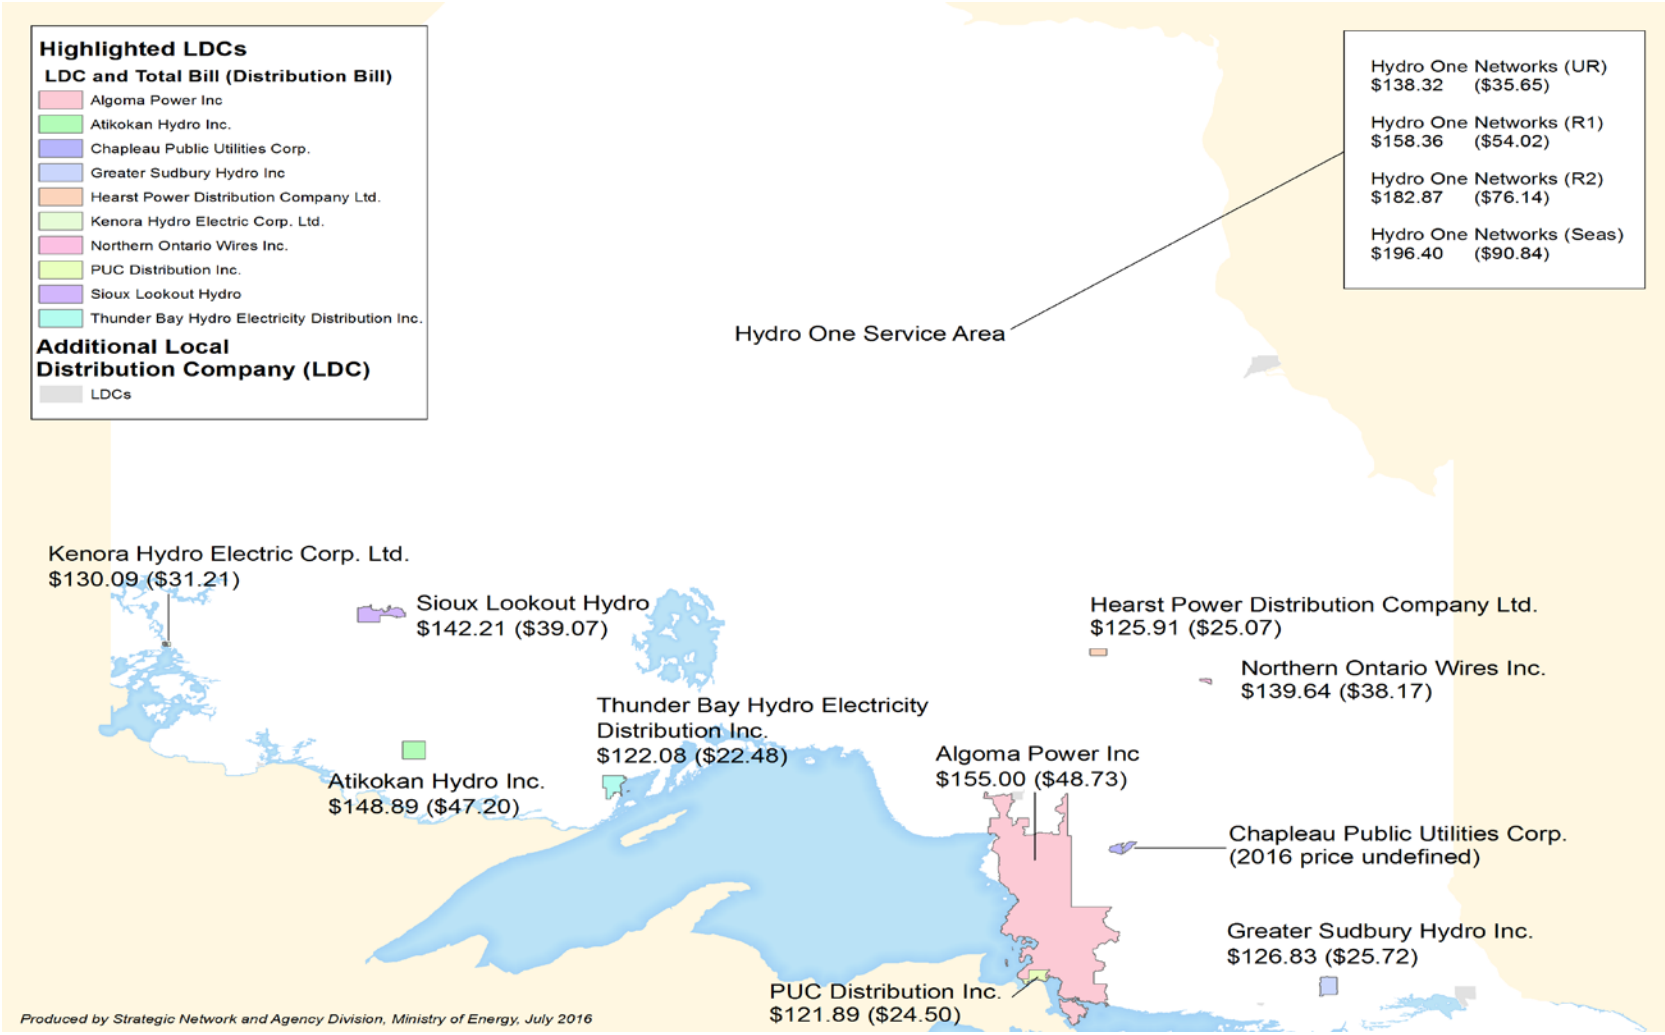
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix B – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Ontario

Electricity Price Mitigation

Working Draft

August 23, 2016

Context

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

- As a result, electricity costs are increasing as the necessary investments are made to modernize the province's electricity infrastructure.

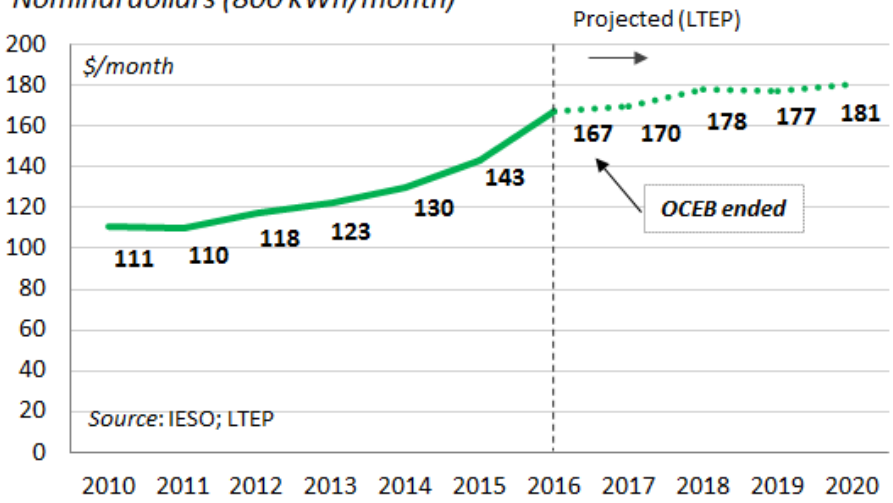
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

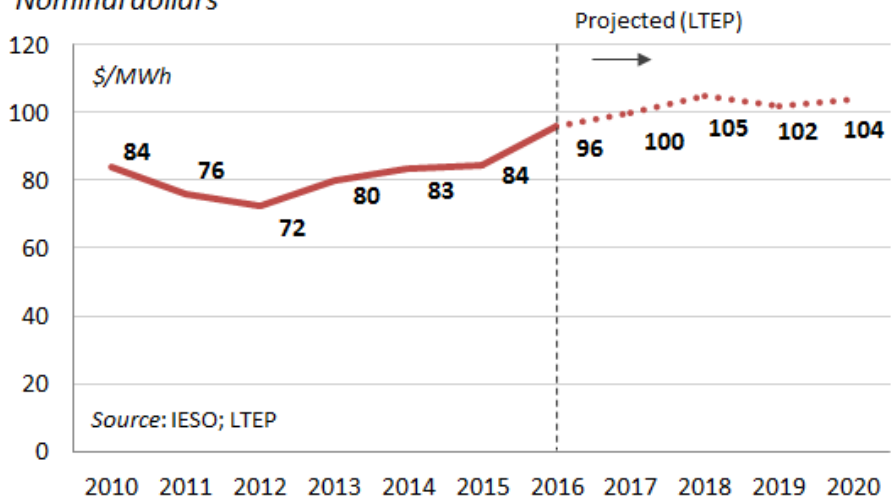
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
below 0.05 MW	0.05–3 MW	*above* 3 MW*
58 TWh (41.1%)	57 TWh (40.4%)	26 TWh (18.4%)

Source: OEB, Navigant, IESO

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

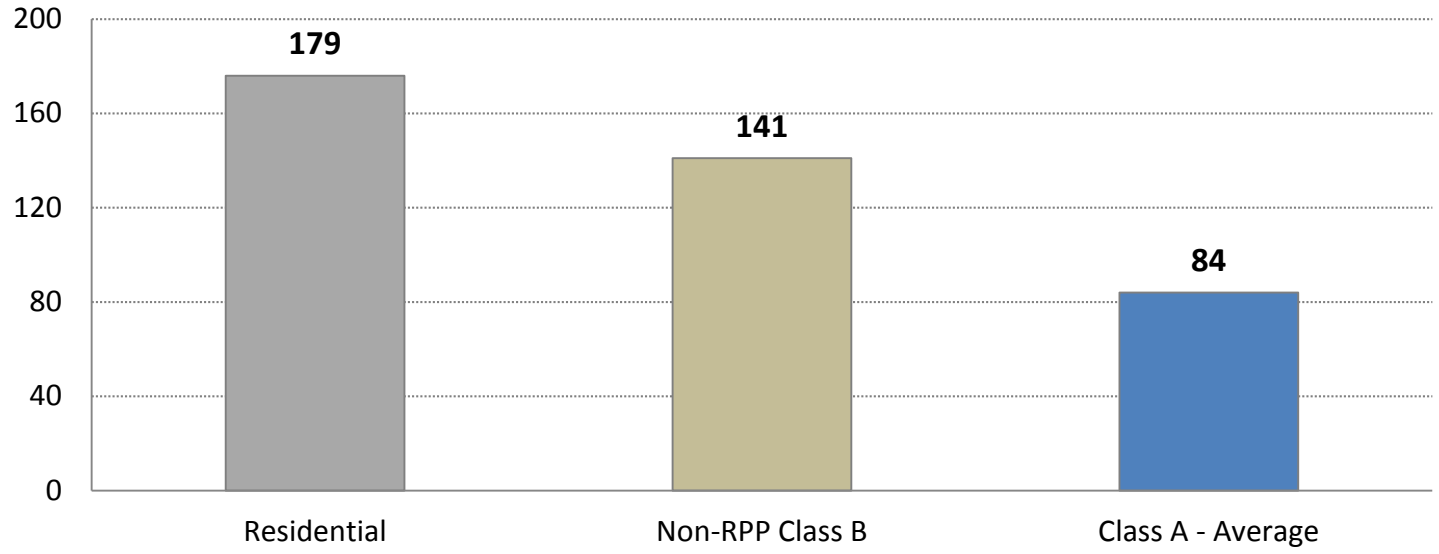
*Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data processing are currently eligible for Class A. All other 3-5MW consumers are Class B.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



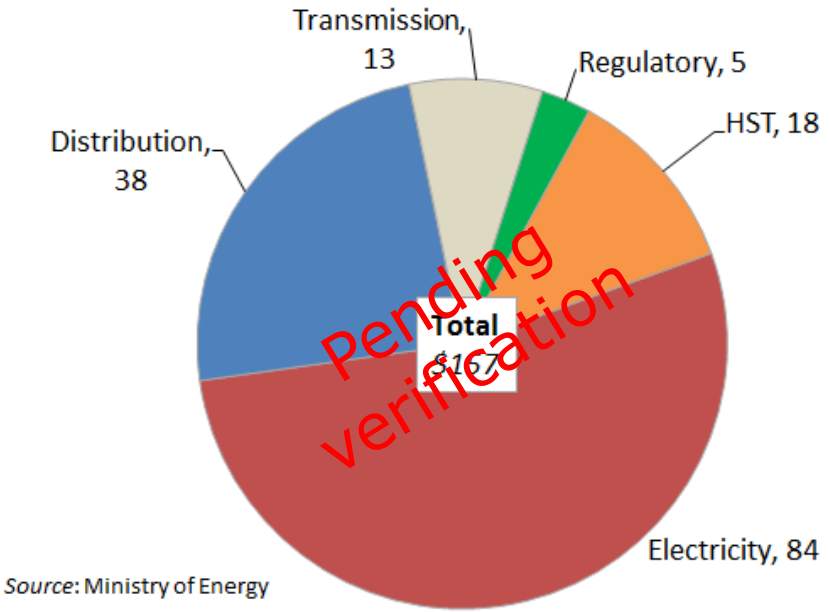
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



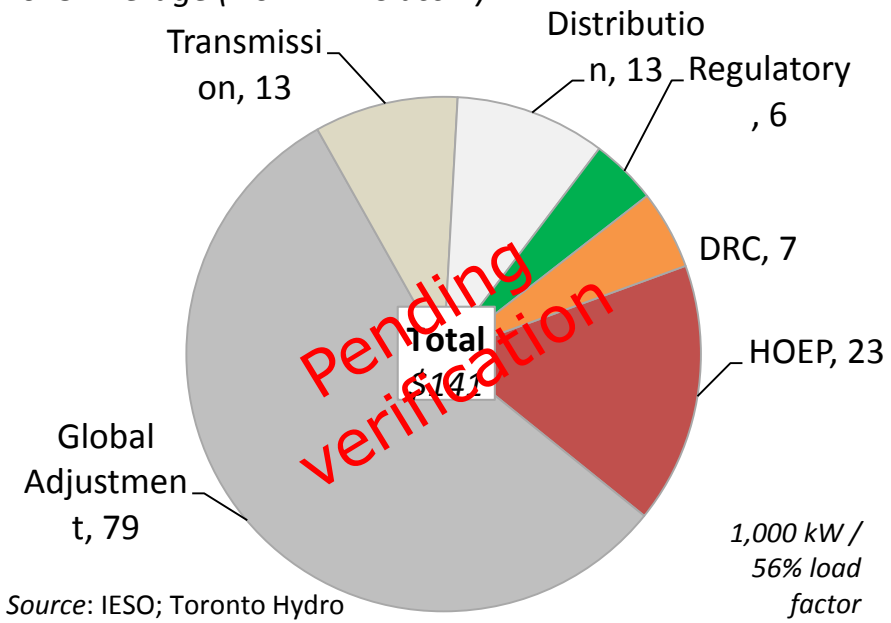
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)

2015 Average (Non-RPP Class B)

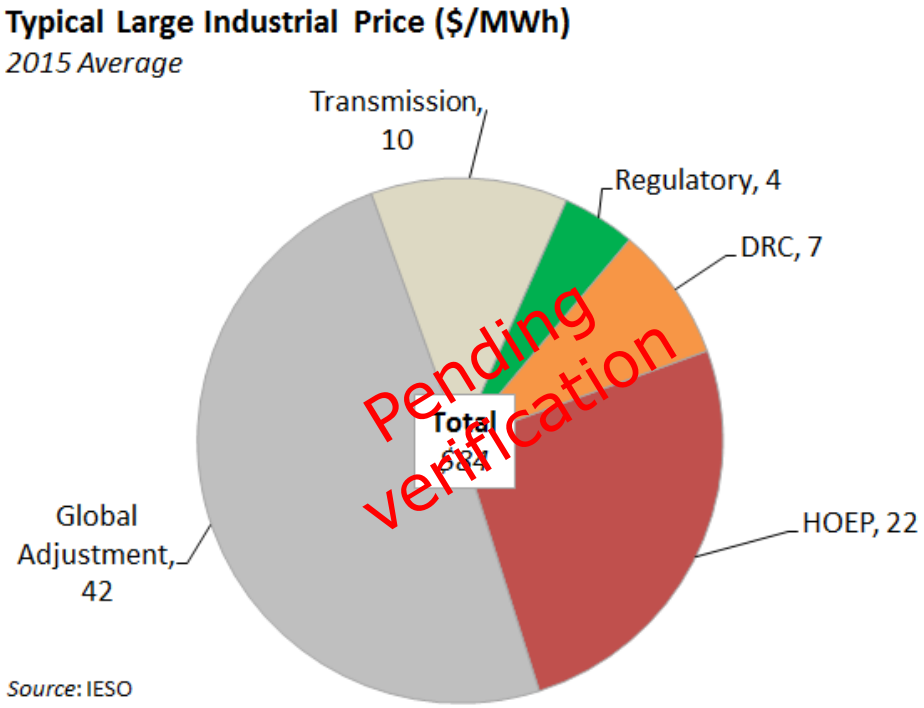


Source: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and the Northern Industrial Electricity Rate Program (NIERP).
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.



- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

Rate Mitigation Levers - Overview

- Tax-based Lever (Shifts costs from the rate-base to the tax base):
  - **8% ~~HST~~ rebate:** providing a rebate equal to provincial portion of the HST to all consumers or specific classes of consumers.
- Cap and Trade Proceeds Lever (Could shift costs to either reduce impact on the rate base or the tax base):
  - **Modified proceeds recycling:** redirecting proceeds towards other consumer classes or funding other existing initiatives that help reduce GHG emissions.

- Rate-based Levers (Shifts costs within the rate-base, i.e. from one customer group to another):
  - **ICI expansion:** expanding eligibility for the ICI program to all consumers over 1 MW. Currently eligibility is limited to consumers over 5 MW and consumers in certain energy intensive sectors between 3-5 MW.
  - **RRRP Update:** increasing the benefit currently paid to rural customers in recognition of the higher cost of delivery.

- The following slides provide additional detail on the above levers.

Tax-based Lever

HST Background

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).
  - Businesses selling HST-exempt goods or services (such as financial services) are not eligible to claim input tax credits.

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
  - PSBs consist of municipalities, universities, public colleges, school authorities, hospital authorities and charities and qualifying non-profit organizations.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates. Charities and qualifying non-profits account for about $40 million that amount.
  - See Appendix for additional information.

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

HST General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - ~~PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates.~~
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates. Savings would be less if there is a cap on the rebate.
- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.
- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.
- The Province may also need to change the reporting for the cost of ~~a portion of the Ontario Sales Tax Credit (OSTC) and~~ the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy ~~(OEPTC) to prevent overlapping revenue offsets~~. The energy component is reported as an offset of HST revenue. ~~Confirmation from Provincial Controllership is needed.~~
  - Ministry program expenses could increase by as much as $445 million (TBC).
- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.
- To improve the province's ability to track impacts and program outcomes, subsequent legislative amendments to enable exchanges of data with LDCs could be considered.

Cap and Trade Proceeds Lever

2016 Budget Commitment

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, The Climate Change Action Plan (CCAP), committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- If a rebate equivalent to the 8% provincial portion of HST is provided for all or some consumers, the resulting savings could be significantly greater than the 2016 Budget commitment and, therefore, the required GGRA proceeds may be reduced further.
  - These savings could be used for additional rate mitigation by further offsetting the cost of investments in renewables and conservation or redirected to other emissions reduction initiatives, as discussed on the next slide.

Alignment with CCAP

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3B over 4 years to greenhouse gas reduction initiatives, funded by Cap and Trade proceeds.

- The CCAP includes up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas by 2020.

$ Billions	2017-18	2018-19	2019-20	2020-21	Total
Total Committed in CCAP	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**6.0 – 8.3**
Electricity Price Mitigation	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 1.3*

- Ontario's Climate *Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail
  - Hamilton LRT
  - Hurontario LRT
  - Energy efficiency in schools

Rate-Based Levers

ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - ‘Short-term’ refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - ‘Long-term’ is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.
- The above bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh.

Rural or Remote Rate Protection (RRRP)

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers.
  - There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.
- There may be opportunity to evaluate current levels of support to enhance rate assistance available to R2 customers.
  - An additional $28.53/month would equalize R2 bills with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 RRRP to $235M with a monthly impact on an average residential consumer of $0.57.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

Rate Mitigation Options

Rate Mitigation Options

- Three options have been identified that could provide relief to various consumer classes. These options are outlined below.

1. **8% Rebate for All Consumers and Eliminate Proceeds Recycling**
   - Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
   - Eliminate planned GGRA proceeds recycling to electricity consumers.

2. **8% Rebate for RPP Consumers + ICI Expansion**
   - Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms).
   - Provide support to small industrial and commercial consumers by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
   - Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

3. **8% ~~HST~~ Rebate for RPP Consumers + ICI Expansion and RRRP Update**
   - Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms).
   - Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
   - Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
   - Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

Consumer Impact Summary (data to be confirmed)

Option	Average Annual Fiscal Impact	Average Annual GGRA Proceeds Impact	Regulated Price Plan (Residential)		Class B (Commercial)		Class A (Industrial)	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*	*0.05 - 1 MW*	*1 - 3 MW*	*Existing*	*New*
8% rebate to all consumers and Eliminate Proceeds Recycling	$1.8 billion	-$330 million (-$1.32 billion over first compliance period)	-$11/ month	-$18/ month	-$12/ MWh		-$7/ MWh	
8% rebate to RPP consumers + ICI Expansion	$1.0 billion	-$125 million (-$0.50 billion over first compliance period)	-$10.3/ month	-$17/ month	-$1/MWh		-$0.9/ MWh	Up to -$52/ MWh
8% rebate to RPP consumers + ICI Expansion and RRRP Update	$1.0 billion	-$60 million (-$0.24 billion over the first compliance period)	-$9.7/ month	-$45/ month	-$1/MWh		-$0.9/ MWh	Up to -$52/ MWh

Pending verification

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

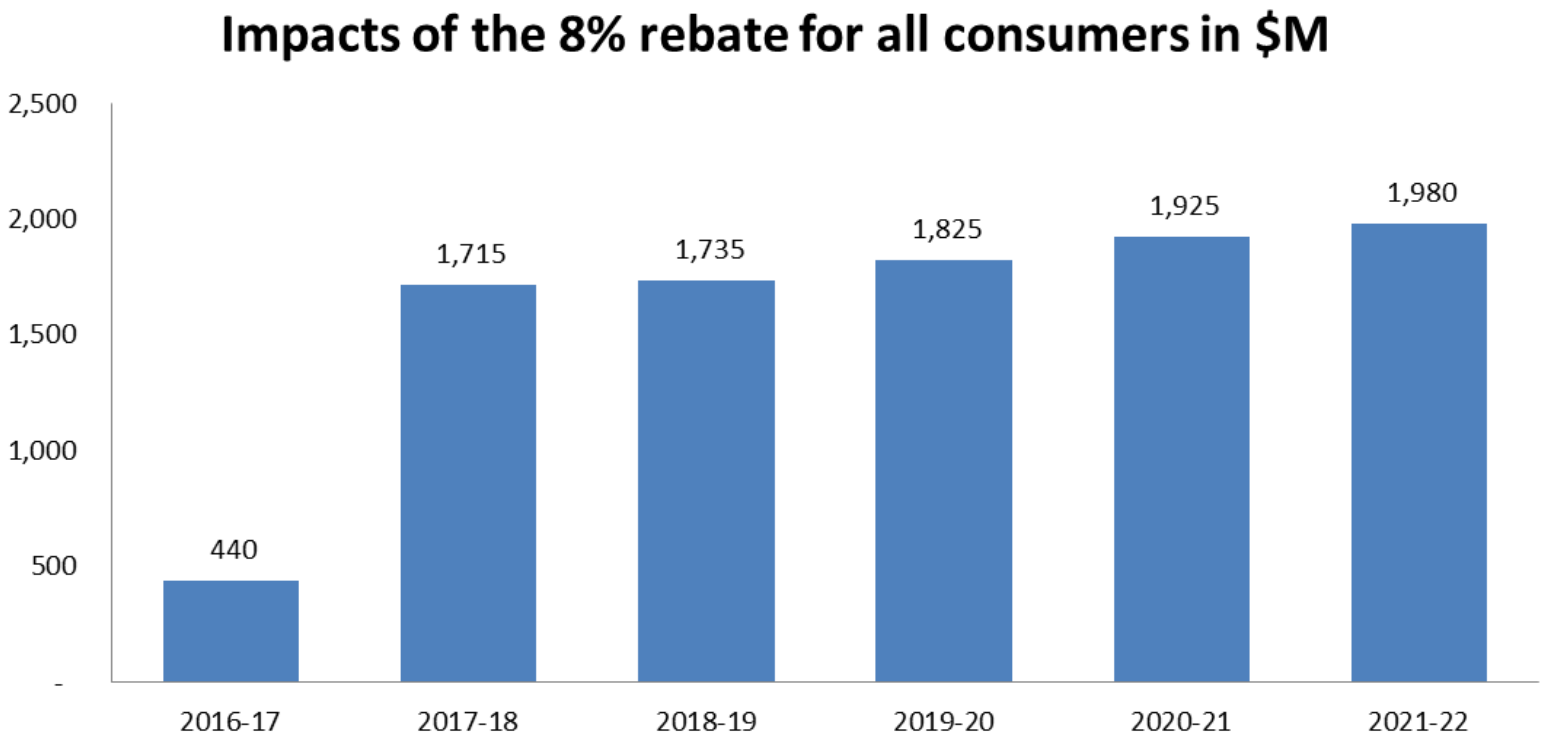
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.
  - This option would avoid stakeholder issues associated with OCEB (e.g., long-term care homes).

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

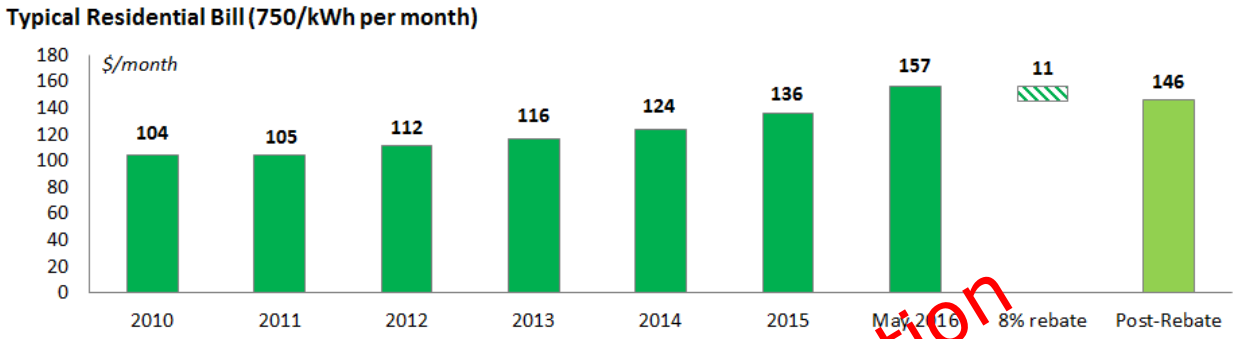
8% Rebate for All Consumers – Projected Cost

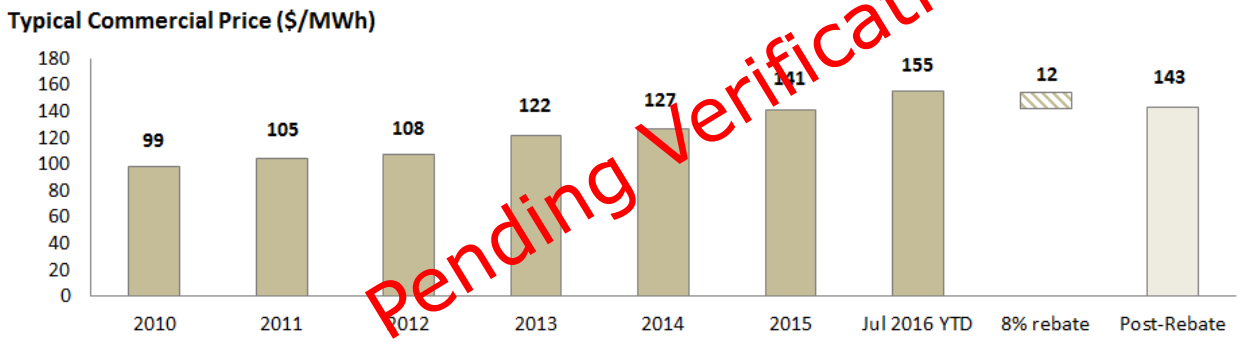
- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.



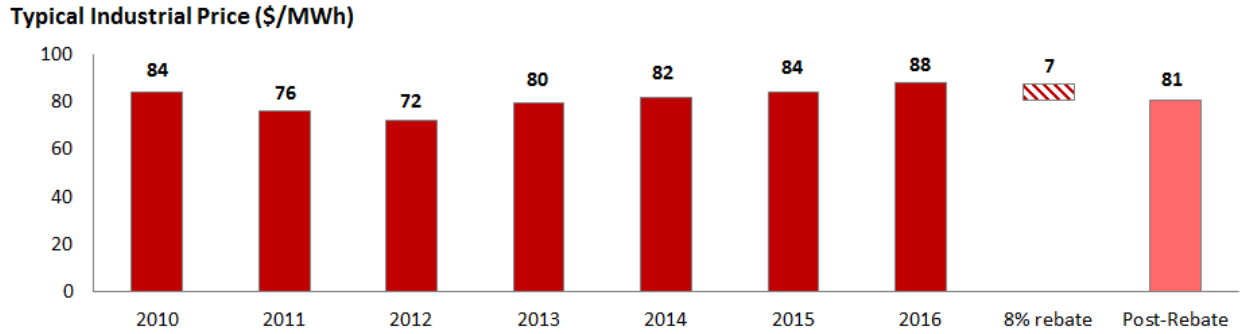
Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $12/MWh rebate.
- A $7/MWh rebate for industrial consumers would bring all-in prices below 2010 levels.





Pending Verification



8% Rebate for All Consumers – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)

8% Rebate for All Consumers – Considerations Cont'd

- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers, potentially eliminating $1.3 billion in required GGRA proceeds over the first compliance period.

- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

- Additionally, commercial and industrial consumers would continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government's ability to achieve fiscal balance.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Option 2 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion

8% Rebate for Regulated Price Plan Consumers + ICI Expansion – Overview

1. 8% Rebate for Regulated Price Plan Consumers

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.
     - Those who decide to opt-in would not see a benefit until July 2018.

3. Modified proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.
  - This option would have similar stakeholder issues to those under OCEB (e.g., long-term care homes).

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

- While non-RPP consumers would not see a benefit from the provincial HST rebate under this option, support would be provided to small industrial and commercial consumers through the ICI expansion and all industrial and commercial consumers would receive proceeds recycling through the GGRA.

- Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers only would be approximately $1 billion between 2017 and 2020.

Projected Cost of 8% Rebate ($B)

Nominal dollars

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + ICI Expansion – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Consideration could be given to a Regulated Price Plan rebate that decreases over time, eventually being fully phased out.

- Amendments would also be required to O. Reg. 429/04 to expand ICI.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Option 3 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion and RRRP Update

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and RRRP Update – Overview

1. 8% Rebate for Regulated Price Plan Consumers

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.

3. RRRP Update
   - Rural consumers would see a benefit of $27.96, while all other consumers would see a cost of $0.57.

4. Modified proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and RRRP Update – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.
  - This option would have similar stakeholder issues to those under OCEB (e.g., long-term care homes).

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and RRRP Update – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Consideration could be given to a Regulated Price Plan rebate that decreases over time, eventually being fully phased out.

- Amendments would also be required to various regulations to expand ICI and RRRP.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan, including consultation with LDCs, the OEB and IESO.

Appendix – Background on Rate-Based Initiatives

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84

Appendix A – ICI

Industrial Conservation Initiative

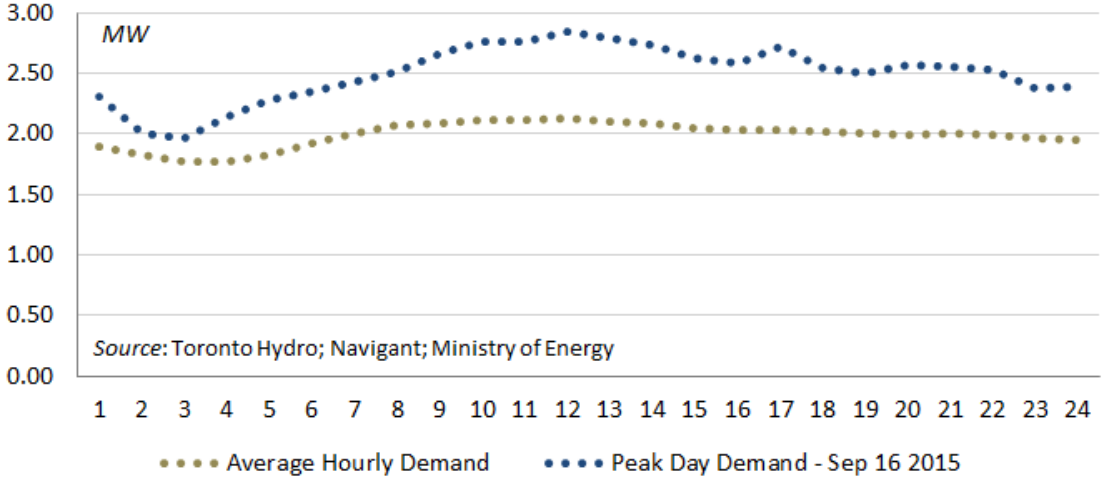
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

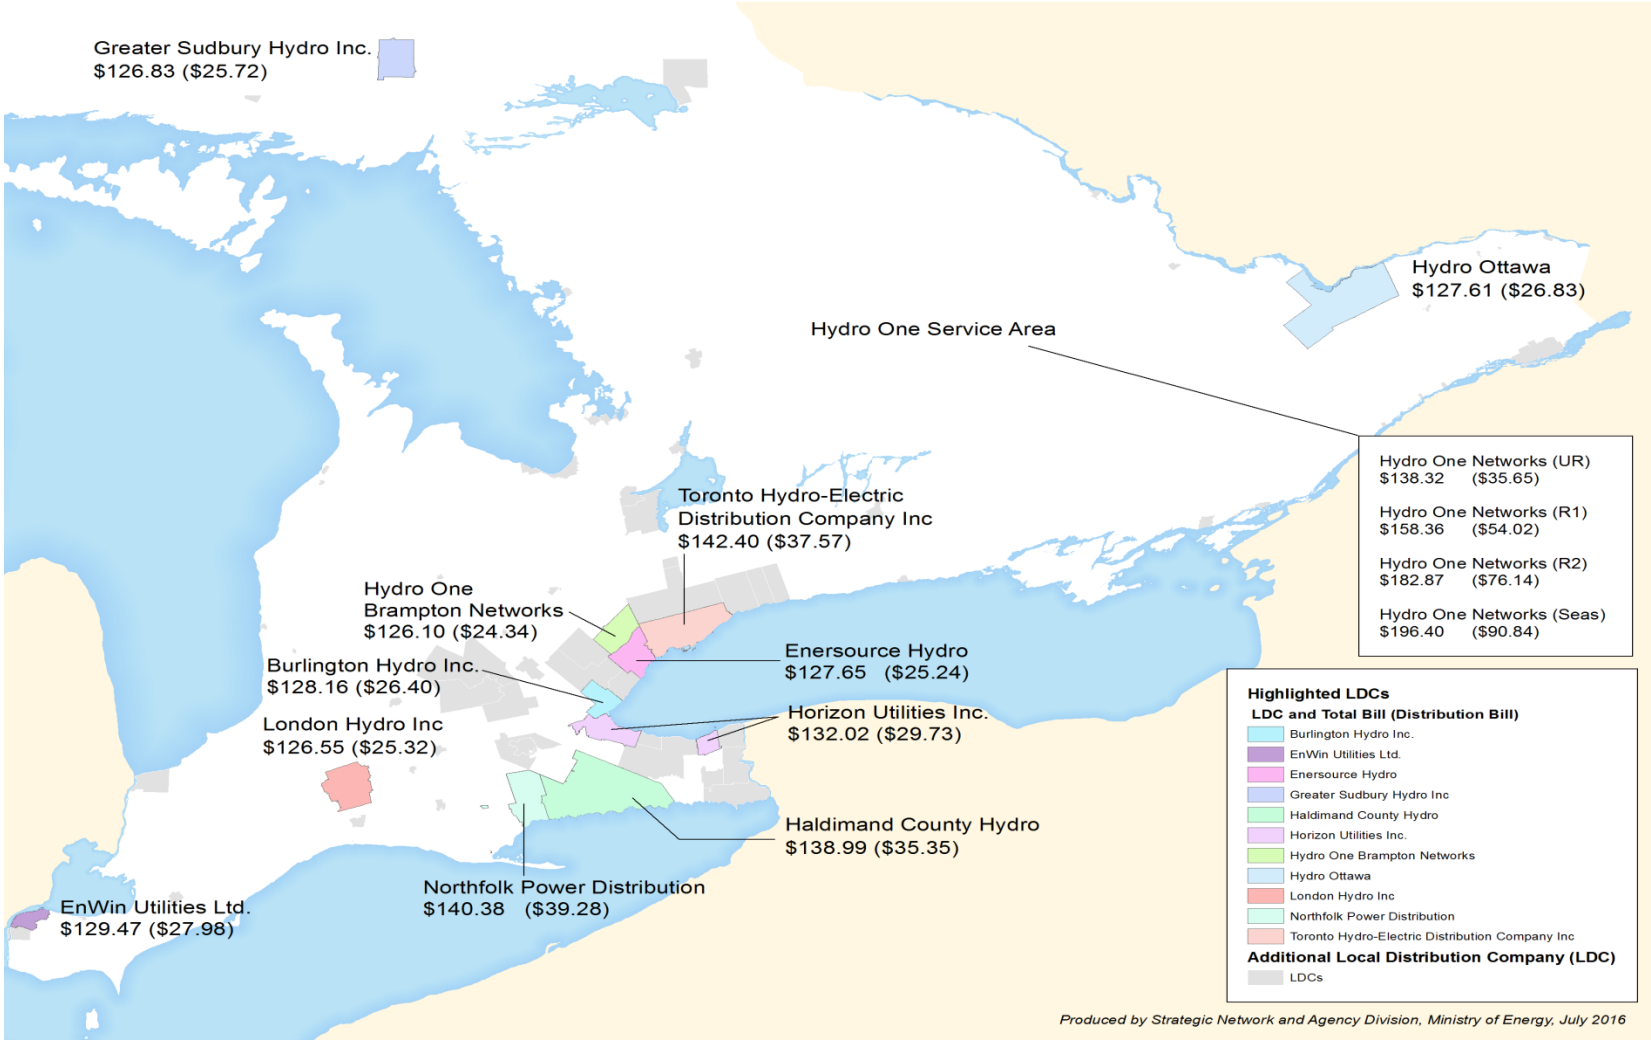
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

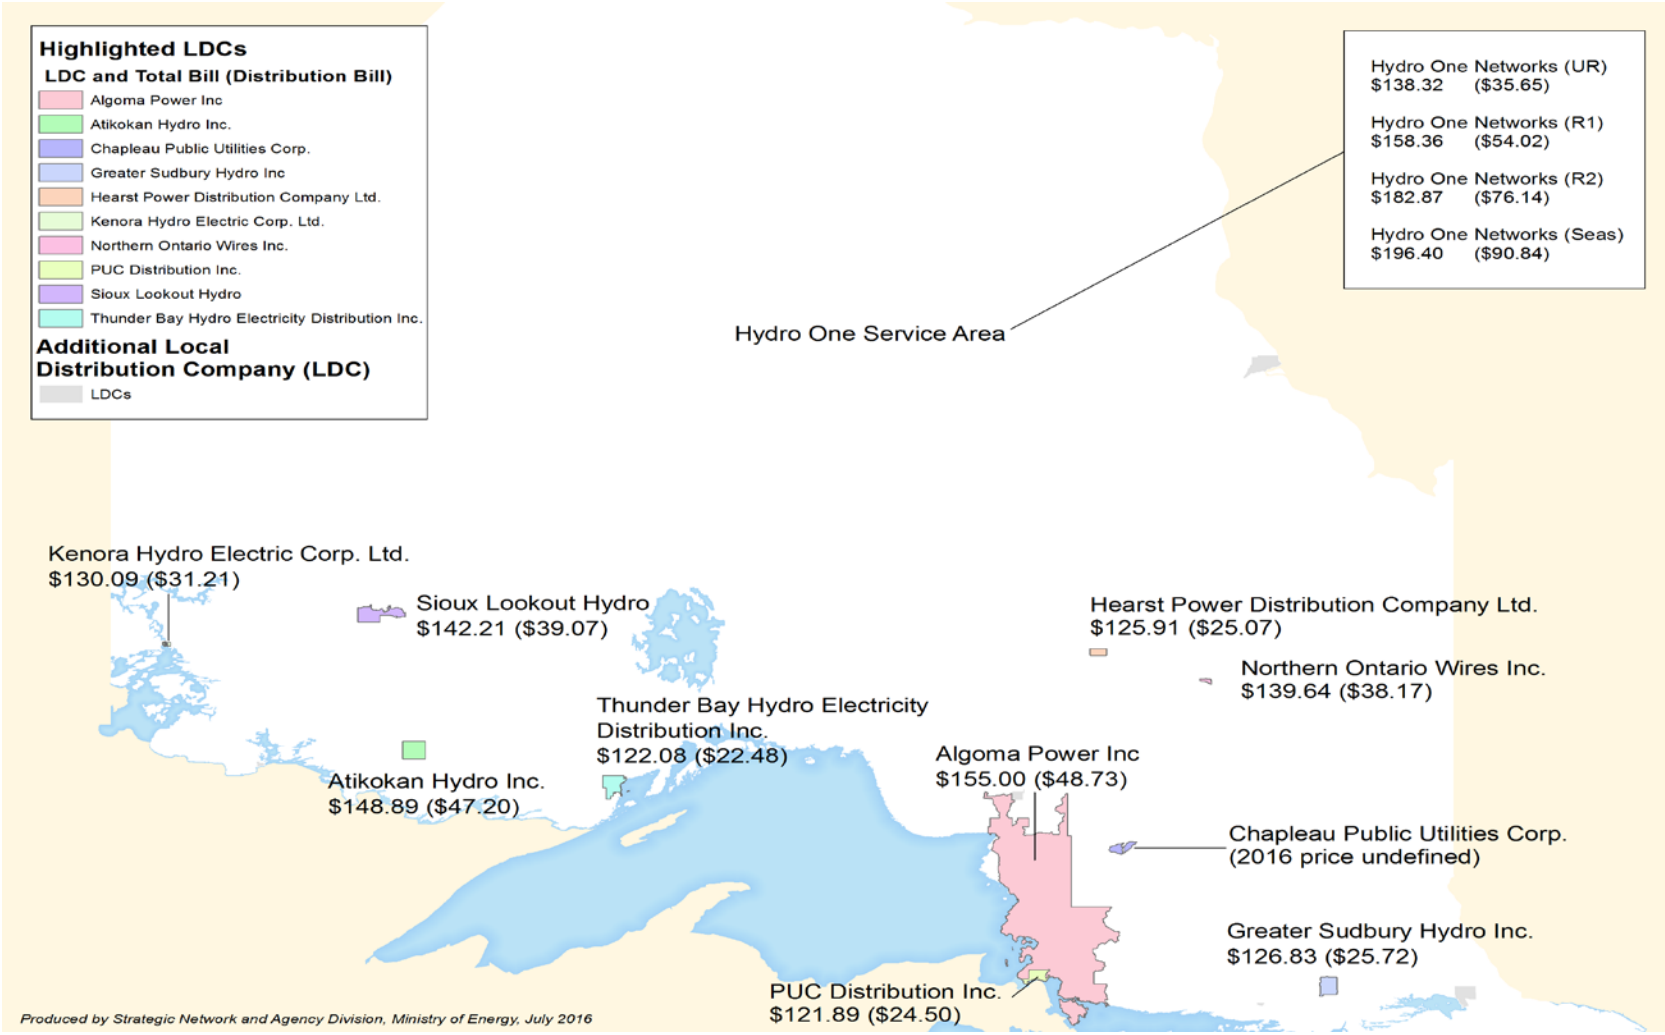
* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix B – RRRP

Selected Rate Comparison
Total Bill and Distribution Rate



Selected Rate Comparison
Total Bill and Distribution Rate



Summary of Options – Incremental costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Appendix C – Additional Information - HST

Additional Information – Public Service Bodies

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
- Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

Electricity Price Mitigation

Working Draft

August 23, 2016 [6pm]

Context

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

- As a result, electricity costs are increasing as the necessary investments are made to modernize the province's electricity infrastructure.

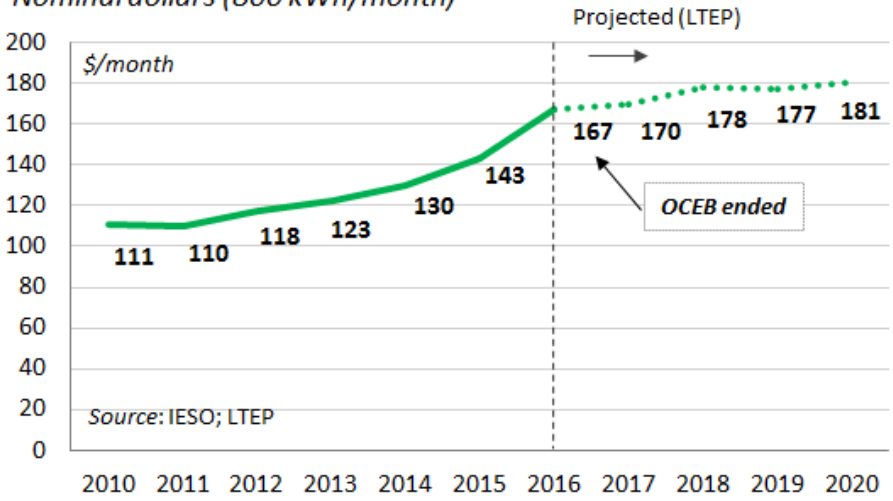
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

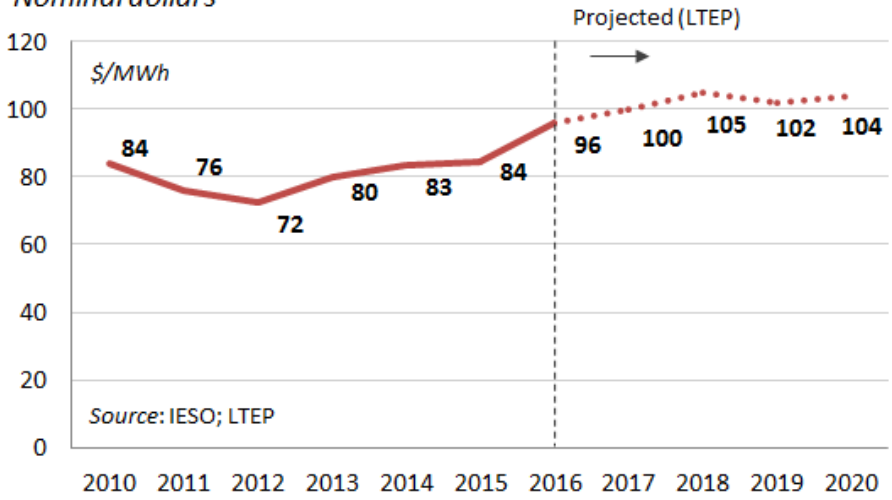
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
below 0.05 MW	0.05–3 MW	*above* 3 MW*
58 TWh (41.1%)	57 TWh (40.4%)	26 TWh (18.4%)

Source: OEB, Navigant, IESO

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

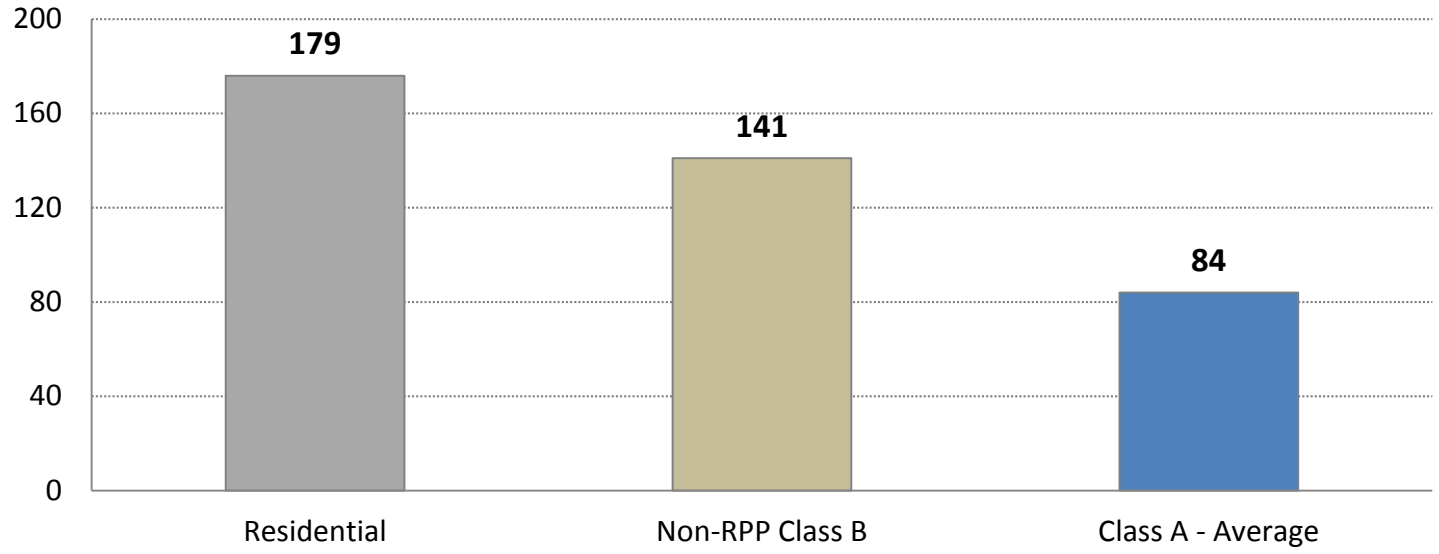
*Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data processing are currently eligible for Class A. All other 3-5MW consumers are Class B.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



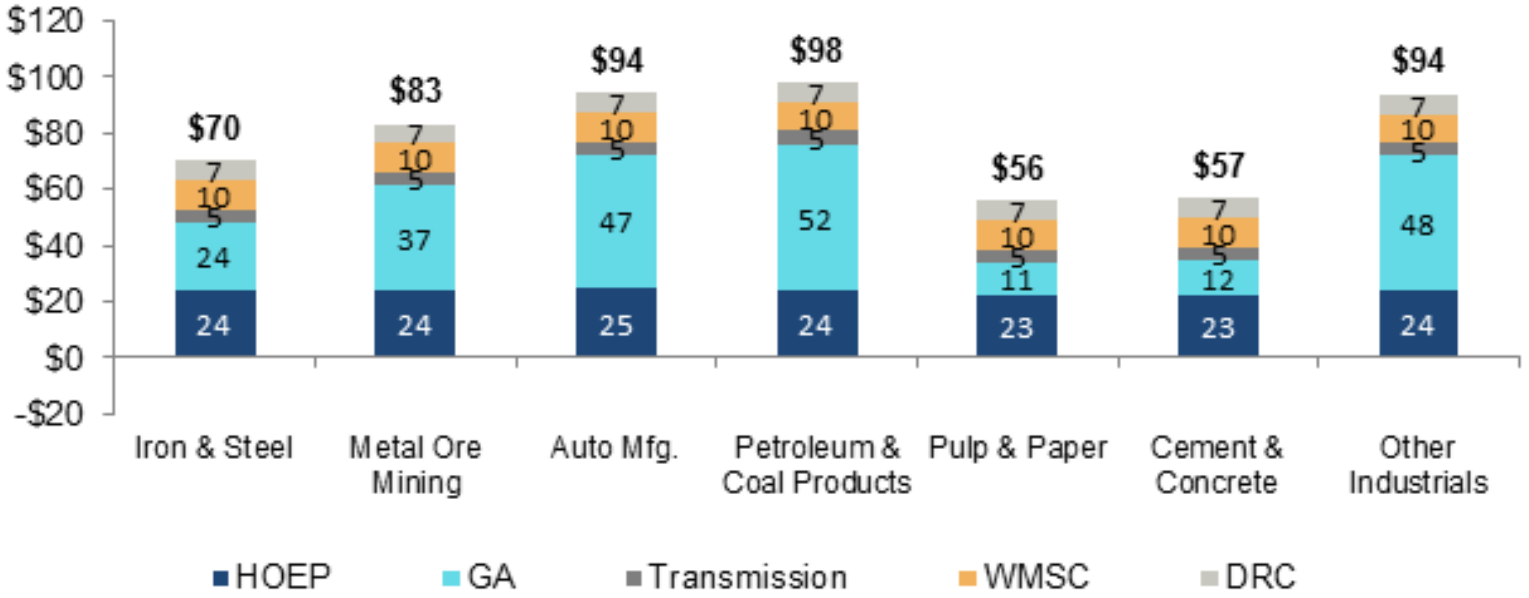
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Industrial Electricity Prices by Sector

- While industrial consumers (Class A) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

Average all-in Class A, transmission-connected electricity prices by industrial sector (estimated), year-to-date September 2015

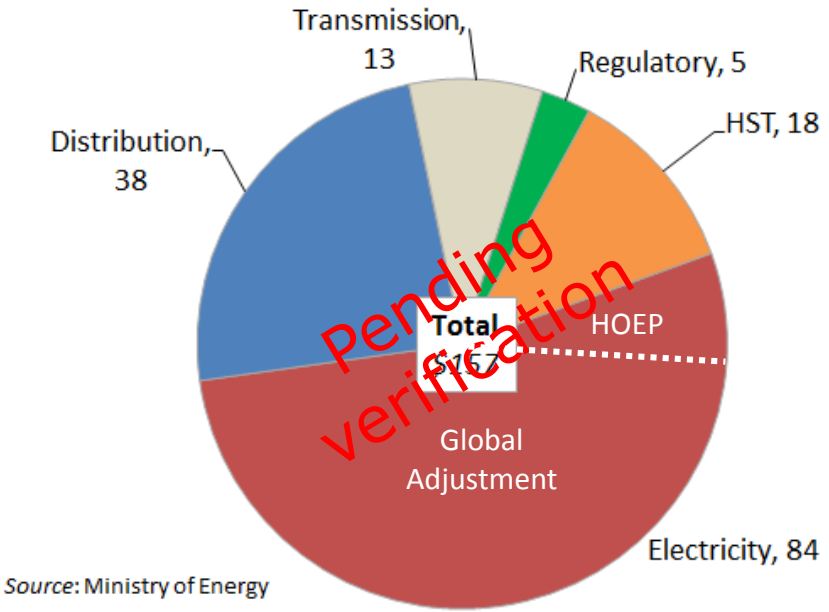


Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



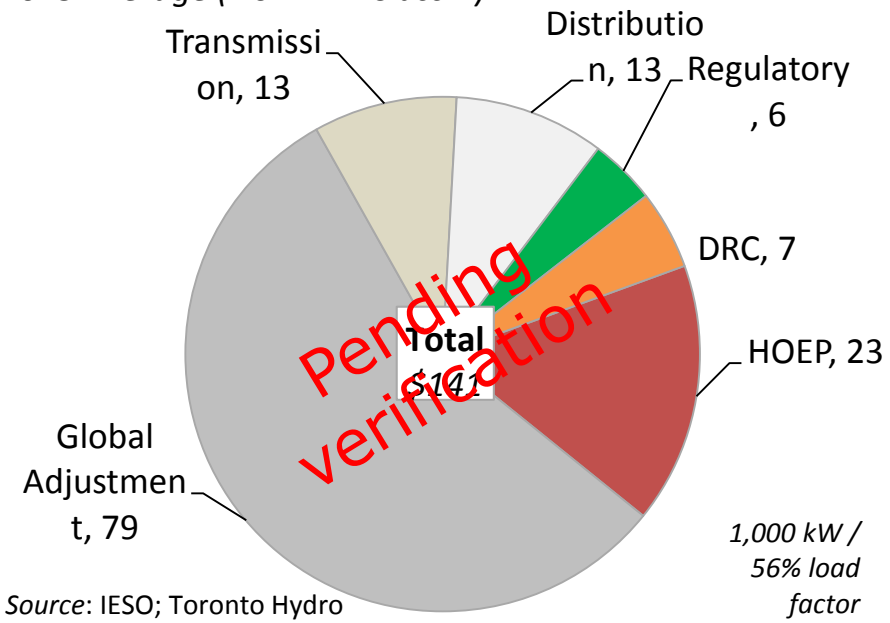
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)*

2015 Average (Non-RPP Class B)



Source: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

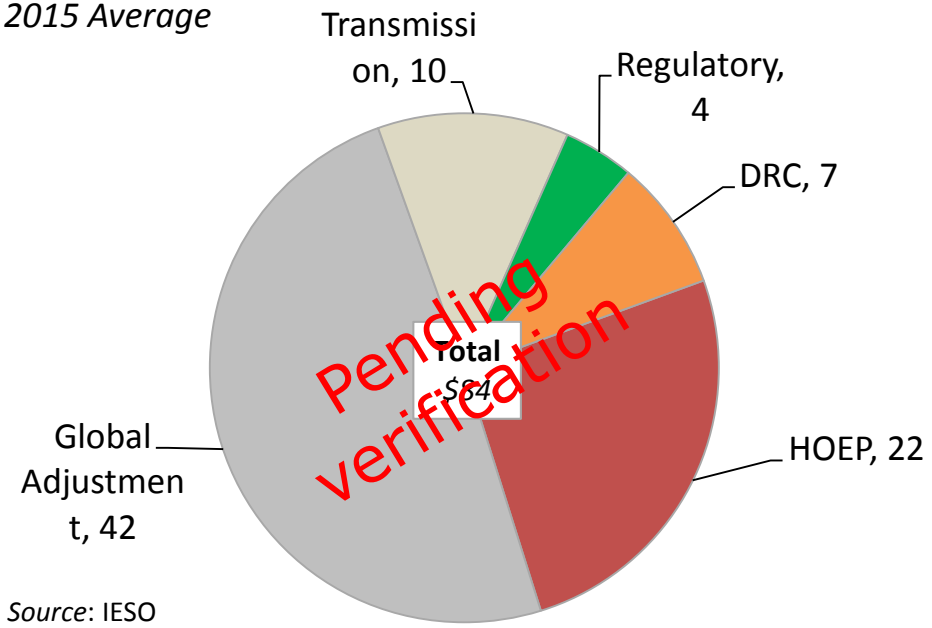
* Note: Most commercial consumers receive input tax credits for their HST.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

Typical Large Industrial Price ($/MWh)*

2015 Average



Source: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

* Note: Industrial consumers receive input tax credits for their HST.

Rate Mitigation Levers - Overview

- **Tax-based Lever** (Shifts costs from the rate-base to the tax base):
  - *8% rebate***:** providing a rebate equal to provincial portion of the HST to all consumers or specific classes of consumers.

- **Cap and Trade Proceeds Lever** (Could shift costs to either reduce impact on the rate base or the tax base):
  - *Modified proceeds recycling*: redirecting proceeds towards other consumer classes or funding other existing initiatives that help reduce GHG emissions.

- **Rate-based Levers** (Shifts costs within the rate-base, i.e. from one customer group to another):
  - *ICI expansion*: expanding eligibility for the ICI program to all consumers over 1 MW. Currently eligibility is limited to consumers over 5 MW and consumers in certain energy intensive sectors between 3-5 MW.
  - *RRRP Update*: increasing the benefit currently paid to rural customers in recognition of the higher cost of delivery.

- The following slides provide additional detail on the above levers.

Tax-based Lever

HST Background

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).
  - Businesses selling HST-exempt goods or services (such as financial services) are not eligible to claim input tax credits.

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
  - PSBs consist of municipalities, universities, public colleges, school authorities, hospital authorities and charities and qualifying non-profit organizations.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates. Charities and qualifying non-profits account for about $40 million that amount.
  - See Appendix for additional information.

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

HST General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates. Savings would be less if there is a cap on the rebate.

- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.

- The Province may also need to change the reporting for the cost of the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy. The energy component is reported as an offset of HST revenue.
  - Ministry program expenses could increase by as much as $445 million (TBC).

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

- To improve the province's ability to track impacts and program outcomes, subsequent legislative amendments to enable exchanges of data with LDCs could be considered.

Cap and Trade Proceeds Lever

2016 Budget Commitment

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, The Climate Change Action Plan (CCAP), committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020)
  - [placeholder for proceeds breakdown by customer class].

- If a rebate equivalent to the 8% provincial portion of HST is provided for all or some consumers, the resulting savings could be significantly greater than the 2016 Budget commitment and, therefore, the required GGRA proceeds may be reduced further.
  - These savings could be used for additional rate mitigation by further offsetting the cost of investments in renewables and conservation or redirected to other emissions reduction initiatives, as discussed on the next slide.

Alignment with CCAP

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3B over 4 years to greenhouse gas reduction initiatives, funded by Cap and Trade proceeds.

- The CCAP includes up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas by 2020.

$ Billions	2017-18	2018-19	2019-20	2020-21	Total
Total Committed in CCAP	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**6.0 – 8.3**
Electricity Price Mitigation	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 1.3*

- Ontario's Climate *Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail
  - Hamilton LRT
  - Hurontario LRT
  - Energy efficiency in schools

Rate-Based Levers

ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

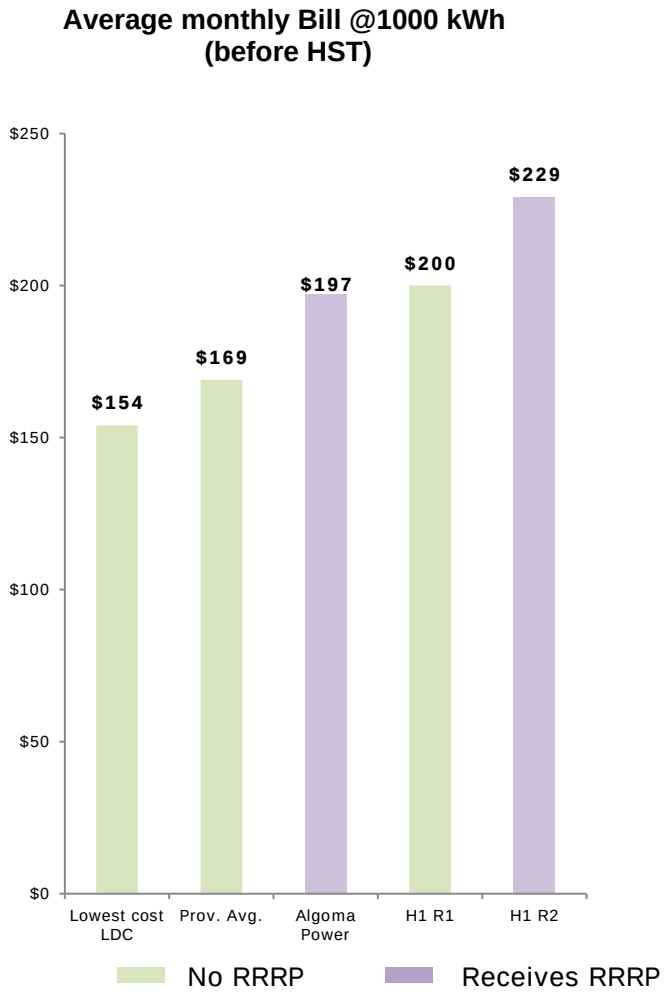
ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - 'Short-term' refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - 'Long-term' is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.
- The above bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh.
- Newly eligible consumers in the program would mostly fall into the small industrial and commercial category, including: automotive supply chain companies, condominiums, greenhouses and others.

Rural or Remote Rate Protection (RRRP) Update

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers.
  - There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.
- There may be opportunity to evaluate current levels of support to enhance rate assistance available to R2 customers.
  - An additional $28.53/month would equalize R2 bills with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 RRRP to $235M with a monthly impact on an average residential consumer of $0.57.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.



Rate Mitigation Options

Rate Mitigation Options

- Three options have been identified that could provide relief to various consumer classes. These options are outlined below.

1. 8% Rebate for All Consumers and Eliminate Proceeds Recycling

- Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
- Eliminate planned GGRA proceeds recycling to electricity consumers.

2. 8% Rebate for RPP Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to OCEB, with a 3,000 kWh cap.
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

3. 8% Rebate for RPP Consumers + ICI Expansion and Redirected Proceeds Recycling

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to the OCEB, with a 3,000 kWh cap.
- Provide support to small industrial and commercial consumers by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

- For each of the above options, a phased-in approach could be pursued to reduce the fiscal impact in the near term. See slide 25 for more details.

Consumer Impact Summary (data to be confirmed)

Option	Average Annual Fiscal Impact	Average Annual GGRA Proceeds Impact	Regulated Price Plan (Residential)		Class B (Commercial)	Class A (Industrial)	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*		*Existing*	*New*
8% rebate to all consumers and Eliminate Proceeds Recycling	$1.8 billion	-$330 million (-$1.32 billion over first compliance period)	-$11/ month (-7%)	-$18/ Month (-8%)	-$12/ MWh (-8%)	-$7/ MWh (-8%)	
8% rebate to RPP consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling	$1.0 billion	-$60 million (-$0.24 billion over the first compliance period)	-$9.7/ month (-6%)	-$45/ Month (-20%)	-$1/MWh (-1%)	-$0.9/ MWh (-1%)	Up to -$52/ MWh (-33%)
8% rebate to RPP consumers + ICI Expansion and Redirected Proceeds Recycling	$1.0 billion	-$125 million (-$0.50 billion over first compliance period)	-$10.3/ month (-6.5%)	-$17/ month (-8%)	-$1/MWh (-1%)	-$0.9/ MWh (-1%)	Up to -$52/ MWh (-33%)

Pending verification

Consumer Impact Examples

Consumer Type	Current Bill	Option 1	Option 2	Option 3
Typical Residential (750 kWh/month)	$157	$146	$147	$146
Rural (R2 – 3,000 kWh/month)				
Small Condo (xx MWh/month				
Auto Supply Chain (2 MW/xx MWh/month)				
Automotive Assembly Plant (20 MW/xx MWh/Month)				

Placeholder

Phased-in Approach

- A phased-in approach could be pursued. The chart below shows the fiscal and ratepayer impacts of a rebate that starts at 2%, increasing by 2% per year up to 8%.

Consumer Type	Fiscal Impact	Bill/Unit Cost Impact – Year 1	Bill/Unit Cost Impact – Year 2	Bill/Unit Cost Impact – Year 3	Bill/Unit Cost Impact – Year 4
Option 1	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					
Option 2	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					
Option 3	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					

Placeholder

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

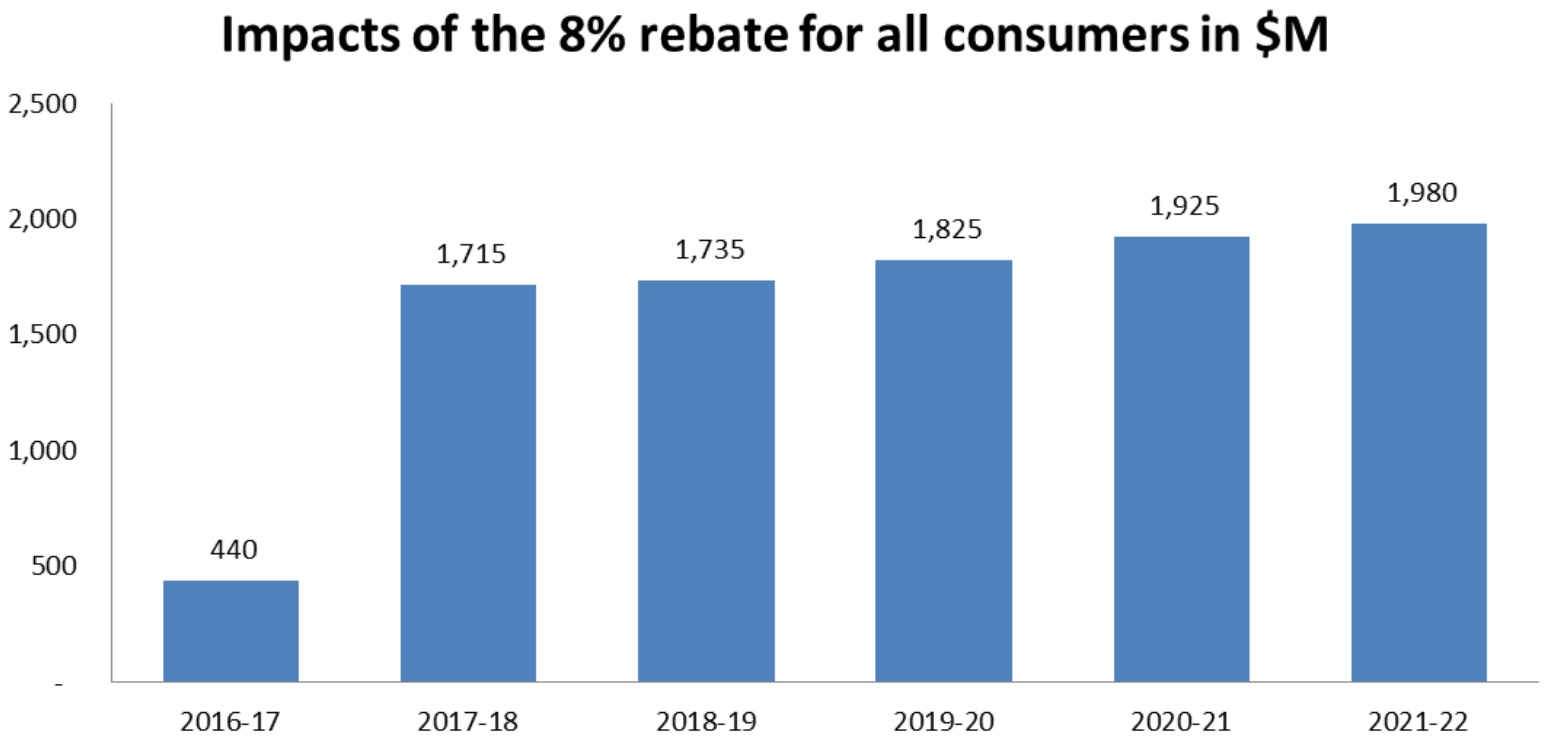
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

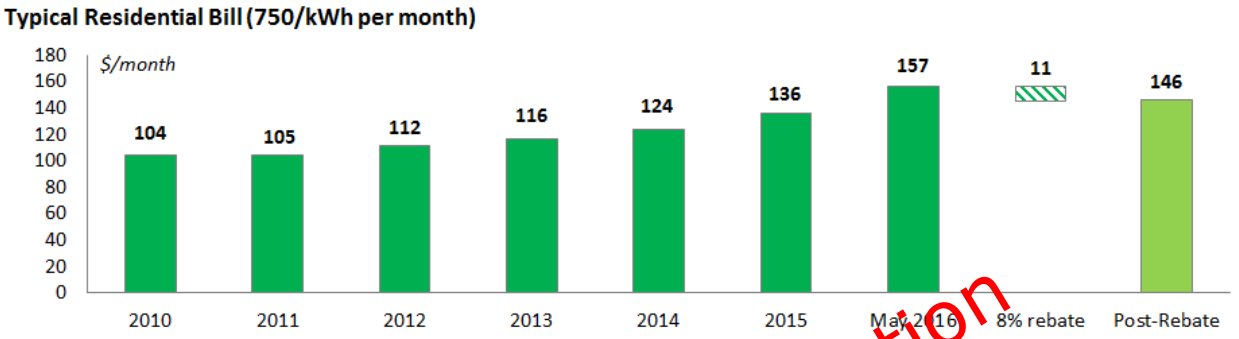
8% Rebate for All Consumers – Projected Cost

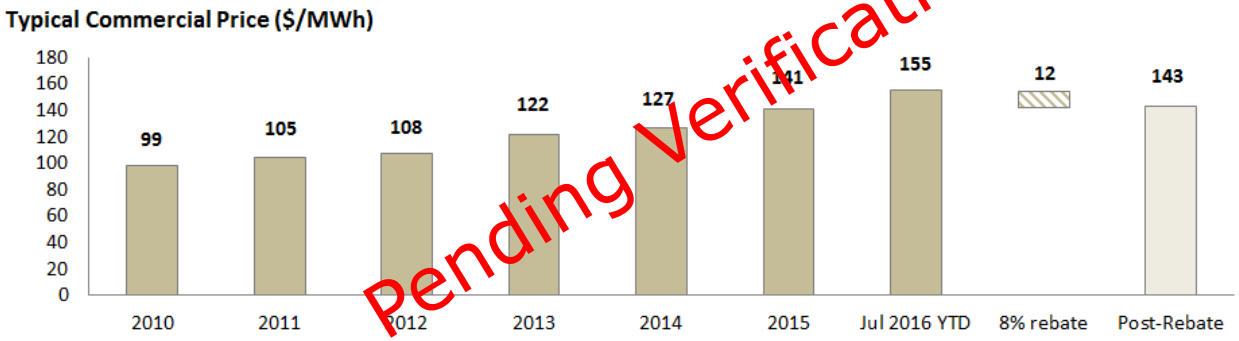
- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.

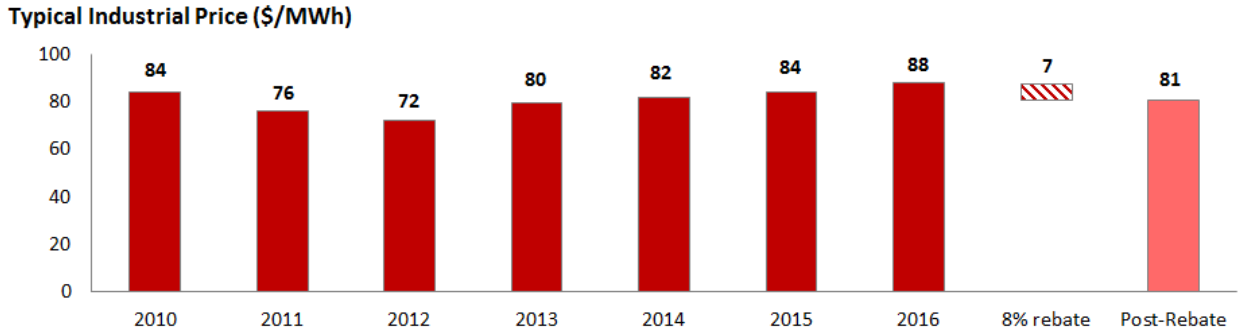


Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate (7% reduction to after tax bill) is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $12/MWh rebate (8% reduction).
- A $7/MWh rebate for industrial consumers would bring all-in prices below 2010 levels (8% reduction).







Pending Verification

8% Rebate for All Consumers – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)

8% Rebate for All Consumers – Considerations Cont'd

- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers, potentially eliminating $1.3 billion in required GGRA proceeds over the first compliance period.

- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

- Additionally, commercial and industrial consumers would continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government's ability to achieve fiscal balance.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

8% Rebate for All Consumers – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).

- **Positioning:**
  - We are committed to keeping electricity in Ontario clean, reliable and affordable.
  - This rebate is fair for all customers, and does the most for homeowners with higher costs.
  - Large businesses in the north are paying among the lowest rates in North America.

- **Issues considerations:**
  - Industrial rates, especially in northern Ontario, would be even more competitive.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity (research shows that OCEB did not appreciably impact public opinion).
  - Media/public interest in the impact to achieving fiscal balance.
  - Capped option would draw comparisons with OCEB (10% rebate).

Option 2 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh Cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.

3. RRRP Update
   - Rural consumers would see a benefit of $27.96, while all other consumers would see a cost of $0.57.

4. Redirected proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion and RRRP update would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

- While non-RPP consumers would not see a benefit from the provincial HST rebate under this option, all industrial and commercial consumers would receive proceeds recycling through the GGRA.
  - Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Additionally, support would be provided to small industrial and commercial consumers through the ICI expansion, while rural customers would see a significant benefit through updates to the RRRP program.

8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers with a 3,000 kWh cap would be approximately $0.x billion between 2017 and 2020.

Projected Cost of 8% Rebate to Regulated Price Plan ($B)

Nominal dollars

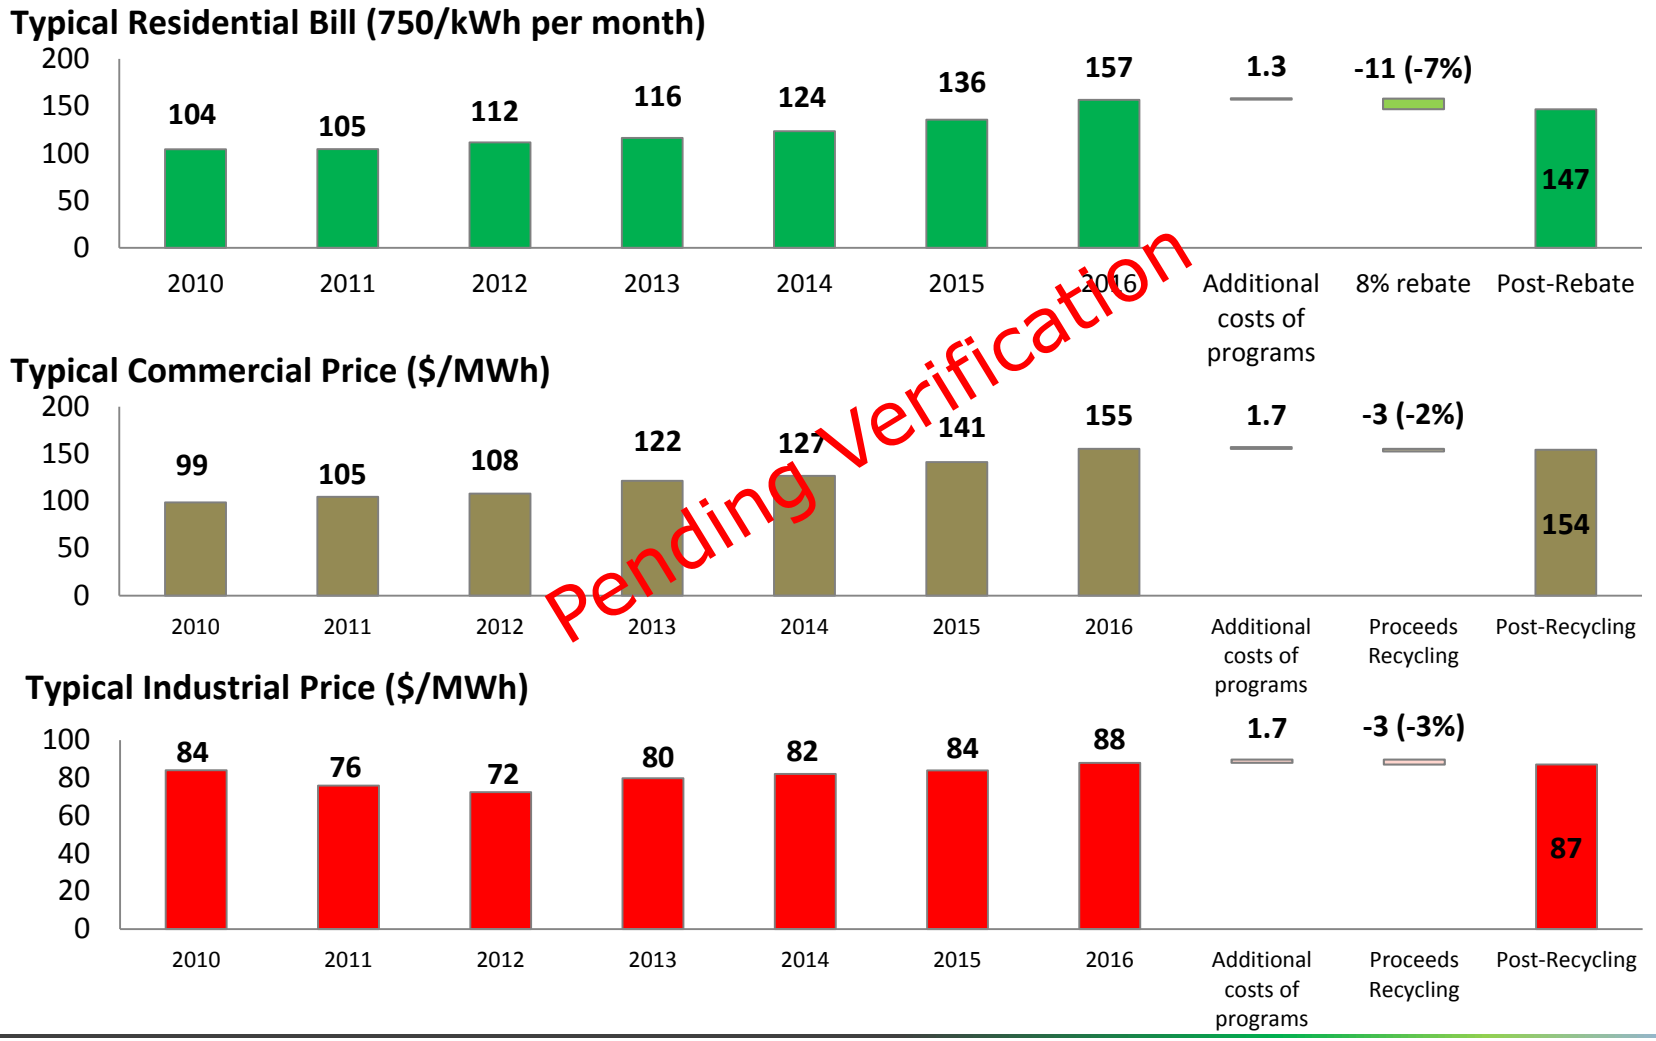
Bill Impacts by Sector



Pending Verification

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Amendments would also be required to various regulations to expand ICI and RRRP.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCo, OEB low-income table, AMO.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
  - More businesses than ever in the north will pay among the lowest electricity rates in North America.

- **Issues considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Option 3 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh Cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.
     - Those who decide to opt-in would not see a benefit until July 2018.

3. Modified proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.
- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.
- While non-RPP consumers would not see a benefit from the provincial HST rebate under this option, support would be provided to small industrial and commercial consumers through the ICI expansion and all industrial and commercial consumers would receive proceeds recycling through the GGRA.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Amendments would also be required to O. Reg. 429/04 to expand ICI.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCo, including speeches/events.

- **Positioning:**
  - A fiscally prudent plan to benefit both businesses and residential ratepayers.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
  - More businesses than ever in the north will pay among the lowest electricity rates in North America.

- **Issues considerations:**
  - Net gain for all residential customers.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan, including consultation with LDCs, the OEB and IESO.

Appendix – Background on Rate-based Initiatives

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77

Negative value indicates a benefit; positive value denotes an incremental charge

Appendix A – ICI

Industrial Conservation Initiative

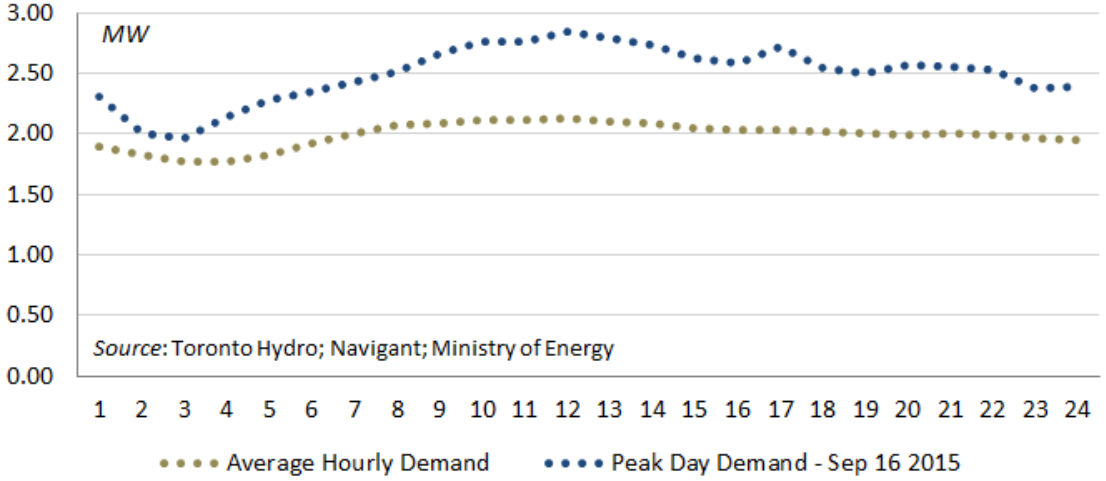
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

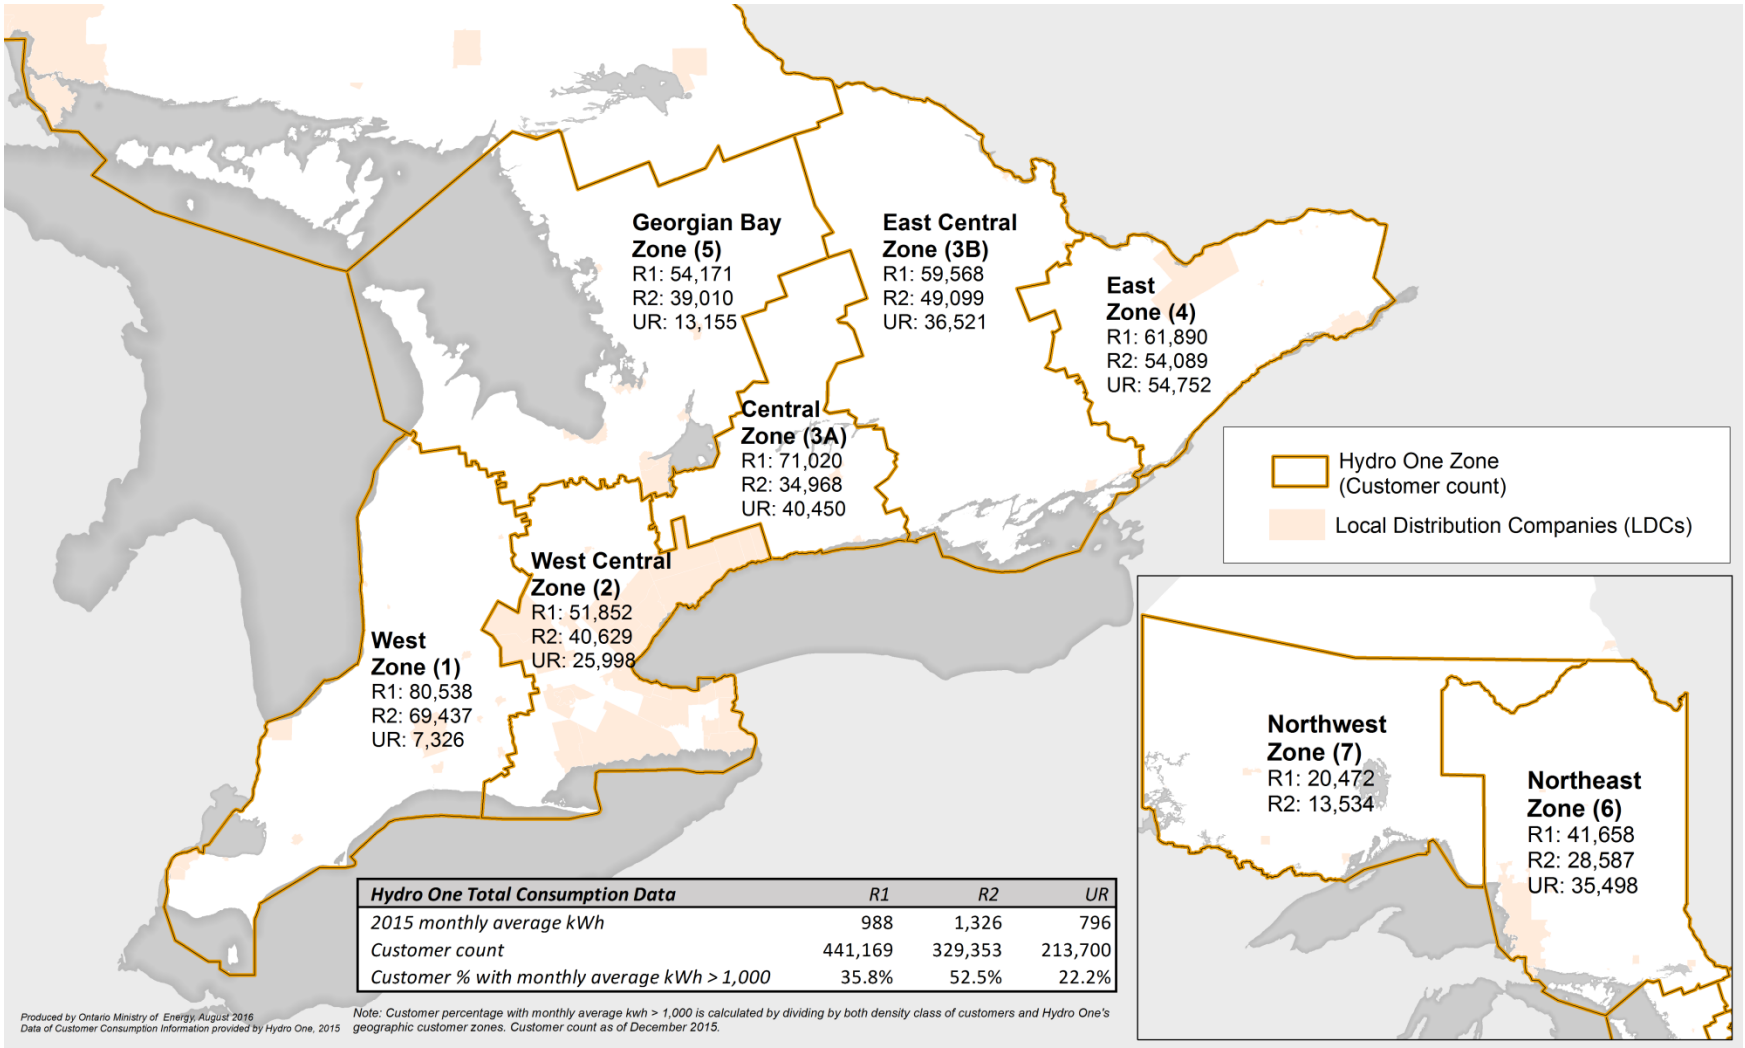
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix B – RRRP

Hydro One Consumers by Customers Class

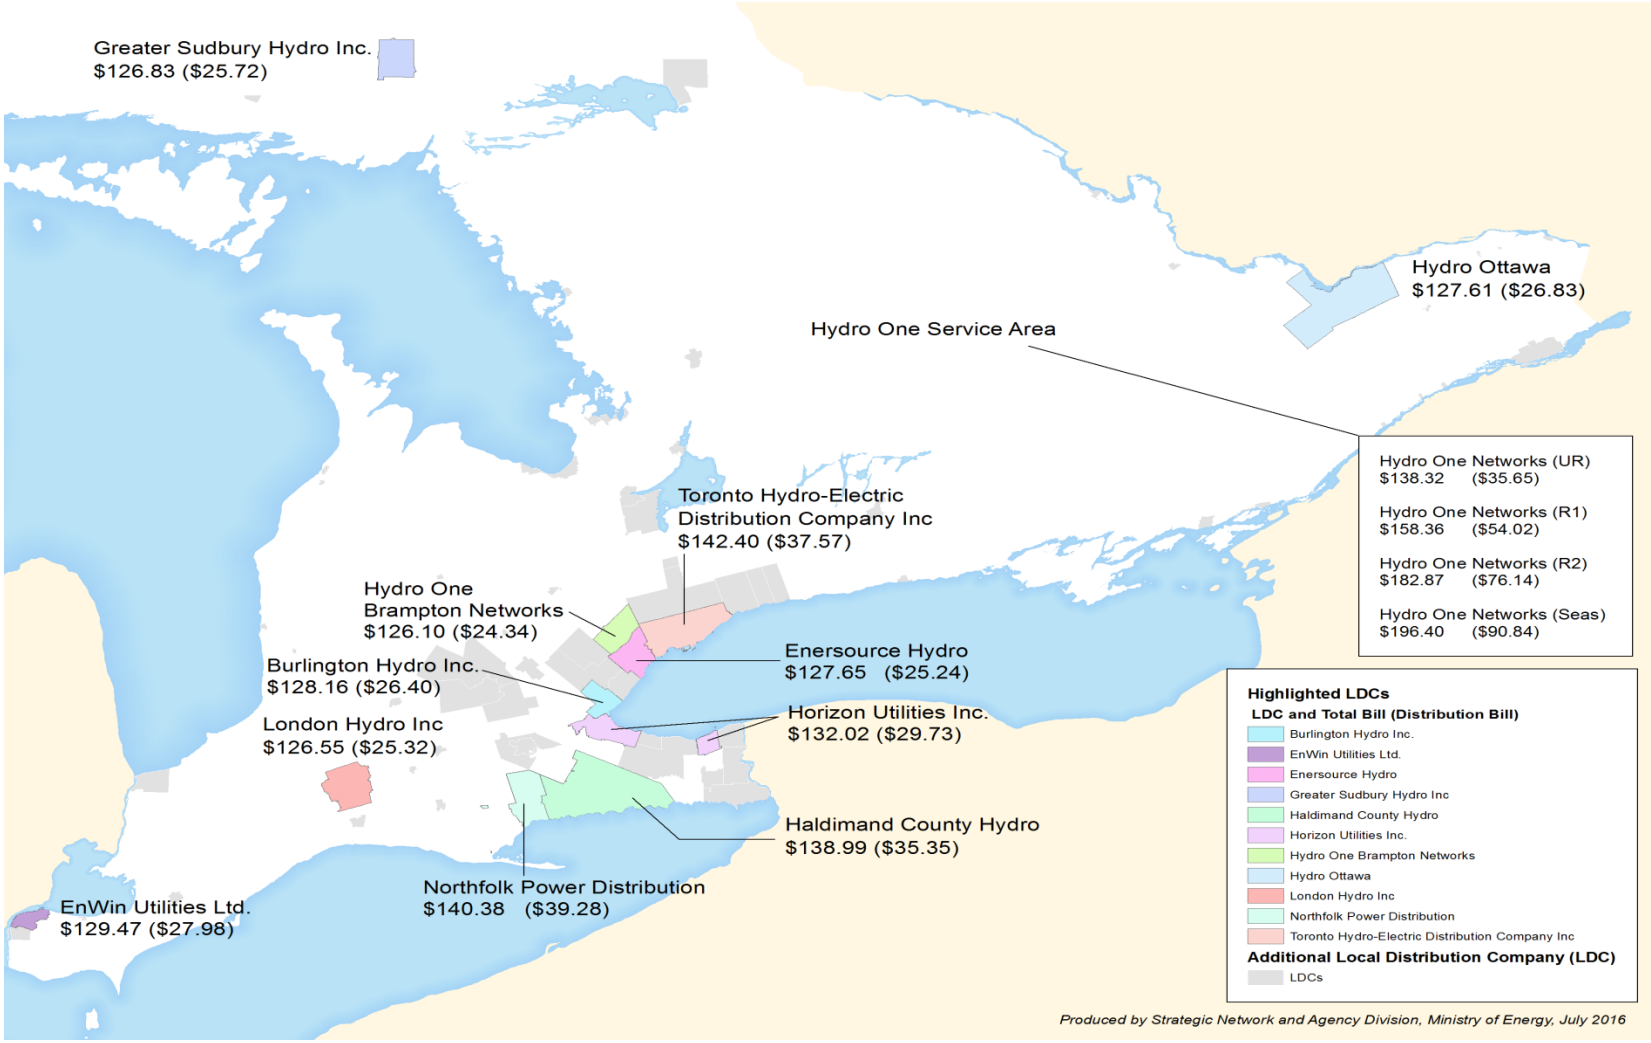


Hydro One Total Consumption Data	*R1*	*R2*	*UR*
2015 monthly average kWh	988	1,326	796
Customer count	441,169	329,353	213,700
Customer % with monthly average kWh > 1,000	35.8%	52.5%	22.2%

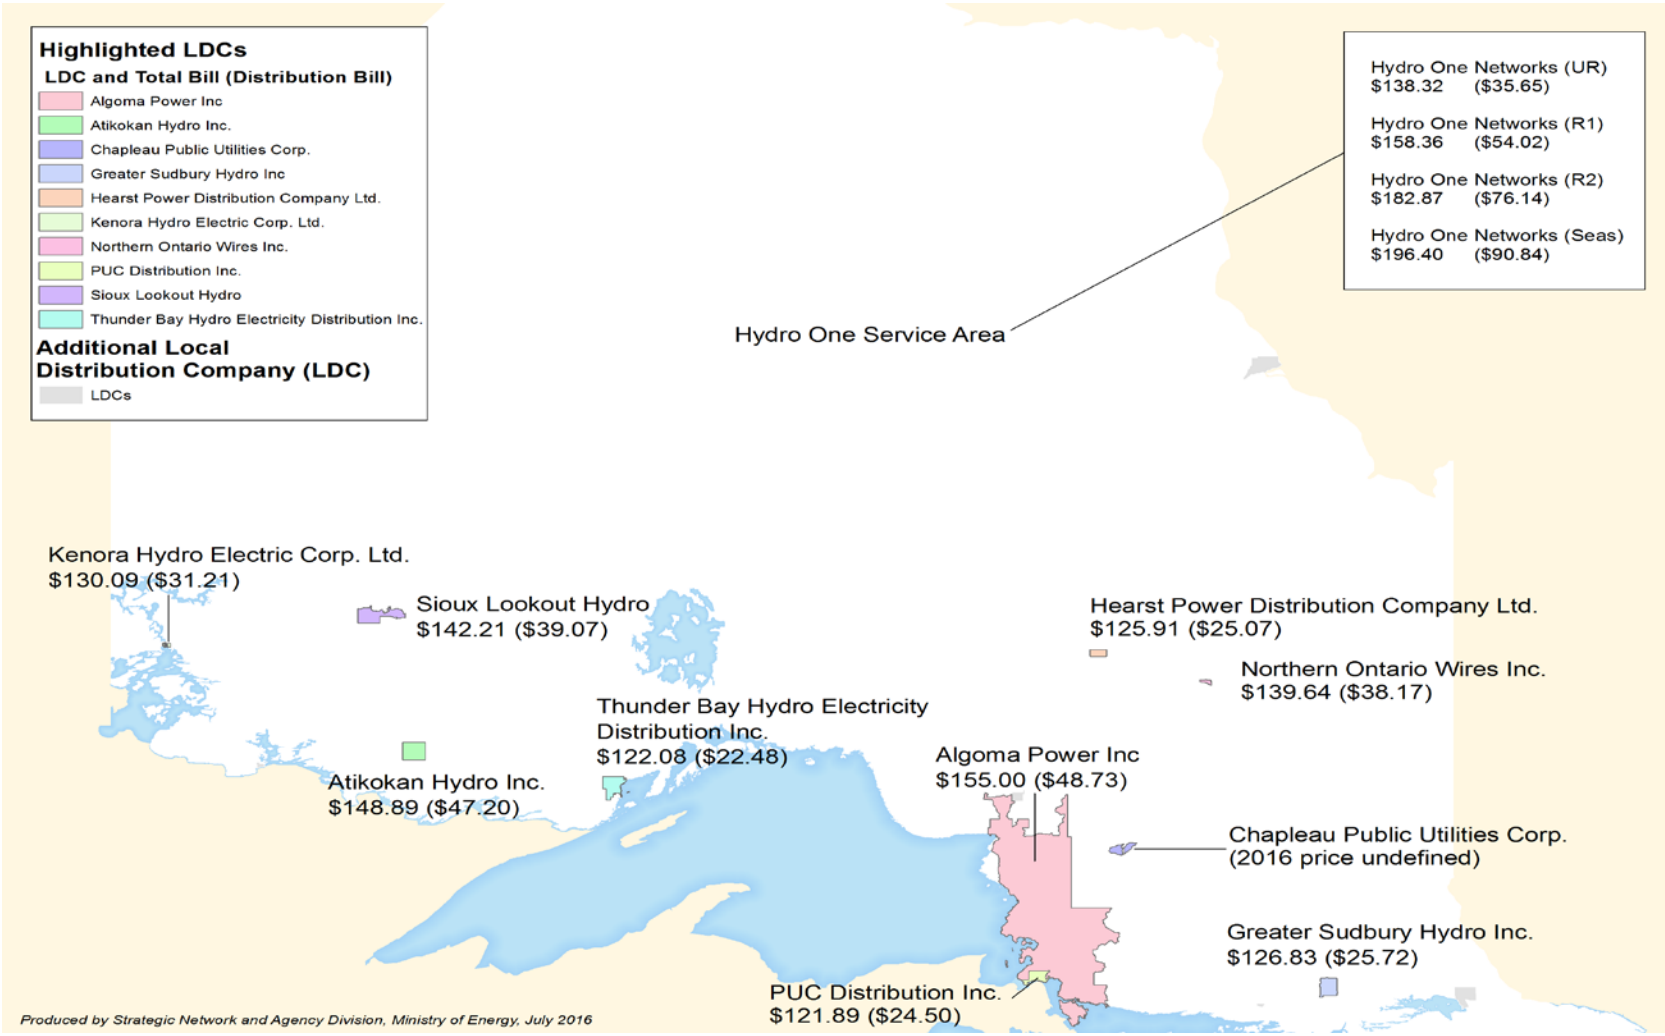
Produced by Ontario Ministry of Energy, August 2016
Data of Customer Consumption Information provided by Hydro One, 2015

Note: Customer percentage with monthly average kwh > 1,000 is calculated by dividing by both density class of customers and Hydro One's geographic customer zones. Customer count as of December 2015.

Selected Rate Comparison – Total Bill and Distribution Rate



Selected Rate Comparison – Total Bill and Distribution Rate



Summary of Options – Incremental costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Appendix C – HST

Additional Information – Public Service Bodies

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
- Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

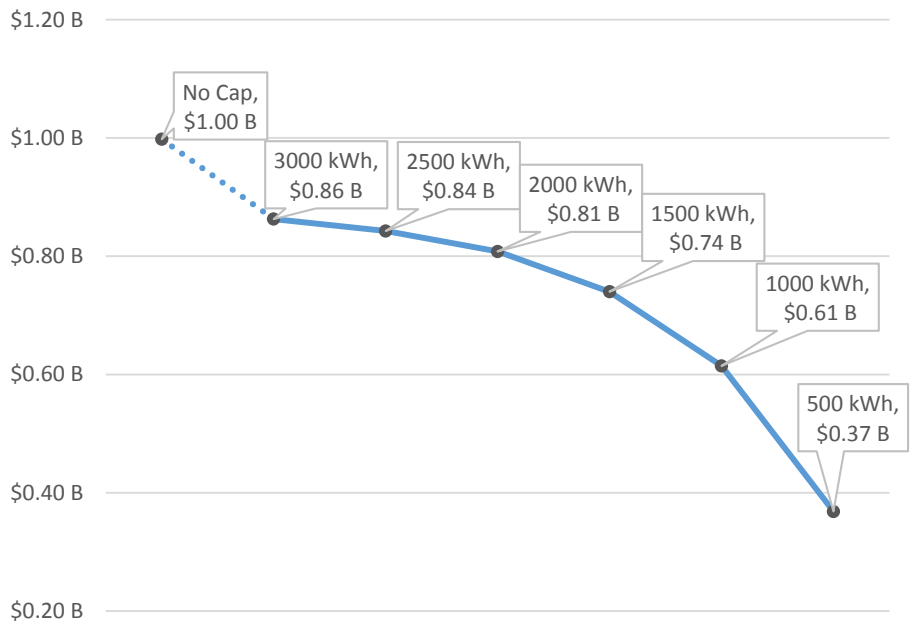
**A qualifying non-profit organization receives at least 40% of its funding from government.*

Appendix – MOF-CEFD ANALYSIS

Program Costs – RPP @ 8% with Various Caps

- CEFD Modelled anticipated program costs for an 8% rebate in 2017 at a variety of cap levels, similar to prior OCEB eligibility criteria.

Cap Scenario	Program Costs	Savings from Cap	Saving from Cap (%)
No Cap	$1.00 B		-
3,000 kWh	$0.86 B		-
2,500 kWh	$0.84 B	$0.14 B	14%
2,000 kWh	$0.81 B	$0.16 B	16%
1,500 kWh	$0.74 B	$0.19 B	19%
1,000 kWh	$0.61 B	$0.26 B	26%
500 kWh	$0.37 B	$0.38 B	38%



Sources:
Price Forecasts from 2013 LTEP Residential Electricity Bill, adjusted for removal for DRC as of January 1, 2016. Rebate applied to total bill before taxes.
Eligibility for Rebate and Cap impacts from CEFD OCEB model incorporating LDC reported data.

Preliminary Forecasts

- The potential exists to withdraw other electricity sector fiscal support programs should the 8% rebate be applied to all consumers including Industrial users.
- The Northern Industrial Electricity Rate (NIER) program provides electricity rebates of two cents per kilowatt-hour to qualifying large northern industrials, up to 1 TWh annually or ($20M).
- NIER support can be clawed-back based

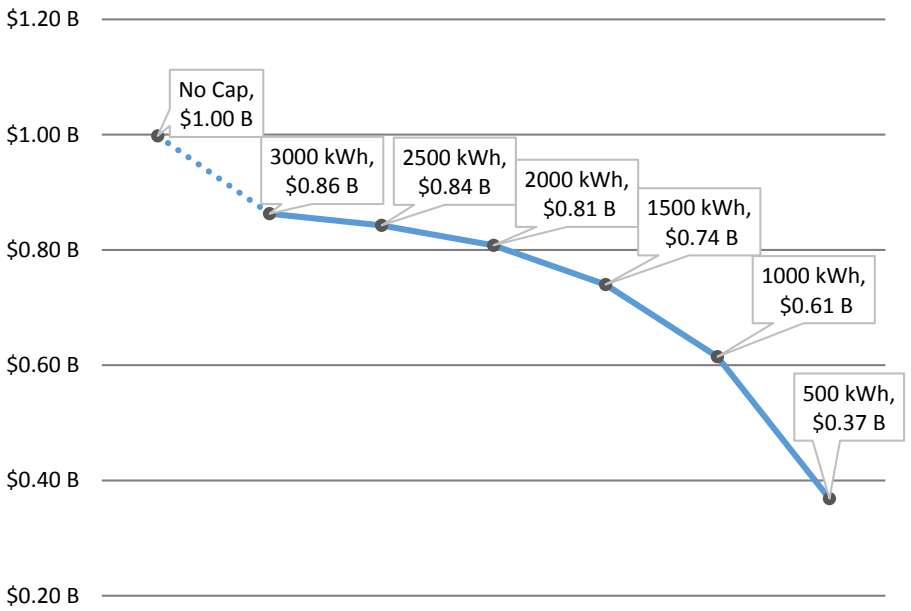
2015-16 Total	Envelope	Actual
NIER Program Spend	$116,711,435.00	$108,442,968.70
Potential Offset Amount	$38,981,619.29	$36,219,951.55
Savings from NIER Claw Backs (%)	33.4 %	

Notes:
Assume 8% rebate applied to total electricity consumption prior to NIER program rebates.
NIER Program Envelope and Actuals from MNDM. All in electricity prices for NIER participants assumed to be 6.35¢/kWh from Q1 2016 Ontario Energy Report, IESO.

Preliminary Forecasts

- CEFD modelled anticipated program costs for an 8% rebate in 2017 at a variety of cap levels, using the same eligibility criteria as the prior OCEB modelling.
- Savings from Cap (%) provides the approximate rule of thumb for savings at various cap levels.
- Estimates subject to change based on current Ministry of Energy price and consumption volume projections by customer types in the RPP.

Cap Scenario	Program Costs	Savings from Cap	Savings from Cap (%)
No Cap	$1.0 B	-	-
3,000 kWh	$0.86 B	$0.14 B	**14%**
2,500 kWh	$0.84 B	$0.16 B	**16%**
2,000 kWh	$0.81 B	$0.19 B	**19%**
1,500 kWh	$0.74 B	$0.26 B	**26%**
1,000 kWh	$0.61 B	$0.38 B	**38%**
500 kWh	$0.37 B	$0.63 B	**63%**

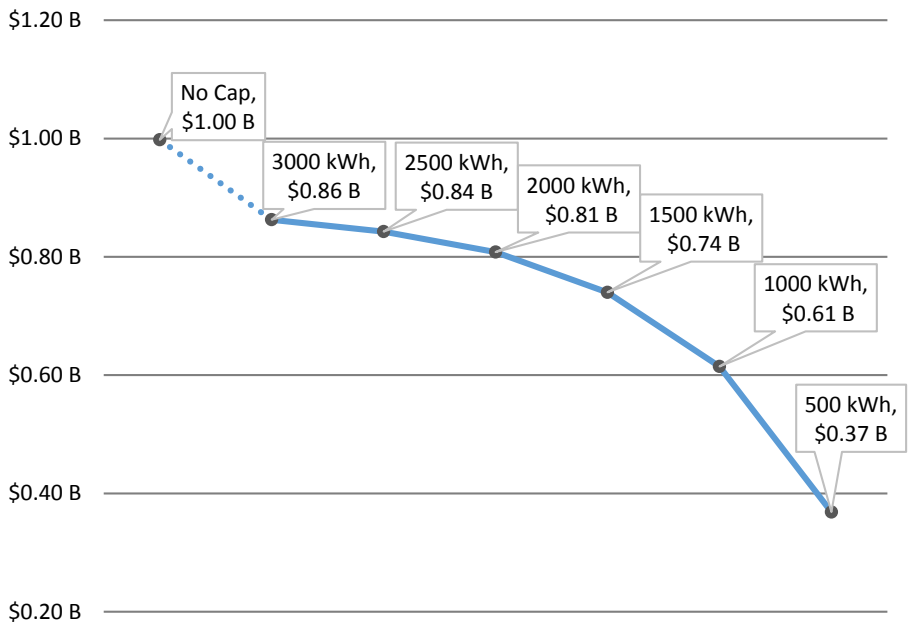


Notes:
Price forecasts from 2013 LTEP, Residential Electricity Bill, adjusted for removal for DRC as of January 1, 2016. Rebate applied to total bill before taxes.
Eligibility for Rebate and Cap impacts from CEFD OCEB model incorporating LDC reported data.
Using strictly RPP-based criteria, along with other restrictions related to PSBs, could lead to different program cost and savings estimates.

Preliminary Estimates: Program Costs – RPP @ 8% with Various Caps

- CEFD modelled anticipated program costs for an 8% rebate in 2017 at a variety of cap levels, using the same eligibility criteria as the prior OCEB modelling.
- Savings from Cap (%) provides the approximate rule of thumb for savings at various cap levels.
- Estimates are subject to updates on Ministry of Energy price and consumption volume projections by customer types in the RPP.

Cap Scenario	Program Costs	Savings from Cap	Savings from Cap (%)
No Cap	$1.0 B	-	-
3,000 kWh	$0.86 B	$0.14 B	**14%**
2,500 kWh	$0.84 B	$0.16 B	**16%**
2,000 kWh	$0.81 B	$0.19 B	**19%**
1,500 kWh	$0.74 B	$0.26 B	**26%**
1,000 kWh	$0.61 B	$0.38 B	**38%**
500 kWh	$0.37 B	$0.63 B	**63%**



Notes:

Electricity Price Mitigation

Working Draft

August 23, 2016 [6pm]

Context

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

- As a result, electricity costs are increasing as the necessary investments are made to modernize the province's electricity infrastructure.

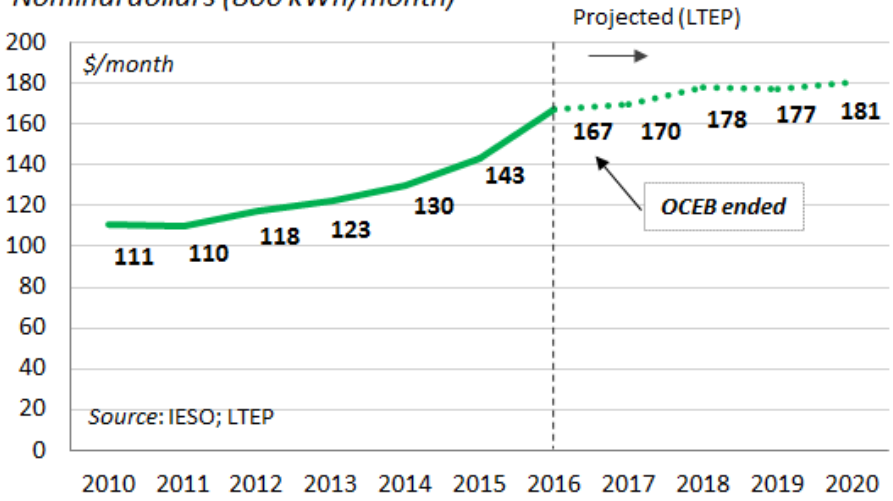
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

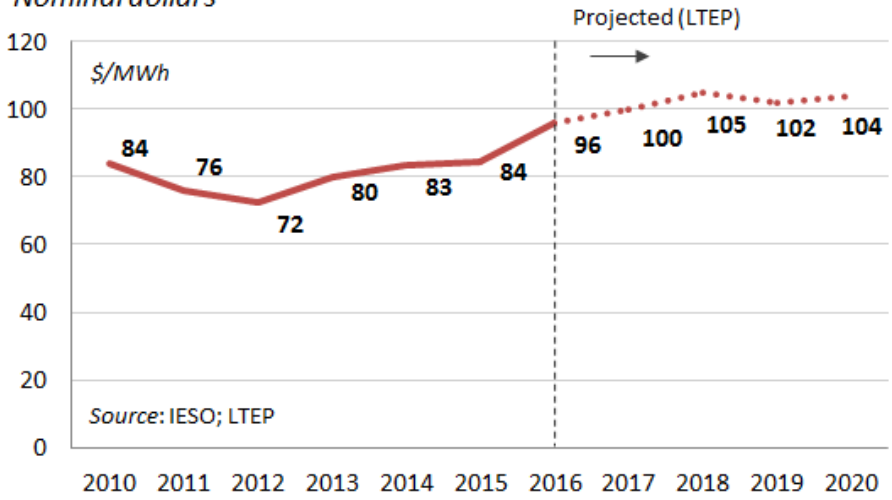
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
below 0.05 MW	0.05–3 MW	*above* 3 MW*
58 TWh (41.1%)	57 TWh (40.4%)	26 TWh (18.4%)

Source: OEB, Navigant, IESO

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

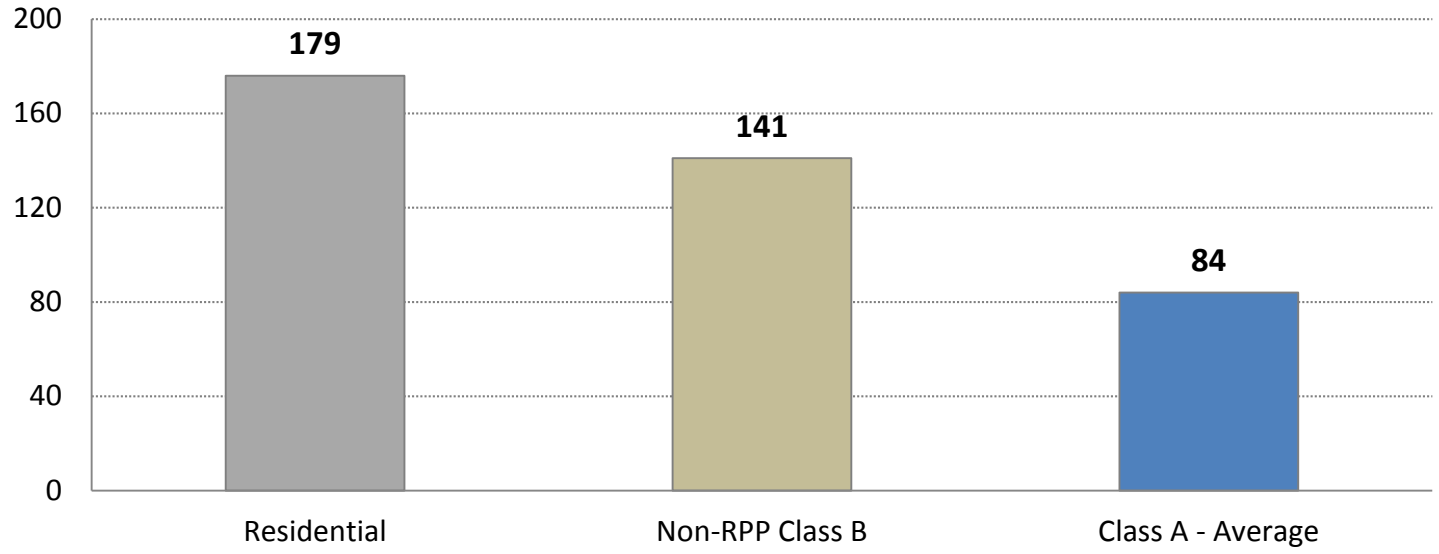
*Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data processing are currently eligible for Class A. All other 3-5MW consumers are Class B.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



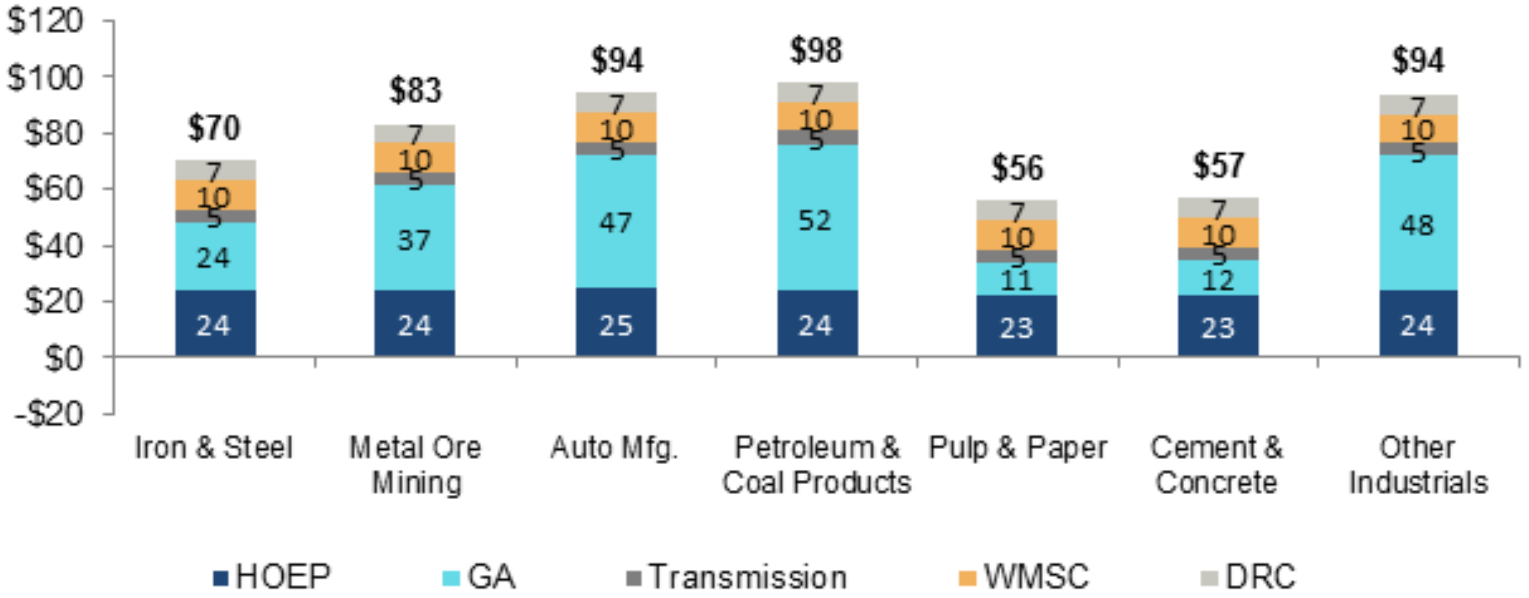
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Industrial Electricity Prices by Sector

- While industrial consumers (Class A) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

Average all-in Class A, transmission-connected electricity prices by industrial sector (estimated), year-to-date September 2015

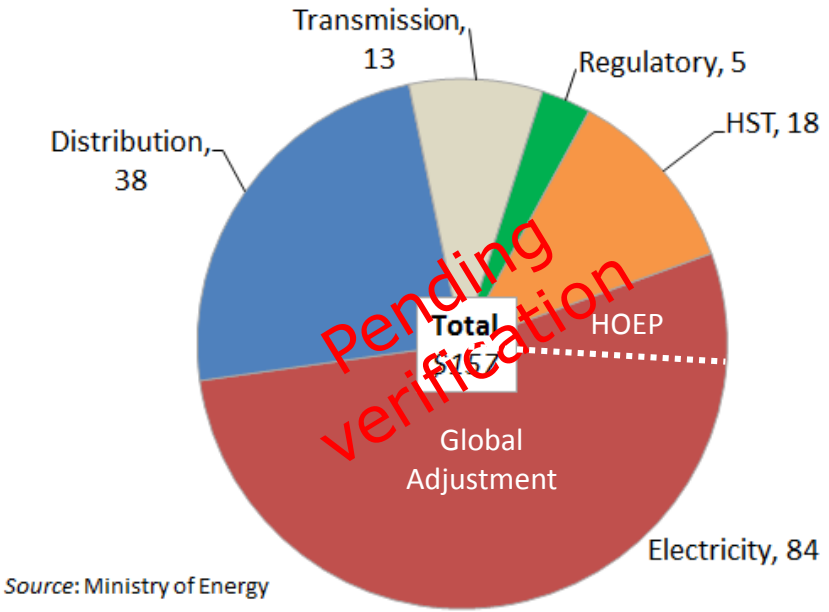


Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



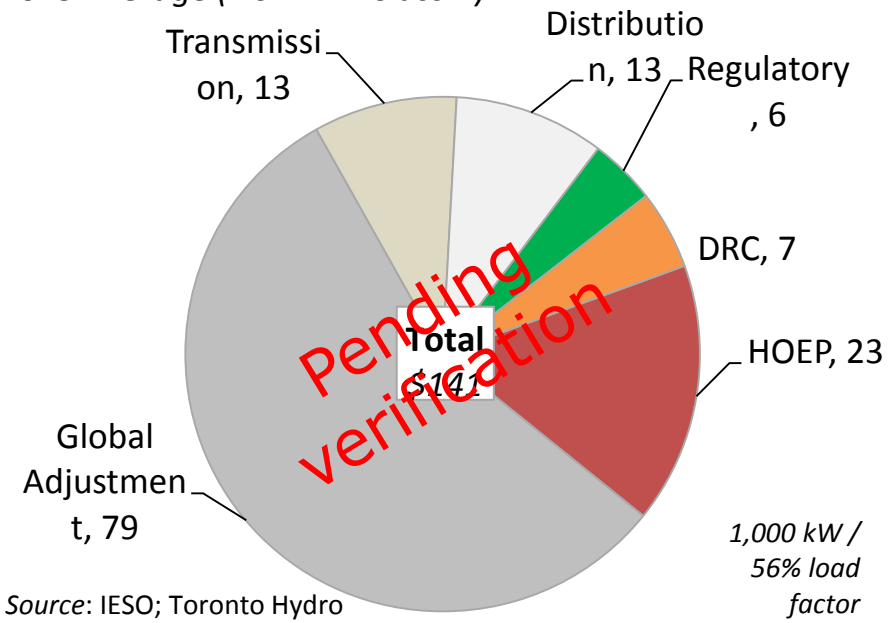
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)*

2015 Average (Non-RPP Class B)



Source: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

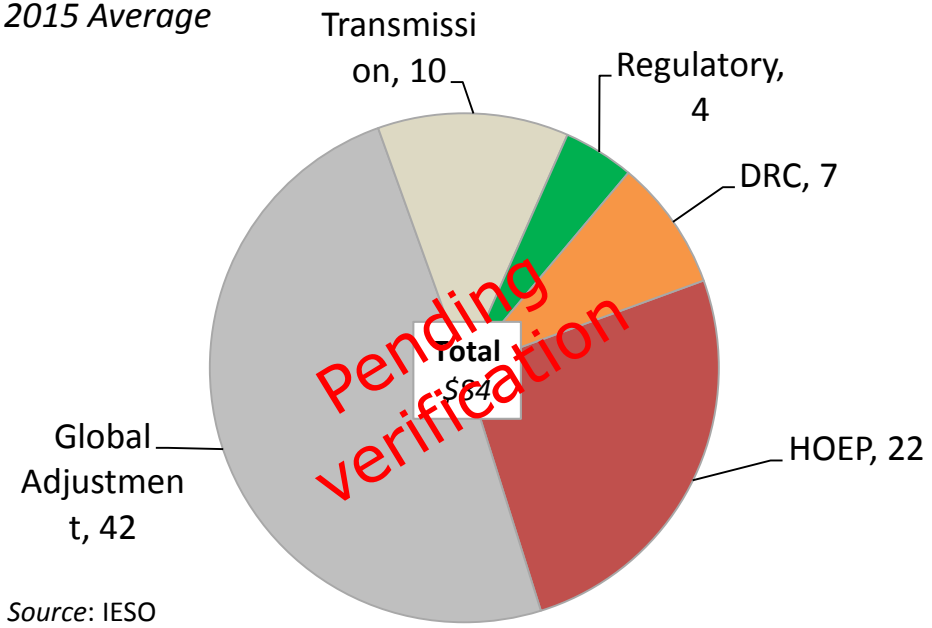
* Note: Most commercial consumers receive input tax credits for their HST.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

Typical Large Industrial Price ($/MWh)*

2015 Average



Source: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

* Note: Industrial consumers receive input tax credits for their HST.

Rate Mitigation Levers - Overview

- **Tax-based Lever** (Shifts costs from the rate-base to the tax base):
  - *8% rebate***:** providing a rebate equal to provincial portion of the HST to all consumers or specific classes of consumers.

- **Cap and Trade Proceeds Lever** (Could shift costs to either reduce impact on the rate base or the tax base):
  - *Modified proceeds recycling*: redirecting proceeds towards other consumer classes or funding other existing initiatives that help reduce GHG emissions.

- **Rate-based Levers** (Shifts costs within the rate-base, i.e. from one customer group to another):
  - *ICI expansion*: expanding eligibility for the ICI program to all consumers over 1 MW. Currently eligibility is limited to consumers over 5 MW and consumers in certain energy intensive sectors between 3-5 MW.
  - *RRRP Update*: increasing the benefit currently paid to rural customers in recognition of the higher cost of delivery.

- The following slides provide additional detail on the above levers.

Tax-based Lever

HST Background

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).
  - Businesses selling HST-exempt goods or services (such as financial services) are not eligible to claim input tax credits.

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
  - PSBs consist of municipalities, universities, public colleges, school authorities, hospital authorities and charities and qualifying non-profit organizations.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates. Charities and qualifying non-profits account for about $40 million that amount.
  - See Appendix for additional information.

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

HST General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates. Savings would be less if there is a cap on the rebate.

- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.

- The Province may also need to change the reporting for the cost of the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy. The energy component is reported as an offset of HST revenue.
  - Ministry program expenses could increase by as much as $445 million (TBC).

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

- To improve the province's ability to track impacts and program outcomes, subsequent legislative amendments to enable exchanges of data with LDCs could be considered.

Cap and Trade Proceeds Lever

2016 Budget Commitment

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, The Climate Change Action Plan (CCAP), committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020)
  - [placeholder for proceeds breakdown by customer class].

- If a rebate equivalent to the 8% provincial portion of HST is provided for all or some consumers, the resulting savings could be significantly greater than the 2016 Budget commitment and, therefore, the required GGRA proceeds may be reduced further.
  - These savings could be used for additional rate mitigation by further offsetting the cost of investments in renewables and conservation or redirected to other emissions reduction initiatives, as discussed on the next slide.

Alignment with CCAP

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3B over 4 years to greenhouse gas reduction initiatives, funded by Cap and Trade proceeds.

- The CCAP includes up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas by 2020.

$ Billions	2017-18	2018-19	2019-20	2020-21	Total
Total Committed in CCAP	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**6.0 – 8.3**
Electricity Price Mitigation	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 1.3*

- Ontario's Climate *Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail
  - Hamilton LRT
  - Hurontario LRT
  - Energy efficiency in schools

Rate-Based Levers

ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

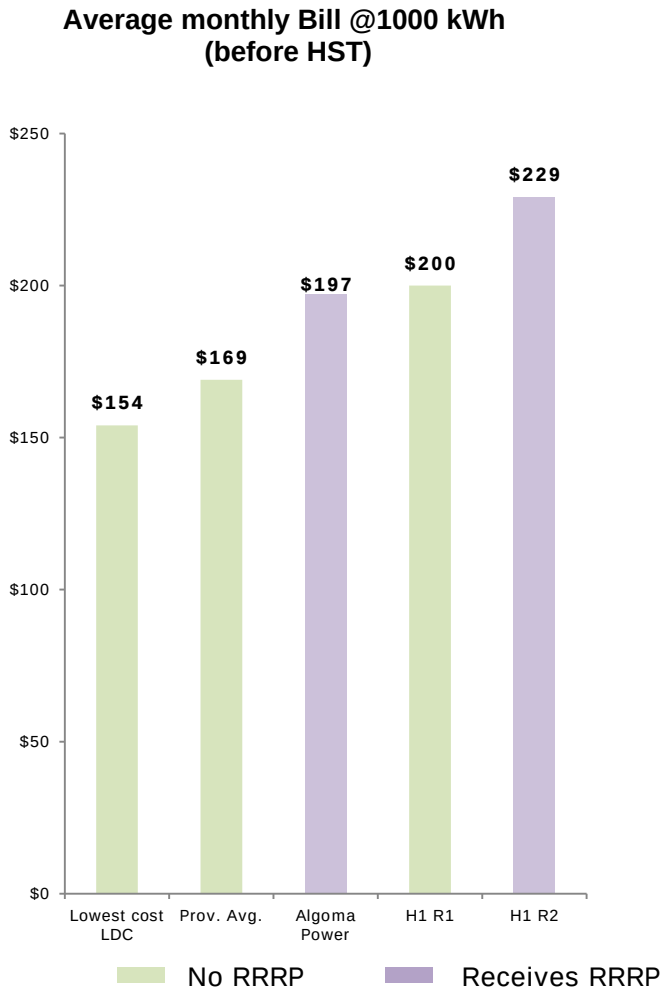
ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - 'Short-term' refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - 'Long-term' is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.
- The above bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh.
- Newly eligible consumers in the program would mostly fall into the small industrial and commercial category, including: automotive supply chain companies, condominiums, greenhouses and others.

Rural or Remote Rate Protection (RRRP) Update

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers.
  - There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.
- There may be opportunity to evaluate current levels of support to enhance rate assistance available to R2 customers.
  - An additional $28.53/month would equalize R2 bills with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 RRRP to $235M with a monthly impact on an average residential consumer of $0.57.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.



Rate Mitigation Options

Rate Mitigation Options

- Three options have been identified that could provide relief to various consumer classes. These options are outlined below.

1. 8% Rebate for All Consumers and Eliminate Proceeds Recycling

- Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
- Eliminate planned GGRA proceeds recycling to electricity consumers.

2. 8% Rebate for RPP Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to OCEB, with a 3,000 kWh cap.
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

3. 8% Rebate for RPP Consumers + ICI Expansion and Redirected Proceeds Recycling

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to the OCEB, with a 3,000 kWh cap.
- Provide support to small industrial and commercial consumers by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

- For each of the above options, a phased-in approach could be pursued to reduce the fiscal impact in the near term. See slide 25 for more details.

Consumer Impact Summary (data to be confirmed)

Option	Average Annual Fiscal Impact	Average Annual GGRA Proceeds Impact	Regulated Price Plan (Residential)		Class B (Commercial)	Class A (Industrial)	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*		*Existing*	*New*
8% rebate to all consumers and Eliminate Proceeds Recycling	$1.8 billion	-$330 million (-$1.32 billion over first compliance period)	-$11/ month (-7%)	-$18/ Month (-8%)	-$12/ MWh (-8%)	-$7/ MWh (-8%)	
8% rebate to RPP consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling	$1.0 billion	-$60 million (-$0.24 billion over the first compliance period)	-$9.7/ month (-6%)	-$45/ Month (-20%)	-$1/MWh (-1%)	-$0.9/ MWh (-1%)	Up to -$52/ MWh (-33%)
8% rebate to RPP consumers + ICI Expansion and Redirected Proceeds Recycling	$1.0 billion	-$125 million (-$0.50 billion over first compliance period)	-$10.3/ month (-6.5%)	-$17/ month (-8%)	-$1/MWh (-1%)	-$0.9/ MWh (-1%)	Up to -$52/ MWh (-33%)

Pending verification

Consumer Impact Examples

Consumer Type	Current Bill	Option 1	Option 2	Option 3
Typical Residential (750 kWh/month)	$157	$146	$147	$146
Rural (R2 – 3,000 kWh/month)				
Small Condo (xx MWh/month				
Auto Supply Chain (2 MW/xx MWh/month)				
Automotive Assembly Plant (20 MW/xx MWh/Month)				

Placeholder

Phased-in Approach

- A phased-in approach could be pursued. The chart below shows the fiscal and ratepayer impacts of a rebate that starts at 2%, increasing by 2% per year up to 8%.

Consumer Type	Fiscal Impact	Bill/Unit Cost Impact – Year 1	Bill/Unit Cost Impact – Year 2	Bill/Unit Cost Impact – Year 3	Bill/Unit Cost Impact – Year 4
Option 1	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					
Option 2	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					
Option 3	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					

Placeholder

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

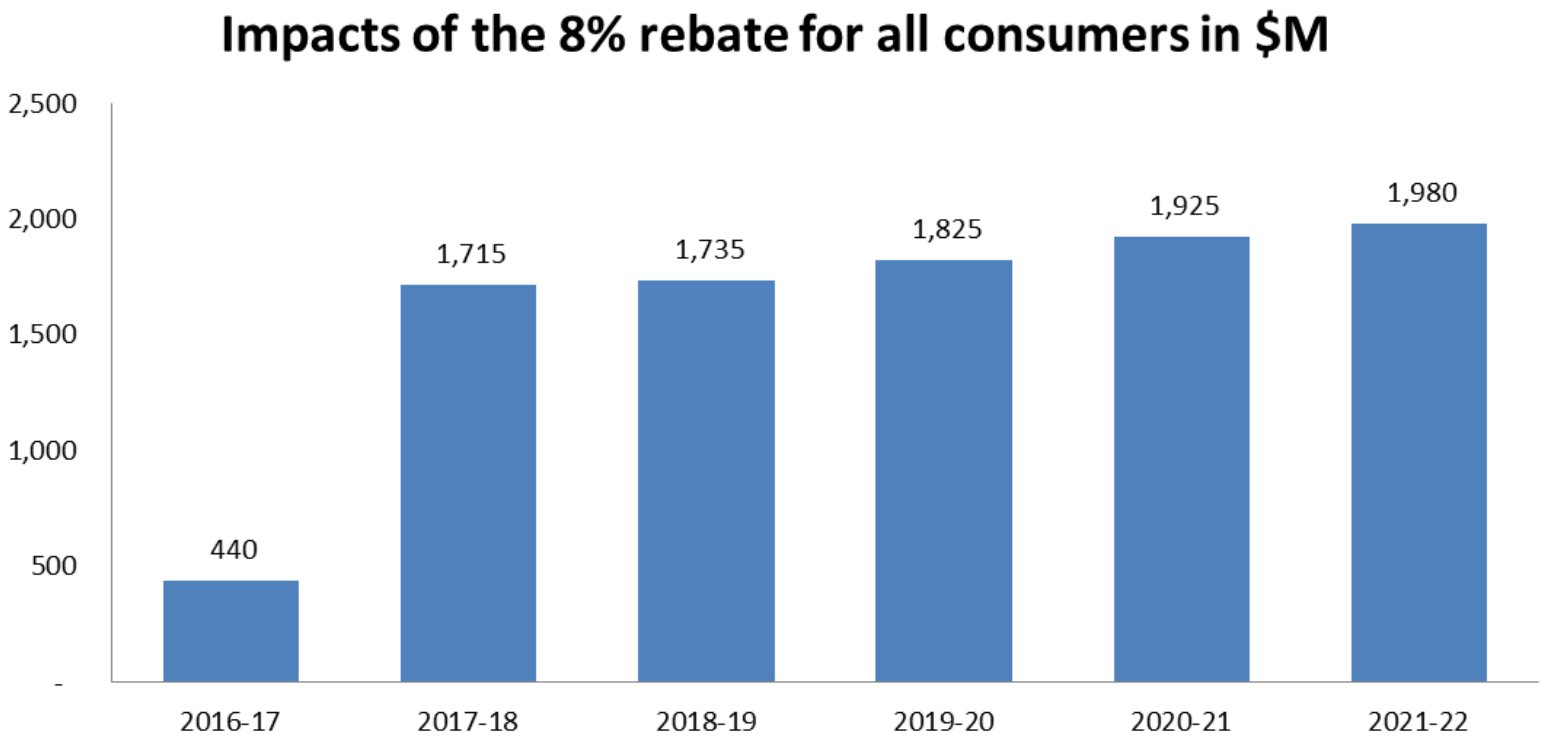
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

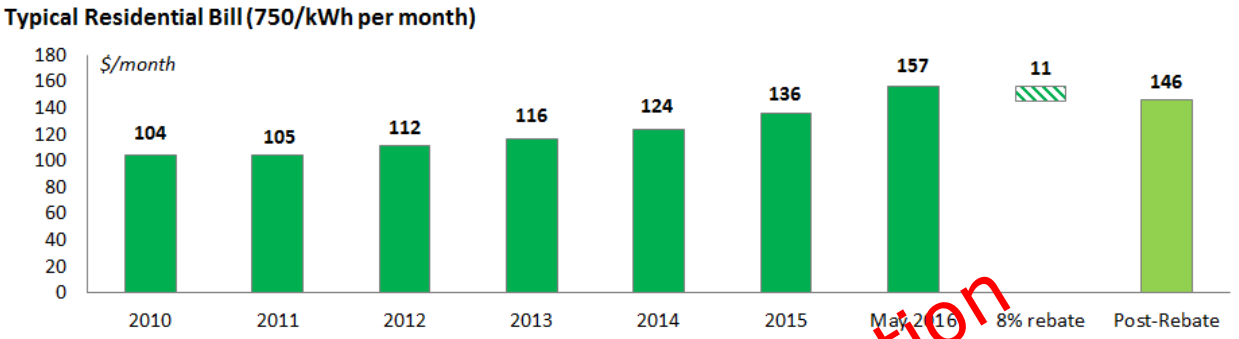
8% Rebate for All Consumers – Projected Cost

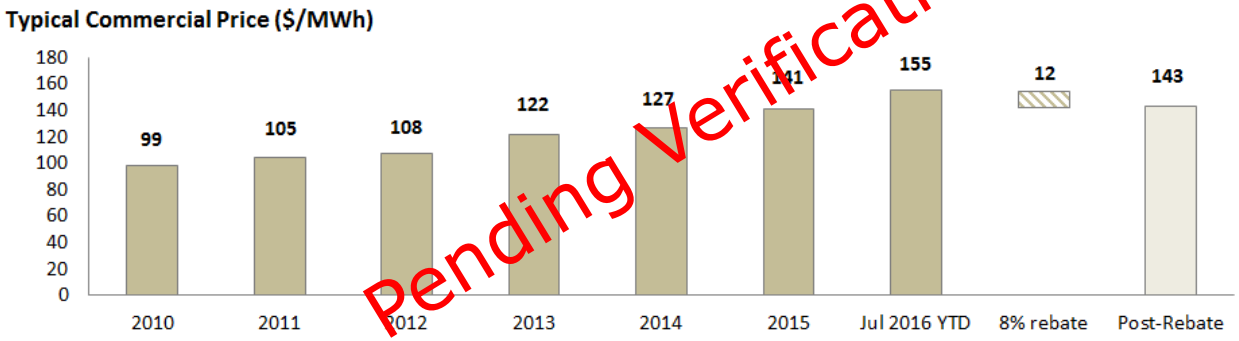
- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.

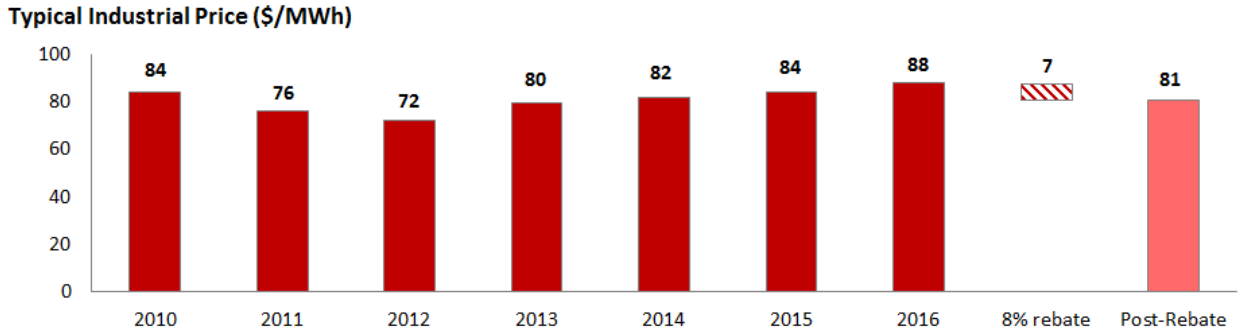


Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate (7% reduction to after tax bill) is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $12/MWh rebate (8% reduction).
- A $7/MWh rebate for industrial consumers would bring all-in prices below 2010 levels (8% reduction).







Pending Verification

8% Rebate for All Consumers – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)

8% Rebate for All Consumers – Considerations Cont'd

- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers, potentially eliminating $1.3 billion in required GGRA proceeds over the first compliance period.

- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

- Additionally, commercial and industrial consumers would continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government's ability to achieve fiscal balance.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

8% Rebate for All Consumers – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).

- **Positioning:**
  - We are committed to keeping electricity in Ontario clean, reliable and affordable.
  - This rebate is fair for all customers, and does the most for homeowners with higher costs.
  - Large businesses in the north are paying among the lowest rates in North America.

- **Issues considerations:**
  - Industrial rates, especially in northern Ontario, would be even more competitive.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity (research shows that OCEB did not appreciably impact public opinion).
  - Media/public interest in the impact to achieving fiscal balance.
  - Capped option would draw comparisons with OCEB (10% rebate).

Option 2 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh Cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.

3. RRRP Update
   - Rural consumers would see a benefit of $27.96, while all other consumers would see a cost of $0.57.

4. Redirected proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion and RRRP update would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

- While non-RPP consumers would not see a benefit from the provincial HST rebate under this option, all industrial and commercial consumers would receive proceeds recycling through the GGRA.
  - Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Additionally, support would be provided to small industrial and commercial consumers through the ICI expansion, while rural customers would see a significant benefit through updates to the RRRP program.

8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers with a 3,000 kWh cap would be approximately $0.x billion between 2017 and 2020.

Projected Cost of 8% Rebate to Regulated Price Plan ($B)

Nominal dollars

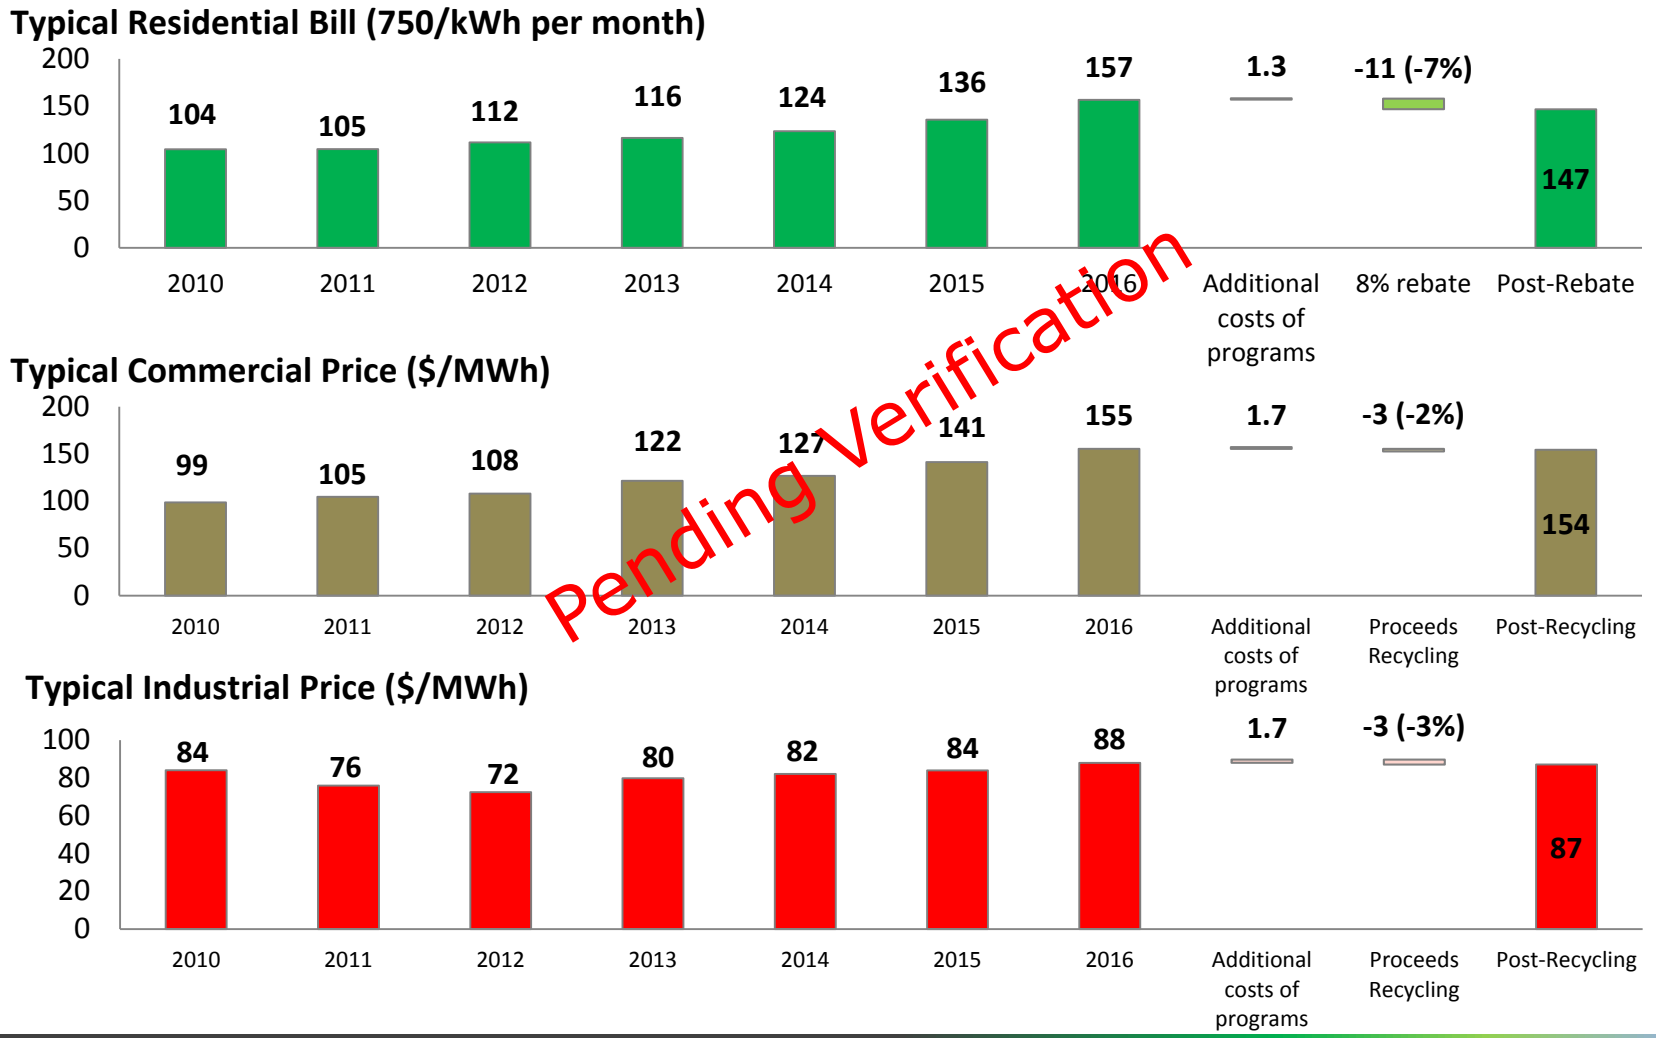
Bill Impacts by Sector



Pending Verification

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Amendments would also be required to various regulations to expand ICI and RRRP.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCo, OEB low-income table, AMO.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
  - More businesses than ever in the north will pay among the lowest electricity rates in North America.

- **Issues considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Option 3 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh Cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.
     - Those who decide to opt-in would not see a benefit until July 2018.

3. Modified proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.
- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCo, including speeches/events.

- **Positioning:**
  - A fiscally prudent plan to benefit both businesses and residential ratepayers.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
  - More businesses than ever in the north will pay among the lowest electricity rates in North America.

- **Issues considerations:**
  - Net gain for all residential customers.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan, including consultation with LDCs, the OEB and IESO.

Appendix – Background on Rate-based Initiatives

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Appendix A – ICI

Industrial Conservation Initiative

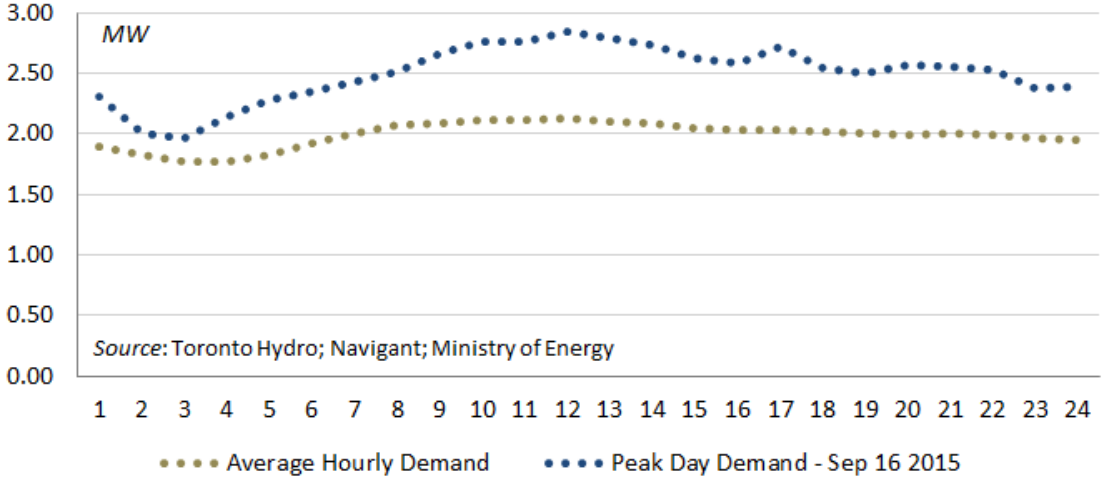
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

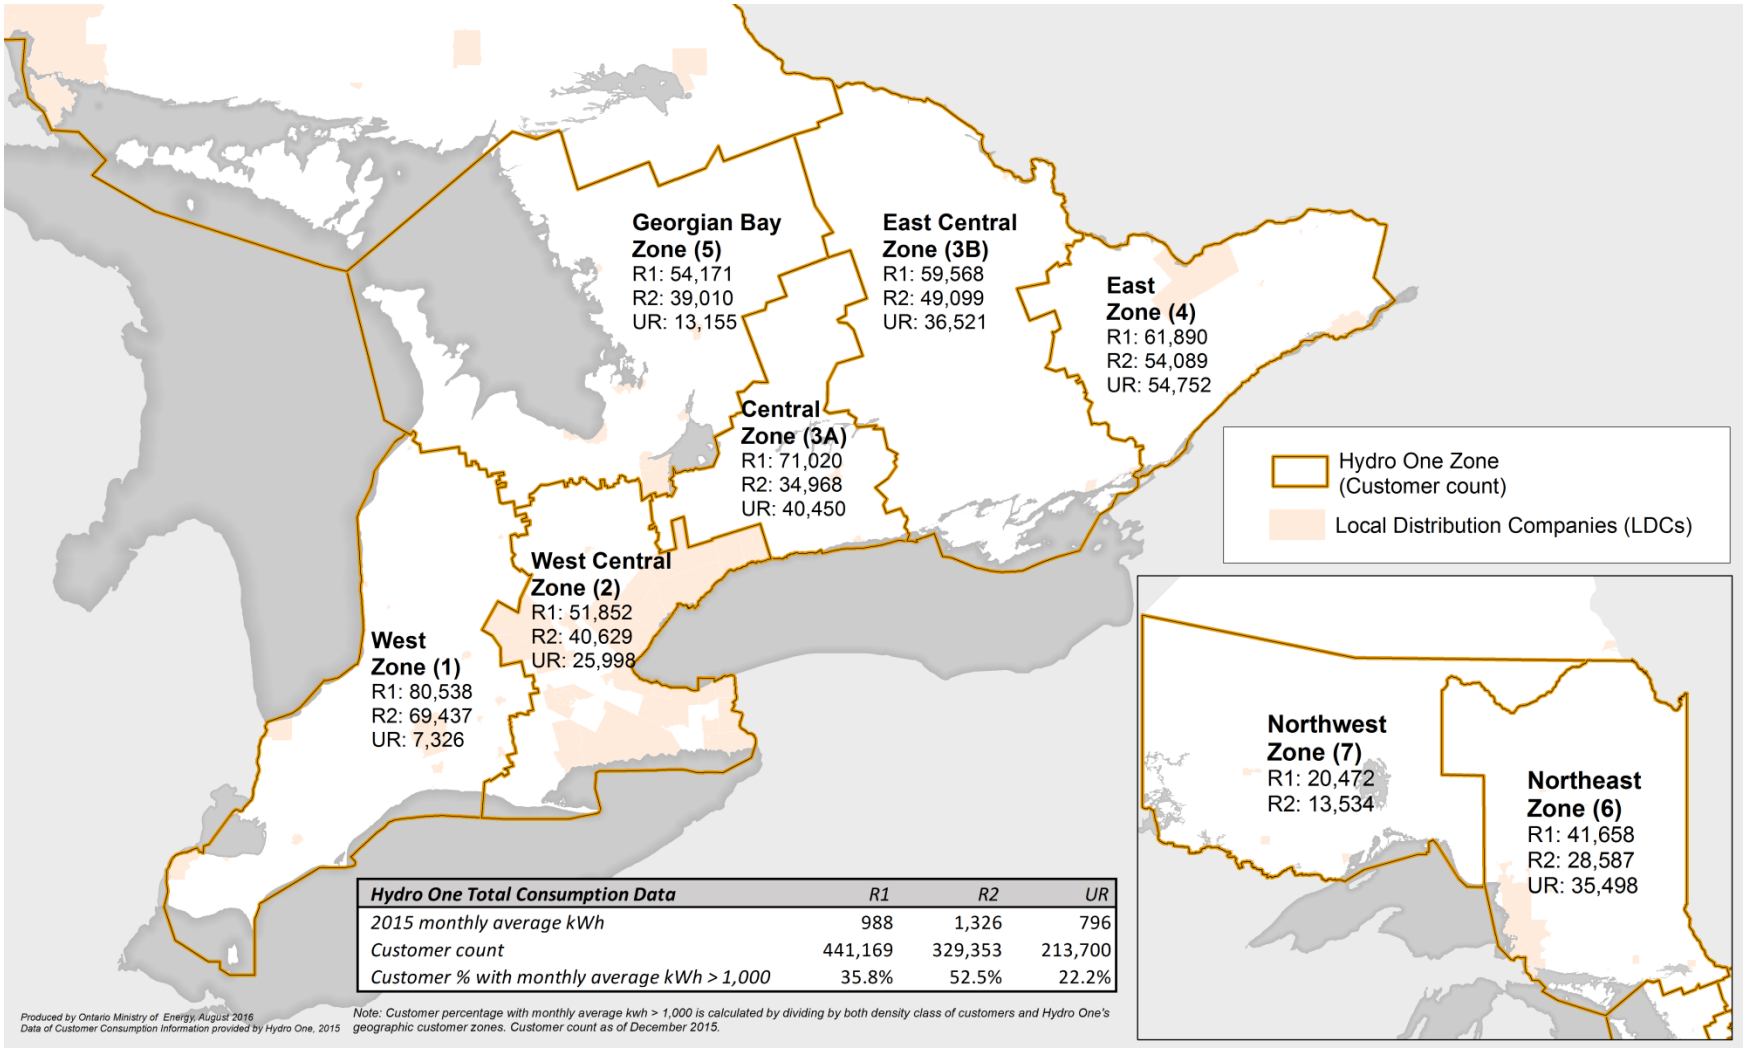
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix B – RRRP

Hydro One Consumers by Customers Class

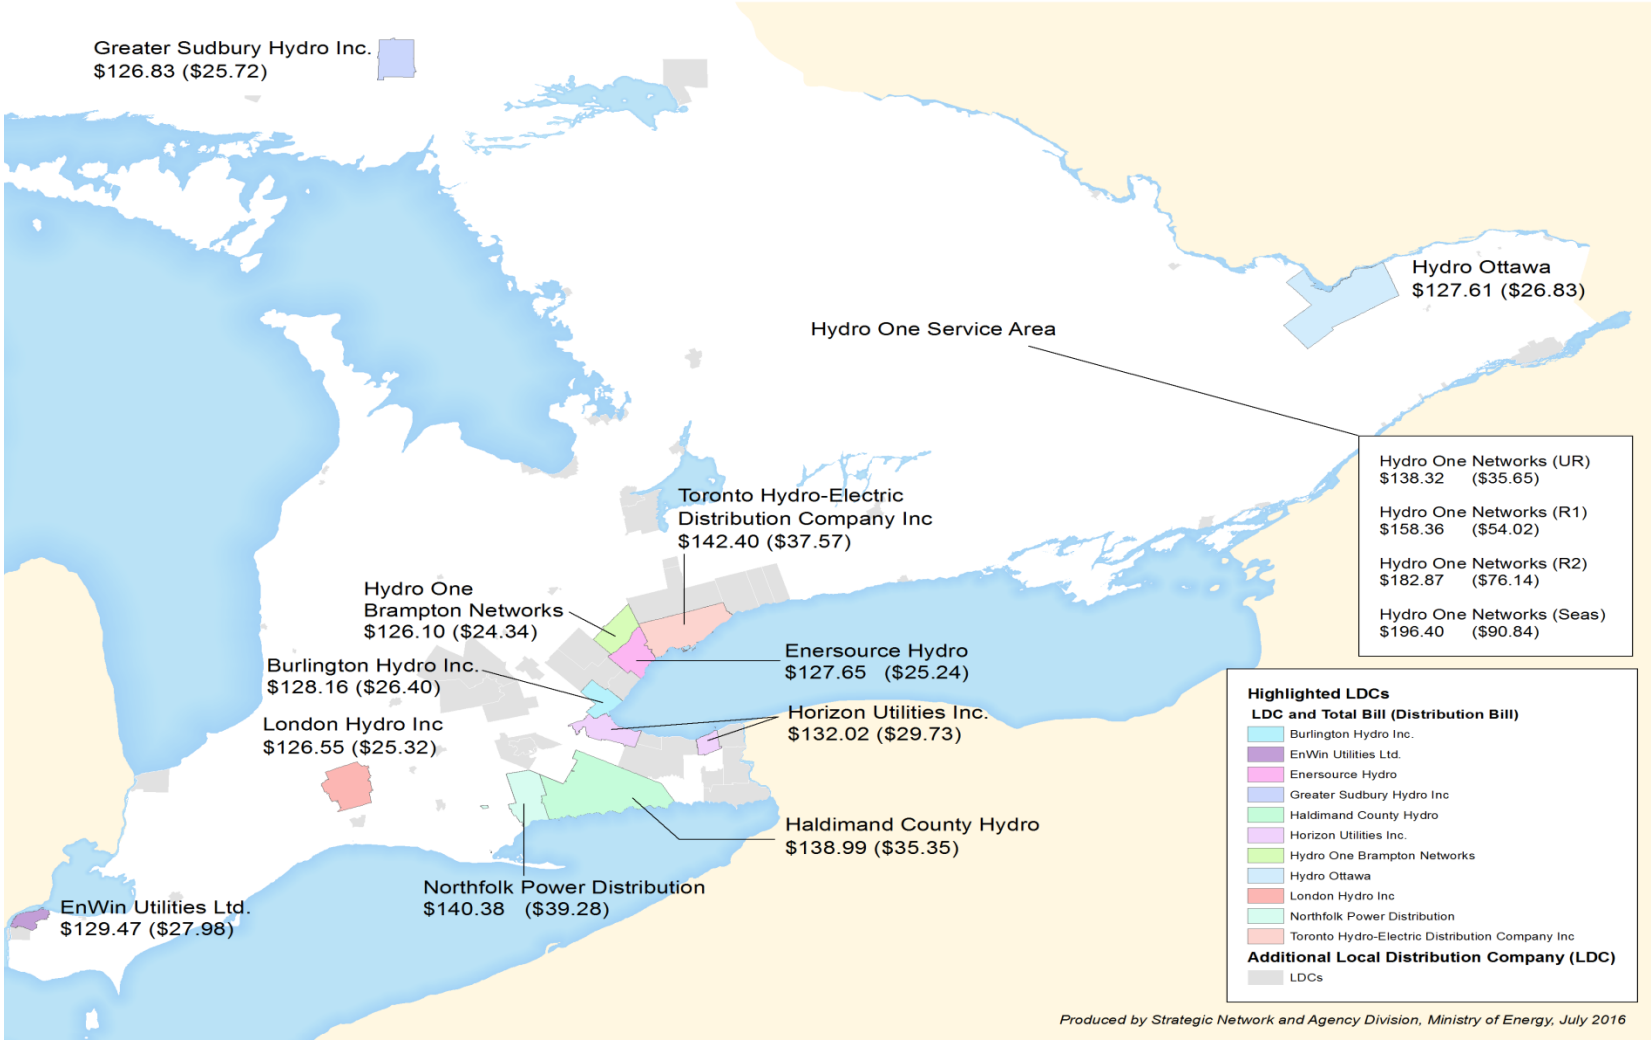


Hydro One Total Consumption Data	*R1*	*R2*	*UR*
2015 monthly average kWh	988	1,326	796
Customer count	441,169	329,353	213,700
Customer % with monthly average kWh > 1,000	35.8%	52.5%	22.2%

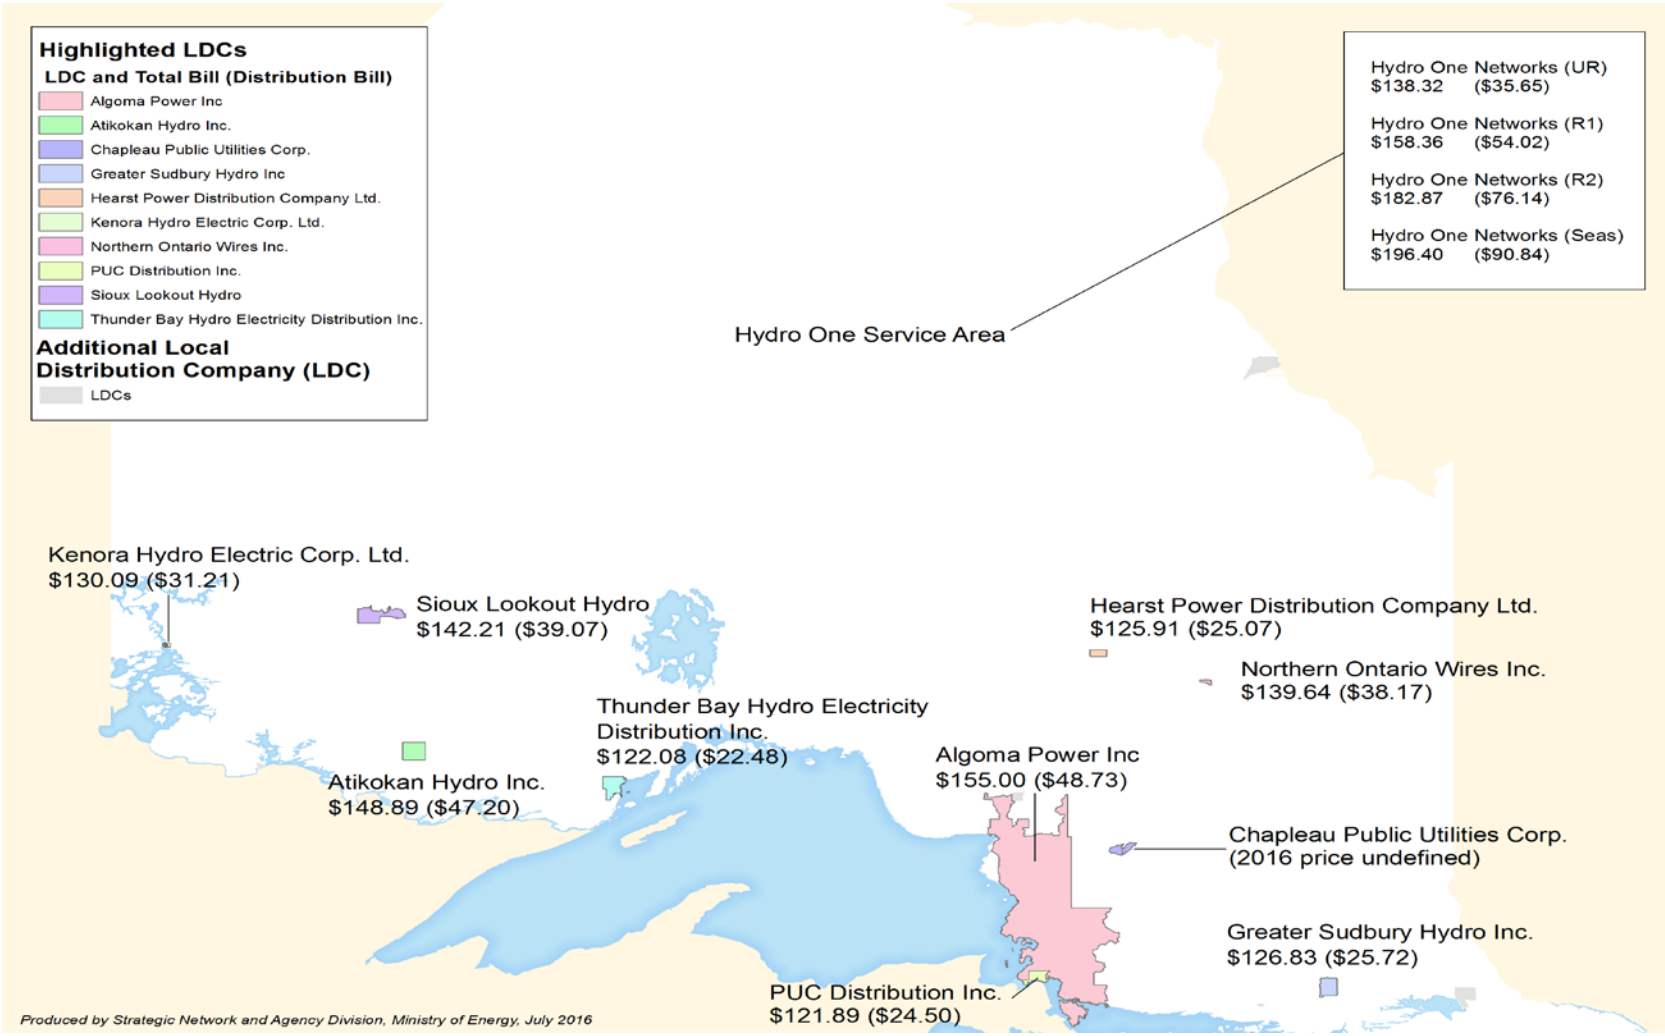
Produced by Ontario Ministry of Energy, August 2016
Data of Customer Consumption Information provided by Hydro One, 2015

Note: Customer percentage with monthly average kwh > 1,000 is calculated by dividing by both density class of customers and Hydro One's geographic customer zones. Customer count as of December 2015.

Selected Rate Comparison – Total Bill and Distribution Rate



Selected Rate Comparison – Total Bill and Distribution Rate



Summary of Options – Incremental costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Appendix C – HST

Additional Information – Public Service Bodies

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
- Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

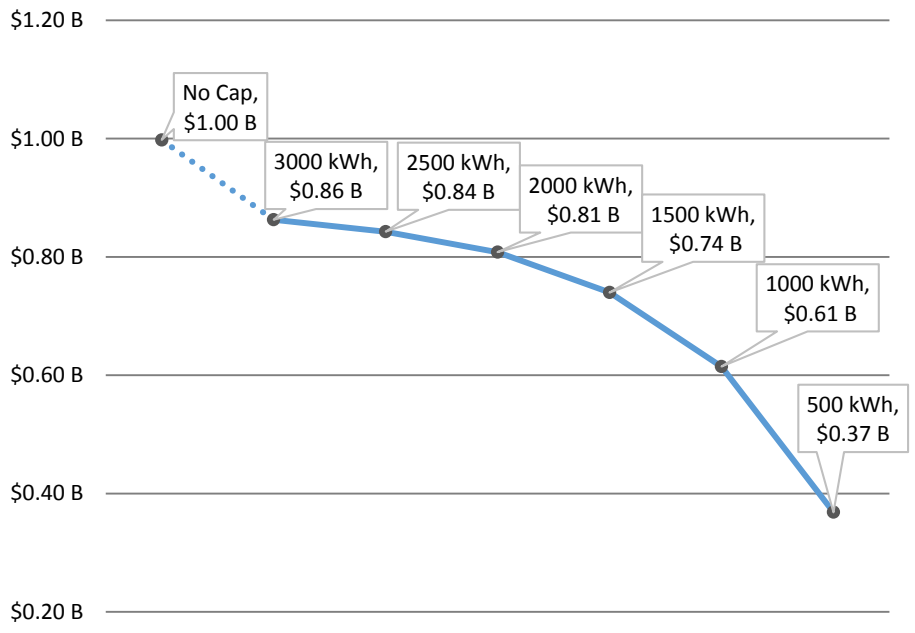
**A qualifying non-profit organization receives at least 40% of its funding from government.*

Appendix – MOF-CEFD ANALYSIS

Program Costs – RPP @ 8% with Various Caps

- CEFD modelled anticipated program costs for an 8% rebate in 2017 at a variety of cap levels, using the same eligibility criteria as the prior OCEB modelling.
- Savings from Cap (%) provides the approximate rule of thumb for savings at various cap levels.

Cap Scenario	Program Costs	Savings from Cap	Savings from Cap (%)
No Cap	$1.0 B	-	-
3,000 kWh	$0.86 B	$0.14 B	**14%**
2,500 kWh	$0.84 B	$0.16 B	**16%**
2,000 kWh	$0.81 B	$0.19 B	**19%**
1,500 kWh	$0.74 B	$0.26 B	**26%**
1,000 kWh	$0.61 B	$0.38 B	**38%**
500 kWh	$0.37 B	$0.63 B	**63%**



Notes:
Price forecasts from 2013 LTEP, Residential Electricity Bill, adjusted for removal for DRC as of January 1, 2016. Rebate applied to total bill before taxes.
Eligibility for Rebate and Cap impacts from CEFD OCEB model incorporating LDC reported data.
Using strictly RPP-based criteria, along with other restrictions related to PSBs, could lead to different program cost and savings estimates.

Electricity Price Mitigation

Working Draft

August 23, 2016 [6pm]

Context

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

- As a result, electricity costs are increasing as the necessary investments are made to modernize the province's electricity infrastructure.

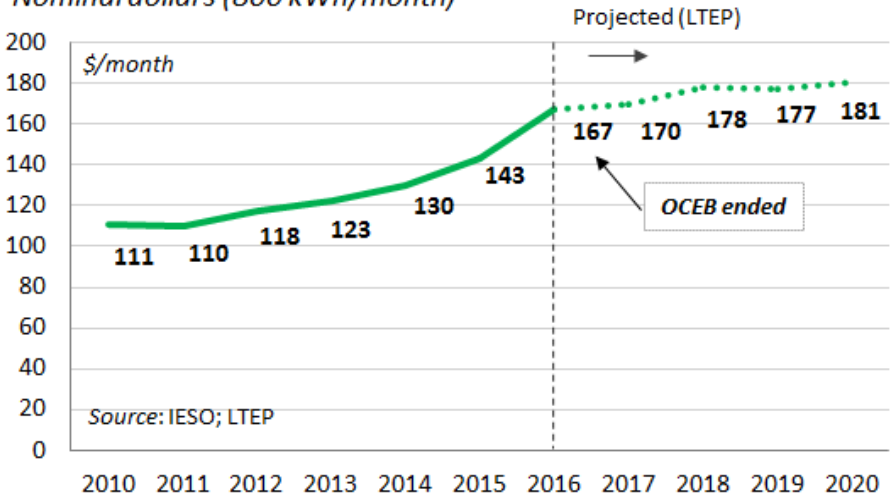
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

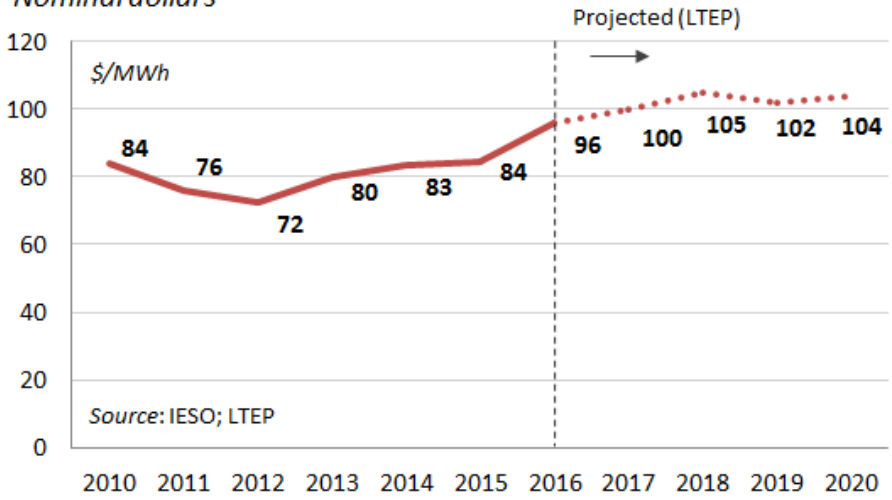
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
below 0.05 MW	0.05–3 MW	*above* 3 MW*
58 TWh (41.1%)	57 TWh (40.4%)	26 TWh (18.4%)

Source: OEB, Navigant, IESO

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

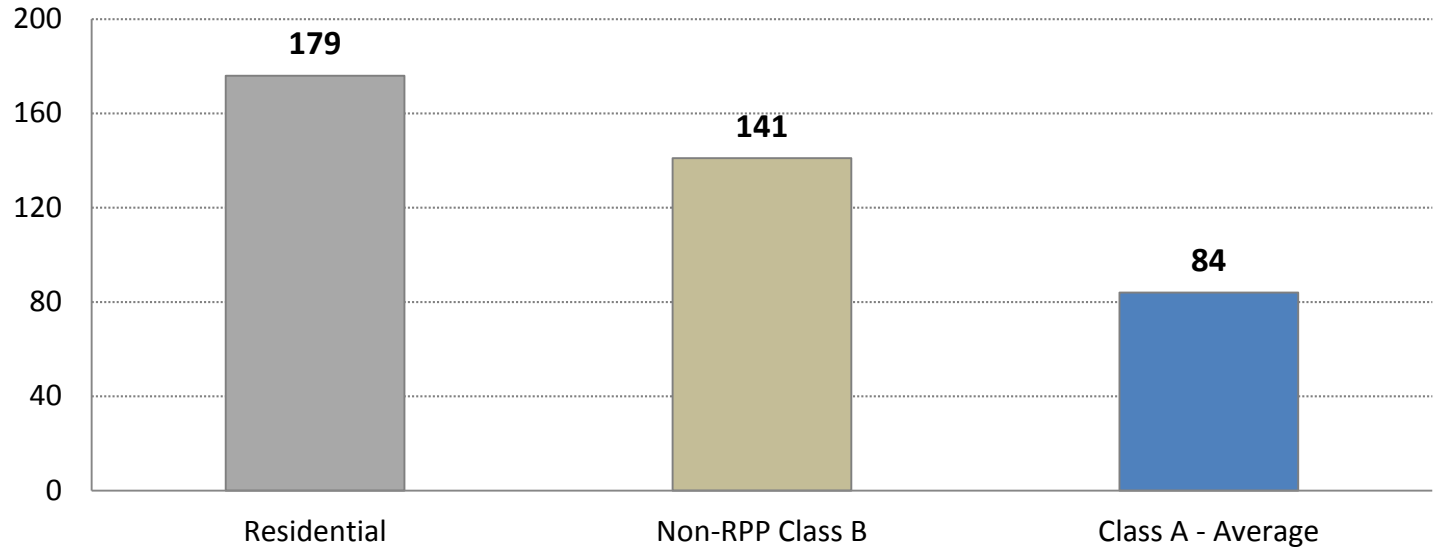
*Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data processing are currently eligible for Class A. All other 3-5MW consumers are Class B.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



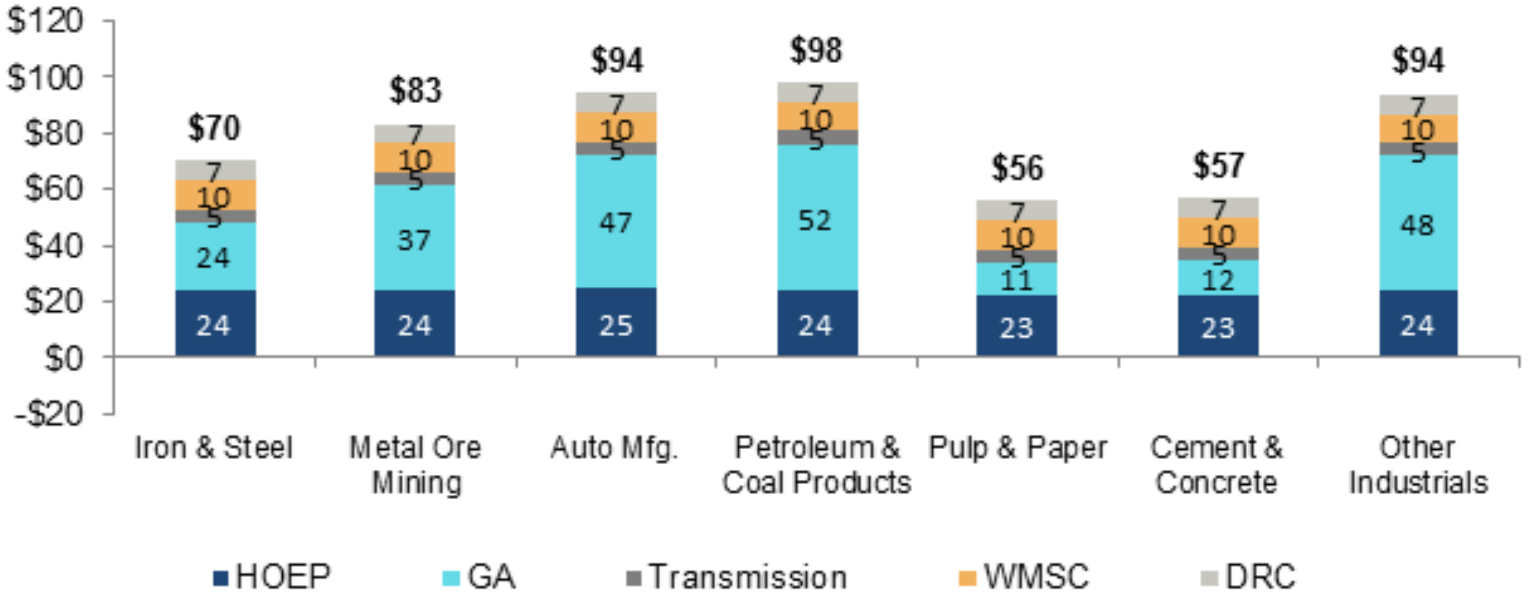
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Industrial Electricity Prices by Sector

- While industrial consumers (Class A) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

Average all-in Class A, transmission-connected electricity prices by industrial sector (estimated), year-to-date September 2015

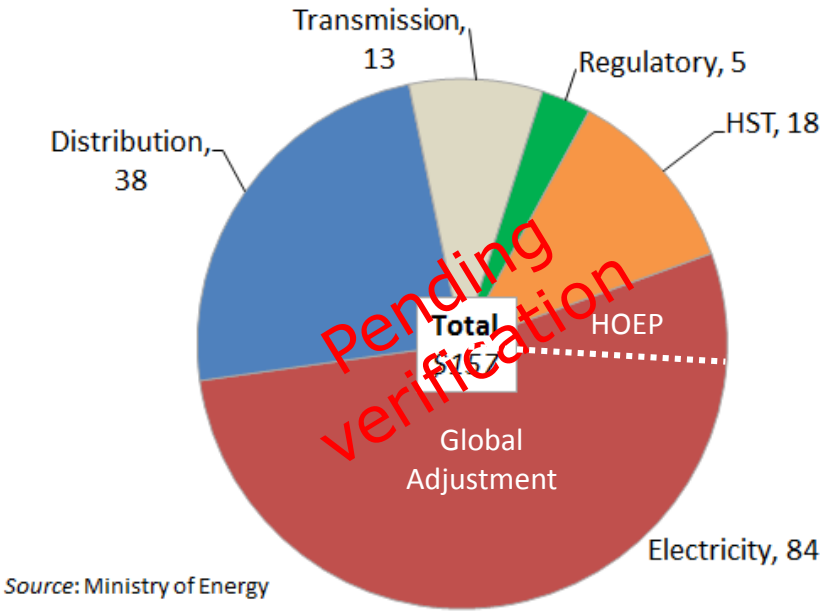


Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



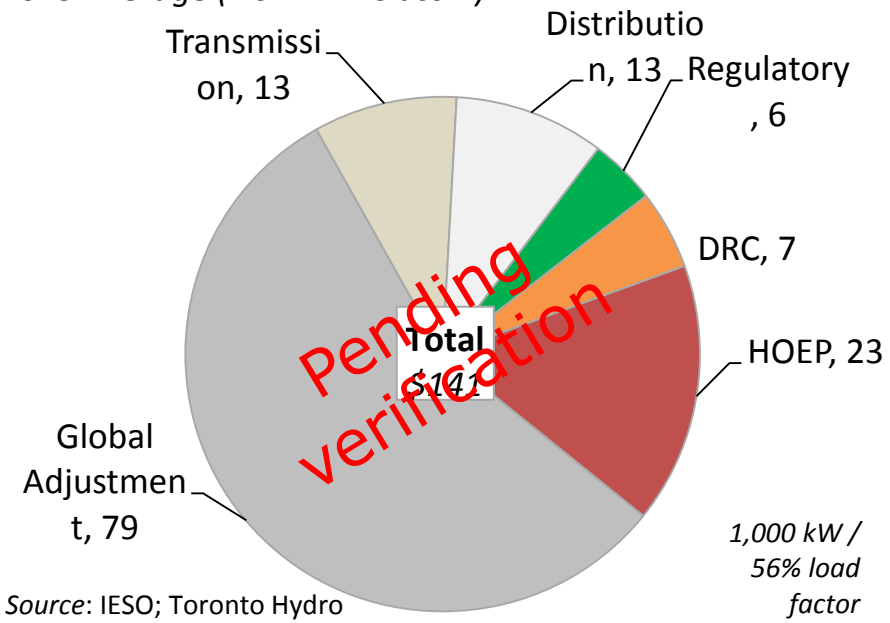
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)*

2015 Average (Non-RPP Class B)



Source: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

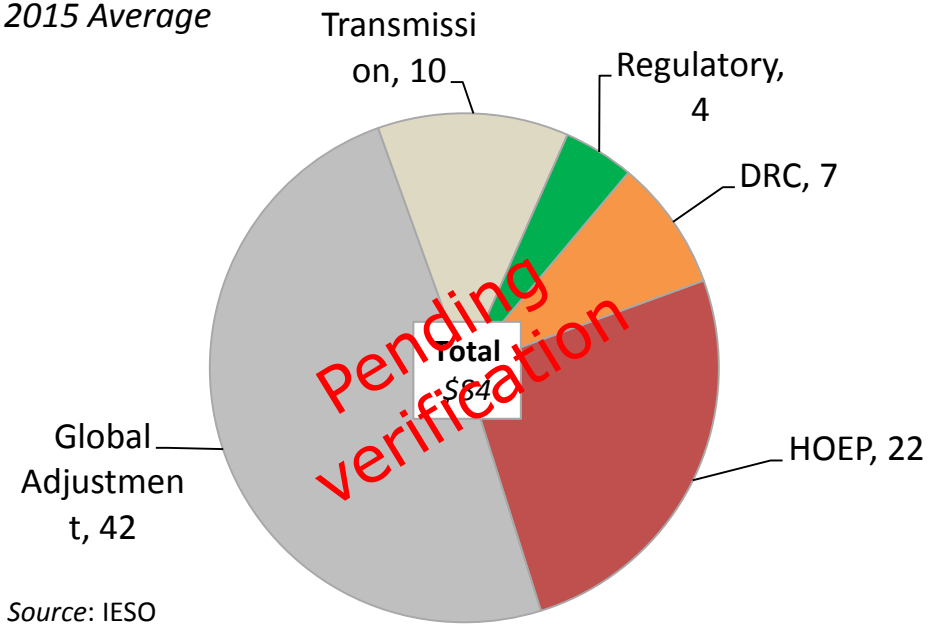
* Note: Most commercial consumers receive input tax credits for their HST.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

Typical Large Industrial Price ($/MWh)*

2015 Average



Source: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

* Note: Industrial consumers receive input tax credits for their HST.

Rate Mitigation Levers - Overview

- **Tax-based Lever** (Shifts costs from the rate-base to the tax base):
  - *8% rebate***:** providing a rebate equal to provincial portion of the HST to all consumers or specific classes of consumers.

- **Cap and Trade Proceeds Lever** (Could shift costs to either reduce impact on the rate base or the tax base):
  - *Modified proceeds recycling*: redirecting proceeds towards other consumer classes or funding other existing initiatives that help reduce GHG emissions.

- **Rate-based Levers** (Shifts costs within the rate-base, i.e. from one customer group to another):
  - *ICI expansion*: expanding eligibility for the ICI program to all consumers over 1 MW. Currently eligibility is limited to consumers over 5 MW and consumers in certain energy intensive sectors between 3-5 MW.
  - *RRRP Update*: increasing the benefit currently paid to rural customers in recognition of the higher cost of delivery.

- The following slides provide additional detail on the above levers.

Tax-based Lever

HST Background

- In general, businesses effectively do not pay HST on their inputs, including electricity, as they are able to claim input tax credits (ITCs).
  - Businesses selling HST-exempt goods or services (such as financial services) are not eligible to claim input tax credits.

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
  - PSBs consist of municipalities, universities, public colleges, school authorities, hospital authorities and charities and qualifying non-profit organizations.
  - PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates. Charities and qualifying non-profits account for about $40 million that amount.
  - See Appendix for additional information.

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.

HST General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates. Savings would be less if there is a cap on the rebate.

- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.

- The Province may also need to change the reporting for the cost of the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy. The energy component is reported as an offset of HST revenue.
  - Ministry program expenses could increase by as much as $445 million (TBC).

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

- To improve the province's ability to track impacts and program outcomes, subsequent legislative amendments to enable exchanges of data with LDCs could be considered.

Cap and Trade Proceeds Lever

2016 Budget Commitment

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, The Climate Change Action Plan (CCAP), committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020)
  - [placeholder for proceeds breakdown by customer class].

- If a rebate equivalent to the 8% provincial portion of HST is provided for all or some consumers, the resulting savings could be significantly greater than the 2016 Budget commitment and, therefore, the required GGRA proceeds may be reduced further.
  - These savings could be used for additional rate mitigation by further offsetting the cost of investments in renewables and conservation or redirected to other emissions reduction initiatives, as discussed on the next slide.

Alignment with CCAP

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3B over 4 years to greenhouse gas reduction initiatives, funded by Cap and Trade proceeds.

- The CCAP includes up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas by 2020.

$ Billions	2017-18	2018-19	2019-20	2020-21	Total
Total Committed in CCAP	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**6.0 – 8.3**
Electricity Price Mitigation	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 1.3*

- Ontario's Climate *Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail
  - Hamilton LRT
  - Hurontario LRT
  - Energy efficiency in schools

Rate-Based Levers

ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

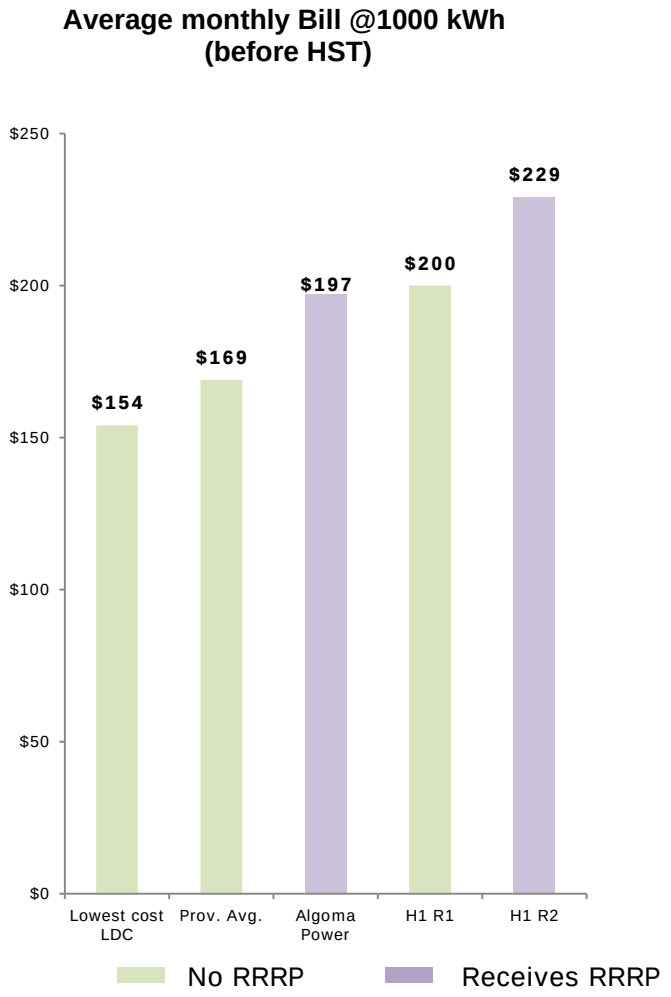
ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - 'Short-term' refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - 'Long-term' is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.
- The above bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh.
- Newly eligible consumers in the program would mostly fall into the small industrial and commercial category, including: automotive supply chain companies, condominiums, greenhouses and others.

Rural or Remote Rate Protection (RRRP) Update

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers.
  - There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.
- There may be opportunity to evaluate current levels of support to enhance rate assistance available to R2 customers.
  - An additional $28.53/month would equalize R2 bills with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 RRRP to $235M with a monthly impact on an average residential consumer of $0.57.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.



Rate Mitigation Options

Rate Mitigation Options

- Three options have been identified that could provide relief to various consumer classes. These options are outlined below.

1. 8% Rebate for All Consumers and Eliminate Proceeds Recycling

- Provide an 8% rebate to all electricity consumers (i.e., industrial, commercial, small business, farms and residential).
- Eliminate planned GGRA proceeds recycling to electricity consumers.

2. 8% Rebate for RPP Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to OCEB, with a 3,000 kWh cap.
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

3. 8% Rebate for RPP Consumers + ICI Expansion and Redirected Proceeds Recycling

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to the OCEB, with a 3,000 kWh cap.
- Provide support to small industrial and commercial consumers by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

- For each of the above options, a phased-in approach could be pursued to reduce the fiscal impact in the near term. See slide 25 for more details.

Consumer Impact Summary (data to be confirmed)

Option	Average Annual Fiscal Impact	Average Annual GGRA Proceeds Impact	Regulated Price Plan (Residential)		Class B (Commercial)	Class A (Industrial)	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*		*Existing*	*New*
8% rebate to all consumers and Eliminate Proceeds Recycling	$1.8 billion	-$330 million (-$1.32 billion over first compliance period)	-$11/ month (-7%)	-$18/ Month (-8%)	-$12/ MWh (-8%)	-$7/ MWh (-8%)	
8% rebate to RPP consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling	$1.0 billion	-$60 million (-$0.24 billion over the first compliance period)	-$9.7/ month (-6%)	-$45/ Month (-20%)	-$1/MWh (-1%)	-$0.9/ MWh (-1%)	Up to -$52/ MWh (-33%)
8% rebate to RPP consumers + ICI Expansion and Redirected Proceeds Recycling	$1.0 billion	-$125 million (-$0.50 billion over first compliance period)	-$10.3/ month (-6.5%)	-$17/ month (-8%)	-$1/MWh (-1%)	-$0.9/ MWh (-1%)	Up to -$52/ MWh (-33%)

Pending verification

Consumer Impact Examples

Consumer Type	Current Bill	Option 1	Option 2	Option 3
Typical Residential (750 kWh/month)	$157	$146	$147	$146
Rural (R2 – 3,000 kWh/month)				
Small Condo (xx MWh/month				
Auto Supply Chain (2 MW/xx MWh/month)				
Automotive Assembly Plant (20 MW/xx MWh/Month)				

Placeholder

Phased-in Approach

- A phased-in approach could be pursued. The chart below shows the fiscal and ratepayer impacts of a rebate that starts at 2%, increasing by 2% per year up to 8%.

Consumer Type	Fiscal Impact	Bill/Unit Cost Impact – Year 1	Bill/Unit Cost Impact – Year 2	Bill/Unit Cost Impact – Year 3	Bill/Unit Cost Impact – Year 4
Option 1	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					
Option 2	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					
Option 3	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					

Placeholder

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

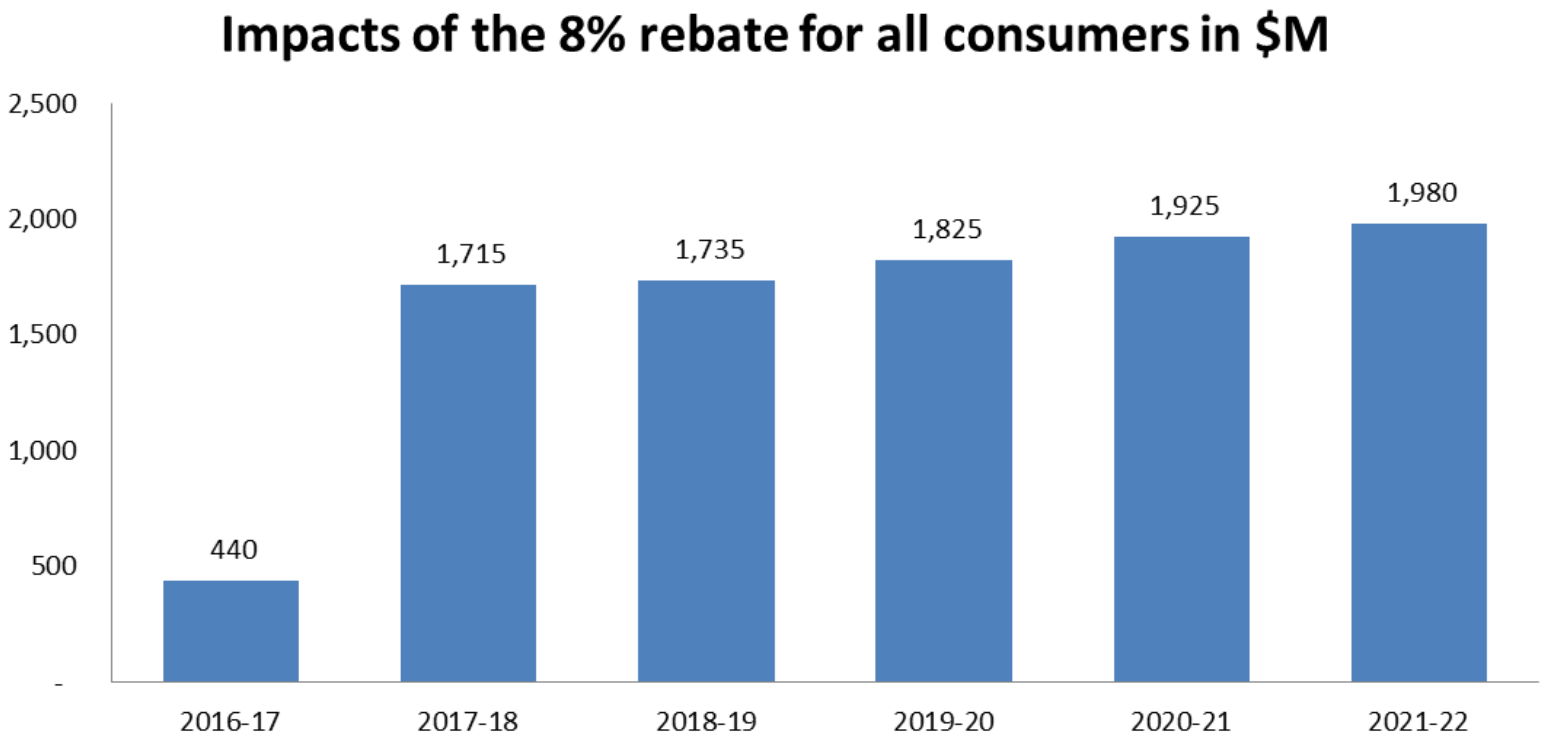
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

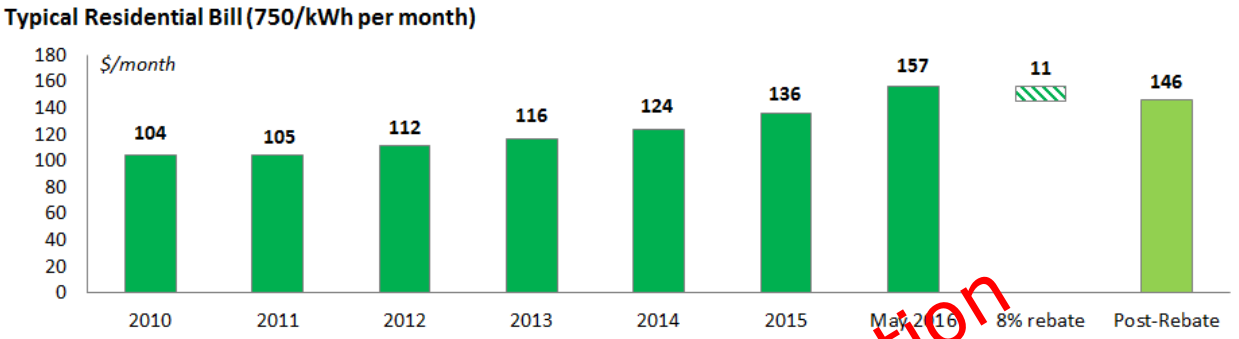
8% Rebate for All Consumers – Projected Cost

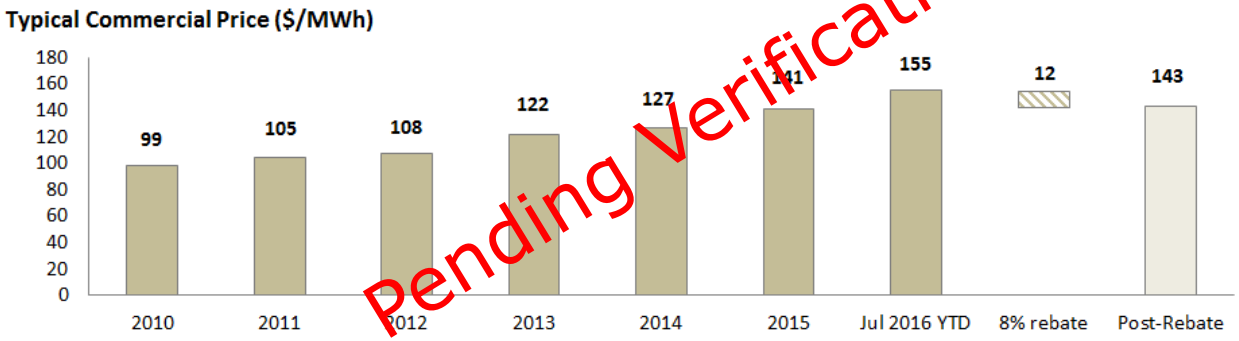
- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.

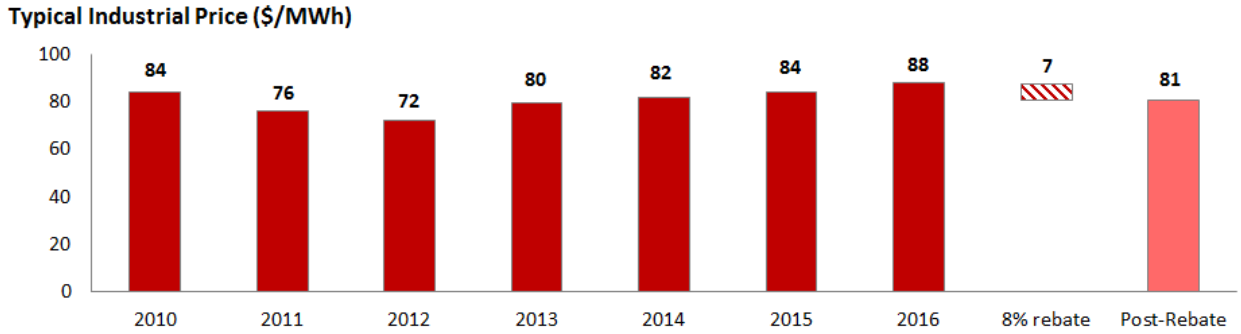


Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate (7% reduction to after tax bill) is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $12/MWh rebate (8% reduction).
- A $7/MWh rebate for industrial consumers would bring all-in prices below 2010 levels (8% reduction).







Pending Verification

8% Rebate for All Consumers – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)

8% Rebate for All Consumers – Considerations Cont'd

- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers, potentially eliminating $1.3 billion in required GGRA proceeds over the first compliance period.

- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

- Additionally, commercial and industrial consumers would continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government's ability to achieve fiscal balance.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

8% Rebate for All Consumers – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).

- **Positioning:**
  - We are committed to keeping electricity in Ontario clean, reliable and affordable.
  - This rebate is fair for all customers, and does the most for homeowners with higher costs.
  - Large businesses in the north are paying among the lowest rates in North America.

- **Issues considerations:**
  - Industrial rates, especially in northern Ontario, would be even more competitive.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity (research shows that OCEB did not appreciably impact public opinion).
  - Media/public interest in the impact to achieving fiscal balance.
  - Capped option would draw comparisons with OCEB (10% rebate).

Option 2 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh Cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.

3. RRRP Update
   - Rural consumers would see a benefit of $27.96, while all other consumers would see a cost of $0.57.

4. Redirected proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion and RRRP update would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

- While non-RPP consumers would not see a benefit from the provincial HST rebate under this option, all industrial and commercial consumers would receive proceeds recycling through the GGRA.
  - Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Additionally, support would be provided to small industrial and commercial consumers through the ICI expansion, while rural customers would see a significant benefit through updates to the RRRP program.

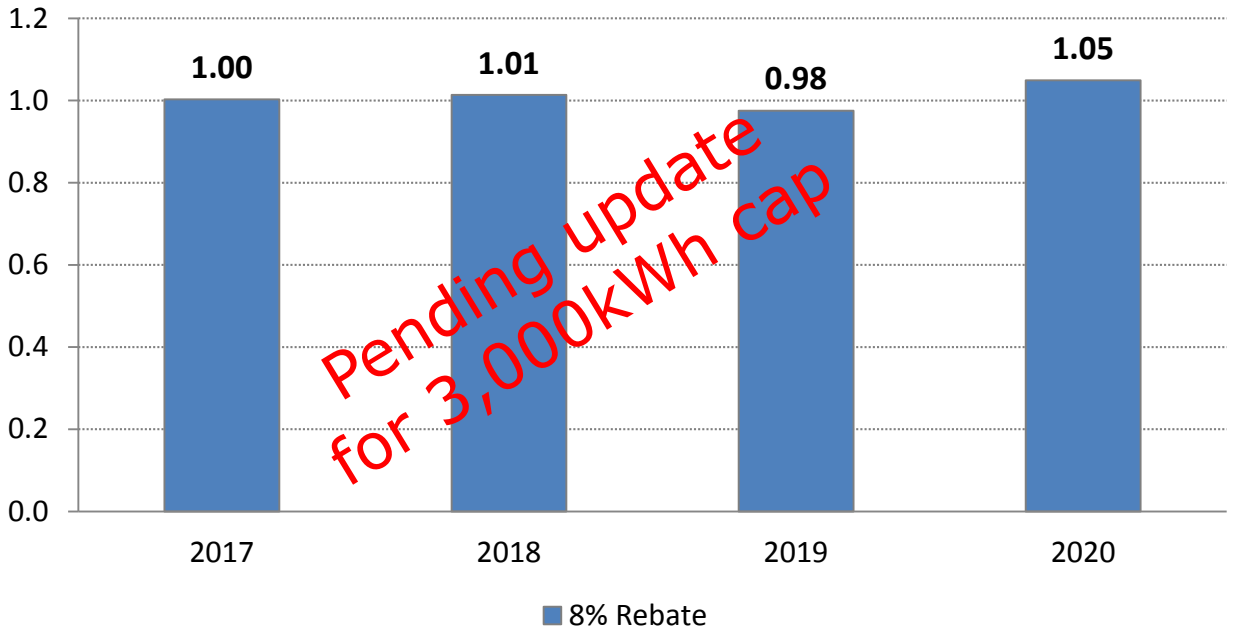
8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers with a 3,000 kWh cap would be approximately $0.x billion between 2017 and 2020.

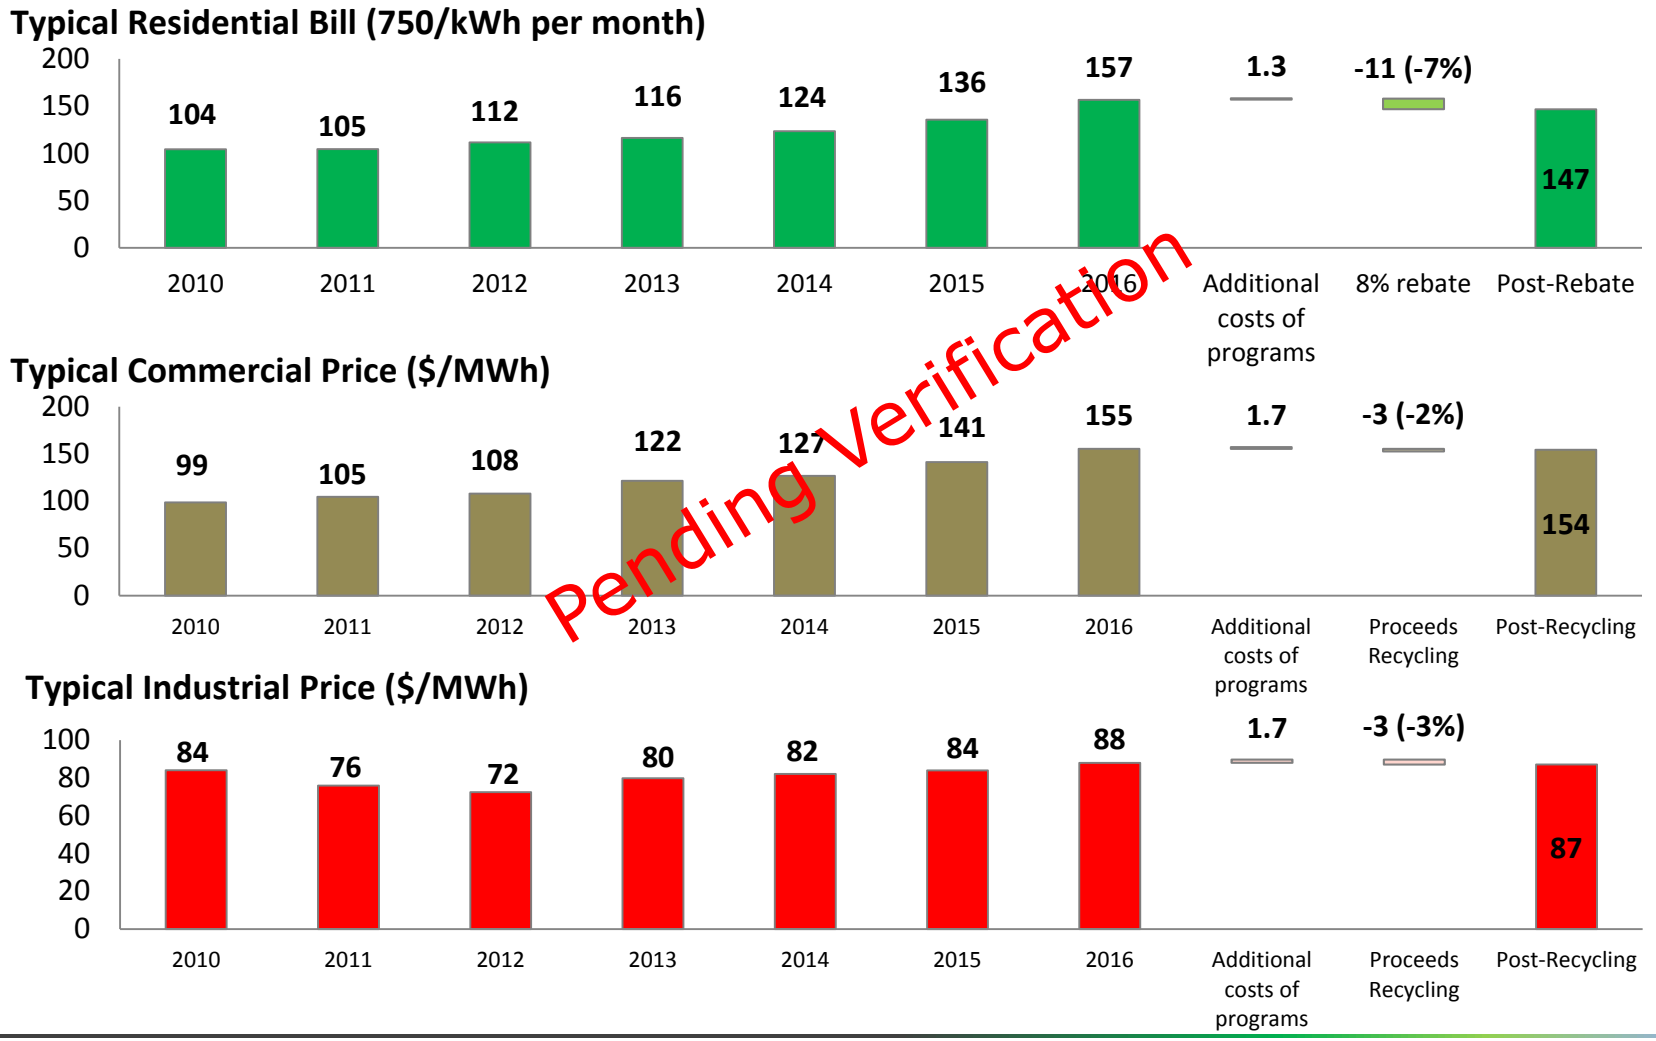
Projected Cost of 8% Rebate to Regulated Price Plan ($B)

Nominal dollars

Source: OPO (Aug 19 2016)



Bill Impacts by Sector



Pending Verification

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Amendments would also be required to various regulations to expand ICI and RRRP.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCo, OEB low-income table, AMO.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
  - More businesses than ever in the north will pay among the lowest electricity rates in North America.

- **Issues considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Option 3 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh Cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.
     - Those who decide to opt-in would not see a benefit until July 2018.

3. Modified proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes residential, small businesses and small farms.
- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.
- While non-RPP consumers would not see a benefit from the provincial HST rebate under this option, support would be provided to small industrial and commercial consumers through the ICI expansion and all industrial and commercial consumers would receive proceeds recycling through the GGRA.
- Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

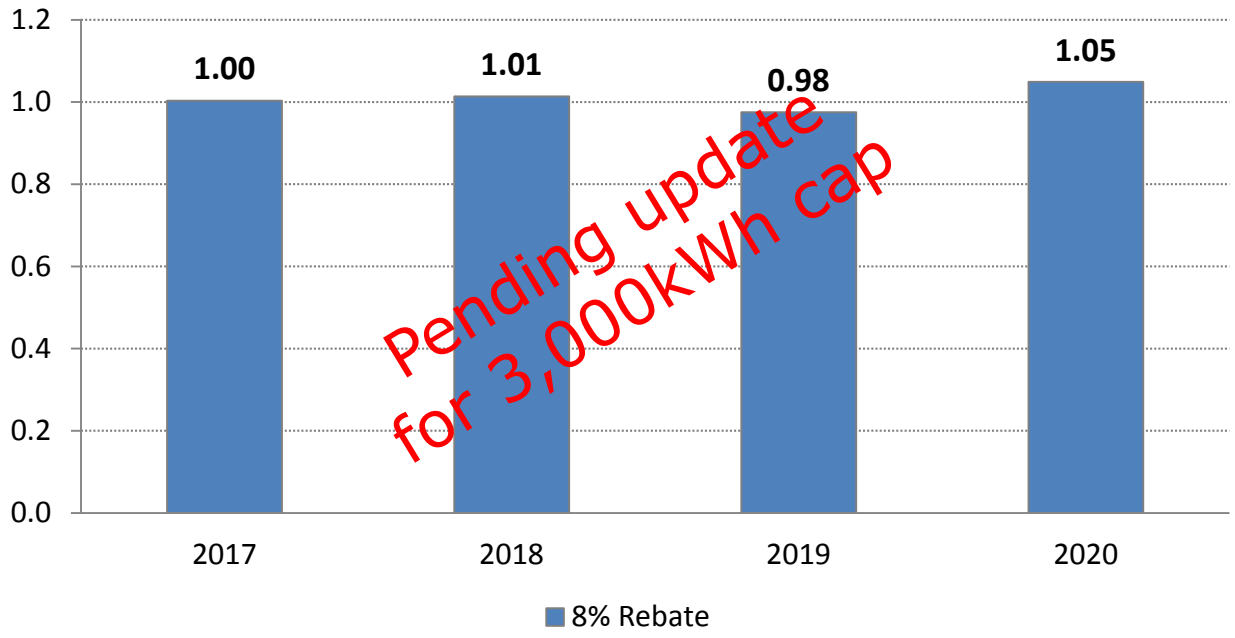
8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers with a 3,000 kWh cap would be approximately $0.x billion between 2017 and 2020.

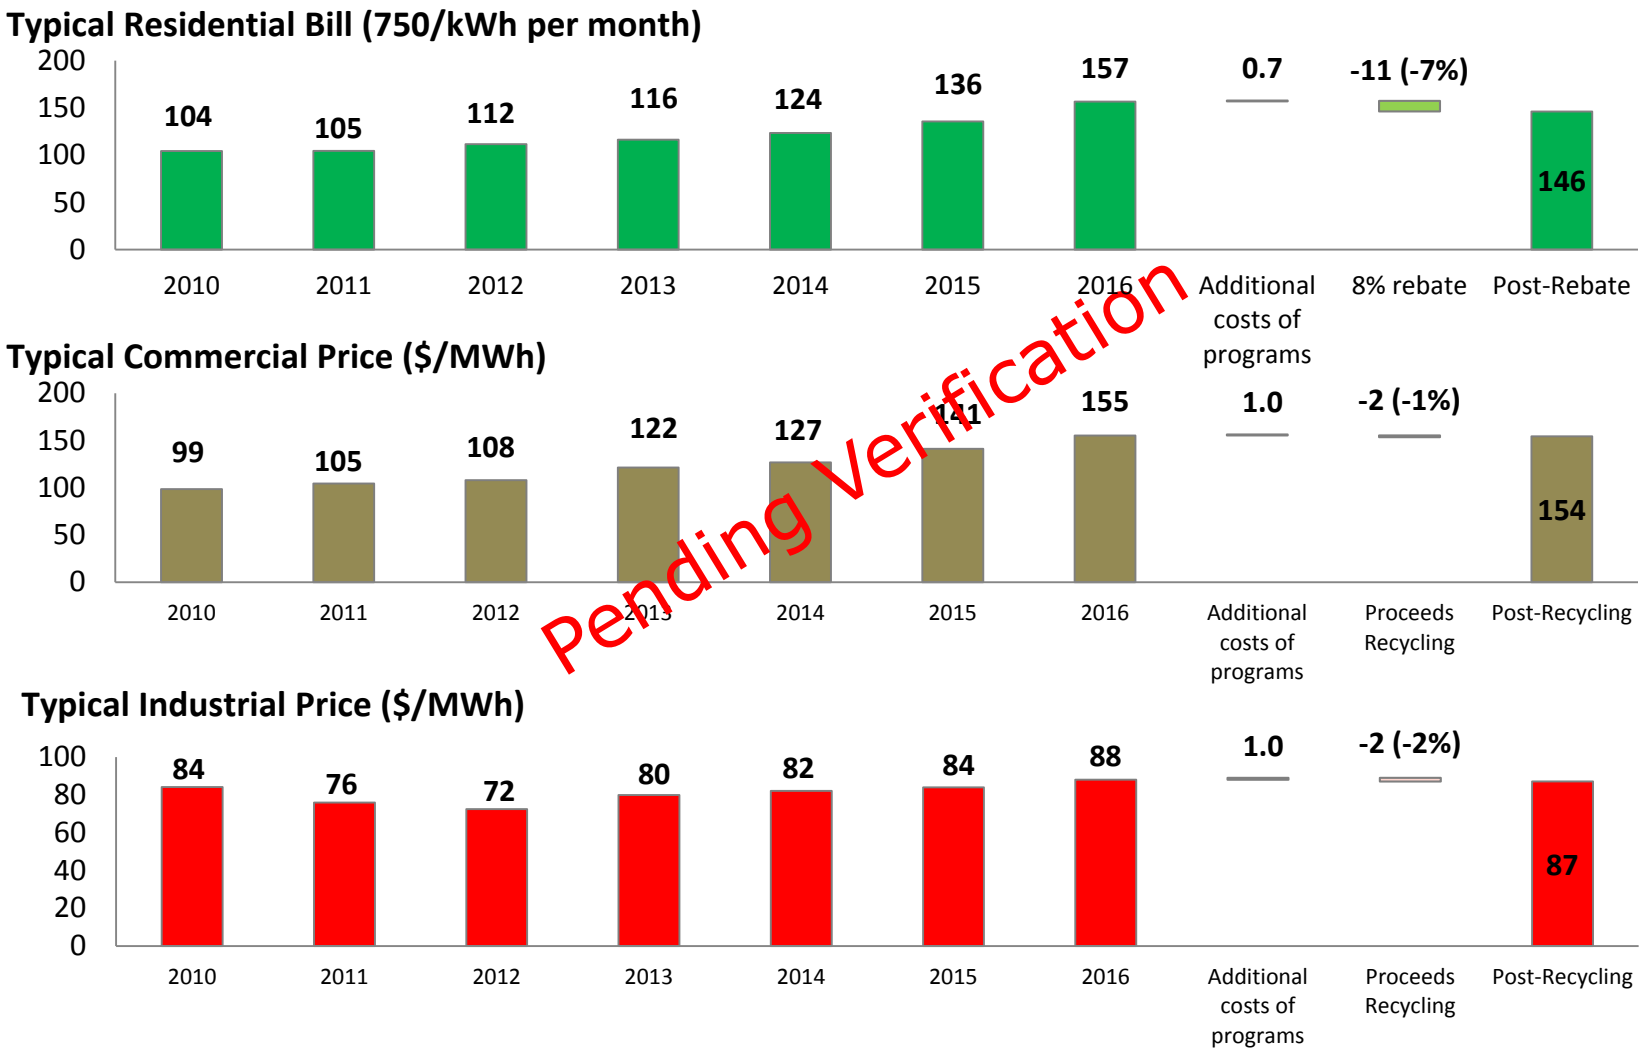
Projected Cost of 8% Rebate to Regulated Price Plan ($B)

Nominal dollars

Source: OPO (Aug 19 2016)



Bill Impacts by Sector



8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Amendments would also be required to O. Reg. 429/04 to expand ICI.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCo, including speeches/events.

- **Positioning:**
  - A fiscally prudent plan to benefit both businesses and residential ratepayers.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
  - More businesses than ever in the north will pay among the lowest electricity rates in North America.

- **Issues considerations:**
  - Net gain for all residential customers.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan, including consultation with LDCs, the OEB and IESO.

Appendix – Background on Rate-based Initiatives

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Typical non-RPP Class B consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	3.54	4.33	4.02	4.71	6.33	6.35
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Appendix A – ICI

Industrial Conservation Initiative

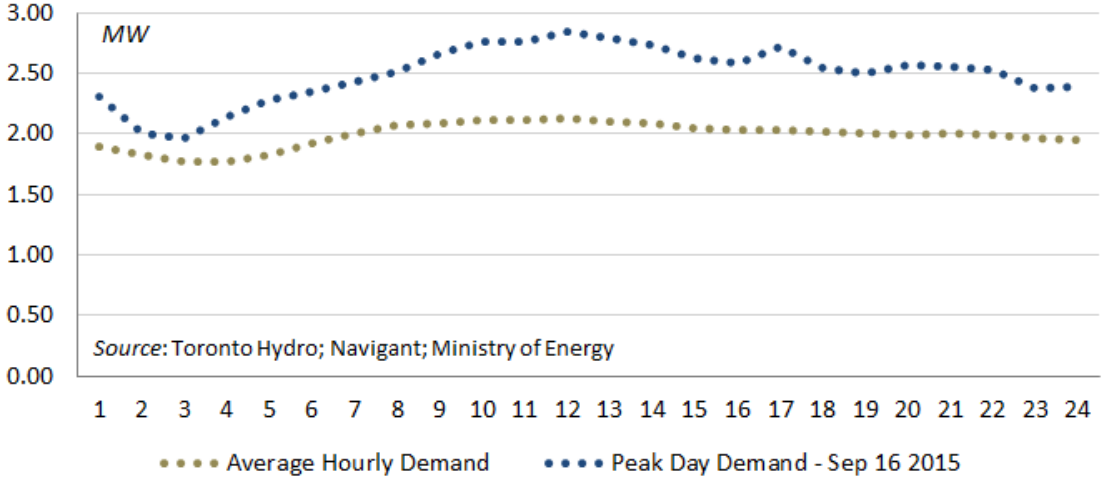
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

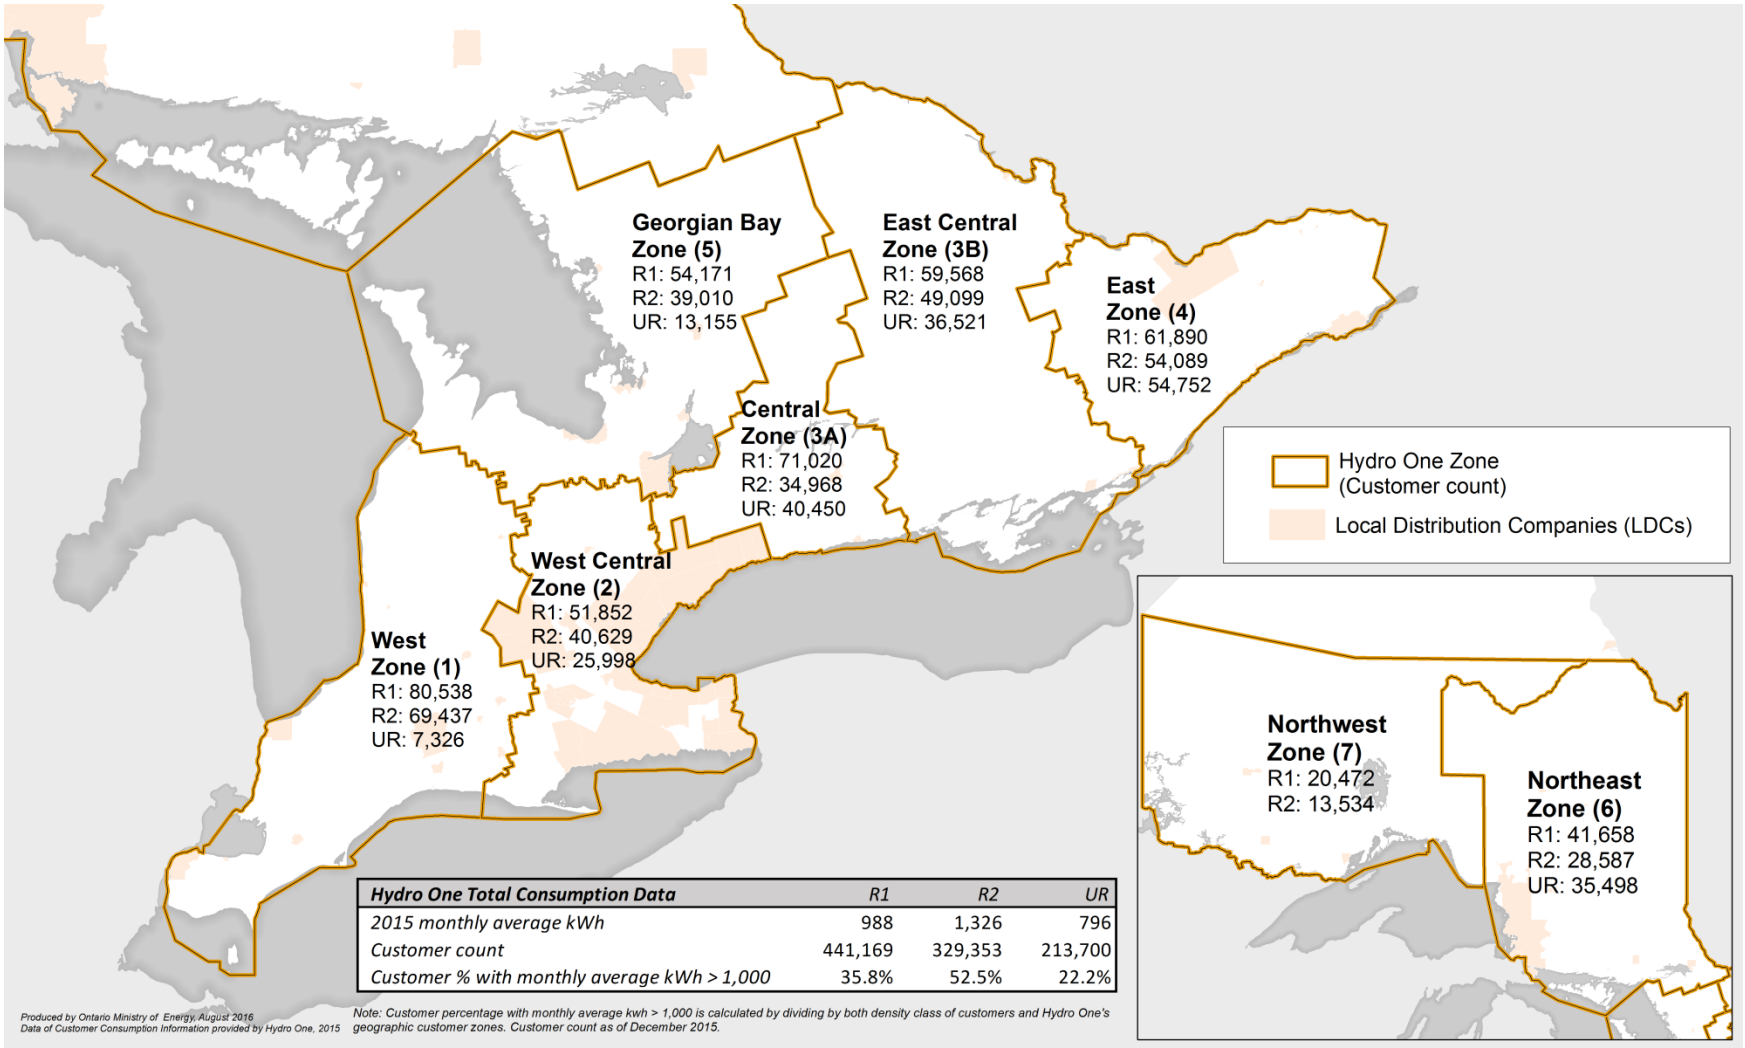
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix B – RRRP

Hydro One Consumers by Customers Class

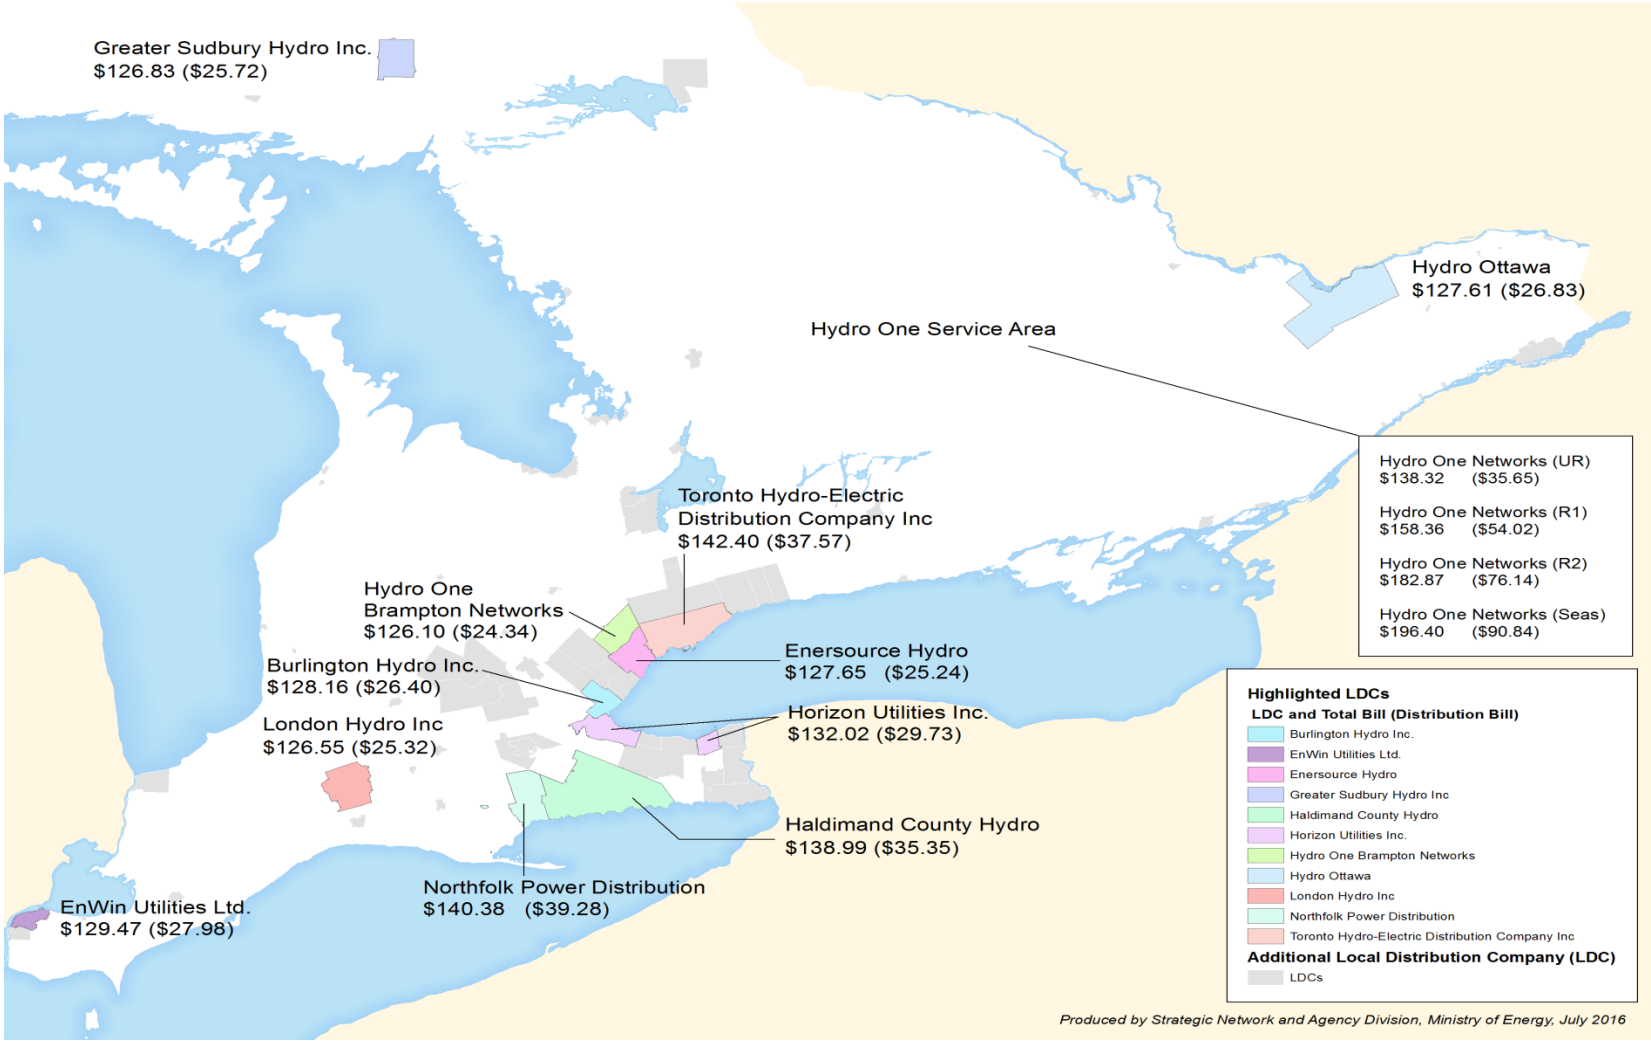


Hydro One Total Consumption Data	*R1*	*R2*	*UR*
2015 monthly average kWh	988	1,326	796
Customer count	441,169	329,353	213,700
Customer % with monthly average kWh > 1,000	35.8%	52.5%	22.2%

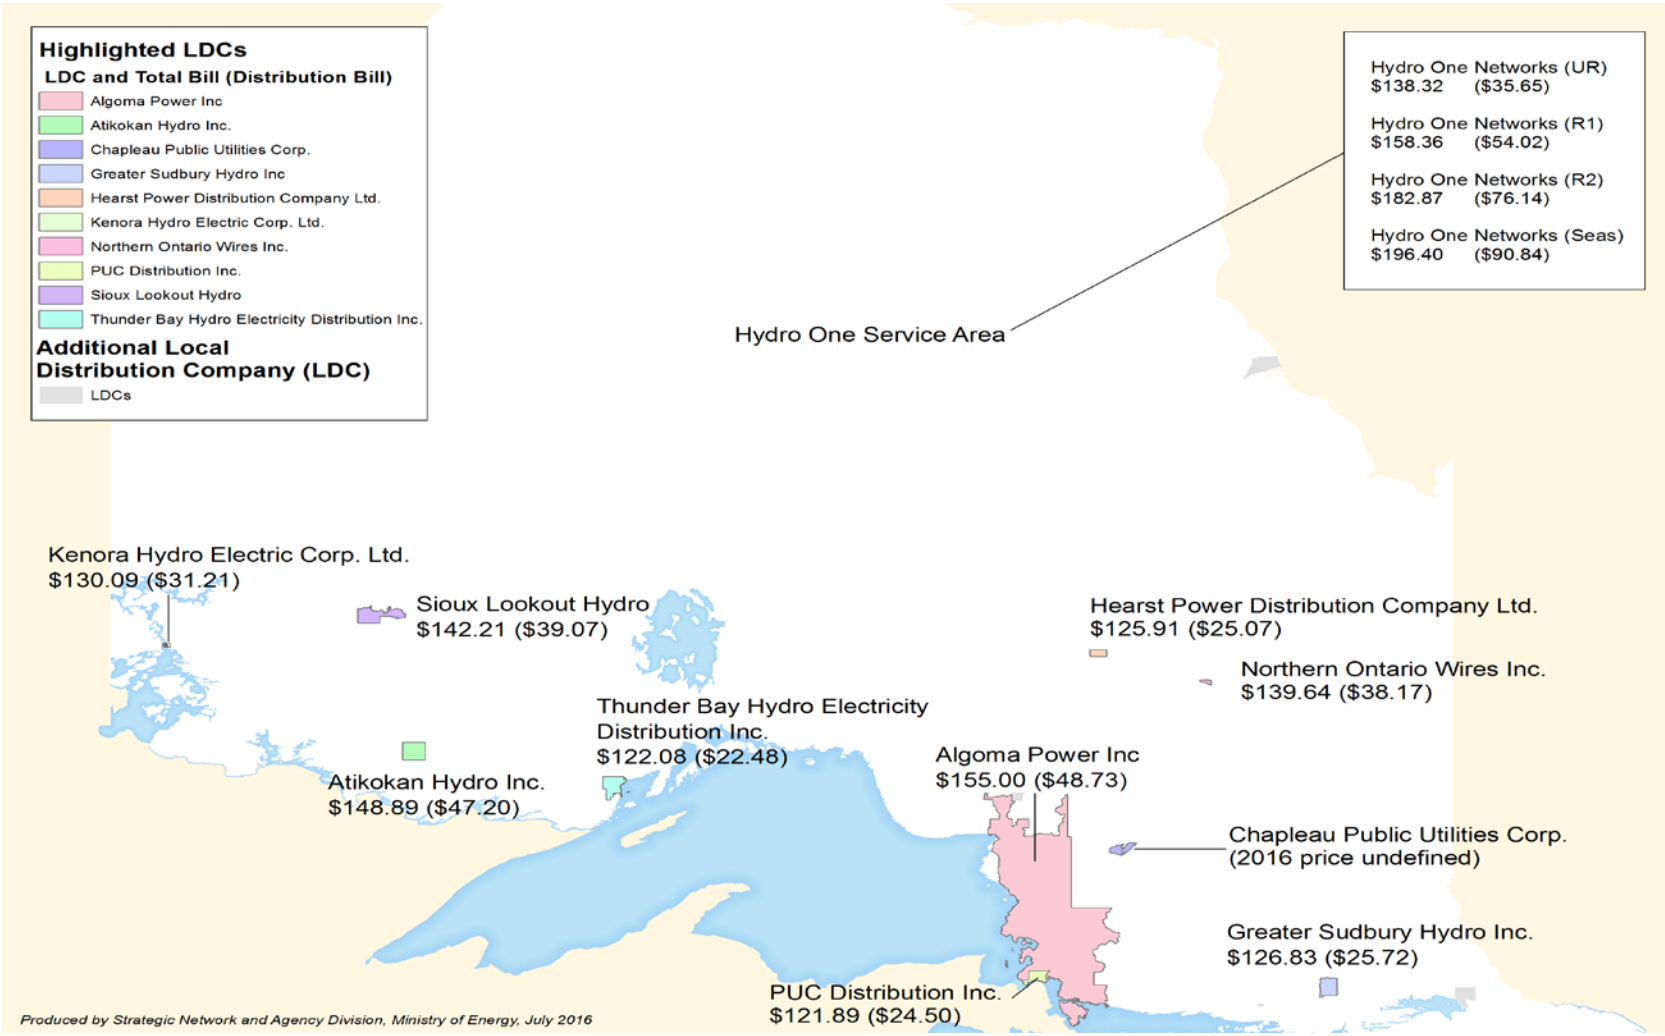
Produced by Ontario Ministry of Energy, August 2016
Data of Customer Consumption Information provided by Hydro One, 2015

Note: Customer percentage with monthly average kwh > 1,000 is calculated by dividing by both density class of customers and Hydro One's geographic customer zones. Customer count as of December 2015.

Selected Rate Comparison – Total Bill and Distribution Rate



Selected Rate Comparison – Total Bill and Distribution Rate



Summary of Options – Incremental costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Appendix C – HST

Additional Information – Public Service Bodies

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
- Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

Electricity Price Mitigation

Working Draft

August 23, 2016 [6pm] MOF edits Aug 24

Context

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

- As a result, electricity costs are increasing as the necessary investments are made to modernize the province's electricity infrastructure.

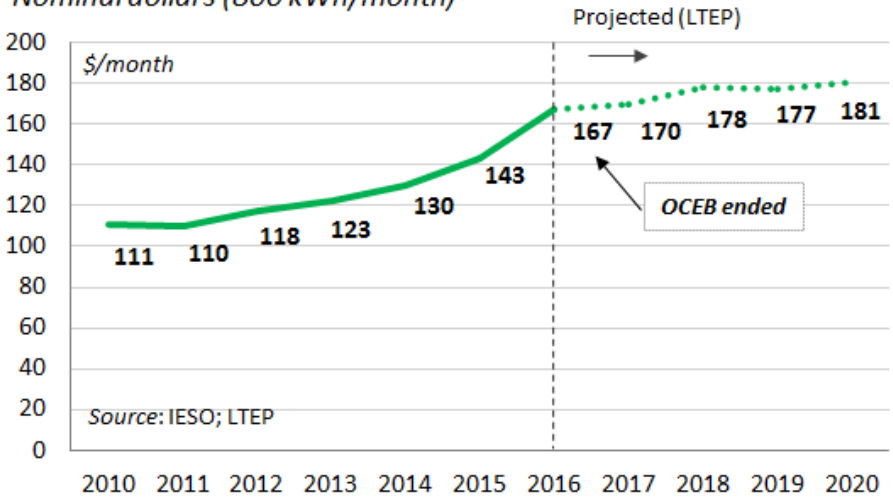
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as more renewable projects come online.

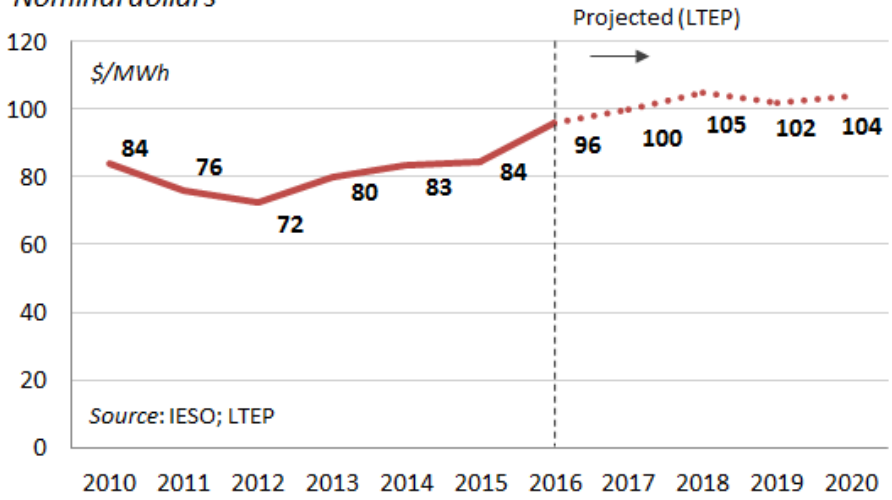
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
below 0.05 MW	0.05–3 MW	*above* 3 MW*
58 TWh (41.1%)	57 TWh (40.4%)	26 TWh (18.4%)

Source: OEB, Navigant, IESO

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

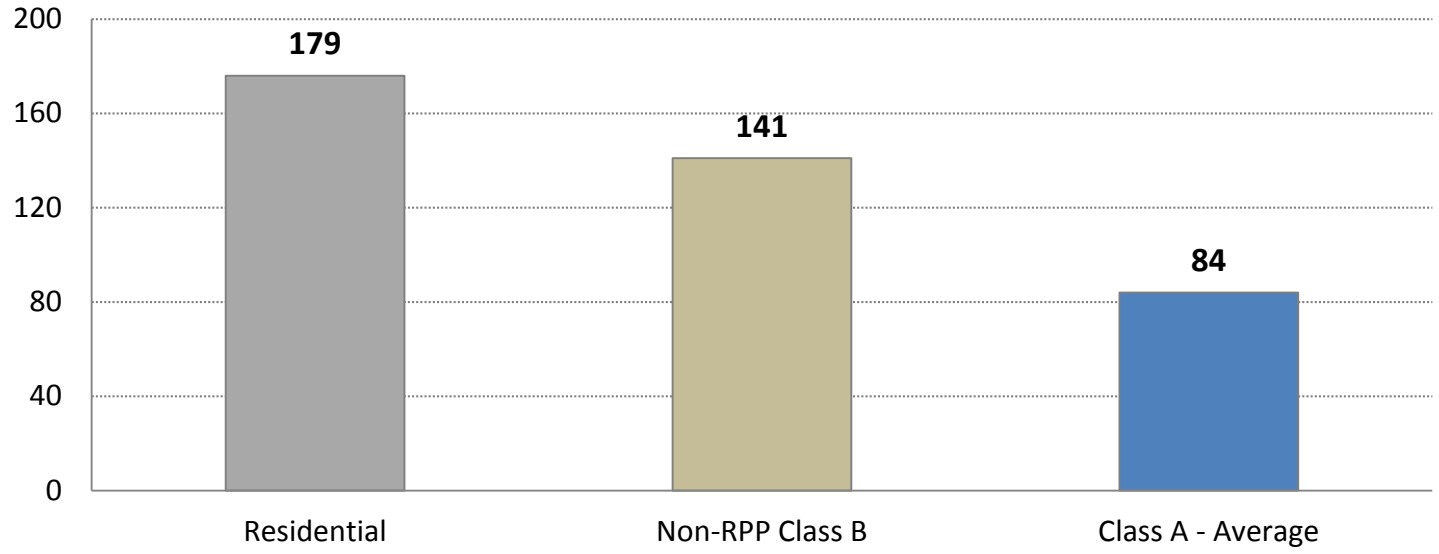
*Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data processing are currently eligible for Class A. All other 3-5MW consumers are Class B.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



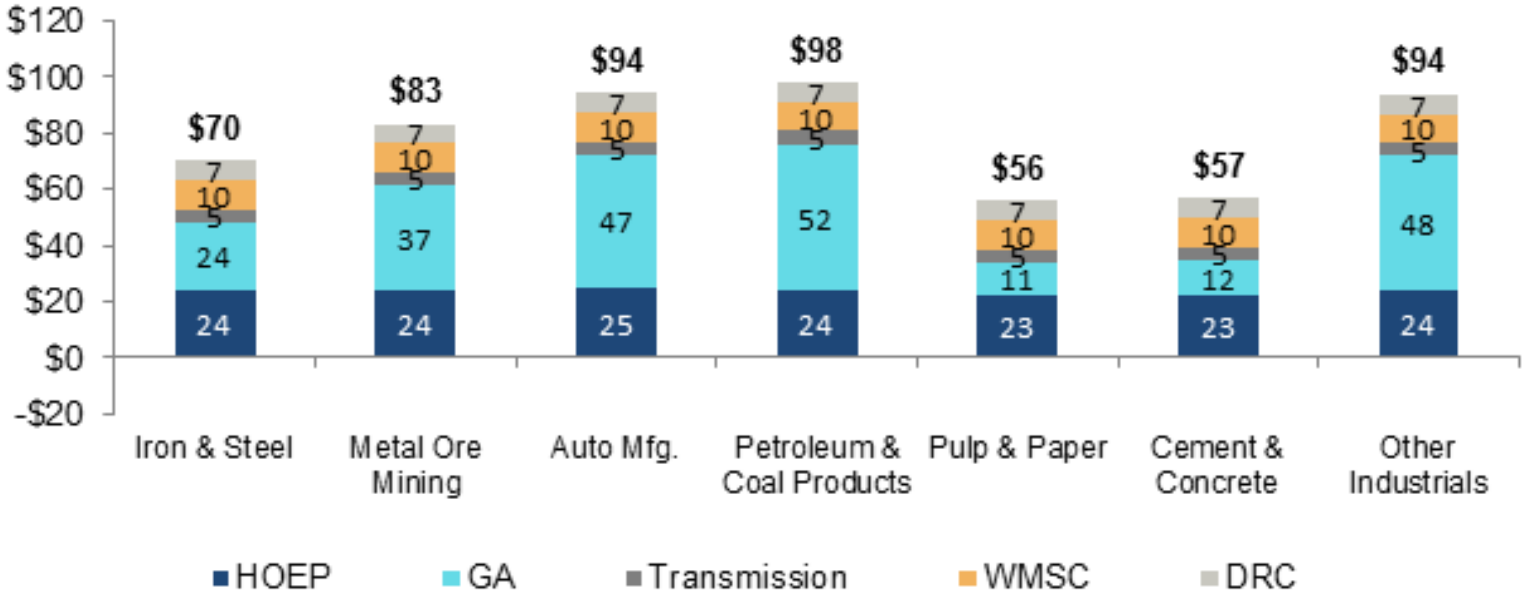
Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Industrial Electricity Prices by Sector

- While industrial consumers (Class A) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

Average all-in Class A, transmission-connected electricity prices by industrial sector (estimated), year-to-date September 2015

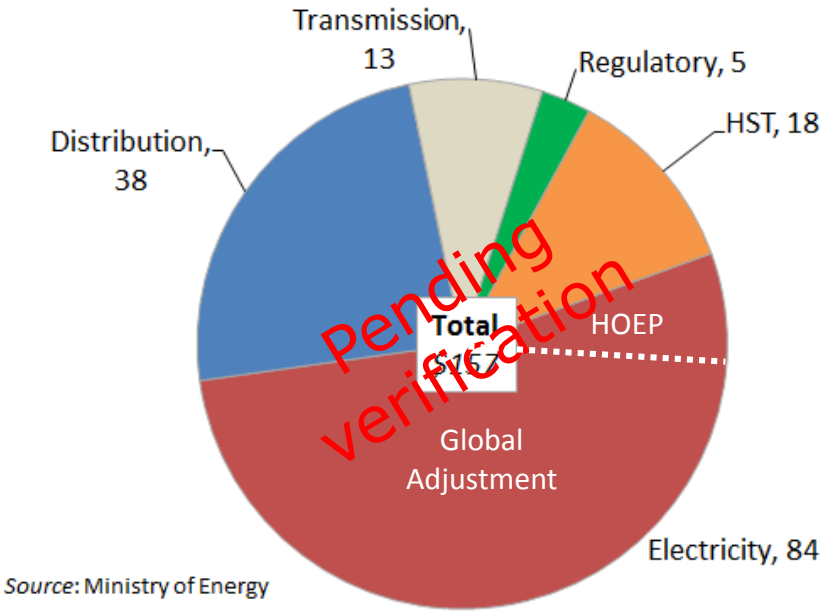


Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



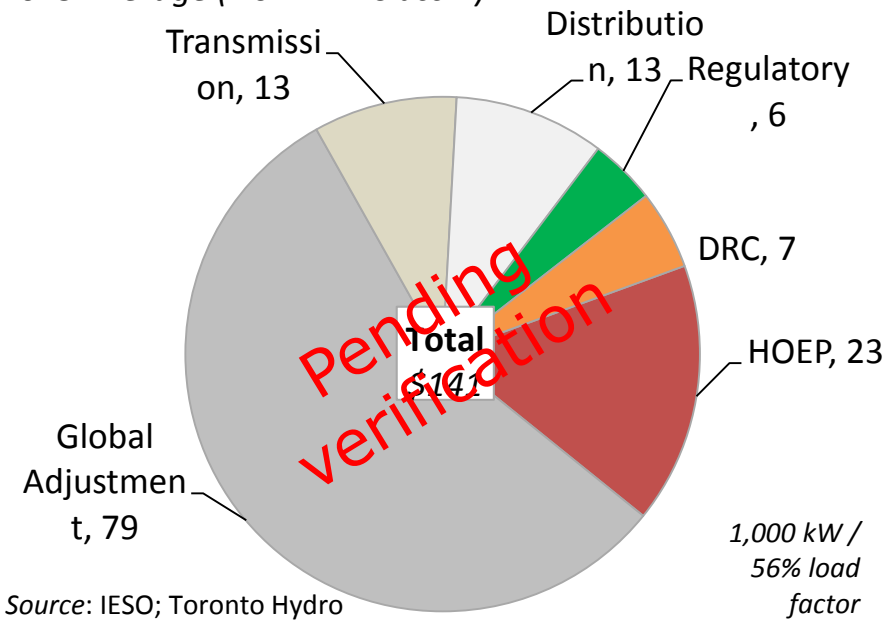
Source: Ministry of Energy

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA (i.e., their commodity rate is not blended or regulated).

Typical Commercial Price ($/MWh)*

2015 Average (Non-RPP Class B)



Source: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

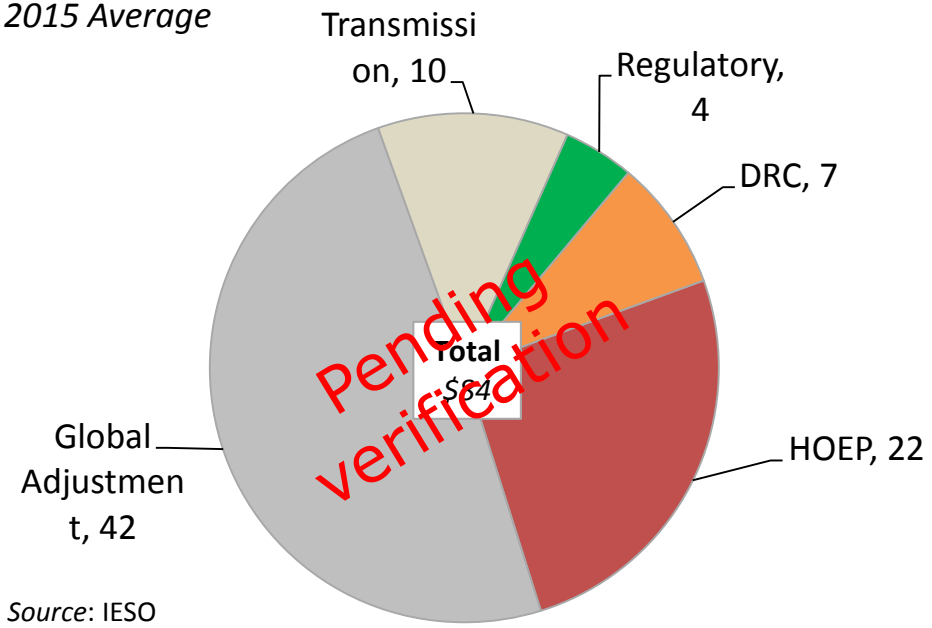
* Note: Most commercial consumers receive input tax credits for their HST.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

Typical Large Industrial Price ($/MWh)*

2015 Average



Source: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

* Note: Industrial consumers receive input tax credits for their HST.

Rate Mitigation Levers - Overview

- **Tax-based Lever** (Shifts costs from the rate-base to the tax base):
  - *8% rebate***:** providing an on-bill rebate equal to provincial portion of the HST to all consumers or specific classes of consumers.

- **Cap and Trade Proceeds Lever** (Could shift costs to either reduce impact on the rate base or the tax base):
  - *Modified proceeds recycling*: redirecting proceeds towards other consumer classes or funding other existing initiatives that help reduce GHG emissions.

- **Rate-based Levers** (Shifts costs within the rate-base, i.e. from one customer group to another):
  - *ICI expansion*: expanding eligibility for the ICI program to all consumers over 1 MW. Currently eligibility is limited to consumers over 5 MW and consumers in certain energy intensive sectors between 3-5 MW.
  - *RRRP Update*: increasing the benefit currently paid to rural customers in recognition of the higher cost of delivery.

- The following slides provide additional detail on the above levers.

Tax-based Lever

HST Background

- The HST is a value-added tax. Unlike a sales tax, under a value-added tax most businesses effectively do not pay tax on their inputs~~, including electricity, as~~ because they are able to claim input tax credits (ITCs).
  - Through ITCs, the HST removes embedded sales taxes paid by businesses.
  - Only HST registrants that have taxable sales can claim ITCs. Businesses selling HST-exempt goods or services (such as financial services) are not eligible to claim input tax credits.

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
  - PSBs consist of municipalities, universities, public colleges, school authorities, hospital authorities and charities and qualifying non-profit organizations.
  - ~~PSBs pay about $155 million for the provincial portion of the HST on electricity (2017-18) before PSB rebates. Charities and qualifying non-profits account for about $40 million that amount.~~
  - See Appendix for additional information.

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
  - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totalling about $445 million in tax relief.

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
  - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependant children under age 19.
  - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.

HST General Considerations

- Could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.
  - ~~PSBs could be carved out from the rebate program; however, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates. Savings would be less if there is a cap on the rebate~~

- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.

- The Province may also need to change the reporting for the cost of the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy. The energy component is reported as an offset of HST revenue.
  - Ministry program expenses could increase by as much as $445 million (TBC).

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

- To improve the province's ability to track impacts and program outcomes, subsequent legislative amendments to enable exchanges of data with LDCs could be considered.

Fiscal Plan Implications

Fiscal Planning Assumptions and Mitigation

- As a result of the 2016 Budget commitments related to offsetting the impact of cap and trade for commercial, industrial and residential consumers, funding was tracking against the Cap and Trade Proceeds in the fiscal plan as part of the Climate Change Action Plan – estimated at around $1.3 billion over four years (2017-2020).

- However, the fiscal plan currently does not include a provision that could cover the potential full cost of almost $6 billion over four years for these electricity mitigation options.

- In the absence of any offset strategies, the full cost of the rate mitigation options would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.
  - Other major risks include, for example, assumptions related to federal revenue (including Equalization), major expense risks identified by ministries, and potential funding for other initiatives under consideration.

- Consideration could be given to mitigating the fiscal impact of options under consideration, including:
  - Designing the rate mitigation initiative in a way that reduces the overall cost of the program, for example:
    - Phasing-in the rate mitigation to limit the fiscal impact over the near-term path to balance.
    - Introducing a cap that would limit the rate mitigation to a monthly level of consumption (e.g. similar to the 3000 kwh cap that was in effect for the OCEB).
  - Allocating a portion (or all) of the $1.3 billion in GGRA proceeds currently earmarked for electricity mitigation towards other existing initiatives that also reduce greenhouse gas emissions (i.e. identify more in-plan initiatives to be supported by GGRA proceeds – see next slide) – thereby providing an overall fiscal plan offset for the strategy.
  - Reviewing other electricity and energy relief currently available (e.g. personal income tax credits).
  - PSBs could be carved out from the rebate program – Option 1 described later in the deck. However, it would be difficult for LDCs to administer without information from the Canada Revenue Agency identifying entities that claim PSB rebates. Savings would be less if there is a cap on the rebate.

- In addition, as part of the upcoming planning processes leading to Fall Statement and the 2017 Document, the government could review and consider other actions and tools to help mitigate the overall impact on the fiscal plan.

Details on CCAP Fiscal Offset

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3B over 4 years to greenhouse gas reduction initiatives, funded by Cap and Trade proceeds.

- The CCAP includes up to $1.3B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas by 2020.

$ Billions	2017-18	2018-19	2019-20	2020-21	Total
Total Committed in CCAP	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**6.0 – 8.3**
Electricity Price Mitigation	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 1.3*

- Ontario's Climate *Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail
  - Hamilton LRT
  - Hurontario LRT
  - Energy efficiency in schools

Cap and Trade Proceeds Lever

2016 Budget Commitment

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, The Climate Change Action Plan (CCAP), committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020)
  - [placeholder for proceeds breakdown by customer class].

- If a rebate equivalent to the 8% provincial portion of HST is provided for all or some consumers, the resulting savings could be significantly greater than the 2016 Budget commitment and, therefore, the required GGRA proceeds may be reduced further.
  - These savings could be used for additional rate mitigation by further offsetting the cost of investments in renewables and conservation or redirected to other emissions reduction initiatives, as discussed on the next slide.

Rate-Based Levers

ICI Expansion

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

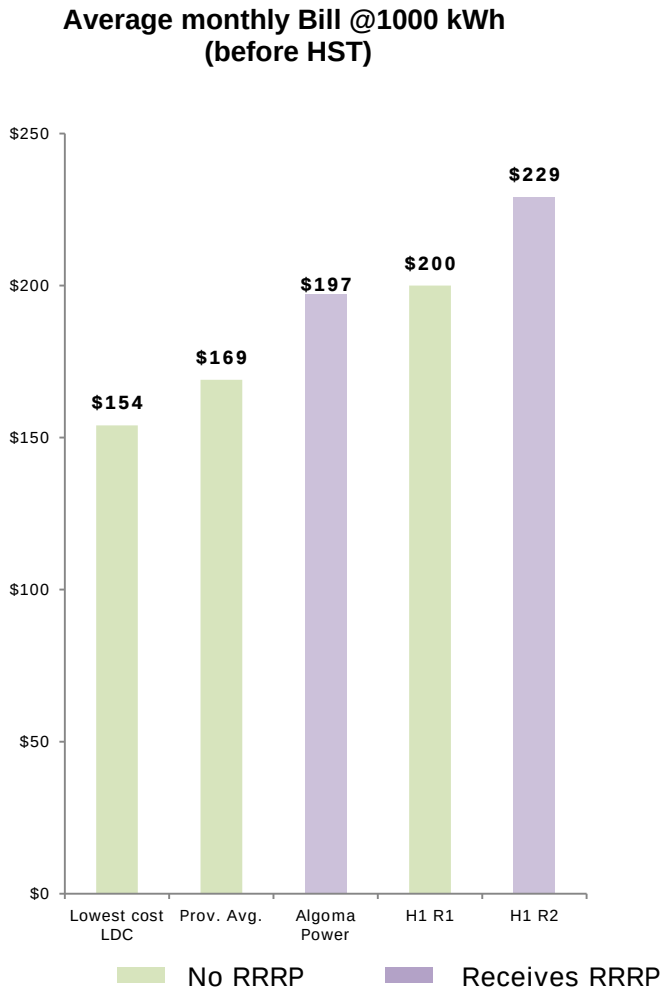
ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - 'Short-term' refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - 'Long-term' is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.
- The above bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh.
- Newly eligible consumers in the program would mostly fall into the small industrial and commercial category, including: automotive supply chain companies, condominiums, greenhouses and others.

Rural or Remote Rate Protection (RRRP) Update

- RRRP is a subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers.
  - There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.
- There may be opportunity to evaluate current levels of support to enhance rate assistance available to R2 customers.
  - An additional $28.53/month would equalize R2 bills with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 RRRP to $235M with a monthly impact on an average residential consumer of $0.57.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.



Rate Mitigation Options

Rate Mitigation Options

- Three options have been identified that could provide relief to various consumer classes. These options are outlined below.

1. 8% Rebate for All Consumers and Eliminate Proceeds Recycling

- Provide an 8% rebate to all electricity consumers (e.g.,industrial, commercial, small business, farms and residential).
- Eliminate planned GGRA proceeds recycling to electricity consumers.

2. 8% Rebate for RPP Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to OCEB, with a 3,000 kWh cap.
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

3. 8% Rebate for RPP Consumers + ICI Expansion and Redirected Proceeds Recycling

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to the OCEB, with a 3,000 kWh cap.
- Provide support to small industrial and commercial consumers by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

- For each of the above options, a phased-in approach could be pursued to reduce the fiscal impact in the near term. See slide 25 for more details.

Consumer Impact Summary (data to be confirmed)

Option	Average Annual Fiscal Impact	Average Annual GGRA Proceeds Impact	Regulated Price Plan (Residential)		Class B (Commercial)	Class A (Industrial)	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*		*Existing*	*New*
8% rebate to all consumers and Eliminate Proceeds Recycling	$1.8 billion	-$330 million (-$1.32 billion over first compliance period)	-$11/ month (-7%)	-$18/ Month (-8%)	-$12/ MWh (-8%)	-$7/ MWh (-8%)	
8% rebate to RPP consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling	$1.0 billion	-$60 million (-$0.24 billion over the first compliance period)	-$9.7/ month (-6%)	-$45/ Month (-20%)	-$1/MWh (-1%)	-$0.9/ MWh (-1%)	Up to -$52/ MWh (-33%)
8% rebate to RPP consumers + ICI Expansion and Redirected Proceeds Recycling	$1.0 billion	-$125 million (-$0.50 billion over first compliance period)	-$10.3/ month (-6.5%)	-$17/ month (-8%)	-$1/MWh (-1%)	-$0.9/ MWh (-1%)	Up to -$52/ MWh (-33%)

Pending verification

Consumer Impact Examples

Consumer Type	Current Bill	Option 1	Option 2	Option 3
Typical Residential (750 kWh/month)	$157	$146	$147	$146
Rural (R2 – 3,000 kWh/month)				
Small Condo (xx MWh/month				
Auto Supply Chain (2 MW/xx MWh/month)				
Automotive Assembly Plant (20 MW/xx MWh/Month)				

Placeholder

Phased-in Approach

- A phased-in approach could be pursued. The chart below shows the fiscal and ratepayer impacts of a rebate that starts at 2%, increasing by 2% per year up to 8%.

Consumer Type	Fiscal Impact	Bill/Unit Cost Impact – Year 1	Bill/Unit Cost Impact – Year 2	Bill/Unit Cost Impact – Year 3	Bill/Unit Cost Impact – Year 4
Option 1	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					
Option 2	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					
Option 3	TBD				
Residential ($/month)					
Commercial ($/MWh)					
Industrial ($/MWh)					

Placeholder

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

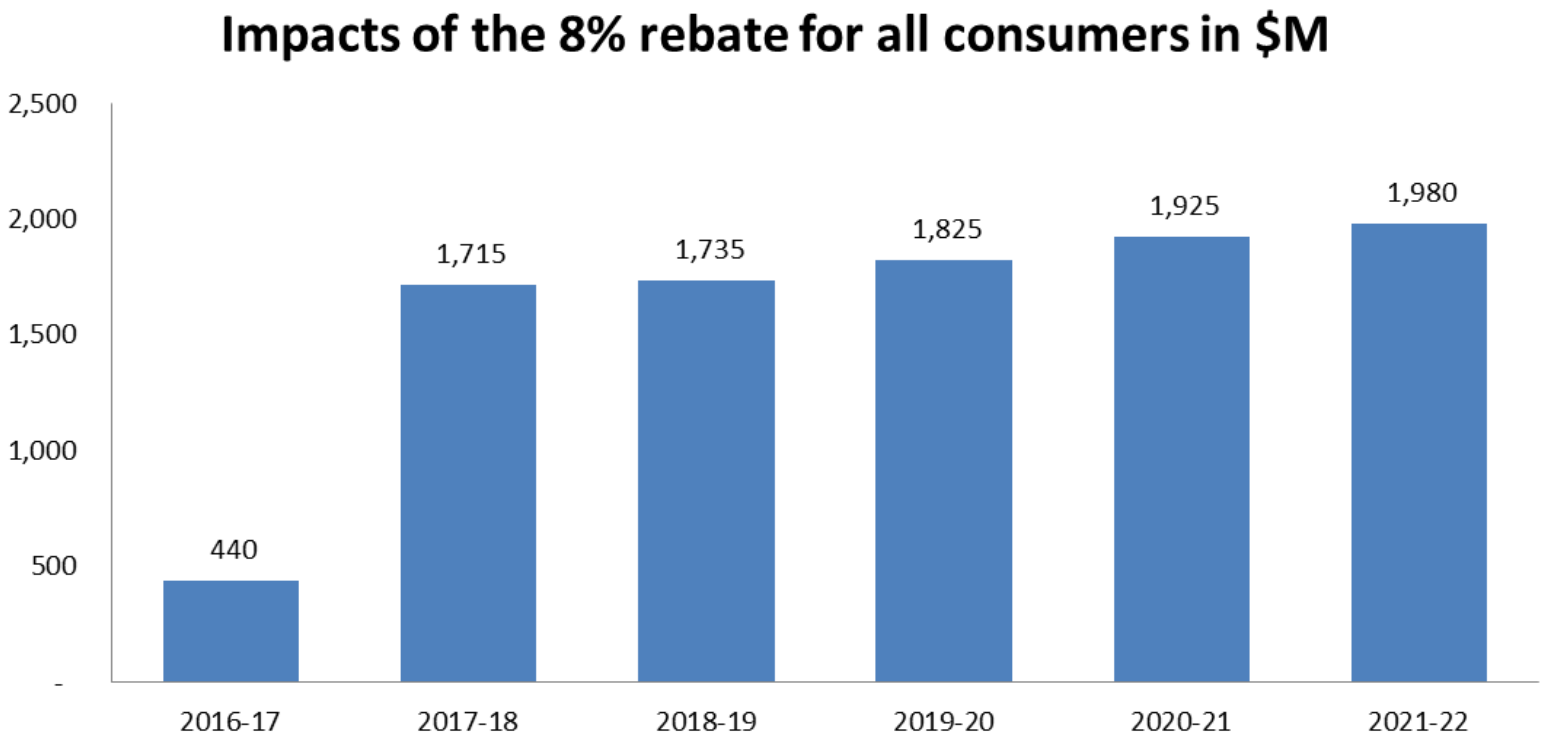
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

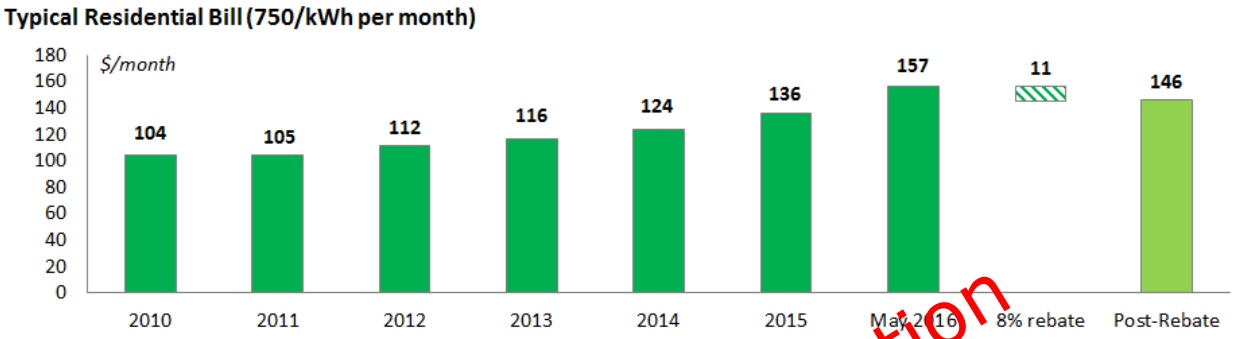
8% Rebate for All Consumers – Projected Cost

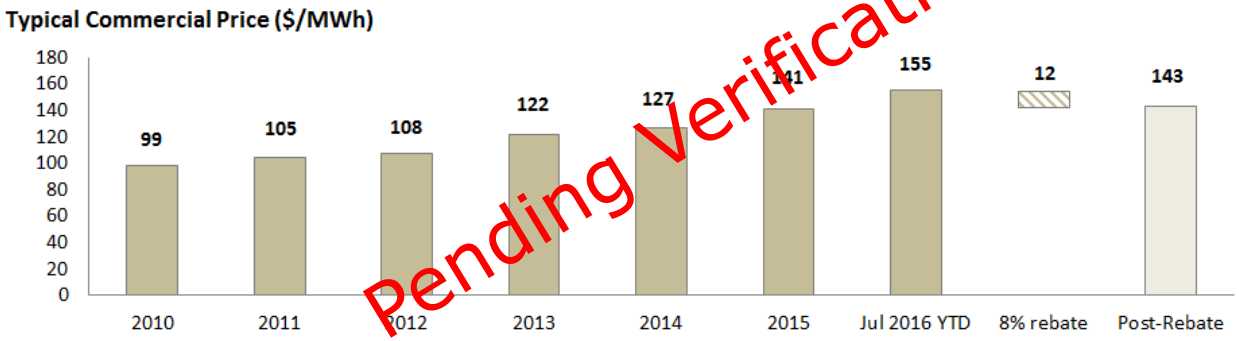
- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.

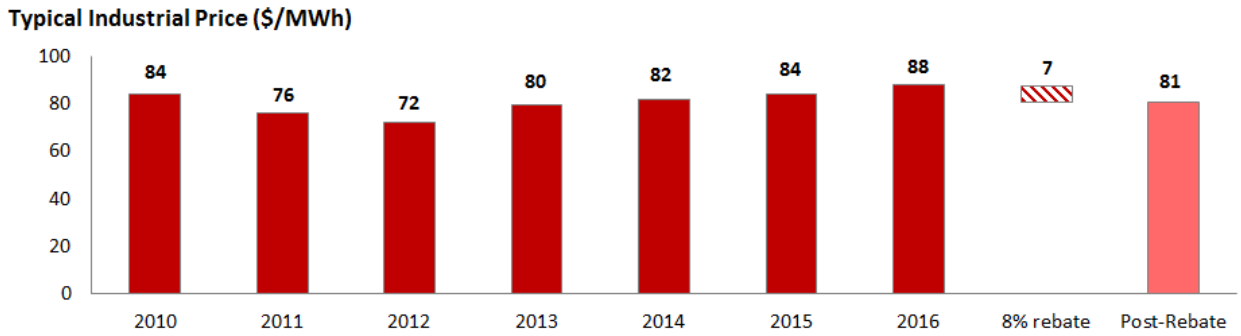


Bill Impacts by Sector

- The charts on the right show the cumulative increase in bills since 2010, the year that the HST was added to electricity bills, and the impact of the proposed rebate.
- For residential consumers, a $11/month rebate (7% reduction to after tax bill) is expected based on current prices which would increase over time. Residential bills, post rebate, would remain above 2015 levels, however.
- Commercial consumers would face a similar situation. They would receive a $12/MWh rebate (8% reduction).
- A $7/MWh rebate for industrial consumers would bring all-in prices below 2010 levels (8% reduction).







Pending Verification

8% Rebate for All Consumers – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)

8% Rebate for All Consumers – Considerations Cont'd

- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers, potentially eliminating $1.3 billion in required GGRA proceeds over the first compliance period.

- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

- Additionally, commercial and industrial consumers would continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government's ability to achieve fiscal balance.

- Consideration could be given to putting a cap in place for RPP customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

8% Rebate for All Consumers – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).

- **Positioning:**
  - We are committed to keeping electricity in Ontario clean, reliable and affordable.
  - This rebate is fair for all customers, and does the most for homeowners with higher costs.
  - Large businesses in the north are paying among the lowest rates in North America.

- **Issues considerations:**
  - Industrial rates, especially in northern Ontario, would be even more competitive.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity (research shows that OCEB did not appreciably impact public opinion).
  - Media/public interest in the impact to achieving fiscal balance.
  - Capped option would draw comparisons with OCEB (10% rebate).

Option 2 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh per month Cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.

3. RRRP Update
   - Rural consumers would see a benefit of $27.96, while all other consumers would see a cost of $0.57.

4. Redirected proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion and RRRP update would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes most residential, small businesses and small farms.
- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.
- While non-RPP consumers would not see a benefit from the 8% provincial ~~HST~~ rebate under this option, all industrial and commercial consumers would receive proceeds recycling through the GGRA.
  - Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.
- Additionally, support would be provided to small industrial and commercial consumers through the ICI expansion, while rural customers would see a significant benefit through updates to the RRRP program.

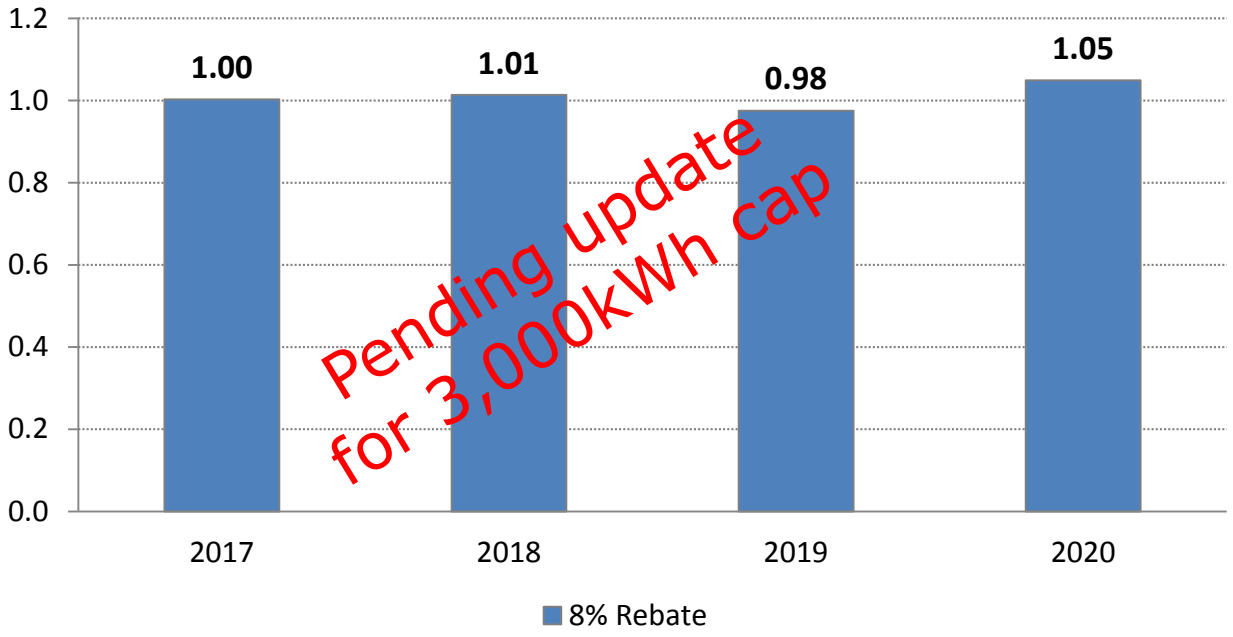
8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers with a 3,000 kWh/mo cap would be approximately $0.x billion between 2017 and 2020.

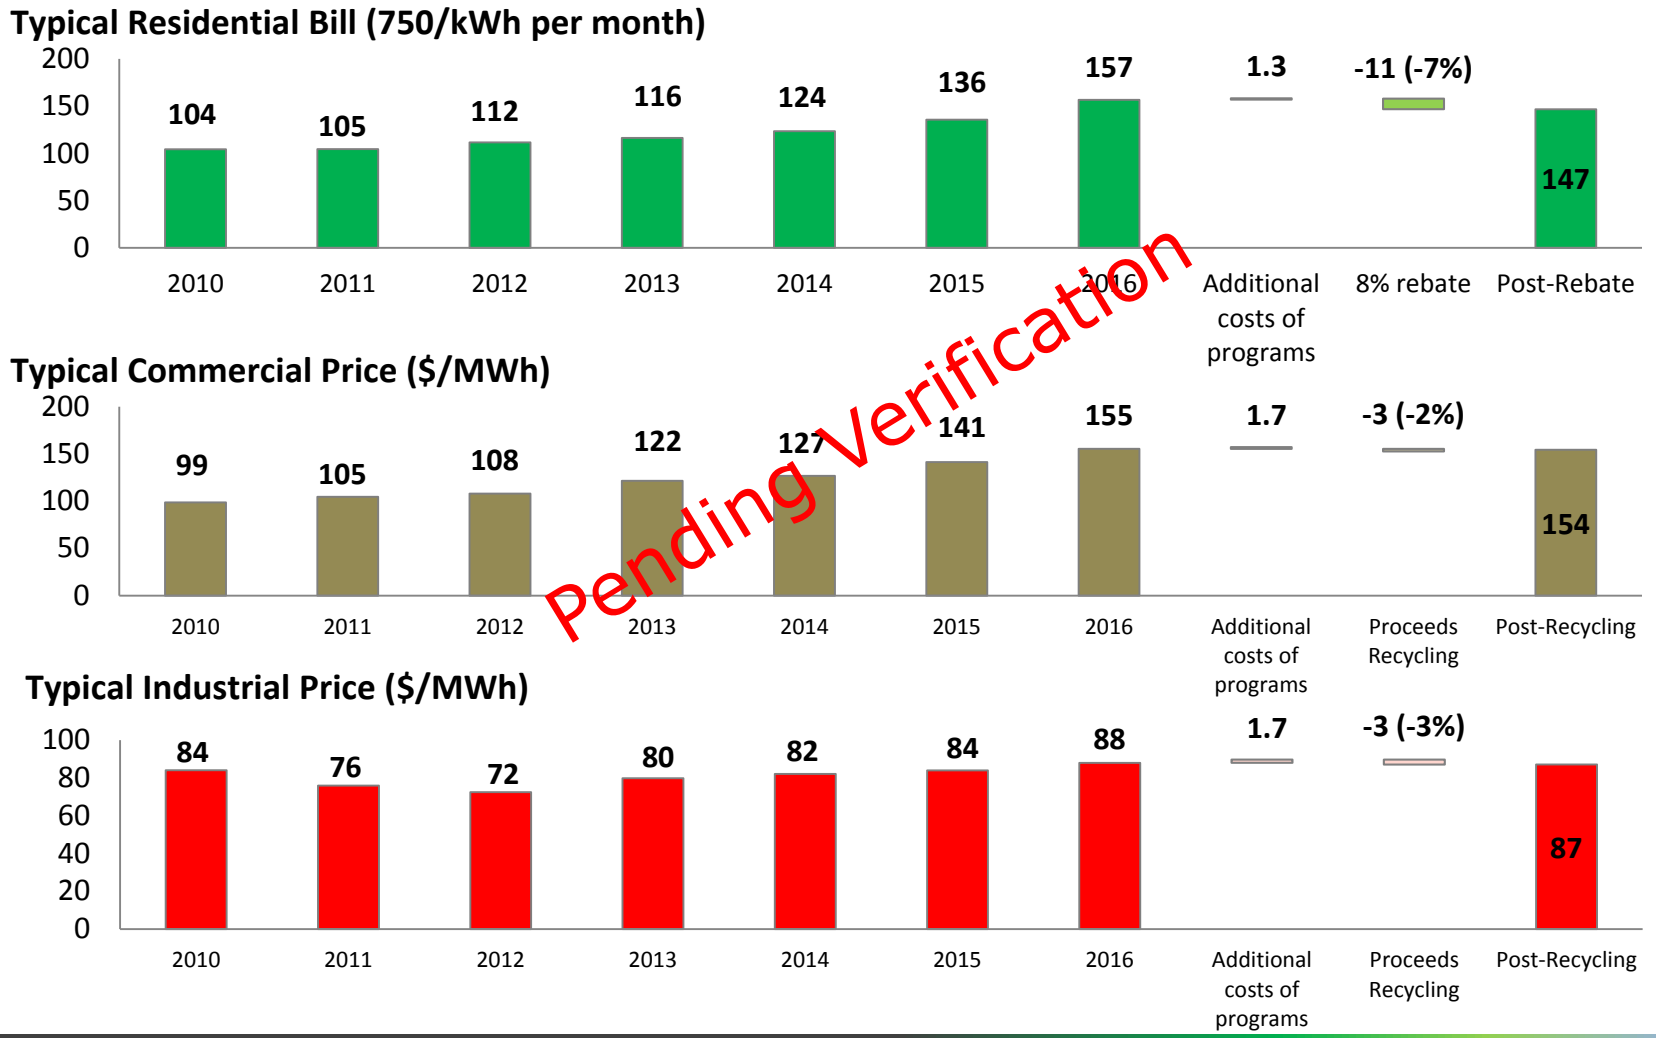
Projected Cost of 8% Rebate to Regulated Price Plan ($B)

Nominal dollars

Source: OPO (Aug 19 2016)



Bill Impacts by Sector



8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations

- New legislation would be required. Legislation would ~~be modelled after~~ closely mirror the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDC's have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Amendments would also be required to various regulations to expand ICI and RRRP.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCo, OEB low-income table, AMO.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
  - More businesses than ever in the north will pay among the lowest electricity rates in North America.

- **Issues considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Option 3 – 8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh per month Cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.
     - Those who decide to opt-in would not see a benefit until July 2018.

3. Modified proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes most residential, small businesses and small farms.
- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.

- Amendments would also be required to O. Reg. 429/04 to expand ICI.

8% Rebate for Regulated Price Plan Consumers + ICI Expansion and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCo, including speeches/events.

- **Positioning:**
  - A fiscally prudent plan to benefit both businesses and residential ratepayers.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
  - More businesses than ever in the north will pay among the lowest electricity rates in North America.

- **Issues considerations:**
  - Net gain for all residential customers.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan, including consultation with LDCs, the OEB and IESO.

Appendix – Background on Rate-based Initiatives

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Total	***3.55***	***4.07***	***3.85***	***4.46***	***5.68***	***6.55***

Cost Shift Impacts - Commercial Bill

Typical non-RPP Class B consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	3.54	4.33	4.02	4.71	6.33	6.35
RRRP	1.20	1.10	1.12	1.23	1.24	1.25

Note

Negative value indicates a benefit; positive value denotes an incremental charge

Appendix A – ICI

Industrial Conservation Initiative

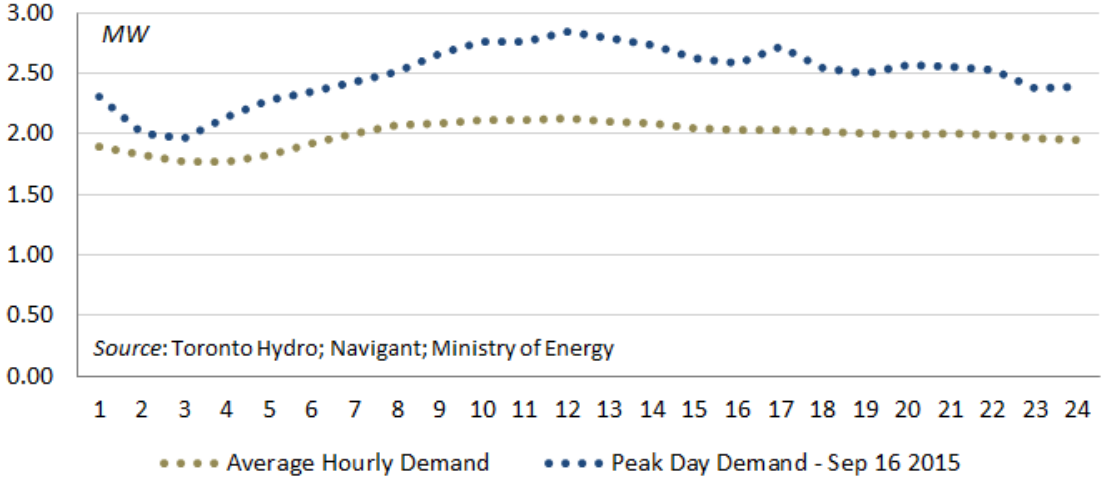
- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015



Illustrative Bill Savings, 2-3 MW Consumer

Manufacturer, NAICS code 32

	Status Quo	*No Price Response*	*Short Term Response*	*Long Term Response*
	Class B	**Class A**	**Class A**	**Class A**
GA	75.26	58.06	43.55	29.03
Total bill	**126.28**	**109.09**	**94.58**	**80.06**
Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

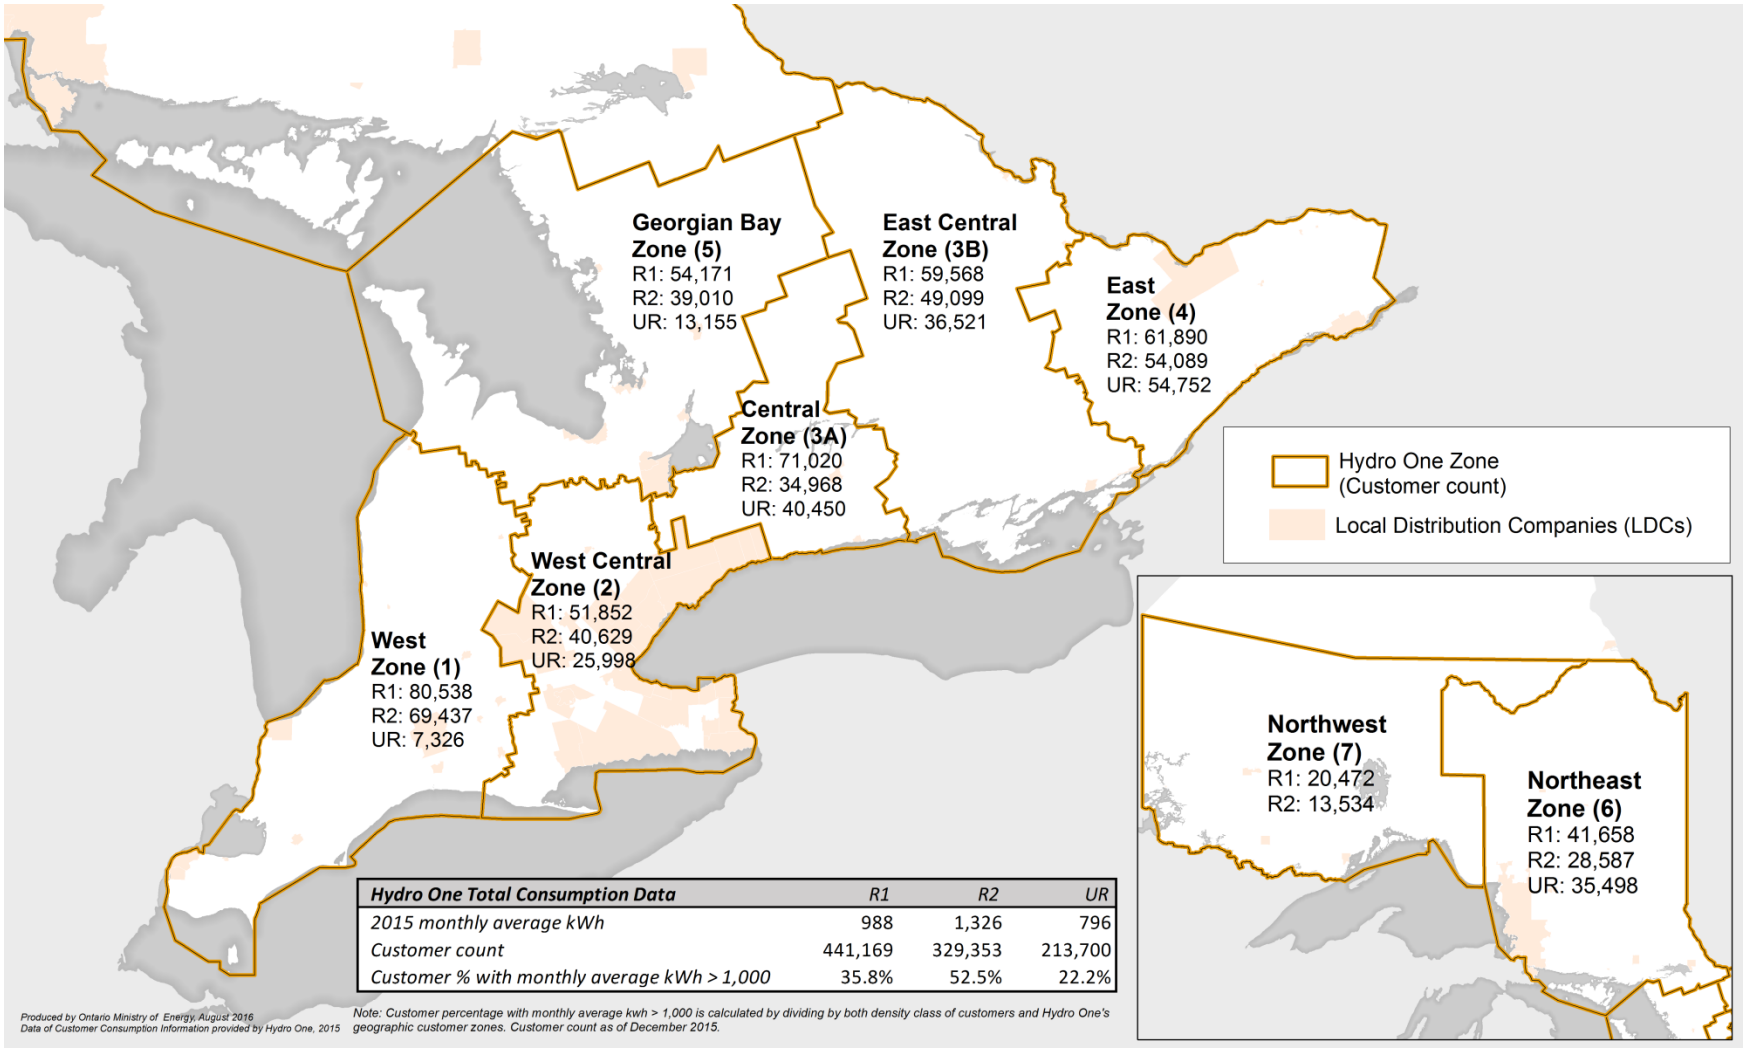
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix B – RRRP

Hydro One Consumers by Customers Class

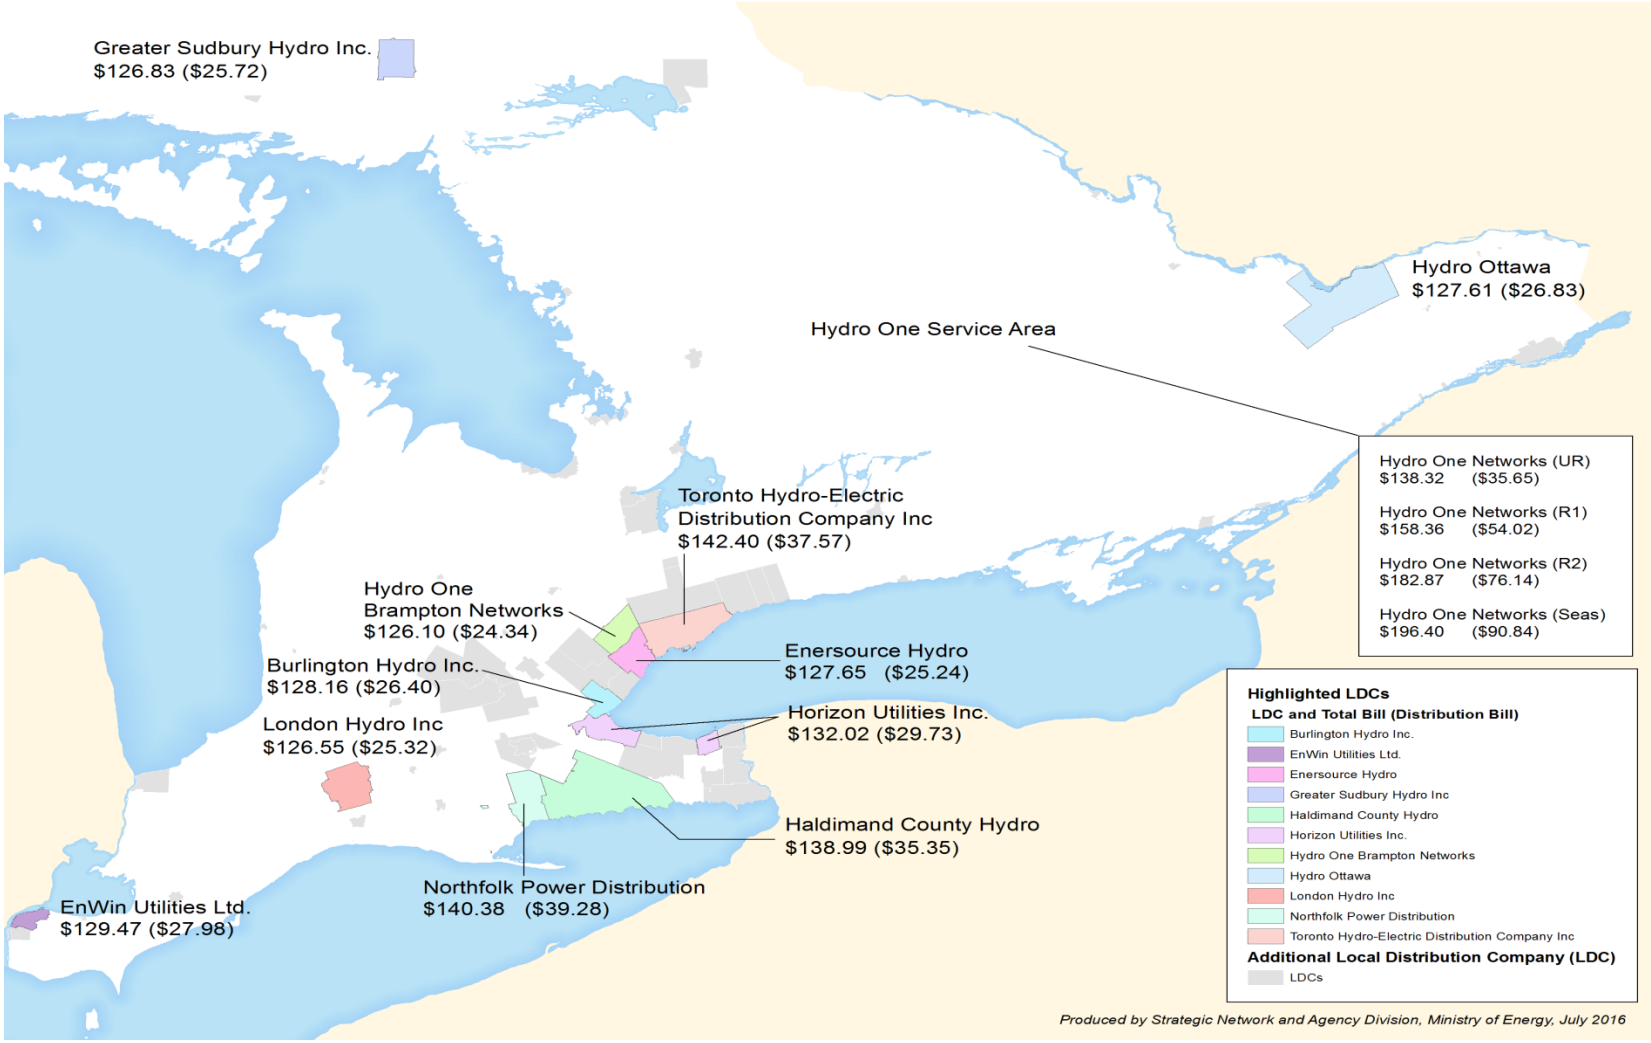


Hydro One Total Consumption Data	*R1*	*R2*	*UR*
2015 monthly average kWh	988	1,326	796
Customer count	441,169	329,353	213,700
Customer % with monthly average kWh > 1,000	35.8%	52.5%	22.2%

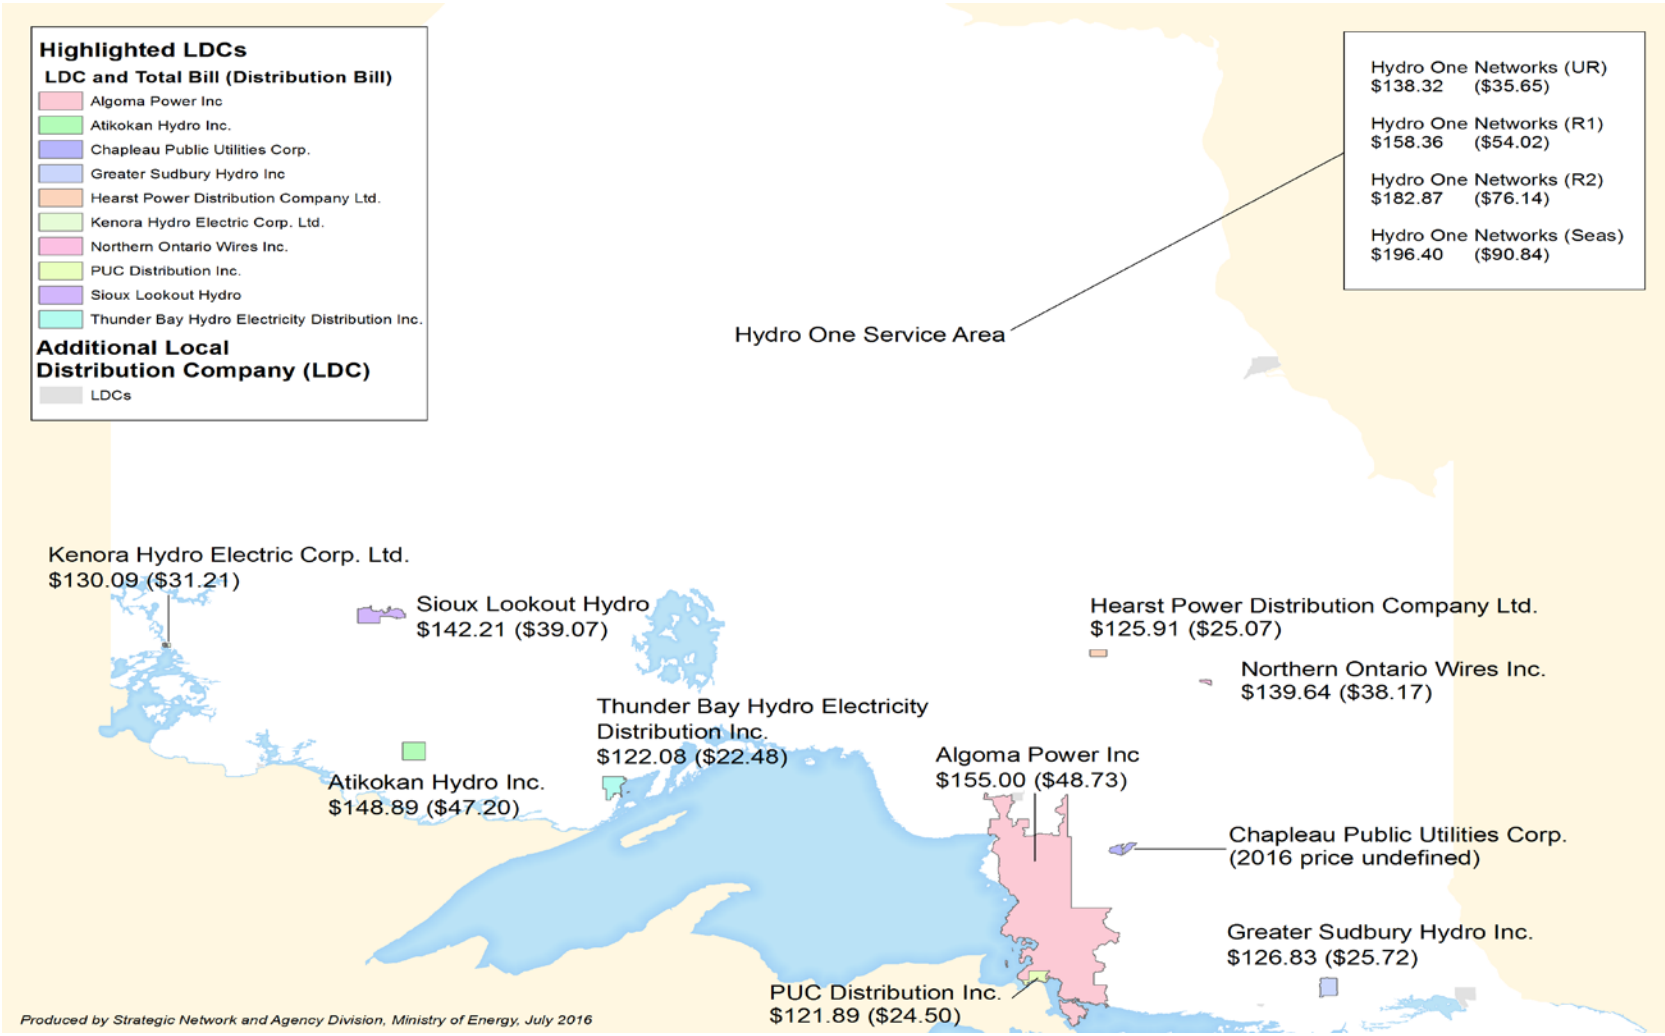
Produced by Ontario Ministry of Energy, August 2016
Data of Customer Consumption Information provided by Hydro One, 2015

Note: Customer percentage with monthly average kwh > 1,000 is calculated by dividing by both density class of customers and Hydro One's geographic customer zones. Customer count as of December 2015.

Selected Rate Comparison – Total Bill and Distribution Rate



Selected Rate Comparison – Total Bill and Distribution Rate



Summary of Options – Incremental costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Appendix C – HST

Additional Information – Public Service Bodies

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
- Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

Ontario

Electricity Price Mitigation

Working Draft

August 24, 2016

Context

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.

- As a result, electricity costs are increasing as the necessary investments are made to modernize the province's electricity infrastructure.

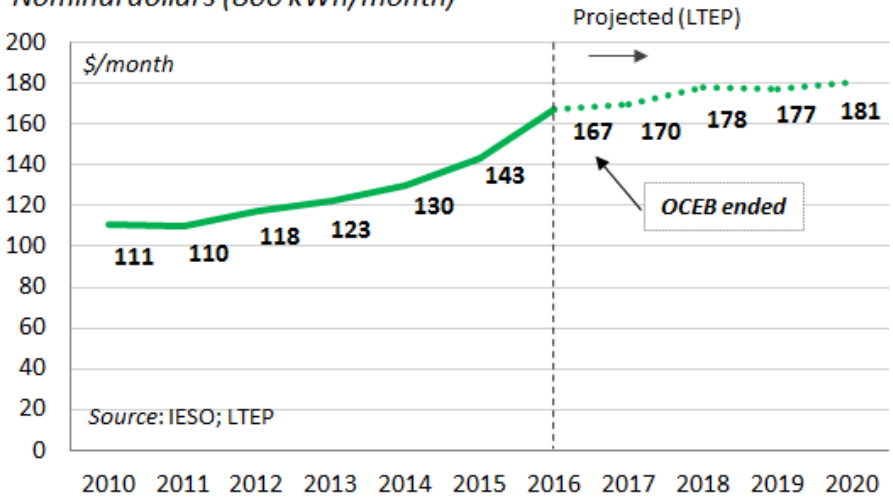
- The Ministry of Energy (ENERGY) and Ministry of Finance (MOF) have been asked to explore rate mitigation options, including offsetting the provincial portion of the Harmonized Sales Tax (HST).

Typical Residential and Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short term as more renewable projects come online.

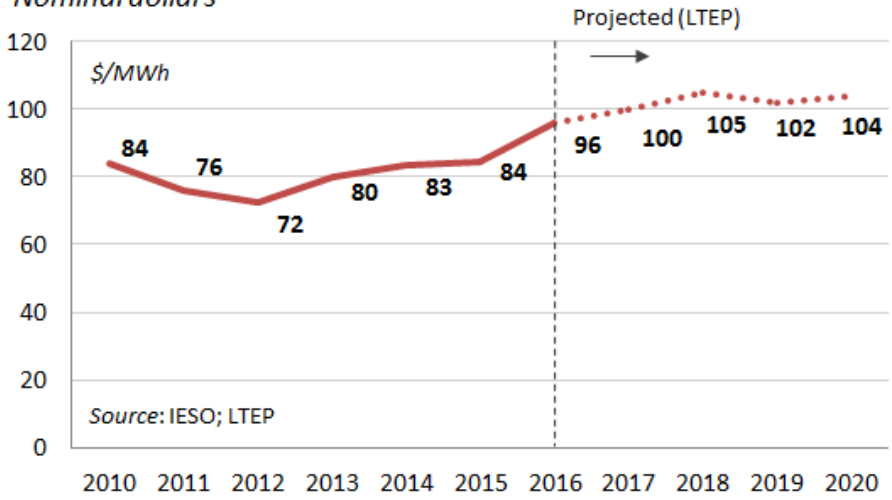
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars



Current Consumer Classes

Regulated Price Plan	Class B	Class A
below 0.05 MW	0.05–3 MW	*above* 3 MW*
58 TWh (41.1%)	57 TWh (40.4%)	26 TWh (18.4%)

Source: OEB, Navigant, IESO

- Regulated Price Plan consumers include nearly all residential consumers, some small businesses and small farms. They pay a blended commodity rate regulated by the Ontario Energy Board (OEB). Regulated Price Plan rates are set every six months by the OEB.

- Class B consumers include many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated – customers see separate charges for the Hourly Ontario Energy Price (HOEP) and Global Adjustment (GA).
  - Class B consumers pay GA charges on a volumetric basis.

- Class A consumers include most medium and large industrial consumers (i.e., those with monthly peak demand exceeding 3 MW).
  - Class A consumers pay GA based on their share of Ontario demand over the 5 peak hours of the year.

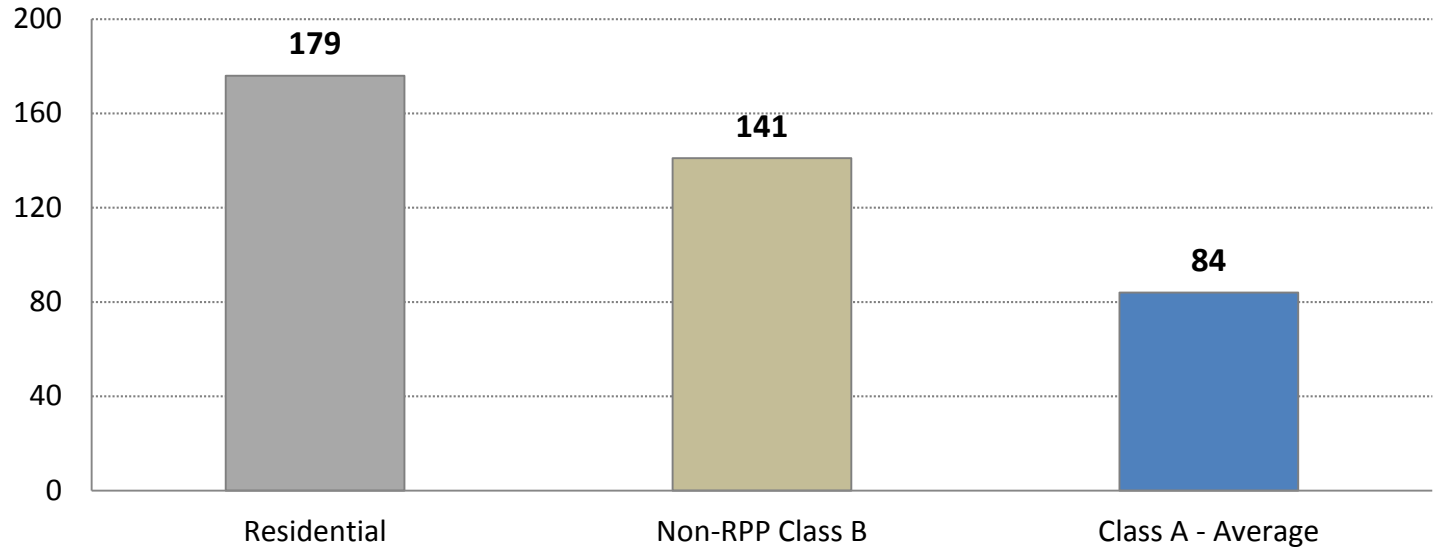
*Note: Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Electricity Price by Sector

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of the Industrial Conservation Initiative (ICI).
  - ICI lowers costs for eligible large electricity consumers that reduce consumption during peak periods.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



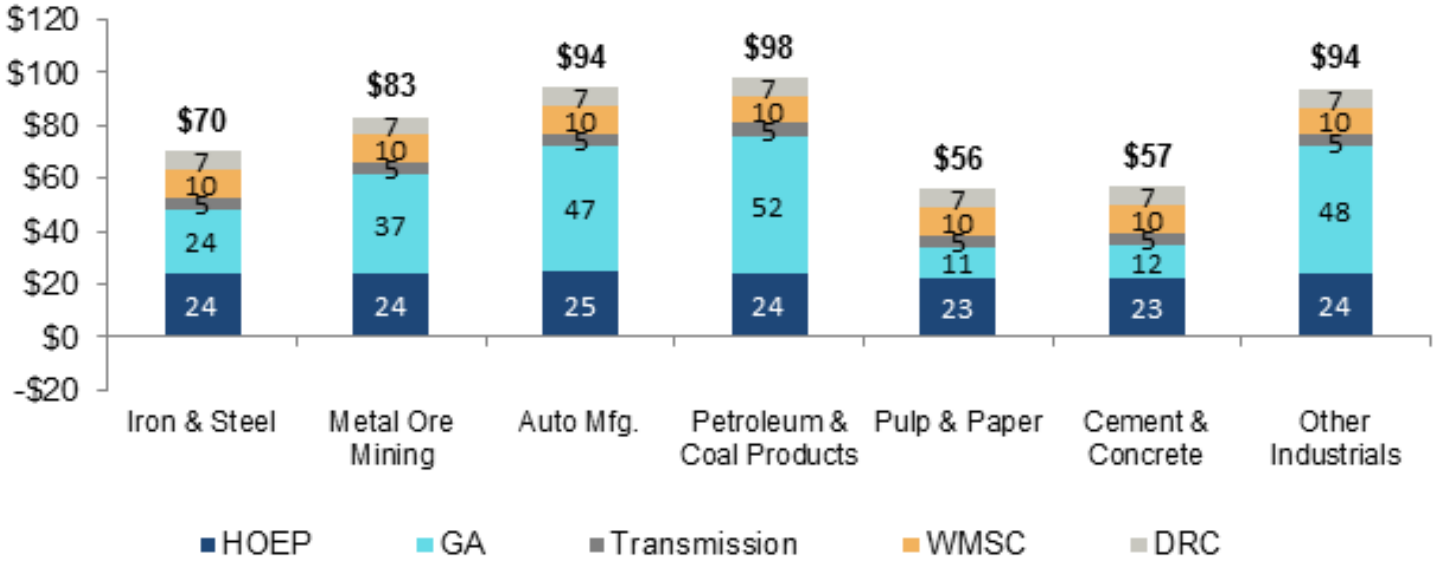
Source: Ministry of Energy (Residential and non-Regulated Price Plan Class B), Ontario Energy Report (Class A)

Industrial Electricity Prices by Sector

- While industrial consumers (Class A) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated), Year-to-date September 2015



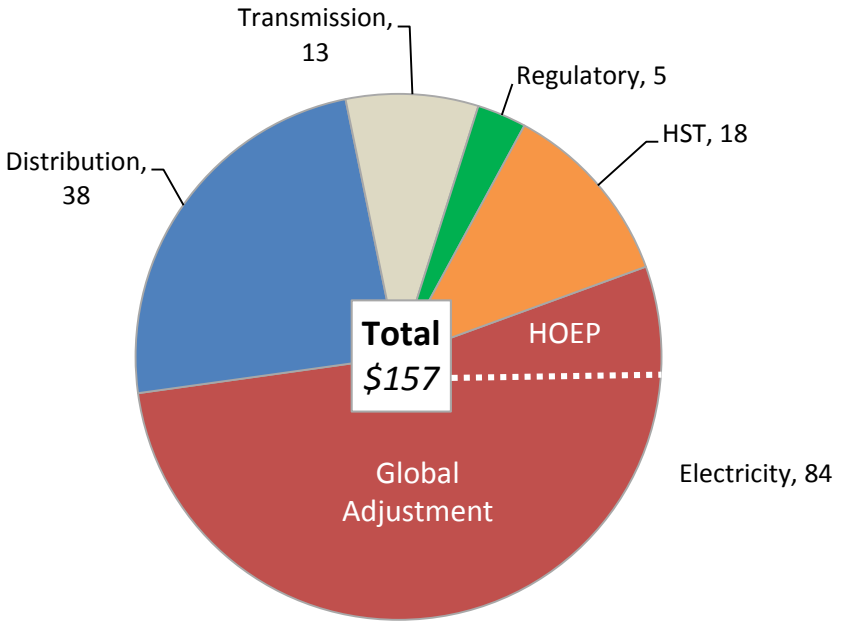
Note: WMSC = Wholesale Market Service Charges.

Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of May 1, 2016 (750 kWh/month)



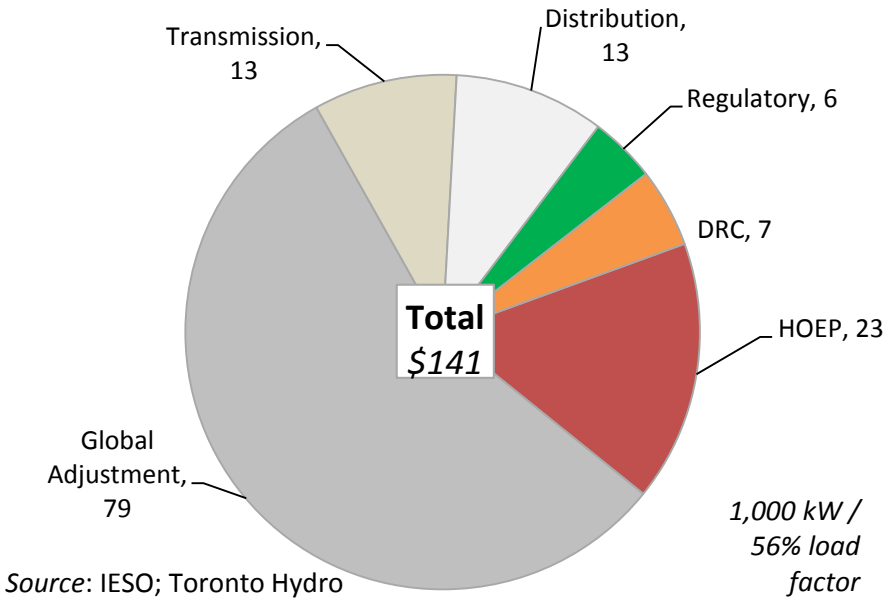
Source: OEB, Toronto Hydro

Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.
- These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

Typical Commercial Price ($/MWh)*

2015 Average (Non-Regulated Price Plan Class B)



Source: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

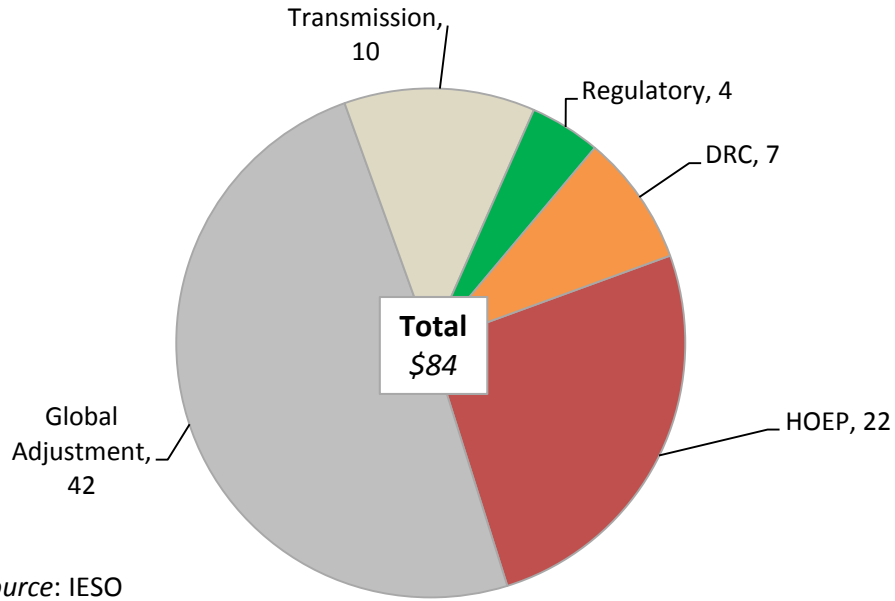
* Note: Most commercial consumers receive input tax credits for their HST.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

Typical Large Industrial Price ($/MWh)*

2015 Average



Source: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

* Note: Industrial consumers receive input tax credits for their HST.

Rate Mitigation Levers – Overview

- The government could use one or more of the levers outlined below to provide rate relief to Ontario electricity consumers:
  - **Tax-based Lever** (Shifts costs from the rate-base to the tax base):
    - *8% rebate*: providing an on-bill rebate equal to provincial portion of the HST to all consumers or specific classes of consumers.
  - **Cap and Trade Proceeds Lever** (Could shift costs to either reduce impact on the rate base or the tax base):
    - *Modified proceeds recycling*: redirecting proceeds towards other consumer classes or funding other existing initiatives that help reduce GHG emissions.
  - **Rate-based Levers** (Shifts costs within the rate-base, i.e. from one customer group to another):
    - *ICI expansion*: expanding eligibility for the ICI program to all consumers over 1 MW. Currently eligibility is limited to consumers over 5 MW and consumers in certain energy intensive sectors between 3-5 MW.
    - *RRRP Update*: increasing the benefit currently paid to certain rural customers in recognition of the higher cost of delivery.
- The following slides provide additional detail on the above levers.

Tax-based Lever

HST – Background

- The HST is a value-added tax. Unlike a sales tax, under a value-added tax most businesses effectively do not pay tax on their inputs because they are able to claim input tax credits (ITCs).
  - Through ITCs, the HST removes embedded sales taxes paid by businesses.
  - Only HST registrants that have taxable sales can claim ITCs. Businesses selling HST-exempt goods or services (such as financial services) are not eligible to claim input tax credits.

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
  - PSBs consist of municipalities, universities, public colleges, school authorities, hospital authorities and charities and qualifying non-profit organizations.
  - See Appendix for additional information.

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
  - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totalling about $445 million in tax relief.

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
  - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependant children under age 19.
  - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.

HST – General Considerations

- An across-the-board 8% rebate could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.

- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.

- The Province may also need to change the reporting for the cost of the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy. The energy component is reported as an offset of HST revenue.
  - Ministry program expenses could increase by as much as $445 million (TBC).

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

- To improve the province's ability to track impacts and program outcomes, subsequent legislative amendments to enable exchanges of data with LDCs could be considered.

Fiscal Plan Implications

Fiscal Planning Assumptions and Mitigation

- The 2016 Budget fiscal plan does not include a provision that could cover the potential full cost of $7.2 billion over four years for these electricity mitigation options.

- However, the Climate Change Action Plan did commit to funding of about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.

- Consideration could be given to allocating a portion (or all) of the GGRA proceeds currently earmarked for electricity mitigation towards other existing initiatives that also reduce greenhouse gas emissions (i.e. identify more in-plan initiatives to be supported by GGRA proceeds – see next slide) – thereby providing an overall fiscal plan offset.

- In the absence of any offset strategies, the full cost of the rate mitigation options would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.
    - Other major risks include, for example, assumptions related to federal revenue (including Equalization), major expense risks identified by ministries, and potential funding for other initiatives under consideration.

- Other potential approaches to mitigating the fiscal impact through design parameters, include:
    - Designing the rate mitigation initiative in a way that reduces the overall cost of the program, for example:
        - Phasing-in the rate mitigation to limit the fiscal impact over the near-term path to balance.
        - Introducing a cap that would limit the rate mitigation to a monthly level of consumption (e.g. similar to the 3000 kwh cap that was in effect for the OCEB).
    - Reviewing other electricity and energy relief currently available (e.g. personal income tax credits).
    - Limiting recipients of the rebate program – for example, carving out PSBs in Option 1.

- In addition, as part of the upcoming planning processes leading to Fall Statement and the 2017 Document, the government could review and consider other actions and tools to help mitigate the overall impact on the fiscal plan.

Cap and Trade Proceeds Lever

2016 Budget Commitment

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, The Climate Change Action Plan (CCAP), committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).
  - Of which $120 million would offset the impact to the average residential consumers, $170 million to commercial and $40 to industrial consumers.

- If a rebate equivalent to the 8% provincial portion of HST is provided for all or some electricity consumers, the resulting savings could be significantly greater than the 2016 Budget commitment and, therefore, the required GGRA proceeds may be reduced further.
  - These savings could be used for additional rate mitigation for certain consumers or redirected to other emissions reduction initiatives to provide a fiscal plan offset, as discussed on the next slide.

Alignment with CCAP

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3 billion over 4 years to greenhouse gas (GHG) reduction initiatives, funded by Cap and Trade auction proceeds.

- The CCAP includes up to $1.32 billion over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas by 2020.

$ Billions	2017-18	2018-19	2019-20	2020-21	Total
Total Committed in CCAP	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**1.5 – 2.1**	**6.0 – 8.3**
Electricity Price Mitigation	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 0.3*	*Up to 1.3*

- Ontario's *Climate Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail;
  - Hamilton LRT;
  - Hurontario LRT; and
  - Energy efficiency in schools.

Rate-Based Levers

ICI Expansion

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI.
- ICI could be expanded so that all consumers over 1 MW are eligible for the program.
- ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of:
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slide discusses the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

ICI Expansion

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - 'Short-term' refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - 'Long-term' is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.
- The above bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

Rural or Remote Rate Protection (RRRP) Update

- RRRP is a ratepayer-funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers.
  - There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.
- There may be opportunity to evaluate current levels of support to enhance rate assistance available to R2 customers.
  - An additional $28.53/month would equalize R2 bills with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 RRRP to $235 million with a monthly impact on an average residential consumer of $0.57.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

Hydro One R2 Bill @ 1000kWh (Pre-HST)	
With Current RRRP Subsidy	**With Proposed RRRP Expansion**
$229.05	$200.51
Bill Comparisons	
Hydro One R1	$200.50
Algoma Power (Receives RRRP)	$197.05
Provincial Average	$169.13
Lowest Cost LDC	$148.83*

*The LDC with the lowest total bill is Fort Frances Power Corporation (FFPC). FFPC customers who are not enrolled with a retailer receive a $0.0125/kwh discount on power due to a historic (1905) mill agreement. In order to maintain the discount, FFPC maintains its ROE at 0%.

Rate Mitigation Options

Rate Mitigation Options

- Three options have been identified that could provide relief to various electricity consumer classes. These options are outlined below:

1. **8% Rebate for All Consumers and Eliminate Proceeds Recycling**
   - Provide an 8% rebate to all electricity consumers
   - Eliminate planned GGRA proceeds recycling to electricity consumers.

2. **8% Rebate for Regulated Price Plan Consumers, ICI Expansion, RRRP Update and Redirected Proceeds Recycling**
   - Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to OCEB, with a 3,000 kWh cap.
   - Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
   - Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
   - Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

3. **8% Rebate for Regulated Price Plan Consumers, ICI Expansion and Redirected Proceeds Recycling**
   - Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to the OCEB, with a 3,000 kWh cap.
   - Provide support to small industrial and commercial consumers by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
   - Eliminate proceeds recycling to Regulated Price Plan consumers and increase proceeds recycling to commercial and industrial consumers.

- For each of the above options, a phased-in approach could be pursued to reduce the fiscal impact in the near term. See slide 25 for more details.

Consumer Impact Summary (2017)

Option	Average Annual Fiscal Impact	Average Annual GGRA Proceeds Impact	Regulated Price Plan (Residential)		Class B (Commercial)	Class A (Industrial)	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*		*Existing*	*New*
8% rebate to all consumers and Eliminate Proceeds Recycling	$1.8 billion	-$330 million (-$1.32 billion over first compliance period)	-$11/ month (-7%)	-$18/ month (-7%)	-$12/ MWh (-8%)	-$8/ MWh (-8%)	
8% rebate to Regulated Price Plan consumers with 3,000 kWh cap**, ICI Expansion, RRRP Update and Redirected Proceeds Recycling	$0.8 billion*	-$60 million (-$0.24 billion over the first compliance period)	-$9.9/ month (-7%)	-$45/ month (-20%)	-$1/MWh (-1%)	-$1/ MWh (-1%)	Up to -$52/ MWh (-33%)
8% rebate to Regulated Price Plan consumers with 3,000 kWh cap**, ICI Expansion and Redirected Proceeds Recycling	$0.8 billion*	-$125 million (-$0.50 billion over first compliance period)	-$10.4/ month (-7%)	-$17/ month (-7%)	-$1/MWh (-1%)	-$1/ MWh (-1%)	Up to -$52/ MWh (-33%)

* Note: Preliminary estimate – subject to further analysis and verification.
** Note: Proceeding with an 8% Regulated Price Plan rebate without a cap would cost an estimated $1 billion per year.

Legal Considerations - Draft

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - No legal risk has been identified.

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Legal Considerations Cont'd - Draft

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Option 1 – 8% Rebate for All Consumers

8% Rebate for All Consumers – Overview

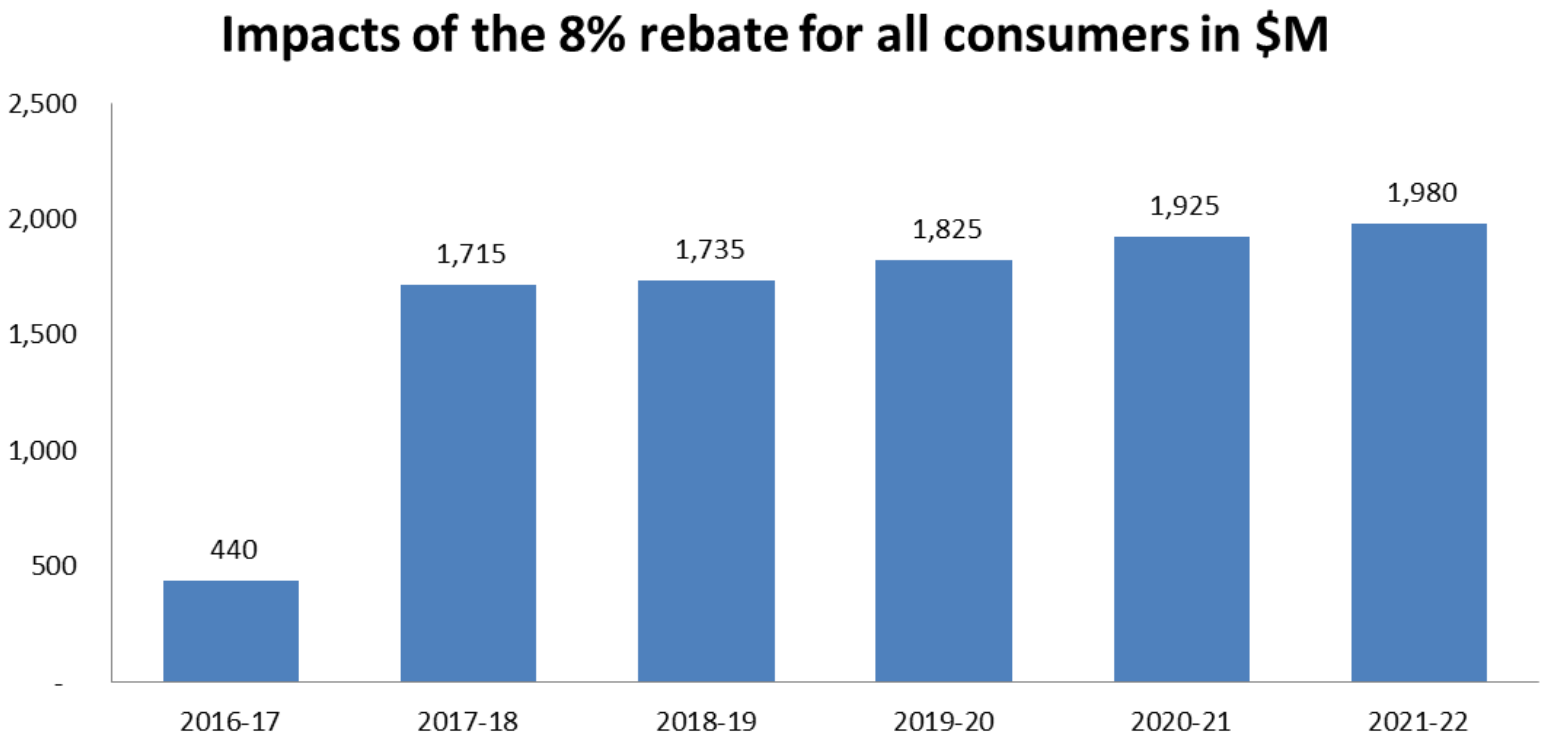
- Providing the rebate to all consumers would ensure that residential, small business commercial, farms, and industrial consumers would receive the benefit.

- An 8% rebate for all consumers would be equal to the provincial portion of HST and funded by the tax base.

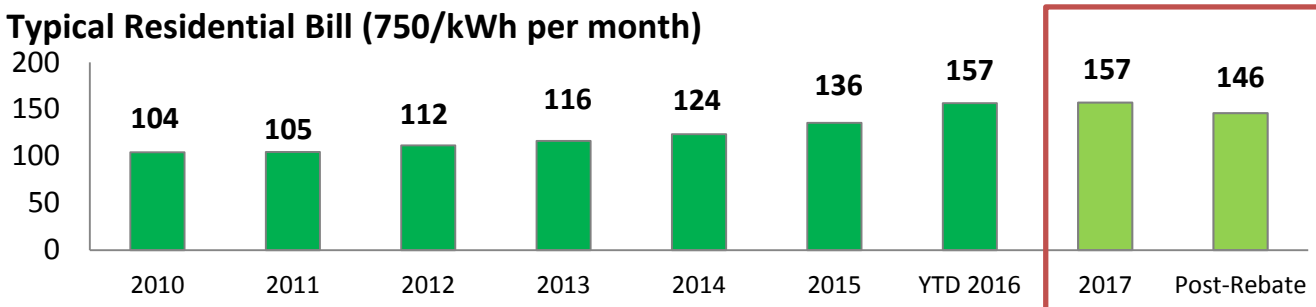
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) and the Independent Electricity System Operator (IESO) would be the delivery mechanism for the rebate.
  - Consultations with LDCs/IESO would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

8% Rebate for All Consumers – Projected Cost

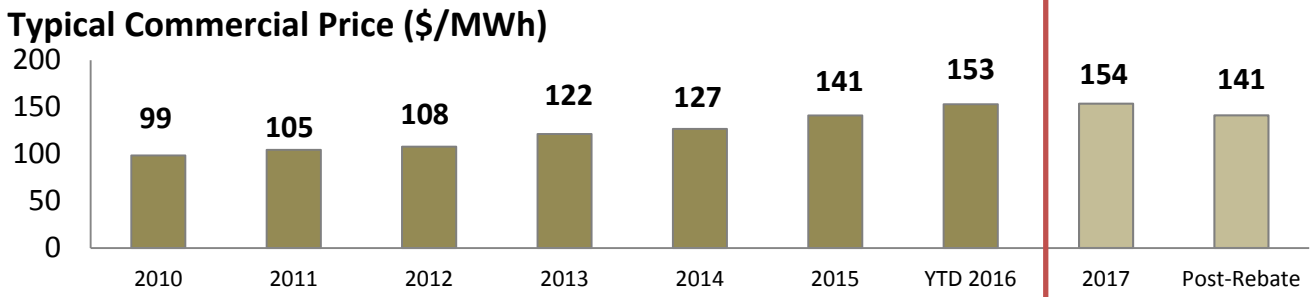
- The chart below shows the projected costs of the 8% rebate for all consumers, including PSBs, assuming an implementation date of January 1, 2017.



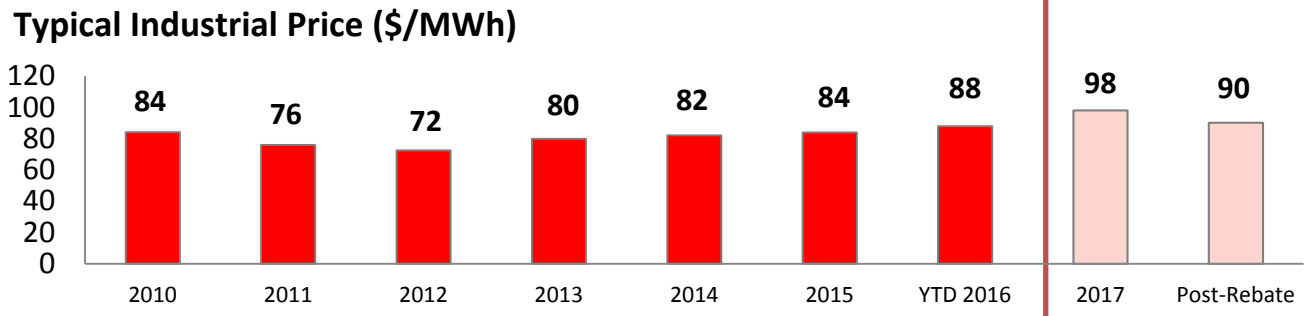
Bill Impacts by Sector



Residential consumers would receive a $11/month rebate (7% reduction to after tax bill).



Commercial consumers would receive a $12/MWh rebate (8% reduction).



Industrial consumers would receive a $8/MWh rebate (8% reduction).

*Note: Commercial and industrial electricity consumers are assumed to receive input tax credits and therefore see the full 8% benefit.

8% Rebate for All Consumers – Considerations

- New legislation would be required. Legislation would be modelled after the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDCs have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for All Consumers – Considerations (Cont'd)

- Under this option, which would provide a benefit to all consumers, it may not be necessary to recycle cap and trade proceeds to consumers, potentially eliminating $1.3 billion in required GGRA proceeds over the first compliance period.

- Consideration could be given to a rebate that decreases over time, eventually being fully phased out.

- Additionally, commercial and industrial consumers would continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Public reaction may be that this is inadequate to address their concerns about the rising cost of electricity
  - Would need to distinguish the differences between the rebate and the OCEB.
  - Media/stakeholder/public interest likely in the impact to broader finances, the government's ability to achieve fiscal balance.

- Consideration could be given to putting a cap in place for Regulated Price Plan customers (residential consumers, certain small businesses and farms) as was done under OCEB (3,000 kWh/month), which would reduce the cost.
  - Different caps within the group (e.g., one for residential and small business and a bigger one for larger businesses) would be more difficult to legislate, implement and administer.

8% Rebate for All Consumers – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).

- **Positioning:**
  - We are committed to keeping electricity in Ontario clean, reliable and affordable.
  - This rebate is fair for all customers, and does the most for homeowners with higher costs.
  - Large businesses in the north are paying among the lowest rates in North America.

- **Issues Considerations:**
  - Industrial rates, especially in northern Ontario, would be even more competitive.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity (research shows that OCEB did not appreciably impact public opinion).
  - Media/public interest in the impact to achieving fiscal balance.
  - Capped option would draw comparisons with OCEB (10% rebate).

Option 2 – 8% Rebate for Regulated Price Plan Consumers, ICI Expansion, RRRP Update and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers, ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh per month cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.

3. RRRP Update
   - Provide an additional $110 million in support to approximately 330,000 Hydro One rural customers. All residential consumers would see an average cost increase of $0.57/month.

4. Redirected proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion and RRRP update would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers, ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes most residential, small businesses and small farms.

- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.

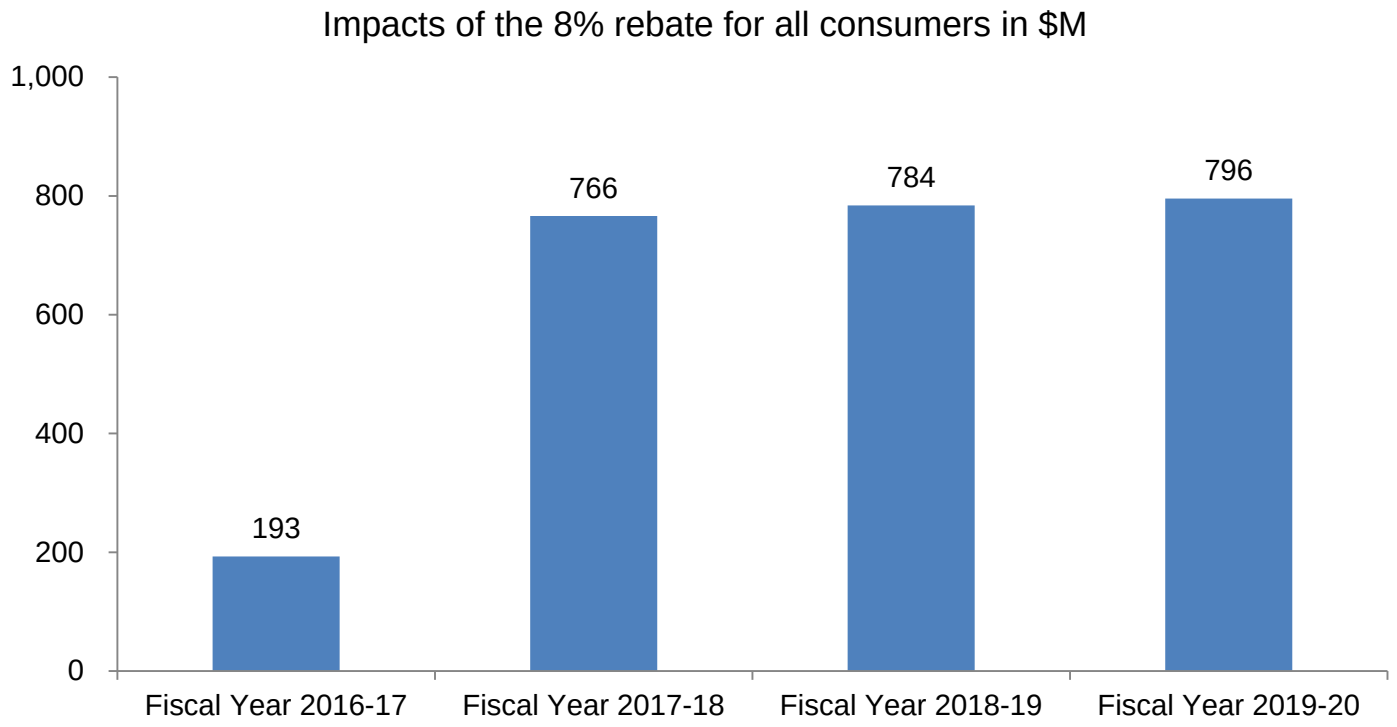
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.

- While non-Regulated Price Plan consumers would not see a benefit from the 8% rebate under this option, all industrial and commercial consumers would receive proceeds recycling through the GGRA.
  - Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

- Additionally, support would be provided to small industrial and commercial consumers through the ICI expansion, while rural customers would see a significant benefit through updates to the RRRP program.

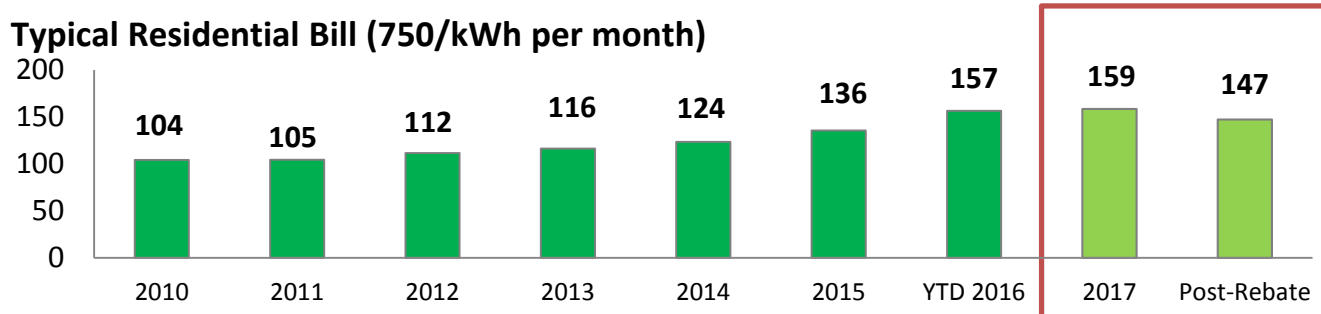
8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for Regulated Price Plan consumers with a 3,000 kWh/month cap would be approximately $0.8 billion* between 2017 and 2020.

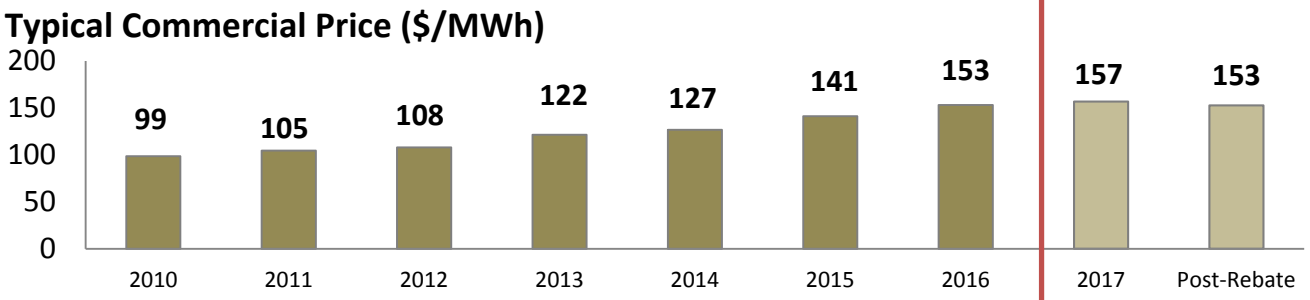


*Note: Initial estimate subject to further analysis and verification.

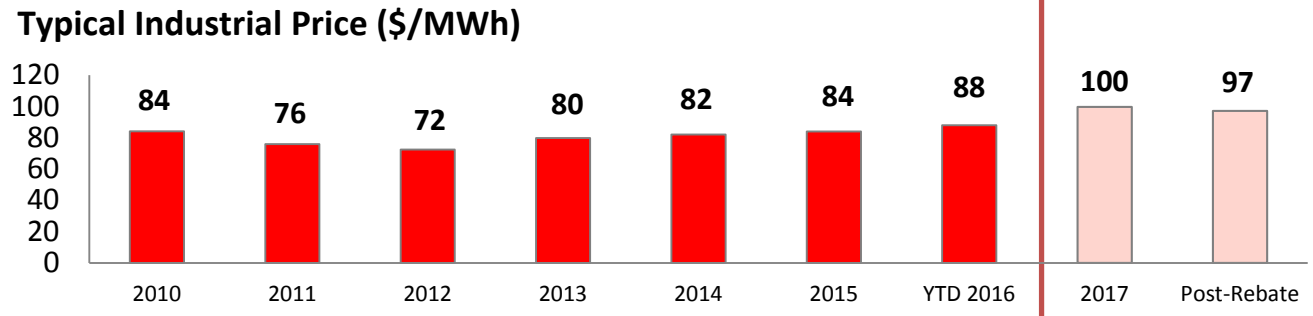
Bill Impacts by Sector



The net impact of the additional cost of programs and 8% rebate is a 7% reduction.



The net impact of the additional cost of programs and proceeds recycling is a 1% reduction.



The net impact of the additional cost of programs and proceeds recycling is a 1% reduction.

Note: The impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, the impact of ICI has been included above for illustrative purposes.

8% Rebate for Regulated Price Plan Consumers, ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations

- New legislation would be required. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDCs have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers, ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Considerations (Cont'd)

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Amendments would also be required to various regulations to expand ICI and RRRP.

8% Rebate for Regulated Price Plan Consumers, ICI Expansion, RRRP Update and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Option 3 – 8% Rebate for Regulated Price Plan Consumers, ICI Expansion and Redirected Proceeds Recycling

8% Rebate for Regulated Price Plan Consumers, ICI Expansion and Redirected Proceeds Recycling – Overview

1. 8% Rebate for Regulated Price Plan Consumers with 3,000 kWh per month cap

2. Expand ICI
   - Lower the threshold for participation in ICI to 1 MW and remove sectoral restrictions on participation.
     - Most newly eligible ICI participants who choose to opt-in to the program would be able to reduce their electricity costs substantially. All other consumers would see a relatively small increase in their bills.
     - Those who decide to opt-in would not see a benefit until July 2018.

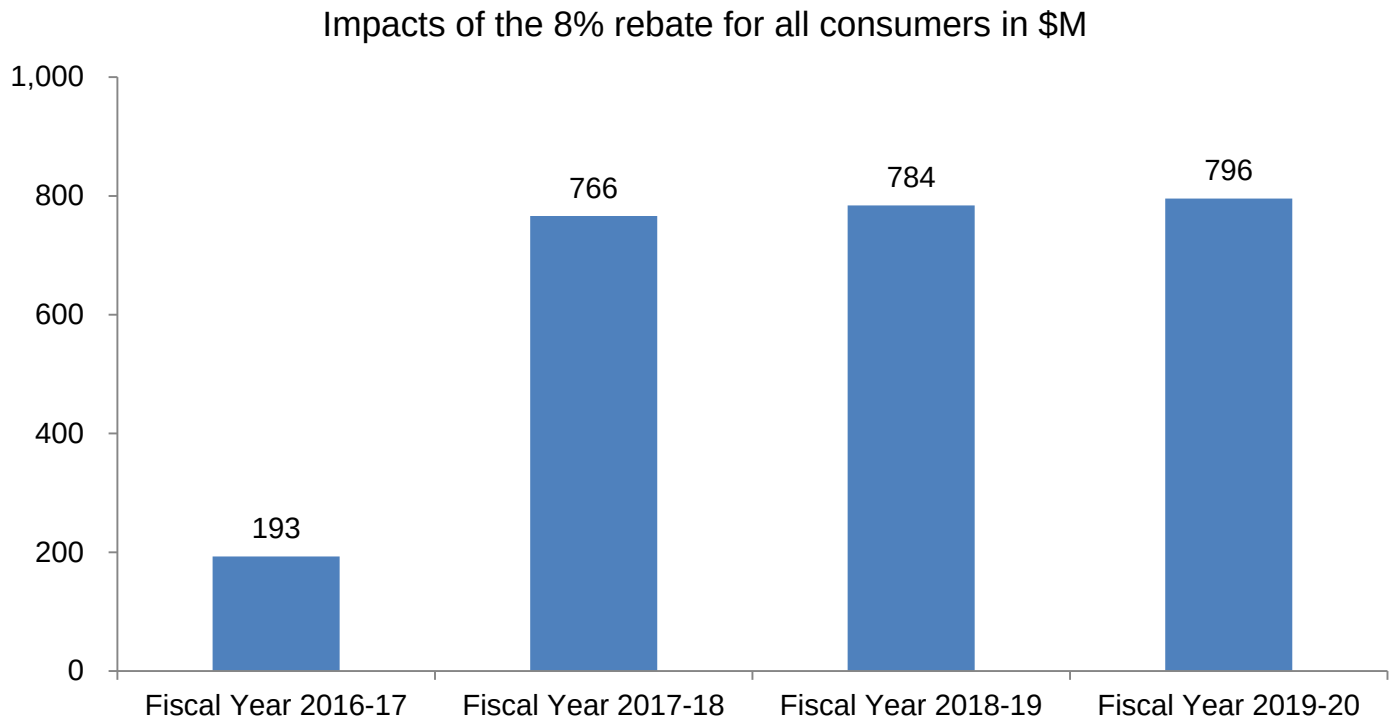
3. Modified proceeds recycling
   - Redirecting some of the forecast $1.3 billion in GGRA proceeds from Regulated Price Plan consumers to commercial and industrial consumers would ensure that the impact of cap and trade and ICI expansion would not increase costs for any large industrial and would result in a benefit to the average industrial and commercial customers.

8% Rebate for Regulated Price Plan Consumers, ICI Expansion and Redirected Proceeds Recycling – Overview

- The Regulated Price Plan includes most residential, small businesses and small farms.
- An 8% rebate for Regulated Price Plan consumers would be equal to the provincial portion of HST and funded by the tax base.
- The rebate would appear directly on bills. As such, Local Distribution Companies (LDC) would be the delivery mechanism for the rebate.
  - Consultations with LDCs would be required to ensure any implementation issues are addressed.
  - Some LDCs may require lead time of at least six months for billing, system, and process changes.
    - LDCs that require more lead time could provide retroactive payments back to January 1, 2017, if necessary.
- While non-Regulated Price Plan consumers would not see a benefit from the 8% rebate under this option, support would be provided to small industrial and commercial consumers through the ICI expansion and all industrial and commercial consumers would receive proceeds recycling through the GGRA.
- Commercial and industrial consumers would also continue to receive input tax credits and Public Service Bodies would continue to receive PSB rebates.

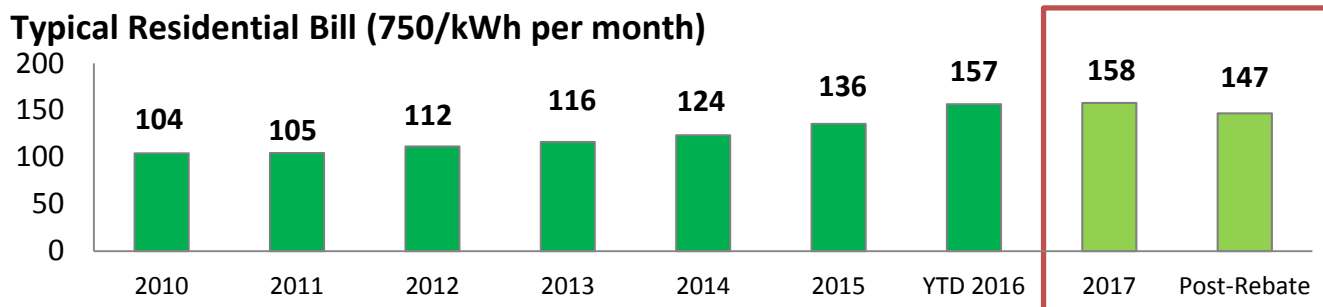
8% Rebate to Regulated Price Plan consumers – Projected Cost

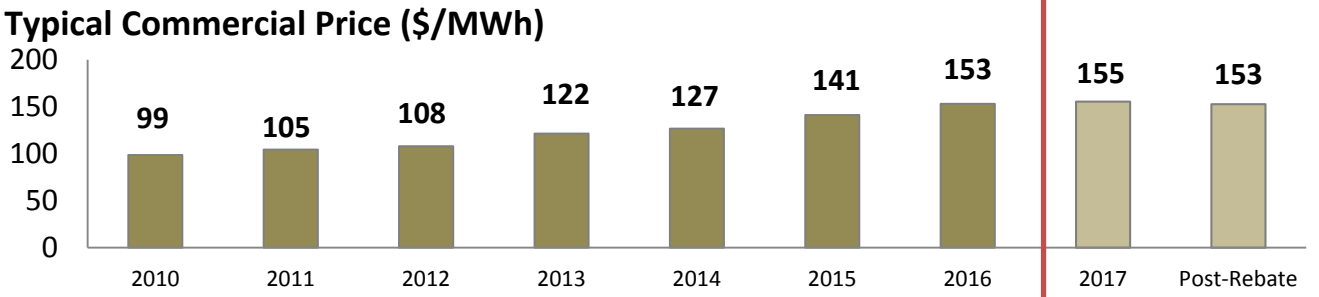
- ENERGY estimates that the average annual cost of an 8% rebate for Regulated Price Plan consumers with a 3,000 kWh/month cap would be approximately $0.8 billion* between 2017 and 2020.

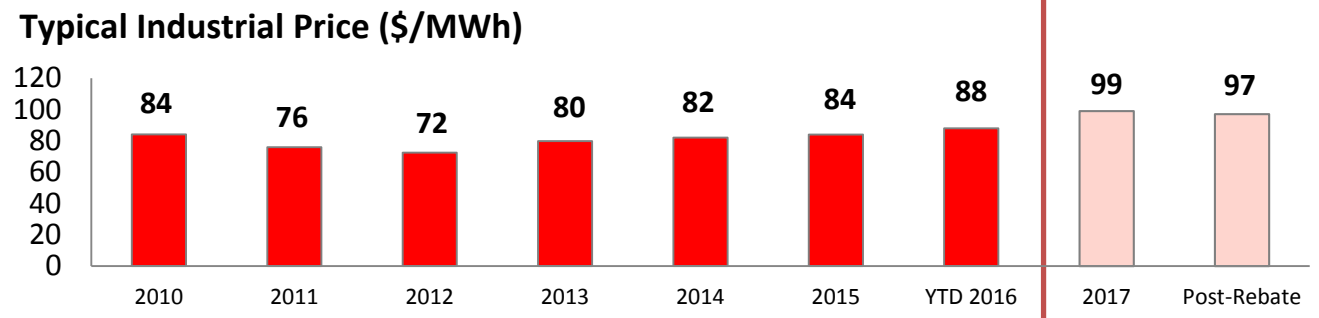


*Note: Initial estimate subject to further analysis and verification.

Bill Impacts by Sector







The net impact of the additional cost of programs and 8% rebate is a 7% reduction.

The net impact of the additional cost of programs and proceeds recycling is a 1% reduction.

The net impact of the additional cost of programs and proceeds recycling is a 1% reduction.

Note: The impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, the impact of ICI has been included above for illustrative purposes.

8% Rebate for Regulated Price Plan Consumers, ICI Expansion and Redirected Proceeds Recycling – Considerations

- New legislation would be required. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.

- On-bill rebate delivery would likely require adjustments to Local Distribution Company (LDC) billing systems, which could impact delivery costs and timelines.

- In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - While LDCs have experience with rebate delivery through the Ontario Clean Energy Benefit (OCEB) and Ontario Electricity Support Program (OESP), which should simplify program implementation, unique considerations may arise. For example, options that provide rebates to specific classes of consumers are more administratively complex than broader offerings.
  - One option to address any timing concerns is to allow LDCs to provide retroactive payments if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- It is recommended that ENERGY (possibly through the Ontario Energy Board) consult with LDCs to accurately assess these impacts once the program has been announced.

- Detailed messaging on bills (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).

8% Rebate for Regulated Price Plan Consumers, ICI Expansion and Redirected Proceeds Recycling – Considerations Cont'd

- Under this option, recycling of cap and trade proceeds to industrial and commercial consumers would still be required to meet or surpass the 2016 Budget commitment that they be no worse off due to the introduction of cap and trade.

- Amendments would also be required to O. Reg. 429/04 to expand ICI.

8% Rebate for Regulated Price Plan Consumers, ICI Expansion and Redirected Proceeds Recycling – Public Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, including speeches/events.

- **Positioning:**
  - A fiscally prudent plan to benefit both businesses and residential ratepayers.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Net gain for all residential customers.
  - Public reaction may not see 8% rebate as adequate to address the rising cost of electricity.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

Next Steps

- ENERGY and MOF to continue analysis.
- Prepare legislation/regulatory amendments, as required, and proceed to Cabinet and Treasury Board.
- Develop communications/roll-out plan, including consultation with LDCs, the OEB and IESO.

Appendix – Background on Rate-based Initiatives

Current Cost Shifts in Ontario's Electricity System

- The tables on the right show the estimated cost shifts in the province's electricity system that result from three existing government programs: ICI, RRRP and OESP.
- Expansion of ICI and RRRP would place further pressure on electricity costs for other consumer classes
- While the OEB is still developing options, it is likely that any implemented First Nations rate assistance program will also shift costs onto non-First Nations customers.

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.01	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84

Appendix A – ICI

Industrial Conservation Initiative (ICI)

- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Typical Demand Profile, 2-3 MW Consumer

Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015

Savings		*-14%*	*-25%*	*-37%*

Source: Navigant; Ministry of Energy

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

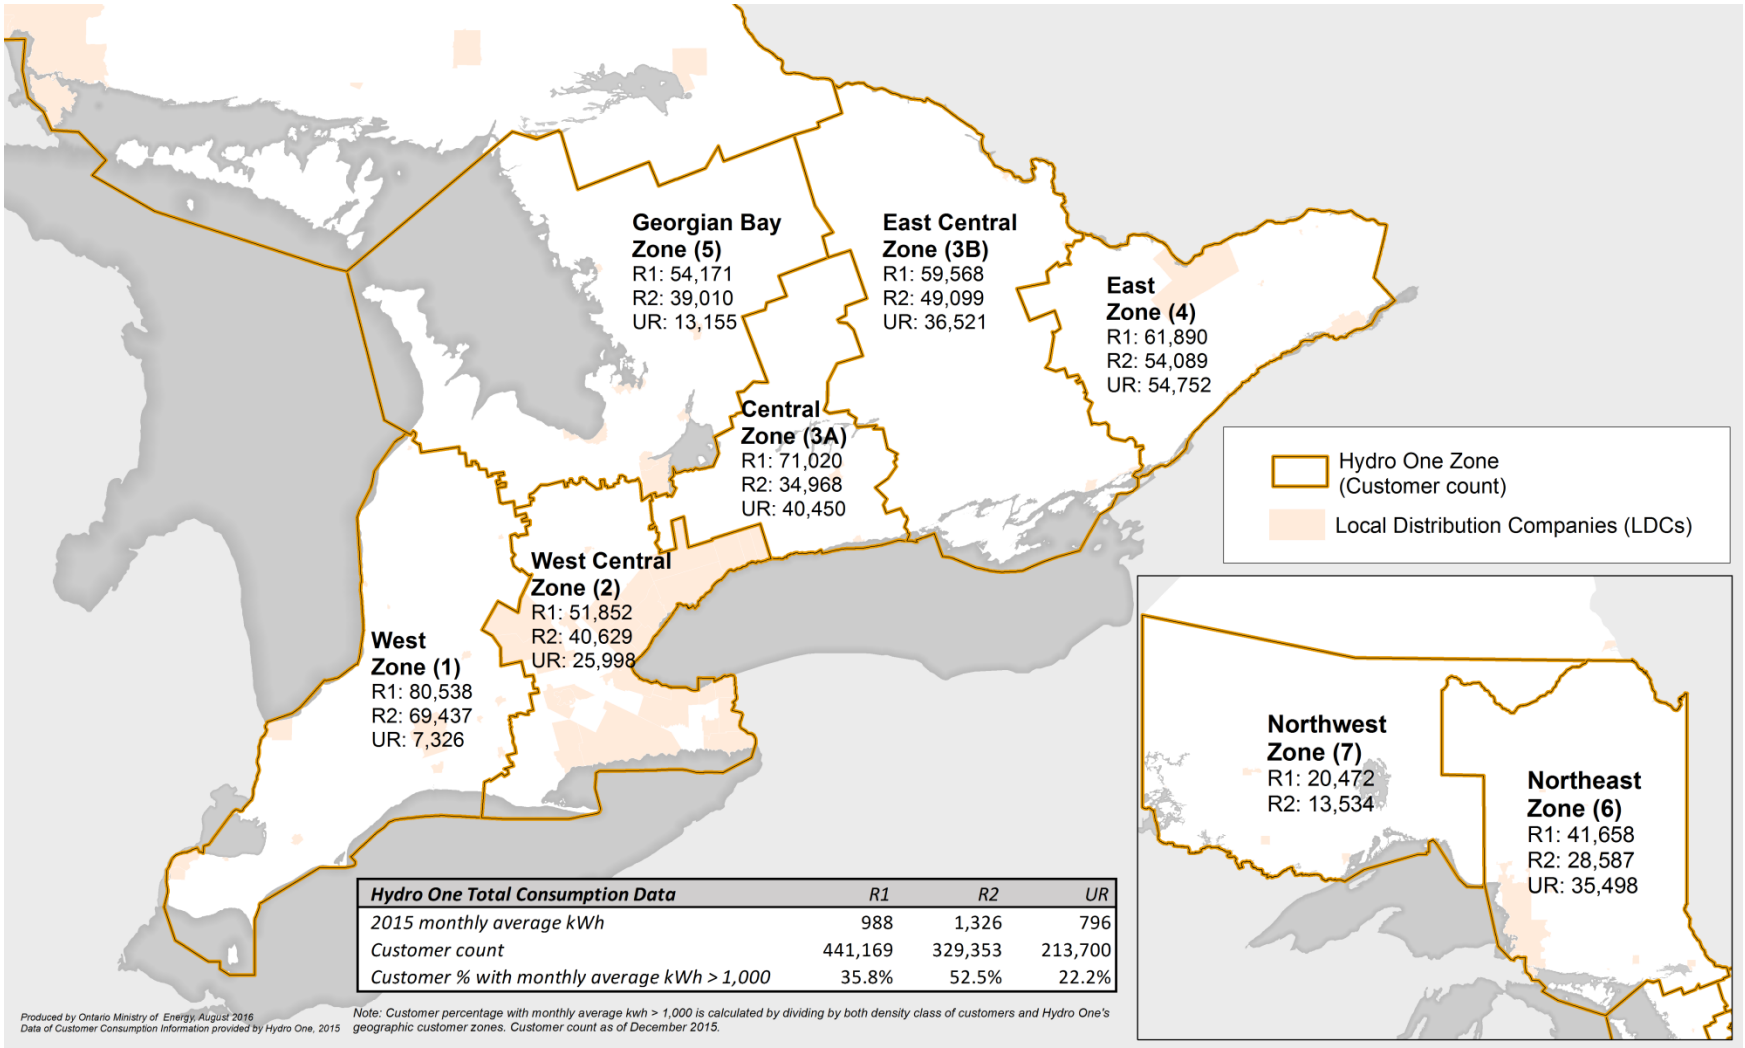
	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Appendix B – RRRP

Hydro One Consumers by Customers Class

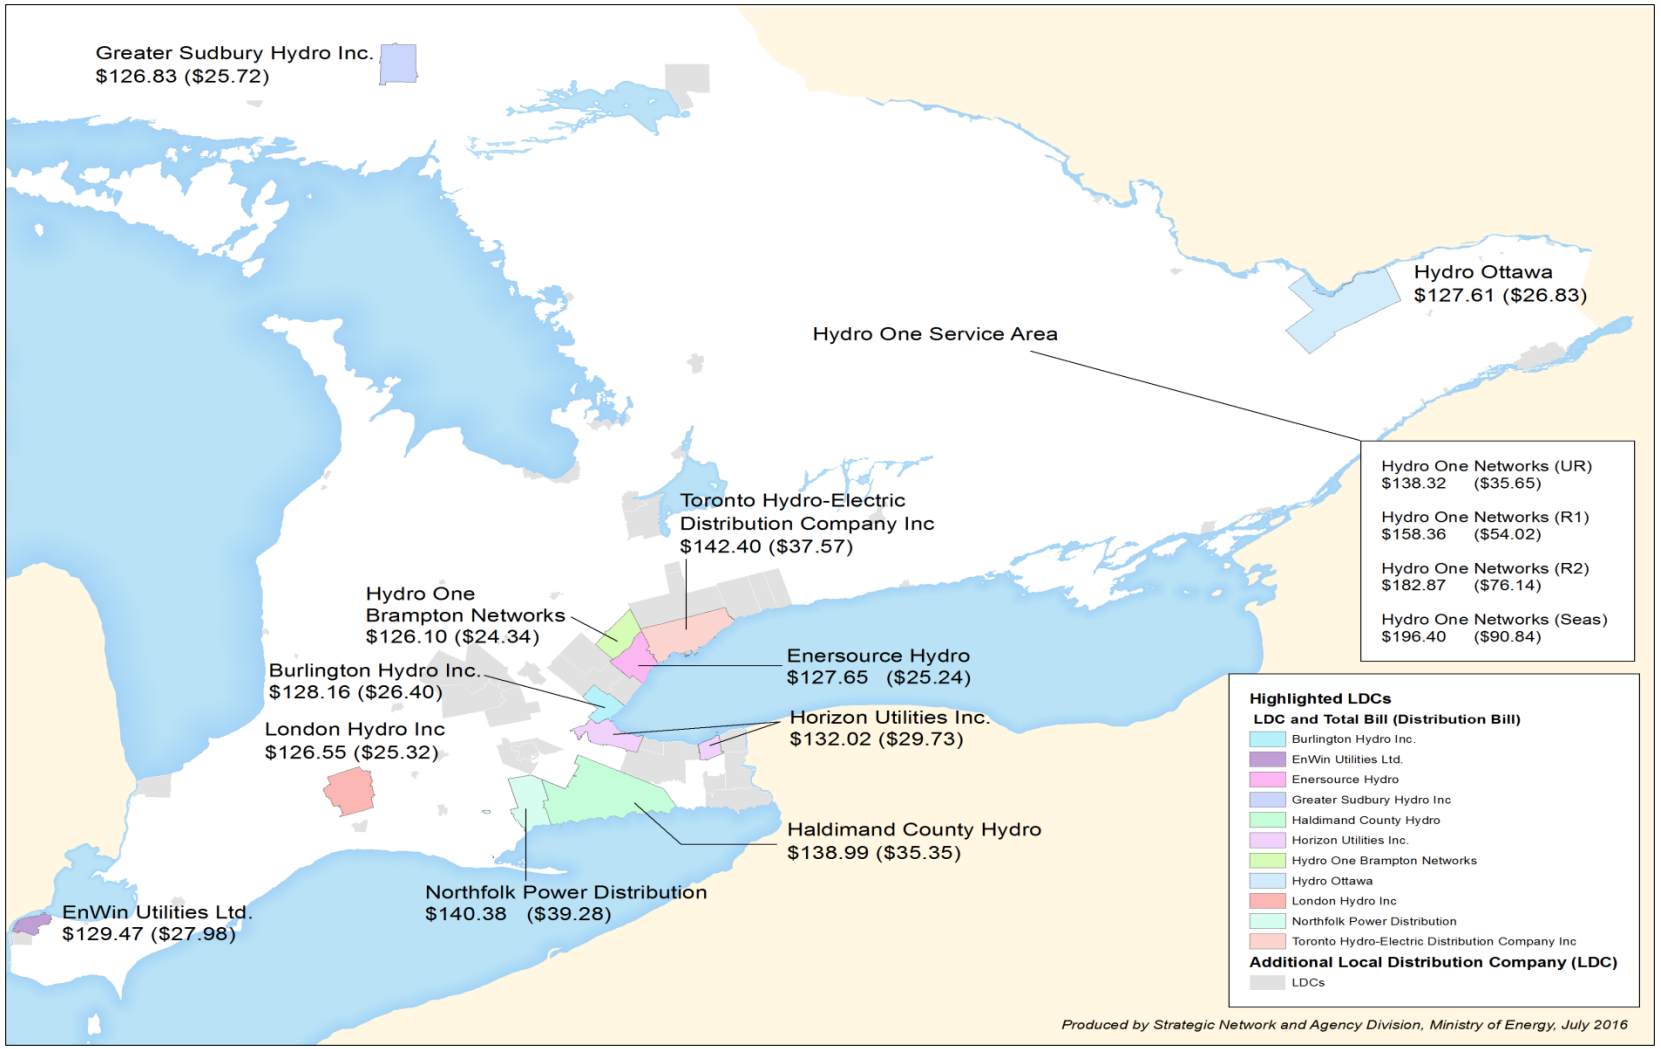


Hydro One Total Consumption Data	*R1*	*R2*	*UR*
2015 monthly average kWh	988	1,326	796
Customer count	441,169	329,353	213,700
Customer % with monthly average kWh > 1,000	35.8%	52.5%	22.2%

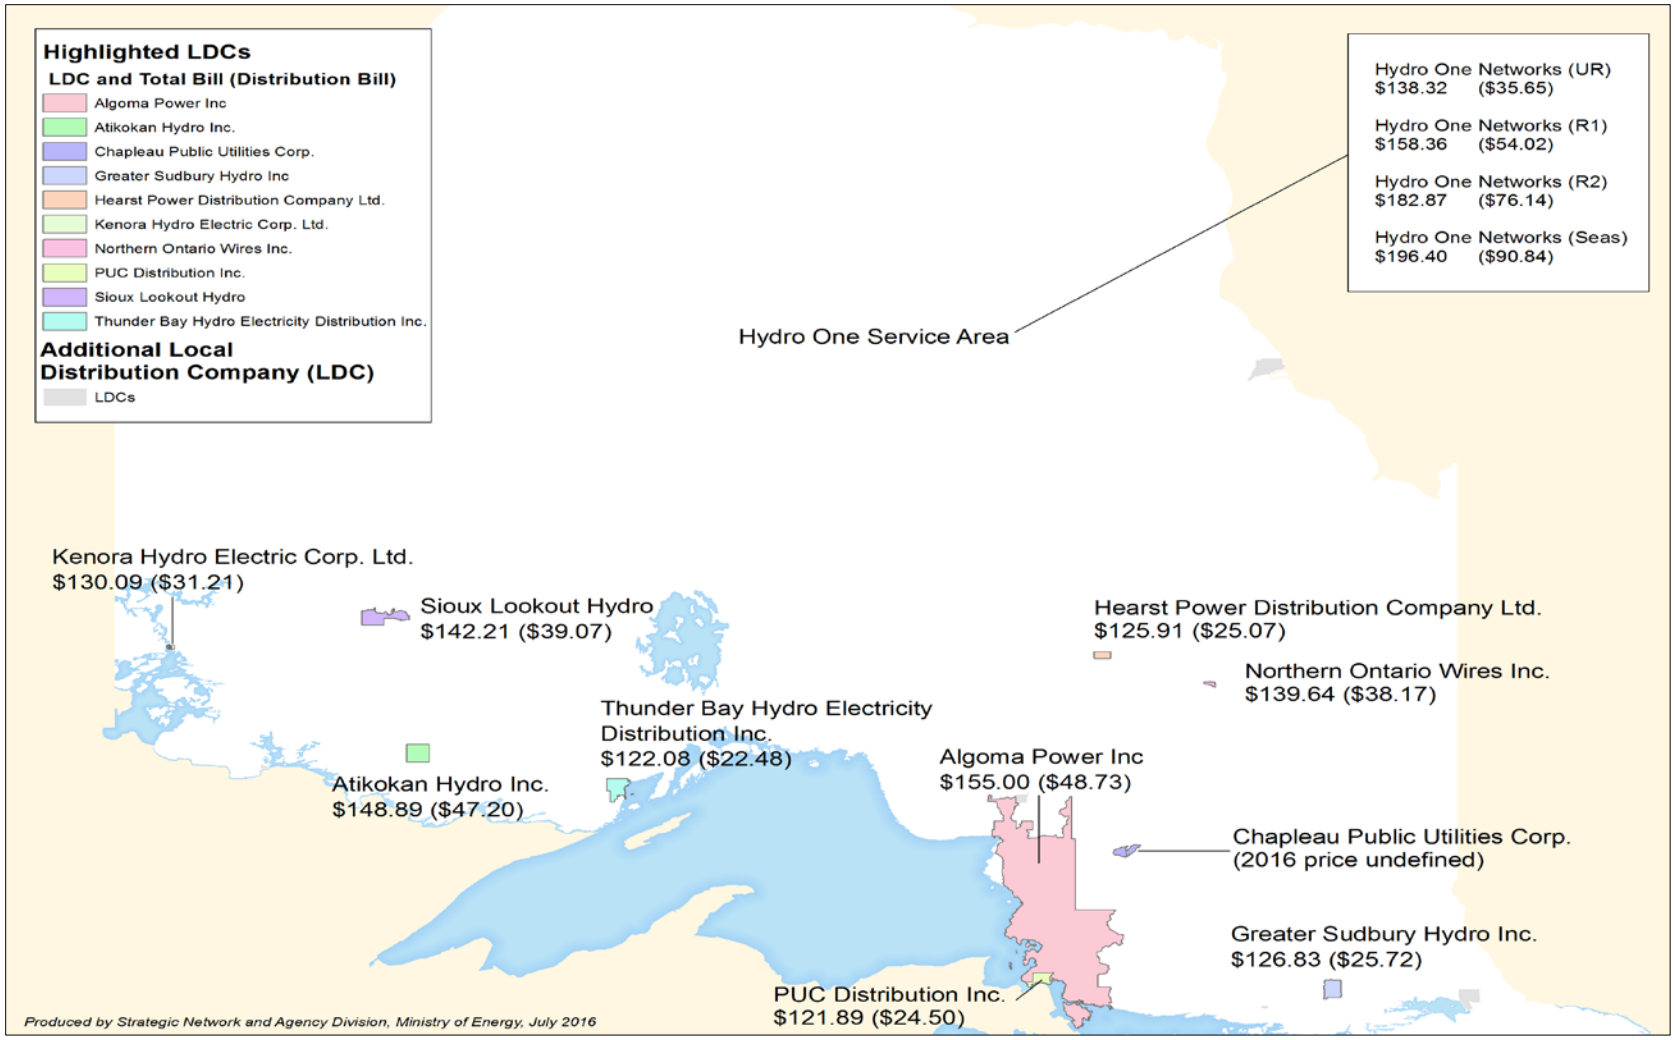
Produced by Ontario Ministry of Energy, August 2016
Data of Customer Consumption Information provided by Hydro One, 2015

Note: Customer percentage with monthly average kwh > 1,000 is calculated by dividing by both density class of customers and Hydro One's geographic customer zones. Customer count as of December 2015.

Selected Rate Comparison – Total Bill and Distribution Rate



Selected Rate Comparison – Total Bill and Distribution Rate



Summary of Options – Incremental costs R2

Option	Incremental Monthly Subsidy levels	Total Bill (1,000wh)	Incremental R2 Program Cost	Incremental Total Program Ratepayer Impact
Status Quo	$31.50	$229.05	$125.5M	~$1/month
1. R2 to Provincial Average	+$59.90 ($91.40)	$169.14	+$231M (~$356.5M)	+$1.24/month ($2.24/month)
2. R2 to other grid connected customers receving RRRP	+$31.98 ($63.48)	$197.06	+$124M (~$249.5M)	+$0.64/month ($1.64/month)
3. R2 to R1	+$28.53 ($60.03)	$200.51	+$110M (~$235.5M)	+$0.57/month ($1.57/month)
4.(a) Inflation index retroactive	+$9.45 ($40.95)	$219.60	+$37.5M (~$163M)	+$0.17/month ($1.17/month)
4.(b) Inflation index going forward	+$0.60 ($32.10)	$228.45	+$2.5M (~$127M)	+ <$0.01/month (~$1/month)

- Note 1:The subsidy provided would be a monthly lump sum, and would equalize bills for a 1000 kWh customer. Consumption over 1000 kWh would result in total bills higher than the average (eg: Under Option #1, R2 subsidy would be fixed at $91.40 regardless of consumption level – same as it is fixed at $31.50 today.)
- Note 2: Bill amounts exclude HST. Amounts are based on 2016 rates. If spending is uncapped beyond 2016, program costs would increase based on chosen adjustment mechanism
- Note 3: Status Quo Ratepayer Impact includes recovery of additional $49.5M ($175M total) in costs to deliver RRRP to Algoma Power, Hydro One Remote, and the James Bay First Nation communities. Approximately ~$0.70 of the ~$1/month RRRP charge covers R2 subsidy costs. Rate payer impact based on 750kWh average consumption

Appendix C – HST

Additional Information – Public Service Bodies

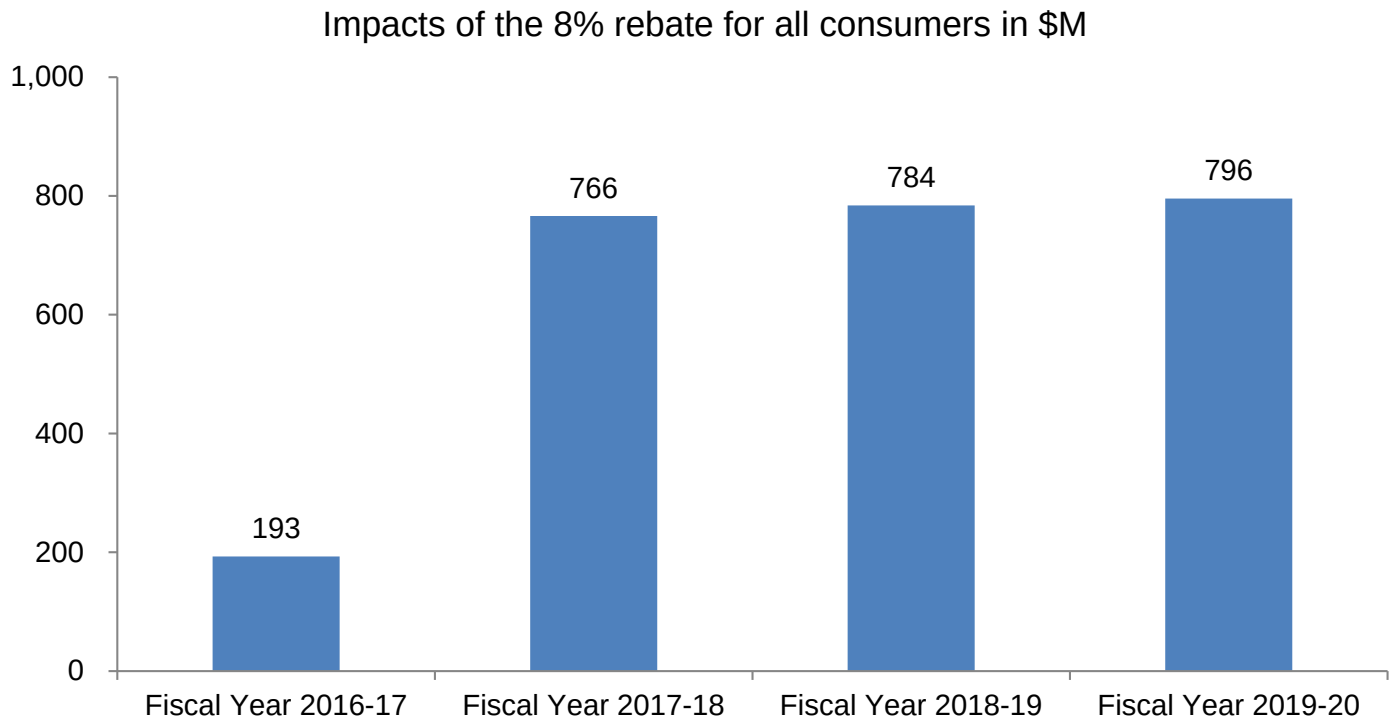
- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
- Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

8% Rebate to Regulated Price Plan consumers – Projected Cost

- ENERGY estimates that the average annual cost of an 8% rebate for RPP consumers with a 3,000 kWh cap would be approximately $0.8 billion* between 2017 and 2020.



**Initial estimate subject to further analysis and verification*

Ontario

MINISTRY OF
ENERGY

Electricity Price Mitigation

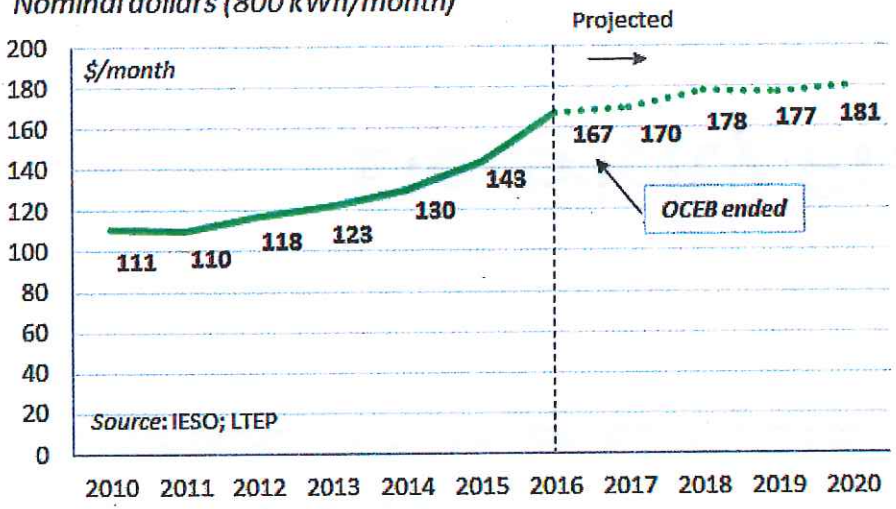
August 17, 2016

Context – Typical Large Industrial Electricity Prices

- Since 2010, electricity prices have risen considerably, particularly for households. Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as renewable projects come online.

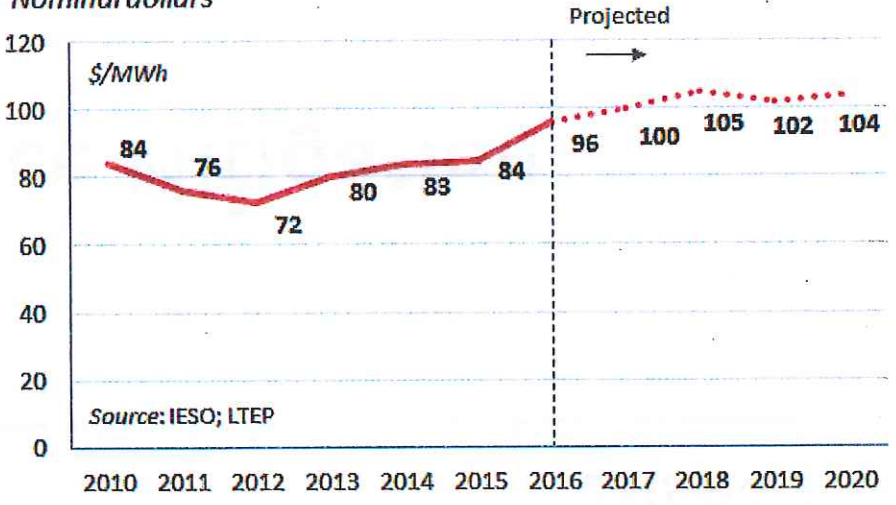
Typical Residential Electricity Bill, Ontario

Nominal dollars (800 kWh/month)



Typical Large Industrial Electricity Price, Ontario

Nominal dollars

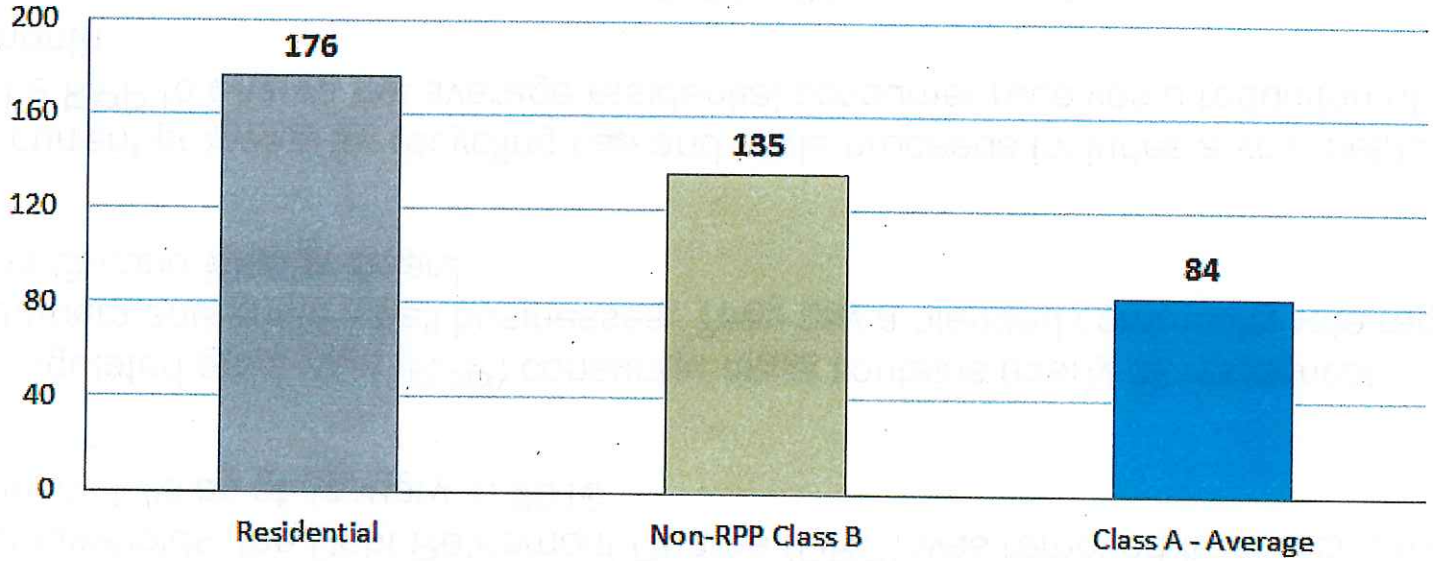


Industrial Price by Types of Electricity Consumer

- On a per-unit basis, Class A electricity consumers (on average) pay the lowest price for electricity in the province, in large part the result of ICI.

Typical Electricity Prices, $/MWh (2015)

By Type of Consumer



Source: Ministry of Energy (Residential and non-RPP Class B), Ontario Energy Report (Class A)

Current Status – Residential

- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.

- The regulated price plan (RPP) consumer class contains nearly all residential consumers and some small businesses. They pay a blended commodity rate regulated by the Ontario Energy Board.

- The current proposal for recycling cap and trade proceeds includes a volumetric rebate via the RPP to ensure the average residential consumer receives a reduction of $2/month.
  - For residential consumers, about $150 million per year is required to meet the 2016 Budget commitment.
  - If HST is removed from residential bills, the consumer savings will be significantly higher than $2/month.

Current Status – Commercial

- Class B includes many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated.

- Targeted pricing programs are currently not available for Class B consumers.

Current Status – Industrial

- *[Bullet point(s) on ICI]*
- *[Bullet point(s) on NIERP]*
- The current proposal for recycling cap and trade proceeds is designed to ensure no Class A consumers are no worse off due to cap and trade. On average, Class A consumers will see a benefit under this proposal.

Option 1 –Provide a 8% Rebate for All Consumers

Provide a 8% Rebate for all Consumers– Overview

- *[8% rebate for all consumers, equal to provincial portion of HST]*
- *[To be a tax-funded rebate program on bills]*
- *[Because all consumers benefit, potentially forego proceeds recycling.]*

Considerations

- *[Commercial and industrial consumers to continue to receive benefit related to input tax credits]*
- *[New legislation would be required]*
- *[Legislation could be patterned after the Ontario Clean Energy Benefit Act, 2010]*
- *[Any bill presentment requirements (for "low-volume" consumer bills) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998)]*

• RPC deliv mechanism

8% Rebate – Size Based on System Costs

- *[Show cost of providing electricity service and resulting size of 8% rebate]*

Fixed cost

- New slide = benefits by customer type
- What to do about BPS? munis.

Option 2 – Expand ICI + Proceeds Recycling and Expand RPP

ICI and RPP Expansion – Overview

- *[Lower the threshold for participation in ICI to increase participation in ICI.]*
  - *[New ICI participants who are able to reduce their electricity demand during peak demand periods.]*
  - *[Relative to status quo, existing Class A consumers would see marginal change. Offer proceeds recycling for the expanded Class A to meet public commitments.]*

- *[If the Class B consumer base is further reduced, it could be replaced with an expansion of RPP. This would address public criticism associated with the non-blended rate (complaints about high Global Adjustment charges), increase efficiency by implementing time-of-use rates for all small consumers, and simplify bills. Remaining Class B ineligible for ICI to pay blended prices via RPP TOU.]*

Considerations

- *[Compared to a 8% tax funded rebate, this option represents a lower fiscal impact. However, the expansion of Class A could impact TOU prices.]*

- *[Amendments to O. Reg. 429/04 and to O. Reg. 442/04 (made under the Electricity Act, 1998) would be required]*

Expand RPP Eligibility to 1 MW

- *[Illustrate estimated impacts on current non-RPP Class B consumers such as restaurants, grocery stores, schools, offices, etc.]*

Implementation Considerations

Implementation Considerations

Local Distribution Companies (LDCs) and Unit Sub-Metering Providers (USMPs)

- Consultations with LDCs and USMPs required to ensure any implementation issues are addressed.
- Based upon implementation of OCEB and the implementation of a 3,000 kWh per month cap, some LDCs and USMPs require lead time of at least six months for billing, system, and process changes.
    - LDCs and USMPs that were not prepared by the implementation dates were required to provide the OCEB retroactively.

OCEB Reporting Portal

- The Ministry's OCEB Reporting Portal that LDCs and USMPs were required to submit data into on a monthly basis has not been taken down, and in December 2015, the Ministry contacted them, stating that until they hear otherwise, they should continue entering data.
    - It is possible that this portal could be re-purposed for a new program.

Independent Power Authorities – (unsure if IPAs pay HST.....)

- The OCEB program did not include the ten Independent Power Authorities (IPAs) in remote First Nations communities, but instead created a separate OCEB program that kept the basic design of the OCEB.
- Contracts for each of the ten IPAs were drafted and IPAs were required to sign them in order to participate and receive a rebate. Despite Ministry support, only 4 IPAs ended up participating.

Implementation Considerations

Cap Impact on Multi-unit Complexes

- The previous OCEB cap provided bulk metered and unit sub-metered buildings with up to 3,000 kWh per month multiplied by the number of units (E.g. 10 units * 3,000). Since most units only used a fraction of the cap space, the residual amount was available for common area meters which typically account for a large portion of building consumption.
    - LDC metered buildings common area meters were limited to only 3,000 kWh, creating an inequity between LDC and bulk/ USMP metered buildings

Clarity On Eligibility

- The OCEB Act definition of eligible account did not provide clarity on whether certain customers qualified, such as long term care homes, and school residences.
- ENERGY will need to provide LDCs and USMPs wording that must appear on invoices
- Sufficient lead-time of at least six months would be required to ensure LDCs have sufficient time to make billing, system and process changes.

Agency Role

- OEB should be consulted and assist in addressing any consumer or utility complaints or inquiries.
- IESO should be consulted since they would submit monthly claims received by LDCs and USMPs to the Ministry, which in turn would work with the Ontario Financing Authority to process these claims in a timely manner

Ministry of Finance Audit Function

- Audit measures under regulation and legislation would ensure the Ministry of Finance could complete audits of LDCs and USMPs to ensure the funds are provided to customers correctly.

Next Steps section noted
- legislation
- comms
- Fiscal plan offset

Communications

Public Communications

- Initiatives would be included in the Fall Economic Statement
- The suite of initiatives can be announced as a package (5-point plan) to emphasize more than just the fiscal aspects:
  1. **HST offset**: universal benefit acknowledging the broad contribution to clean power across Ontario
  2. **RRRP realignment**: Assistance for customers most sensitive to the price of delivering power
  3. **ICI expansion**: improving business competitiveness for businesses of all size in all sectors
  4. **Consumer tools for ongoing efficiency**: Creating a bill that is clear, easy to understand; implementing CCAP commitment for universal Green Button "Connect My Data"
  5. **Helping First Nations:** OEB directive to address bills for on-reserve First Nation households

Stakeholder considerations

- Engaging LDCs to communicate changes consistently and effectively to all classes of customer
- Clear OEB direction and LDC communication on short- and long-term implications for bill presentment
- Managing expectations if these changes are announced in Fall 2016, mid-consultation on LTEP
- Public education campaign, particularly in early 2017 when first bills will still include taxable 2016 power consumption

Key Messages

- Electricity is the backbone of our economy and a household essential
- These actions are part of our ongoing commitment to keep electricity in Ontario clean, reliable and affordable
- We closed coal plants and eliminated almost all of the emissions from our electricity sector. Everyone contributed to making this happen, and everyone should benefit from this cost offset.
- We're keeping Ontario businesses competitive. Businesses of all size in all sectors can now benefit from paying lower rates (and avoiding using energy at peak times?)
- We have directed the OEB to address the cost of power for First Nations communities, as we committed to do under the Political Accord.
- Consumers deserve better information and better tools to help them better manage their energy use. We will design an electricity bill that is clearer and easier to understand, and we will ensure that every Ontarian, no matter who their utility is, will have access to apps and other digital energy management tools.

Appendix

Industrial Conservation Initiative

- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered from 3 MW to 2 MW.
- Such manufacturers fall under NAICs code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

Consumer Classes

Status Quo	RPP < 0.05 MW	Class B 0.05 – 3 MW	Class A 3+ MW
After ICI Expansion	RPP < 0.05 MW	Class B 0.05 – 1 MW	Class A 1+ MW

- The regulated price plan (RPP) consumer class contains nearly all residential consumers and some small businesses. They pay a blended commodity rate regulated by the Ontario Energy Board.
- Class B includes many small and mid-sized industrial and commercial consumers. Their commodity rate is not blended or regulated.
- If the Class B consumer base is further reduced, it could be replaced with an expansion of RPP. This would address public criticism associated with the non-blended rate (complaints about high Global Adjustment charges), increase efficiency by implementing time-of-use rates for all small consumers, and simplify bills.

After ICI and RPP expansion	RPP 0.05 - 1MW	Industrial Rate Class 1+ MW

Analysis of Further Expanding ICI Eligibility

- Since the implementation of ICI, ENERGY has been studying the impact of further lowering the threshold for participation.
- In general, expanding ICI has the effect of
  - Reducing electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reducing electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increasing the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.
- The following slides discuss the expected impact of expanding the ICI eligibility threshold from 3 MW to 1 MW and allowing all consumer types into the program, including commercial and institutional consumers.

Analysis of Further Expanding ICI Eligibility

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short term	Up to 21%	80	47	Increase of $0.42/month
Long term	Up to 34%	165	82	Increase of $0.74/month

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - 'Short-term' refers to the expected impact once ICI billing begins for new Class A customers (one year after expanded eligibility takes place).
  - 'Long-term' is the expected impact once new Class A customers have had time to significantly change their behaviour and investment decisions in response to the ICI.

Expected Numbers of Eligible Consumers

- As part of their ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

	1-2 MW	2-3 MW	3-5 MW*
# of customers – ICI survey	649	197	171
# of customers – Adjusted for response rate	854	259	225

Source: Navigant; Ministry of Energy

* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

Options for HST Relief on Electricity Bills for Low-Volume Consumers

Tax Policy Division
Ministry of Finance
August 17, 2016

Decisions Required:

- Scope of relief – which electricity users: residential, small business, farms, industrial, public service bodies?
- Mechanism of delivery:
    - Reducing HST charged on electricity bills from 13% to 5% (the remaining federal portion) through a federally-administered point-of-sale rebate under the Canada-Ontario HST agreement?
    - Providing an 8% provincial rebate on electricity bills (to account for the provincial portion of the HST)?
    - Providing targeted relief through the income tax system?
- Permanent or temporary relief?

Key Considerations:

- The Ministry of Energy forecasts that electricity prices will continue to increase over the next several years.
- Providing relief equivalent to the provincial portion of the HST on electricity would be one way of reducing the total cost to consumers.
    - The provincial portion of the HST on electricity is 8%. The federal portion is 5%.
- Any tax measures to reduce electricity bills would entail a fiscal cost for the Province and essentially shift a portion of the cost of electricity from ratepayers to taxpayers.
- Broad relief could be provided by way of a federally-administered point-of-sale rebate of the provincial portion of the HST (subject to federal agreement) or a broad provincial rebate (similar to the former Ontario Clean Energy Benefit).
    - The amount of HST attributable to residential electricity bills is estimated to be around $700 million in 2016-17 and $735 million in 2017-18.
    - Providing relief of the HST on electricity could lead to pressure for relief from the HST on home heating (which would cost an estimated $380 million in 2016-17).
    - Existing targeted relief for low- and moderate-income individuals could be reduced to (partially) offset the cost of providing broad relief of the HST on residential electricity.
- If Ontario removed or rebated the HST paid on residential electricity, the OEPTC energy amount should be reduced in parallel.Reducing the cost of electricity could contradict Ontario's energy conservation and environmental goals.
- Removing HST from electricity bills would provide a larger benefit to higher-income households.

HST on Electricity:

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
  - In general, the HST is consistent with the GST and follows the same rules and tax base.
  - Electricity has been taxed under GST since its inception.
- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
  - Under the HST (a value-added tax), businesses generally can claim an input tax credit to recover the HST paid on purchases and operating expenses related to the business's commercial activities. Commercial activities include selling taxable goods and/or taxable services.
  - A business engaged in commercial activities can claim an input tax credit for the HST it pays in the course of operating its business. For example, if a business purchased electricity in the course of operating its business (e.g. for lighting, operating machinery, heating) it would claim an input tax credit for the HST it paid on its electricity bill, effectively reducing the HST it paid on the electricity to zero.
- Unlike businesses engaged in commercial activities, Public Service Bodies are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid through claiming Public Sector Body Rebates.
  - Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

Option 1 – Federally-administered point-of-sale rebate

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
    - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
    - See appendix for additional criteria.
- At $735 million and growing, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
    - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.
- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
    - The federal government may not agree.
        - It could object out of concern that other HST-participating provinces would request similar exceptions to their respective HST agreements.
        - It could also object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.
- The federal government may not agree to allow a POS rebate only for residential electricity if it is of the view that it would be difficult for electricity companies to comply with the rebate or for the Canada Revenue Agency (CRA) to administer the rebate.

Option 2 – Provincial rebate on bills

- The HST agreement has no limitations on provincial rebates since the CRA would play no role in administering them.
- The Province could introduce an 8% reduction on consumers' electricity bills (equivalent to the provincial portion of the HST). The structure and administration could be similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB), which provided a 10% reduction.
    - The OCEB cost about $1.2 billion per year and ended on December 31, 2015.
    - Other measures to help mitigate electricity costs have been implemented (such as the Ontario Electricity Support Program) in addition to the tax credits implemented at the time of transition to HST.
- A provincial rebate could be somewhat more targeted that a federally-administered rebate.
    - For example, a cap for total electricity consumption eligible for the rebate could be set, as was done for OCEB (3,000 kWh per month).
- A provincial rebate could give rise to opportunities for "double dipping" by some businesses and institutions.
    - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in "double dipping."
    - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.
- Renters who do not pay electricity bills directly would not get any direct benefit.
- Nova Scotia has a provincial rebate that applies to all sources of residential use energy including electricity, home heating fuel, natural gas, propane, firewood, wood pellets, coal, and kerosene.
    - It appears on the electricity bills similar to the way OCEB appeared on bills in Ontario.

Option 3 – Mitigation through tax credits

- Ontario could make changes to tax credits and benefits it provides through the Personal Income Tax system to help lower-income Ontarians with their electricity costs.
- Fiscal impacts shown in the table correspond to examples provided.

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	**Fiscal Impact ($M)**
(1) Increase the OEPTC energy amount o The OEPTC energy amount could be increased (e.g., by $50 from $224 to $274).	60 (sales tax revenue reduction)
(2) Create a new electricity tax credit o For greater visibility, a separate annual Electricity Bill Tax Credit could be delivered through the PIT system (e.g., as part of the Ontario Trillium Benefit) Amounts could be notional (e.g. up to $100) or based on electricity use.	190 (new program cost)
(3) Increase the NOEC amounts o The NOEC amounts could be increased (e.g., by $50, from $146 to $196 per single individual and from $224 to $299 per family).	10 (increase in program cost)

- Tax credits are legal entitlements and are provided to all who qualify. Funding cannot be capped.
- The OEPTC energy component and the NOEC are notional and not based on usage. Home energy receipts are not required in most cases. For that reason,
  - Enhancing the OEPTC or NOEC would help those whose electricity costs are included in rent.
  - Households composed of several tax families could receive more than one credit amount. Some households may also be receiving the OESP.
- Renters who do not pay electricity bills directly would not get any help from a tax credit based on electricity use, because they would not be able to provide required receipts.

Appendix – Current Mitigation

A number of tax measures currently exist to provide relief with respect to residential energy costs (including electricity) and taxes on residential electricity consumption.

Programs to provide electricity cost relief to businesses are not included below.

Measure	Target group	Benefit Amount	Fiscal Impact
Energy component of the Ontario Energy and Property Tax Credit	Low- to moderate-income	$224 per eligible family or single person (2016 benefit year)	$445 million (offsets sales tax revenue)
Ontario Sales Tax Credit	Low- to moderate-income	$291 per eligible individual plus $291 for their spouse and each of their eligible children (2016 benefit year)	$1.3 billion (offsets sales tax revenue)
Northern Ontario Energy Credit	Ontarians living in the North	$146 per eligible single person. $224 per eligible family (2016 benefit year)	$25 million (program expense)
Debt Retirement Charge Exemption	Residential electricity users	Average of $70 per year till DRC ends on April 1, 2018	$330 million (program expense)
Ontario Electricity Support Program	Low-income	$360 -$600 per year (increased if high electricity usage related to medical devices)	Ratepayer funded

See next page for more details about these programs.

Appendix – Current Mitigation (cont'd)

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.
- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.
- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to their more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.
- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - Removing the Debt Retirement Charge (DRC) cost from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage to power medical devices can get monthly assistance of $45 to $75.

Appendix – Cap and Trade and Energy Costs

Impact on Electricity Costs

- The Climate Change Action Plan (CCAP), released in June 2016, re-stated the 2016 Budget announcement that electricity costs will not increase as a result of cap and trade.[1,2]
- The CCAP specified that this will be achieved by allocating between $1 billion and $1.32 billion from cap and trade proceeds to fund greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.[3]
- Commercial and industrial users will see no change in electricity costs.
- Residential consumers will see a modest benefit of up to $2/month.

Impact on Other Energy Costs

- Cap and trade is expected to increase the costs of other energy sources.
- Budget 2016 included estimates from the Ministry of the Environment and Climate Change of the increased cost in 2017 once the cap and trade program is in operation.[4]
    - Gasoline prices are expected to increase by 4.3 cents per litre.
    - Natural gas prices are expected to increase by 3.3 cents per cubic metre (about $5 per month for the average household or facility).
    - These estimates do not include HST, which will apply to any increase in the price of energy.

Appendix – Overview of the HST

Comprehensive Integrated Tax Coordination Agreement (CITCA)

The CITCA is the HST agreement between Canada and Ontario.

- The HST is established under federal legislation (the Excise Tax Act).
- The Canada Revenue Agency collects, administers and enforces the HST.
- The federal government is the policy lead on all HST matters. Ontario is bound by any federal tax base changes or rulings.
- Any change to the HST in Ontario requires, at a minimum, changes to federal regulations.

Under the CITCA, Ontario maintains flexibility in particular areas, including the ability to designate items or services as eligible for a POS rebate of the 8% provincial portion of the HST, subject to certain constraints:

- The cost of the new rebate must not exceed Ontario's POS "room" (the total value of POS rebates must not exceed 5% of the Goods and Services Tax base in Ontario).
- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to determine the expenditure in the Province attributable to the item or service.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

Appendix – Overview of the HST (cont'd)

Process to Create a New POS Rebate

If Ontario wishes to make a permitted change to the HST, the amendment process in CITCA must be followed, which would take a minimum of four months, unless Canada and Ontario agree otherwise.

1. Ontario must give at least 120 days' notice of the proposed HST change to the federal government (effective date could be earlier or later if agreed to by the parties).
   - The effective date of the HST change must be January 1, April 1 or July 1. It may only be October 1 if mutually agreed.
2. Ontario must give 60 days' notice to the public of the proposed HST change (unless the federal government agrees otherwise).
3. After the public announcement, Ontario must obtain the approval of the provincial Legislature (e.g., by way of motion) to make the HST change (unless the federal government agrees otherwise).
4. Canada must amend Cabinet regulations to implement the HST change, and make transitional rules.
5. To implement a new point-of-sale rebate, the *Retail Sales Tax Act* and regulations must be amended.
6. The Minister of Finance of Ontario and the Minister of Finance of Canada must amend CITCA in writing.

Appendix – Jurisdictional Scan – Sales Taxes on Energy:

Jurisdiction	Tax	Business	Residential	Comment
British Columbia	PST	Yes – 7%	No	PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling BC's carbon tax does not apply to electricity bills.
Alberta	None	N/A	N/A	Alberta does not have a provincial sales tax.
Saskatchewan	PST	Yes – 5% Except for electricity purchased to heat a building.	No	PST does not apply to electricity purchased for use in a residential dwelling. PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity.
Manitoba	PST	Yes – 8% Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery	Yes -8% Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity purchased solely to heat the purchaser's home is exempt.	Winnipeg also applies a tax of 2.5% on residential and 5% on commercial.
Ontario	HST DRC	Yes (less ITCs) Yes until April 2018	Yes – 8% No	DRC, which is generally a flat rate of 0.7 cents per kWh, will end for all users on April 1, 2018.
Quebec	QST	Yes (less ITCs)	Yes – 9.975%	
Nova Scotia	HST	Yes (less ITCs)	Yes – 10% less provincially administered rebate.	*Your Energy Rebate* is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources.
New Brunswick	HST	Yes (less ITCs)	Yes – 10%	
Prince Edward Island	HST	Yes (less ITCs)	Yes – 9% (10% beginning Oct 1, 2016)	
Newfoundland and Labrador	HST	Yes (less ITCs)	Yes – 10%	Nfld had a provincially administered Home Heating Rebate program until July 2015

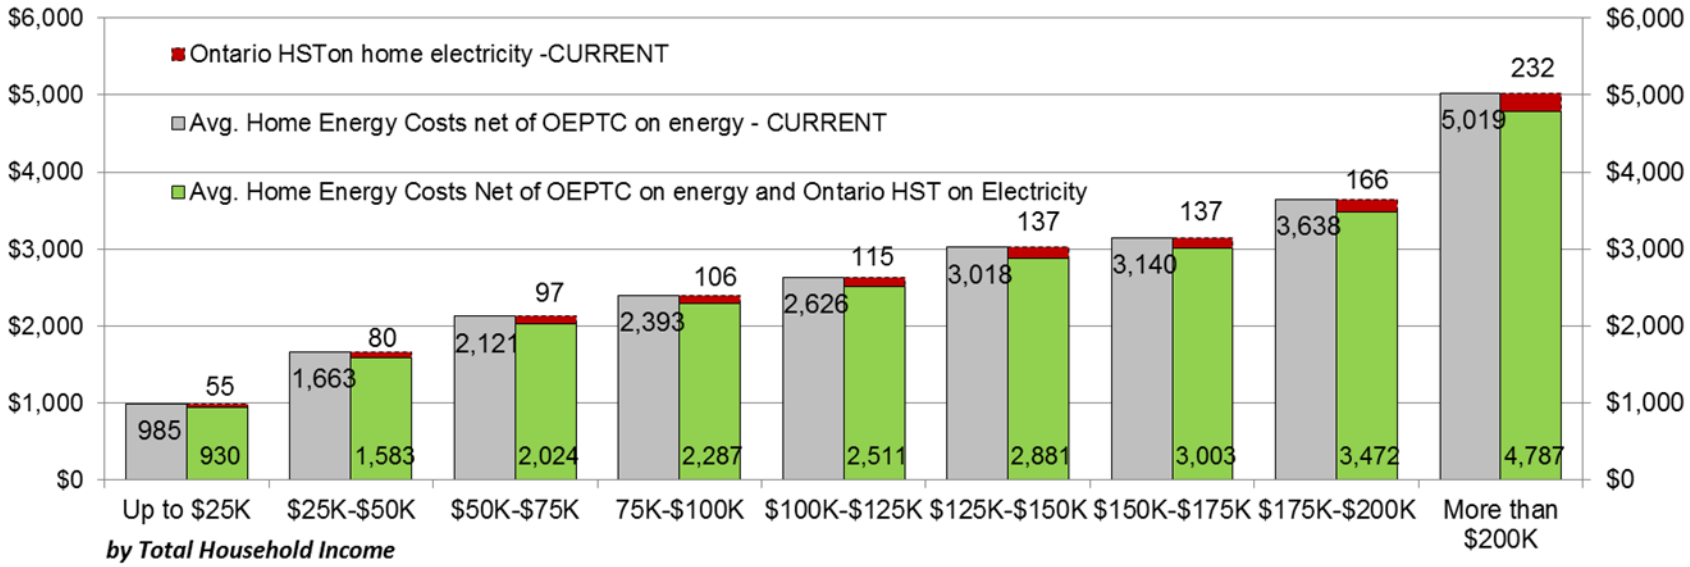
Federal	GST	Yes (less ITCs)	Yes – 5%	

* In this table, the HST rates refer to the provincial portion of the rate.

Appendix – Home Energy Costs Paid by Ontario Households:

- The provincial portion of HST on electricity represents a small share of the overall home energy costs paid by Ontario households.
- Average home energy costs shown in the chart below are net of the sales tax relief on home energy households get through the Ontario Energy and Property Tax Credit (OEPTC).

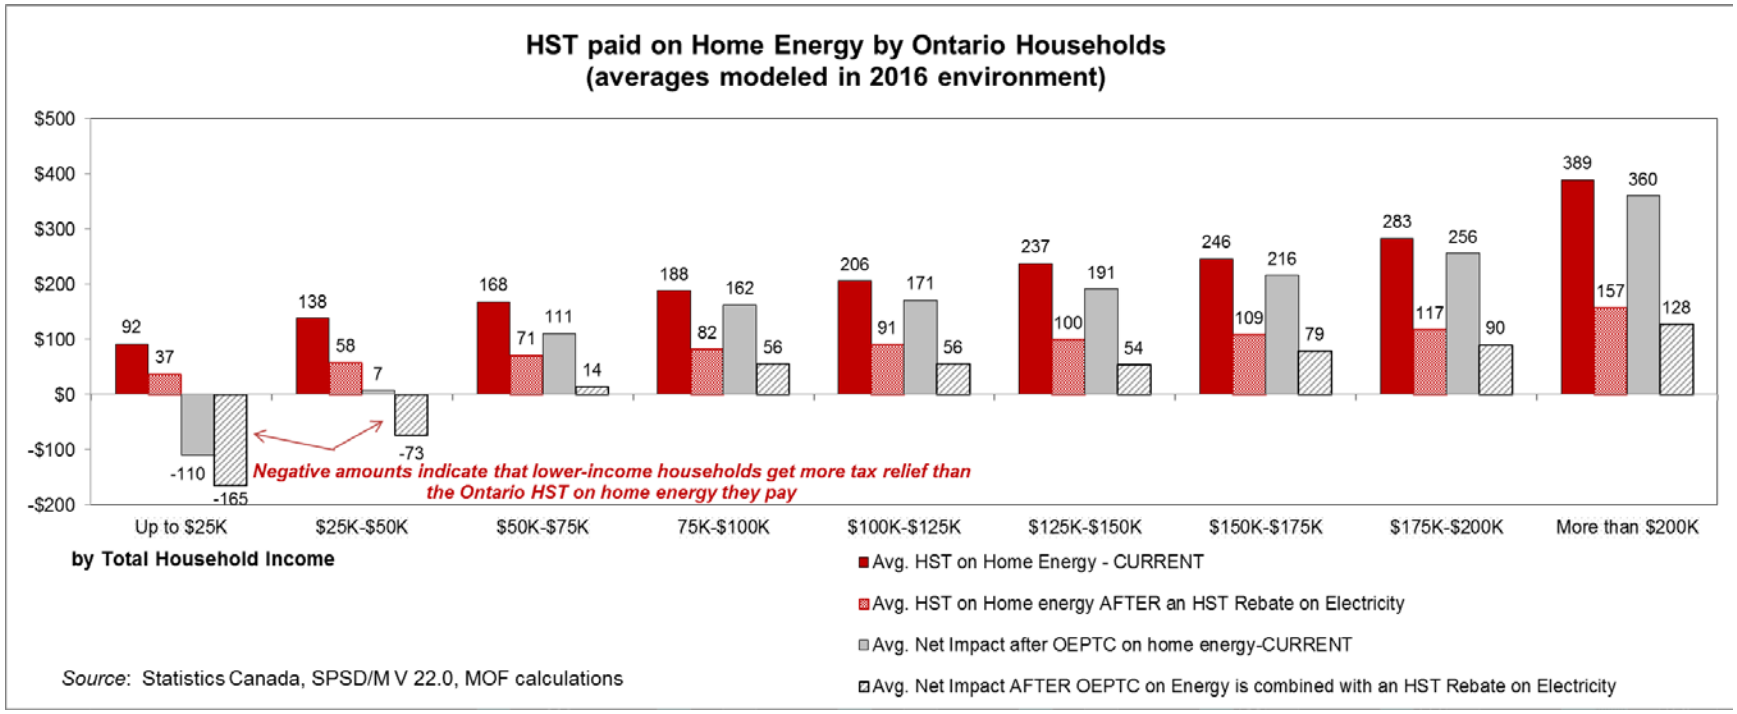
Annual Home Energy Costs of Ontario Households (averages modeled 2016 environment)



Source: SPSD/M V22.0, Statistics Canada, MOF calculations.

Appendix – HST on Home Energy paid by Ontario Households

- When combined with the energy component of the OEPTC, removing the Ontario HST on electricity would provide average relief in excess of the average Ontario HST on home energy paid by households with less than $50,000 of income.
- Removing HST from electricity bills would provide a larger benefit to higher-income households than to lower-income households.



Options for HST Relief on Electricity Bills for Low-Volume Consumers

Tax Policy Division
Ministry of Finance
August 17, 2016

Decisions Required:

- Scope of relief – which electricity users: residential, small business, farms, industrial, public service bodies?
- Mechanism of delivery:
    - Reducing HST charged on electricity bills from 13% to 5% (the remaining federal portion) through a federally-administered point-of-sale rebate under the Canada-Ontario HST agreement?
    - Providing an 8% provincial rebate on electricity bills (to account for the provincial portion of the HST)?
    - Providing targeted relief through the income tax system?
- Permanent or temporary relief?

Key Considerations:

- The Ministry of Energy forecasts that electricity prices will continue to increase over the next several years.
- Providing relief equivalent to the provincial portion of the HST on electricity would be one way of reducing the total cost to consumers.
    - The provincial portion of the HST on electricity is 8%. The federal portion is 5%.
- Any tax measures to reduce electricity bills would entail a fiscal cost for the Province and essentially shift a portion of the cost of electricity from ratepayers to taxpayers.
- Broad relief could be provided by way of a federally-administered point-of-sale rebate of the provincial portion of the HST (subject to federal agreement) or a broad provincial rebate (similar to the former Ontario Clean Energy Benefit).
    - The amount of HST attributable to residential electricity bills is estimated to be around $700 million in 2016-17 and $735 million in 2017-18.
    - Providing relief of the HST on electricity could lead to pressure for relief from the HST on home heating (which would cost an estimated $380 million in 2016-17).
    - Existing targeted relief for low- and moderate-income individuals could be reduced to (partially) offset the cost of providing broad relief of the HST on residential electricity.
- If Ontario removed or rebated the HST paid on residential electricity, the OEPTC energy amount should be reduced in parallel. Reducing the cost of electricity could contradict Ontario's energy conservation and environmental goals.
- Removing HST from electricity bills would provide a larger benefit to higher-income households.

Commented [JK1]: The provincial portion.

Commented [JK2]: Same as above.

HST on Electricity:

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
  - In general, the HST is consistent with the GST and follows the same rules and tax base.
  - Electricity has been taxed under GST since its inception.
- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
  - Under the HST (a value-added tax), businesses generally can claim an input tax credit to recover the HST paid on purchases and operating expenses related to the business's commercial activities. Commercial activities include selling taxable goods and/or taxable services.
  - A business engaged in commercial activities can claim an input tax credit for the HST it pays in the course of operating its business. For example, if a business purchased electricity in the course of operating its business (e.g. for lighting, operating machinery, heating) it would claim an input tax credit for the HST it paid on its electricity bill, effectively reducing the HST it paid on the electricity to zero.
- Unlike businesses engaged in commercial activities, Public Service Bodies are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid through claiming Public Sector Body Rebates.
  - Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

Option 1 – Federally-administered point-of-sale rebate

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
    - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
    - See appendix for additional criteria.
- At $735 million and growing, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
    - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.
- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
    - The federal government may not agree.
        - It could object out of concern that other HST-participating provinces would request similar exceptions to their respective HST agreements.
        - It could also object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.
- The federal government may not agree to allow a POS rebate only for residential electricity if it is of the view that it would be difficult for electricity companies to comply with the rebate or for the Canada Revenue Agency (CRA) to administer the rebate.

Option 2 – Provincial rebate on bills

- The HST agreement has no limitations on provincial rebates since the CRA would play no role in administering them.
- The Province could introduce an 8% reduction on consumers' electricity bills (equivalent to the provincial portion of the HST). The structure and administration could be similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB), which provided a 10% reduction.
  - The OCEB cost about $1.2 billion per year and ended on December 31, 2015.
  - Other measures to help mitigate electricity costs have been implemented (such as the Ontario Electricity Support Program) in addition to the tax credits implemented at the time of transition to HST.
- A provincial rebate could be somewhat more targeted ~~that~~ than a federally-administered rebate.
  - For example, a cap for total electricity consumption eligible for the rebate could be set, as was done for OCEB (3,000 kWh per month).
- A provincial rebate could give rise to opportunities for "double dipping" by some businesses and institutions.
  - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in "double dipping."
  - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.
- Renters who do not pay electricity bills directly would not get any direct benefit.
- Nova Scotia has a provincial rebate that applies to all sources of residential use energy including electricity, home heating fuel, natural gas, propane, firewood, wood pellets, coal, and kerosene.
  - It appears on the electricity bills similar to the way OCEB appeared on bills in Ontario.

Commented [JK3]: Seems high.

Option 3 – Mitigation through tax credits

- Ontario could make changes to tax credits and benefits it provides through the Personal Income Tax system to help lower-income Ontarians with their electricity costs.
- Fiscal impacts shown in the table correspond to examples provided.

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	Fiscal Impact ($M)
(1) Increase the OEPTC energy amount o The OEPTC energy amount could be increased (e.g., by $50 from $224 to $274).	60 (sales tax revenue reduction)
(2) Create a new electricity tax credit o For greater visibility, a separate annual Electricity Bill Tax Credit could be delivered through the PIT system (e.g., as part of the Ontario Trillium Benefit) Amounts could be notional (e.g. up to $100) or based on electricity use.	190 (new program cost)
(3) Increase the NOEC amounts o The NOEC amounts could be increased (e.g., by $50, from $146 to $196 per single individual and from $224 to $299 per family).	10 (increase in program cost)

- Tax credits are legal entitlements and are provided to all who qualify. Funding cannot be capped.
- The OEPTC energy component and the NOEC are notional and not based on usage. Home energy receipts are not required in most cases. For that reason,
  - Enhancing the OEPTC or NOEC would help those whose electricity costs are included in rent.
  - Households composed of several tax families could receive more than one credit amount. Some households may also be receiving the OESP.
- Renters who do not pay electricity bills directly would not get any help from a tax credit based on electricity use, because they would not be able to provide required receipts.

Appendix – Current Mitigation

A number of tax measures currently exist to provide relief with respect to residential energy costs (including electricity) and taxes on residential electricity consumption.

Programs to provide electricity cost relief to businesses are not included below.

Measure	Target group	Benefit Amount	Fiscal Impact
Energy component of the Ontario Energy and Property Tax Credit	Low- to moderate-income	$224 per eligible family or single person (2016 benefit year)	$445 million (offsets sales tax revenue)
Ontario Sales Tax Credit	Low- to moderate-income	$291 per eligible individual plus $291 for their spouse and each of their eligible children (2016 benefit year)	$1.3 billion (offsets sales tax revenue)
Northern Ontario Energy Credit	Ontarians living in the North	$146 per eligible single person. $224 per eligible family (2016 benefit year)	$25 million (program expense)
Debt Retirement Charge Exemption	Residential electricity users	Average of $70 per year till DRC ends on April 1, 2018	$330 million (program expense)
Ontario Electricity Support Program	Low-income	$360 -$600 per year (increased if high electricity usage related to medical devices)	Ratepayer funded

See next page for more details about these programs.

Appendix – Current Mitigation (cont'd)

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.
- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.
- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to their more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.
- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - Removing the Debt Retirement Charge (DRC) cost from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage to power medical devices can get monthly assistance of $45 to $75.

Appendix – Cap and Trade and Energy Costs

Impact on Electricity Costs

- The Climate Change Action Plan (CCAP), released in June 2016, re-stated the 2016 Budget announcement that electricity costs will not increase as a result of cap and trade.[1,2]
- The CCAP specified that this will be achieved by allocating between $1 billion and $1.32 billion from cap and trade proceeds to fund greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.[3]
- Commercial and industrial users will see no change in electricity costs.
- Residential consumers will see a modest benefit of up to $2/month.

Impact on Other Energy Costs

- Cap and trade is expected to increase the costs of other energy sources.
- Budget 2016 included estimates from the Ministry of the Environment and Climate Change of the increased cost in 2017 once the cap and trade program is in operation.[4]
    - Gasoline prices are expected to increase by 4.3 cents per litre.
    - Natural gas prices are expected to increase by 3.3 cents per cubic metre (about $5 per month for the average household or facility).
    - These estimates do not include HST, which will apply to any increase in the price of energy.

Appendix – Overview of the HST

Comprehensive Integrated Tax Coordination Agreement (CITCA)

The CITCA is the HST agreement between Canada and Ontario.

- The HST is established under federal legislation (the Excise Tax Act).
- The Canada Revenue Agency collects, administers and enforces the HST.
- The federal government is the policy lead on all HST matters. Ontario is bound by any federal tax base changes or rulings.
- Any change to the HST in Ontario requires, at a minimum, changes to federal regulations.

Under the CITCA, Ontario maintains flexibility in particular areas, including the ability to designate items or services as eligible for a POS rebate of the 8% provincial portion of the HST, subject to certain constraints:

- The cost of the new rebate must not exceed Ontario's POS "room" (the total value of POS rebates must not exceed 5% of the Goods and Services Tax base in Ontario).
- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to determine the expenditure in the Province attributable to the item or service.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

Appendix – Overview of the HST (cont'd)

Process to Create a New POS Rebate

If Ontario wishes to make a permitted change to the HST, the amendment process in CITCA must be followed, which would take a minimum of four months, unless Canada and Ontario agree otherwise.

1. Ontario must give at least 120 days' notice of the proposed HST change to the federal government (effective date could be earlier or later if agreed to by the parties).
   - The effective date of the HST change must be January 1, April 1 or July 1. It may only be October 1 if mutually agreed.
2. Ontario must give 60 days' notice to the public of the proposed HST change (unless the federal government agrees otherwise).
3. After the public announcement, Ontario must obtain the approval of the provincial Legislature (e.g., by way of motion) to make the HST change (unless the federal government agrees otherwise).
4. Canada must amend Cabinet regulations to implement the HST change, and make transitional rules.
5. To implement a new point-of-sale rebate, the *Retail Sales Tax Act* and regulations must be amended.
6. The Minister of Finance of Ontario and the Minister of Finance of Canada must amend CITCA in writing.

Appendix – Jurisdictional Scan – Sales Taxes on Energy:

Jurisdiction	Tax	Business	Residential	Comment
British Columbia	PST	Yes – 7%	No	PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling BC's carbon tax does not apply to electricity bills.
Alberta	None	N/A	N/A	Alberta does not have a provincial sales tax.
Saskatchewan	PST	Yes – 5% Except for electricity purchased to heat a building.	No	PST does not apply to electricity purchased for use in a residential dwelling. PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity.
Manitoba	PST	Yes – 8% Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery	Yes -8% Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity purchased solely to heat the purchaser's home is exempt.	Winnipeg also applies a tax of 2.5% on residential and 5% on commercial.
Ontario	HST DRC	Yes (less ITCs) Yes until April 2018	Yes – 8% No	DRC, which is generally a flat rate of 0.7 cents per kWh, will end for all users on April 1, 2018.
Quebec	QST	Yes (less ITCs)	Yes – 9.975%	
Nova Scotia	HST	Yes (less ITCs)	Yes – 10% less provincially administered rebate.	*Your Energy Rebate* is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources.
New Brunswick	HST	Yes (less ITCs)	Yes – 10%	
Prince Edward Island	HST	Yes (less ITCs)	Yes – 9% (10% beginning Oct 1, 2016)	
Newfoundland and Labrador	HST	Yes (less ITCs)	Yes – 10%	Nfld had a provincially administered Home Heating Rebate program until July 2015

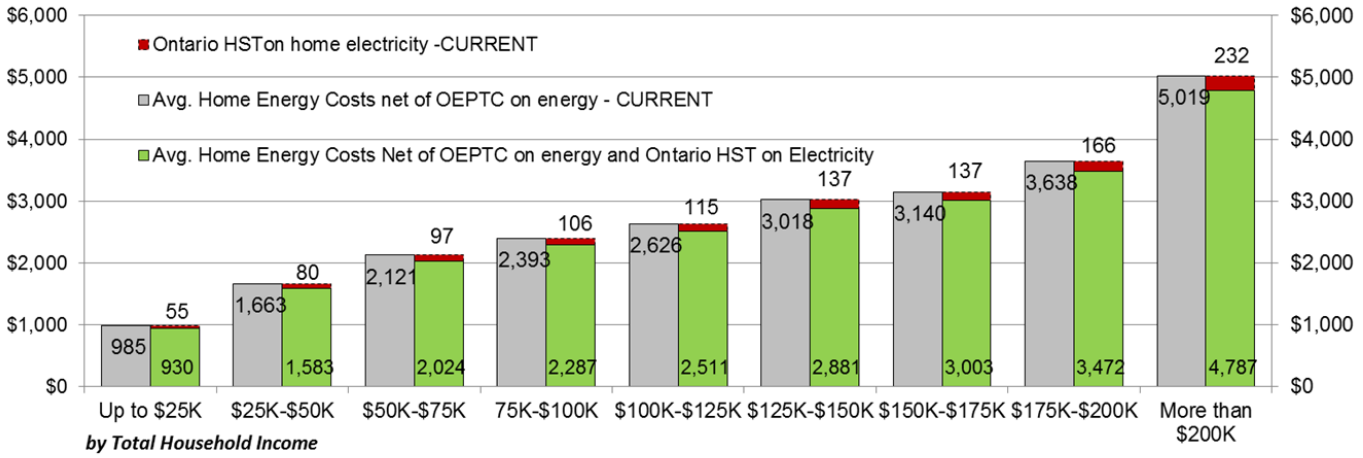
Federal	GST	Yes (less ITCs)	Yes – 5%	

* In this table, the HST rates refer to the provincial portion of the rate.

Appendix – Home Energy Costs Paid by Ontario Households:

- The provincial portion of HST on electricity represents a small share of the overall home energy costs paid by Ontario households.
- Average home energy costs shown in the chart below are net of the sales tax relief on home energy households get through the Ontario Energy and Property Tax Credit (OEPTC).

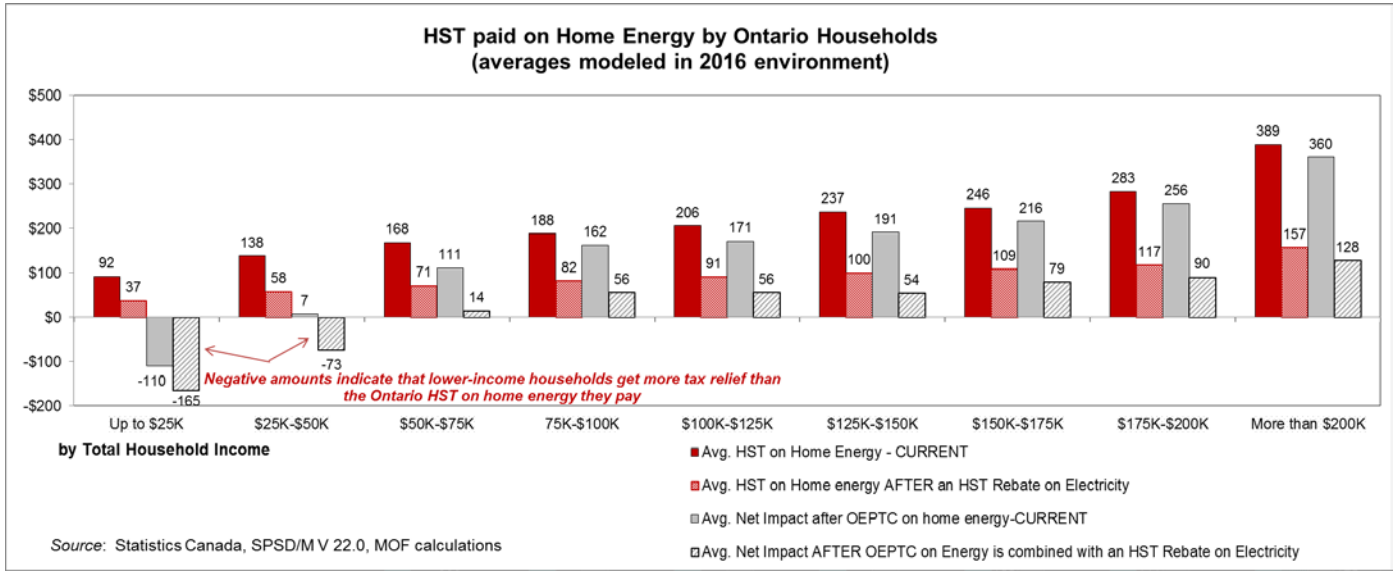
Annual Home Energy Costs of Ontario Households
(averages modeled 2016 environment)



Source: SPSD/M V22.0, Statistics Canada, MOF calculations.

Appendix – HST on Home Energy paid by Ontario Households

- When combined with the energy component of the OEPTC, removing the Ontario HST on electricity would provide average relief in excess of the average Ontario HST on home energy paid by households with less than $50,000 of income.
- Removing HST from electricity bills would provide a larger benefit to higher-income households than to lower-income households.



Options for HST Relief on Electricity Bills for Low-Volume Consumers

Tax Policy Division
Ministry of Finance
August 17, 2016

Decisions Required:

- Scope of relief – which electricity users: residential, small business, farms, industrial, public service bodies?
- Mechanism of delivery:
    - Reducing HST charged on electricity bills from 13% to 5% (the remaining federal portion) through a federally-administered point-of-sale rebate under the Canada-Ontario HST agreement?
    - Providing an 8% provincial rebate on electricity bills (to account for the provincial portion of the HST)?
    - Providing targeted relief through the income tax system?
- Permanent or temporary relief?

Key Considerations:

- The Ministry of Energy forecasts that electricity prices will continue to increase over the next several years.
- Providing relief equivalent to the provincial portion of the HST on electricity would be one way of reducing the total cost to consumers.
    - The provincial portion of the HST on electricity is 8%. The federal portion is 5%.
- Any tax measures to reduce electricity bills would entail a fiscal cost for the Province and essentially shift a portion of the cost of electricity from ratepayers to taxpayers.
- Broad relief could be provided by way of a federally-administered point-of-sale rebate of the provincial portion of the HST (subject to federal agreement) or a broad provincial rebate (similar to the former Ontario Clean Energy Benefit).
    - The amount of HST attributable to residential electricity bills is estimated to be around $700 million in 2016-17 and $735 million in 2017-18.
    - Providing relief of the HST on electricity could lead to pressure for relief from the HST on home heating (which would cost an estimated $380 million in 2016-17).
    - Existing targeted relief for low- and moderate-income individuals could be reduced to (partially) offset the cost of providing broad relief of the HST on residential electricity.
- If Ontario removed or rebated the HST paid on residential electricity, the OEPTC energy amount should be reduced in parallel. Reducing the cost of electricity could contradict Ontario's energy conservation and environmental goals.
- Removing HST from electricity bills would provide a larger benefit to higher-income households.

Commented [JK1]: The provincial portion.

Commented [JK2]: Same as above.

HST on Electricity:

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
  - In general, the HST is consistent with the GST and follows the same rules and tax base.
  - Electricity has been taxed under GST since its inception.
- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
  - Under the HST (a value-added tax), businesses generally can claim an input tax credit to recover the HST paid on purchases and operating expenses related to the business's commercial activities. Commercial activities include selling taxable goods and/or taxable services.
  - A business engaged in commercial activities can claim an input tax credit for the HST it pays in the course of operating its business. For example, if a business purchased electricity in the course of operating its business (e.g. for lighting, operating machinery, heating) it would claim an input tax credit for the HST it paid on its electricity bill, effectively reducing the HST it paid on the electricity to zero.
- Unlike businesses engaged in commercial activities, Public Service Bodies are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid through claiming Public Sector Body Rebates.
  - Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

Option 1 – Federally-administered point-of-sale rebate

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
    - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
    - See appendix for additional criteria.
- At $735 million and growing, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
    - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.
- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
    - The federal government may not agree.
        - It could object out of concern that other HST-participating provinces would request similar exceptions to their respective HST agreements.
        - It could also object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.
- The federal government may not agree to allow a POS rebate only for residential electricity if it is of the view that it would be difficult for electricity companies to comply with the rebate or for the Canada Revenue Agency (CRA) to administer the rebate.

Option 2 – Provincial rebate on bills

- The HST agreement has no limitations on provincial rebates since the CRA would play no role in administering them.
- The Province could introduce an 8% reduction on consumers' electricity bills (equivalent to the provincial portion of the HST). The structure and administration could be similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB), which provided a 10% reduction.
  - The OCEB cost about $1.2 billion per year and ended on December 31, 2015.
  - Other measures to help mitigate electricity costs have been implemented (such as the Ontario Electricity Support Program) in addition to the tax credits implemented at the time of transition to HST.
- A provincial rebate could be somewhat more targeted ~~that~~ than a federally-administered rebate.
  - For example, a cap for total electricity consumption eligible for the rebate could be set, as was done for OCEB (3,000 kWh per month).
- A provincial rebate could give rise to opportunities for "double dipping" by some businesses and institutions.
  - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in "double dipping."
  - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.
- Renters who do not pay electricity bills directly would not get any direct benefit.
- Nova Scotia has a provincial rebate that applies to all sources of residential use energy including electricity, home heating fuel, natural gas, propane, firewood, wood pellets, coal, and kerosene.
  - It appears on the electricity bills similar to the way OCEB appeared on bills in Ontario.

Commented [JK3]: Seems high.

Option 3 – Mitigation through tax credits

- Ontario could make changes to tax credits and benefits it provides through the Personal Income Tax system to help lower-income Ontarians with their electricity costs.
- Fiscal impacts shown in the table correspond to examples provided.

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	Fiscal Impact ($M)
(1) Increase the OEPTC energy amount o The OEPTC energy amount could be increased (e.g., by $50 from $224 to $274).	60 (sales tax revenue reduction)
(2) Create a new electricity tax credit o For greater visibility, a separate annual Electricity Bill Tax Credit could be delivered through the PIT system (e.g., as part of the Ontario Trillium Benefit) Amounts could be notional (e.g. up to $100) or based on electricity use.	190 (new program cost)
(3) Increase the NOEC amounts o The NOEC amounts could be increased (e.g., by $50, from $146 to $196 per single individual and from $224 to $299 per family).	10 (increase in program cost)

- Tax credits are legal entitlements and are provided to all who qualify. Funding cannot be capped.
- The OEPTC energy component and the NOEC are notional and not based on usage. Home energy receipts are not required in most cases. For that reason,
  - Enhancing the OEPTC or NOEC would help those whose electricity costs are included in rent.
  - Households composed of several tax families could receive more than one credit amount. Some households may also be receiving the OESP.
- Renters who do not pay electricity bills directly would not get any help from a tax credit based on electricity use, because they would not be able to provide required receipts.

Interest on overdue amounts is calculated at 1.5% per month or part thereof (19.56% per annum).

Appendix – Current Mitigation

A number of tax measures currently exist to provide relief with respect to residential energy costs (including electricity) and taxes on residential electricity consumption.

Programs to provide electricity cost relief to businesses are not included below.

Measure	Target group	Benefit Amount	Fiscal Impact
Energy component of the Ontario Energy and Property Tax Credit	Low- to moderate-income	$224 per eligible family or single person (2016 benefit year)	$445 million (offsets sales tax revenue)
Ontario Sales Tax Credit	Low- to moderate-income	$291 per eligible individual plus $291 for their spouse and each of their eligible children (2016 benefit year)	$1.3 billion (offsets sales tax revenue)
Northern Ontario Energy Credit	Ontarians living in the North	$146 per eligible single person. $224 per eligible family (2016 benefit year)	$25 million (program expense)
Debt Retirement Charge Exemption	Residential electricity users	Average of $70 per year till DRC ends on April 1, 2018	$330 million (program expense)
Ontario Electricity Support Program	Low-income	$360 -$600 per year (increased if high electricity usage related to medical devices)	Ratepayer funded

See next page for more details about these programs.

Appendix – Current Mitigation (cont'd)

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.
- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.
- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to their more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.
- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - Removing the Debt Retirement Charge (DRC) cost from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage to power medical devices can get monthly assistance of $45 to $75.

Appendix – Cap and Trade and Energy Costs

Impact on Electricity Costs

- The Climate Change Action Plan (CCAP), released in June 2016, re-stated the 2016 Budget announcement that electricity costs will not increase as a result of cap and trade.[1,2]
- The CCAP specified that this will be achieved by allocating between $1 billion and $1.32 billion from cap and trade proceeds to fund greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.[3]
- Commercial and industrial users will see no change in electricity costs.
- Residential consumers will see a modest benefit of up to $2/month.

Impact on Other Energy Costs

- Cap and trade is expected to increase the costs of other energy sources.
- Budget 2016 included estimates from the Ministry of the Environment and Climate Change of the increased cost in 2017 once the cap and trade program is in operation.[4]
    - Gasoline prices are expected to increase by 4.3 cents per litre.
    - Natural gas prices are expected to increase by 3.3 cents per cubic metre (about $5 per month for the average household or facility).
    - These estimates do not include HST, which will apply to any increase in the price of energy.

Appendix – Overview of the HST

Comprehensive Integrated Tax Coordination Agreement (CITCA)

The CITCA is the HST agreement between Canada and Ontario.

- The HST is established under federal legislation (the Excise Tax Act).
- The Canada Revenue Agency collects, administers and enforces the HST.
- The federal government is the policy lead on all HST matters. Ontario is bound by any federal tax base changes or rulings.
- Any change to the HST in Ontario requires, at a minimum, changes to federal regulations.

Under the CITCA, Ontario maintains flexibility in particular areas, including the ability to designate items or services as eligible for a POS rebate of the 8% provincial portion of the HST, subject to certain constraints:

- The cost of the new rebate must not exceed Ontario's POS "room" (the total value of POS rebates must not exceed 5% of the Goods and Services Tax base in Ontario).
- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to determine the expenditure in the Province attributable to the item or service.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

Appendix – Overview of the HST (cont'd)

Process to Create a New POS Rebate

If Ontario wishes to make a permitted change to the HST, the amendment process in CITCA must be followed, which would take a minimum of four months, unless Canada and Ontario agree otherwise.

1. Ontario must give at least 120 days' notice of the proposed HST change to the federal government (effective date could be earlier or later if agreed to by the parties).
   - The effective date of the HST change must be January 1, April 1 or July 1. It may only be October 1 if mutually agreed.
2. Ontario must give 60 days' notice to the public of the proposed HST change (unless the federal government agrees otherwise).
3. After the public announcement, Ontario must obtain the approval of the provincial Legislature (e.g., by way of motion) to make the HST change (unless the federal government agrees otherwise).
4. Canada must amend Cabinet regulations to implement the HST change, and make transitional rules.
5. To implement a new point-of-sale rebate, the *Retail Sales Tax Act* and regulations must be amended.
6. The Minister of Finance of Ontario and the Minister of Finance of Canada must amend CITCA in writing.

Appendix – Jurisdictional Scan – Sales Taxes on Energy:

Jurisdiction	Tax	Business	Residential	Comment
British Columbia	PST	Yes – 7%	No	PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling BC's carbon tax does not apply to electricity bills.
Alberta	None	N/A	N/A	Alberta does not have a provincial sales tax.
Saskatchewan	PST	Yes – 5% Except for electricity purchased to heat a building.	No	PST does not apply to electricity purchased for use in a residential dwelling. PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity.
Manitoba	PST	Yes – 8% Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery	Yes -8% Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity purchased solely to heat the purchaser's home is exempt.	Winnipeg also applies a tax of 2.5% on residential and 5% on commercial.
Ontario	HST DRC	Yes (less ITCs) Yes until April 2018	Yes – 8% No	DRC, which is generally a flat rate of 0.7 cents per kWh, will end for all users on April 1, 2018.
Quebec	QST	Yes (less ITCs)	Yes – 9.975%

Newfoundland and Labrador	HST	Yes (less ITCs)	Yes – 10%	Nfld had a provincially administered Home Heating Rebate program until July 2015

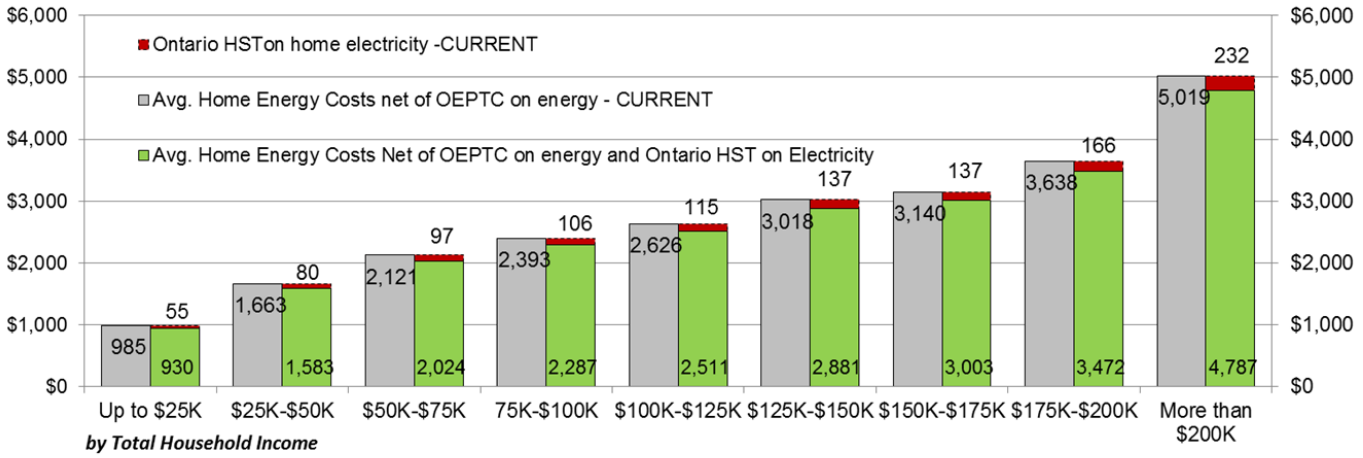
Federal	GST	Yes (less ITCs)	Yes – 5%	

* In this table, the HST rates refer to the provincial portion of the rate.

Appendix – Home Energy Costs Paid by Ontario Households:

- The provincial portion of HST on electricity represents a small share of the overall home energy costs paid by Ontario households.
- Average home energy costs shown in the chart below are net of the sales tax relief on home energy households get through the Ontario Energy and Property Tax Credit (OEPTC).

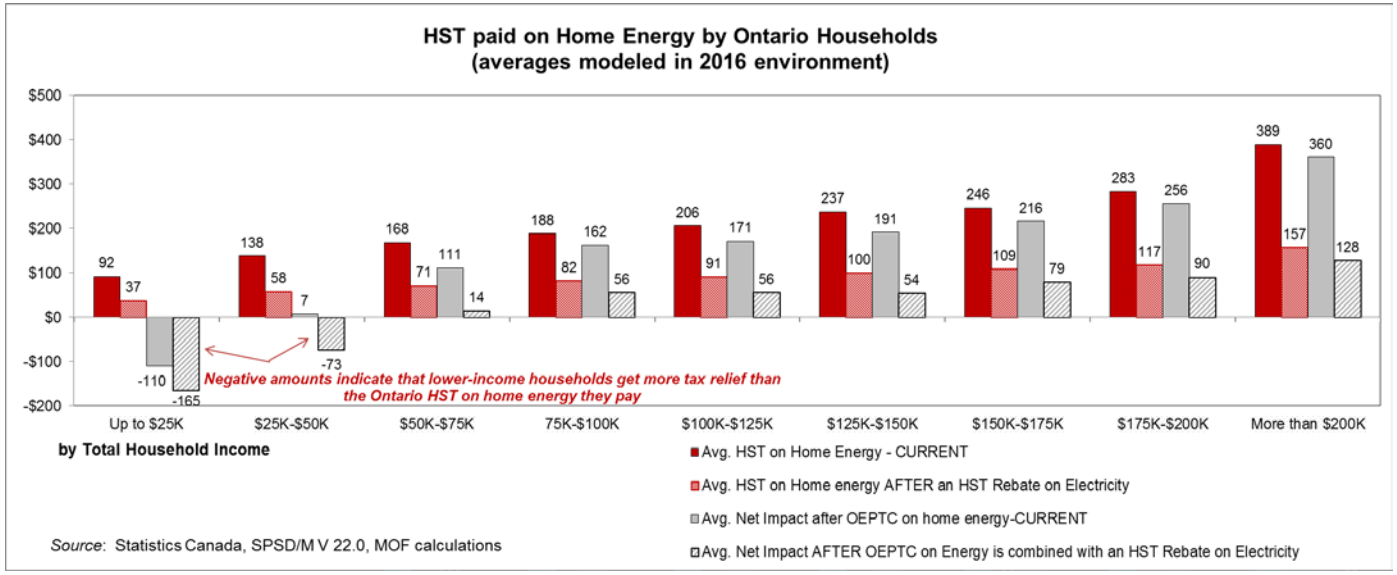
Annual Home Energy Costs of Ontario Households
(averages modeled 2016 environment)



Source: SPSD/M V22.0, Statistics Canada, MOF calculations.

Appendix – HST on Home Energy paid by Ontario Households

- When combined with the energy component of the OEPTC, removing the Ontario HST on electricity would provide average relief in excess of the average Ontario HST on home energy paid by households with less than $50,000 of income.
- Removing HST from electricity bills would provide a larger benefit to higher-income households than to lower-income households.



Options for HST Relief on Electricity Bills for Low-Volume Consumers

Tax Policy Division
Ministry of Finance
August 17, 2016

Decisions Required:

- Scope of relief – which electricity users: residential, small business, farms, industrial, public service bodies?
- Mechanism of delivery:
    - Reducing HST charged on electricity bills from 13% to 5% (the remaining federal portion) through a federally-administered point-of-sale rebate under the Canada-Ontario HST agreement?
    - Providing an 8% provincial rebate on electricity bills (to account for the provincial portion of the HST)?
    - Providing targeted relief through the income tax system?
- Permanent or temporary relief?

Key Considerations:

- The Ministry of Energy forecasts that electricity prices will continue to increase over the next several years.
- Providing relief equivalent to the provincial portion of the HST on electricity would be one way of reducing the total cost to consumers.
    - The provincial portion of the HST on electricity is 8%. The federal portion is 5%.
- Any tax measures to reduce electricity bills would entail a fiscal cost for the Province and essentially shift a portion of the cost of electricity from ratepayers to taxpayers.
- Broad relief could be provided by way of a federally-administered point-of-sale rebate of the provincial portion of the HST (subject to federal agreement) or a broad provincial rebate (similar to the former Ontario Clean Energy Benefit).
    - The amount of HST attributable to residential electricity bills is estimated to be around $700 million in 2016-17 and $735 million in 2017-18.
    - Providing relief of the HST on electricity could lead to pressure for relief from the HST on home heating (which would cost an estimated $380 million in 2016-17).
    - Existing targeted relief for low- and moderate-income individuals could be reduced to (partially) offset the cost of providing broad relief of the HST on residential electricity.
- If Ontario removed or rebated the HST paid on residential electricity, the OEPTC energy amount should be reduced in parallel. Reducing the cost of electricity could contradict Ontario's energy conservation and environmental goals.
- Removing HST from electricity bills would provide a larger benefit to higher-income households.

Commented [JK1]: The provincial portion.

Commented [JK2]: Same as above.

HST on Electricity:

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
  - In general, the HST is consistent with the GST and follows the same rules and tax base.
  - Electricity has been taxed under GST since its inception.
- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
  - Under the HST (a value-added tax), businesses generally can claim an input tax credit to recover the HST paid on purchases and operating expenses related to the business's commercial activities. Commercial activities include selling taxable goods and/or taxable services.
  - A business engaged in commercial activities can claim an input tax credit for the HST it pays in the course of operating its business. For example, if a business purchased electricity in the course of operating its business (e.g. for lighting, operating machinery, heating) it would claim an input tax credit for the HST it paid on its electricity bill, effectively reducing the HST it paid on the electricity to zero.
- Unlike businesses engaged in commercial activities, Public Service Bodies are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid through claiming Public Sector Body Rebates.
  - Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

REBATE RATES FOR PSBs		
PSB Type	**Ontario (8%)**	**Federal (5%)**
Municipalities	78%	100%
Universities & Public Colleges	78%	67%
School Authorities	93%	68%
Hospital Authorities	87%	83%
Charities and Qualifying Non-Profit Organizations*	82%	50%

**A qualifying non-profit organization receives at least 40% of its funding from government.*

Option 1 – Federally-administered point-of-sale rebate

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
    - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
    - See appendix for additional criteria.
- At $735 million and growing, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
    - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.
- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
    - The federal government may not agree.
        - It could object out of concern that other HST-participating provinces would request similar exceptions to their respective HST agreements.
        - It could also object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.
- The federal government may not agree to allow a POS rebate only for residential electricity if it is of the view that it would be difficult for electricity companies to comply with the rebate or for the Canada Revenue Agency (CRA) to administer the rebate.

Option 2 – Provincial rebate on bills

- The HST agreement has no limitations on provincial rebates since the CRA would play no role in administering them.
- The Province could introduce an 8% reduction on consumers' electricity bills (equivalent to the provincial portion of the HST). The structure and administration could be similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB), which provided a 10% reduction.
  - The OCEB cost about $1.2 billion per year and ended on December 31, 2015.
  - Other measures to help mitigate electricity costs have been implemented (such as the Ontario Electricity Support Program) in addition to the tax credits implemented at the time of transition to HST.
- A provincial rebate could be somewhat more targeted ~~that~~ than a federally-administered rebate.
  - For example, a cap for total electricity consumption eligible for the rebate could be set, as was done for OCEB (3,000 kWh per month).
- A provincial rebate could give rise to opportunities for "double dipping" by some businesses and institutions.
  - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in "double dipping."
  - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.
- Renters who do not pay electricity bills directly would not get any direct benefit.
- Nova Scotia has a provincial rebate that applies to all sources of residential use energy including electricity, home heating fuel, natural gas, propane, firewood, wood pellets, coal, and kerosene.
  - It appears on the electricity bills similar to the way OCEB appeared on bills in Ontario.

Commented [JK3]: Seems high.

Option 3 – Mitigation through tax credits

- Ontario could make changes to tax credits and benefits it provides through the Personal Income Tax system to help lower-income Ontarians with their electricity costs.
- Fiscal impacts shown in the table correspond to examples provided.

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	Fiscal Impact ($M)
(1) Increase the OEPTC energy amount o The OEPTC energy amount could be increased (e.g., by $50 from $224 to $274).	60 (sales tax revenue reduction)
(2) Create a new electricity tax credit o For greater visibility, a separate annual Electricity Bill Tax Credit could be delivered through the PIT system (e.g., as part of the Ontario Trillium Benefit) Amounts could be notional (e.g. up to $100) or based on electricity use.	190 (new program cost)
(3) Increase the NOEC amounts o The NOEC amounts could be increased (e.g., by $50, from $146 to $196 per single individual and from $224 to $299 per family).	10 (increase in program cost)

- Tax credits are legal entitlements and are provided to all who qualify. Funding cannot be capped.
- The OEPTC energy component and the NOEC are notional and not based on usage. Home energy receipts are not required in most cases. For that reason,
  - Enhancing the OEPTC or NOEC would help those whose electricity costs are included in rent.
  - Households composed of several tax families could receive more than one credit amount. Some households may also be receiving the OESP.
- Renters who do not pay electricity bills directly would not get any help from a tax credit based on electricity use, because they would not be able to provide required receipts.

Appendix – Current Mitigation

A number of tax measures currently exist to provide relief with respect to residential energy costs (including electricity) and taxes on residential electricity consumption.

Programs to provide electricity cost relief to businesses are not included below.

Measure	Target group	Benefit Amount	Fiscal Impact
Energy component of the Ontario Energy and Property Tax Credit	Low- to moderate-income	$224 per eligible family or single person (2016 benefit year)	$445 million (offsets sales tax revenue)
Ontario Sales Tax Credit	Low- to moderate-income	$291 per eligible individual plus $291 for their spouse and each of their eligible children (2016 benefit year)	$1.3 billion (offsets sales tax revenue)
Northern Ontario Energy Credit	Ontarians living in the North	$146 per eligible single person. $224 per eligible family (2016 benefit year)	$25 million (program expense)
Debt Retirement Charge Exemption	Residential electricity users	Average of $70 per year till DRC ends on April 1, 2018	$330 million (program expense)
Ontario Electricity Support Program	Low-income	$360 -$600 per year (increased if high electricity usage related to medical devices)	Ratepayer funded

See next page for more details about these programs.

Appendix – Current Mitigation (cont'd)

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.
- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.
- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to their more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.
- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - Removing the Debt Retirement Charge (DRC) cost from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage to power medical devices can get monthly assistance of $45 to $75.

Appendix – Cap and Trade and Energy Costs

Impact on Electricity Costs

- The Climate Change Action Plan (CCAP), released in June 2016, re-stated the 2016 Budget announcement that electricity costs will not increase as a result of cap and trade.[1,2]
- The CCAP specified that this will be achieved by allocating between $1 billion and $1.32 billion from cap and trade proceeds to fund greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.[3]
- Commercial and industrial users will see no change in electricity costs.
- Residential consumers will see a modest benefit of up to $2/month.

Impact on Other Energy Costs

- Cap and trade is expected to increase the costs of other energy sources.
- Budget 2016 included estimates from the Ministry of the Environment and Climate Change of the increased cost in 2017 once the cap and trade program is in operation.[4]
    - Gasoline prices are expected to increase by 4.3 cents per litre.
    - Natural gas prices are expected to increase by 3.3 cents per cubic metre (about $5 per month for the average household or facility).
    - These estimates do not include HST, which will apply to any increase in the price of energy.

Appendix – Overview of the HST

Comprehensive Integrated Tax Coordination Agreement (CITCA)

The CITCA is the HST agreement between Canada and Ontario.

- The HST is established under federal legislation (the Excise Tax Act).
- The Canada Revenue Agency collects, administers and enforces the HST.
- The federal government is the policy lead on all HST matters. Ontario is bound by any federal tax base changes or rulings.
- Any change to the HST in Ontario requires, at a minimum, changes to federal regulations.

Under the CITCA, Ontario maintains flexibility in particular areas, including the ability to designate items or services as eligible for a POS rebate of the 8% provincial portion of the HST, subject to certain constraints:

- The cost of the new rebate must not exceed Ontario's POS "room" (the total value of POS rebates must not exceed 5% of the Goods and Services Tax base in Ontario).
- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to determine the expenditure in the Province attributable to the item or service.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

Appendix – Overview of the HST (cont'd)

Process to Create a New POS Rebate

If Ontario wishes to make a permitted change to the HST, the amendment process in CITCA must be followed, which would take a minimum of four months, unless Canada and Ontario agree otherwise.

1. Ontario must give at least 120 days' notice of the proposed HST change to the federal government (effective date could be earlier or later if agreed to by the parties).
   - The effective date of the HST change must be January 1, April 1 or July 1. It may only be October 1 if mutually agreed.
2. Ontario must give 60 days' notice to the public of the proposed HST change (unless the federal government agrees otherwise).
3. After the public announcement, Ontario must obtain the approval of the provincial Legislature (e.g., by way of motion) to make the HST change (unless the federal government agrees otherwise).
4. Canada must amend Cabinet regulations to implement the HST change, and make transitional rules.
5. To implement a new point-of-sale rebate, the *Retail Sales Tax Act* and regulations must be amended.
6. The Minister of Finance of Ontario and the Minister of Finance of Canada must amend CITCA in writing.

Appendix – Jurisdictional Scan – Sales Taxes on Energy:

Jurisdiction	Tax	Business	Residential	Comment
British Columbia	PST	Yes – 7%	No	PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling BC's carbon tax does not apply to electricity bills.
Alberta	None	N/A	N/A	Alberta does not have a provincial sales tax.
Saskatchewan	PST	Yes – 5% Except for electricity purchased to heat a building.	No	PST does not apply to electricity purchased for use in a residential dwelling. PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity.
Manitoba	PST	Yes – 8% Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery	Yes -8% Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity purchased solely to heat the purchaser's home is exempt.	Winnipeg also applies a tax of 2.5% on residential and 5% on commercial.
Ontario	HST DRC	Yes (less ITCs) Yes until April 2018	Yes – 8% No	DRC, which is generally a flat rate of 0.7 cents per kWh, will end for all users on April 1, 2018.
Quebec	QST	Yes (less ITCs)	Yes – 9.975%	
Nova Scotia	HST	Yes (less ITCs)	Yes – 10% less provincially administered rebate.	*Your Energy Rebate* is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources.
New Brunswick	HST	Yes (less ITCs)	Yes – 10%	
Prince Edward Island	HST	Yes (less ITCs)	Yes – 9% (10% beginning Oct 1, 2016)	
Newfoundland and Labrador	HST	Yes (less ITCs)	Yes – 10%	Nfld had a provincially administered Home Heating Rebate program until July 2015

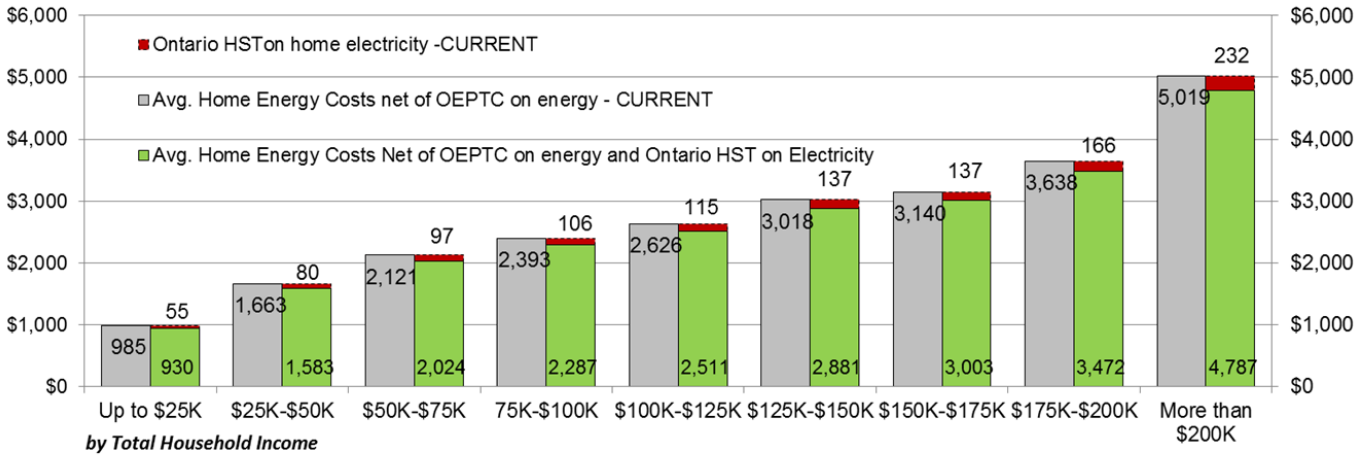
Federal	GST	Yes (less ITCs)	Yes – 5%	

* In this table, the HST rates refer to the provincial portion of the rate.

Appendix – Home Energy Costs Paid by Ontario Households:

- The provincial portion of HST on electricity represents a small share of the overall home energy costs paid by Ontario households.
- Average home energy costs shown in the chart below are net of the sales tax relief on home energy households get through the Ontario Energy and Property Tax Credit (OEPTC).

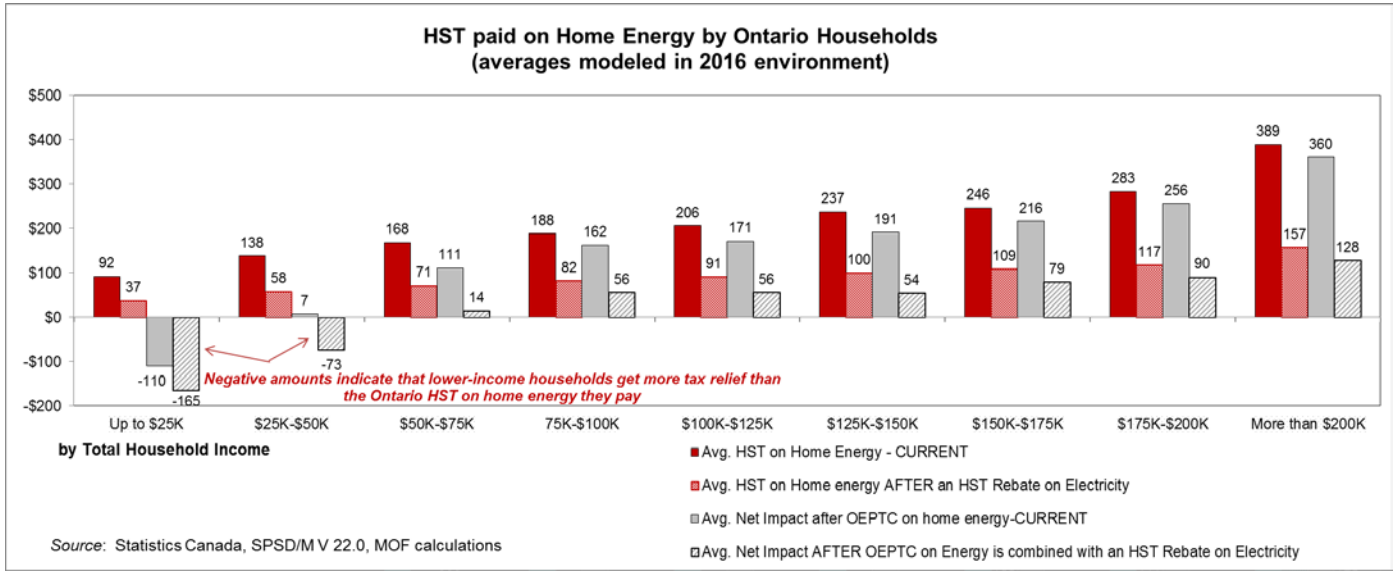
Annual Home Energy Costs of Ontario Households
(averages modeled 2016 environment)



Source: SPSD/M V22.0, Statistics Canada, MOF calculations.

Appendix – HST on Home Energy paid by Ontario Households

- When combined with the energy component of the OEPTC, removing the Ontario HST on electricity would provide average relief in excess of the average Ontario HST on home energy paid by households with less than $50,000 of income.
- Removing HST from electricity bills would provide a larger benefit to higher-income households than to lower-income households.



Options for Mitigating Electricity Prices through the Tax System

DRAFT

Tax Policy Division
Ministry of Finance
August 15, 2016

Purpose:

The Ministry of Energy (ENERGY) is proposing to remove the provincial portion of the Harmonized Sales Tax (HST) from electricity bills as a means of mitigating increasing electricity prices.

This deck provides options and key considerations with respect to tax measures to reduce the cost of electricity seen by residential consumers on their bills.

DRAFT

Key Considerations:

- The Ministry of Energy forecasts that electricity prices will continue to increase over the next several years.
- Taxes such as the Harmonized Sales Tax are not the primary cause of increasing electricity prices in Ontario; however, providing relief from the provincial portion of the HST on electricity would be one way of reducing the price seen by consumers on their bills.
    - The provincial portion of the HST on electricity is 8%. The federal portion is 5%.
- Any tax measures to reduce residential electricity bills would entail a fiscal cost for the Province and essentially shift a portion of the cost of electricity from ratepayers to taxpayers.
- Broad, comprehensive relief could be provided by way of a federally-administered point-of-sale rebate (subject to federal agreement) or a provincially-administered rebate (similar to the former Ontario Clean Energy Benefit, or OCEB).
    - The amount of HST attributable to residential electricity bills is estimated to be around $735 million in 2017-18. [need something to indicate growth rate]
- Ontario already provides relief to low- to moderate-income individuals and families for the sales tax they pay through the Ontario Sales Tax Credit and the Ontario Energy and Property Tax Credit (OEPTC) and for energy costs through the Ontario Electricity Support Program and the Northern Ontario Energy Credit.
    - This targeted relief could be enhanced or broadened.
- If the government proceeds with broad, comprehensive relief of HST on electricity, other existing relief targeted at low- and moderate-income individuals could be reduced.
- Any relief could be a time-limited or permanent.

DRAFT

- [c&t impact: - issue #2 from Lynn's email, including use of C&T proceeds to fund an electricity POS]

Formatted: Font: (Default) Arial, 16 pt, Font color: Text 1

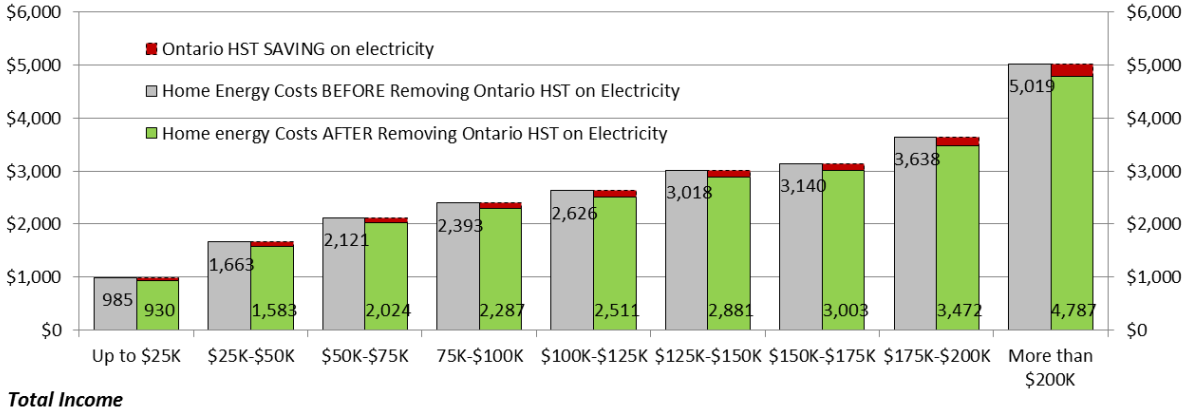
Formatted: Font: (Default) Arial, Font color: Text 1

DRAFT

Home Energy Costs of Ontario Households:

- The provincial portion of HST on electricity represents a small share of the overall home energy costs paid by Ontario households. Show HST#s above red bars
- Average home energy costs shown in the chart below are net of the ~~sales~~ tax relief on home energy households get through the spell OEPTC.

Average Annual Home Energy Costs in Ontario by Household Income, 2016



Total Income

Source: SPSD/M V22.0, Statistics Canada, MOF calculations.

Notes: The average Ontario HST on home energy costs is net of the tax relief households receive through the energy component of the OEPTC that provides sales tax relief for home energy. The average amounts of Ontario HST do not reflect sales tax relief that households receive through the Ontario Sales Tax Credit, and the relief from energy costs they may get through the Northern Ontario Energy Credit or the OEB's Ontario Electricity Support Program.

Alignment with Other Provincial Policy Priorities: delete page

- Using tax measures to mitigate increasing electricity costs could align with the Premier's Office / Cabinet Office "Making Everyday Life Easier for Ontarians" initiative.
- Broad, comprehensive relief from the HST on electricity could undermine the government's ongoing efforts to encourage energy conservation and could lead to higher greenhouse gas emissions.
    - Reducing the total cost of electricity paid by electricity consumers reduces the incentive to conserve electricity.
    - Natural gas (a source of greenhouse gas emissions) accounted for 9% of Ontario's electricity generation in 2014 and 2015. This figure is expected to grow when nuclear units are taken offline in the coming years (e.g., for refurbishment).[1]
    - Ontario's Long-Term Energy Plan, released in 2013, projected that greenhouse gas emissions from Ontario's electricity sector would increase over the next two decades.
- Proceeds from Ontario's forthcoming cap and trade program must be used for programs that reduce or support the reduction of greenhouse gas emissions. Reducing the cost of electricity for residential consumers is likely not an eligible expenditure.

DRAFT

[1] Natural gas accounted for about 28% of Ontario's installed energy capacity in June 2016, according to the IESO.

Current Mitigation

A number of tax measures currently exist to provide relief with respect to residential energy costs (including electricity) and taxes on residential electricity consumption.

Programs to provide electricity cost relief to businesses are not included below.

Measure	Target group	Benefit Amount	Fiscal Impact
Energy component of the Ontario Energy and Property Tax Credit	Low- to moderate-income	$224 per eligible family or single person (2016 benefit year)	$445 million
Ontario Sales Tax Credit	Low- to moderate-income	$291 per eligible individual plus $291 for their spouse and each of their eligible children (2016 benefit year)	$1.3 billion
Northern Ontario Energy Credit	Ontarians living in the North	$146 per eligible single person. $224 per eligible family (2016 benefit year)	$25 million
Debt Retirement Charge Exemption	Residential electricity users	Average of $70 per year till DRC ends	TBC
Ontario Electricity Support Program	Low-income	$360 -$600 per year (increased if high electricity usage related to medical devices)	Ratepayer funded
Cap and Trade delete	Residential electricity users	Up to $24 per year ($2/month), on average	TBC (residential share of total $1 billion and $1.32 billion over five years)

See appendix for more details about these programs.

DRAFT

Options:

Options for using the tax system to reduce the price of electricity on consumers' electricity bills:

1. Federally-administered Point of Sale rebate of the provincial portion of the HST
2. Provincially-administered rebate on bills (similar to the Ontario Clean Energy Benefit)
3. Targeted Mitigation through Tax Credits or Social Assistance

DRAFT

Option 1 – Federally-administered Point of Sale rebate

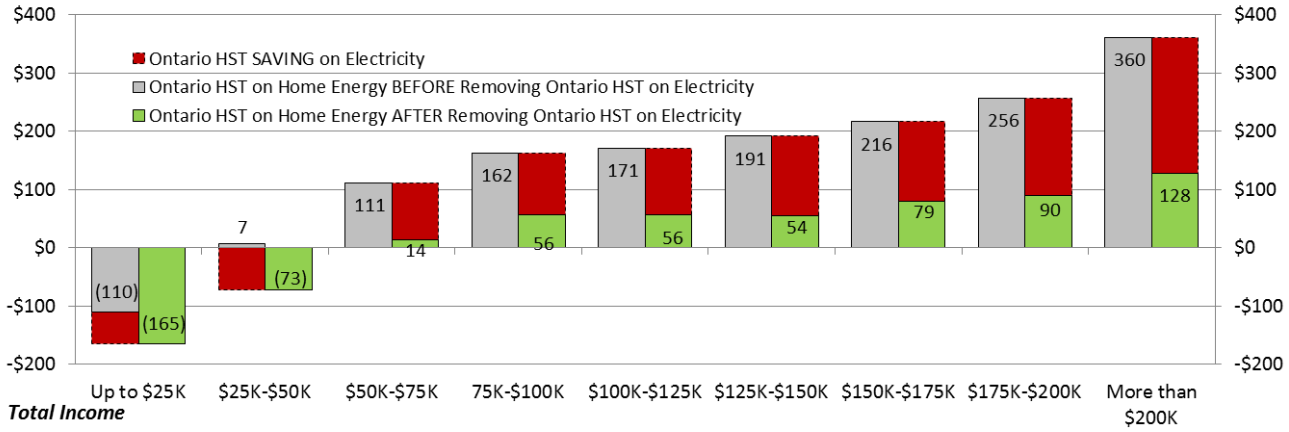
- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
    - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
    - See appendix for additional criteria.
- At $735 million and growing, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
    - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.
- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
    - The federal government may not agree.
        - It could object out of concern that other HST-participating provinces would request similar exceptions to their respective HST agreements.
        - It could also object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.

DRAFT

Option 1 – Federally-administered Point of Sale rebate (cont'd)

- When combined with the energy component of the OEPTC, removing the Ontario HST on electricity would provide average relief in excess of the average Ontario HST on home energy paid by households with less than $50,000 of income. Need to be clearer on low income labels below
- Removing HST from electricity bills would provide a larger benefit to higher-income households.

Average Annual Ontario HST on Home Electricity by Household Income, 2016



Source: SPSD/M V22.0, Statistics Canada, MOF calculations.
Notes: The average Ontario HST on home energy is net of the tax relief households receive through the energy component of the OEPTC that provides sales tax relief for home energy. The average amounts of Ontario HST do not reflect sales tax relief that households receive through the Ontario Sales Tax Credit, and the relief from energy costs they may get through the Northern Ontario Energy Credit or the OEB's Ontario Electricity Support Program.

Option 2 – Provincially-administered rebate on bills

- The HST agreement has no limitations on provincially-administered point-of-sale rebate equivalents since the CRA would play no role in administering them.
- In the case of providing an 8% reduction on a residential customer's electricity bill (equivalent to the provincial portion of the HST), the structure and administration could be similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB).
    - The OCEB ended on December 31, 2015. Other measures to help mitigate electricity costs have been implemented (such as the Ontario Electricity Support Program), in addition to the tax credits implemented at the time of transition to HST.
- It would be difficult to limit the rebate only to electricity used residentially (what about federal POS?).
    - The OCEB applied to small business and farms, as well as to residential customers and therefore did not face the same challenges.
    - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in "double dipping."
    - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.
- Ontario does not currently provide any provincially-administered HST rebates. Introducing one could set a precedent.
    - Ontario is often asked to provide HST relief for supplies such as gasoline and home heating fuels.
- For some program designs the funding envelope could be capped at a desired amount.
- Renters who do not pay electricity bills directly would not get any direct benefit.

DRAFT

Option 2 – Provincially-administered rebate on bills (cont'd) not sure about this page

Summary of Option 2 Potential Designs	Fiscal Impact ($M)
(1) A 10% off electricity for all electricity consumers o Introduce a program similar to the OCEB, which ended December 31, 2015. The OCEB provided benefit equal to 10% of the total cost of electricity on ratepayer bills, including tax. Electricity consumption eligible for the benefit was capped at 3,000 kWh per month.	about 1,000
(2) A notional HST rebate through the OESP o Ontario could provide funds (e.g., $100 million) to the OEB to deliver an amount notionally meant to rebate HST for lower-income households eligible for the OESP program currently administered through the OEB.	TBD (depending on the funding envelope)
(3) An electricity bill supplement o Ontario could provide funds (e.g., $200 million) to the OEB to deliver an Electricity Bill Supplement to top up the OESP amounts.	TBD (depending on the funding envelope)
(4) Emergency Relief o Provide funds to the OEB to supplement the Low Income Energy Assistance Program (e.g., increase amounts or duration of support) for people who face electricity disconnection due to inability to pay.	TBD (depending on the funding envelope)

DRAFT

Option 3 – Targeted Mitigation through Tax Credits

- Ontario could make changes to tax credits and benefits it provides through the Personal Income Tax System to help lower-income Ontarians with their electricity costs.
- Fiscal impacts shown in the table correspond to examples provided. Indicate if revenue or expense

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	Fiscal Impact ($M)
(1) Increase the OEPTC energy amount o The OEPTC energy amount could be increased (e.g., by $50 from $224 to $274).	60
(2) Create a new electricity tax credit o For greater visibility, a separate annual Electricity Bill Tax Credit could be delivered through the PIT system (e.g., as part of the Ontario Trillium Benefit) Amounts could be notional (e.g. up to $100) or based on electricity use.	190
(3) Increase the NOEC amounts o The NOEC amounts could be increased (e.g., by $50, from $146 to $196 per single individual and from $224 to $299 per family).	10

- Tax credits are legal entitlements and are provided to all who qualify. Funding cannot be capped.
- The energy component of the OEPTC and the NOEC are notional and not based on usage. Electricity receipts are not required in most cases.
- Enhancing the OEPTC or NOEC would help those who pay indirectly for their electricity through rent.
- Households composed of several tax families could receive more than one credit amount. Some households may also be receiving the OESP.
- Renters who do not pay electricity bills directly would not get any help from a tax credit based on electricity use, because they would not be able to provide required receipts.
- Could contradict Ontario's energy conservation and environmental goals.

DRAFT

Option 3 (cont'd) – Targeted Mitigation through Social Assistance

- Delete this option; we can speak to it. Ontario could make changes to Social Assistance to help the most vulnerable Ontarians with their electricity costs.

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	Fiscal Impact ($M)
(4) Introduce a new Electricity Benefit for Social Assistance Recipients o Could be designed as a discretionary fund for case managers or as an enhancement to the shelter component.	TBD based on design

- Supports provided through Social Assistance are more targeted and account for people's assets and family resources.
- Social Assistance benefits are more responsive than tax credits to sudden changes in income or in personal circumstances within the year.
- (These two points are not necessarily true in practice.)

DRAFT

Appendix – Current Mitigation

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs, Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.
- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.
- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to their more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.
- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - Removing the Debt Retirement Charge (DRC) cost from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage to power medical devices can get monthly assistance of $45 to $75.

DRAFT

Appendix – Cap and Trade and Electricity Costs

- The Climate Change Action Plan (CCAP), released in June 2016, re-stated the 2016 Budget announcement that electricity costs would not increase as a result of cap and trade.[2,3]
- The CCAP specified that this would be achieved by allocating between $1 billion and $1.32 billion from cap and trade proceeds to fund greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.[4]
- Commercial and industrial users will see no change in electricity costs and residential consumers will see a modest benefit of up to $2/month.
- Add budget language on other energy costs increasing; doesn't include HST; MOECC modeling

[4] Climate Change Action Plan (http://www.applications.ene.gov.on.ca/ccap/products/CCAP_ENGLISH.pdf) page 67

Appendix – Overview of the HST

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
    - In general, the HST is consistent with the GST and follows the same rules and tax base.
    - The federal government is responsible for deciding how a particular item is taxed under GST/HST.
    - Electricity has been taxed under GST since its inception.
- Based on the most recent Ministry of Finance estimate, the provincial portion of the HST on electricity is about $735 million in 2017-18.
    - Ontario's Climate Change Action Plan contains a number of initiatives that would lead to increased electricity consumption (for example, through greater use of electric vehicles and electric heating). The tax expenditure for an HST rebate would thus be expected to grow substantially in coming years.
- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
    - The HST is a value-added tax that applies at each stage of the supply chain. Businesses that make taxable sales collect HST from their customers and remit it to the Canada Revenue Agency. At the same time, they claim ITCs to recover the HST they pay on their business inputs, typically by netting the amount off the HST they remit.

DRAFT

Appendix – Overview of the HST (cont'd)

Comprehensive Integrated Tax Coordination Agreement (CITCA)

The CITCA is the HST agreement between Canada and Ontario.

- The HST is established under federal legislation (the Excise Tax Act).
- The Canada Revenue Agency collects, administers and enforces the HST.
- The federal government is the policy lead on all HST matters. Ontario is bound by any federal tax base changes or rulings.
- Any change to the HST in Ontario requires, at a minimum, changes to federal regulations.

Under the CITCA, Ontario maintains flexibility in particular areas, including the ability to designate items or services as eligible for a POS rebate of the 8% provincial portion of the HST, subject to certain constraints:

- The cost of the new rebate must not exceed Ontario's POS "room" (the total value of POS rebates must not exceed 5% of the Goods and Services Tax base in Ontario).
- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to determine the expenditure in the Province attributable to the item or service.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

DRAFT

Appendix – Overview of the HST (cont'd)

Process to Create a New POS Rebate

If Ontario wishes to make a permitted change to the HST, the amendment process in CITCA must be followed, which would take a minimum of four months, unless Canada and Ontario agree otherwise.

1. Ontario must give at least 120 days' notice of the proposed HST change to the federal government (effective date could be earlier or later if agreed to by the parties).
   - The effective date of the HST change must be January 1, April 1 or July 1. It may only be October 1 if mutually agreed.
2. Ontario must give 60 days' notice to the public of the proposed HST change (unless the federal government agrees otherwise).
3. After the public announcement, Ontario must obtain the approval of the provincial Legislature (e.g., by way of motion) to make the HST change (unless the federal government agrees otherwise).
4. Canada must amend Cabinet regulations to implement the HST change, and make transitional rules.
5. To implement a new point-of-sale rebate, the *Retail Sales Tax Act* and regulations must be amended.
6. The Minister of Finance of Ontario and the Minister of Finance of Canada must amend CITCA in writing.

DRAFT

Appendix – Jurisdictional Scan – Sales Taxes on Energy:

Jurisdiction	Tax	Business	Residential	Comment
British Columbia	PST	Yes – 7%	No	PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling BC's carbon tax does not apply to electricity bills.
Alberta	None	N/A	N/A	Alberta does not have a provincial sales tax.
Saskatchewan	PST	Yes – 5% Except for electricity purchased to heat a building.	No	PST does not apply to electricity purchased for use in a residential dwelling. PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity.
Manitoba	PST	Yes – 8% Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery	Yes -8% Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity purchased solely to heat the purchaser's home is exempt.	Winnipeg also applies a tax of 2.5% on residential and 5% on commercial.
Ontario	HST DRC	Yes (less ITCs) Yes until April 2018	Yes – 8% No	DRC, which is generally a flat rate of 0.7 cents per kWh, will end for all users on April 1, 2018.
Quebec	QST	Yes (less ITCs)	Yes – 9.975%	
Nova Scotia	HST	Yes (less ITCs)	Yes – 10% less provincially administered rebate.	*Your Energy Rebate* is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources.
New Brunswick	HST	Yes (less ITCs)	Yes – 10%	
Prince Edward Island	HST	Yes (less ITCs)	Yes – 9% (10% beginning Oct 1, 2016)	
Newfoundland and Labrador	HST	Yes (less ITCs)	Yes – 10%	Nfld had a provincially administered Home Heating Rebate program until July 2015

DRAFT

Federal	GST	Yes (less ITCs)	Yes – 5%	

* In this table, the HST rates refer to the provincial portion of the rate.

DRAFT

Options for Mitigating Electricity Prices through the Tax System

DRAFT

Tax Policy Division
Ministry of Finance
August 15, 2016

Purpose:

The Ministry of Energy (ENERGY) is proposing to remove the provincial portion of the Harmonized Sales Tax (HST) from electricity bills as a means of mitigating increasing electricity prices.

This deck provides options and key considerations with respect to tax measures to reduce the cost of electricity seen by residential consumers on their bills.

DRAFT

Key Considerations:

- The Ministry of Energy forecasts that electricity prices will continue to increase over the next several years.
- Taxes such as the Harmonized Sales Tax are not the primary cause of increasing electricity prices in Ontario; however, providing relief from the provincial portion of the HST on electricity would be one way of reducing the price seen by consumers on their bills.
    - The provincial portion of the HST on electricity is 8%. The federal portion is 5%.
- Any tax measures to reduce residential electricity bills would entail a fiscal cost for the Province and essentially shift a portion of the cost of electricity from ratepayers to taxpayers.
- Broad, comprehensive relief could be provided by way of a federally-administered point-of-sale rebate (subject to federal agreement) or a provincially-administered rebate (similar to the former Ontario Clean Energy Benefit, or OCEB).
    - The amount of the provincial portion of HST attributable to residential electricity bills is estimated to be around $735 million in 2017-18. [need something to indicate growth rate]
- Ontario already provides relief to low- to moderate-income individuals and families for the sales tax they pay through the Ontario Sales Tax Credit and the Ontario Energy and Property Tax Credit (OEPTC) and for energy costs through the Ontario Electricity Support Program and the Northern Ontario Energy Credit.
    - This targeted relief could be enhanced or broadened.
- If the government proceeds with broad, comprehensive relief of HST on electricity, other existing relief targeted at low- and moderate-income individuals could be reduced.
- Any relief could be a time-limited or permanent.

Commented [JK1]: SIFB had commented to the effect that IESO is of the view that the net demand growth will be moderate?

DRAFT

- [c&t impact: - issue #2 from Lynn's email, including use of C&T proceeds to fund an electricity POS]

Formatted: Font: (Default) Arial, 16 pt, Font color: Text 1

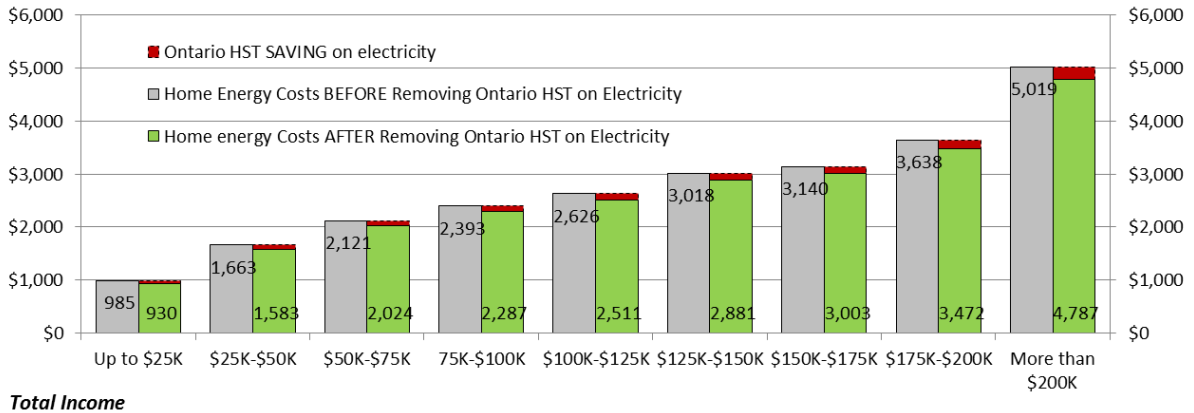
Formatted: Font: (Default) Arial, Font color: Text 1

DRAFT

Home Energy Costs of Ontario Households:

- The provincial portion of HST on electricity represents a small share of the overall home energy costs paid by Ontario households. Show HST#s above red bars
- Average home energy costs shown in the chart below are net of the ~~sales~~ tax relief on home energy households get through the spell OEPTC.

Average Annual Home Energy Costs in Ontario by Household Income, 2016



Total Income

Source: SPSD/M V22.0, Statistics Canada, MOF calculations.

Notes: The average Ontario HST on home energy costs is net of the tax relief households receive through the energy component of the OEPTC that provides sales tax relief for home energy. The average amounts of Ontario HST do not reflect sales tax relief that households receive through the Ontario Sales Tax Credit, and the relief from energy costs they may get through the Northern Ontario Energy Credit or the OEB's Ontario Electricity Support Program.

Alignment with Other Provincial Policy Priorities: delete page

- Using tax measures to mitigate increasing electricity costs could align with the Premier's Office / Cabinet Office "Making Everyday Life Easier for Ontarians" initiative.
- Broad, comprehensive relief from the HST on electricity could undermine the government's ongoing efforts to encourage energy conservation and could lead to higher greenhouse gas emissions.
    - Reducing the total cost of electricity paid by electricity consumers reduces the incentive to conserve electricity.
    - Natural gas (a source of greenhouse gas emissions) accounted for 9% of Ontario's electricity generation in 2014 and 2015. This figure is expected to grow when nuclear units are taken offline in the coming years (e.g., for refurbishment).[1]
    - Ontario's Long-Term Energy Plan, released in 2013, projected that greenhouse gas emissions from Ontario's electricity sector would increase over the next two decades.
- Proceeds from Ontario's forthcoming cap and trade program must be used for programs that reduce or support the reduction of greenhouse gas emissions. Reducing the cost of electricity for residential consumers is likely not an eligible expenditure.

DRAFT

[1] Natural gas accounted for about 28% of Ontario's installed energy capacity in June 2016, according to the IESO.

Current Mitigation

A number of tax measures currently exist to provide relief with respect to residential energy costs (including electricity) and taxes on residential electricity consumption.

Programs to provide electricity cost relief to businesses are not included below.

Measure	Target group	Benefit Amount	Fiscal Impact
Energy component of the Ontario Energy and Property Tax Credit	Low- to moderate-income	$224 per eligible family or single person (2016 benefit year)	$445 million
Ontario Sales Tax Credit	Low- to moderate-income	$291 per eligible individual plus $291 for their spouse and each of their eligible children (2016 benefit year)	$1.3 billion
Northern Ontario Energy Credit	Ontarians living in the North	$146 per eligible single person. $224 per eligible family (2016 benefit year)	$25 million
Debt Retirement Charge Exemption	Residential electricity users	Average of $70 per year till DRC ends	TBC, estimated to be over $300 million per year
Ontario Electricity Support Program	Low-income	$360 -$600 per year (increased if high electricity usage related to medical devices)	Ratepayer funded
Cap and Trade delete	Residential electricity users	Up to $24 per year ($2/month), on average	TBC (residential share of total $1 billion and $1.32 billion over five years)

See appendix for more details about these programs.

DRAFT

Options:

Options for using the tax system to reduce the price of electricity on consumers' electricity bills:

1. Federally-administered Point of Sale rebate of the provincial portion of the HST
2. Provincially-administered rebate on bills (similar to the Ontario Clean Energy Benefit)
3. Targeted Mitigation through Tax Credits or Social Assistance

DRAFT

Option 1 – Federally-administered Point of Sale rebate

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
    - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
    - See appendix for additional criteria.
- At $735 million ~~and growing~~, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
    - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.
- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
    - The federal government may not agree.
        - It could object out of concern that other HST-participating provinces would request similar exceptions to their respective HST agreements.
        - It could also object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.

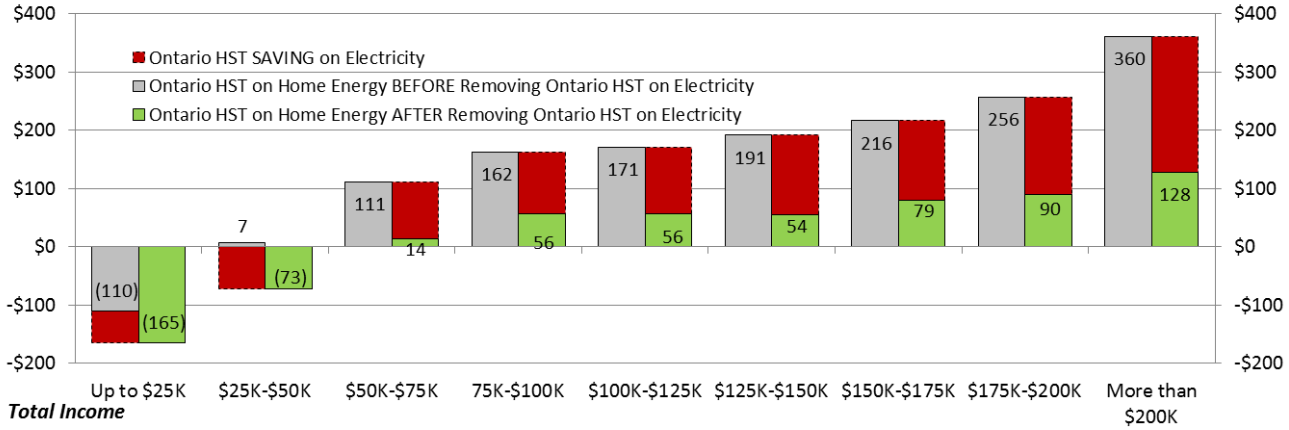
Commented [JK2]: Same as above?

DRAFT

Option 1 – Federally-administered Point of Sale rebate (cont'd)

- When combined with the energy component of the OEPTC, removing the Ontario HST on electricity would provide average relief in excess of the average Ontario HST on home energy paid by households with less than $50,000 of income. Need to be clearer on low income labels below
- Removing HST from electricity bills would provide a larger benefit to higher-income households.

Average Annual Ontario HST on Home Electricity by Household Income, 2016



Source: SPSD/M V22.0, Statistics Canada, MOF calculations.
Notes: The average Ontario HST on home energy is net of the tax relief households receive through the energy component of the OEPTC that provides sales tax relief for home energy. The average amounts of Ontario HST do not reflect sales tax relief that households receive through the Ontario Sales Tax Credit, and the relief from energy costs they may get through the Northern Ontario Energy Credit or the OEB's Ontario Electricity Support Program.

Option 2 – Provincially-administered rebate on bills

- The HST agreement has no limitations on provincially-administered point-of-sale rebate equivalents since the CRA would play no role in administering them.
- In the case of providing an 8% reduction on a residential customer's electricity bill (equivalent to the provincial portion of the HST), the structure and administration could be similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB).
    - The OCEB ended on December 31, 2015. Other measures to help mitigate electricity costs have been implemented (such as the Ontario Electricity Support Program), in addition to the tax credits implemented at the time of transition to HST.
- It would be difficult to limit the rebate only to electricity used residentially (what about federal POS?).
    - The OCEB applied to small business and farms, as well as to residential customers and therefore did not face the same challenges.
    - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in "double dipping."
    - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.
- Ontario does not currently provide any provincially-administered HST rebates. Introducing one could set a precedent.
    - Ontario is often asked to provide HST relief for supplies such as gasoline and home heating fuels.
- For some program designs the funding envelope could be capped at a desired amount.
- Renters who do not pay electricity bills directly would not get any direct benefit.

DRAFT

Option 2 – Provincially-administered rebate on bills (cont'd) not sure about this page

Summary of Option 2 Potential Designs	Fiscal Impact ($M)
(1) A 10% off electricity for all electricity consumers o Introduce a program similar to the OCEB, which ended December 31, 2015. The OCEB provided benefit equal to 10% of the total cost of electricity on ratepayer bills, including tax. Electricity consumption eligible for the benefit was capped at 3,000 kWh per month.	about 1,000
(2) A notional HST rebate through the OESP o Ontario could provide funds (e.g., $100 million) to the OEB to deliver an amount notionally meant to rebate HST for lower-income households eligible for the OESP program currently administered through the OEB.	TBD (depending on the funding envelope)
(3) An electricity bill supplement o Ontario could provide funds (e.g., $200 million) to the OEB to deliver an Electricity Bill Supplement to top up the OESP amounts.	TBD (depending on the funding envelope)
(4) Emergency Relief o Provide funds to the OEB to supplement the Low Income Energy Assistance Program (e.g., increase amounts or duration of support) for people who face electricity disconnection due to inability to pay.	TBD (depending on the funding envelope)

Commented [EK3]: I don't think funding would be provided to OEB. It is likely that any funding for this option would need to be provided to IESO.

DRAFT

Option 3 – Targeted Mitigation through Tax Credits

- Ontario could make changes to tax credits and benefits it provides through the Personal Income Tax System to help lower-income Ontarians with their electricity costs.
- Fiscal impacts shown in the table correspond to examples provided. Indicate if revenue or expense

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	Fiscal Impact ($M)
(1) Increase the OEPTC energy amount o The OEPTC energy amount could be increased (e.g., by $50 from $224 to $274).	60
(2) Create a new electricity tax credit o For greater visibility, a separate annual Electricity Bill Tax Credit could be delivered through the PIT system (e.g., as part of the Ontario Trillium Benefit) Amounts could be notional (e.g. up to $100) or based on electricity use.	190
(3) Increase the NOEC amounts o The NOEC amounts could be increased (e.g., by $50, from $146 to $196 per single individual and from $224 to $299 per family).	10

- Tax credits are legal entitlements and are provided to all who qualify. Funding cannot be capped.
- The energy component of the OEPTC and the NOEC are notional and not based on usage. Electricity receipts are not required in most cases.
- Enhancing the OEPTC or NOEC would help those who pay indirectly for their electricity through rent.
- Households composed of several tax families could receive more than one credit amount. Some households may also be receiving the OESP.
- Renters who do not pay electricity bills directly would not get any help from a tax credit based on electricity use, because they would not be able to provide required receipts.
- Could contradict Ontario's energy conservation and environmental goals.

DRAFT

Option 3 (cont'd) – Targeted Mitigation through Social Assistance

Commented [JK4]: Understood that OESP also has low take up rate.

- Delete this option; we can speak to it. Ontario could make changes to Social Assistance to help the most vulnerable Ontarians with their electricity costs.

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	Fiscal Impact ($M)
(4) Introduce a new Electricity Benefit for Social Assistance Recipients o Could be designed as a discretionary fund for case managers or as an enhancement to the shelter component.	TBD based on design

- Supports provided through Social Assistance are more targeted and account for people's assets and family resources.
- Social Assistance benefits are more responsive than tax credits to sudden changes in income or in personal circumstances within the year.
- (These two points are not necessarily true in practice.)

DRAFT

Appendix – Current Mitigation

Formatted: Font: 8 pt

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs, Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.
- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.
- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to their more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.
- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - Removing the Debt Retirement Charge (DRC) cost from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage due to electric heating or ~~power~~ medical devices that use a lot of power can get monthly assistance of $45 to $75. First Nations and Métis applicants would also qualify for a higher level of assistance.

DRAFT

Appendix – Cap and Trade and Electricity Costs

- The Climate Change Action Plan (CCAP), released in June 2016, re-stated the 2016 Budget announcement that electricity costs would not increase as a result of cap and trade.[2,3]
    - The 2016 Budget commitment is that the net impact of Ontario's forthcoming cap and trade program would not result in an overall increase in electricity costs for commercial and industrial consumers, and that for residential users there would be a modest benefit of up to $2 per month, on average.
- The CCAP specified that this would be achieved by allocating between $1 billion and $1.32 billion from cap and trade proceeds to fund greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.[4]
- ~~Commercial and industrial users will see no change in electricity costs and residential consumers will see a modest benefit of up to $2/month.~~
- Add budget language on other energy costs increasing; doesn't include HST; MOECC modeling

Appendix – Overview of the HST

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
  - In general, the HST is consistent with the GST and follows the same rules and tax base.
  - The federal government is responsible for deciding how a particular item is taxed under GST/HST.
  - Electricity has been taxed under GST since its inception.
- Based on the most recent Ministry of Finance estimate, the provincial portion of the HST on electricity is about $735 million in 2017-18.
  - ~~Ontario's Climate Change Action Plan contains a number of initiatives that would lead to increased electricity consumption (for example, through greater use of electric vehicles and electric heating). The tax expenditure for an HST rebate would thus be expected to grow substantially in coming years.~~
- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
  - The HST is a value-added tax that applies at each stage of the supply chain. Businesses that make taxable sales collect HST from their customers and remit it to the Canada Revenue Agency. At the same time, they claim ITCs to recover the HST they pay on their business inputs, typically by netting the amount off the HST they remit.

Commented [EK5]: It is unclear whether electricity consumption will substantially increase in the coming years.

In its Ontario Planning Outlook, IESO state that "long-term net demand growth will remain moderate as conservation savings offset projected economic growth."

The planning outlook also states that "a significant amount of electrification of transit and electric vehicles is included in the reference demand forecast.

With regard to heating, low natural gas prices and expansion of the natural gas system may offset the effects of programs under the Climate Change Action Plan (CCAP). It is Ontario Planning Outlook (released before the CCAP), IESO assumed a modest decline in electric fuel share for space and water heating.

DRAFT

Appendix – Overview of the HST (cont'd)

Comprehensive Integrated Tax Coordination Agreement (CITCA)

The CITCA is the HST agreement between Canada and Ontario.

- The HST is established under federal legislation (the Excise Tax Act).
- The Canada Revenue Agency collects, administers and enforces the HST.
- The federal government is the policy lead on all HST matters. Ontario is bound by any federal tax base changes or rulings.
- Any change to the HST in Ontario requires, at a minimum, changes to federal regulations.

Under the CITCA, Ontario maintains flexibility in particular areas, including the ability to designate items or services as eligible for a POS rebate of the 8% provincial portion of the HST, subject to certain constraints:

- The cost of the new rebate must not exceed Ontario's POS "room" (the total value of POS rebates must not exceed 5% of the Goods and Services Tax base in Ontario).
- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to determine the expenditure in the Province attributable to the item or service.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

DRAFT

Options for Mitigating Electricity Prices through the Tax System

DRAFT

Tax Policy Division
Ministry of Finance
August 15, 2016

Purpose:

The Ministry of Energy (ENERGY) is proposing to remove the provincial portion of the Harmonized Sales Tax (HST) from electricity bills as a means of mitigating increasing electricity prices.

This deck provides options and key considerations with respect to tax measures to reduce the cost of electricity seen by residential consumers on their bills.

DRAFT

Key Considerations:

- The Ministry of Energy forecasts that electricity prices will continue to increase over the next several years.
- Taxes such as the Harmonized Sales Tax are not the primary cause of increasing electricity prices in Ontario; however, providing relief from the provincial portion of the HST on electricity would be one way of reducing the price seen by consumers on their bills.
    - The provincial portion of the HST on electricity is 8%. The federal portion is 5%.
- Any tax measures to reduce residential electricity bills would entail a fiscal cost for the Province and essentially shift a portion of the cost of electricity from ratepayers to taxpayers.
- Broad, comprehensive relief could be provided by way of a federally-administered point-of-sale rebate (subject to federal agreement) or a provincially-administered rebate (similar to the former Ontario Clean Energy Benefit, or OCEB).
    - The amount of the provincial portion of HST attributable to residential electricity bills is estimated to be around $735 million in 2017-18. [need something to indicate growth rate]
- Ontario already provides relief to low- to moderate-income individuals and families for the sales tax they pay through the Ontario Sales Tax Credit and the Ontario Energy and Property Tax Credit (OEPTC) and for energy costs through the Ontario Electricity Support Program and the Northern Ontario Energy Credit.
    - This targeted relief could be enhanced or broadened.
- If the government proceeds with broad, comprehensive relief of HST on electricity, other existing relief targeted at low- and moderate-income individuals could be reduced.
- Any relief could be a time-limited or permanent.

Commented [JK1]: SIFB had commented to the effect that IESO is of the view that the net demand growth will be moderate?

Alignment with Other Provincial Policy Priorities: delete page

- Using tax measures to mitigate increasing electricity costs could align with the Premier's Office / Cabinet Office "Making Everyday Life Easier for Ontarians" initiative.
- Broad, comprehensive relief from the HST on electricity could undermine the government's ongoing efforts to encourage energy conservation and could lead to higher greenhouse gas emissions.
    - Reducing the total cost of electricity paid by electricity consumers reduces the incentive to conserve electricity.
    - Natural gas (a source of greenhouse gas emissions) accounted for 9% of Ontario's electricity generation in 2014 and 2015. This figure is expected to grow when nuclear units are taken offline in the coming years (e.g., for refurbishment).[1]
    - Ontario's Long-Term Energy Plan, released in 2013, projected that greenhouse gas emissions from Ontario's electricity sector would increase over the next two decades.
- Proceeds from Ontario's forthcoming cap and trade program must be used for programs that reduce or support the reduction of greenhouse gas emissions. Reducing the cost of electricity for residential consumers is likely not an eligible expenditure.

DRAFT

[1] Natural gas accounted for about 28% of Ontario's installed energy capacity in June 2016, according to the IESO.

Current Mitigation

A number of tax measures currently exist to provide relief with respect to residential energy costs (including electricity) and taxes on residential electricity consumption.

Programs to provide electricity cost relief to businesses are not included below.

Measure	Target group	Benefit Amount	Fiscal Impact
Energy component of the Ontario Energy and Property Tax Credit	Low- to moderate-income	$224 per eligible family or single person (2016 benefit year)	$445 million
Ontario Sales Tax Credit	Low- to moderate-income	$291 per eligible individual plus $291 for their spouse and each of their eligible children (2016 benefit year)	$1.3 billion
Northern Ontario Energy Credit	Ontarians living in the North	$146 per eligible single person. $224 per eligible family (2016 benefit year)	$25 million
Debt Retirement Charge Exemption	Residential electricity users	Average of $70 per year till DRC ends	TBC, estimated to be over $300 million per year
Ontario Electricity Support Program	Low-income	$360 -$600 per year (increased if high electricity usage related to medical devices)	Ratepayer funded
Cap and Trade delete	Residential electricity users	Up to $24 per year ($2/month), on average	TBC (residential share of total $1 billion and $1.32 billion over five years)

See appendix for more details about these programs.

DRAFT

Options:

Options for using the tax system to reduce the price of electricity on consumers' electricity bills:

1. Federally-administered Point of Sale rebate of the provincial portion of the HST
2. Provincially-administered rebate on bills (similar to the Ontario Clean Energy Benefit)
3. Targeted Mitigation through Tax Credits or Social Assistance

DRAFT

Option 1 – Federally-administered Point of Sale rebate

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
    - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
    - See appendix for additional criteria.
- At $735 million and growing, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
    - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.
- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
    - The federal government may not agree.
        - It could object out of concern that other HST-participating provinces would request similar exceptions to their respective HST agreements.
        - It could also object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.

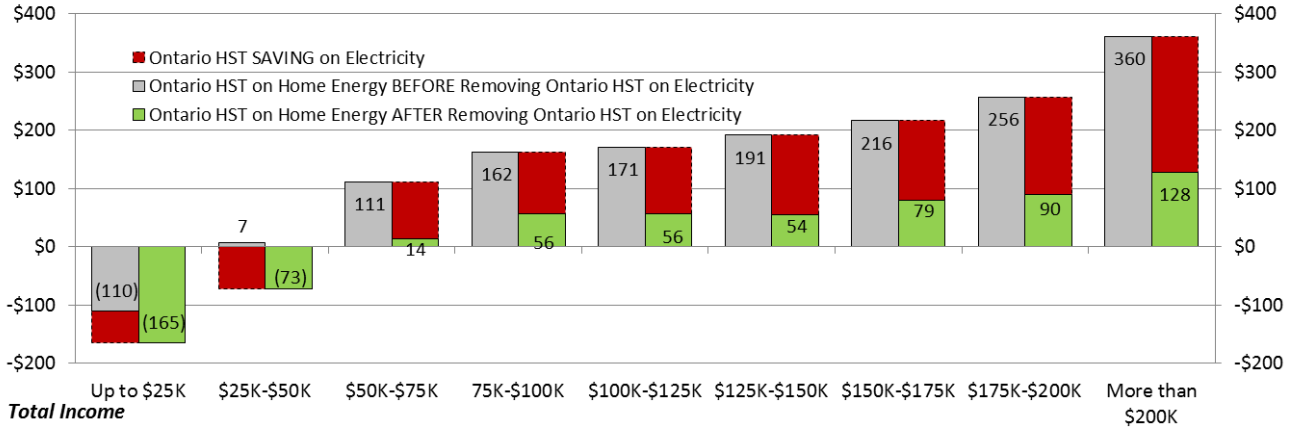
Commented [JK2]: Same as above?

DRAFT

Option 1 – Federally-administered Point of Sale rebate (cont'd)

- When combined with the energy component of the OEPTC, removing the Ontario HST on electricity would provide average relief in excess of the average Ontario HST on home energy paid by households with less than $50,000 of income. Need to be clearer on low income labels below
- Removing HST from electricity bills would provide a larger benefit to higher-income households.

Average Annual Ontario HST on Home Electricity by Household Income, 2016



Source: SPSD/M V22.0, Statistics Canada, MOF calculations.
Notes: The average Ontario HST on home energy is net of the tax relief households receive through the energy component of the OEPTC that provides sales tax relief for home energy. The average amounts of Ontario HST do not reflect sales tax relief that households receive through the Ontario Sales Tax Credit, and the relief from energy costs they may get through the Northern Ontario Energy Credit or the OEB's Ontario Electricity Support Program.

Option 2 – Provincially-administered rebate on bills

- The HST agreement has no limitations on provincially-administered point-of-sale rebate equivalents since the CRA would play no role in administering them.
- In the case of providing an 8% reduction on a residential customer's electricity bill (equivalent to the provincial portion of the HST), the structure and administration could be similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB).
    - The OCEB ended on December 31, 2015. Other measures to help mitigate electricity costs have been implemented (such as the Ontario Electricity Support Program), in addition to the tax credits implemented at the time of transition to HST.
- It would be difficult to limit the rebate only to electricity used residentially (what about federal POS?).
    - The OCEB applied to small business and farms, as well as to residential customers and therefore did not face the same challenges.
    - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in "double dipping."
    - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.
- Ontario does not currently provide any provincially-administered HST rebates. Introducing one could set a precedent.
    - Ontario is often asked to provide HST relief for supplies such as gasoline and home heating fuels.
- For some program designs the funding envelope could be capped at a desired amount.
- Renters who do not pay electricity bills directly would not get any direct benefit.

DRAFT

Option 2 – Provincially-administered rebate on bills (cont'd) not sure about this page

Summary of Option 2 Potential Designs	Fiscal Impact ($M)
(1) A 10% off electricity for all electricity consumers o Introduce a program similar to the OCEB, which ended December 31, 2015. The OCEB provided benefit equal to 10% of the total cost of electricity on ratepayer bills, including tax. Electricity consumption eligible for the benefit was capped at 3,000 kWh per month.	about 1,000
(2) A notional HST rebate through the OESP o Ontario could provide funds (e.g., $100 million) to the OEB to deliver an amount notionally meant to rebate HST for lower-income households eligible for the OESP program currently administered through the OEB.	TBD (depending on the funding envelope)
(3) An electricity bill supplement o Ontario could provide funds (e.g., $200 million) to the OEB to deliver an Electricity Bill Supplement to top up the OESP amounts.	TBD (depending on the funding envelope)
(4) Emergency Relief o Provide funds to the OEB to supplement the Low Income Energy Assistance Program (e.g., increase amounts or duration of support) for people who face electricity disconnection due to inability to pay.	TBD (depending on the funding envelope)

Commented [RK3]: Estimated cost of a 10% OCEB, capped or uncapped, and what's the average annual projected price increase?

Commented [EK4]: I don't think funding would be provided to OEB. It is likely that any funding for this option would need to be provided to IESO.

Commented [RK5R4]: Who carries the variance account on this, that could be adjusted to flow a subsidy?

DRAFT

Option 3 – Targeted Mitigation through Tax Credits

- Ontario could make changes to tax credits and benefits it provides through the Personal Income Tax System to help lower-income Ontarians with their electricity costs.
- Fiscal impacts shown in the table correspond to examples provided. Indicate if revenue or expense

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	Fiscal Impact ($M)
(1) Increase the OEPTC energy amount o The OEPTC energy amount could be increased (e.g., by $50 from $224 to $274).	60
(2) Create a new electricity tax credit o For greater visibility, a separate annual Electricity Bill Tax Credit could be delivered through the PIT system (e.g., as part of the Ontario Trillium Benefit) Amounts could be notional (e.g. up to $100) or based on electricity use.	190
(3) Increase the NOEC amounts o The NOEC amounts could be increased (e.g., by $50, from $146 to $196 per single individual and from $224 to $299 per family).	10

- Tax credits are legal entitlements and are provided to all who qualify. Funding cannot be capped.
- The energy component of the OEPTC and the NOEC are notional and not based on usage. Electricity receipts are not required in most cases.
- Enhancing the OEPTC or NOEC would help those who pay indirectly for their electricity through rent.
- Households composed of several tax families could receive more than one credit amount. Some households may also be receiving the OESP.
- Renters who do not pay electricity bills directly would not get any help from a tax credit based on electricity use, because they would not be able to provide required receipts.
- Could contradict Ontario's energy conservation and environmental goals.

DRAFT

Option 3 (cont'd) – Targeted Mitigation through Social Assistance

Commented [JK6]: Understood that OESP also has low take up rate.

- Delete this option; we can speak to it. Ontario could make changes to Social Assistance to help the most vulnerable Ontarians with their electricity costs.

Summary of Option 3 Potential Designs – Modelled Based on 2016 Tax Year	Fiscal Impact ($M)
(4) Introduce a new Electricity Benefit for Social Assistance Recipients o Could be designed as a discretionary fund for case managers or as an enhancement to the shelter component.	TBD based on design

- Supports provided through Social Assistance are more targeted and account for people's assets and family resources.
- Social Assistance benefits are more responsive than tax credits to sudden changes in income or in personal circumstances within the year.
- (These two points are not necessarily true in practice.)

DRAFT

Appendix – Current Mitigation

Formatted: Font: 8 pt

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs, Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.
- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.
- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to their more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.
- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - Removing the Debt Retirement Charge (DRC) cost from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage due to electric heating or ~~power~~ medical devices that use a lot of power can get monthly assistance of $45 to $75. First Nations and Métis applicants would also qualify for a higher level of assistance.

DRAFT

Appendix – Cap and Trade and Electricity Costs

- The Climate Change Action Plan (CCAP), released in June 2016, re-stated the 2016 Budget announcement that electricity costs would not increase as a result of cap and trade.[2,3]
    - The 2016 Budget commitment is that the net impact of Ontario's forthcoming cap and trade program would not result in an overall increase in electricity costs for commercial and industrial consumers, and that for residential users there would be a modest benefit of up to $2 per month, on average.
- The CCAP specified that this would be achieved by allocating between $1 billion and $1.32 billion from cap and trade proceeds to fund greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.[4]
- ~~Commercial and industrial users will see no change in electricity costs and residential consumers will see a modest benefit of up to $2/month.~~
- Add budget language on other energy costs increasing; doesn't include HST; MOECC modeling

[3] 2016 Ontario Budget (http://www.fin.gov.on.ca/en/budget/ontariobudgets/2016/papers_all.pdf) page 27
[4] Climate Change Action Plan (http://www.applications.ene.gov.on.ca/ccap/products/CCAP_ENGLISH.pdf) page 67

Appendix – Overview of the HST

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
  - In general, the HST is consistent with the GST and follows the same rules and tax base.
  - The federal government is responsible for deciding how a particular item is taxed under GST/HST.
  - Electricity has been taxed under GST since its inception.
- Based on the most recent Ministry of Finance estimate, the provincial portion of the HST on electricity is about $735 million in 2017-18.
  - ~~Ontario's Climate Change Action Plan contains a number of initiatives that would lead to increased electricity consumption (for example, through greater use of electric vehicles and electric heating). The tax expenditure for an HST rebate would thus be expected to grow substantially in coming years.~~
- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
  - The HST is a value-added tax that applies at each stage of the supply chain. Businesses that make taxable sales collect HST from their customers and remit it to the Canada Revenue Agency. At the same time, they claim ITCs to recover the HST they pay on their business inputs, typically by netting the amount off the HST they remit.

Commented [EK7]: It is unclear whether electricity consumption will substantially increase in the coming years.

In its Ontario Planning Outlook, IESO state that "long-term net demand growth will remain moderate as conservation savings offset projected economic growth."

The planning outlook also states that "a significant amount of electrification of transit and electric vehicles is included in the reference demand forecast.

With regard to heating, low natural gas prices and expansion of the natural gas system may offset the effects of programs under the Climate Change Action Plan (CCAP). It is Ontario Planning Outlook (released before the CCAP), IESO assumed a modest decline in electric fuel share for space and water heating.

DRAFT

Appendix – Overview of the HST (cont'd)

Comprehensive Integrated Tax Coordination Agreement (CITCA)

The CITCA is the HST agreement between Canada and Ontario.

- The HST is established under federal legislation (the Excise Tax Act).
- The Canada Revenue Agency collects, administers and enforces the HST.
- The federal government is the policy lead on all HST matters. Ontario is bound by any federal tax base changes or rulings.
- Any change to the HST in Ontario requires, at a minimum, changes to federal regulations.

Under the CITCA, Ontario maintains flexibility in particular areas, including the ability to designate items or services as eligible for a POS rebate of the 8% provincial portion of the HST, subject to certain constraints:

- The cost of the new rebate must not exceed Ontario's POS "room" (the total value of POS rebates must not exceed 5% of the Goods and Services Tax base in Ontario).
- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to determine the expenditure in the Province attributable to the item or service.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

DRAFT

Appendix – Overview of the HST (cont'd)

Process to Create a New POS Rebate

If Ontario wishes to make a permitted change to the HST, the amendment process in CITCA must be followed, which would take a minimum of four months, unless Canada and Ontario agree otherwise.

1. Ontario must give at least 120 days' notice of the proposed HST change to the federal government (effective date could be earlier or later if agreed to by the parties).
   - The effective date of the HST change must be January 1, April 1 or July 1. It may only be October 1 if mutually agreed.
2. Ontario must give 60 days' notice to the public of the proposed HST change (unless the federal government agrees otherwise).
3. After the public announcement, Ontario must obtain the approval of the provincial Legislature (e.g., by way of motion) to make the HST change (unless the federal government agrees otherwise).
4. Canada must amend Cabinet regulations to implement the HST change, and make transitional rules.
5. To implement a new point-of-sale rebate, the *Retail Sales Tax Act* and regulations must be amended.
6. The Minister of Finance of Ontario and the Minister of Finance of Canada must amend CITCA in writing.

DRAFT

Appendix – Jurisdictional Scan – Sales Taxes on Energy:

Jurisdiction	Tax	Business	Residential	Comment
British Columbia	PST	Yes – 7%	No	PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling ~~BC's carbon tax does not apply to electricity bills.~~
Alberta	None	N/A	N/A	Alberta does not have a provincial sales tax.
Saskatchewan	PST	Yes – 5% Except for electricity purchased to heat a building.	No	PST does not apply to electricity purchased for use in a residential dwelling. PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity.
Manitoba	PST	Yes – 8% Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery	Yes -8% Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity purchased solely to heat the purchaser's home is exempt.	Winnipeg also applies a tax of 2.5% on residential and 5% on commercial.
Ontario	HST DRC	Yes (less ITCs) Yes until April 2018	Yes – 8% No	DRC, which is generally a flat rate of 0.7 cents per kWh, will end for all users on April 1, 2018.
Quebec	QST	Yes (less ITCs)	Yes – 9.975%	
Nova Scotia	HST	Yes (less ITCs)	Yes – 10% less provincially administered rebate.	*Your Energy Rebate* is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources.
New Brunswick	HST	Yes (less ITCs)	Yes – 10%	
Prince Edward Island	HST	Yes (less ITCs)	Yes – 9% (10% beginning Oct 1, 2016)	
Newfoundland and Labrador	HST	Yes (less ITCs)	Yes – 10%	Nfld had a provincially administered Home Heating Rebate program until July 2015
Federal	GST	Yes (less ITCs)	Yes – 5%	

* In this table, the HST rates refer to the provincial portion of the rate.

Commented [EK8]: A carbon tax would be applied to the fuels used in the generation of electricity.

DRAFT

SCHEDULE __
ONTARIO REBATE FOR ELECTRICITY CONSUMERS ACT, 2016

The proposed *Ontario Rebate for Electricity Consumers Act, 2016* would assist eligible consumers with increases in their electricity bills resulting from Ontario's commitment to a more reliable and cleaner electricity system. The proposed Act will, subject to the approval of the Legislature, authorize a rebate equivalent to the provincial portion of the harmonized sales tax (HST) for Ontario electricity consumers in respect of electricity costs relating to homes, farms, eligible multi-unit residential buildings and eligible small businesses.

Except for farms and eligible multi-unit residential buildings, the rebate would be limited to electricity consumers whose monthly demand for electricity is not more than 50 kilowatts or whose annual electricity consumption does not exceed 250,000 kilowatt hours.

Most consumers would receive the rebate by means of an 8 per cent credit to the charges for electricity on their electricity accounts for each billing period. The rebate would be available and appear on invoices issued on or after January 1, 2017. Certain amounts that may be included on a consumer's invoice, such as a late payment fee or interest charge, would not be considered electricity costs for the purposes of determining the amount of the consumer's rebate.

The proposed Act would authorize the making of regulations to reimburse electricity vendors for amounts rebated to consumers' accounts under the Act. It would contain other administrative and enforcement provisions, including requirements relating to record keeping by electricity vendors and authorization for inspections and inquiries with respect to amounts of rebates provided and reimbursements to electricity vendors.

It is also proposed that the *Ontario Clean Energy Benefit Act, 2010* be amended to authorize regulations to end any further payments under the former financial assistance program on a date to be prescribed. The proposed Act would also amend the *Ontario Energy Board Act, 1998* so that the provisions of the proposed *Ontario Rebate for Electricity Consumers Act, 2016* and regulations made under the proposed Act are enforceable by the Ontario Energy Board.

Memorandum of Understanding
Relating to the
Ontario Clean Energy Benefit

Dated: **June 3, 2011**

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the *Ontario Clean Energy Benefit Act, 2010* , including the regulations thereunder (the "Act"), certain consumers will be entitled to receive a credit, known as the Ontario Clean Energy Benefit ("OCEB"), against the cost of electricity consumed by them during the period from January 1, 2011 to December 31, 2015 inclusive;

2. Funds in respect of the OCEB will flow to most distributors and unit sub-metering providers through the Independent Electricity System Operator ("IESO") in accordance with the Act, its regulations and the Market Rules;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OCEB (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OCEB cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 8 (2)(e)of the *Ministry of Energy and Infrastructure Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OCEB cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. Payment Authorization

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The OFA shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. Payment Process

a) The Ministry will register with the IESO as an IESO Program Participant.

b) The Ministry will take all necessary steps to provide the OFA with access to the Ministry's IESO account and will arrange for the OFA to have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. Reporting Requirements and Records

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OCEB for a period of seven (7) years.

c) The requirements under this section shall survive any termination of the MOU.

4. OCEB Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OCEB.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OCEB, and any reports by OCEB transfer payment recipients (e.g. Local Distribution Companies and unit sub-metering providers) to the IESO received by the Ministry.

c) The OFA will prepare fiscal year cost estimates and monthly cashflow estimates for OCEB and will provide these estimates to the Ministry.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OCEB may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OCEB, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OCEB.

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OCEB cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices; monitoring the IESO's application of the Payments; monitoring the balance from time to time of the Appropriated Amount; or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Sandy Roberts, Director, Strategic Project Finance Branch
Tel: 416-325-1557
email: Sandy.Roberts@ofina.on.ca

c) As of the date of this MOU the Ministry's contact person is:

John Whitehead, ADM / CAO
Tel: 416-325-8072
email: John.Whitehead@ontario.ca

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 300
1 Dundas St. W.
Attention: Director, Strategic Project Finance Branch
email: Sandy.Roberts@ofina.on.ca

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy
880 Bay Street, 5th Floor
Attention: Assistant Deputy-Minister/Chief Administrative Officer
email: John.Whitehead@ontario.ca

10. Execution

The parties have executed this MOU, effective as of the date first above written.

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy

by: _____

name: John Whitehead

title: Assistant Deputy Minsiter and Chief Administrative Officer

Ontario Financing Authority

by: _____

name: Serge Imbrogno

title: Assistant Deputy Minister, Corporate and Electricity Finance Division

Fair Hydro Investor Presentation Comments

Slide #	Reference	Comment
Slide 4	Images	Consider removing the nuclear and large hydro images as the plan only covers costs form renewables procurements, gas and conservation.
Slide 6	First bullet	Suggest using "proxy consumer" instead of "average" in this context, which would be more accurate and consistent with legislation as covered later in the presentation.
Slide 6	Second bullet	Suggest changing “8% rebate in the provincial portion…” to “ 8% rebate equivalent to the provincial portion…”.
Slide 6	Third bullet	Language suggest that bills will increase back to status quo in 2021 – suggest adding language regarding increases back up to and past the status quo over time.
Slide 7	First bullet	Consider replacing the phrase starting from “in an amount…” with “in such an amount that the total OPG-held subordinated debt does not exceed 49% of all outstanding debt”, for clarity.
Slide 11	First bullet	Suggest rewording to the following: “As part of the restructuring of Ontario’s electricity industry under the Energy Competition Act, 1998, the municipal electricity utilities became municipally-owned business corporations, including local distribution companies (“LDCs”).” – Some LDCs continue to be municipally-owned, while others have been sold to or acquired by Hydro One or private-sector owners.”
Slide 14	Second bullet	Consider replacing “previously established regulated rate” with “regulated rate established in the first year of the Rate Reduction Period”.
Slide 14	Last bullet	Similar to comment on Slide 6 above, suggest referencing increases back up to and beyond status quo over time.
Slide 15	Third bullet	Consider adding in the words “in favour of the Trust” at the end of the bullet [IESO Security Agreement]. Also, can we clarify whether the $2 billion credit facility is provided by the OFA or the OEFC? Who is the actual lender?
Slide 15	Last bullet	It’s “Ontario Electricity Financial Corporation” (i.e., not “Financing”). Also, consider rewording so as not to suggest that the $2 billion facility is solely for “carrying costs”. Also, suggest that the last clause on security be a stand-alone bullet, not part of the OEF credit facility bullet.
Slide 16	Second bullet	Consider rephrasing to align better with the offering memorandum and legislation.
Slide 16	Third bullet	Consider adding in the word “mainly” before “in respect of …” [see O.Reg. 206/17 section 5].
Slide 16	Bill image	Consider removing as text description should be sufficient.
Slide 17	Second bullet	Consider replacing the words “dealt with” with “mitigated” to avoid suggesting that the risk is eliminated.

Slide 17	Number 2 in the process chart	Consider adding in the word “amount” at the end [O.Reg. 206/17 section 8(2)].
Slide 17	Number 6 in the process chart	Consider replacing the words “in a trust” with “in trust” [FHPA section 16(3)].
Slide 18	Chart	Consider adding explanation of readjustment amount.
Slide 20	OEB’s relationship with OPG in the diagram	Consider replacing “review of OPG Fees” with “review and approval of OPG Fees” to better align with the language in O. Reg. 206/17. Consider replacing “Management Agreement” with “Regulation”.
Slide 20	IESO’s relationship with the Fair Hydro Trust	Note that the Acknowledgement and Indemnity Agreement is made to the Indenture Trustee. Consider editing to avoid confusion.
Slide 20	Ontario Caption	Suggest just having “Province of Ontario” (i.e., omit “(Ministry of Energy)”)
Slide 21	"Suspension Notice"	May wish to consider noting in the sentence that post-suspension refinancing is covered by the guarantee. As this was something Torys made a point of including in the agreement for financeability, suggest including for investors.
Slide 23	Key Terms – Moratorium Period (bullet 3)	Consider replacing “(until May 1, 2021)” to “(until April 30, 2021) and up to July 31, 2021” [see section 21(4) of FHPA and section 9.1 of O. Reg. 206/17]. Consider removing “which will be offered, as regulatory assets, for transfer to the Trust in a subsequent period”, since this is not expressly provided in the MTSA [also see section 16 of O. Reg. 206/17].
Slide 28	Third bullet	Consider replacing “fit under the fair allocation curve” with “ensure reasonable alignment with fair allocation amounts”. [see paragraph 1 of section 21(3) of FHPA].
Slide 31	Chart	The post-FHP bill should not follow the status quo trajectory between 2025 and 2028 – bill should be above status quo including rebates as the FAA is positive for those years (Fair Adjustment would be used to offset the majority of the CEA but the amount of the FAA would remain).
Slide 36	First bullet	Consider removing references to “statutorily mandated”. Remittances from IESO are mandated under s. 9.1 of O. Reg. 206/17.
Slide 38	Political Risk	Consider reviewing the characterization of the risk to align with the risk as described in the Agreements.
Slide 38	Third bullet	Please note reference to ability to disconnect service for non-payment by LDCs isn’t fully reflective of the requirement, consider revising to be more reflective of the actual mechanism.

Ontario’s new electricity policy: History repeats as farce

The Globe and Mail
Published Tuesday, Sep. 13, 2016 6:00PM EDT
Last updated Tuesday, Sep. 13, 2016 6:00PM EDT

Karl Marx said that history repeats: first as tragedy, then as farce. In Ontario, the history of failed energy policy repeats – first as farce, and then as more farce.

Premier Kathleen Wynne faces an election in a little over a year and a half, and one of the main issues dogging the Liberal government is the price of electricity. Thanks to policy choices that the government itself seems incapable of unwinding, electricity bills have been on an upward tear for a decade. Many voters are furious. And so the Wynne government devoted the heart of its Throne Speech this week to a plan to lower the price of electricity. Not the cost of electricity, however. Just the sticker price.

Taxpayers of Ontario, you will now be paying for more of your electricity through your taxes, or through future taxes funded by deficit financing, and less through your electricity bill. Yes, that's the new plan. It looks a lot like the old plan.

Nearly six years ago, Ms. Wynne's predecessor, Dalton McGuinty, was facing an election. He was, like the current premier, spooked by rapidly rising electricity prices. These spiking prices, note well, had been engineered by the Liberal government's mishandled Green Energy policy. To win back voters, Mr. McGuinty decided to give consumers a break. The tool: the so-called Ontario Clean Energy Benefit, which ran from the start of 2011 to the end of 2015.

The Clean Energy Benefit did not have anything to do with clean energy, and its benefits were illusory. All consumer hydro bills were awarded a government rebate worth 10 per cent – so the more electricity a customer used, the more they saved. This "benefit" for Ontario consumers was paid for by Ontario taxpayers. Yes, they're the same people.

Given that the province was deeply in deficit at the time, that meant Queen's Park was borrowing money, solely for the purpose of immediately handing it over to electricity customers. Cash was being put into your right pocket, but you weren't supposed to notice that it was coming from your left.

In its final full year in operation, the province borrowed more than $1-billion to reduce everyone electricity bill. It was economically nuts. But it made sense politically.

And now it's back. The new rebate is eight per cent – achieved by eliminating the provincial sales tax portion of the harmonized HST from electricity, and only electricity.

Ask any economist: If your goal is lowering energy use and pollution, the last thing you want to do is provide a subsidy to energy users. Yet that's what this policy does. There may be arguments in favour of cutting taxes – but cutting the tax on electricity, and nothing else? Seriously?

Stranger still, this comes from a government that in this very same Throne Speech trumpets its plan to spend billions of dollars encouraging Ontarians to use less electricity. Billions spent

subsidizing consumers into using less electricity, billions spend subsidizing them into using more. Did we mention the bit about farce?

The problem facing the Wynne government comes down to this simple fact: Year after year, electricity costs have been rising much faster than inflation. That's not happening across North America; on the contrary, many jurisdictions are enjoying exceptionally low energy costs. But more than a decade ago, Ontario's Liberal government decided that it would use the excuse of greening the electricity system – a perfectly good idea, if done right – to try to stimulate and subsidize the creation of new green industries in the province. The province essentially forced the electricity system to become more inefficient and more expensive, for no reason justified by economics or ecology.

Over the past 10 years, Canada's Consumer Price Index has increased by 17.6 per cent. But over the same period, according to the Ontario Energy Board, the cost to consumers of a kilowatt-hour of electricity purchased at the peak hours of the day has risen from 10.5 cents to 18 cents, a jump of 71 per cent. Mid-peak electricity prices are up 76 per cent. And the price of electricity in the middle of the night, known as off-peak, is up 149 per cent.

Ontarians who sense that their electricity bills are spiralling upward are not imagining things.

A century ago, when Sir Adam Beck created the public utility that went on to become Ontario Hydro, his slogan was, "Power at Cost." A century later, Ontario's motto might as well be, "artificially costly power, priced below cost, with taxpayers picking up the difference." What a mess.

By the time the next provincial election rolls around, the Liberals will have been in power for a decade and a half. Having done experimental surgery on the electricity system, they have no idea of how to cage their Frankenstein creation. So instead of fixing the fiasco, they are going to once again pay voters, with their own money, into not noticing it.

It worked last time.

I don't know where the G&M got their numbers, but when the Liberals came to power the retail price of electricity was 5 cents a KWH.
Using my bill as an example and using the calculated average, the price is now somewhere north of 150% higher, not including all the fees and taxes applied.
My monthly cost has gone up far more than the HST rebate, and I will be paying for that as well.

The editorial is bang on. And it highlights an important issue: the ignorance of the electorate.

The Globe needs to take the lead in bringing this problem to light - by focusing more detailed articles on the actual math...and providing a summary detailed web page of the decade and a half of blunder. Whether its Ornge, Gas Plants, Caledonia, etc, the incredulous failures need to be listed, detailed and in our faces.

C'mon Globe - you made CRA move on Vancouver - you will figure out how to dethrone the corrupt Liberals of Ontario.

What do you expect with Discovery Math and the dumbing down of Ontarians' numeracy skills. Most people are basically financially illiterate.

Reply

Report Comment

Ray Skunk 2 days ago +17

Many G&M hacks are unionized.
Unions are in the pockets of the Liberals.
Ergo; the MSM will never go on the attack against the OLP. Combine with paid-off teacher indoctrination of the next generation, and you've got no chance.

See also: CBC paid off with hundreds of millions as soon as Trudeau gets into office, Ontario government blanket advertising on every TV network who daren't upset their main source of income by portraying them in a negative light.

As a child I spent many summers in the communist Eastern Bloc.
I'm sensing a lot of deja vu these days.

pushka 1 day ago +9

The ignorant electorate is indeed the problem in Ontario. The people elected these incompetent actors and have no one to blame but themselves. The Liberals have catered to the unions and create a bloated bureaucracy loaded with overpaid and incompetent policy experts who, like the Liberals, are only there to prevaricate and pick the taxpayers pockets while ensuring themselves a heavily pensioned retirement package.

In the 1960's, Ontario used to promote itself as a manufacturing hub due to its low electricity prices. In fact, one of the lowest electricity prices in North America.

This alone helped working Ontarians in the manufacturing sector to enjoy slightly higher wages, as this cost was offset by cheap electricity.

But now thanks to McGuinty/Wynne, that Ontario advantage is gone.....forever.

And manufacturing is leaving with it.

Report Comment

Robert McInnes 1 day ago **+3**

In the 1960's, Ontario Hydro --as it was then known-- borrowed a lot in order to maintain those lo electricity prices. I was a young guy then in the investment business and there were regular issues of Ontario Hydro bonds (guaranteed by the Province). The fact is that this is not a Liberal vs. Conservative issue; there is enough blame to go around.
But the real blame lies with the voters. Someone in the U.S. said quit blaming the politicians for not understanding how ti fix the government's finances. They know exactly what to do. What they don't know, is if they do it, how are they going to get re-elected? That says it well. Has anyone noticed that a major theme of these posts is that we have to fix it by electing a new government but no politicians are providing any details on the measures needed to fix the problem?

Reply 1 reply

Report Comment

cold air 20 hours ago **+1**

Ontario Hydro borrowed a lot to build things - such as Pickering, Bruce and Darlington, as well as the transmission as demand grew (albeit slower than expected).
They could not build things otherwise - as the Ontario Hydro was neither allowed to profit or to add to the rate base until new assets entered service.

Report Comment

Robert McInnes 1 day ago **-8**

The departure of manufacturing is an international issue - not an Ontario issue. Ask any U.S. economist.

Government is the Problem 2 days ago **+53**

Here's a question...

I personally have been railing against this Liberal government and their phony "green" energy plan for over 10 years now.

I posted 10 years ago in this forum that this green energy plan would NOT result in any meaningful emissions reduction, would NOT create any jobs and would SKYROCKET the electricity bills of individuals and businesses. In fact, this plan would result in Ontario LOSING jobs.

So now we find ourselves so many years down the road and all these things have come true. It is now difficult, if not impossible, to undo the damage that has been done.

So why is it that I as just a common person can see this well in advance yet all the so-called experts cannot?

I personally believe that this was just another Liberal scheme all along, intended to line the pockets of the Liberals and their friends, disguised as a "saving the world" plan so that all the phony socialist social justice warriors could pretend to feel good about themselves.

My friend, when Tom Parkinson (as I recall) questioned how much alternative energy could efficiently be added to the grid he was "audited" but you can't change the laws of physics: consumption and generation MUST be simultaneous. As yet there is no battery capable of running your basic household needs that is cost-effective. And for running the entire grid there is one known battery sufficient to the task - it's called a dam. Because NO alternative energy source is dependable the grid must be built to run WITHOUT any of these windmills and solar panels, because sometimes they simply don't produce when the power is needed. Therefore the efficient (and I say that in every sense of the word) way to run a grid is with no more than 15% alternative energy. Germany claims they have achieved 25% but they also claimed their vehicles had low emissions. The cost to make a home run on solar power is prohibitive - combined batteries and panels will cost you about the same as a new vehicle and you do NOT want to be near that crap in a house fire. Environmentally friendly my gas!

High electricity costs means...General Motors Oshawa assembly plant...soon to be gone.

Unless Wynne pulls yet another Venezuela and begins subsidizing GM to stay.

Isn't it ironic how socialism always results in the very things that socialists always accuse conservatives of doing?

Reply 2 replies

Report Comment

Balter 1 day ago +2

Venezuela didn't have Alberta to suck dry... mind you, low oil prices may produce a similar effect in Ontario. The nice thing about the Trudeau government is their new policy - no, not all the mumbo-jumbo they spout for the CBC, the practice of reversing all the former government's legislation. Other than that, and beside raising personal taxes (disguised as a Canada Pension deduction) what have the Federal Liberals done? But they've established the principle so it shouldn't be too difficult for a new government to reverse whatever policies they want. That's the way we roll in Canada eh.

Reply

Report Comment

Rationalthought 1 day ago +3

Ontario isn't remotely similar to Venezuela, but your comment about GM is accurate

214Montreal 2 days ago +17

Its a for gone conclusion that when the next Ontario election comes around the Star, CBC CITY TV, CTV Post and Globe will have forgotten all this, and will champion Wynne as a wise and wonderful leader with a stellar track record. Why, she even cut hydro rates by generously rebating the 8% Ontario tax. Yes, in 2 years she will again have all her cats in a row.

Reply 1 reply

Report Comment

Midlam 2 days ago

In the six months before the election, all the regular columnists, who are, with the exception of the centrist Wente and possibly one or two more, dyed-in-the-wool Liberals and progressives, will jump on any of the most minor failings of the opposing parties in an effort to get these Liberals back in power. The unions and Liberals themselves will dominate social media and forums like this one with ugly, partisan attacks. The unions will again spend $15 million on TV ads. And so your average Joe and Jane, who don't really understand budgets, rates, debt, GDP, etc., will vote against their own interests and re-elect them. (Actually, it only takes 10-20% on top of the public sector union vote.) Apathy plus press bias equals incompetence, corruption, and a $300 billion debt.

I think you can credit Curious George Smitherman and Gerry Butts for this fiasco! I trust Ottawa is listening....get Energy East under way now!

Reply

Midlam 2 days ago +8

It's a lot worse than the article says. Before the Liberals started governing, rates were 4.3 cents/kWh 24/7. Now daytime rates are 18 cents/kWh. (A kW is about what your kettle uses, and a kWh is the power it uses when on for an hour. Tea under the Liberals is no longer an economical beverage...)

Market rates have been under 3 cents/kWh for years. The Liberals gave green energy producers up to 80.2 cents/kWh, guaranteed for 25 years. A 3500% premium is not going to make any economic sense, ever, under any circumstances, nor lead to any new industries that can survive without subsidies. It will make Liberal cronies very rich, however. In the meantime, new agreements for large-scale solar installations (in e.g. India) have been signed for 5 cents/kWh. Guess what: Ontario solar companies are not doing any of them.

Ontario Liberals are incompetent and corrupt. Wynne should already be barred from office for her involvement in the alleged bribery of the Sudbury candidate. Instead, she is trying to legally bribe ratepayers with taxpayer money. Again.

Reply

Helppleh 2 days ago +8

Wynne is going to win the next election.

The average person has no understanding of the ridiculous fiasco our electricity system has become. What they understand is that Wynne is trying to help out the average voter by giving them a tax break on electricity. Never mind that the Liberals are raising prices with cap and trade, redistributing rates from lower income and now also to rural voters. The electricity pricing system is a giant political slush fund.

Unfortuantley we are loosing jobs reliant on electricity, and so consumption will continue to decline pushing fixed costs unto lower consumption, thereby increasing the price per kw/h. The viscous circle will not easily be broken.

Sell soon and move out of the province before it collapses under its own weight (debt).

Reply

J_Lee 2 days ago +7

Well, the same guy who mishandled the Ontario green policy is now pulling the string on puppet Justin Trudeau. The same group of Ontario liberals are now in charge of the PMO.

It would be fun to see how they destroy Canada.

Dear Ontario,

We don't speak that often, but this seems like an ample time to let you know of our gratitude. You have elected the Liberals to lead your province for now 13 years and what a job they have done ... billion dollar boondoggles, ballooning debt, ethical lapses in government access (i.e. pay for play) and now a 'solution' to their self-created mess of energy costs that is basically a high stakes version of three card monty. And because it has been going SO well you decided let's do it for the rest of Canada. So you send their colleagues in arms to Ottawa and emboldened by a solid Ontario base of Liberal MP's, Prime Minister Selfie is ready for Act II. 'You can do it Gerard Butts! , you can bring clarity and some smart thinkin' to the rest of Canada! They will love us for it!" you scream in unison. So as I sit back and I see the lack of direction in terms of any economic or fiscal management, the already escalating deficits and the trepidation to do anything to upset their core base, I thank you!

The Rest of Canada

Reply

ontariotaxserf 2 days ago +6

For consideration:
1) The McGuinty -Wynne Liberal governments really were and are incredibly short-sighted and massively incompetent. Even though they were warned pre-GEA that this policy would be disastrous, they implemented and continue to follow the policy even when it was clear that the GEA is a total failure. As evidence of the damage mounted, it was ignored, or glossed over. If the government really was that monumentally incompetent, then tried to hide the results, formal-wide ranging investigations should have been initiated....OR...
2) Nobody is that stupid. McGuinty-Wynne knew exactly what they were doing, and what the result would be. The government signed contracts with ''green'' energy providers that would guarantee massive profits, even if the programs failed. Lib insiders knew what was happening, and dealt themselves in. Follow the money. Formal wide-ranging criminal investigations should have been opened, and pursued
vigorously.
3) Combination of both stupidity and duplicity. The most alarming. Incompetence together with corruption are exponentially worse then either alone. McGuinty-Wynne was crooked enough to put the fix in, but too stupid to know when to stop. We see the result....OR...
4) Wynne just doesn't care . She doesn't care about you, or your family, or neighbors, your town, your province. She cares about power, and she'll do anything, say anything, and sacrifice anyone to get it and keep it. She'll lie, cheat, steal, smokescreen, deflect, and cover-up. She'll smile,shake your hand, and give you a pretty speech...meanwhile, she's lifted your wallet. She walks away smiling and waving. You? not so much.
Wynne and her merry band of pirates need to be dumped - and hard, They need to be banished to the political wasteland for a long, long, time. They shouldn't be able to get their hands on this once-thriving province. They've damaged it so badly that Ontario will take many years to recover -if it ever can.

The Globe and Mail should have to answer for its very damaging role in propagandizing the Liberals fake "green" laws and policies, and for hyping, aiding and abetting the non-existent manmade climate change catastrophism with which they are rationalized. A calamitous failure of journalism. No integrity. A shameful disgrace.

Reply

Disgusted with The Globe 1 day ago +5

Stupid me - I just realized why the annual savings from Wicked Wynnee's and the Sousaphonee's hydro rebate was as large as I thought it would be.

Read the fine print - "And now it's back. The new rebate is eight per cent – achieved by eliminating the provincial sales tax portion of the harmonized HST from electricity, and ONLY ELECTRICITY."

The value of "only electricity" on my Hydro 1 bills pales in comparison to the "distribution" cost. Usually about 10%.

So we're still going to be paying HST on distribution costs and all of the other ridiculous fees.

I wonder why the Liberals didn't make that clear - just more obfuscation and misleading actions hoping that the great unwashed public won't notice.

Reply 1 reply

Reply

Genius09 1 day ago +5

When Wynne and her Liberal gang partially privatized Hydro One about two years ago, one thing she did for her "friends" was to ensure their salaries were no longer to appear on Ontario's Sunshine List (more than $100,000 annually). The 2013 list shows that there were 11,879 employees of Hydro One, the Ontario Energy Board and Ontario Power Generation making over $100,000 per year. a whopping 77.5% of Ontario Power Generation employees make over $100,000/Year. Over 70%
of Hydro One employees and over 60% of Ontario Energy Board employees made over 100K in 2013 and there is no indication that their wages have been "frozen" over the past three years! In addition, there were 182 employees making over $250,000 a year, that number has probably grown in the last three years! Wynne will leave us with the highest hydro rates in North America and the largest sub-sovereign debt in the world, how any thinking person could consider voting for her Party is beyond my comprehension!

Reply

Hatley1 2 days ago +5

The Globe got caught up in mob hysteria and blindly embraced delusional and corrupt Green Energy policies (along with other gems) which have made Ontario non competitive. The only jobs to be had will be in government or subsidized in some fashion by government. No need to go to Venezuela. The madness of crowds is with us on parade under the guise of virtue.

Reply

jpwjpw 2 days ago +5

When you read history, it is full of cultures, civilizations that implode because of choices in governance that render them dysfunctional. Though this sounds melodramatic, I wonder if we are staring at this in our times. What else would cause successive governments in Ontario to torpedo below the water line the welfare of the people they are supposed to lead wisely in almost every department you care to mention (energy being just one)? Corruption, incompetence, neglect seems to be what the majority vote for.

So how many hundreds of stories and articles has the Globe & Mail produced supporting all this Green Energy nonsense and NOW you pretend to have seen this disaster unfolding all along.

Seriously ridiculous journalism, but at least now you admit Green Energy is as Butt naked an Emperor as you have been told it always was by anyone who could and did do simple arithmetic.

Reply 1 reply

DieterHH 1 day ago

The G&M ignorance of STEM and related economics is abysmal - like most media.
But spelling and grammar, sentence structure are correct, unfortunately devoid of meaningful content.

Green Energy (solar, wind) is unstable and in all cases requires back-up capacity - in effect doubling capital and maintenace costs, never mind extended grid infrastructure. One may ask how many nuclear plants could have been built for the money thus far wasted.

Reply

ProVertias 1 day ago +2

Amazing people still fall for the old shell game. As P.T. Barnum said, "There's a sucker born every minute".

Reply

Glauria 1 day ago +2

Unfortunately, the sad truth is, no one can fix the mess the Dalton Gang has created in this province. NO ONE. You had several chances to toss these lying liberal thieves to the curb, but instead, you kept re-electing them. And every time you did that, they became more emboldened to push the Envelope of Stupid a bit further.

And then what did you do?? After more than a decade of one billion-dollar scandal after another?? You gave them a frickin' MAJORITY because "Hudak scared you."

Well, you people are getting exactly what you deserve. The S.S. Ontariowe is headed straight for that fiscal iceberg and the cabal of incompetents who are steering it should be at the helm when it goes down. So enjoy the decline. No one can save this ship, not even God himself.

Reply 1 reply

DieterHH 1 day ago

Exactly !
God is shaking his head and the Devil is rubbing his hands - stoking his furnaces with the surplus electricity we sell for free.

Reply

Balter 1 day ago +2

Please do not dignify this with the term 'policy' - Ontario's Electrical Wonderland, okay. Ontario Liberals' Electrical Fantasia, maybe. It's too late now, it will take a decade or two to rebuild dependable generation, you're stuck with Never Never Land windmills and Glow Little Glow Worm solar panels. And this was all painfully obvious a decade ago, never mind the last election when Ontario blithely voted these idiots in for yet another four years. The only person who can survive at the top over at Hydro One is a Yes Man (or Woman, as the case may be, they give them the golden handshake so fast these days it's hard to remember their names) because the state of political activism in the English-speaking world is basically this: if we make it a law, it shall be so. Never mind the laws of physics, that's for the details people. Well she comin' down people, she comin' down hard, real hard. Chickens coming home to roost. My advise to the opposition parties is to run - no sense wearing this mess, it's going to take years to clean up, even if the West Canada Credit Card keeps working. And I wouldn't bet on it.

Reply 2 replies

Glauria 1 day ago

That's exactly right. The smart people have already left Ontario (like we did last year) and are watching from a safe distance in one of the "lifeboat" provinces while the S.S. Ontariowe slips beneath the waves. Our suggestion is to get out of that province while you can, as soon as you can, because it is not going to get any better for decades. ESPECIALLY when you have three parties who are all carbon copies of each other, right now.

Reply 1 reply

Major Burn 21 hours ago

I've said it before and I will say it again. Ontario has FAR more than 3 options. Liberals, Conservatives and NDP have all screwed us. I refuse to vote for any of them ever again. Don't like them yourself? Great, don't vote for them. Vote Freedom party if you lean towards less government and lower taxes. Vote Green Party if you want to continue this crusade of stupidity against common sense. I don't care, so long as you stop voting for the "big three" simply because you feel you have no options. YOU HAVE OPTIONS!! USE THEM!

JP230 1 day ago +2

How bad can the alternative parties possible be in Ontario if they keep voting for this government?

Reply 4 replies

Rationalthought 1 day ago

Pretty bad, to be sure. "Useless" comes to mind.

Reply 1 reply

Katherine McCulloch 1 day ago

Does that justify voting for these corrupt, inept, tax grabbing idiots we have in power presently? No, No, No!Useless doesn't even begin to describe the current regime. So you really have no idea how bad or good the opposition parties are. ANYBODY would be better than the Lberals because there is nothing worse.

Glauria 1 day ago

All three parties right now are carbon copies of each other. Horwath (NDP) helped to keep these Liberal incompetents in office LONG after they should have been ejected. And the current PC leader is Patrick Brown....a liberal plant if ever there was one. He fully supports the craziest of Liberal policies, like the carbon tax scam.

Ontario is out of options. Their last chance to get rid of the remaining Dalton Gang and turn that ship around ended with the 2014 election. That province is now screwed for the next several decades.

Reply 1 reply

Major Burn 20 hours ago

We are not out of options. Your options have always been there in the form of the freedom party for the right and greens for the left. You are only atuck with the three stooges for as long as you vote for them.

RONDA 2 days ago +2

And all you dips ticks will vote for this government again. You will get what you deserve

Reply

Major Burn 19 hours ago +1

Despair.

I'm so sick of the despair on these boards. You complain about Wynne, then vote her back in cause you've been convinced we are doomed and have no options. Libs, Cons, and NDP are all carbon copies, thats true, but those aren't our only options!

If you are right leaning, look at Freedom Party. Left leaning, look at Green party.

There are options people! We are only stuck with these three political vampires so long as we keep voting for them. If you can't vote for a party you like, do us all a favor and don't vote at all. If you do like a party, vote for them regardless of their chances of winning. It's your vote, don't waste it on someone you hate the least.

Reply 2 replies

truthhurtstttheleft 16 hours ago

hey pal,a minority elected her, the majority are against her bs,, democracy doesnt end after the election either, its our duty to keep exposing the bs,,,and save the bs,, the ontario conservatives are nothing like the corrupt libs, under harris we prospered, took rae;s 10 bill deficit to balanced book,s, thus over 800,000 net private sector jobs came to ontario ,, ,, leaning left even center left is the problem, always will be,,

Reply 1 reply

Major Burn 14 hours ago

I'm not against the Cons of the past. They did a good job and actually were conservative. My problem is with the "Liberal Lite" brand they've been pushing lately. So worried about taking the middle that they are abandoning the right and copying their policies from the Libs. I don't want a Conservative version of the Liberal policies, I want conservative policies that make sense, starting with scraping every bad move the Libs have made over the last 14 years. Nuke and Pave if needed. Better to have nothing than the horribly malfunctioning crap the libs have put in place, but no Tory seems to be willing to wipe the slate clean. They are unwilling to make the tough decisions, so I go to the Freedom party who will. In the last election, they were the only party to post a platform that would have had us in the black in year 1, not year 4. They were the only party willing to scrap the horrible green energy act, and they didn't even get any air time because the libs don't want you to know about them, and the libs control the media.

Major Burn 22 hours ago +1

Wow, so you are going to give us a rebate, REBATE, on the HST. Just so everyone is clear a Rebate is NOT removing the tax as so many news papers seem to have interpreted it. A rebate means you pay the tax first, then after the government has your money, they are giving it back. Consider this for a moment. At first you are thinking "what's the difference? I still get my 8% in my pocket." And that is true, except for the multiple levels of bureaucracy required to collect that money, filter out the PST charge, print you a check and mail it back to you. (or however they are planning on sending us this rebate) We will have raises in taxes elsewhere to pay for this, when instead they could just not collect the PST in the first place.

And on the subject of the HST, there is the fact that Ontario is now adding a flat centers per litre tax to gasoline. What you may not know is that this is the second flat tax gasoline will get. The old one is still there. What you ALSO may not know is that when the HST came into effect, putting the PST on gasoline for the first time in history, the HST was applied AFTER the flat tax was calculated in. That's right, they taxed the tax. I have absolute faith that when this new 4 cent charge is applied, the HST will be applied to that too. Crooked thieves in office.

Reply 2 replies

Major Burn 22 hours ago

And on another note about the Rebate, you can bet your behind that the rebate will not come from the original PST collected. That money will go straight into government coffers. The rebate will be paid for by borrowing more money, just to bribe us into complacency, putting us further in debt.

Reply 1 reply

D.Jeff 19 hours ago

It is a deficit funded rebate for sure

David Gibson 1 day ago +1

"""So instead of fixing the fiasco, they are going to once again pay voters, with their own money, into not noticing it."""

It will work. The only reality which exists in the public consciousness are the things which the half-dozen leading Toronto news companies focus on and/or obsess about. (Those are, of course, also the half-dozen leading Ontario and Canadian news companies.) Government finances? Most citizens and journalists don't even know the difference between debt and deficit. The press is not going to do jihad about electricity rates or government finances, and Toronto's establishments - political, press, union, etc..) would re-elect Wynne next week if there were an election.

If Wynne was a stock, I'd buy it. She is financing her next election victory with borrowed money, a wise leveraging move.

"Power at Cost" indeed.

Reply

JeffSpooner 1 day ago +1

No one apparently noticed that when the rebate scheme starts in 2017, there is also a scheduled increase in hydro rates. I think this is generally referred to by the average citizen,as money in money out, and no farther ahead.

Reply

How many of those thousands, if mot millions, of voting tenants have any clue as to what the hydro costs actually are ? Most renters have it included in their rent so they never see a bill. Those that do will pay to keep the TV on before they pay their landlord. And if they end up on the street because the landlord wasn't paid, they then end up in public housing - umm... and who is paying for that ? .... Oh well ... unicorns and rainbows will be filling those super green meadows that grow money trees instead of corn. No sense in getting a real job because after my 12 years of post graduate study, the government will be anxious to pay me HUGE dollars just to have my advice on hand.

GIVE US AN ELECTION !!!

Reply 1 reply

214Montreal 5 hours ago

That was a big underlying problem in the Soviet Union: The Workers' Paradise. . Nobody knew what the value of anything actually was. The price of a car, shoes, taxi rides, cheese, apartment rent, light bulbs, a TV, bread, a haircut, a winter scarf, had no relation to the cost of manufacturing and distributing it. Everything had to be subsidized because no business was permitted by law to make a profit. The economy simply went bankrupt because the costs of subsidies, even a shoe shine stand were simply impossible, even in resource rich Russia. When the system collapsed in 1989 it was a gob smacking disaster.

Reply

BRITCAN 1 day ago 0

Although our political system has many advantages such as free speech it has a serious flaw when an elected party with a majority has created such a response as we have seen in the last few days & there is no way to get necessary action until the next election & even then the results appear to favour public service workers with their voting control.
The media can help by publishing details of the various reasons of how the Liberals created this situation but is this enough?
Ontario is a major province that affects the economy of this country so maybe this is the time to think outside the box.
Why not consider eliminating provincial governments entirely as there are too many different government levels in this day & age when distances are no longer relevant & control of many factors such as health, education, energy, environment, transport, etc. should be controlled from one source.
It would be interesting to see how quickly such a system would eliminate our provincial & national debt.

So you are saying Ontario cannot compete with Germany. Where the work force gets more vacation more benefits and more pay.

Reply 1 reply

Major Burn 22 hours ago

Ask yourself, if that is true, how badly must we be messed up to make it true. If more companies can afford more vacation, pay and benefits, that means their operating expenses are low in other sectors (power costs and taxes).

scottd 2 days ago -2

To be accurate G&M, Ontario governments have been hiding hydro costs since the 1970's.

Reply 1 reply

rcbeattie 1 day ago -3

I think a tax rebate or credit would be a good idea if it applied to only a portion of the bill, so that people living in modest housing with fewer gadgets, who use less electricity, pay less, while those who use a lot of electricity pay the full freight on everything above that portion. You would support the policy goal of reducing electricity use and you would leave people able to pay their bills. I calculated, though, that if everyone drove a Volt our electricity use would increase by about 25%. How does that fit with her plans to have the second car (!!) on every driveway an electric car?

Reply 1 reply

JeffSpooner 1 day ago

You forget that the selling of power, and therefore its consumption is a business. if consumption drops , and since there is no competition rates have to raised in order to compensate for the short fall. This has already happened. Considering the investment Ontario has made and the ridiculous green energy contracts, we only hurt ourselves by not consuming power, as the money will have to come from somewhere, and that usually means taxes.

Reply

Sven.Persson 1 day ago -5

Yeah, it's a populist move. But hey, the Globe does nothing but promote the same lie over and over again "green policies are to blame". Plenty of work has been done to expose how that this a myth (prices are comprised of over a dozen factors; generation, distribution, debt retirement charges, maintenance, etc, etc, etc,). Globe wants you to believe 40% of your bill goes to solar. Sorry, not buying that BS. Also not buying that Tim Hudak had better answers than Wynne's lame answers.

Reply 4 replies

Glauria 1 day ago

Where does it say in the article that 40% goes to solar? Your entire comment is nonsense and indicates someone who has no real clue of how the energy file in Ontariowe is set up.

Reply 1 reply

DieterHH 1 day ago

A typical Ontario voter .-)

Major Burn 22 hours ago

How about the actual rate that we pay for solar and wind 80 cents per kilowatt hour, compared to something like 4 or 5 cents for everything else. How about the rule the libs put in place with their green energy act that says the priority of energy sources, and thus billing, is that green energy sources take priority, guaranteeing that we are paying the full load generated by green sources before the remainder is billed to us from the cheaper other sources. That's right, if you buy a kilowatt hour, and that kilowatt hour is available from a green source and from nuclear, hydro or coal you MUST by it from the over priced green source. Any excess energy generated (ie, all the cheap sources we relied on before this boondoggle) are then sold to the states at a loss. This is the nightmare situation the Libs have put us in, guaranteeing that we pay for the most expensive source first.

truthhurtstttheleft 20 hours ago

hey ignorant idiot the gea is a complete disaster to our system, , costing us at least a billion a year forcing us to sell of the electricity from much less costly sources, to guarantee we buy the wind and solar always,, maybe you missed the AG report that clearly showed that of the 37 billion we over paid for hydro since 2006, 9 BILLION of that was from the GEA you ignorant liberal sheep

Glauria 1 day ago

Oh please. Harris and Hudak have nothing to do with this mess. The fault for this fiasco falls squarely and firmly in the laps of the Dalton Gang and no amount of deflection on your part is going to change that.

Reply

Interested Party 2 days ago -16

Yes, history repeats itself, but does it not it go back further than the two Liberal attempts? I clearly remember Ernie Eves as the then new PC Premier playing tricks with electricity costs to quell public outrage. Did that not also involve adding hugely to the debt, which then lead to debt retirement charges that padded bills for a long time after (or maybe still)?

what? you are not blaming Harris?

Reply

truthhurtstttheleft 2 days ago

hey pal,, ernie FROZE rates for politics no tricks just froze rates,, it added to the debt yes, but didnt try and spin it as some miracle fix for peoples pockets like this trash liberals are doing,, never mind he didnt rack up the bureacracy in hydro and create the GeA all that screwed over ontario rates out of sight,,,, save your deflection bs,, as for retirement fees,, well YOUR liberals took 4 BILLION out of that fund as we were paying it off and used it in general accounts for thier vote buying scams (as was outed by the AG),,, that really forced us to pay for years on the dept long after we actually paid it off,, care to update your rant now Lib troll?

Reply 1 reply

Rationalthought 1 day ago

Freezing rates is a trick; playing games and not addressing th actual problems. Eve's did that 'pal'. Wayne is guilty of much, but our Electricity problem have been a long time brewing.

Karl Schlabodka 2 days ago

How far back in history do you want to go?..if Ernie was so bad why didn't Dalton immediately reverse the Eves move?..to pint to bad behaviour to justify your own is stupidity

Reply 1 reply

Rationalthought 1 day ago

Simple. The electricity problem is a difficult one To fix, and nobody wants to tackle the problem when there is no easy solution. Daltons hair brained ideas just made it worse.

Glauria 1 day ago

Astounding how many people will try to blame over THIRTEEN years of Liberal corruption and incompetence on Harris or Eves. By the way, the Auditor General reported that the Debt Retirement charge (which has now been retired, how do you not know that?) was actually paid off in 2009, but the Dalton Gang stole $4 BILLION from the fund and that is why we had to continue paying it off for several more years.

Reply

cold air 21 hours ago

The Ontario Electricity Finance Corp has all it's annual reports online. From the 2001-2002 fiscal year through 2004-05's the "unfunded liability" rose by about $300,000.
Essentially the first years of the Debt Retirement Charge paid for the rate freeze and not reducing debt liability. That Eves rate freeze slowed down paying off debt, but he was not in the irresponsibility league the current Premier plays in.

HST on Electricity

Issue:

The Ministry of Energy is proposing to remove the provincial portion of the Harmonized Sales Tax (HST) from electricity bills as a means to mitigate increasing electricity prices.

Key Messages:

- The HST applies to electricity, as it does to most goods and services.
    - Businesses are generally able to claim input tax credits for the HST they pay.
- Ontario already provides tax relief to low- to moderate-income individuals and families for the sales tax they pay through the Ontario Sales Tax Credit and the Ontario Energy and Property Tax Credit (OEPTC).
- Additional assistance with the cost of energy is provided to:
    - low- to moderate-income families and single people living in Northern Ontario, through the Northern Ontario Energy Credit; and
    - lower-income households through government-provided housing benefits, and the Ontario Energy Board's Ontario Electricity Support Program, which provides direct energy bill assistance.
- Targeted HST relief could be provided to those most in need by enhancing amounts provided through existing programs.
    - The cost of enhancing existing amounts would be lower than the cost of removing the provincial portion of the HST from all residential electricity bills.
    - This is because they are targeted to people with higher needs whereas a broad exemption could benefit higher-income people.
    - The amount of sales tax relief that some low-income Ontarians get through existing tax credits may exceed the amount of provincial sales tax they pay.
- Broad, comprehensive relief could be provided by way of a federally-administered point-of-sale rebate or a provincially-administered rebate (similar to the former Ontario Clean Energy Benefit).
    - The amount of HST attributable to residential electricity bills is around $735 million for the 2017-18 fiscal year.
- Broad, comprehensive relief from the HST on electricity could undermine the government's efforts to encourage energy conservation and could lead to higher greenhouse gas emissions.
    - Removing the HST from electricity would subsidize electricity consumption, likely leading to higher consumption than would otherwise be the case.
    - The Environmental Commissioner of Ontario criticized the former Ontario Clean Energy Benefit (OCEB), describing it as a perverse incentive that rewarded increased electricity consumption.
        - HST relief on electricity would have similar effects to the OCEB.
    - Natural gas (a source of greenhouse gas emissions) accounted for 9% of Ontario's electricity generation in 2014 and 2015.

        - This figure is expected to grow when nuclear units are taken offline in the coming years (e.g., for refurbishment).[1]
    - Ontario's Long-Term Energy Plan, released in 2013, projected that greenhouse gas emissions from Ontario's electricity sector would increase over the next two decades.
- As noted in Budget 2016, Ontario's forthcoming cap and trade program will not result in increased electricity costs. In fact, residential users will experience a modest benefit of up to $2 per month, on average.
    - Cap and trade proceeds will be used to offset the cost of greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.

HST Overview:

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
    - In general, the HST is consistent with the GST and follows the same rules and tax base.
    - The federal government is responsible for deciding how a particular item is taxed under GST/HST.
    - Electricity has been taxed under GST since its inception.

- Based on the most recent Ministry of Finance estimate, the provincial portion of the HST on electricity is about $735 million in 2017-18.
    - Ontario's Climate Change Action Plan contains a number of initiatives that would lead to increased electricity consumption (for example, through greater use of electric vehicles and electric heating). The tax expenditure for an HST rebate would thus be expected to grow substantially in coming years.

- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
    - The HST is a value-added tax that applies at each stage of the supply chain. Businesses that make taxable sales collect HST from their customers and remit it to the Canada Revenue Agency. At the same time, they claim ITCs to recover the HST they pay on their business inputs, typically by netting the amount off the HST they remit.

Relief currently provided:

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs, Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).

[1] Natural gas accounted for about 28% of Ontario's installed energy capacity in June 2016, according to the IESO.

    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.

- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate-income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.

- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to their more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.

- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - Removing the Debt Retirement Charge (DRC) cost from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage to power medical devices can get monthly assistance of $45 to $75.

Additional Electricity Price Mitigation:

- Additional sales or electricity cost relief could be provided through one or a combination of Ontario's existing programs meant to help low- to moderate-income people with such costs (e.g., enhance the OEPTC energy component, NOEC).

- Ontario could work with the OEB to target additional sales tax relief to people who qualify for the OESP.
    - This would require a formal arrangement under which Ontario would remit funds to be delivered to eligible people by the OEB and electricity distribution companies.

- A new home energy benefit could be introduced, but such a program would:
    - Add complexity to the tax and benefit system due to overlaps with existing programs;

- Likely be considered income support and, therefore, be taxable to the recipient; and
- May result in Ontario incurring higher administration costs.

Federally Administered Point of Sale Rebate:

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
  - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
  - See appendix for additional criteria.

- At $735 million and growing, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
  - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.

- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
  - The federal government may not agree. It could, for example, object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.

Provincially Administered Rebate (similar to the Ontario Clean Energy Benefit):

- The HST agreement has no limitations on provincially-administered point-of-sale rebate equivalents since the CRA would play no role in administering them.

- In the case of providing an 8% reduction on a residential customer's electricity bill, it is likely that the structure and administration could be very similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB).
  - The OCEB ended on December 31, 2015. Other measures to help mitigate electricity costs have been implemented, in addition to the tax credits implemented at the time of transition to HST.

- A provincially-administered rebate could likely be shown on customers' bills, similar to the way the OCEB was shown.
  - Confirmation of this would require consultation with the Ministry of Energy.

- It would be difficult to limit the rebate only to electricity used residentially.

    - The OCEB applied to small business and farms, as well as to residential customers and therefore did not face the same challenges.
    - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in “double dipping.”
    - Ontario cannot introduce new restrictions to a business’s ability to claim an ITC.

- Ontario does not currently provide any provincially-administered HST rebates.
    - Providing a rebate for the provincial portion of the HST on electricity could set a difficult precedent.
        - Ontario is often asked to provide HST relief for supplies such as gasoline and home heating fuels.

Appendix: Federally-Administered Point-of-Sale Rebate

Comprehensive Integrated Tax Coordination Agreement (CITCA)

The CITCA is the HST agreement between Canada and Ontario.

- The HST is established under federal legislation (the *Excise Tax Act*).
- The Canada Revenue Agency collects, administers and enforces the HST.
- The federal government is the policy lead on all HST matters. Ontario is bound by any federal tax base changes or rulings.
- Any change to the HST in Ontario requires, at a minimum, changes to federal regulations.

Under the CITCA, Ontario maintains flexibility in particular areas, including the ability to designate items or services as eligible for a POS rebate of the 8% provincial portion of the HST, subject to certain constraints:

- The cost of the new rebate must not exceed Ontario's POS "room" (the total value of POS rebates must not exceed 5% of the Goods and Services Tax base in Ontario).
- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to determine the expenditure in the Province attributable to the item or service.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

Process to Create a New POS Rebate

If Ontario wishes to make a permitted change to the HST, the amendment process in CITCA must be followed, which would a minimum of four months, unless Canada and Ontario agree otherwise.

1. Ontario must give at least 120 days' notice of the proposed HST change to the federal government (effective date could be earlier or later if agreed to by the parties).
    - The effective date of the HST change must be January 1, April 1 or July 1. It may only be October 1 if mutually agreed.
2. Ontario must give 60 days' notice to the public of the proposed HST change (unless the federal government agrees otherwise).
3. After the public announcement, Ontario must obtain the approval of the provincial Legislature (e.g., by way of motion) to make the HST change (unless the federal government agrees otherwise).
4. Canada must amend Cabinet regulations to implement the HST change, and make transitional rules.
5. To implement a new point-of-sale rebate, the *Retail Sales Tax Act* and regulations must be amended.
6. The Minister of Finance of Ontario and the Minister of Finance of Canada must amend CITCA in writing.

HST on Electricity

Issue:

The Ministry of Energy is proposing ~~to remove~~that the provincial portion of the Harmonized Sales Tax (HST) be removed from residential[?] electricity bills as a means to mitigate increasing electricity prices.

Key Messages:

- The HST applies to electricity, as it does to most goods and services.
  - Businesses are generally able to claim input tax credits for the HST they pay.
- Ontario already provides tax relief to low- to moderate-income individuals and families for the sales tax they pay through the Ontario Sales Tax Credit and the Ontario Energy and Property Tax Credit (OEPTC).
- Additional assistance with the cost of energy is provided to:
  - low- to moderate-income families and single people living in Northern Ontario, through the Northern Ontario Energy Credit; and
  - lower-income households through government-provided housing benefits, and the Ontario Energy Board's Ontario Electricity Support Program, which provides direct energy bill assistance.
- Targeted HST relief could be provided to those most in need by enhancing amounts provided through existing programs.
  - The cost of enhancing existing amounts would be lower than the cost of removing the provincial portion of the HST from all residential electricity bills.
  - This is because they are targeted to people with higher needs whereas a broad exemption w~~o~~ould benefit all ratepayers, including higher-income people.
  - The amount of sales tax relief that some low-income Ontarians get through existing tax credits may exceed the amount of provincial sales tax they pay.
- Broad, comprehensive relief could be provided by way of a federally-administered point-of-sale rebate or a provincially-administered rebate (similar to the former Ontario Clean Energy Benefit).
  - The provincial amount of HST attributable to residential electricity bills is forecast to be around $735 million for the 2017-18 fiscal year.
- Broad, comprehensive relief from the HST on electricity could undermine the government's efforts to encourage energy conservation and could lead to higher greenhouse gas emissions.
  - Removing the provincial portion of HST from electricity would ~~subsidize electricity consumption~~, likely, ~~likely~~and may lead~~ing~~ to higher consumption than would otherwise be the case.
  - ~~The~~In a report released in 2011, ~~T~~the Environmental Commissioner of Ontario criticized the former Ontario Clean Energy Benefit (OCEB), describing it as a perverse incentive that undermines conservation. ~~rewarded increased electricity consumption.~~
    - HST relief on electricity would have similar effects to the OCEB.
  - Future electricity sector emissions are likely to be driven by nuclear supply decisions.

Commented [GH1]: All or residential?

Commented [EK2]: Since electricity consumption isn't price-sensitive, I don't think it is clear that removing HST would significantly increase emissions.

Any submission from Energy on this proposal should address this issue and provide an estimate of the potential increase in emissions.

Commented [JK3]: The first part does not appear accurate.

Commented [EK4]: I couldn't find the phrase "rewarded increase electricity consumption" in the report.

The ECO report does state:
Since the rebate is funded from government revenue and the size of the rebate is proportional to the amount of electricity consumed, it uses the tax system to indirectly transfer wealth from low-volume energy consumers to higher volume consumers.

- In its Ontario Planning Outlook, the Independent Electricity System Operator states that longer-term electricity sector emissions will remain well below historic levels, but will fluctuate in step with natural gas generation. Natural gas generation will tend to be highest when nuclear output is lowest, such as during refurbishments and upon Pickering retirement.

- ~~Natural gas (a source of greenhouse gas emissions) accounted for 9% of Ontario's electricity generation in 2014 and 2015.~~
  - ~~This figure is expected to grow when nuclear units are taken offline in the coming years (e.g., for refurbishment).[1]~~
- ~~Ontario's Long-Term Energy Plan, released in 2013, projected that greenhouse gas emissions from Ontario's electricity sector would increase over the next two decades.~~

- ~~As noted in~~ Budget 2016~~,~~ included a commitment that the net impact of Ontario's forthcoming cap and trade program ~~will~~would~~ill~~ not result in an overall increase~~d~~ in electricity costs~~.~~ for commercial and industrial consumers,~~ In fact,~~ and that for residential users there would be~~will experience~~ a modest benefit of up to $2 per month, on average.
  - Cap and trade proceeds will be used to offset the cost of greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.

HST Overview:

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
  - In general, the HST is consistent with the GST and follows the same rules and tax base.
  - The federal government is responsible for deciding how a particular item is taxed under GST/HST.
  - Electricity has been taxed under GST since its inception.

- Based on the most recent Ministry of Finance estimate, the provincial portion of the HST on residential electricity bills is forecast to be about $735 million in 2017-18.

- ~~Ontario's Climate Change Action Plan contains a number of initiatives that would lead to increased electricity consumption (for example, through greater use of electric vehicles and electric heating). The tax expenditure for an HST rebate would thus be expected to grow substantially in coming years.~~

- ~~•~~

- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
  - The HST is a value-added tax that applies at each stage of the supply chain. Businesses that make taxable sales collect HST from their customers and remit it to the Canada Revenue Agency. At the same time, they claim ITCs to recover the HST

[1] ~~Natural gas accounted for about 28% of Ontario's installed energy capacity in June 2016, according to the IESO.~~

Formatted

Commented [JK5]: Is this factchecked?

Commented [SK6]: Please confirm this is for residential electricity bills.

Commented [EK7]: On page 1, it is stated that $735 million is the amount of HST on residential electricity bills.

Formatted

Commented [EK8]: It is unclear whether electricity consumption will substantially increase in the coming years.

In its Ontario Planning Outlook, IESO state that "long-term net demand growth will remain moderate as conservation savings offset projected economic growth."

The planning outlook also states that "a significant amount of electrification of transit and electric vehicles is included in the reference demand forecast.

With regard to heating, low natural gas prices and expansion of the natural gas system may offset the effects of programs under the Climate Change Action Plan (CCAP). It is Ontario Planning Outlook (released before the CCAP), IESO assumed a modest decline in electric fuel share for space and water heating.

Formatted: Font: (Default) Arial

Formatted: Font: +Body (Calibri)

they pay on their business inputs, typically by netting the amount off the HST they remit.

Relief currently provided:

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs, Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.

- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate-income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.

- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to ~~their~~ more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.

- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - ~~Removing~~ Removed the Debt Retirement Charge (DRC) ~~cost~~ from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage due to electric heating or ~~power~~ medical devices that use a lot of power can get monthly assistance of $45 to $75.

Additional Electricity Price Mitigation:

- Additional sales tax or electricity cost relief could be provided through one or a combination of Ontario's existing programs meant to help low- to moderate-income people with such costs (e.g., enhance the OEPTC energy component, NOEC).

- Ontario could work with the OEB to target additional sales tax relief to people who qualify for the OESP.
    - This would require a formal arrangement under which Ontario would remit funds to be delivered to eligible people by ~~the OEB and~~ electricity distribution companies.

- A new home energy benefit could be introduced, but such a program would:
    - Add complexity to the tax and benefit system due to overlaps with existing programs;
    - Likely be considered income support and, therefore, be taxable to the recipient; and
    - May result in Ontario incurring higher administration costs.

Federally Administered Point of Sale Rebate:

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
    - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
    - See appendix for additional criteria.

- At $735 million annually ~~and growing~~, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
    - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.

Commented [EK9]: Earlier in the note it is stated that the amount of HST attributable to residential electricity bills is forecast to be $735 million in 2017-18. If $735 million is the amount for the full 13% HST, and the rebate is only for the provincial portion, then the amount of the rebate would be lower.

- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
    - The federal government may not agree. It could, for example, object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.

Provincially Administered Rebate (similar to the Ontario Clean Energy Benefit):

- The HST agreement has no limitations on provincially-administered point-of-sale rebate equivalents since the CRA would play no role in administering them.

- In the case of providing an 8% reduction on a residential customer's electricity bill, it is likely that the structure and administration could be very similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB).
    - The OCEB ended on December 31, 2015. Other measures to help mitigate electricity costs have been implemented, in addition to the tax credits implemented at the time of transition to HST.

- A provincially-administered rebate could likely be shown on customers' bills, similar to the way the OCEB was shown.
    - Confirmation of this would require consultation with the Ministry of Energy.

- It would be difficult to limit the rebate only to electricity used residentially.
    - The OCEB applied to small business and farms, as well as to residential customers and therefore did not face the same challenges.
    - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in "double dipping."
    - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.

- Ontario does not currently provide any provincially-administered HST rebates.
    - Providing a rebate for the provincial portion of the HST on electricity could set a ~~difficult~~ precedent.
        - Ontario is often asked to provide HST relief for supplies such as gasoline and home heating fuels.

Commented [SK10]: Suggest moving / copying this to the Key Messages section. This seems to be an important consideration for any provincial HST rebate and ought to be brought up earlier.

HST on Electricity

Issue:

The Ministry of Energy is proposing ~~to remove~~that the provincial portion of the Harmonized Sales Tax (HST) be removed from residential~~[~~?] electricity bills as a means to mitigate increasing electricity prices.

Key Messages:

- The HST applies to electricity, as it does to most goods and services.
  - Businesses are generally able to claim input tax credits for the HST they pay.
- Ontario already provides tax relief to low- to moderate-income individuals and families for the sales tax they pay through the Ontario Sales Tax Credit and the Ontario Energy and Property Tax Credit (OEPTC).
- Additional assistance with the cost of energy is provided to:
  - low- to moderate-income families and single people living in Northern Ontario, through the Northern Ontario Energy Credit; and
  - lower-income households through government-provided housing benefits, and the Ontario Energy Board's Ontario Electricity Support Program, which provides direct energy bill assistance.
- Targeted HST relief could be provided to those most in need by enhancing amounts provided through existing programs.
  - The cost of enhancing existing amounts would be lower than the cost of removing the provincial portion of the HST from all residential electricity bills.
  - This is because they are targeted to people with higher needs whereas a broad exemption w~~e~~ould benefit all ratepayers, including higher-income people.
  - The amount of sales tax relief that some low-income Ontarians get through existing tax credits may exceed the amount of provincial sales tax they pay.
- Broad, comprehensive relief could be provided by way of a federally-administered point-of-sale rebate or a provincially-administered rebate (similar to the former Ontario Clean Energy Benefit).
  - The provincial amount of HST attributable to residential electricity bills is forecast to be around $735 million for the 2017-18 fiscal year.
- Broad, comprehensive relief from the HST on electricity could undermine the government's efforts to encourage energy conservation and could lead to higher greenhouse gas emissions.
  - Removing the provincial portion of HST from electricity would subsidize electricity consumption, likely, ~~likely~~and may lead~~ing~~ to higher consumption than would otherwise be the case.
  - ~~The~~In a report released in 2011, ~~T~~the Environmental Commissioner of Ontario criticized the former Ontario Clean Energy Benefit (OCEB), describing it as a perverse incentive that undermines conservation. ~~rewarded increased electricity consumption.~~
    - HST relief on electricity would have similar effects to the OCEB.
  - Future electricity sector emissions are likely to be driven by nuclear supply decisions.

Commented [GH1]: All or residential?

Commented [EK2]: Since electricity consumption isn't price-sensitive, I don't think it is clear that removing HST would significantly increase emissions.

Any submission from Energy on this proposal should address this issue and provide an estimate of the potential increase in emissions.

Commented [RK3R2]: There is some price sensitivity. More over time, I would think, too.

Commented [JK4]: The first part does not appear accurate.

Commented [EK5]: I couldn't find the phrase "rewarded increase electricity consumption" in the report.

The ECO report does state:
Since the rebate is funded from government revenue and the size of the rebate is proportional to the amount of electricity consumed, it uses the tax system to indirectly transfer wealth from low-volume energy consumers to higher volume consumers.

- In its Ontario Planning Outlook, the Independent Electricity System Operator states that longer-term electricity sector emissions will remain well below historic levels, but will fluctuate in step with natural gas generation. Natural gas generation will tend to be highest when nuclear output is lowest, such as during refurbishments and upon Pickering retirement.

- ~~Natural gas (a source of greenhouse gas emissions) accounted for 9% of Ontario's electricity generation in 2014 and 2015.~~
  - ~~This figure is expected to grow when nuclear units are taken offline in the coming years (e.g., for refurbishment).[1]~~
- ~~Ontario's Long-Term Energy Plan, released in 2013, projected that greenhouse gas emissions from Ontario's electricity sector would increase over the next two decades.~~

- ~~As noted in~~ Budget 2016~~,~~ included a commitment that the net impact of Ontario's forthcoming cap and trade program ~~will~~would~~ill~~ not result in an overall increase~~d~~ in electricity costs~~.~~ for commercial and industrial consumers,~~ In fact,~~ and that for residential users there would be~~will experience~~ a modest benefit of up to $2 per month, on average.
  - Cap and trade proceeds will be used to offset the cost of greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.

HST Overview:

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent.
  - In general, the HST is consistent with the GST and follows the same rules and tax base.
  - The federal government is responsible for deciding how a particular item is taxed under GST/HST.
  - Electricity has been taxed under GST since its inception.

- Based on the most recent Ministry of Finance estimate, the provincial portion of the HST on residential electricity bills is forecast to be about $735 million in 2017-18.

- ~~Ontario's Climate Change Action Plan contains a number of initiatives that would lead to increased electricity consumption (for example, through greater use of electric vehicles and electric heating). The tax expenditure for an HST rebate would thus be expected to grow substantially in coming years.~~

- ~~[illegible]~~

- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
  - The HST is a value-added tax that applies at each stage of the supply chain. Businesses that make taxable sales collect HST from their customers and remit it to the Canada Revenue Agency. At the same time, they claim ITCs to recover the HST

~~[1] Natural gas accounted for about 28% of Ontario's installed energy capacity in June 2016, according to the IESO.~~

Formatted

Commented [JK6]: Is this factchecked?

Commented [SK7]: Please confirm this is for residential electricity bills.

Commented [EK8]: On page 1, it is stated that $735 million is the amount of HST on residential electricity bills.

Formatted

Commented [EK9]: It is unclear whether electricity consumption will substantially increase in the coming years.

In its Ontario Planning Outlook, IESO state that "long-term net demand growth will remain moderate as conservation savings offset projected economic growth."

The planning outlook also states that "a significant amount of electrification of transit and electric vehicles is included in the reference demand forecast.

With regard to heating, low natural gas prices and expansion of the natural gas system may offset the effects of programs under the Climate Change Action Plan (CCAP). It is Ontario Planning Outlook (released before the CCAP), IESO assumed a modest decline in electric fuel share for space and water heating.

Formatted: Font: (Default) Arial

Formatted: Font: +Body (Calibri)

they pay on their business inputs, typically by netting the amount off the HST they remit.

Relief currently provided:

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs, Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
    - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totaling about $445 million in tax relief.

- The Ontario Sales Tax Credit (OSTC) was enhanced in 2010 to help low- to moderate-income individuals and families with the overall sales taxes they pay.
    - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependent children under age 19.
    - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.

- In 2010, the Northern Ontario Energy Credit (NOEC) was introduced specifically to help Ontarians living in the North with the higher energy costs they face due to ~~their~~ more severe winters and heavier reliance on more expensive home heating fuels.
    - Eligible single people can get up to $146 and eligible families can get up to $224 for the 2016 benefit year, and the credit is estimated to provide about $25 million in assistance.

- As part of its commitment to reduce electricity cost pressures, the government has also introduced rate mitigation measures, including:
    - ~~Removing~~ Removed the Debt Retirement Charge (DRC) ~~cost~~ from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board (OEB). This program provides a monthly assistance of $30 to $50 directly on the electricity bills of eligible low-income families, as of January 1, 2016. People whose electricity bill are typically high because of high electricity usage due to electric heating or ~~power~~ medical devices that use a lot of power can get monthly assistance of $45 to $75.

Additional Electricity Price Mitigation:

- Additional sales tax or electricity cost relief could be provided through one or a combination of Ontario's existing programs meant to help low- to moderate-income people with such costs (e.g., enhance the OEPTC energy component, NOEC).

- Ontario could work with the OEB to target additional sales tax relief to people who qualify for the OESP.
    - This would require a formal arrangement under which Ontario would remit funds to be delivered to eligible people by ~~the OEB and~~ electricity distribution companies.

- A new home energy benefit could be introduced, but such a program would:
    - Add complexity to the tax and benefit system due to overlaps with existing programs;
    - Likely be considered income support and, therefore, be taxable to the recipient; and
    - May result in Ontario incurring higher administration costs.

Federally Administered Point of Sale Rebate:

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate of the eight per cent provincial portion of the HST in certain circumstances and within a certain envelope of rebate "room."
    - For a POS rebate on residential electricity to be in place by Jan 1, 2017, for example, Ontario would need to give the federal government notice of the change before September 3, 2016.
    - See appendix for additional criteria.

- At $735 million, and growing, a POS rebate on electricity would likely exceed the amount of rebate room available (estimated at around $500 million).
    - The exact amount of room available would need to be agreed upon by the governments of Canada and Ontario.

- Ontario could attempt to negotiate an amendment to the HST agreement with the federal government to permit the province to designate electricity as eligible for a POS rebate.
    - The federal government may not agree. It could, for example, object to a special amendment on the grounds that subsidizing electricity consumption is not compatible with federal and provincial governments' commitments to work to reduce greenhouse gas emissions.

Provincially Administered Rebate (similar to the Ontario Clean Energy Benefit):

- The HST agreement has no limitations on provincially-administered point-of-sale rebate equivalents since the CRA would play no role in administering them.

- In the case of providing an 8% reduction on a residential customer's electricity bill, it is likely that the structure and administration could be very similar to that of the now discontinued Ontario Clean Energy Benefit (OCEB).
    - The OCEB ended on December 31, 2015. Other measures to help mitigate electricity costs have been implemented, in addition to the tax credits implemented at the time of transition to HST.

Commented [EK10]: Earlier in the note it is stated that the amount of HST attributable to residential electricity bills is forecast to be $735 million in 2017-18. If $735 million is the amount for the full 13% HST, and the rebate is only for the provincial portion, then the amount of the rebate would be lower.

Commented [RK11R10]: I believe the 735 is just the 8% provincial portion, and it would grow as electricity bills are projected to grow.

Commented [RK12]: What would be the cost of a 10% "new" OCEB – capped or uncapped?

What is the average annual projected growth rate (rate of price increase (adjusted for volume?)?

- A provincially-administered rebate could likely be shown on customers' bills, similar to the way the OCEB was shown.
    - Confirmation of this would require consultation with the Ministry of Energy.

- It would be difficult to limit the rebate only to electricity used residentially.
    - The OCEB applied to small business and farms, as well as to residential customers and therefore did not face the same challenges.
    - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms), resulting in "double dipping."
    - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.

- Ontario does not currently provide any provincially-administered HST rebates.
    - Providing a rebate for the provincial portion of the HST on electricity could set a ~~difficult~~ precedent.
        - Ontario is often asked to provide HST relief for supplies such as gasoline and home heating fuels.

Commented [SK13]: Suggest moving / copying this to the Key Messages section. This seems to be an important consideration for any provincial HST rebate and ought to be brought up earlier.

Appendix: Federally-Administered Point-of-Sale Rebate

Comprehensive Integrated Tax Coordination Agreement (CITCA)
The CITCA is the HST agreement between Canada and Ontario.

- The HST is established under federal legislation (the *Excise Tax Act*).
- The Canada Revenue Agency collects, administers and enforces the HST.
- The federal government is the policy lead on all HST matters. Ontario is bound by any federal tax base changes or rulings.
- Any change to the HST in Ontario requires, at a minimum, changes to federal regulations.

Under the CITCA, Ontario maintains flexibility in particular areas, including the ability to designate items or services as eligible for a POS rebate of the 8% provincial portion of the HST, subject to certain constraints:

- The cost of the new rebate must not exceed Ontario's POS "room" (the total value of POS rebates must not exceed 5% of the Goods and Services Tax base in Ontario).
- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to determine the expenditure in the Province attributable to the item or service.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

Process to Create a New POS Rebate
If Ontario wishes to make a permitted change to the HST, the amendment process in CITCA must be followed, which would a minimum of four months, unless Canada and Ontario agree otherwise.

1. Ontario must give at least 120 days' notice of the proposed HST change to the federal government (effective date could be earlier or later if agreed to by the parties).
    - The effective date of the HST change must be January 1, April 1 or July 1. It may only be October 1 if mutually agreed.
2. Ontario must give 60 days' notice to the public of the proposed HST change (unless the federal government agrees otherwise).
3. After the public announcement, Ontario must obtain the approval of the provincial Legislature (e.g., by way of motion) to make the HST change (unless the federal government agrees otherwise).
4. Canada must amend Cabinet regulations to implement the HST change, and make transitional rules.
5. To implement a new point-of-sale rebate, the *Retail Sales Tax Act* and regulations must be amended.
6. The Minister of Finance of Ontario and the Minister of Finance of Canada must amend CITCA in writing.

HST on Electricity

Issue:

The Ministry of Energy is proposing to remove HST from electricity bills.

HST and Electricity -- Overview:

- The HST is a federally imposed and administered tax with a combined rate of 13 per cent. The federal portion is five per cent. In Ontario, the provincial portion is eight per cent. In general, the HST is consistent with the GST and follows the same rules and tax base.
    - The federal government is responsible for deciding how a particular item is taxed under GST/HST.
    - Electricity has been taxed under GST since its inception.

- Based on the most recent Ministry of Finance estimate, the provincial portion of the HST on electricity is about $700 million in 2016-17.

- Businesses are generally able to claim input tax credits (ITCs) for the HST they pay.
    - The HST is a value-added tax that applies at each stage of the supply chain. Businesses that make taxable sales collect HST from their customers and remit it to the Canada Revenue Agency. At the same time, they claim ITCs to recover the HST they pay on their business inputs, typically by netting the amount off the HST they remit.

Federally Administered Point of Sale Rebate:

- Under the HST agreement with the federal government, Ontario can designate items as eligible for a point-of-sale (POS) rebate from the eight per cent provincial portion of the HST in certain circumstances.

- A key constraint on the creation of new point-of-sale rebates is that the total cost of all rebates must not exceed 5% of the tax base in Ontario. This is often referred to as the POS room.

- Ontario estimates the POS room to be about $505 million
    - Ontario would need to seek agreement with the federal government on the room available.

- At $700 million, a POS rebate on electricity would significantly exceed the amount of tax room available.

- Other criteria include:

- There must be Statistics Canada data (or a mutually agreed upon alternative data source) to estimate the cost of the rebate for the purposes of revenue allocation.
- The Canada Revenue Agency must be capable of administering the rebate.
- Business must be able to comply with the rebate.

Provincially Administered Rebate:

- The HST agreement has no limitations on provincially-administered point-of-sale rebate equivalents since the CRA would play no role in administering them.

- Compared to a federally-administered point-of-sale rebate, a provincially administered rebate would have administration costs, be more difficult to implement and more onerous on business.
  - For example, business could face additional burden when making application to the province to seek reimbursement for the point of sale rebate they provide their customers.

- In the case of providing an 8% reduction on a residential customer's electricity bill, it is likely that the structure and administration could be very similar to that of the now discontinued Ontario Clean Energy Benefit.
  - The OCEB ended on December 31, 2015. Other measures to help mitigate electricity costs have been implemented, in addition to the tax credits implemented at the time of transition to HST.

- It would be difficult to limit the rebate only to electricity used residentially.
  - The OCEB applied to small business and farms, as well as to residential customers and therefore did not face the same challenges.
  - It is probable that some businesses that claim input tax credits ITCs or benefit from Public Service Body rebates could be given the electricity rebate (e.g. home offices, apartment buildings, long term care homes, farms).
  - Ontario cannot introduce new restrictions to a business's ability to claim an ITC.

- Ontario does not currently provide any provincially-administered HST rebates.
  - Providing a rebate for the provincial portion of the HST on electricity could set a difficult precedent.
    - Ontario is often asked to provide HST relief for supplies such as gasoline and home heating fuels.

- Providing a rebate may be considered inconsistent with the Climate Change strategy.

Relief currently provided:

- Ontario provides tax relief for low- to moderate-income individuals and families to help them with their home energy costs, including:
    - The energy portion of the Ontario Energy and Property Tax Credit, which is estimated to provide $425 million in relief from the sales tax on energy in 2015; and
    - The Northern Ontario Energy Credit, which provided $24 million in 2014-15 to assist Ontarians living in the North with the higher energy costs they face.

- As part of its commitment to reduce electricity cost pressures, the government has introduced rate mitigation measures, including:
    - Removing the Debt Retirement Charge (DRC) cost from residential users' electricity bills, beginning on January 1, 2016, saving a typical residential ratepayer about $70 each year.
    - The Ontario Electricity Support Program (OESP), implemented by the Ontario Energy Board, is available to provide a monthly credit of $30 to $50 directly on the bills of eligible low-income families, as of January 1, 2016.

RATE REBATE – FISCAL IMPACT

KEY INFORMATION:

- Slide 25 of the final version of the recent Electricity Price Mitigation Options deck notes that "proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year".

- The $1 billion figure is a 2017 to 2020 *calendar year* average of cost estimates developed by Ministry of Energy staff, as follows:

$ millions	**2017**	**2018**	**2019**	**2020**
	1,003	1,014	975	1,049
Avg. 2017-20	1,010			

- On a *fiscal year* basis, the above estimates become:

$ millions	**2016-17**	**2017-18**	**2018-19**	**2019-20**
	261	1,006	1,004	994
3-Year Avg.	1,001			

- Ministry staff are in the process of developing a refined estimate of the cost.

Local Distribution Company (LDC) Frequently Asked Questions

Login Issues:

Q: Is it possible to change the settings for the 'sign me in automatically' box, which is automatically selected by default?

A: No, you should not attempt to make changes to this setting as this may cause problems with the portal. Different versions of Excel require this box to be checked in order for certain forms to be downloaded correctly.

Q: Will LDCs involved in the portal testing be able to keep the new passwords they created for use in the post-testing phase?

A: Yes.

Q: Is it possible for an LDC to have more than one portal login account, or one portal login account with separate passwords for all staff members involved in the data entry process?

A: Each LDC will only receive one portal login account, however, a username and password can be distributed to several staff members.

Q: Can you change security settings so that only one session can be opened and logged into at a time?

A: Currently, this is not possible. However, the last changes made in the portal will be saved.

Q: Can alerts be set up to be received by two or three email addresses?

A: No, alerts can only be made to one email address and will be received by the person identified as the primary contact.

The primary contact is responsible for distributing the email communications as required within each company.

Q: Can LDCs change the primary contact associated with their account?

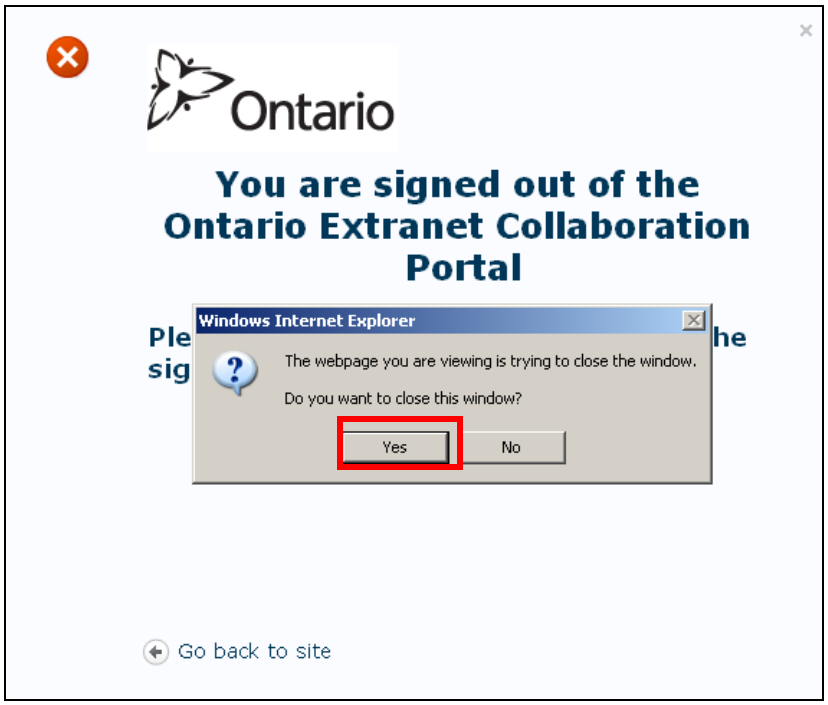
A: Yes, the primary contact can be changed; however, the changes cannot be made directly by the LDC from within the portal. The LDCs primary contact must email the Ministry contact to request this change.

Q: Is there a logout process?

A: Users may logout by clicking on the arrow next to the username in the top right corner or by simply closing the window.

More details:
To Sign Out from the OCEB Portal click on the arrow pointing down on the right hand side of the List Box showing your full login name, then click on **Sign Out** link. (Your Full Login Name is displayed at the top right corner of the screen)

Click **Yes** button to close the browser window.



Forms:

Q: Under section 1, is the amount of financial assistance for eligible customers the same as the amount submitted to the IESO every month?

A: Yes, these values should be the same

Q: In the MULTI UNIT RESIDENTIAL category of the form, does "no. of customers" refer to the number of units in a building or eligible bulk-metered accounts related to multi-unit residential buildings?

A: The number of eligible bulk-metered accounts related to multi-unit residential buildings

Q: Is there a prescribed methodology for carrying out the 3 month OCEB cash forecast? Are these forecasts expected to be within a specific margin of error of the actual?

A: There is no prescribed methodology for the 3 month OCEB cash forecasting. LDCs are asked to make their best effort at providing an accurate forecast.

Q: How do I print the form? Is it possible to include a print button or to allow for greater customization of the size of the form?

A: The form can be printed by right clicking on the form, clicking “Select All”, then simultaneously hitting “Ctrl” and “c”, and pasting the form into a word processing document. Printing options will be enhanced in the near future.

More details:

It may be desirable to print out or capture the content of submission form for verification or validation purposes. There are several printing & saving options available for you:

Option 1:

- Open the existing submission (view only) by clicking on its title. You may need to adjust your browser zoom settings and maximize the entry form window size to make sure that all submitted data on the form is visible.

Q: We are on cash accounting and do not have all of the billed data for the month of October to report by the fourth business day of the following month. How do we report for OCEB?

A: Please use the same approach when seeking reimbursement through the Independent Electricity System Operator (IESO). As stated in Jon Norman's

letter dated August 4, 2011, the amount of financial assistance reported for the month must be the same as the amount submitted to the IESO for the month.

Q: When reporting Volume (kWh), should the adjusted kWh be reported?

A: Yes, please report the adjusted kWh which includes line loss.

Q: Are we required to report account information for multi-unit residential buildings for <u>all</u> rate classes?

A: No. As stated in section 3 of Jon Norman's letter dated August 4, 2011, please report data associated with multi-unit residential buildings for all rate classes other than the Residential rate class. It is not required to disaggregate this data by rate class.

Additional Reporting Requirements:

Q: There is not enough space to answer some of the questions asked in the Additional Reporting Requirements Excel spreadsheet. Can LDCs alter the Excel template in order to answer questions?

A: Yes, the form can be altered if the existing format does not allow you to submit your responses in a viewable fashion.

Q: In question 2 of section 6 in the August 4th letter from the Ministry, how is the number of active OCEB-eligible accounts different from the information requested in section 1?

A: The information requested in section 1 refers to the number of OCEB-eligible accounts entitled to the OCEB for the particular month the user is reporting on. This number may differ from the total number of active accounts depending on the billing cycle for the LDC.

Q: Question 5 of section 6 in the August 4th letter from the Ministry is unclear. What are you expecting for this answer?

A: This question is referring to the billing cycle (monthly, bimonthly) and how these bills are distributed (in batches, set amount daily)

Q: Are we required to update the information submitted in section 6 – additional reporting requirements?

A: We request that the information submitted for the additional reporting requirements be updated on an annual basis or as needed. The Ministry will communicate with users when an update is required.

General Questions:

Q: Are wholly-embedded distributors required to report this data through their host distributor?

A: No, wholly-embedded distributors are required to submit their data directly to the portal.

Q: Do we still have to report to the IESO?

A: Yes, reporting to the IESO still has to be done for reimbursement of the OCEB.

Q: Since the reporting is beginning in November, do we still have to report September data?

A: Yes, for the November data entry period, we require LDCs to report data for September and October.

Q: Is this reporting expected to continue for the entire 5 year program life?

A: Yes, the reporting will continue through the completion of the OCEB program.

DRAFT

What is the OCEB LDC Reporting Application?

Section 8 of O. Reg. 495/10 allows the Minister of Energy and the Ontario Energy Board (OEB) to request information from Local Distribution Companies (LDCs) related to the Ontario Clean Energy Benefit (OCEB).

The information collected will support the Ministry of Revenue (MOR) in developing and executing an OCEB audit plan, inform the Ontario Financing Authority's (OFA) forecasting of OCEB expenditures and support the Ministry of Energy (ENERGY) in the overall program management of the OCEB program.

What can the OCEB LDC Reporting Application do for me?

Overview

In order to support audit, program management and fiscal planning of the OCEB program, the application allows LDCs to report monthly to the ministry on how much OCEB credit was applied to customers, how much electricity was used and the number of customers receiving the OCEB, broken down into several consumer rate classes. It also collects a rolling three month forecast on the amount of OCEB claims to be submitted to the IESO on a monthly basis.

The OCEB LDC Reporting Application will:

- Facilitate user login and security requirements
- Post collected data for review
- Provide tools for viewing data
- Ensure secure data storage

Design Features:

- Data is collected monthly
- All data that is provided and uploaded by LDCs is private - LDCs cannot see each other's data
- LDCs have an ability to upload data collected via extranet URL using SharePoint forms

Reporting Process

Monthly reporting will be submitted by host distributors in a secure, standardized electronic format. The submission period shall take place during the first 4 business days of each month (with the exception of the 1st entry which will take place November 7-11).
Wholly embedded distributors are required to report OCEB data separate from the host.

Reporting Requirements

The Government of Ontario requires that all licensed distributors report the information described below on a monthly basis.

1. OCEB Claim, Number of Eligible Accounts, Volume of Electricity
Every licensed distributor shall provide the following information:

1. The amount of financial assistance to which consumers who have eligible accounts with the licensed distributor are entitled for the month and any adjustments to be made in respect of earlier months (i.e. consistent with amounts claimed through the Independent Electricity System Operator's (IESO) settlement process).
2. The number of eligible accounts attributable to the amount of financial assistance provided in item 1 of this section.
3. The volume of electricity, in kilowatt hours, attributable to the amount of financial assistance provided in item 1 of this section.

2. Consumer Rate Class
Every licensed distributor shall categorize the three items listed in section 1 in the following consumer rate classes:

1. Residential

DRAFT

2. General Service <50 kilowatts
3. General Service >50 kilowatts
4. Other (remaining consumer rate classes)

3. Multi Unit Residential Buildings
Every licensed distributor shall provide the information listed in section 1 for all LDC accounts in consumer rate classes 2, 3, and 4 in section 2 relating to multi-unit residential buildings. It is not required to disaggregate accounts relating to multi-unit residential buildings by rate class.

4. Retailer-Enrolled Accounts
Every licensed distributor shall provide the information listed in section 1 for all eligible consumer retailer accounts. It is not required to disaggregate retailer-enrolled accounts by consumer rate class.

5. Short-Term OCEB Forecast
On a monthly basis, every licensed distributor shall provide a monthly forecast of OCEB claims to be submitted to the IESO for the three upcoming consecutive months. Documentation (e.g. sample calculations) explaining the forecasting approach and assumptions used must be reported as described in section 6.

6. Additional Reporting Requirements
In addition to the monthly reporting outlined above, every licensed distributor shall submit written responses to the attached questions. The Ministry of Energy may request that distributors provide updates to this information in order to maintain reasonably current data over the duration of the program.

Data Validation Rules

LDC Form:

- Mandatory – All fields except Market Participant ID
- Integer (no negative) – No. of customers fields
- Decimal (2 decimal places, positive only) – Fees and Charges, Forecast fields
- Decimal (2 decimal places, positive or negative) – OCEB Claim and Volume fields

Late Reporting Process

Late data entry adjustments will be accommodated in case of a significant data entry error(s). These adjustments must be fixed immediately and must match the entries made to the IESO. The data entry change outside of the first four business days each month will require intervention by the OCEB LDC Reporting Application administrator. The administrator can "unlock" the submitted data entry record for two hours based on the request (phone call or email) from an LDC's primary contact. After the two hours, the data record will be closed again. Alternatively, the OCEB LDC Reporting Application administrator can make the changes directly based on the direct communication with an LDC's primary contact.

Please note that this process should be used very infrequently and not as a substitute for timely monthly data submission.

Additional Reporting Requirements

In addition to a regular monthly data collection, LDCs are asked to provide additional initial information. This additional information may be collected and/or updated on an annual basis or more frequently as needed.
To collect this additional information, a predefined Microsoft Excel Workbook template is available for download from the OCEB LDC Reporting Application Website. Users also have the ability to upload their own Excel documents to answer these questions. After downloading the template, fill in the required information and then upload it to the designated library on the OCEB LDC Reporting Application Website.

Downloading the LDC User Guide

You can download the LDC User Guide from "**Shared Documents**" library available from OCEB LDC Reporting Application home page:
https://extra.sse.gov.on.ca/sites/moen-oceb/Shared%20Documents/Forms/AllItems.aspx)

OCEB LDC Reporting Application Site Information

The OCEB LDC Reporting Application is a web-based solution that uses SharePoint Service Enterprise (SSE). Data is entered and collected via an online form.

The LDC Data entry form has 47 data entry fields (21 calculated fields) plus 6 data entry fields for 'forecast' data.

Lookup fields / optional-mandatory field:

- Licensed Distributor Name (Mandatory)
- IESO Market Participant ID (Optional)
- Date Submitted (Mandatory)
- Submitter (Mandatory)
- Settlement Period (Mandatory)
- Accounting Method (Mandatory – values "Billed or Accrual")

Data Entry Fields / characteristics:

Section 1

- Total Customer Base
- Residential
- General Service <50 kW
- General Service >50kW
- Other Classes
- Multi Unit Residential
- Retail (all rate classes)
- OCEB Claim ($) column / No. of Customers column / Volume (kWh) column
- Current Month (empty default, field level validation numeric)
- Previous Months' Adjustments (empty default, field level validation numeric)
- Total (for each column, sum of previous 2 data entry row cell entries)

Section 2: "Short Term Monthly cash forecast (Total Customer Base)

- Lookup for next 3 months rolling data displayed

Previous Months' Adjustments	0	0	0
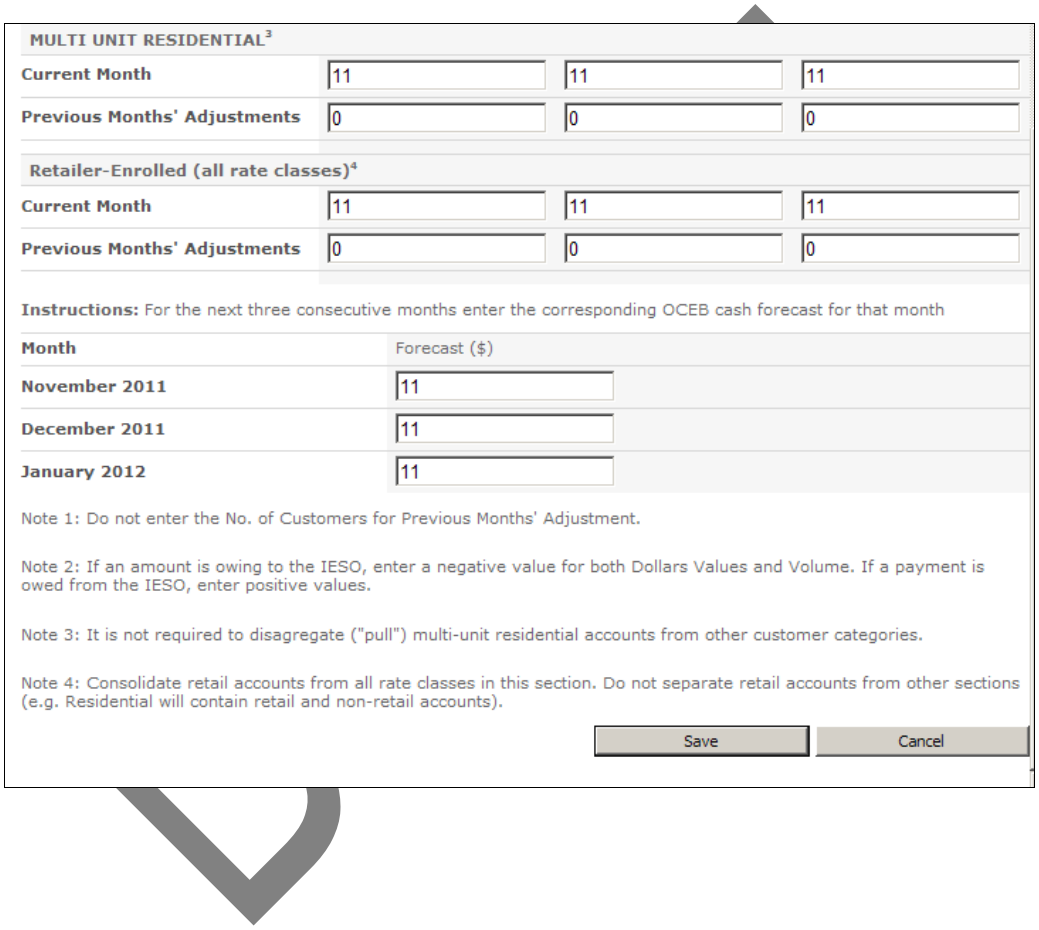
GENERAL SERVICE >50 kW			
Current Month	11	11	11
Previous Months' Adjustments	0	0	0
OTHER CLASSES			
Current Month	11	11	11
Previous Months' Adjustments	0	0	0

FORM for Distributors - continued



MULTI UNIT RESIDENTIAL[3]			
Current Month	11	11	11
Previous Months' Adjustments	0	0	0
Retailer-Enrolled (all rate classes)[4]			
Current Month	11	11	11
Previous Months' Adjustments	0	0	0

Instructions: For the next three consecutive months enter the corresponding OCEB cash forecast for that month

Month	Forecast ($)
November 2011	11
December 2011	11
January 2012	11

Note 1: Do not enter the No. of Customers for Previous Months' Adjustment.

Note 2: If an amount is owing to the IESO, enter a negative value for both Dollars Values and Volume. If a payment is owed from the IESO, enter positive values.

Note 3: It is not required to disagregate ("pull") multi-unit residential accounts from other customer categories.

Note 4: Consolidate retail accounts from all rate classes in this section. Do not separate retail accounts from other sections (e.g. Residential will contain retail and non-retail accounts).

Save Cancel

Site Access Levels

The OCEB LDC Reporting Application is based upon permissions and roles and access rights which empower users to enter and edit submitted data, view and organize the data using custom views with filters and sorts, maintain and administer data and users, export data to multiple formats and monitor the application performance.

For the user Login and authentication process, each user was assigned a username and temporary password. This was sent to the primary contact of each LDC who can then decide who to manage the login/password.

Once the LDC logs into the system, they can change the user password or, if required, request for a password reset, as long as the email address listed is in the system, i.e., either the CEO default or whomever the CEO designated as the primary user.

Notes:

There will be 12 data entries per calendar year, 1 data entry per month. Each LDC will have its own designated folder that will contain the compiled data entry submissions for all months. Only the current month submission will be UNLOCKED and accessible for editing. All other past submissions will be available in a view mode only.

Each LDC can only gain access to their respective entity data.

LDCs can:

- *Submit and view their own records only*
- *Enter the data, edit and review for accuracy (view or edit mode)*
- *Cannot see the records submitted by other distributors*

DRAFT

Process to Login, Enter and Submit Data

Log in to OCEB LDC Reporting Application Website using the following URL:

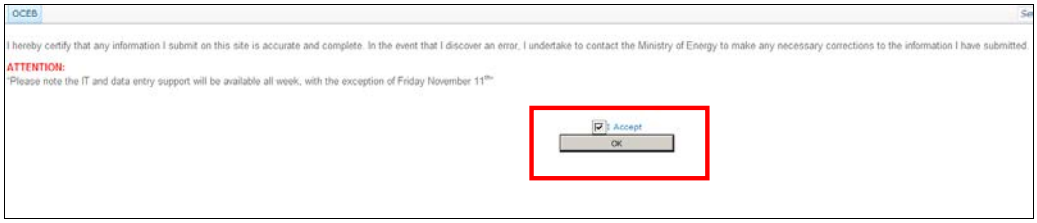
https://extra.sse.gov.on.ca/sites/moen-oceb

Field Code Changed

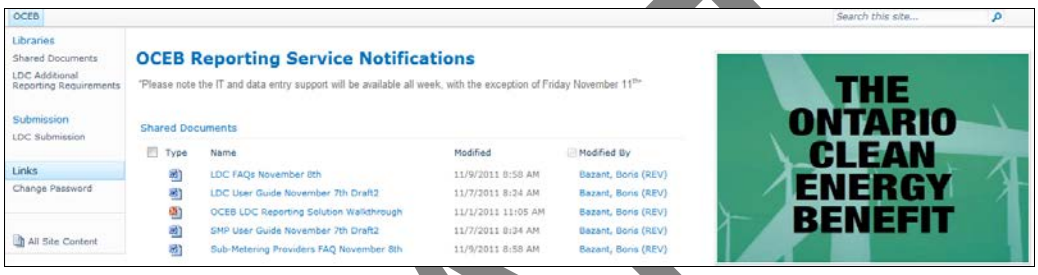
Type in your user name and initial password provided to you. Do not click on “Click Here to Login with OPS Credentials”.

Next, you will see the **Disclaimer page** and need to accept it by clicking on the “**I Accepted**” box; then click the **OK** button.

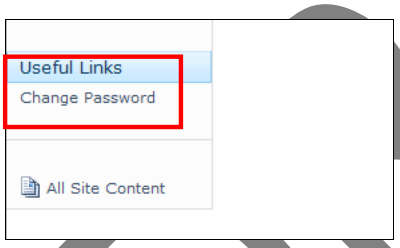
DRAFT



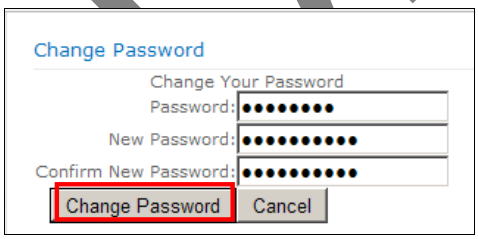
After the acceptance of the Disclaimer, you will be redirected to the **Landing Page** for the OCEB LDC Reporting Application Website. This is the page you use as a starting point for all other activities such as data entry submission, data editing and additional reporting requirements submission.



Before continuing with your data entry, we recommend that you change your initial password. To change your password, use the "**Change Password**" link.

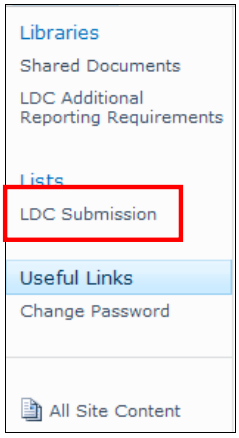


Type in the old password, then the new password and click the "**Change Password**" button to save the changes.



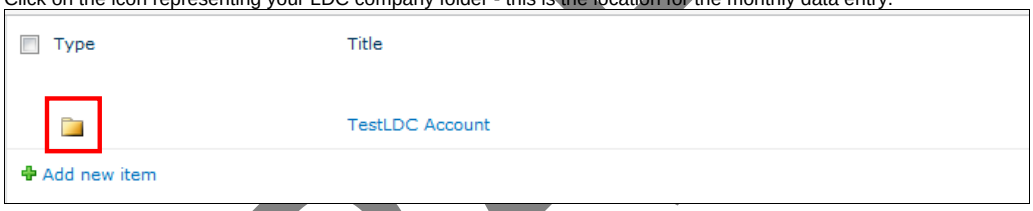
The first step in the data entry process and submitting is to click on the "**LDC Submission**" link on the right hand side.

DRAFT

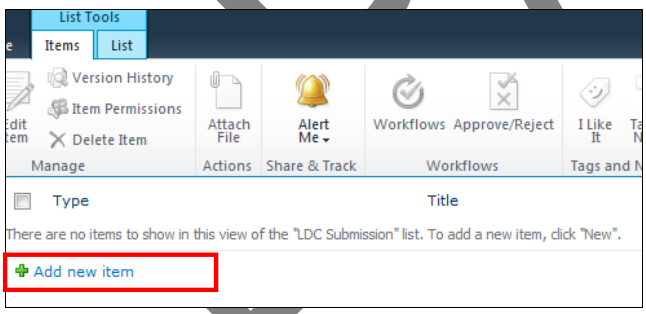


You will be redirected to the page that displays an LDC company specific folder for the data entry.

Click on the icon representing your LDC company folder - this is the location for the monthly data entry.



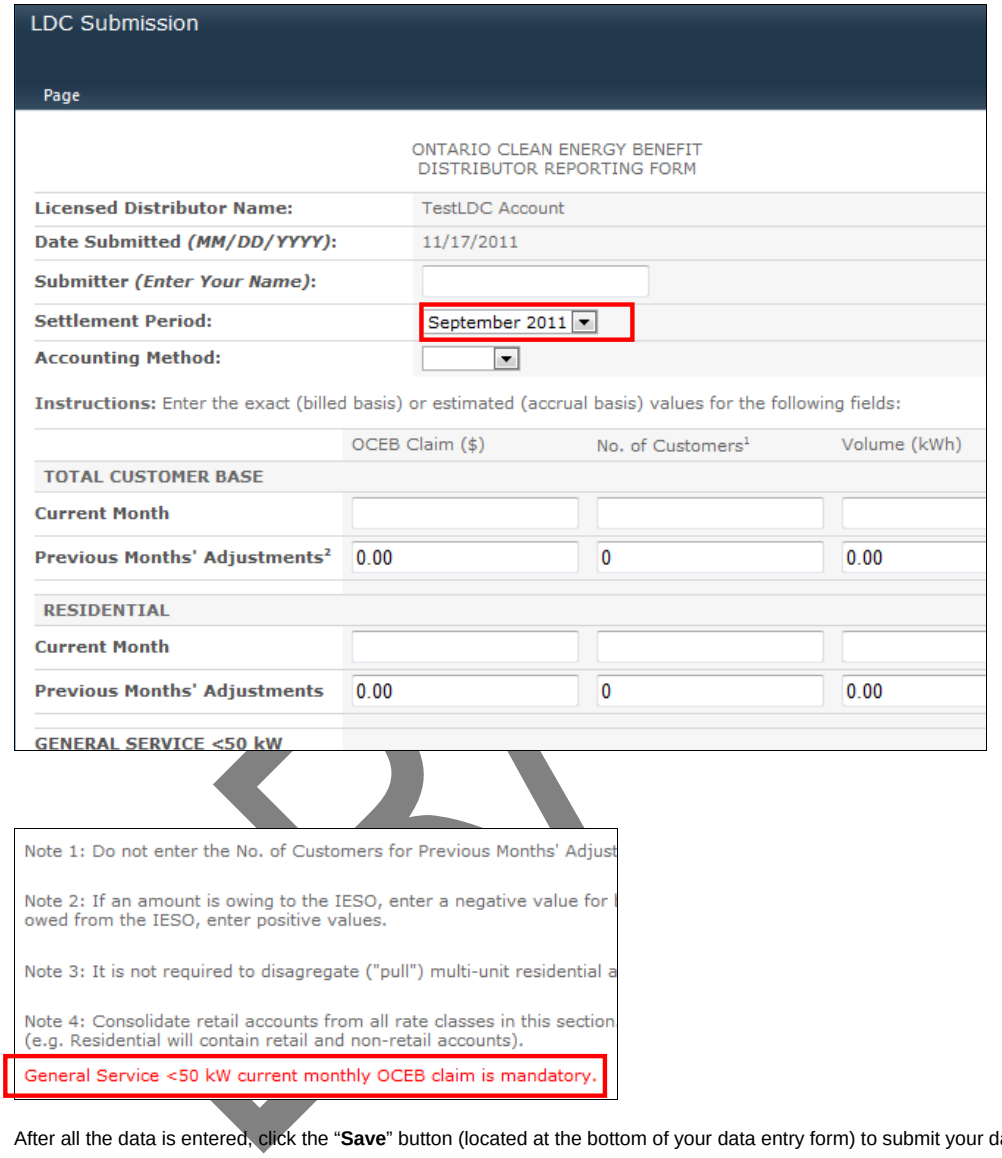
To create a new data entry, click on the "**Add new item"** link.



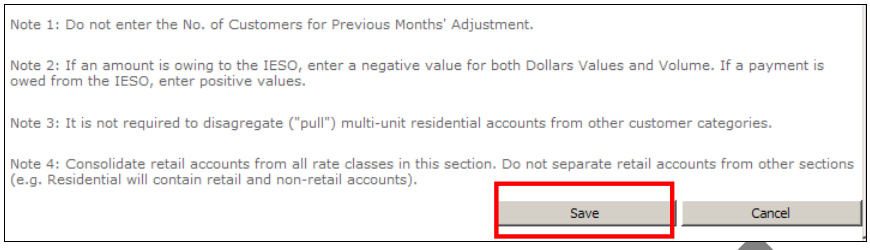
You will be redirected to the "**LDC Submission**" page where you make all your data entries. Many fields have data validation implemented and will require you to enter correct data – see Data Validation Rules section earlier in the document for more details on the data validation rules implemented. If any mandatory data is missing or incorrect, the error message will be displayed in red at the top and the bottom of the **LDC Submission** form.

Note:

Make sure you select correct Settlement Period – September 2011 or October 2011 for the first data submission period.



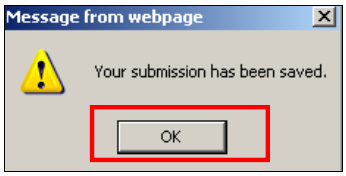
After all the data is entered, click the "**Save**" button (located at the bottom of your data entry form) to submit your data.



Note:

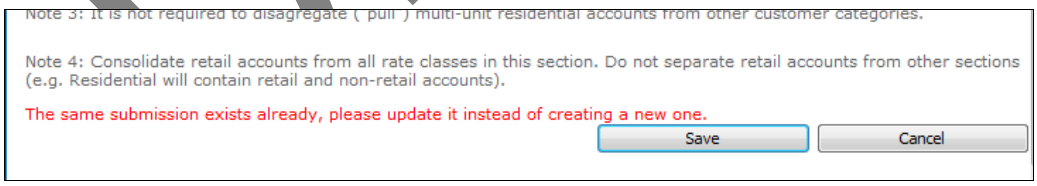
*At any point, you can also cancel the current data entry by clicking on the "**Cancel**" button. The entered data will not be saved.*

You will see the on screen confirmation that your data was saved successfully. Click the **OK** button to finish the data entry submission.



After your data entry is saved, you will see the new submission item listed.

There can be only one data submission record created for each month. If you try to create a duplicate record for any month (by clicking on "Add new item" link), you will see the following error message:

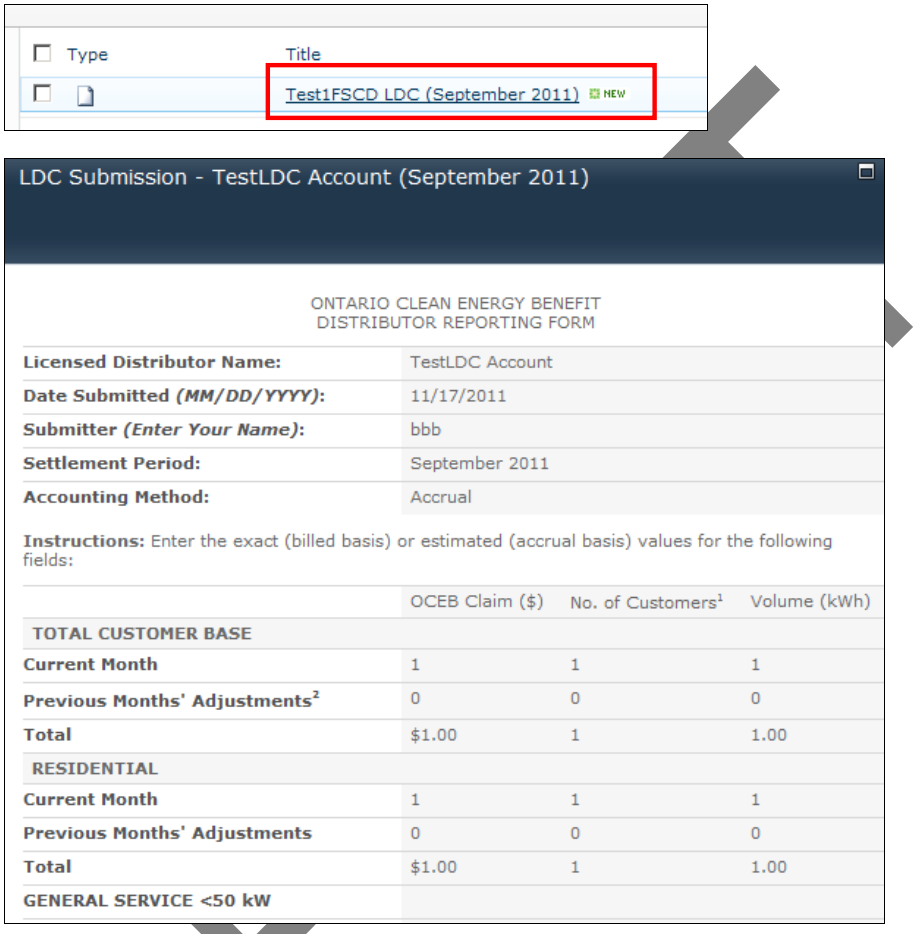


Once the data entry record is saved, you can still view it, edit or correct it.

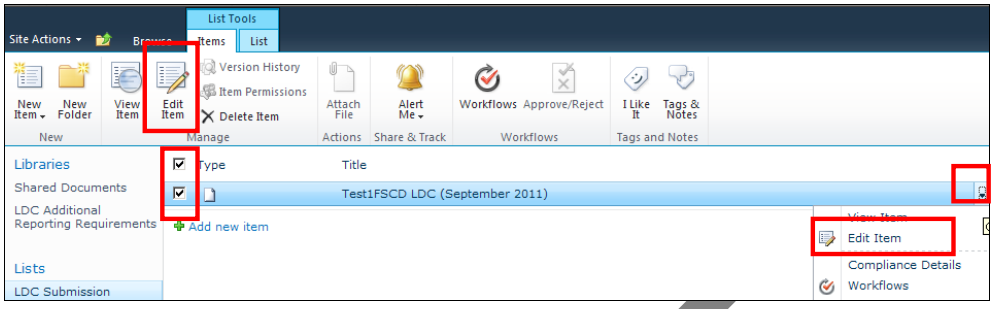
DRAFT

Data Entry Viewing and Editing

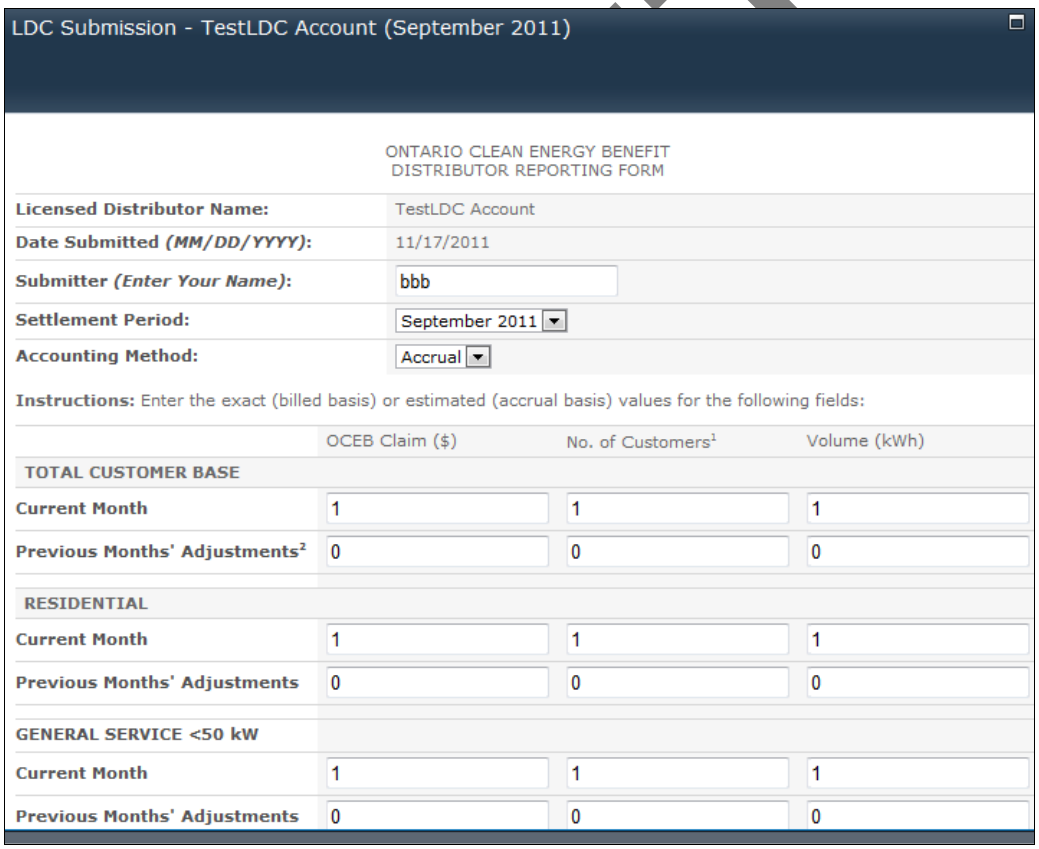
To **view** the existing record, select the existing record from the appropriate folder by clicking its title.



To **edit** the already submitted data click the box under "**Type**" heading and then either use the "**Edit Item"** button in the main menu ribbon or select the "**Edit Item"** option from the menu list on the right.

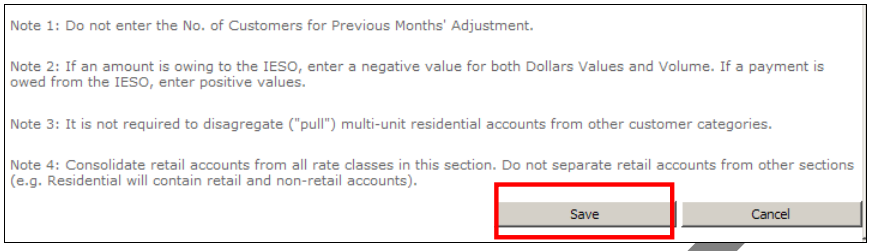


The existing data entry record will display in “edit” mode, allowing you to make necessary edits and/or corrections.



After you edit and/or correct your data, click the “**Save**” button (located at the bottom of your data entry form) to resubmit your data.

An LDC’s data entry record will be considered submitted once the data entry period (typically, the first 4 business days of each month) is over.



Note 1: Do not enter the No. of Customers for Previous Months' Adjustment.
Note 2: If an amount is owing to the IESO, enter a negative value for both Dollars Values and Volume. If a payment is owed from the IESO, enter positive values.
Note 3: It is not required to disagregate ("pull") multi-unit residential accounts from other customer categories.
Note 4: Consolidate retail accounts from all rate classes in this section. Do not separate retail accounts from other sections (e.g. Residential will contain retail and non-retail accounts).
Save
Cancel

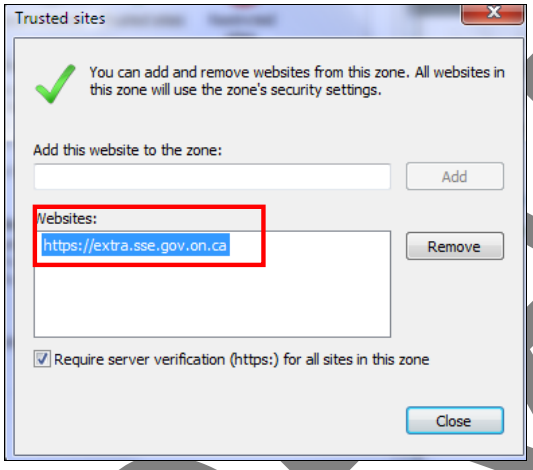
DRAFT

Additional Reporting Requirements Submission

In addition to a regular monthly data collection, LDCs will be asked to provide additional initial information. This additional information may be collected and/or updated on an annual or more frequent basis as needed.
To collect this additional information, a predefined Microsoft Excel Workbook template is available for download from the OCEB LDC Reporting Application Website. After downloading the template, fill in the required information and then upload it to the designated library on the OCEB LDC Reporting Application Website.

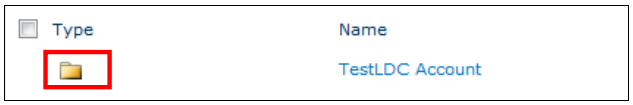
Steps to download the predefined Microsoft Excel Workbook template:

Before downloading the predefined Microsoft Excel Workbook template for LDC Additional Reporting Requirements, make sure that the OCEB website URL is added to your trusted sites. A failure to do so may cause unexpected behaviour when downloading or editing & saving the LDC Additional Reporting Requirements file(s).



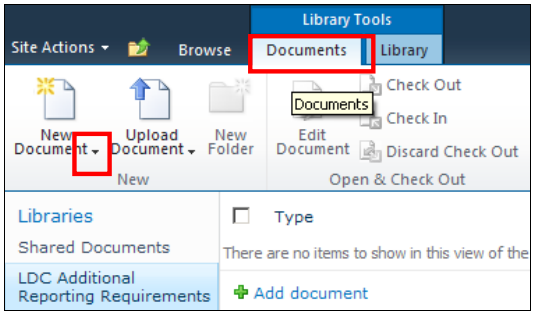
In the OCEB LDC Reporting Application home page, select the **LDC Additional Reporting Requirements** link.

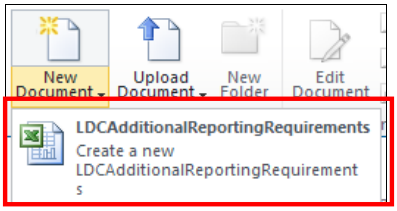
Click on the folder icon to open your additional information folder.



DRAFT

Click on the **Documents** tab under **Library Tools,** then click the arrow pointing down under the **New Document** button in the ribbon menu and select "**LDCAdditionalDReportingRequirements**" Excel template:





Save the Excel Template locally to your hard disk. Use the Excel 2003 file format (*.xls) when saving the file. Provide the required information and upload the finished Excel Workbook to the OCEB LDC Reporting application library.

Use the following file name convention when saving and later on uploading the finished Excel workbook:

<Company name> OCEB Report <month-year>

Example: File submitted by Brantford Power Inc. in October 2011

Brantford Power OCEB Report 10-2011

Note:

LDCs are asked to use Excel when submitting this data. If this is problematic, the LDC should call the Ministry contact(s).

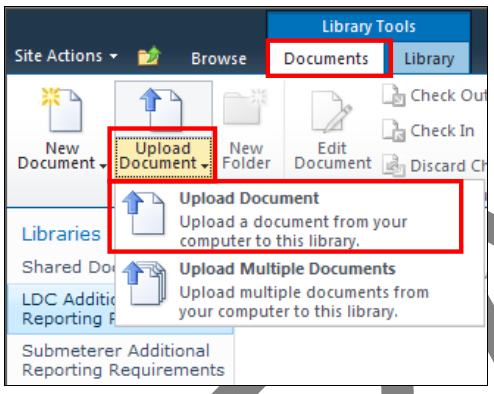
Steps to upload the finished LDC Additional Reporting Requirements Excel Workbook:

After you finished the additional reporting requirements entry, upload the file to the **LDC Additional Reporting Requirements** library.

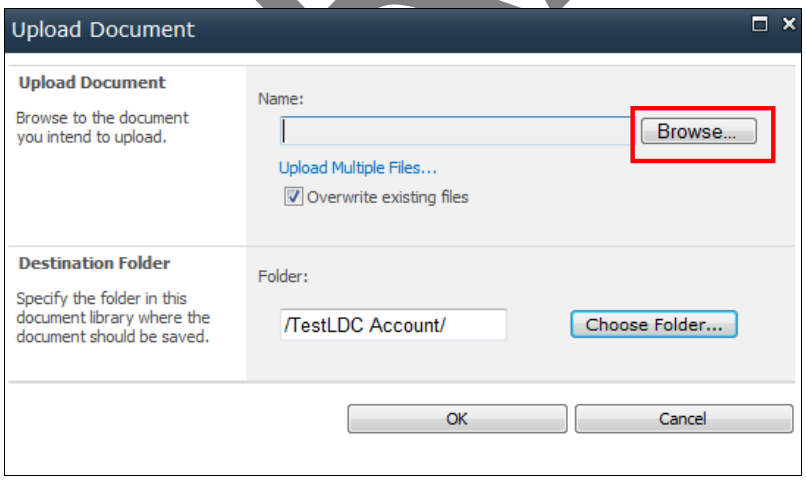
In the OCEB LDC Reporting Application home page, select the **LDC Additional Reporting Requirements** link.

DRAFT

Click on the **Documents** tab under **Library Tools,** then click the arrow pointing down under the **Upload Document** button and select **Upload Document**.

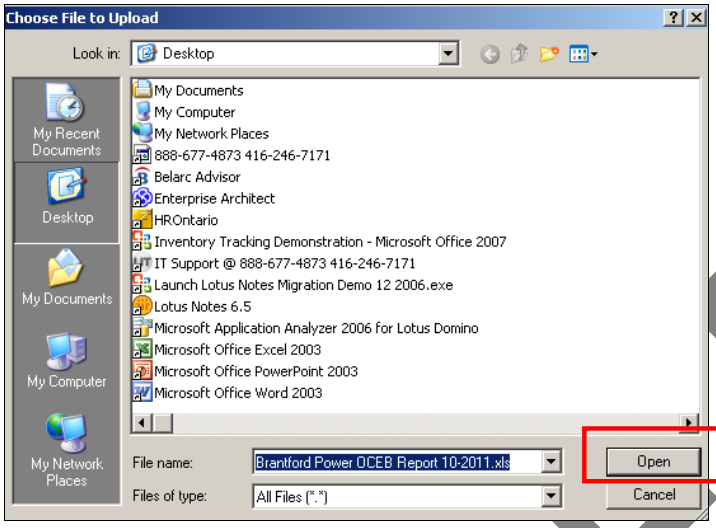


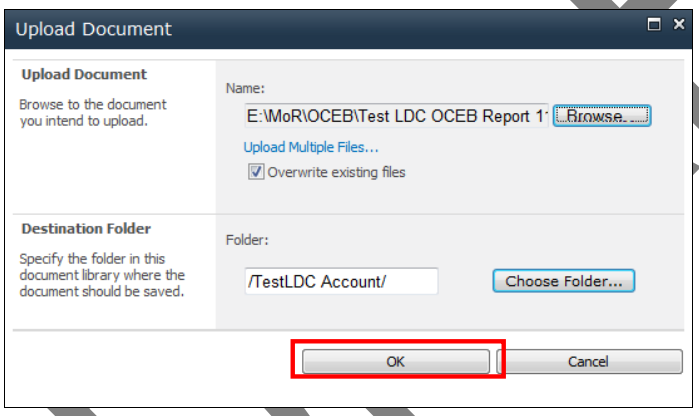
Click on the **Browse** button



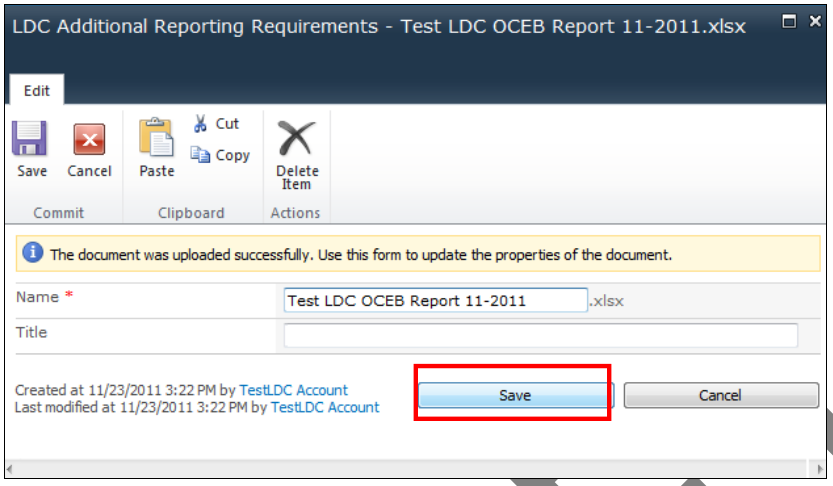
Browse to your saved Excel Workbook, click the **Open** button, and then click the **OK** button.

DRAFT

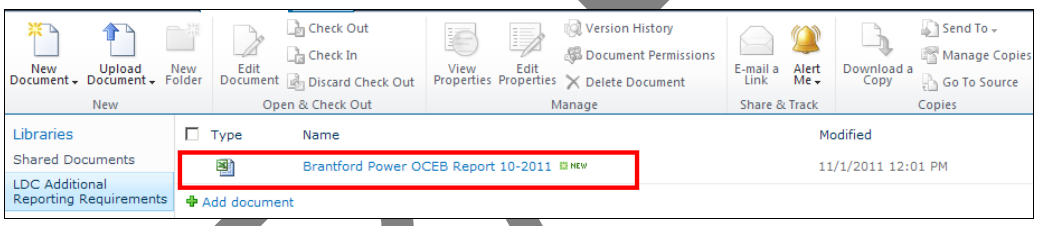




Click the Save button to save your **Additional Reporting Requirements** workbook to your folder in the **LDC Additional Reporting Requirements** library.



You will see your **Additional Reporting Requirements** workbook listed and saved.



Note:

*The same security rules used for regular monthly Data Entry will be used for the **Additional Reporting Requirements** library submissions as well.*

LDCs:

- *Can submit, edit and view their own information only*
- *Cannot see the information submitted by other distributors*

DRAFT

Support Model and Contact Information for Application Technical Support

Support for the OCEB LDC Reporting application is available via email or phone. When an LDC experiences a problem with the OCEB site, or doesn't understand how to do some specific task within the site, the user has various options depending on the situation. The technical support for the OCEB LDC Reporting application will be provided Monday to Friday, 9 AM to 5 PM, excluding holidays.

The LDC User Guide is available for download at:

https://extra.sse.gov.on.ca/sites/MOEN-oceb/Shared%20Documents/Forms/AllItems.aspx

November 1 to January 31, 2012:

Ministry of Energy

Frequently Asked Questions (FAQs)

1. What is the OCEB LDC Reporting application URL and how do I log in?

Answer:

Log in to OCEB LDC Reporting Application Website using the following URL:

https://extra.sse.gov.on.ca/sites/moen-oceb

Field Code Changed

2. How do I contact OCEB LDC Reporting Application technical support?

Answer:

For the period of November 1, 2011 to January 31, 2012:

Ministry of Energy
Contact Name: Michael Beare
Phone Number: 416-327-5313
Email Address: michael.beare@ontario.ca

Contact Name: Michael Nucciarone
Phone Number: 416-326-9101
Email Address: michael.nucciarone@ontario.ca

You will be contacted by the OCEB LDC Reporting Application support within 1 business day.

For the period following January 31, 2012 the single point of contact for all OCEB LDC Reporting Application support will be OPS Help Desk.

Phone Numbers: 888-677-4873 (888-OPS-ITSD) or 416 -246 - 7171 in the GTA. TTY: 877- 889 - 4873

3. How do I change the company contact information (name, email address, phone number)?

Answer:

To change your company contact information, use the following contact information:

For the period of November 1, 2011 to January 31, 2012:
Ministry of Energy
Contact Name: Michael Beare
Phone Number: 416-327-5313
Email Address: michael.beare@ontario.ca

Contact Name: Michael Nucciarone
Phone Number: 416-326-9101
Email Address: michael.nucciarone@ontario.ca

For the period following January 31, 2012 the single point of contact for all OCEB LDC Reporting Application support will be OPS Help Desk.

Phone Numbers: 888-677-4873 (888-OPS-ITSD) or 416 -246 - 7171 in the GTA. TTY: 877- 889 - 4873

The changes will be made by OCEB LDC Reporting Application support personnel and you will be notified of the changes made via email. The requested changes will be made within 1 business day.

4. What are the technical support hours?

Answer:

OCEB LDC Reporting Application support will be available Monday to Friday 9 AM to 5 PM, excluding holidays.

5. How do I change my password?

Answer:

To change your password, use the "Change Password" link on the OCEB home page (https://extra.sse.gov.on.ca/sites/moen-oceb/SitePages/Home.aspx) and follow the instructions - you will need to provide your old and new password.

6. I forgot my password; how do I reset it?

Answer:

To reset your company password use the following contact information:

For the period of November 1, 2011 to January 31, 2012:
Ministry of Energy
Contact Name: Michael Beare
Phone Number: 416-327-5313
Email Address: michael.beare@ontario.ca

Contact Name: Michael Nucciarone
Phone Number: 416-326-9101
Email Address: michael.nucciarone@ontario.ca

For the period following January 31, 2012 the single point of contact for all OCEB LDC Reporting Application support will be OPS Help Desk.

Phone Numbers: 888-677-4873 (888-OPS-ITSD) or 416 -246 - 7171 in the GTA. TTY: 877- 889 - 4873

The password reset will be done by OCEB LDC Reporting Application support and you will be notified of the new initial password via email. It is recommended that you change the initial password after receiving the email with the new password. The requested password reset will be done within 1 business day.

7. What are the validation rules for data entry forms?

Answer:

- Mandatory – All fields
- Integer (no negative) – No. of customers fields
- Decimal (2 decimal places, positive only) – Forecast fields
- Decimal (2 decimal places, positive or negative) – OCEB Claim and Volume fields

8. What security model is implemented; what can I do & see?

Answer:

There will be 12 data entries per calendar year, 1 data entry per month. Each LDC will have its own designated folder that will contain the compiled data entry submissions for all months. Only the current month submission will be UNLOCKED and accessible for editing during the data entry window. All other previous submissions will be LOCKED and viewable only by authorized entity userid and the Ministry of Energy.

An authorized entity userid will only have access to their respective entity data solely.

LDCs:
- Can submit and view their records only
- Can upload the data and review for accuracy
- Cannot see the records submitted by other distributors

9. What is the data entry period each month?

Answer:

- The default data entry period is the first four business days of each month unless otherwise notified.

10. How do I correct or edit submitted data?

Answer:

- To view the existing record, select the existing record from the appropriate folder by clicking its title. For more details see the “Data Entry Viewing and Editing” section of the LDC User Guide.

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: **, 2016**

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the *Ontario Rebate for Electricity Consumers Act, 2016* , including the regulations thereunder (the "Act"), certain consumers will be entitled to receive a credit, known as the Ontario Rebate for Electricity Consumers ("OREC"), against the cost of electricity consumed by them during the period commencing January 1, 2017;

2. Funds in respect of the OREC will flow to most distributors and unit sub-metering providers through the Independent Electricity System Operator ("IESO") in accordance with the Act, its regulations and the Market Rules;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f)of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Commented [SQ1]: Confirm there is no end date for this program, for now.

Therefore:

The Ministry and the OFA agree as follows:

1. Payment Authorization

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. Payment Process

a) The Ministry is registered with the IESO as an IESO Program Participant.

b) The Ministry will take all necessary steps to provide the OFA with access to the Ministry's IESO account and will arrange for the OFA to have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. Reporting Requirements and Records

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

Commented [SQ2]: This is new.

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies and unit sub-metering providers) to the IESO received by the Ministry. A preliminary list of these reports is listed in Appendix A and are subject to change as the requirements of the OREC changes.

c) The OFA will prepare fiscal year cost estimates and monthly cashflow estimates for OREC and will provide these estimates to the Ministry.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices; monitoring the IESO's application of the Payments; monitoring the balance from time to time of the Appropriated Amount; or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention:
email:

c) In the case of the Ministry, the addresses for notice are:

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. Payment Process

a) The Ministry is registered with the IESO as an IESO Program Participant.

b) The Ministry will take all necessary steps to provide the OFA with access to the Ministry's IESO account and will arrange for the OFA to have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. Reporting Requirements and Records

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies and unit sub-metering providers) to the IESO received by the Ministry. This includes providing electronic portal access to complete and accurate data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process .

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention:
email:

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy
880 Bay Street, 5th Floor
Attention:
email:

10. Execution

The parties have executed this MOU, effective as of the date first above written.

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: **, 2016**

Commented [RH1]: TBD

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the [*Ontario Rebate for Electricity Consumers Act, 2016* (the "Act")] ~~– NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder ~~(~~the ~~"~~Act~~")~~, certain electricity consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, which is called the "Ontario Rebate for Electricity Consumers" or "OREC" in this Memorandum of Understanding ("MOU") ~~called the "Ontario Rebate for Electricity Consumers ("" or "OREC"), against"~~, in respect of the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to electricity consumers and persons receiving invoices from unit sub-meter providers ("~~Reimbursement~~Payments") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

Commented [GH2]: Not sure what this means. Are they different kind of electricity consumers?

Commented [GH3]: I changed this term to "Payments" to avoid double definition. In #3 it seems that "reimbursement" was re-defined as "Payments".

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the ~~OREC~~Reimbursement ~~(the "~~Payments~~")~~ out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry, which ~~and~~ the OFA has agreed to ~~make the Payments on behalf of the Ministry~~;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act, 2011* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the

Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. Payment Authorization

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as an agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. Payment Process

~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices, within XX business days upon receiving the invoices.

~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. Reporting Requirements and Records

Commented [GH4]: Do we need to define in how many business days?

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ensure that the Ministry has full access to such records.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~related data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~.

c) The OFA will collaborate with ~~and~~ the Ministry ~~will collaborate~~ to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for any differences between the forecast and actual costs of OREC, auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

Commented [GH5]: Will there be a general mailbox? The contact person might change from time to time.

Commented [SQ26]: What would this access look like? Are they expecting us to set up up an external site with all of our files/modeling as well?

Just need to clarify expectations.

Commented [KR7]: I would not expect this ti be anything other than physical access. You may wish to clarify this point.

Commented [GH8]: I am not sure what this sentence means or trying to say.

Commented [GH9]: According to section 5 below, the OFA is only assisting in cost forecasting.

Commented [GH10]: Question – then who is responsible for this?

Formatted: Font: Not Bold

Formatted: Indent: Left: 0.25", Hanging: 0.25"

Commented [SQ211]: The only change outlined in the latest version.

Commented [KR12]: Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

Formatted: Font: Not Bold

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: **, 2016**

Commented [RH1]: TBD

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the ~~[~~*Ontario Rebate for Electricity Consumers Act, 2016*~~] – NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder (the "Act"), certain consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers ("~~" or "~~OREC"), against~~", in respect of~~ the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. **Payment Authorization**

   (i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

   (ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

   (iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

      i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

      ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. **Payment Process**

   ~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

   a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

   ~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

   ~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

   ~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

   ~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. **Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ~~ensure that~~provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of ~~has full access to~~ such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

Commented [SQ22]: The only change outlined in the latest version.

Commented [KR3]: Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: **, 2016**

Commented [RH1]: TBD

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the ~~[~~*Ontario Rebate for Electricity Consumers Act, 2016*~~] – NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder (the "Act"), certain consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers ("~~" or "~~OREC"), against~~", in respect of~~ the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. **Payment Authorization**

   (i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

   (ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

   (iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

      i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

      ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. **Payment Process**

   ~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

   a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

   ~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

   ~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

   ~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

   ~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. **Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ~~ensure that~~provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of ~~has full access to~~ such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the ~~Corporate and Electricity Finance Division of~~ the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

~~d)a) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.~~

d) ~~e)~~ The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

e) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for the appropriated amount or for a change in the appropriated amount for OREC.

5. Limited Role of the OFA

Commented [KK2]: Throughout the MOU we have used "OFA" to stand in for all divsions, referring to the OFA here as well keeps it consistent.

Formatted: Indent: Left: 0.25", Numbered + Level: 1 + Numbering Style: a, b, c, … + Start at: 1 + Alignment: Left + Aligned at: 0.75" + Indent at: 1"

Commented [SQ23]: The only change outlined in the latest version.

Commented [KR4]: Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

Commented [RK5]: How about dealing with it by switching the order and slightly amending the new "e)"?

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention:
email:

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy
880 Bay Street, 5th Floor
Attention:
email:

10. Execution

The parties have executed this MOU, effective as of the date first above written.

e) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for the appropriated amount or for a change in the appropriated amount for OREC.

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention: John Kim
email: john.kim@ofina.on.ca

c) In the case of the Ministry, the addresses for notice are:

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: **, 2016**

Commented [RH1]: TBD

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the ~~[~~*Ontario Rebate for Electricity Consumers Act, 2016*~~] – NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder (the "Act"), certain consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers ("~~" or "~~OREC"), against~~", in respect of~~ the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. **Payment Authorization**

   (i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

   (ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

   (iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

      i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

      ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. **Payment Process**

   ~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

   a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

   ~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

   ~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

   ~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

   ~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. **Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ~~ensure that~~provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of ~~has full access to~~ such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the ~~Corporate and Electricity Finance Division of~~ the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

~~d)a) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.~~

d) ~~e)~~ The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

e) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for the appropriated amount or for a change in the appropriated amount for OREC.

5. Limited Role of the OFA

Commented [KK2]: Throughout the MOU we have used "OFA" to stand in for all divsions, referring to the OFA here as well keeps it consistent.

Formatted: Indent: Left: 0.25", Numbered + Level: 1 + Numbering Style: a, b, c, … + Start at: 1 + Alignment: Left + Aligned at: 0.75" + Indent at: 1"

Commented [SQ23]: The only change outlined in the latest version.

Commented [KR4]: Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

Commented [RK5]: How about dealing with it by switching the order and slightly amending the new "e)"?

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention: John Kim
email: john.kim@ofina.on.ca

c) In the case of the Ministry, the addresses for notice are:

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: **, 2016**

Commented [RH1]: TBD

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the *Ontario Rebate for Electricity Consumers Act, 2016* and the regulations thereunder (the "Act"), certain consumers will be entitled to receive financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers ("" or "OREC"), against", in respect of the cost of electricity consumed by them commencing January 1, 2017;

2. Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. Payment Authorization

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. Payment Process

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

b) The Ministry will take all necessary steps to provide the OFA with access to the IESO Portal so that the OFA will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. Reporting Requirements and Records

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement on the forecasts.

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. Payment Authorization

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. Payment Process

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

b) The Ministry will take all necessary steps to provide the OFA with access to the IESO Portal so that the OFA will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. Reporting Requirements and Records

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ~~ensure that~~provide the Ministry ~~has full access to~~ with electronic copies (or paper copies, if requested by the Ministry) of such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the ~~Corporate and Electricity Finance Division of the~~ OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement on the forecasts.

~~d)~~e) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for the appropriated amount or for a change in the appropriated amount for OREC.

~~e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement of the forecasts.~~

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

John Kim
Tel: (416) 212-6996
email: john.kim@ofina.on.ca

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

9. Notice

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:

Memorandum of Understanding
Relating to the
Ontario Rebate for Electricity Consumers

Dated: **, 2016**

Commented [RH1]: TBD

Between:

Her Majesty the Queen in right of Ontario
as represented by the Minister of Energy ("**Ministry**")

And:

Ontario Financing Authority
an agency of the Province of Ontario (the "**OFA**")

Whereas:

1. Pursuant to the ~~[~~*Ontario Rebate for Electricity Consumers Act, 2016*~~] – NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder (the "Act"), certain consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers ~~("~~" or "OREC~~"), against~~", in respect of the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the ~~OREC~~Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f)of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

Therefore:

The Ministry and the OFA agree as follows:

1. **Payment Authorization**

   (i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

   (ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

   (iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

      i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

      ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. **Payment Process**

   ~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

   a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

   ~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

   ~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

   ~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

   ~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. **Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ensure that the Ministry has full access to such records.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

e)

Commented [SQ22]: What would this access look like? Are they expecting us to set up up an external site with all of our files/modeling as well?

Just need to clarify expectations.

4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process .

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement of the forecasts.

Commented [SQ23]: The only change outlined in the latest version.

5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

7. No Service Charges

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

8. Contacts

DO LONG-TERM CARE HOMES ALSO QUALIFY FOR THE EIGHT PER CENT REBATE PROPOSED IN THE ONTARIO REBATE FOR ELECTRICITY CONSUMERS ACT, 2016?

ISSUE

The proposed *Ontario Rebate for Electricity Consumers Act, 2016 ("OREC Act")* would provide an eight per cent rebate to electricity consumers. Are Long-term Care Homes eligible for the eight per cent rebate?

RESPONSE

As per the proposed OREC legislation, the rebate would apply to consumers who have an "eligible account" with an electricity vendor.

- The "eligible account" includes an account that relates to "…*a residential complex, within the meaning of subsection 2 (1) of the Residential Tenancies Act, 2006, without regard to section 5 of that Act".*
    - Section 5 of the *Residential Tenancies Act, 2006* provides an exclusion list, which does include long-term care homes[1]. Notwithstanding this, the language in the OREC Act ensures that the exclusions **do not** apply in its definition of "residential complex".
    - This means that long-term care homes are eligible to receive the eight percent rebate under the proposed OREC Act.

FURTHER CONSIDERATIONS

For clarity, staff looked at the electricity consumer base that would be eligible, as defined under the *Ontario Clean Energy Benefit Act, 2010 ("OCEB")* and defined for the Regulated Price Plan ("RPP"). See Appendix A.

- Under both, OCEB and RPP, section 5 of the *Residential Tenancies Act, 2006* applied, which included long-term care homes in an exclusion list along with other electricity user subsets. See Appendix B.
    - For example, the exemption in 5(a) of the *Residential Tenancies Act, 2006* would imply **hotels, which had been exempted from the OCEB rebate, will now be eligible for the eight percent rebate, in contradiction of the proposal in Energy's Cabinet Submission.**
- Furthermore, the proposed Cabinet minute implied that the eight per cent rebate would only apply to RPP eligible consumers.
    - By including the entire list of consumers that had been excluded under the RPP definition of 'residential complex', the proposed legislation is:
        a) in direct contradiction of the proposed Cabinet Minute and

[1] *Residential Tenancies Act, 2006, Section 5: This Act does not apply with respect to, Section 5(e) living accommodation that is subject to the Public Hospitals Act, the Private Hospitals Act, the Long-Term Care Homes Act, 2007, the Ministry of Correctional Services Act or the Child and Family Services Act;*

b) would result in the eight per cent rebate applying to a much larger group of consumers and correspondingly having a larger fiscal impact to the Province.

It is unclear whether the intention of the proposed OREC legislation was to include just long term care homes in eligibility for the rebate, or to broaden the eligibility to the entire list of exempted users as listed in section 5 of the *Residential Tenancies Act, 2006*.

DISCLAIMER: This preliminary analysis and interpretation of proposed and existing legislation was carried forth by CEFD staff without the input from legal staff. Legal staff would need to be involved to ensure complete accuracy.

Corporate and Electricity Finance Division, Ontario Financing Authority

Appendix A – Comparison of Proposed OREC to OCEB to RPP Eligibility

OREC[2]	OCEB[3]	RPP Definition[4]
"eligible account" means, in respect of a consumer, an account with an electricity vendor, or with a person prescribed by the regulations, for the provision of electricity in Ontario if, (a) the consumer has a demand for electricity of 50 kilowatts or less, or such other amount of demand for electricity as may be prescribed, (b) the consumer annually uses not more than 250,000 kilowatt hours of electricity, or such other amount of use of electricity as may be prescribed, (c) the consumer, (i) carries on a business that is a farming business for the purposes of the Farm Registration and Farm Organizations Funding Act, 1993, and (ii) holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act, (d) the account relates to, (i) a dwelling, (ii) a property, within the meaning of the Condominium Act, 1998, **(iii) a residential complex, within the meaning of subsection 2 (1) of the Residential Tenancies Act, 2006, without regard to section 5 of that Act, or** (iv) a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the Co-operative Corporations Act, or (e) the consumer or the account satisfies such conditions as may be prescribed by the regulations; ("compte admissible")	"eligible account" means, in respect of a consumer, an account with an electricity vendor, or with a person prescribed by the regulations, for the provision of electricity in Ontario if, (a) the consumer has a demand for electricity of 50 kilowatts or less, (b) the consumer annually uses not more than 250,000 kilowatt hours of electricity, (c) the consumer, (i) carries on a business that is a farming business for the purposes of the Farm Registration and Farm Organizations Funding Act, 1993, and (ii) holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act, (d) the account relates to, (i) a dwelling, (ii) a property, within the meaning of the Condominium Act, 1998, **(iii) a residential complex, within the meaning of subsection 2 (1) of the Residential Tenancies Act, 2006,** (iv) a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the Co-operative Corporations Act, or (e) the consumer or the account satisfies such conditions as may be prescribed by the regulations; ("compte admissible")	Class of consumers, s. 79.16 4. (1) Revoked: O. Reg. 494/10, s. 2 (1). (2) On and after November 1, 2009, the following are prescribed as the class of consumers for the purposes of subsection 79.16 (1) of the Act: 1. Low-volume consumers. 2. A consumer who has a demand of 50 kilowatts or less. 3. A consumer who has an account with a distributor, if the account relates to, i. a dwelling, ii. a property as defined in the Condominium Act, 1998, iii. **a residential complex as defined in the Residential Tenancies Act, 2006**, or iv. a property that includes one or more dwellings and that is owned or leased by a co-operative as defined in the Co-operative Corporations Act. 4. A consumer who annually uses at least 150,000 but not more than 250,000 kilowatt hours of electricity. 5. A consumer who has an account with a distributor if the consumer, i. carries on a business that is a farming business for the purposes of the Farm Registration and Farm Organizations Funding Act, 1993, and ii. holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act. O. Reg. 58/08, s. 1; O. Reg. 115/09, s. 1 (2); O. Reg. 494/10, s. 2 (2, 3).

Appendix B – List of Exclusions in Section 5 of the Residential Tenancies Act, 2006

The following are the exemptions from Section 5 of the Residential Tenancies Act, 2006 that excluded eligibility from OCEB and RPP, but are ignored in reference to eligibility for OREC. As such OREC now includes a much broader interpretation of a "residential complex".

Exemptions from Act

5. This Act does not apply with respect to,
   (a) living accommodation intended to be provided to the travelling or vacationing public or occupied for a seasonal or temporary period in a hotel, motel or motor hotel, resort, lodge, tourist camp, cottage or cabin establishment, inn, campground, trailer park, tourist home, bed and breakfast vacation establishment or vacation home;
   (b) living accommodation whose occupancy is conditional upon the occupant continuing to be employed on a farm, whether or not the accommodation is located on that farm;
   (c) living accommodation that is a member unit of a non-profit housing co-operative, except for Part V.1, and except for those provisions in other Parts that are needed to give effect to Part V.1;
   (d) living accommodation occupied by a person for penal or correctional purposes;
   (e) living accommodation that is subject to the *Public Hospitals Act*, the *Private Hospitals Act*, the *Long-Term Care Homes Act, 2007*, the *Ministry of Correctional Services Act* or the *Child and Family Services Act*;
   (f) short-term living accommodation provided as emergency shelter;
   (g) living accommodation provided by an educational institution to its students or staff where,
      (i) the living accommodation is provided primarily to persons under the age of majority, or all major questions related to the living accommodation are decided after consultation with a council or association representing the residents, and
      (ii) the living accommodation does not have its own self-contained bathroom and kitchen facilities or is not intended for year-round occupancy by full-time students or staff and members of their households;
   (h) living accommodation located in a building or project used in whole or in part for non-residential purposes if the occupancy of the living accommodation is conditional upon the occupant continuing to be an employee of or perform services related to a business or enterprise carried out in the building or project;
   (i) living accommodation whose occupant or occupants are required to share a bathroom or kitchen facility with the owner, the owner's spouse, child or parent or the spouse's child or parent, and where the owner, spouse, child or parent lives in the building in which the living accommodation is located;
   (j) premises occupied for business or agricultural purposes with living accommodation attached if the occupancy for both purposes is under a single lease and the same person occupies the premises and the living accommodation;
   (k) living accommodation occupied by a person for the purpose of receiving rehabilitative or therapeutic services agreed upon by the person and the provider of the living accommodation, where,
      (i) the parties have agreed that,
         (A) the period of occupancy will be of a specified duration, or
         (B) the occupancy will terminate when the objectives of the services have been met or will not be met, and
      (ii) the living accommodation is intended to be provided for no more than a one-year period;
   (l) living accommodation in a care home occupied by a person for the purpose of receiving short-term respite care;
   (m) living accommodation in a residential complex in which the Crown in right of Ontario has an interest, if,
      (i) the residential complex was forfeited to the Crown in right of Ontario under the *Civil Remedies Act, 2001*, the *Prohibiting Profiting from Recounting Crimes Act, 2002* or the *Criminal Code* (Canada), or
      (ii) possession of the residential complex has been or may be taken in the name of the Crown under the *Escheats Act*; and

Note: On December 10, 2016, clause 5 (m) of the Act is repealed and the following substituted: (See: 2015, c. 38, Sched. 7, s. 60)

   (m) living accommodation in a residential complex in which the Crown in right of Ontario has an interest if,
      (i) the living accommodation or residential complex was forfeited to the Crown in right of Ontario under any Ontario statute or the *Criminal Code* (Canada),
      (ii) possession of the living accommodation or residential complex has been or may be taken in the name of the Crown in right of Ontario under the *Escheats Act, 2015*, or
      (iii) the living accommodation or residential complex is forfeited corporate property to which the *Forfeited Corporate Property Act, 2015* applies;
   (n) any other prescribed class of accommodation. 2006, c. 17, s. 5; 2007, c. 8, s. 226; 2007, c. 13, s. 48; 2008, c. 14, s. 58 (2, 4); 2009, c. 33, Sched. 18, s. 30; 2013, c. 3, s. 24.

KEY MESSAGES

- Ontario's Government is committed to taking action to help people in their everyday lives and ensure that everyone in the province has equitable access to energy.

- We've heard clearly from families and businesses that the costs of rebuilding our power system, after years of neglect, require relief, so today we're taking immediate action to reduce bills for all consumers.

- After years of careful fiscal management and prudent stewardship of the economy leading to consistent economic growth, Ontario is in a position to take action to help with the cost of electricity as an everyday expense.

- Our plan to reduce bills involves three key actions:

    1. On January 1, 2017 we will rebate all provincial taxes from electricity bills, reducing bills by 8% and saving the average family $11 on each monthly bill.
    2. We will modernize programs that reduce distribution rates for rural and ~~northern~~ remote consumers, reducing the average bill by up to 20% or $45 each month.
    3. We will expand eligibility of the Industrial Conservation Initiative to allow more than one thousand new businesses to qualify and reduce their electricity bills by up to ~~for~~ a one third ~~reduction in bills~~.

- These actions build on a foundation of efforts to provide support for low-income families, incent industrial consumers, expand natural gas to more communities, and grid-connect remote first nations communities.

Commented [JK1]: Equitable access? And to energy and not electricity?

Commented [JK2]: Hopefully the government's stewardship led to the consistent growth.

Commented [SK23]: Presumably not all northern consumers would be classified under Hydro One's R2 classification.

Commented [SK24]: Note, the one third reduction is not a certainty.

Want to imply here that it is 'up to' one third.

KEY MESSAGES

- Ontario's Government is committed to taking action to help people in their everyday lives and ensure that everyone in the province has equitable access to energy.

- We've heard clearly from families and businesses that the costs of rebuilding our power system, after years of neglect, require relief, so today we're taking immediate action to reduce bills for all consumers.

- After years of careful fiscal management and ~~consistent~~ economic growth, Ontario is in a position to take action to help with the cost of electricity as an everyday expense.

- Our plan to reduce bills involves three key actions:

    1. Starting as of~~On~~ January 1, 2017, we ~~will~~propose to rebate ~~all~~ an amount equal to the 8% provincial portion ~~provincial taxes~~of HST from electricity bills, ~~reducing bills by 8% and~~ saving the average family $11 per month on ~~each monthly~~the bill.
    2. We will modernize programs that reduce distribution rates for rural and ~~northern~~ remote consumers, reducing the average bill by up to 20% or $45 each month.
    3. We will expand eligibility of the Industrial Conservation Initiative to allow more than one thousand new businesses to qualify and reduce their electricity bills by up to ~~for a~~ one third ~~reduction in bills~~.

- These actions build on a foundation of efforts to provide support for low-income families, incent industrial consumers, expand natural gas to more communities, and grid-connect remote ~~f~~First ~~n~~Nations communities.

Commented [JK1]: Equitable access? And to energy and not electricity?

Commented [RK2]: Have OB and OEP commented on this?

Formatted: Font: (Default) Calibri, 11 pt

Commented [SK23]: Presumably not all northern consumers would be classified under Hydro One's R2 classification.

Commented [RK4]: Energy should review. Not sure it's 1000 new businesses.

Commented [SK25]: Note, the one third reduction is not a certainty.

Want to imply here that it is 'up to' one third.

KEY MESSAGES

- Ontario's Government is committed to taking action to help people in their everyday lives and ensure that everyone in the province has equitable access to energy.

- We've heard clearly from families and businesses that the costs of rebuilding our power system after years of neglect require relief, so today we're taking immediate action to reduce bills for all consumers.

- After years of careful fiscal management and consistent economic growth, Ontario is in a position to take action to help with the cost of electricity as an everyday expense.

- Our plan to reduce bills involves three key actions:
    1. On January 1, 2017 we will rebate all provincial taxes from electricity bills, reducing bills by 8% and saving the average family $11 on each monthly bill.
    2. We will modernize programs that reduce distribution rates for rural and northern consumers, reducing the average bill by up to 20% or $45 each month.
    3. We will expand eligibility of the Industrial Conservation Initiative to allow more than one thousand new businesses to qualify for a one third reduction in bills.
- These actions build on a foundation of efforts to support for low-income families, incent industrial consumers, expand natural gas to more communities, and grid-connect remote first nations communities.

Ontario

MINISTRY OF
ENERGY

Proposed Initiatives to Transform Ontario's Electricity Sector

Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

Context (Cont'd)

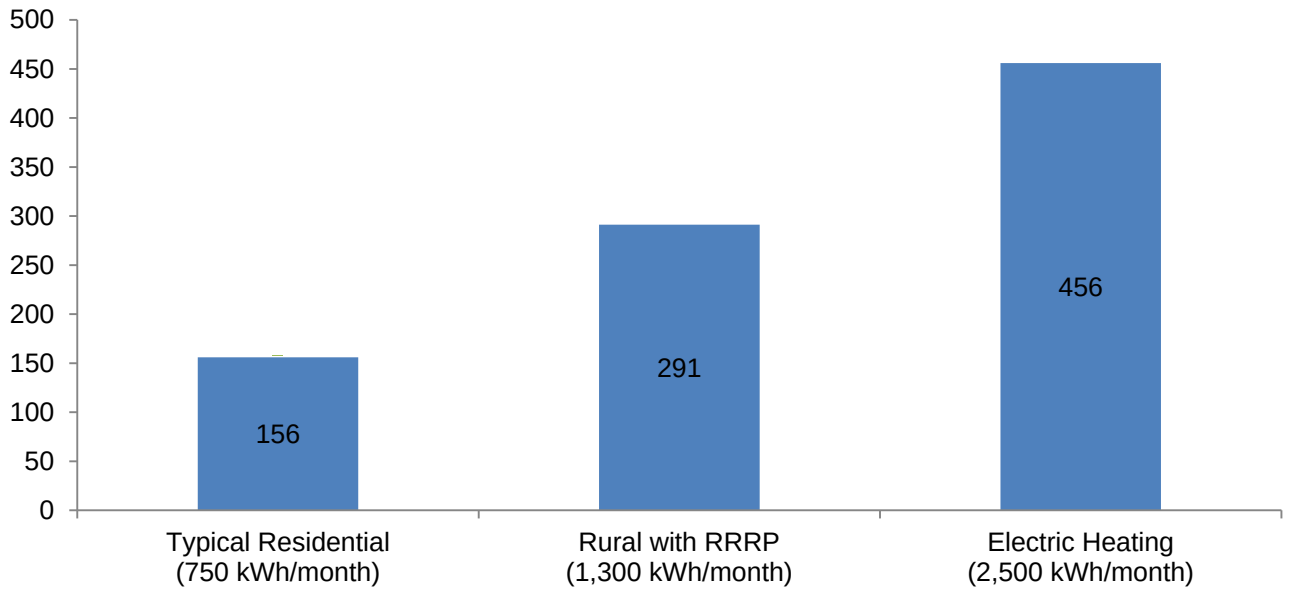
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

Residential Electricity Bills
in $/month

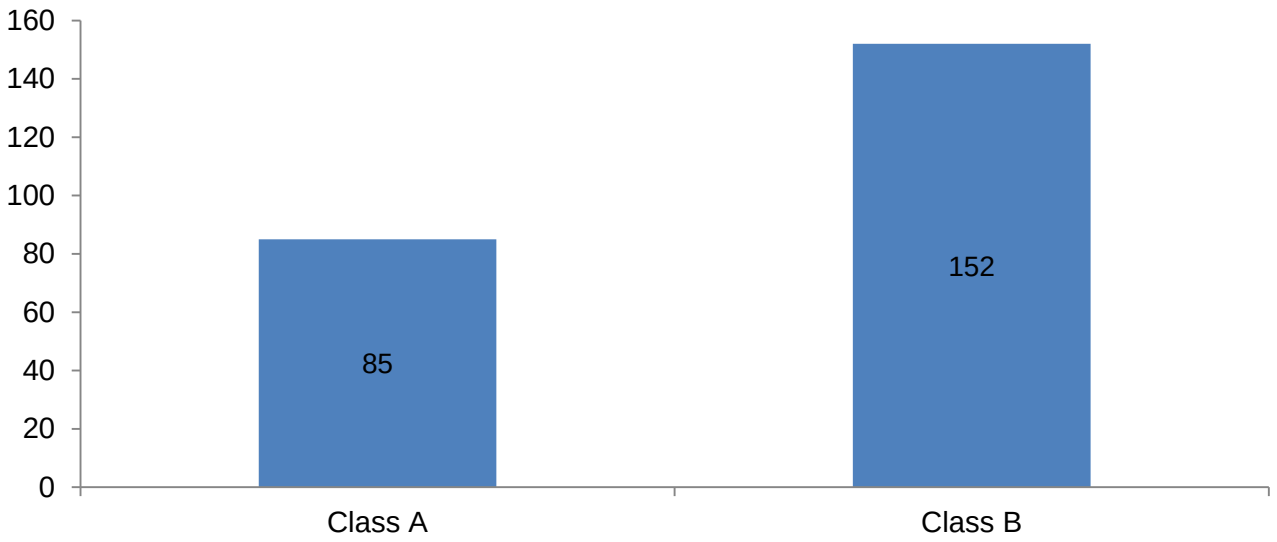


Note: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

Current All-In electricity Price
in $/MWh



Note: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

Current Status on Taxpayer Funded Electricity Price Mitigation

($M)	2011-12	2012-13	2013-14	2014-15	2015-16	2016-17[1]	2017-18[1]
OCEB	1,033	994	1,006	1,078	860	-	-
OREC	-	-	-	-	-	300	1,100*
Ending DRC[2]	-	-	-	-	85	330	330
NIERP	120	120	115	108	120	120	120
NOEC	23	24	25	24	26	25	25
OEPTC[3]	354	406	418	429	444	450	460
TOTAL	**1,530**	**1,544**	**1,564**	**1,639**	**1,525**	**1,195**	**2,005**

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

Proposal	Program / Initiative	Line on Bills	Who Benefits
1. Implement Market Renewal Initiatives	Market Renewal	Electricity, Global Adjustment, Regulatory	Market Renewal: All electricity consumers
2. Fund Electricity Support Programs Through The Tax-base	OESP, RRRP	Regulatory	All electricity consumers evenly
3. Eliminate the Industrial Conservation Initiative (ICI)	ICI	Electricity, Global Adjustment	Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers.
4. Amortize Conservation Program Costs	Amortization	Electricity, Global Adjustment	Class B electricity consumers and to a lesser extent Class A consumers
5. LDC Efficiencies	Distribution efficiencies	Delivery	All embedded consumers
6. Rate Design Initiatives	Rate structures	Electricity, Global Adjustment	Rate Design Initiatives: Participating electricity consumers
7. Reduced Cost of OPG Borrowing	n/a	Electricity, Global Adjustment	Class B electricity consumers and to a lesser extent Class A consumers
8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers	Debt Retirement Charge (DRC)	DRC	Class B consumers (i.e., small business and commercial consumers, etc)
9. Dedicate Departure Tax	Departure Tax	TBD	TBD
10. Cancel/Adjust Renewable Energy Procurements	FIT, LRP	Electricity, Global Adjustment	Class B electricity consumers and to a lesser extent Class A consumers

Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

$/750kWh	2017	2018	2019	2020	2021	2022	Timing of Benefit
1. Implement Market Renewal Initiatives	-	-	-	1.58	1.59	1.60	Longer-Term
2. Fund Electricity Support Programs through the Tax-base	2.18	2.30	2.31	2.45	2.48	2.51	Immediate
3. Eliminate the Industrial Conservation Initiative (ICI)	4.40	4.24	4.10	4.24	3.73	3.58	Immediate
4. Amortize Conservation Program Costs	1.67	1.56	1.21	0.81	0.54	0.3	Immediate
5. LDC Efficiencies	TBD	TBD	TBD	TBD	TBD	TBD	Near-Term
6. Rate Design Initiatives*	-	-	-	-	-	-	Immediate
7. Reduced Cost of OPG Borrowing	0.13	0.13	0.13	0.18	0.18	0.18	Immediate
8. End DRC Early for Class B Electricity Consumers**	-	-	-	-	-	-	n/a
9. Dedicate Departure Tax	TBD	TBD	TBD	TBD	TBD	TBD	Immediate
10. Cancel / Adjust Renewable Energy Procurements	-	-	TBD	TBD	TBD	TBD	Longer-Term
Total decrease on typical monthly bill	**8.38**	**8.23**	**7.75**	**9.26**	**8.52**	**8.17**	

Note: The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

$/MWh	2017	2018	2019	2020	2021	2022	Timing of Benefit
1. Implement Market Renewal Initiatives	-	-	-	2.11	2.12	2.13	Longer-Term
2. Fund Electricity Support Programs through the Tax-base	2.91	3.06	3.17	3.27	3.33	3.38	Immediate
3. Eliminate the Industrial Conservation Initiative (ICI)	(24.12)	(23.21)	(22.45)	(23.23)	(20.42)	(19.61)	Immediate
4. Amortize Conservation Program Costs	1.15	1.08	0.84	0.56	0.37	0.25	Immediate
5. LDC Efficiencies	n/a	n/a	n/a	n/a	n/a	n/a	Near-Term
6. Rate Design Initiatives*	-	-	-	-	-	-	Immediate
7. Reduced Cost of OPG Borrowing	0.10	0.10	0.10	0.15	0.15	0.15	Immediate
8. End DRC Early for Class B Electricity Consumers**	-	-	-	-	-	-	n/a
9. Dedicate Departure Tax	TBD	TBD	TBD	TBD	TBD	TBD	Immediate
10. Cancel / Adjust Renewable Energy Procurements	-	-	TBD	TBD	TBD	TBD	Longer-Term
Total increase on industrial bill	**19.96**	**18.97**	**18.34**	**17.14**	**14.45**	**13.7**	

Note: Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $[TBD based on Energy's estimate of affected consumption] ~~[placeholder for OFA]~~ on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based only new borrowing and increasing to about $70M by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide.

Proposed Taxpayer Funded Electricity Price Mitigation

($M)	2016-17[1]	2017-18[1]	2018-19[1]	2019-20[1]	2020-21[1]
OCEB	-	-	-	-	-
OREC	300	1,100*	1,100*	1,200*	1,200*
Ending DRC[2]	330	330	--	--	--
NIERP	120	120	120	120	120
NOEC	25	25	25	25	25
OEPTC[3]	450	460	470	481	481
CURRENT TOTAL	**1,195**	**2,005**	**1,715**	**1,826**	**1,826**
1. OESP		106	119	127	132
2. RRRP		292	300	306	315
3. First Nations Delivery Rate		18	18	18	18
4. Fund ICI through Tax Base		900+	900+	900+	900+
5. Departure Tax		TBD	TBD	TBD	TBD
6. Conservation Amortisation	N/A	N/A	N/A	N/A	N/A
7. DRC Ended for Class B	110	450	--	--	--
8. Other					
TOTAL	**1,305**	**3,871**	**3,152**	**3,177**	**3,191**

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion by 2020-21. That is a 145% increase from the current forecast for 2016-17 or a 93% increase when comparing against the current expected funding for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

Considerations

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

Considerations

Consumer Impacts and implementation

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

Year	OESP	RRRP	First Nations Delivery Rate	TOTAL
2017	$106M	$292M	$18M	**$416M**
2018	$119M	$300M	$18M	**$437M**
2019	$127M	$306M	$18M	**$451M**
2020	$132M	$315M	$18M	**$465M**

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

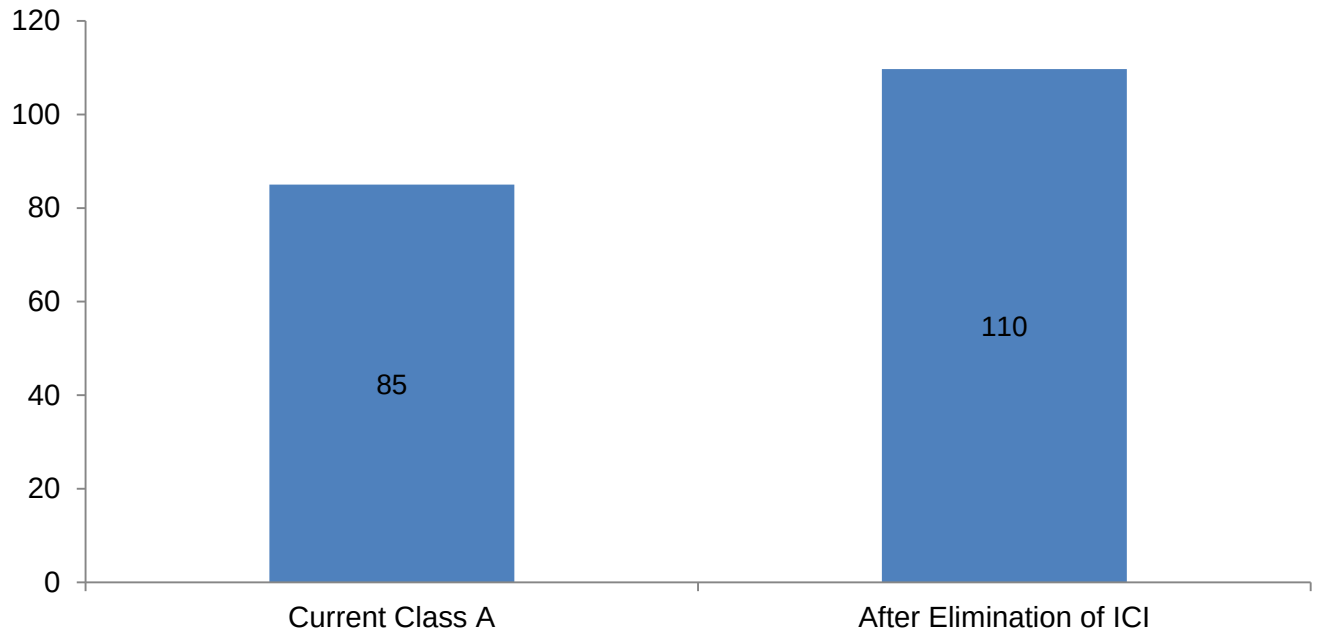
Considerations

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

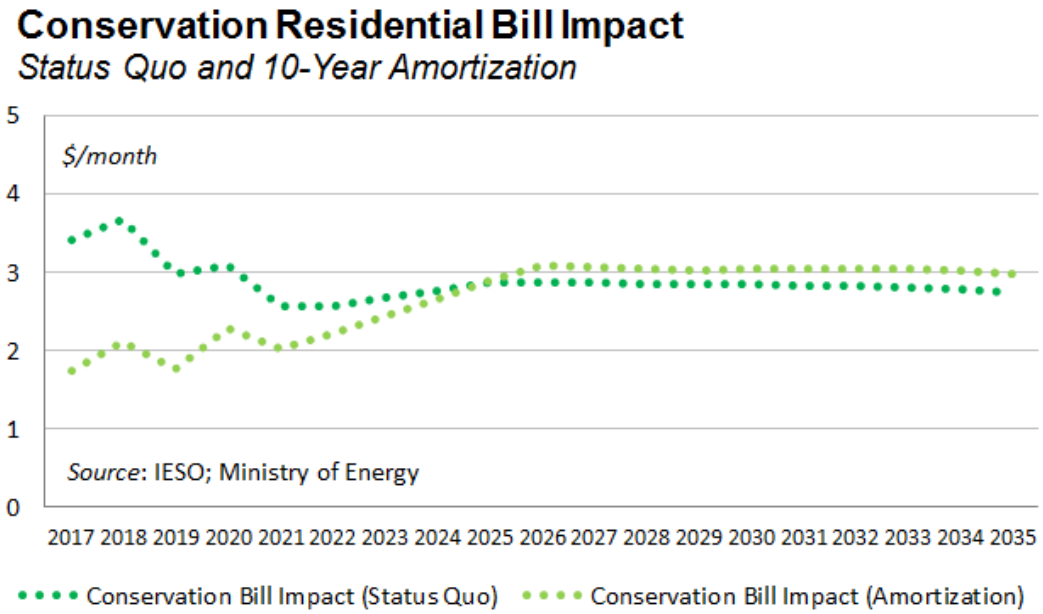
All-In Electricity Price
in $/MWh



Note: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



Note: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

4. Amortize Conservation Program Costs (cont'd)

Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

4. Amortize Conservation Program Costs (cont'd)

Considerations

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

Considerations

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

Current TOU	New Flat Rate
On: 18.0 ¢/kWh	11.1 ¢/kWh
Mid: 13.2 ¢/kWh	
Off: 8.7 ¢/kWh	

Considerations

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

	Current TOU	New Flat Rate
1) Monthly electricity bill- higher peak and mid-peak usage patterns	$172	$163
2) Monthly electricity bill- higher off-peak usage patterns	$152	$163

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

6. Rate Design Initiatives (cont'd)

Considerations

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

Considerations

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

Considerations

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

Considerations

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

Unallocated/Terminated Capacity	Announced Procurements	Executed Contracts
A. Do not procure unallocated or terminated capacity	B. Revise FIT 5 target	D. Cancel LRP I contracts
	C. Cancel FIT 6	

Overarching Considerations

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

Cancel/Adjust Announced Procurements

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

Cancel Existing LRP I Contracts

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

Considerations

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.5 billion a year).

Appendix

Electricity Consumer Classes

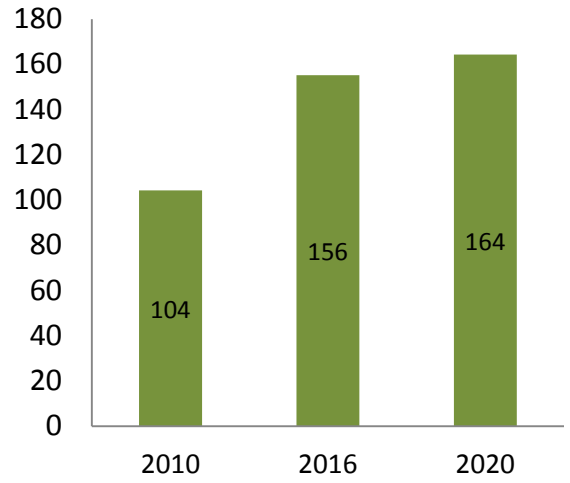
- In Ontario, there are three classes of electricity consumers:

	Regulated Price Plan	Class B	Class A
Consumer Types	• Residential • Small Business • Farms	• Commercial • Institutional • Small industrial	• Large commercial • Large industrial
Load Size	Below 0.05 MW	Between 0.05 MW and 1 MW	Above 1 MW
Total Consumption	58 TWh	57 TWh	26 TWh
Share of Consumption	41.1%	40.4%	18.4%

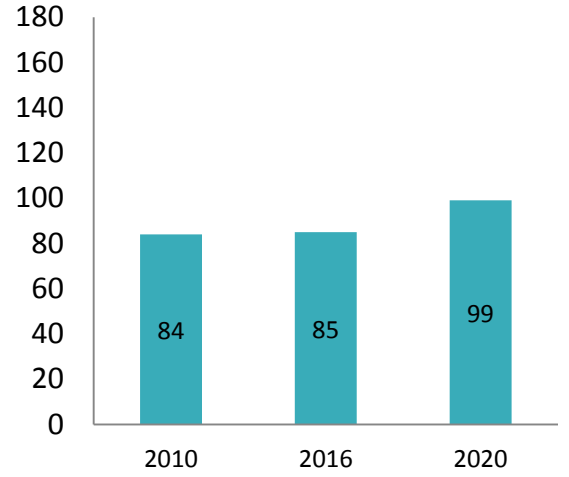
Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

Typical Residential Bill (750/kWh per month)



Typical Class A (Industrial) Price ($/MWh)



Note: 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

Cost Shift Impacts - Residential Bill

Typical 750 kWh/month Toronto Hydro consumer

$/month	2011	2012	2013	2014	2015	2016
ICI	2.65	3.25	3.88	3.53	4.75	4.77
RRRP	0.90	0.82	0.84	0.92	0.93	0.94
OESP	-	-	-	-	-	0.84
Conservation	1.85	1.92	2.00	1.58	2.43	2.45
IEI	-	-	0.08	0.09	0.11	0.12
Total	**5.41**	**5.99**	**6.81**	**6.13**	**8.21**	**9.12**

Cost Shift Impacts - Industrial Bill

Typical Class A consumer

$/MWh	2011	2012	2013	2014	2015	2016
ICI	-22.17	-26.36	-30.29	-25.91	-33.79	-33.92
RRRP	1.20	1.10	1.12	1.23	1.24	1.25
OESP	-	-	-	-	-	1.13
Conservation	1.53	1.59	1.66	1.31	2.01	2.02
IEI	-	-	0.07	0.08	0.09	0.10
Total	**-19.43**	**-23.67**	**-27.44**	**-23.29**	**-30.45**	**-29.43**

Note: OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

Cost of Programs

By government program

$M	2011	2012	2013	2014	2015	2016
ICI	506	615	736	670	890	893
RRRP	172	156	159	176	174	176
OESP	-	-	-	-	-	158
Conservation	329	339	354	280	425	428
IEI	-	-	15	16	18	19

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

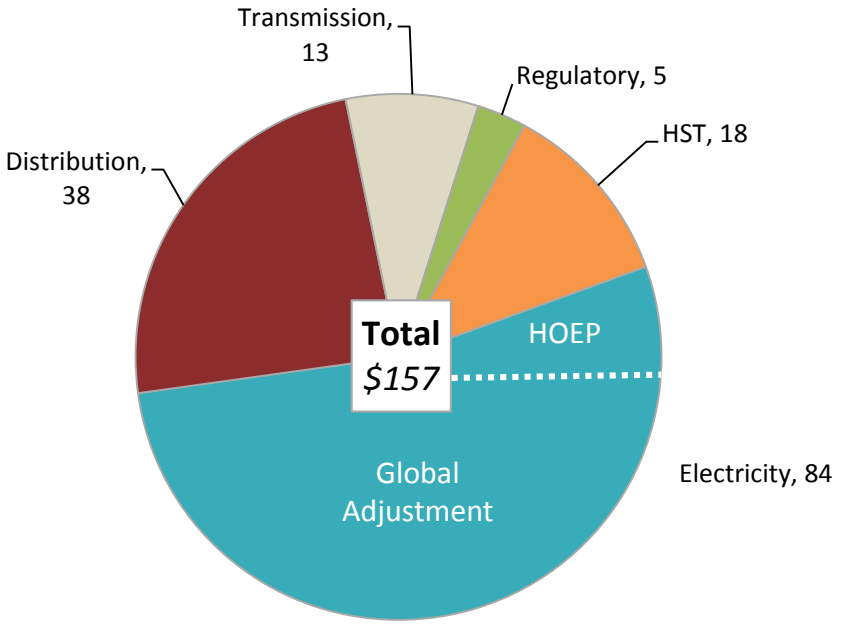
Note: OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

Typical Residential Monthly Bills ($)

As of November 1, 2016 (750 kWh/month)



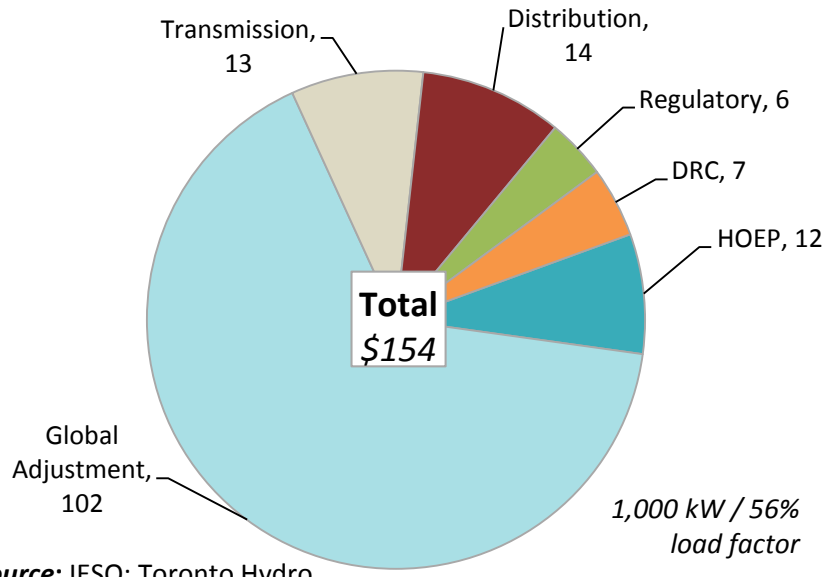
***Source*: OEB, Toronto Hydro**

Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

Typical Commercial Price ($/MWh)

YTD June 2016 (Non-RPP Class B)



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

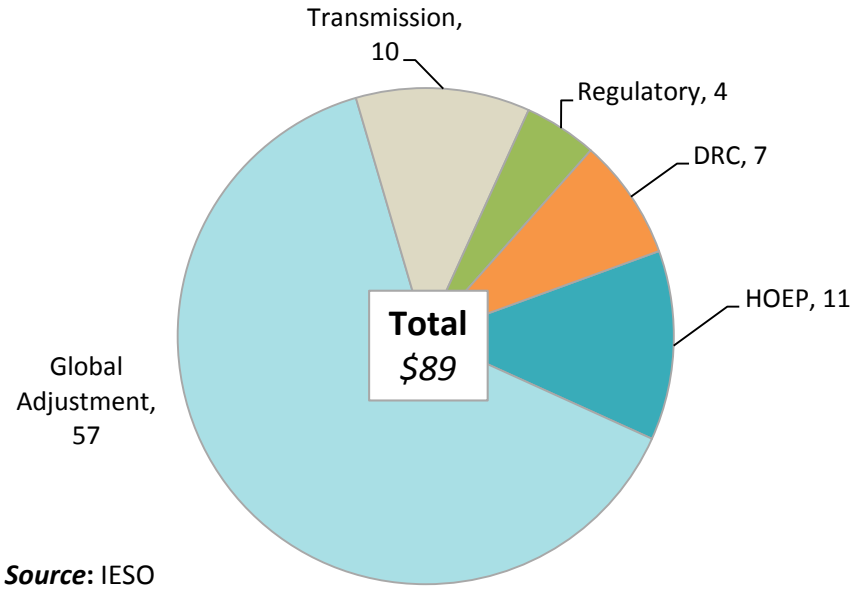
*** Note**: Most commercial consumers receive input tax credits for their HST.

Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

Typical Large Industrial Price ($/MWh)

YTD June 2016



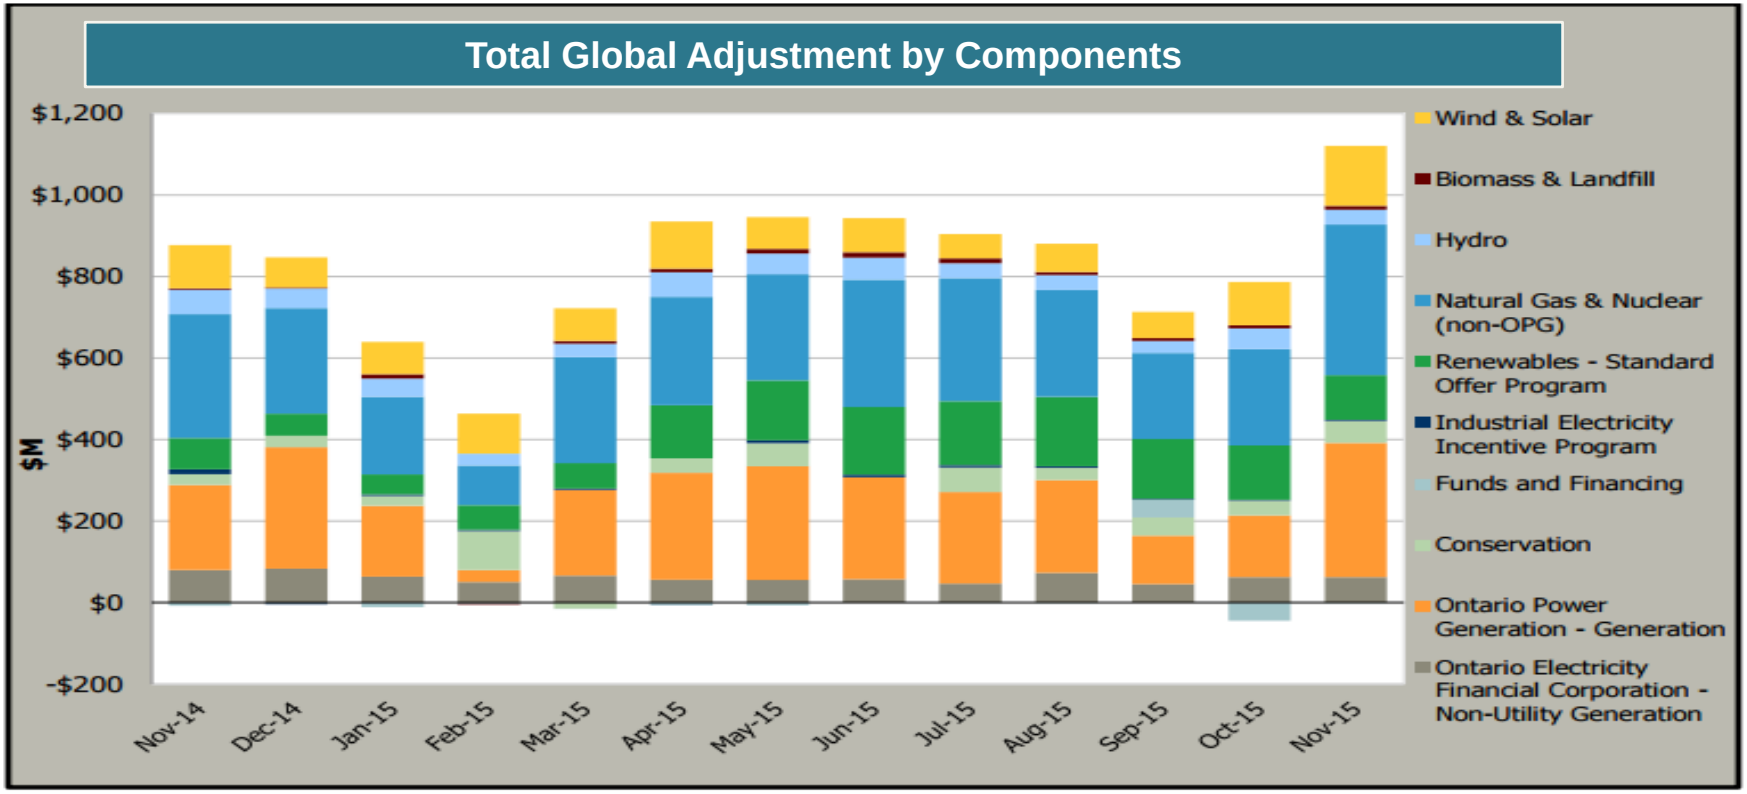
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



Source: IESO Monthly Market Report (November 2015)

Cancel/Adjust Renewable Energy Procurements

LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

DRAFT

Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

General Comments on Energy's Deck

- The Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill.
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing electricity price mitigation that has a fiscal impact (averaging over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see following slide for estimated costs over time, and likely increasing over time).
  - That is not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.
- Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded, with an estimated impact of about $0.4 billion initially, and rising over time.
  - This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base.
  - Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

General Comments on Energy's Deck (cont.)

- Industrial Conservation Initiative (ICI): Energy also presents as a residential mitigation measure the cancellation of the ICI.
  - Energy is not initially proposing it continue as taxpayer funded, but notes the about 30% price increase for the large Class A customers benefiting from ICI currently (at a cost shift of about $900 million per year).
  - This cost is for 2016, prior to the planned expansion of the ICI, which could further increase the fiscal exposure.
- Departure Tax:
- Other fiscal cost risks include amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr), and a lowering of the debt interest paid by OPG.

Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

Context: Taxpayer Funded Electricity Price Mitigation

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

Appendix

DRAFT

Background on Taxpayer-funded Electricity Price Mitigation

Program	Annual Fiscal Impacts ($M)	Date	Details
Ontario Clean Energy Benefit (OCEB)	~1,000	Jan 1 2011 to Dec 31, 2015	OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated.
Removed Debt Retirement Charge (DRC) from Residential Bills	~330	Jan 1, 2016 to Mar 31, 2018	The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.
Ontario Rebate for Electricity Consumers (OREC)	~1,200	Jan 1, 2017 onward	This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST).
Northern Industrial Electricity Rate (NIER) Program	120	March 2010	As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company. NIER initially established as a three-year program in Budget 2010, effective April 1, 2010.
Northern Ontario Energy Credit	~25	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1]
Ontario Energy Property Tax Credit	~445[1]	Budget 2010	Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1]

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

Timeline: Taxpayer-funded Electricity Price Mitigation

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.

2010 2011 2012 2013 2014 2015 2016 2017

History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

DRAFT

Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

DRAFT

Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time).
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

General Comments on Energy's Deck (cont.)

- Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded, with an estimated impact of about $0.4 billion initially, and rising over time.
  - This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base.
  - Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes the about 30% price increase (from $85/MWH to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently (at a cost shift of about $900 million per year in 2016).
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $xxx million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks:
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $xx – yy million/yr),

Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

Timeline: Taxpayer-funded Electricity Price Mitigation

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.

2010 2011 2012 2013 2014 2015 2016 2017

History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes the about 30% price increase (from $85/MWH to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $xxx million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $xx – yy million/yr),

DRAFT

Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

Appendix

DRAFT

Background on Taxpayer-funded Electricity Price Mitigation

Program	Annual Fiscal Impacts ($M)	Date	Details
Ontario Clean Energy Benefit (OCEB)	~1,000	Jan 1 2011 to Dec 31, 2015	OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated.
Removed Debt Retirement Charge (DRC) from Residential Bills	~330	Jan 1, 2016 to Mar 31, 2018	The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.
Ontario Rebate for Electricity Consumers (OREC)	~1,200	Jan 1, 2017 onward	This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST).
Northern Industrial Electricity Rate (NIER) Program	120	March 2010	As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company. NIER initially established as a three-year program in Budget 2010, effective April 1, 2010.
Northern Ontario Energy Credit	~25	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1]
Ontario Energy Property Tax Credit	~445[1]	Budget 2010	Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1]

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

Timeline: Taxpayer-funded Electricity Price Mitigation

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.

2010 2011 2012 2013 2014 2015 2016 2017

History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

DRAFT

Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

DRAFT

General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.2 to $1.5 billion per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.4 billion in 2017-18.
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

- As shown above, if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion, or more, by 2020-21. That is about a 145% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

Appendix

DRAFT

Background on Taxpayer-funded Electricity Price Mitigation

Program	Annual Fiscal Impacts ($M)	Date	Details
Ontario Clean Energy Benefit (OCEB)	~1,000	Jan 1 2011 to Dec 31, 2015	OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated.
Removed Debt Retirement Charge (DRC) from Residential Bills	~330	Jan 1, 2016 to Mar 31, 2018	The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.
Ontario Rebate for Electricity Consumers (OREC)	~1,200	Jan 1, 2017 onward	This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST).
Northern Industrial Electricity Rate (NIER) Program	120	March 2010	As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company. NIER initially established as a three-year program in Budget 2010, effective April 1, 2010.
Northern Ontario Energy Credit	~25	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1]
Ontario Energy Property Tax Credit	~445[1]	Budget 2010	Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1]

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

Timeline: Taxpayer-funded Electricity Price Mitigation

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.

2010 2011 2012 2013 2014 2015 2016 2017

History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

DRAFT

Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

DRAFT

Proposed Taxpayer Funded Electricity Price Mitigation
(To be revised)

($M)	2016-17[1]	2017-18[1]	2018-19[1]	2019-20[1]	2020-21[1]

OREC	300	1,100*	1,100*	1,200*	1,200*
Ending DRC[2]	330	330	--	--	--
NIERP	120	120	120	120	120
NOEC	25	25	25	25	25
OEPTC[3]	450	460	470	481	481
CURRENT TOTAL	**1,195**	**2,005**	**1,715**	**1,826**	**1,826**
1. OESP		106	119	127	132
2. RRRP		292	300	306	315
3. First Nations Delivery Rate		18	18	18	18
4. Fund ICI through Tax Base		900+	900+	900+	900+
5. Departure Tax		TBD	TBD	TBD	TBD
6. Conservation Amortisation					
7. DRC Ended for Class B	110	450			
8. Other					
TOTAL	**1,305**	**3,871**	**3,152**	**3,177**	**3,191**

1. 2016-17, 2017-18 based on forecasted numbers
2. Estimated impact up to March 31, 2018
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above, if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion, or more, by 2020-21. That is a 145% increase from the current forecast for 2016-17 or a 93% increase when comparing against the current expected funding for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

Appendix

DRAFT

Background on Taxpayer-funded Electricity Price Mitigation

Program	Annual Fiscal Impacts ($M)	Date	Details
Ontario Clean Energy Benefit (OCEB)	~1,000	Jan 1 2011 to Dec 31, 2015	OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated.
Removed Debt Retirement Charge (DRC) from Residential Bills	~330	Jan 1, 2016 to Mar 31, 2018	The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.
Ontario Rebate for Electricity Consumers (OREC)	~1,200	Jan 1, 2017 onward	This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST).
Northern Industrial Electricity Rate (NIER) Program	120	March 2010	As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company. NIER initially established as a three-year program in Budget 2010, effective April 1, 2010.
Northern Ontario Energy Credit	~25	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1]
Ontario Energy Property Tax Credit	~445[1]	Budget 2010	Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1]

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

Timeline: Taxpayer-funded Electricity Price Mitigation

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.

2010 2011 2012 2013 2014 2015 2016 2017

History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

DRAFT

Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.3 – 1.9 plus bn per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.3-3.9 plus billion in 2017-18, if Energy`s proposals are adopted.
  - These existing mitigation costs are not presented in Energy's deck.
  - Not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge

NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $900 million.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.7 billion.

Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

Background on Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 1

Program	Annual Fiscal Impacts ($M)	Date	Details
Ontario Clean Energy Benefit (OCEB)	~1,000	Jan 1 2011 to Dec 31, 2015	OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated.
Removed Debt Retirement Charge (DRC) from Residential Bills	~330	Jan 1, 2016 to Mar 31, 2018	The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.
Ontario Rebate for Electricity Consumers (OREC)	~1,200	Jan 1, 2017 onward	This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST).
Northern Industrial Electricity Rate (NIER) Program	120	March 2010	As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company. NIER initially established as a three-year program in Budget 2010, effective April 1, 2010.
Northern Ontario Energy Credit	~25	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1]
Ontario Energy Property Tax Credit	~445[1]	Budget 2010	Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1]

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

Option 2

Program	Annual Fiscal Impacts ($M)	Date	Details
Ontario Clean Energy Benefit (OCEB)	~1,000	Jan 1 2011 to Dec 31, 2015	OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated.
Ontario Rebate for Electricity Consumers (OREC)	~1,200	Jan 1, 2017 onward	This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST).
Northern Industrial Electricity Rate (NIER) Program	120	March 2010	As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company. NIER initially established as a three-year program in Budget 2010, effective April 1, 2010.
Northern Ontario Energy Credit	~25	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1]

Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 1

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

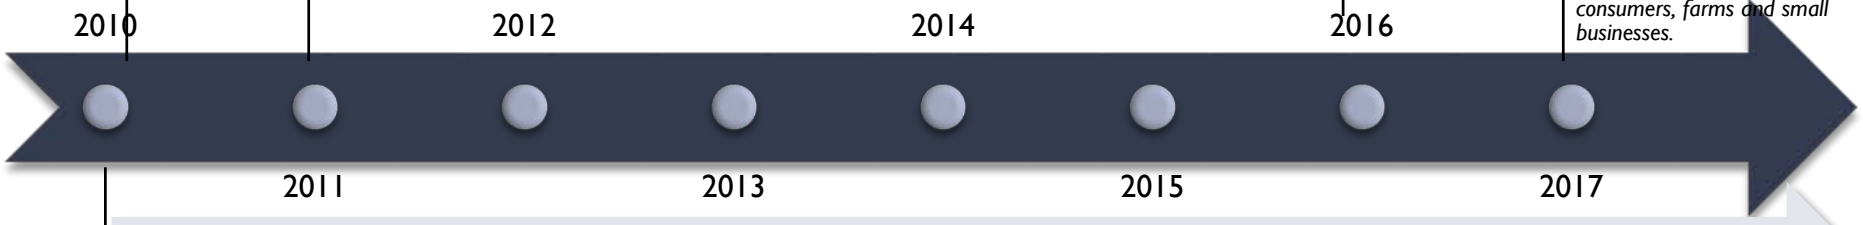
OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.



History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

DRAFT

Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

Potential Fiscal Impact to the Electricity Sector

General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.3 – 1.9 plus bn per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.3-3.9 plus billion in 2017-18, if Energy`s proposals are adopted.
  - These existing mitigation costs are not presented in Energy's deck.
  - Not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

DRAFT

Background on Taxpayer-funded Electricity Price Mitigation

Program	Annual Fiscal Impacts ($M)	Date	Details
Ontario Clean Energy Benefit (OCEB)	~1,000	Jan 1 2011 to Dec 31, 2015	OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated.
Removed Debt Retirement Charge (DRC) from Residential Bills	~330	Jan 1, 2016 to Mar 31, 2018	The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.
Ontario Rebate for Electricity Consumers (OREC)	~1,200	Jan 1, 2017 onward	This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST).
Northern Industrial Electricity Rate (NIER) Program	120	March 2010	As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company. NIER initially established as a three-year program in Budget 2010, effective April 1, 2010.
Northern Ontario Energy Credit	~25	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1]
Ontario Energy Property Tax Credit	~445[1]	Budget 2010	Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1]

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

Timeline: Taxpayer-funded Electricity Price Mitigation

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.

2010 2011 2012 2013 2014 2015 2016 2017

History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

1. 2016-17, 2017-18 based on forecasted numbers
2. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge

NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $900 million.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.7 billion.

Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

DRAFT

Background on Taxpayer-funded Electricity Price Mitigation

Option 1

Program	Annual Fiscal Impacts ($M)	Date	Details
Ontario Clean Energy Benefit (OCEB)	~1,000	Jan 1 2011 to Dec 31, 2015	OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated.
Removed Debt Retirement Charge (DRC) from Residential Bills	~330	Jan 1, 2016 to Mar 31, 2018	Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures – particularly in the context of the end of OCEB – rather than based on defeasance as per the original conception of the DRC. ~~The government removed the DRC from residential electricity users' bills as of January 1, 2016.~~ This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.
Ontario Rebate for Electricity Consumers (OREC)	~1,200	Jan 1, 2017 onward	This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST).
Northern Industrial Electricity Rate (NIER) Program	120	March 2010	As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year. Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company. NIER initially established as a three-year program in Budget 2010, effective April 1, 2010.
Northern Ontario Energy Credit	~25	Budget 2010	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1]
Ontario Energy Property Tax Credit	~445[1]	Budget 2010	Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1]

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 1

Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit

In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.

Ontario Clean Energy Benefit (Jan 1 2011 to Dec 31 2015)

The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.

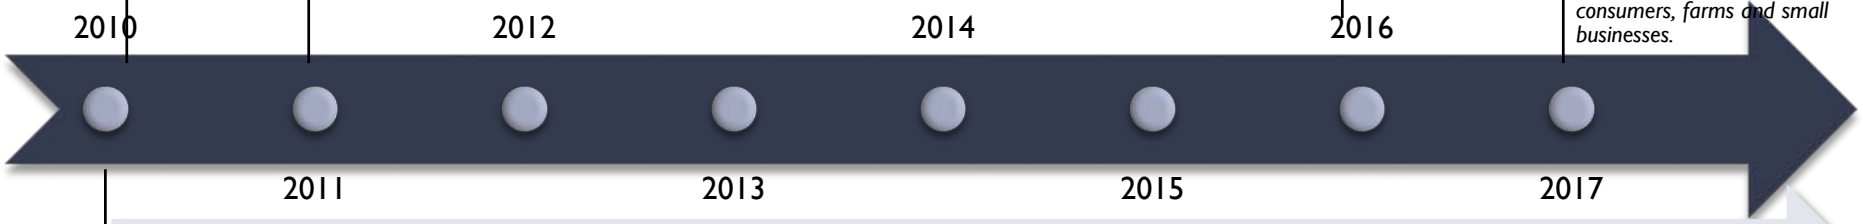
OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.

Removing DRC from Residential Bills (Jan 1 2016 to Mar 31 2018)

Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures rather than based on defeasance as per the original conception of the DRC. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

Ontario Rebate for Electricity Consumers

As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.



History of Northern Industrial Electricity Price Relief

November 2006

The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006

Budget 2009

The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.

Budget 2010

NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

September 2010

Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.

December 2012

The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.

DRAFT

Potential Fiscal Impact to the Electricity Sector

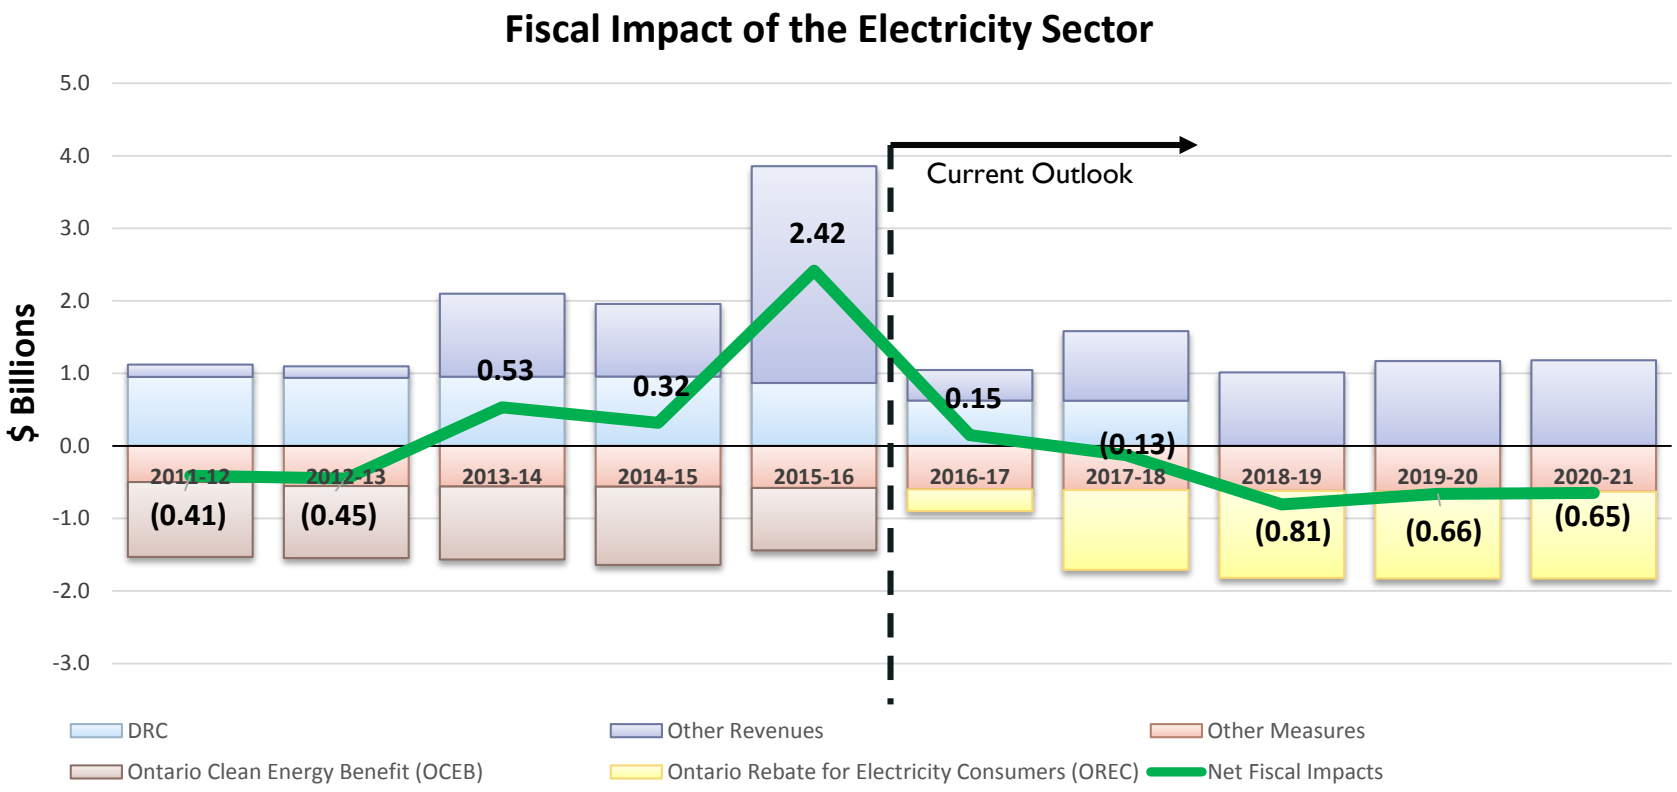
- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Note: The Province has invested capital into OPG and Hydro One with the expectation that as commercial corporations, the Province would receive a risk-adjusted return in exchange for these investments.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

Potential Fiscal Impact to the Electricity Sector

DRAFT

Option 2

- The below chart provides an overview of the fiscal impact from the electricity sector



Other Revenues include payments in lieu of taxes (PILs), and property tax PILs in the case of Hydro One, directed to the OEFC. The provincial portion of these taxes would be a fiscal benefit to the province, regardless of company ownership.

Ontario

MINISTRY OF
ENERGY

Options to Mitigate the Increase in Electricity Rates

May 2016

Context

- The kick off of the Long Term Energy Plan this year will be an opportunity for the Ministry and its agencies to focus on programs and initiatives that could help create efficiencies in the electricity sector and that could help mitigate impacts of higher electricity costs in Ontario.
    - LTEP will allow for consultations with the public and various stakeholders across the Province and electricity pricing will likely be a key topic of discussion.
- Although there are programs and initiatives currently in place to help mitigate residential as well as commercial and industrial electricity bills, the Ministry and its agencies can further explore ideas that can help consumers with their bills.
- This deck explores ~~a number of different~~ initiatives that could impact electricity prices and/or find sector efficiencies that could be passed on to consumers: LDC dividend adjustments, changes to current tax-based and rate-based support programs, options made possible through the cap and trade program, and regulatory modifications.

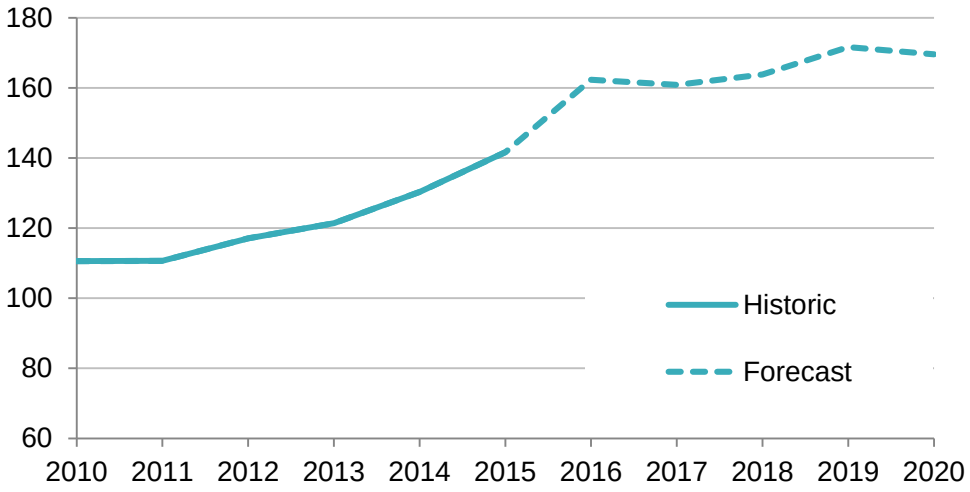
Commercially Sensitive & Confidential

Background: Typical Residential Electricity Bill

- Between 2010 and 2015, the typical residential electricity bill increased by nearly 30% inclusive of the Ontario Clean Energy Benefit (OCEB). Price increases are associated with investments to replace coal-fired electricity generation with refurbished nuclear, renewables and natural gas.
- Electricity bills are expected to continue to increase over the short-term as renewable projects come online, moderated by the removal of Debt Retirement Charge (DRC) from residential bills.
- In the 2016 Budget, the government committed to recycle a portion of the cap and trade auction proceeds to ensure that electricity costs for average commercial and industrial consumers will not increase due to cap and trade and provide a modest benefit of up to $2 per month to the typical residential consumer relative to what they otherwise would have paid

Typical Residential Electricity Bill

based on 800 kWh per month and connection to Toronto Hydro



Note:
Reflects actuals for 2010-2015.

Estimates for 2016 onwards is based on the 2013 LTEP with the removal of the DRC from residential bills and the implementation of the Ontario Electricity Support Program, along with impacts from cap and trade from 2017 to 2020 based on analysis from IESO.

Price of carbon based on third-party forecasts assuming linked California and Quebec systems. Estimates for 2017 onwards reflects the commitment made in the 2016 Budget.

Initiatives to consider to help alleviate pressure on Residential Electricity Bills

- The initiatives noted below not only impact the electricity bills, but may also have consequential impacts on the sector (e.g. potential impacts on agencies, the distribution sector and consumers). and will need to be discussed further with agencies (OPG, OEB, IESO) and with other Ministries.

Option	Description
LDC Dividend Rebate	A one-time or on-going rebate of LDC dividend payments to consumers could be an outcome of an effort to ensure efficiencies are sought in the distribution sector and that there is proper balance between risk and reward for distributors in Ontario. • However, rebating net income for LDCs will impact the entire distribution (and gas) sector and could impact investor confidence in Ontario's distribution sector (e.g. potential investors in Hydro One).
Removing Provincial Portion of HST from the Bill	The Ministry could explore making changes to the existing tax regime and tax based programs to provide consumers with an HST rebate.
Cap and Trade	In the 2016 Budget, the government committed to recycle a portion of the cap and trade auction proceeds to provide a modest benefit of up to $2 per month to the typical residential consumer relative to what they otherwise would have paid.
OEB Efficiencies Investigation	The OEB can lead and pursue regulatory reform to ensure the most efficient LDCs are rewarded and poorer performing LDCs are penalized (e.g. distribution panel report had a number of ideas that could be pursued by OEB).

Commercially Sensitive & Confidential

Initiatives to consider to help alleviate pressure on Residential Electricity Bills

	2017	2018	2019	2020	Notes
Estimated Monthly Residential Bill	$165	$173	$178	$182	1
LDC dividend benefit (Potential range based on assumptions below)	$0 – $0.50	$0 – $0.50	$0 – $0.50	$0 – $0.50	1,2
Removing Provincial Portion of the HST from Bill	11.66	12.22	12.60	12.88	1,3
Cap and Trade	$1.55	$1.93	$2.05	$2.67	4
OEB Efficiencies Investigation	TBD	TBD	TBD	TBD	5
*** All numbers are subject to change. May not be added as eligibility and outcomes may vary**					

DRAFT

Note:

1. Potential bill impacts based on residential bill forecast from Energy Supply Policy Division (2013 LTEP with DRC removal and OESP).
2. Bill impact model: Based on a sample of LDCs, assuming maximum return of 15% of dividends back to all rate classes. This slide shows the impact to residential customers only. The proportion of dividend returned to Residential customers is the same as the "Residential revenue ratio" (revenues from residential customers/total revenue; a ratio calculated from 2014 OEB Yearbook). See appendix for more details on bill impact.
3. Savings related to removing the provincial portion (8%) of the HST from bills. Based on preliminary estimates, this could reduce provincial HST revenues by over $700 million.
4. In the 2016 Budget, the government committed to recycle a portion of the cap and trade auction proceeds to provide a modest benefit of up to $2 per month to the typical residential consumer relative to what they otherwise would have paid. Subject to change pending decisions on the use of cap and trade auction proceeds and the mechanism to meet the Budget commitment.
5. Bill impacts of regulatory efficiencies would be dependent on an OEB-led policy development process to determine what LDC performance criteria/standards are appropriate to levy financial penalties on, and the severity of such penalties. Penalties could include direct credits to consumers and//or reductions in allowable return based on failure to achieve performance standards.

Ontario

Executive Summary

Proposal

This section examines the impact of LDCs returning a pre-determined portion of their annual earnings back to ratepayers.

- There are ~70 LDCs across Ontario where 10 are partially/fully owned privately while ~ 60 are owned by Municipalities.
- Net income highly varies across LDCs due to rate base and operational performance. Around 60 small/medium sized LDCs on average earned less than $5 million in Net Income in 2014 while ~ 8 LDCs made more then $20 million in Net income.
- Dividends are paid from net income and returned to shareholders. Municipalities are often the primarily shareholders and they depend on the dividends as an important source of funding for their programs, investments etc.

Results of Preliminary Analysis

- Based on a sample of LDCs, the typical residential customer is estimated to receive a benefit of less than 50 cents on a monthly bill. Due to variability across LDCs, rate payers across Ontario will not receive the same benefits with some receiving no benefit if the LDC has zero or negative earnings.
- Shareholders (often Municipalities) are estimated to forgo $80,000 to $6 million in dividend payouts.

Considerations

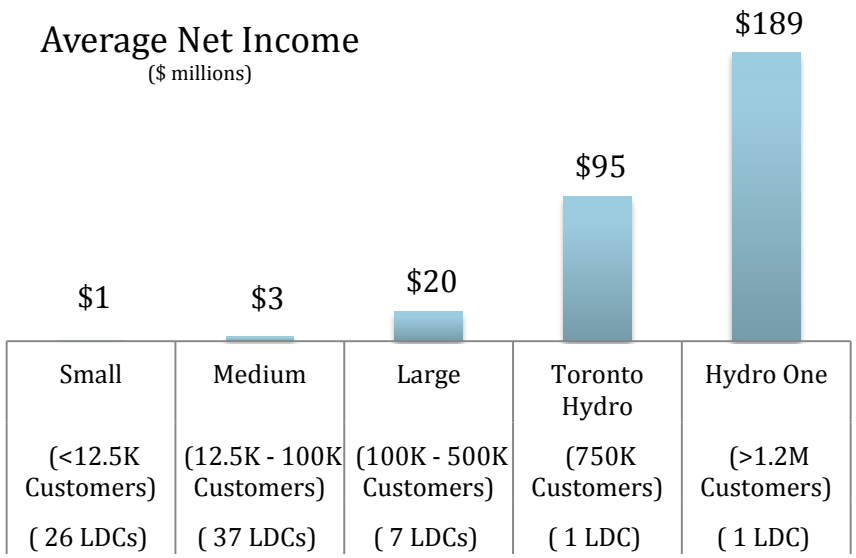
- Requiring LDCs to give up their earnings could lead to lower valuations of these companies and may directly impact consolidation efforts within the sector.
- *Implementation complexities*:
    - Influencing dividend payouts would be perceived as infringing on matters that are typically the purview of the LDCs Board of Directors.
    - Implementing this proposal will require further legal review.
    - Mechanism to implement may be complicated – for example, new regulatory variance accounts may be needed to return the portion of dividends back to distribution customers through future rate proceedings.

Commercially Sensitive & Confidential

Shareholder Relationships

- Net Income varies across LDCs. In some years, net income may be negative or zero; thereby not allowing for dividend payments to occur.
- LDC dividends are a source of revenue in cash for municipalities.
- Municipalities are often the primary shareholders of LDCs and recipients of LDC dividends. This payment is an important source of revenues which municipalities use for variety of investments including infrastructure, paying down debt, financing programs etc.
- The Board of Directors of the LDC is responsible for setting a dividend policy, and using it to issue dividends to shareholders. Across Ontario, LDCs pay anywhere between 5% upto 75% of their Net Income as dividends to shareholders (often municipalities).
- The variability in Net Income combined with variability in dividend policies complicates distribution of dividends among rate payers.
- Influencing dividend payouts would be perceived as infringing on matters that are typically the purview of the LDCs Board of Directors.

Net Income highly varies across LDCs



- The chart illustrates the average net income across different LDCs groups (based on total customers).
- There is large variability in net income across LDCs: ~ 63 small/medium sized LDCs earn less than 5 Million in net income while few LDCs (~8) make more than $20 million on average.

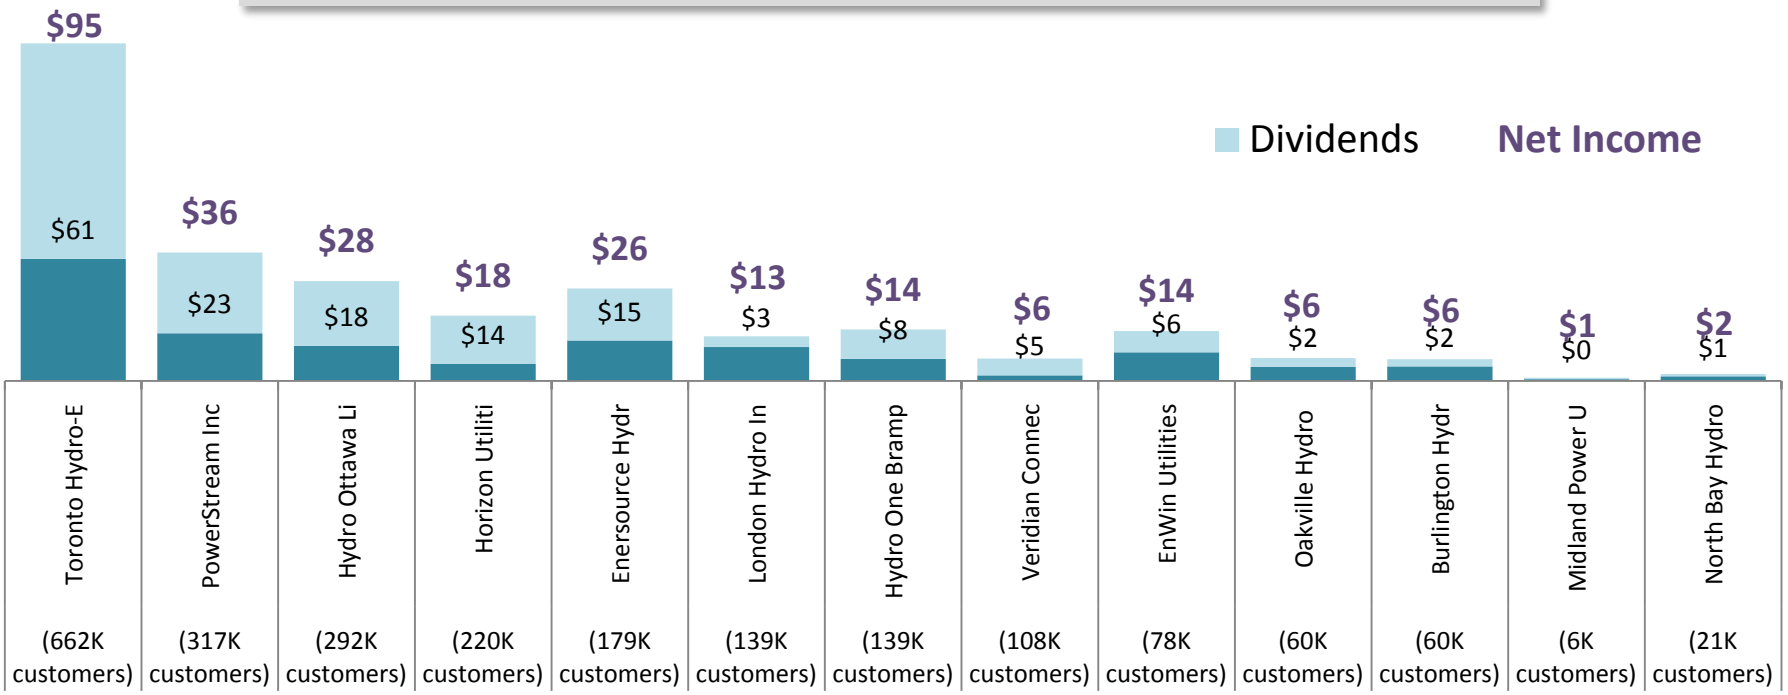
Note: Data From 2014 OEB Yearbook.

Commercially Sensitive & Confidential

2014 NET Income and Dividends across LDCs

Earnings and dividends are highly variable across LDCs.

- A benefit that is contingent on earnings and dividends will be equally variable. As such ratepayers will not see a guaranteed nor a uniform benefit across all LDC customers.



Note:

- The following LDCs were selected for analysis because dividend policies are clearly separated out for distribution. Hydro One was excluded because dividend policy includes payouts from Transmissions and Distribution.
- Net Income data taken from 2014 OEB Yearbook, and Dividend payouts taken from LDCs Annual reports.
- Number on Top = Net income and number on the bottom = Dividends paid out by LDCs ($ million)
- The bottom numbers represents the number of residential customers.

Commercially Sensitive & Confidential

Analysis: Sharing LDC dividends with Ratepayers

- The table illustrates the impact of ongoing monthly rebates to ratepayers for a sample of LDCs (small, medium, and large).
- As shown below, the reductions in the monthly bill are estimated to be less than 0.5% for the different scenarios for the sample of LDCs. However, the trade-off for shareholders (primarily municipalities) varies significantly ($80,000 to $6 Million), as does the impact to customers across all LDCs.
- The variability is a result of LDC size (e.g., ratebase) as well as operational performance.

Estimated Bill Impact based on 2014 LDC Dividends

LDC (# of residential customers)	2014 Dividend policy	Shareholder / Municipality	% of Dividends LDC returns to rate payers	Benefit to ratepayers ($)	Rate Payers Benefit ($ / month)[1]	Benefit as a % of monthly bill
Renfrew Hydro (4K)	No clear Dividend Policy	Town of Renfrew	5%	$0.13K	$0.00	0.00%
			10%	$0.26K	$0.01	0.00%
			15%	$0.39K	$0.01	0.01%
Oshawa Networks (50K)	~ 38% of Annual Net income (no clear policy)	City of Oshawa	5%	$0.08M	$0.14	0.10%
			10%	$0.17M	$0.28	0.20%
			15%	$0.25M	$0.42	0.29%
Hydro Ottawa (292K)	60% Annual Consolidated Net Income	City of Ottawa	5%	$0.73M	$0.21	0.14%
			10%	$1.47M	$0.42	0.28%
			15%	$2.20M	$0.63	0.41%
Horizon Utilities (220K)	60% Annual Consolidated Net Income	City of Hamilton and City of St. Catharines	5%	$0.55M	$0.21	0.14%
			10%	$1.10M	$0.42	0.27%
			15%	$1.65M	$0.63	0.41%
Toronto Hydro (660K)	50% of Prior year's Net Income	City of Toronto	5%	$1.27M	$0.16	0.10%
			10%	$2.55M	$0.32	0.20%
			15%	$3.82M	$0.48	0.30%

Shareholders (e.g., municipalities) will not receive this funding

Notes:
1. The analysis below is based on actual dividends paid by LDCs in 2014.
2. Bill impact model: Assume that LDCs pay back % of the Dividend back to all rate classes. This slide shows the impact to residential customers only. The proportion of Dividend returned to Residential customers is the same as the "Residential revenue ratio" (revenues from residential customers/total revenue; a ratio calculated from 2014 OEB Yearbook).
3. Used data from 2014 OEB Year book, 2014 financials for the LDC Dividend policy, and OEB Utility Bill Calculator to complete the analysis .
4. It is important to note that some LDCs may have negative or zero Net Income and will not be able pay dividends to shareholders or give benefits to ratepayers.

Commercially Sensitive & Confidential

Impact to Province as Shareholder

- The Province has an equity interest in Hydro One Brampton (100% ownership) and Hydro One Networks (~ 72% ownership).
- The proposal to return a portion of LDC earnings to electricity ratepayers will adversely impact the financials of Hydro One and Brampton
- In particular, this proposal is in conflict with the objective to maximize value of these assets under proposed divestment scenarios.
- The Province has committed to sell 60% of Hydro One to fund infrastructure. The proposal to return earnings to ratepayers will diminish investors confidence which could lead to
  - Reduced valuation of Hydro One;
  - Decrease future earnings from secondary offerings; and
  - Affect the amount of funds available for infrastructure investment
- Hydro One has spurred some of the consolidation efforts within the distribution sector in Ontario. The proposal will reduce the earnings available to Hydro One that could be used to fund continued acquisitions.

Commercially Sensitive & Confidential

LDC Savings: Considerations

- *Ratepayer impacts*: Given the variability of earnings across LDCs, this proposal would result in unequal rebates to customers of different distributors. For example, LDCs with zero or negative earnings for the year would not be able to provide any rebate to their customers.
- *Regulatory incentive*: If the rebate is proportionate to earnings, there may be a perverse incentive to not be as efficient, thereby potentially conflicting with incentives and regulatory framework developed by the OEB.
- *Reducing value of LDCs*: By requiring LDCs to give up their earnings, could lead to lower valuations of these companies and may directly impact consolidation efforts within the sector.
- *Impacts to municipalities*: Given the majority of LDCs are owned by municipalities, the rebate would likely reduce the cash available for dividends to municipal shareholders. This would result in less funds to finance infrastructure and other municipal priorities and could also lead to requests for higher provincial assistance and a subsequent fiscal impact.
- *Legal and implementation complexities*: Implementing this proposal will require further legal review.
    - Further the mechanism to implement may be complicated – for example, new regulatory variance accounts may be needed to return the portion of dividends back to distribution customers through future rate proceedings.

Commercially Sensitive & Confidential

Removing HST

Commercially Sensitive & Confidential

Removing HST

- The government could attempt to reduce electricity bills by the provincial portion of the HST. Ontario currently charges HST on electricity bills; when the province moved to the HST, it resulted in an increase of 8% to electricity bills.
    - The province entered into a tax agreement with the federal government when it harmonized the PST with the federal government's GST. There are provisions in the agreement for federally administered provincial HST rebates, however, the opportunity to further exempt HST for other provisions may have passed. ~~Further discussion with Ministry of Finance would be needed.~~
- The province could pursue changes to the HST and the tax credit programs – ~~, however,~~ the Ministry of Energy would need to work with the Ministry of Finance (MOF) and ~~as well as~~ the Federal government to consider any changes.
    - An alternative to a tax agreement with the Feds could be to implement a provincially administered HST rebate where a non-taxed rebate is administered to residential consumers on the provincial portion of the HST on their electricity bills ~~is administered~~.
    - Based on very preliminary estimates, a rebate for residential consumers could reduce provincial HST revenues by over $700 million.
        - The province ~~also currently~~ delivers two income-tested tax credits related to energy costs – Northern Ontario Energy Credit (NOEC) and Ontario Energy and Property Tax Credit (OEPTC). Together they provide about $450 million in energy cost relief per year. The province could consider using these tax credit programs to offset the lost HST revenues.

Commercially Sensitive & Confidential

Removing HST

HST Considerations

- There are a number of considerations in changing the existing tax regime.
- ENERGY would need to work with MOF to determine whether electricity bills could even be exempted from the HST. If not, the Province could provide a rebate to consumers through their electricity bills, although this option could result in other concerns.
  - An HST rebate only on electricity bills and not other energy bills may be viewed as inequitable by consumers.
  - Administration costs and burden on utilities, particularly under a provincially run rebate scenario.

Bill impact

HST: Bill impact in 2018 estimated to be a $12.22 per month reduction*

**Calculated using LTEP 2018 figure less DRC exemption plus OESP charge.*

Commercially Sensitive & Confidential

Cap and Trade

Commercially Sensitive & Confidential

Cap and Trade Proceeds

- In the 2016 Budget, Ontario committed to mitigate the impact of cap and trade on the average industrial and commercial consumer, and provide a modest benefit of up to $2 per month on average to residential consumers.

- The Ministry of the Environment and Climate Change (MOECC) is expected to report back to Treasury Board on its “Climate Change Action Plan” (CCAP) in May 2016, which may include a proposal on proceeds recycling to the electricity sector.

Considerations

- The Ministry of Energy is continuing to work with MOECC towards implementing proceeds recycling and to address the 2016 Budget commitment.

- The CCAP is also expected to include initiatives such as electrification and increased electric vehicle uptake. While the province is expected to have sufficient supply over the short to medium-term to meet changes in demand (including the potential for electrification), electrification over the long-term could require additional investment in the electricity system.

- The Ministry’s position is that incremental supply needs due to CCAP initiatives should be funded, either by auction proceeds or from the tax base, to mitigate the impact of climate change initiatives on electricity consumers.

Regulatory Efficiencies

Commercially Sensitive & Confidential

LDC Savings: Sector Efficiencies Underway

OEB Renewed Regulatory Framework for Electricity (RRFE)

- In October 2012, the OEB released its report, *Renewed Regulatory Framework for Electricity Distributors: A Performance-Based Approach* (RRFE). The framework represents a continuing evolution in the OEB's focus as regulator. It starts to move that focus from costs and cost recovery to focusing on long-term value for money. In its Report, the OEB indicated:
    - *The Board's renewed regulatory framework for electricity is designed to support the cost-effective planning and operation of the electricity distribution network – a network that is efficient, reliable, sustainable, and provides value for customers.*
    - *The renewed regulatory framework is a comprehensive performance-based approach to regulation that is based on the achievement of outcomes that ensure that Ontario's electricity system provides value for money for customers. The Board believes that emphasizing results rather than activities, will better respond to customer preferences, enhance distributor productivity and promote innovation.*

LDC Sector Consolidation & Restructuring

- Significant activity in LDC Consolidation is occurring:
    - Proposed merger of Enersource, Horizon, Powerstream and Hydro One Brampton;
    - Recent acquisition of Norfolk, Haldimand and Woodstock by Hydro One;
    - Acquisition of Brant County by Cambridge & North Dumfries; Amalgamation of Lakeland and Parry Sound;
    - 2015 Budget announcement reducing transfer tax from 33 to 22 per cent, exempting MEUs with less than 30,000 customers from the transfer tax, and exempting capital gains arising under the PILs Deemed Disposition Rules.
- Merger activity is expected to deliver efficiencies and economies of scale benefiting ratepayers.

Commercially Sensitive & Confidential

LDC Savings: OEB Efficiencies Investigation

- There may be advantages to using more general regulatory process rather than specific tools such as ROE reductions and or a dividend levy to achieve customer savings.
- The OEB, through existing authority to set and require LDC compliance with various codes and standards, is equipped to consider regulatory reforms that can further drive efficiency and consumer value in the sector. This can be done by investigating alternative approaches to financial/performance incentives, some of which are employed in other jurisdictions.
- Regulatory processes can also consider issues beyond simple bill impact to affect change in the *value* the consumer receives from that service (Ex: receiving improved reliability for the same cost).
- Regulatory processes may be more favourably perceived by all parties (LDCs, customers, other interested parties) even if certain parties disagree with the final result, as the regulatory process follows due process, is collaborative, and the final decision is a result of an independent adjudicative body (i.e., the OEB).
- The government could explore tools to clearly signal that it expects the OEB to move forward on enhancements to its existing processes. This could include asking the OEB for a “Section 35” report on options (as was done on Energy East and the OESP) or using the LTEP implementation plan pending the passage of Bill 135.

Commercially Sensitive & Confidential

LDC Savings: Enhanced Regulatory Process Examples

Productivity Enhancements

- There is potential for the OEB to augment the RRFE with “higher powered incentives” that pin rate adjustments to LDC productivity performance. Inferior performing LDCs would not receive full entitlement to rate increase.
  - LDCs that surpass minimum productivity requirements can retain a portion of ROE greater than “approved regulatory return” incenting management to implement productivity enhancing strategies, increasing service value for consumers.
  - ROE above certain maximum threshold can be shared with ratepayers through agreed upon “earnings sharing”.

Service Standards/Penalties

- The OEB does not currently levy financial penalties on LDCs for failing to meet service standards on criteria such as reliability. This is a practice employed by other electricity regulators including in the UK.
  - The OEB could require LDCs to provide pre-set rebates to consumers whose service is interrupted beyond an acceptable limit set by the OEB.
  - The OEB could also order a small percentage of their LDC ROE be exposed to potential adjustment (+/-) based on their performance on quality metrics across their service territory.
- See appendix for further details on these options.

Commercially Sensitive & Confidential

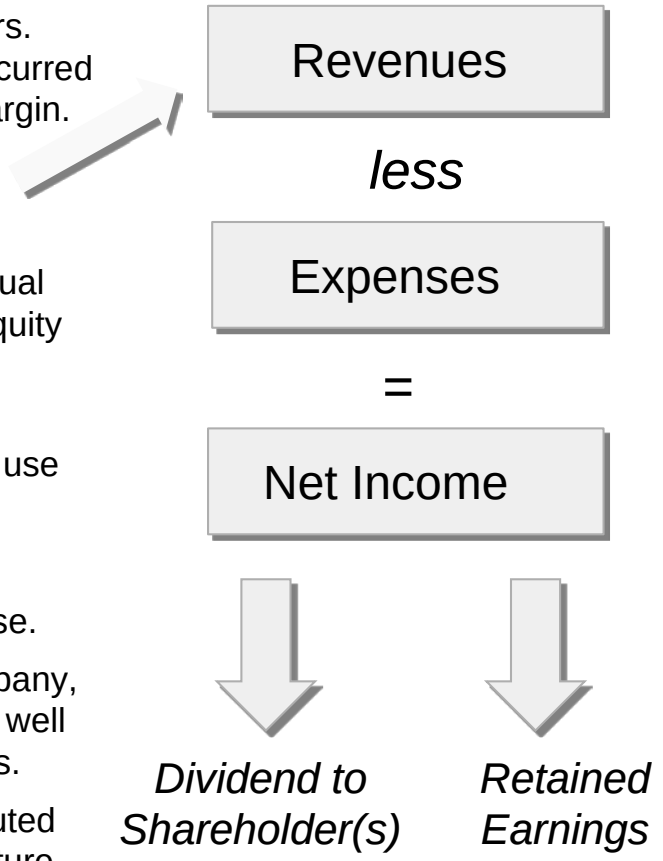
APPENDIX

Commercially Sensitive & Confidential

LDC financials

The OEB regulates the revenues received by LDCs from ratepayers. These revenues to collect from ratepayers reflect prudently incurred costs as determined by the OEB plus a risk-adjusted profit margin.

Total Approved Revenue = Approved Costs + Approved Return on Capital (debt+equity)



The approved return is calculated based on the ratebase of individual LDCs, and the regulated parameters, such as the return on equity and the proportion of equity that are updated every few years based on both macro conditions.

For a proposed rate filing, the OEB has two main levers that it can use to reduce rates for distributors, if appropriate:

- Disallow costs it deems imprudent
- Disallow or defer certain items in the distributor's ratebase.

- Financial performance, or the actual return earned by the company, is different from the regulated return as it is dependent on how well the company manages its costs and other exogenous variables.
- As illustrated on the right, net income earned are either distributed as dividends to shareholder, or retained by the company for future investment.

CONFIDENTIAL

Dividend Policies of Several LDCs

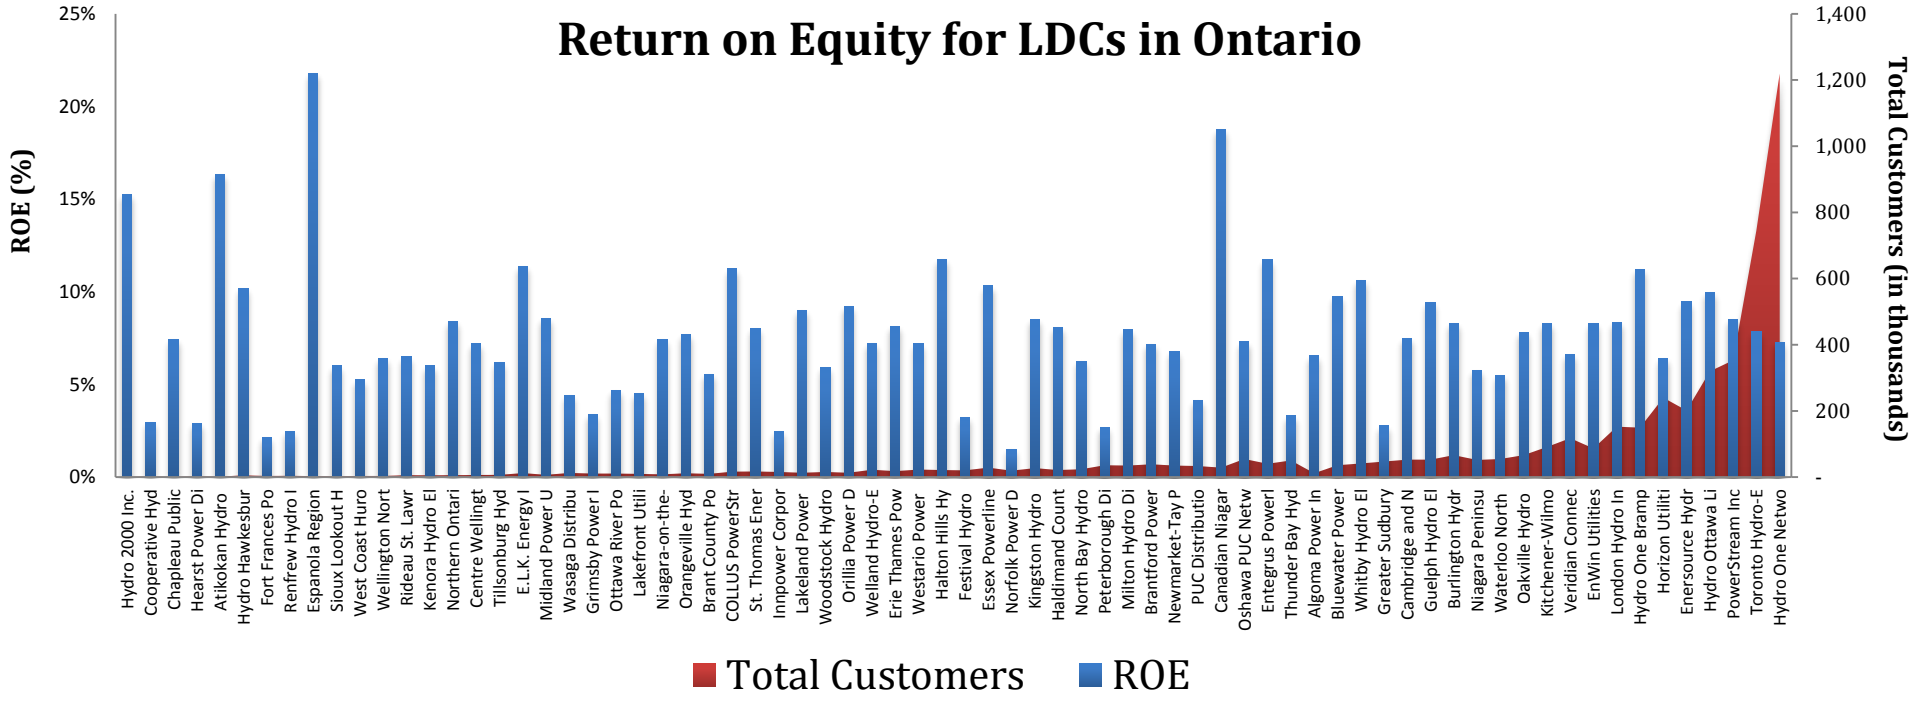
LDC	Customer Base (all customers)	Dividend Policy	2014 Dividend ($M)	Net Income ($M)	Dividend/Net Income	Shareholder Municipality/City
Toronto Hydro	744,252	Greater of $25.0 million or 50% of the Corporation's consolidated net income for the prior fiscal year	60.6	94.9	64%	City of Toronto
PowerStream Inc.	353,284	50% of Modified IFRS income	22.7	36.1	63%	City of Vaughan, City of Markham and City of Barrie
Hydro Ottawa	319,536	60% of its annual consolidated net income	18.2	28.1	65%	City of Ottawa
Horizon Utilities	240,076	60% of annual consolidated net earnings	13.5	18.4	73%	City of Hamilton and the City of St. Catharines
Enersource Hydro Mississauga Inc.	201,359	60% of prior year consolidated net income	14.6	26	56%	90% City of Mississauga
London Hydro Inc.	152,544	40% of the Company's prior year's net earnings	3.0	12.5	24%	City of London
Hydro One Brampton Networks Inc.	149,618	Discretion of Board of Directors	8.3	14.5	57%	Province of Ontario
Veridian Connections Inc.	117,494	$4.7 million from 2012 to 2016	4.7	8.9	53%	City of Pickering, Town of Ajax, Municipality of Clarington and City of Belleville
EnWin	86,662	Between 25% and 55% of Modified IFRS4 income	6.0	14	43%	City of Windsor
Oakville Hydro	66,530	No clear dividend policy.	2.45	6.4	38%	Town of Oakville
Burlington Hydro	66,366	N/A	2.0	6.1	33%	City of Burlington
Midland Power Utility	7,035	No clear dividend policy.	0.4	0.9	45%	Town of Midland
North Bay Hydro	23,975	No clear dividend policy.	0.7	2	36%	City of North Bay
Oshawa PUC Networks	54,731	No clear dividend policy.	1.7	4.5	38%	City of Oshawa
Renfrew Hydro Inc.	3,756	No clear dividend policy.	0.0047	0.09	5.30%	Town of Renfrew (8)

Commercially Sensitive & Confidential

Variability across LDCs

There is significant variability in profitability across different sized LDCs.

- Profitability is dependant on various factors (e.g., rural vs urban, coverage area, age of infrastructure etc.) and not just the number of customers.



Notes:
1. Analysis completed using 2014 OEB yearbook

Commercially Sensitive & Confidential

Ontario

Analysis: Sharing LDC dividends with Ratepayers (multi-year forecasts)

- This table illustrates similar impacts as the earlier table, except it includes projections for multiple years based on data available from rate applications, 15% return and forecasted residential bill projections from Energy Supply Policy Division.

LDC (# of residential customers)	Shareholder / Municipality	15% of Dividends Returned to rate payers	2016	2017	2018	2019	2020
		Proposed Residential Bills * 3	$162	$165	$173	$178	$182
Oshawa Networks (50K)	City of Oshawa	Total Dividends LDCs returns annually	$0.12M	$0.12M	$0.12M	$0.12M	$0.11M
		Benefit per customer per month	$0.19	$0.19	$0.18	$0.17	$0.16
		% Benefit to Customer / month	0.12%	0.11%	0.10%	0.10%	0.09%
Hydro Ottawa (292K)	City of Ottawa	Total Dividends LDCs returns annually	$1.32M	$1.26M	$1.23M	$1.19M	$1.15M
		Benefit per customer per month	$0.37	$0.35	$0.34	$0.32	$0.31
		% Benefit to Customer / month	0.23%	0.21%	0.19%	0.18%	0.17%
Horizon Utilities (220K)	City of Hamilton and City of St. Catharines	Total Dividends LDCs returns annually	$0.92M	$0.90M	$0.88M	$0.87M	$0.83M
		Benefit per customer per month	$0.34	$0.33	$0.32	$0.32	$0.30
		% Benefit to Customer / month	0.21%	0.20%	0.19%	0.18%	0.16%
Toronto Hydro (660K)	City of Toronto	Total Dividends LDCs returns annually	$4.00M	$4.38M	$4.72M	$5.01M	$5.31M
		Benefit per customer per month	$0.46	$0.47	$0.47	$0.46	$0.45
		% Benefit to Customer / month	0.29%	0.28%	0.27%	0.26%	0.25%

Notes:

1. Bill impact model: Assume that LDCs pay back % of the Dividend back to all rate classes. This slide shows the impact to residential customers only. The proportion of Dividend returned to Residential customers is the same as the "Residential revenue ratio" (revenues from residential customers/total revenue; a ratio calculated from 2014 OEB Yearbook).
2. Net Income taken from LDC's 2014 – 2016 Customer IR applications, Price Cap Index rates were used as growth rate when needed (taken from 2014 – 2015 PCI applications) and Dividend policies taken from LDC's 2014 Annual Report.
3. Potential bill impacts based on residential bill forecast from Energy Supply Policy Division (LTEP with DRC removal and OESP)
4. All numbers are shown in present value (OEB 2015 WACC used as discount rate).

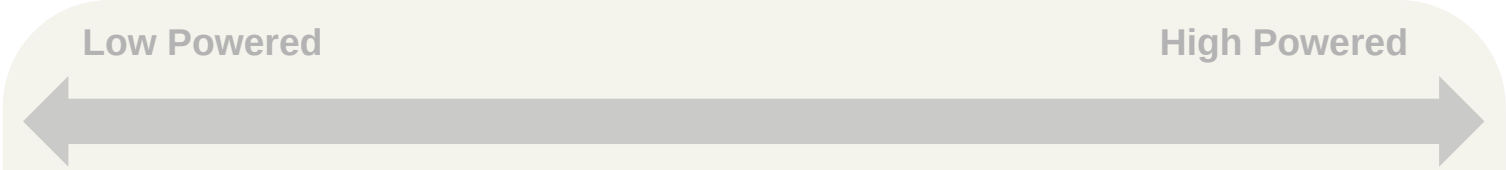
Commercially Sensitive & Confidential

Other LDC Options: Regulatory Tools for LDC Performance

"Low-Powered" versus "High-Powered" Incentives for Efficiency & Quality

- **Low-powered incentive scheme**: Approved realized costs or actual savings directly passed through, as in a cost-of-service application.
- **High-powered incentive scheme**: A higher fraction of costs are borne by owners (do not directly pass through actual costs). However, a greater portion of savings are retained by owners.

Incentive Continuum



Cost-of-Service — Incentive Regulation

COS	COS with cost benchmarking	COS with cost benchmarking / performance penalties-bonuses	IRM	IRM benchmarked to best practice / performance penalties-bonuses.

- Pure cost-plus pricing (100% cost pass-thru): lowest efficiency incentive;
- COS with prudency review; some cost containment but not cost minimizing.

- Price Cap / Price Freeze / Enhanced ROE opportunities – higher incentives for cost minimization / efficiency maximization

Note: Many high-powered incentive plans have mandate service quality requirements/penalties to counteract the incentive to degrade quality to enhance returns/minimize costs.

Commercially Sensitive & Confidential

LDC Savings: Regulatory Options for Investigation

1. ***Require real productivity improvements to be reflected in LDC rate adjustments***

- The OEB could consider implementing more demanding productivity requirements on LDCs, with those LDCs that fail to meet requirements not being permitted to recover lost ROE from ratepayers.
    - OEB currently has base productivity requirement of zero (0%). Highest "stretch factor" is 0.6%, lowest is zero (0%).
    - In the past, OEB required all LDCs to obtain 1.5% productivity increase (inclusive of 0.25% stretch factor) prior to any rate adjustment. Other international regulators have also required similar, or more onerous results.
    - Implementing a higher productivity factor would assume LDCs are capable of achieving cost reductions and rates would be adjusted accordingly. LDCs whose costs do not meet productivity expectations would use expected return to cover the excess.
- To further create a productivity incentive, LDC shareholders who successfully exceed the new productivity targets would be permitted to keep a portion of the growth in ROE.
    - See previous ROE / Productivity trade-off proposed by OEB Staff in 1999 (appendix slide: Graduated ROE).
- This type of proposal does not "mandate" ROE reductions. It allows LDCs to "earn" additional return. It does not allow underperforming LDCs to recapture lost returns from rate payers. Therefore, this does not violate "fair return standard".

Commercially Sensitive & Confidential

LDC Savings: Regulatory Options for Investigation

2. *Require real consequences for degraded service standards and reliability*

- The OEB could consider developing a framework for imposing financial penalties on LDCs, to be funneled back to consumers, for failures to meet pre-set performance standards on quality and service metrics.
    - OEB does not impose financial penalties on LDCs that do not meet reliability and service quality standards. When OEB first considered incentive regulation for electricity in 2000, the Board indicated that ***financial consequences*** should be considered after the first year. Staff are not aware of any additional policy work related to this since that statement was released.
- Other regulators have used incentives and penalties to promote service quality and reliability. Ofgem (the UK regulator of electricity distribution networks in England, Scotland and Wales) implements a set of standards and incentives as set out below:
    - **Guaranteed Standards** reflect service levels that must be met by every distribution company. If the distribution company fails to meet the level of service required, it must make a payment to the customer. For example supply must be restored within 18 hours, otherwise residential customers are paid £50, commercial customers paid £100, plus £25 for each further 12 hours.
    - **Quality of Service Incentives** involve establishing annual rewards and metrics for distribution companies based on their performance on service territory-wide metrics. For UK Dx companies, their revenue requirement can be adjusted +/- 1.2% for achievement on number of customers interrupted, and 1.8% for customer minutes lost.

Commercially Sensitive & Confidential

Graduated ROE

- Graduated approach to ROE and productivity requirement has been discussed by OEB before. A proposal by OEB Staff in 1999 for 1st Generation PBR (Incentive Regulation) was heard by the OEB. The ROE-Productivity trade-off proposal is summarized below:
  - The LDC selects a productivity commitment. The LDC is allowed to adjust rates based on Inflation *minus* selected productivity for duration of the plan. The LDC is allowed to earn up to ROE ceiling for duration of the plan. ROE is not guaranteed. Over earning on ROE is returned 100% to rate payers.
  - The proposal was developed with extensive consultation with parties including the LDCs (then MEUs).

Table 4-1
THE RELATION BETWEEN PF AND ROE CEILING

Selection	Productivity Factor (percent change per year)	ROE Ceiling (percent)
A	1.25	10
B	1.50	11
C	1.75	12
D	2.00	13
E	2.25	14
F	2.50	15

- This plan was developed based on similar approaches applied in telecom (FCC) and railways (ICC) as well as incentive research in the US and UK.
- The OEB ultimately did not accept the plan as filed. The OEB balanced the concern of implementing a "one-size fits all" approach versus "unnecessary complexity" and opted a single productivity factor and ROE as a first-term plan.

Ontario

MINISTRY OF
ENERGY

Proposed Initiatives to Transform Ontario's Electricity Sector – Update

Working Draft

December 2016

CONFIDENTIAL DRAFT

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% per cent rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new “green bank entity” over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the “Trillium Trust” to make investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties and expansion of natural gas to rural areas, etc.
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario’s electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to “opt into” a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

$/750kWh	2017	2018	2019	2020	2021	2022	Timing of Benefit
Recommended Initiatives							
1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate)	2.16	2.31	2.41	2.49	2.54	2.58	Immediate
2. Expand the OESP (i.e., 50% increase)	-	-	-	-	-	-	n/a
3. Fund Conservation Programs Through The Tax-Base	3.40	3.68	2.98	3.09	2.58	2.58	Immediate
4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc)	TBD	TBD	TBD	TBD	TBD	TBD	TBD
5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency*							
a. IESO – Market Renewal	-	-	-	-	1.00	1.03	Long-Term
b. OEB – LDC efficiencies	TBD	TBD	TBD	TBD	TBD	TBD	Medium-Term
c. OPG – Operational efficiencies	TBD	TBD	TBD	TBD	TBD	TBD	Medium-Term
6. Give Residential Consumers More Rate Choices	-	-	-	-	-	-	n/a
7. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)**	-	-	-	-	-	-	n/a
8. Cancel / Adjust FIT	-	-	0.13	0.13	0.14	0.14	Long-Term
9. Dedicate Departure Tax	TBD	TBD	TBD	TBD	TBD	TBD	Immediate
Considered but not Recommended							
1. Eliminate the Industrial Conservation Initiative (ICI)	4.40	4.24	4.10	4.24	3.73	3.58	Immediate
2. Cancel LRP I	-	-	TBD	TBD	TBD	TBD	Medium-Term

Note: The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

Source: Ministry of Finance, Energy

Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

MINISTRY OF
ENERGY

Proposed Initiatives to Transform Ontario's Electricity Sector – Update

Working Draft

December 2016

CONFIDENTIAL DRAFT

Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% per cent rebate ($11/month savings), updating RRRP ($45/month savings, combined with the 8% rebate), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs [despite the system benefit rationale] by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" beyond the Moving Ontario Forward initiative to make certain investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties ~~and expansion of natural gas to rural areas~~, etc. (note that expanding access to natural gas is already included under Moving Ontario Forward.)
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

Source: Ministry of Finance, Energy

Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

Q&A Response

Q. What is the revised cost forecast for the 8% rebate as result of the measures announced in Ontario's Fair Hydro Plan?

Key measures announced in Ontario's Fair Hydro Plan (OFHP) are expected to reduce the cost of the 8% rebate for the Province. The cost to the Province is expected to decrease as the total cost of electricity paid by eligible customers, upon which the rebate is based, will be reduced.

ENERGY has updated the cost forecast for the 8% rebate based upon the following:

- Independent Electricity System Operator updated its Ontario Planning Outlook (OPO) with respect to a typical bill for a residential consumer as outlined in the March 1, 2017 Cabinet Submission. This revised OPO price outlook is inclusive of all the recently announced measures including cancellation of LRP II and EFW and expansion of ICI.

- ENERGY's estimates of the reduction to a typical bill for a residential consumer as a result of the Global Adjustment (GA) refinancing and funding electricity support programs through provincial revenues as announced in the OFHP.

- ENERGY's estimates of the reduction in costs for consumers that benefit from electricity support programs as announced in the OFHP (i.e., expanded Rural or Remote Rate Protection, enhanced Ontario Electricity Support Program and the First Nations Delivery Rebate). For Fiscal Year 2017-2018 this includes a 50% adjustment to the cost given that implementation of the expanded programs is expected to be deferred to September 2017.

	2017-2018	**2018-2019**	**2019-2020**
ENERGY Estimate **(August 26, 2016)** ($ million)	1,006	1,004	944
ENERGY's Revised Cost Estimate **(September 8, 2016)** ($ million)	1,119	1,086	1,171
ENERGY Revised Estimate **(March 15, 2017)** ($ million)	939	882	882
Change: **March 15, 2017** vs **August 26, 2016**	-7%	-12%	-7%
Change: **March 15, 2017** vs **September 8, 2016**	-16%	-19%	-25%

NOTE: The above estimates are subject to variances as result of uncertainties in demand, natural gas prices and other factors. These uncertainties also impact the variance account for the Regulated Price Plan (RPP).

Estimate Assumptions:

	2017	2018	2019	2020
Annual Average Electricity Price, Pre-tax, after Mitigation Programs ($ per month)	127*	120	122	125

***Note:** Value adjusted from $117 to account for deferral of implementation to May 2017 (GA refinancing) and July 2017 (tax-basing electricity support programs).

Price Mitigation Initiatives
September 2016
Key Messages/Questions and Answers
Last updated by: Comms, SNAP, ESP MO

KEY MESSAGES

- **Ontario is taking action to reduce electricity bills for families, farms, and businesses.**

- **We're doing this because we know that families need help with the cost of everyday living. Despite consistent economic growth since the global recession, many families aren't feeling the impact of the recovery in their everyday lives.**

- **We also recognize that rebuilding and cleaning up Ontario's electricity system has come at a cost. Over the last decade we've rebuilt our transmission and distribution grid, we've invested in clean generation, and we've closed the last dirty coal-fired power plant. But we need to take the next step in ensuring that clean, reliable system is affordable.**

- **Recognizing this, we are introducing new measures that would take effect January 1, 2017, including:**

    - **Rebating provincial portion of the HST to reduce bills by 8% ($11)**

    - **Cutting delivery charges for the most rural customers by 20% ($45)**

    - **Empowering industrial businesses to reduce bills by one third through the Industrial Conservation Initiative**

- **Taken together, this plan represents the single largest action to reduce costs for electricity consumers in the province's history. It will provide needed assistance to consumers of all sizes, and it targets support to those that need it most.**

- **These actions build on our government's commitment to provide affordable access to energy, including providing support for low-income families, expanding natural gas to more communities, and grid-connecting remote First Nations communities.**

QUESTIONS AND ANSWERS

General

Q. Why is the government introducing these price mitigation measures? Is the government finally acknowledging that electricity prices are too high?

We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

We know that these changes have come at a cost to Ontario's residential and business consumers.

Ontario already has several programs in place to help all consumers manage their electricity costs, but we understand that some consumers continue to face challenges.

Recognizing this, we are proposing new measures, some of which would take effect January 1, 2017.

These measures will give Ontario's residential and business consumers more ways to manage their electricity costs while we continue to make the critical investments needed to maintain our energy system.

Q. Even with these price mitigation efforts, Ontarians will still likely struggle to pay their electricity costs. What are you going to do to stop further increases in the future?

We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

The good news is that Ontario has already done the heavy lifting in terms of rebuilding aging transmission infrastructure and transitioning off coal-fired generation. Because of these investments, Ontarians aren't forecast to see the kind of energy cost increases coal-dependent provinces like Alberta and Saskatchewan are.

Ontario's 2013 Long-Term Energy Plan (LTEP) forecasted a typical monthly residential bill of $167 in 2016. On a 750 kWh per month basis, actual and forecast monthly bills are $157 and $159 respectively.

Over the forecast period, the average annual increase in consumers' costs is generally in-line with expected inflation, which averaged about 1.7% over the last ten years (2006-2015).

Q. If the government is looking to reduce electricity system costs, why not simply cancel expensive renewable energy projects?

Ontario is committed to investing in a clean, modern and reliable electricity system that reduces greenhouse gas (GHG) emissions and provides cleaner air for this and future generations of Ontarians.

Ontario's 2013 LTEP includes targets for renewable energy:

- 10,700 megawatts (MW) for wind, solar, and bioenergy to be online by 2021; and
- 9,300 MW for hydroelectricity to be online by 2025.

We set those targets to fulfill our commitment to replace coal-fired generation with cleaner sources of energy, which not only benefits our environment but also the health of Ontarians.

The diversity of the current supply mix also insulates Ontario against sudden changes in cost or availability of any one source, and is one of the greatest strengths of Ontario's electricity system.

Each of the supply mix elements, including hydroelectric, nuclear, natural gas, non-hydro renewables, conservation and clean imports, plays a unique role in delivering a reliable and cost-effective source of energy to Ontarians.

Q. Was there any consultation with the public or businesses when developing these price mitigation measures?

We know Ontario homeowners and businesses have expressed concern about the cost of electricity and the impact these costs can have on their budgets.

We understand it can be challenging and we want Ontarians to know that we have been listening and are taking action.

This year, the Ministry of Energy is also beginning to develop its next Long-Term Energy Plan (LTEP).

Developing the LTEP is a highly collaborative process. The Ministry works closely with its agencies and stakeholders during LTEP consultations and development.

LTEP consultations are expected to take place in fall 2016 and we encourage all Ontarians to take part.

Q. When will these mitigation measures take effect?

We are introducing legislation to support the proposed 8% rebate on September 15, 2016 (TBC). If passed, residential consumers, small businesses and farms, will start receiving the rebate on January 1, 2017.

We will be moving as quickly and responsibly as we can to implement the rest of the measures.

Under the Industrial Conservation Initiative, Class A consumers pay Global Adjustment (GA) based on a percentage of their contribution to the top five Ontario peaks over a 12-month base period. New participants who opt-into Industrial Conservation Initiative (ICI) would see the change on their bills in 2018.

Q. Will Local Distribution Companies (LDCs) be ready to implement the bill changes? What happens if they are delayed? Will consumers be compensated retroactively?

We will work with the Ontario Energy Board and Local Distribution Companies (LDCs) to ensure the necessary adjustments are made to LDC billing systems.

LDCs already have experience with the implementation of billing changes like those associated with the OCEB and the Ontario Electricity Support Program (OESP).

If LDCs cannot implement the necessary changes to their billing systems by January 1, 2017, it is expected that consumers would receive their rebates through catch-up payments.

8% rebate for residential consumers, small businesses and farms:

Q. How will customers receive this rebate? Is it permanent? Are there any requirements to be eligible? Who will be receiving this rebate?

The proposed rebate will be available to all consumers eligible for the Regulated Price Plan (RPP) – this includes aboutfive million residential consumers, small businesses and farms.

The proposed rebate will provide 8% off total electricity costs before taxes, effectively offsetting the provincial portion of the HST.

Consumers won't have to do anything to receive the rebate.

The rebate will automatically be added to every eligible consumer's bill as of January 1, 2017.

Q. How much can an average customer expect to save off their electricity bill?

The proposed rebate will provide 8% off total electricity costs before taxes – effectively offsetting the provincial portion of the HST.

A typical urban residential customer that consumes 750 kWh per month will see an annual benefit of approximately $132 or a monthly benefit of approximately $11, before tax.

A typical rural customer, eligible for the increased RRRP support, that consumes 1000 kWh per month will see an annual benefit of approximately $540 or a monthly benefit of approximately $45, before tax.

A small farm or small business will see an annual benefit of 8% before tax.

If pressed:

Taking into account all of the new measures we are introducing, we expect eligible consumers to see a 6% net reduction in their monthly bills after the impact of tax and the costs of the new programs.

Q. Will any other programs be affected by this rebate? For example, will recipients of the Ontario Electricity Support Program also receive the rebate?

The proposed rebate would apply to all RPP-eligible consumers regardless of income, status or location.

The rebate will work with other existing programs, such as the Ontario Electricity Support Program (OESP).

Q. Are consumers really receiving an 8% rebate when taking into account the costs associated with the other price mitigation measures you're announcing today (i.e. RRRP and ICI)?

The proposed rebate would provide 8% off total electricity costs before taxes, effectively offsetting the provincial portion of the HST.

If pressed:

Taking into account all of the new measures we are introducing, we expect eligible consumers to see a 6% net reduction in their monthly bills after the impact of tax and the costs of the new programs.

Q. Doesn't the rebate reward those who use more electricity – how does this encourage conservation?

We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

We know that these changes have come at a cost to Ontario's residential and business consumers.

Recognizing this, we are proposing new measures that would take effect January 1, 2017.

As we plan for Ontario's energy needs for the next 20 years, conservation will be the first resource considered, wherever cost-effective.

It is the cleanest and most cost-effective energy resource, offers consumers a way to reduce their energy bills and reduces the need to build new generation, transmission and distribution infrastructure.

We encourage all Ontarians to participate in conservation programs offered through their Local Distribution Company (LDC) and the Independent Electricity System Operator (IESO).

Isn't this just another version of the Ontario Clean Energy Benefit (OCEB) – except it's 8% instead of 10%? Why didn't you just keep the OCEB?

The Ontario Clean Energy Benefit (OCEB) was a five year temporary program that ended, as planned, on December 31, 2015.

The OCEB was introduced to help families, farms and small businesses, manage their costs during our transition from coal-fired electricity generation towards a clean, modern and more reliable electricity system.

The good news is that Ontario has already done the heavy lifting in terms of rebuilding aging transmission infrastructure and transitioning off coal-fired generation. Because of these investments, Ontarians aren't forecast to see the kind of energy cost increases coal-dependent provinces like Alberta and Saskatchewan are.

We understand the price of electricity can still be a particular challenge for those that pay a higher share of their income towards their bill – such as low-income families, seniors on a fixed income, and homeowners that heat with electricity.

Recognizing this, we are introducing news measures that would take effect January 1, 2017.

These initiatives will give Ontario's residential consumers, small businesses and farms, more ways to manage their electricity costs while we continue to make the critical investments needed to maintain our energy system.

Expansion of the Industrial Conservation Initiative (ICI):

Q. Why are you expanding the Industrial Conservation Initiative? How will the expansion of ICI help businesses with their electricity costs?

The Industrial Conservation Initiative (ICI) allows large electricity consumers to reduce their electricity costs by reducing their demand during peak hours. Reducing consumption during peak hours benefits companies financially and benefits the electricity system by deferring the need for new peaking generation.
ICI is currently available to electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors.

To give more businesses the incentive to participate in the ICI, we will be taking measures to lower the threshold to 1 MW and will be removing sector restrictions so that more consumers can benefit.

Newly eligible consumers will be able to opt-in to the ICI program at their discretion.

Q. How much can ICI participants expect to save in terms of electricity costs? When will they start to see the benefit financially?

ICI participants save approximately one-third on their electricity bills.

Companies that opt-in to ICI would see the impact in 2018 due to the time required to implement the expansion and the need to set a one-year baseline.

Q. How many companies will be eligible for the ICI once the expansion happens?

Currently there are about 300 consumers in the ICI program.

Newly eligible consumers would have to decide whether they wish to opt-in to ICI program.

We wouldn’t want to speculate on the number of companies that will choose to participate in the program.

Q. What about companies that can’t shift their operations to off-peak hours? Will they be penalized financially by having to pay higher rates?

We recognize that electricity costs are a major factor for businesses participating in Ontario’s economy. That’s why Ontario has programs in place to help industrial consumers address the cost of their electricity.

Ontario's hybrid electricity market, combining regulated, contract and competitive market pricing, provides long-term price stability for industrial and smaller customers.

In addition to the ICI, there are many existing programs and incentives available to support industrial consumers.

For example:

- Participants in the Northern Industrial Electricity Rate Program (NIERP) receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 25% through the program. In 2015, the Ontario government announced the commitment to an ongoing NIERP beyond March 2016.

- The Industrial Electricity Incentive (IEI) offers reduced electricity rates for companies starting or expanding operations in Ontario. To date, IESO has awarded 22 contracts to electricity-intensive companies across the province through the program.

- The Industrial Accelerator Program (IAP) provides financial incentives to eligible transmission-connected companies to fast track capital investment in major energy conservation projects.

- The IESO holds annual demand response auctions, which provide availability and utilization payments to successful participants that commit to reducing their electricity consumption when called upon to do so.

- The IESO's saveONenergy for Business conservation programs for commercial and industrial consumers offers financial incentives to distribution-connected small businesses, commercial, institutional and industrial consumers, to install energy-efficient equipment and improve the energy efficiency of their buildings.

As we move forward we will continue to look at all options to strike the balance between reliability and affordability, while continuing our work on modernizing our electricity system.

Q. If new ICI participants will be getting a break on their bills, where will the money come from? How will costs get shifted?

An ICI participant's share of peak demand is used to calculate some electricity charges. The remainder of these charges not allocated to ICI participants would be shared across remaining consumers.

Over the long-term, system benefits from ICI include reducing electricity use during peak periods and reducing the need for new peaking generation.

Impacts will depend on a number of factors, including how many eligible companies decide to opt-in and their ability to reduce their electricity demand during peak hours.

Greenhouse Gas Recycling Account proceeds for Commercial and Industrial Ratepayers

Q. How will GGRA recycling work to help reduce costs for commercial and industrial customers?

As outlined in the 2016 Budget and the Climate Change Action Plan (CCAP), the government intends to recycle a portion of the cap and trade auction proceeds to offset the impact of cap and trade on industrial and commercial electricity consumers to keep rates affordable.

Q. Why is the government using GGRA funds to help reduce the electricity costs of commercial and industrial companies? Aren't GGRA funds supposed to go to programs/initiatives that reduce greenhouse gas emissions?

As outlined in the 2016 Budget and the Climate Change Action Plan (CCAP), the government intends to recycle a portion of the cap and trade auction proceeds to offset the impact of cap and trade on industrial and commercial electricity consumers to keep rates affordable.

Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support the CCAP's goals of electrification.

Rural or Remote Rate Protection (RRRP) Update:

Q. What is Rural or Remote Rate Protection (RRRP)? How is RPPP being updated? What kind of relief will it provide to ratepayers that currently receive it?

The Rural or Remote Rate Protection (RRRP) is a program that provides a rate subsidy to rural and remote residential customers who are faced with higher distribution costs relative to urban areas.

Funding to support these rural customers has not been changed since 2003, which has resulted in diminishing relief for customers over the years.

That's why are going to increase the RRRP subsidy for eligible consumers by updating the RRRP

This update would result in additional support for eligible customers.

The typical eligible consumer (1000 kWh/month) will see their RRRP subsidy increase from $[31.50] per month to $[60.50] per month.

Q. If the government is putting more money towards RRRP, where are those extra funds coming from? Ratepayers in the rest of the province?

The RRRP is funded by Ontario ratepayers.

As a result of this update, residential consumers will see an average cost increase of approximately $0.60 per month.

This cost increase is more than offset thanks to the 8% rebate they will be receiving starting in January 1, 2017.

Q. The Minister of Energy recently requested asked the Ontario Energy Board to look into rate relief for First Nations. Will the OEB's report take the RRRP update into account?

Our government recognizes that the price of electricity can be a particular challenge for those that pay a higher share of their income towards the bill - particularly residents in rural and remote communities and on-reserve First Nation customers.

We have heard concerns about high electricity costs from First Nation leaders across Ontario and understand on-reserve First Nation customers often face unique challenges that lead to higher electricity consumption and higher costs that impact electricity affordability.

Given these unique challenges, the Minister of Energy committed to look at options for addressing First Nation electricity cost. That's why under s.35 of the Ontario Energy Board Act, 1998 the Minister of Energy requested that the Ontario Energy Board (OEB) investigate appropriate rate assistance options for on-reserve First Nation electricity consumers.

The OEB is an independent regulator with a mandate to protect Ontario consumers with respect to electricity prices and ensure the financial viability of electricity distributors.

We wouldn't want to speculate on what the OEB will be recommending in its report.

The OEB has been asked to report back to the Minister on rate options, cost and funding mechanisms and program development issues by January 1, 2017.

Q. Why are urban customers subsidizing rural consumers? Isn't this just a tax on some to provide relief for others? How does this rate relief benefit the electricity system?

The RRRP has been in place since 2001 and replaces a similar program that was in place prior to 1998.

Our energy system is being transformed and we are making needed investments to modernize the system. We chose to replace coal-fired generation with cleaner sources of energy, which will not only benefit our environment but also the health of Ontarians.

We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

We know that these changes have come at a cost to Ontario's residential and business consumers. Recognizing this, we are proposing news measures that would take effect January 1, 2017.

****

Additional QAs provided by the Ministry of Finance

Q. How would the Ontario Rebate for Electricity Consumers impact Ontario's plans for a balanced budget?

The Ontario Rebate for Electricity Consumers would help make everyday life easier for Ontario families, small businesses and farms with electricity costs by providing a rebate that is equal to the eight per cent provincial portion of HST. This eight per cent rebate would appear directly on the consumer's electricity bill.

The government remains committed to balancing the budget by 2017-18 while continuing to invest in the economy, our people and a healthy, clean and prosperous low-carbon future. These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth.

Q. Do other provinces provide harmonized sales tax (HST) rebates related to energy?

Currently, there are no federally-administered point-of-sale rebates for electricity in any of the other provinces participating in the HST.

Nova Scotia is the only province with a provincially administered home energy rebate program that is equal to the provincial portion of the HST, and applies to all sources of residential use energy, including electricity.

Newfoundland and Labrador had a “Residential Energy Rebate” that was eliminated, effective July 1, 2015. The rebate, which came into effect October 11, 2011, was a provincially administered energy rebate equal to the provincial portion of the HST on energy used for residential purposes, including electricity.

Q. Would the rebate affect HST paid by consumers?

No. The HST on electricity costs remains at 13 per cent.

Q. What happens to input tax credits claimed by businesses?

Most businesses engaged in commercial activities can claim input tax credits to recover the HST they pay to operate their business.

Following the introduction of the eight per cent rebate, businesses would continue to be able to claim the credits as usual.

With this rebate, businesses across Ontario would have even more opportunity to be competitive and manage their energy costs.

Q. How is Ontario helping to lower electricity costs for residential consumers?

Ontario has a number of programs in place to help low-to-moderate income individuals and families with energy costs, including the Ontario Energy and Property Tax Credit, the Ontario Electricity Support Program, the Ontario Sale Tax Credit.

The Ontario Rebate for Electricity Consumers would be another program that would help Ontario families, small businesses and farms with electricity costs in addition to the above mentioned programs, if consumers were eligible.

Q. Will the federal government be rebating its portion of the HST?

The federal government has not shared any plans to mitigate electricity costs for Canadians.

The Province continues to work with the federal government when there is an opportunity to partner or consult as it relates to regulatory and emerging issues.

Ontario remains committed to making everyday life easier for people across the province by lowering costs and enhancing convenience and choice.

Price Mitigation Initiatives
September 2016
Key Messages/Questions and Answers
Last updated by: Comms, SNAP, ESP MO

KEY MESSAGES

- **Ontario is taking action to reduce electricity bills for families, farms, and businesses.**

- **We're doing this because we know that families need help with the cost of everyday living. Despite consistent economic growth since the global recession, many families aren't feeling the impact of the recovery in their everyday lives.**

- **We also recognize that rebuilding and cleaning up Ontario's electricity system has come at a cost. Over the last decade we've rebuilt our transmission and distribution grid, we've invested in clean generation, and we've closed the last dirty coal-fired power plant. But we need to take the next step in ensuring that clean, reliable system is affordable.**

- **Recognizing this, we are introducing new measures that would take effect January 1, 2017, including:**

    - **Rebating provincial portion of the HST to reduce bills by 8% ($11)**

    - **Cutting delivery charges for the most rural customers by 20% ($45)**

    - **Empowering industrial businesses to reduce bills by one third through the Industrial Conservation Initiative**

- **Taken together, this plan represents the single largest action to reduce costs for electricity consumers in the province's history. It will provide needed assistance to consumers of all sizes, and it targets support to those that need it most.**

- **These actions build on our government's commitment to provide affordable access to energy, including providing support for low-income families, expanding natural gas to more communities, and grid-connecting remote First Nations communities.**

QUESTIONS AND ANSWERS

General

Q. Why is the government introducing these price mitigation measures? Is the government finally acknowledging that electricity prices are too high?

We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

We know that these changes have come at a cost to Ontario's residential and business consumers.

Ontario already has several programs in place to help all consumers manage their electricity costs, but we understand that some consumers continue to face challenges.

Recognizing this, we are proposing new measures, some of which would take effect January 1, 2017.

These measures will give Ontario's residential and business consumers more ways to manage their electricity costs while we continue to make the critical investments needed to maintain our energy system.

Q. Even with these price mitigation efforts, Ontarians will still likely struggle to pay their electricity costs. What are you going to do to stop further increases in the future?

We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

The good news is that Ontario has already done the heavy lifting in terms of rebuilding aging transmission infrastructure and transitioning off coal-fired generation. Because of these investments, Ontarians aren't forecast to see the kind of energy cost increases coal-dependent provinces like Alberta and Saskatchewan are.

Ontario's 2013 Long-Term Energy Plan (LTEP) forecasted a typical monthly residential bill of $167 in 2016. On a 750 kWh per month basis, actual and forecast monthly bills are $157 and $159 respectively.

Over the forecast period, the average annual increase in consumers' costs is generally in-line with expected inflation, which averaged about 1.7% over the last ten years (2006-2015).

Q. If the government is looking to reduce electricity system costs, why not simply cancel expensive renewable energy projects?

Ontario is committed to investing in a clean, modern and reliable electricity system that reduces greenhouse gas (GHG) emissions and provides cleaner air for this and future generations of Ontarians.

Ontario's 2013 LTEP includes targets for renewable energy:

- 10,700 megawatts (MW) for wind, solar, and bioenergy to be online by 2021; and
- 9,300 MW for hydroelectricity to be online by 2025.

We set those targets to fulfill our commitment to replace coal-fired generation with cleaner sources of energy, which not only benefits our environment but also the health of Ontarians.

The diversity of the current supply mix also insulates Ontario against sudden changes in cost or availability of any one source, and is one of the greatest strengths of Ontario's electricity system.

Each of the supply mix elements, including hydroelectric, nuclear, natural gas, non-hydro renewables, conservation and clean imports, plays a unique role in delivering a reliable and cost-effective source of energy to Ontarians.

Q. Was there any consultation with the public or businesses when developing these price mitigation measures?

We know Ontario homeowners and businesses have expressed concern about the cost of electricity and the impact these costs can have on their budgets.

We understand it can be challenging and we want Ontarians to know that we have been listening and are taking action.

This year, the Ministry of Energy is also beginning to develop its next Long-Term Energy Plan (LTEP).

Developing the LTEP is a highly collaborative process. The Ministry works closely with its agencies and stakeholders during LTEP consultations and development.

LTEP consultations are expected to take place in fall 2016 and we encourage all Ontarians to take part.

Q. When will these mitigation measures take effect?

We are introducing legislation to support the proposed 8% rebate on September 15, 2016 (TBC). If passed, residential consumers, small businesses and farms, will start receiving the rebate on January 1, 2017.

We will be moving as quickly and responsibly as we can to implement the rest of the measures.

Under the Industrial Conservation Initiative, Class A consumers pay Global Adjustment (GA) based on a percentage of their contribution to the top five Ontario peaks over a 12-month base period. New participants who opt-into Industrial Conservation Initiative (ICI) would see the change on their bills in 2018.

Q. Will Local Distribution Companies (LDCs) be ready to implement the bill changes? What happens if they are delayed? Will consumers be compensated retroactively?

We will work with the Ontario Energy Board and Local Distribution Companies (LDCs) to ensure the necessary adjustments are made to LDC billing systems.

LDCs already have experience with the implementation of billing changes like those associated with the OCEB and the Ontario Electricity Support Program (OESP).

If LDCs cannot implement the necessary changes to their billing systems by January 1, 2017, it is expected that consumers would receive their rebates through catch-up payments.

8% rebate for residential consumers, small businesses and farms:

Q. How will customers receive this rebate? Is it permanent? Are there any requirements to be eligible? Who will be receiving this rebate?

The proposed rebate will be available to all consumers eligible for the Regulated Price Plan (RPP) – this includes aboutfive million residential consumers, small businesses and farms.

The proposed rebate will provide 8% off total electricity costs before taxes, effectively offsetting the provincial portion of the HST.

Consumers won't have to do anything to receive the rebate.

The rebate will automatically be added to every eligible consumer's bill as of January 1, 2017.

Q. How much can an average customer expect to save off their electricity bill?

The proposed rebate will provide 8% off total electricity costs before taxes – effectively offsetting the provincial portion of the HST.

A typical urban residential customer that consumes 750 kWh per month will see an annual benefit of approximately $132 or a monthly benefit of approximately $11, before tax.

A typical rural customer, eligible for the increased RRRP support, that consumes 1000 kWh per month will see an annual benefit of approximately $540 or a monthly benefit of approximately $45, before tax.

A small farm or small business will see an annual benefit of 8% before tax.

If pressed:

Taking into account all of the new measures we are introducing, we expect eligible consumers to see a 6% net reduction in their monthly bills after the impact of tax and the costs of the new programs.

Q. Will any other programs be affected by this rebate? For example, will recipients of the Ontario Electricity Support Program also receive the rebate?

The proposed rebate would apply to all RPP-eligible consumers regardless of income, status or location.

The rebate will work with other existing programs, such as the Ontario Electricity Support Program (OESP).

Q. Are consumers really receiving an 8% rebate when taking into account the costs associated with the other price mitigation measures you're announcing today (i.e. RRRP and ICI)?

The proposed rebate would provide 8% off total electricity costs before taxes, effectively offsetting the provincial portion of the HST.

If pressed:

Taking into account all of the new measures we are introducing, we expect eligible consumers to see a 6% net reduction in their monthly bills after the impact of tax and the costs of the new programs.

Q. Doesn't the rebate reward those who use more electricity – how does this encourage conservation?

We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

We know that these changes have come at a cost to Ontario's residential and business consumers.

Recognizing this, we are proposing new measures that would take effect January 1, 2017.

As we plan for Ontario's energy needs for the next 20 years, conservation will be the first resource considered, wherever cost-effective.

It is the cleanest and most cost-effective energy resource, offers consumers a way to reduce their energy bills and reduces the need to build new generation, transmission and distribution infrastructure.

We encourage all Ontarians to participate in conservation programs offered through their Local Distribution Company (LDC) and the Independent Electricity System Operator (IESO).

Isn't this just another version of the Ontario Clean Energy Benefit (OCEB) – except it's 8% instead of 10%? Why didn't you just keep the OCEB?

The Ontario Clean Energy Benefit (OCEB) was a five year temporary program that ended, as planned, on December 31, 2015.

The OCEB was introduced to help families, farms and small businesses, manage their costs during our transition from coal-fired electricity generation towards a clean, modern and more reliable electricity system.

The good news is that Ontario has already done the heavy lifting in terms of rebuilding aging transmission infrastructure and transitioning off coal-fired generation. Because of these investments, Ontarians aren't forecast to see the kind of energy cost increases coal-dependent provinces like Alberta and Saskatchewan are.

We understand the price of electricity can still be a particular challenge for those that pay a higher share of their income towards their bill – such as low-income families, seniors on a fixed income, and homeowners that heat with electricity.

Recognizing this, we are introducing news measures that would take effect January 1, 2017.

These initiatives will give Ontario's residential consumers, small businesses and farms, more ways to manage their electricity costs while we continue to make the critical investments needed to maintain our energy system.

Expansion of the Industrial Conservation Initiative (ICI):

Q. Why are you expanding the Industrial Conservation Initiative? How will the expansion of ICI help businesses with their electricity costs?

The Industrial Conservation Initiative (ICI) allows large electricity consumers to reduce their electricity costs by reducing their demand during peak hours. Reducing consumption during peak hours benefits companies financially and benefits the electricity system by deferring the need for new peaking generation.
ICI is currently available to electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors.

To give more businesses the incentive to participate in the ICI, we will be taking measures to lower the threshold to 1 MW and will be removing sector restrictions so that more consumers can benefit.

Newly eligible consumers will be able to opt-in to the ICI program at their discretion.

Q. How much can ICI participants expect to save in terms of electricity costs? When will they start to see the benefit financially?

ICI participants save approximately one-third on their electricity bills.

Companies that opt-in to ICI would see the impact in 2018 due to the time required to implement the expansion and the need to set a one-year baseline.

Q. How many companies will be eligible for the ICI once the expansion happens?

Currently there are about 300 consumers in the ICI program.

Newly eligible consumers would have to decide whether they wish to opt-in to ICI program.

We wouldn’t want to speculate on the number of companies that will choose to participate in the program.

Q. What about companies that can’t shift their operations to off-peak hours? Will they be penalized financially by having to pay higher rates?

We recognize that electricity costs are a major factor for businesses participating in Ontario’s economy. That’s why Ontario has programs in place to help industrial consumers address the cost of their electricity.

Ontario's hybrid electricity market, combining regulated, contract and competitive market pricing, provides long-term price stability for industrial and smaller customers.

In addition to the ICI, there are many existing programs and incentives available to support industrial consumers.

For example:

- Participants in the Northern Industrial Electricity Rate Program (NIERP) receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 25% through the program. In 2015, the Ontario government announced the commitment to an ongoing NIERP beyond March 2016.

- The Industrial Electricity Incentive (IEI) offers reduced electricity rates for companies starting or expanding operations in Ontario. To date, IESO has awarded 22 contracts to electricity-intensive companies across the province through the program.

- The Industrial Accelerator Program (IAP) provides financial incentives to eligible transmission-connected companies to fast track capital investment in major energy conservation projects.

- The IESO holds annual demand response auctions, which provide availability and utilization payments to successful participants that commit to reducing their electricity consumption when called upon to do so.

- The IESO's saveONenergy for Business conservation programs for commercial and industrial consumers offers financial incentives to distribution-connected small businesses, commercial, institutional and industrial consumers, to install energy-efficient equipment and improve the energy efficiency of their buildings.

As we move forward we will continue to look at all options to strike the balance between reliability and affordability, while continuing our work on modernizing our electricity system.

Q. If new ICI participants will be getting a break on their bills, where will the money come from? How will costs get shifted?

An ICI participant's share of peak demand is used to calculate some electricity charges. The remainder of these charges not allocated to ICI participants would be shared across remaining consumers.

Over the long-term, system benefits from ICI include reducing electricity use during peak periods and reducing the need for new peaking generation.

Impacts will depend on a number of factors, including how many eligible companies decide to opt-in and their ability to reduce their electricity demand during peak hours.

Greenhouse Gas Recycling Account proceeds for Commercial and Industrial Ratepayers

Q. How will GGRA recycling work to help reduce costs for commercial and industrial customers?

As outlined in the 2016 Budget and the Climate Change Action Plan (CCAP), the government intends to recycle a portion of the cap and trade auction proceeds to offset the impact of cap and trade on industrial and commercial electricity consumers to keep rates affordable.

Q. Why is the government using GGRA funds to help reduce the electricity costs of commercial and industrial companies? Aren't GGRA funds supposed to go to programs/initiatives that reduce greenhouse gas emissions?

As outlined in the 2016 Budget and the Climate Change Action Plan (CCAP), the government intends to recycle a portion of the cap and trade auction proceeds to offset the impact of cap and trade on industrial and commercial electricity consumers to keep rates affordable.

Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support the CCAP's goals of electrification.

Rural or Remote Rate Protection (RRRP) Update:

Q. What is Rural or Remote Rate Protection (RRRP)? How is RPPP being updated? What kind of relief will it provide to ratepayers that currently receive it?

The Rural or Remote Rate Protection (RRRP) is a program that provides a rate subsidy to rural and remote residential customers who are faced with higher distribution costs relative to urban areas.

Funding to support these rural customers has not been changed since 2003, which has resulted in diminishing relief for customers over the years.

That's why are going to increase the RRRP subsidy for eligible consumers by updating the RRRP

This update would result in additional support for eligible customers.

The typical eligible consumer (1000 kWh/month) will see their RRRP subsidy increase from $[31.50] per month to $[60.50] per month.

Q. If the government is putting more money towards RRRP, where are those extra funds coming from? Ratepayers in the rest of the province?

The RRRP is funded by Ontario ratepayers.

As a result of this update, residential consumers will see an average cost increase of approximately $0.60 per month.

This cost increase is more than offset thanks to the 8% rebate they will be receiving starting in January 1, 2017.

Q. The Minister of Energy recently requested asked the Ontario Energy Board to look into rate relief for First Nations. Will the OEB's report take the RRRP update into account?

Our government recognizes that the price of electricity can be a particular challenge for those that pay a higher share of their income towards the bill - particularly residents in rural and remote communities and on-reserve First Nation customers.

We have heard concerns about high electricity costs from First Nation leaders across Ontario and understand on-reserve First Nation customers often face unique challenges that lead to higher electricity consumption and higher costs that impact electricity affordability.

Given these unique challenges, the Minister of Energy committed to look at options for addressing First Nation electricity cost. That's why under s.35 of the Ontario Energy Board Act, 1998 the Minister of Energy requested that the Ontario Energy Board (OEB) investigate appropriate rate assistance options for on-reserve First Nation electricity consumers.

The OEB is an independent regulator with a mandate to protect Ontario consumers with respect to electricity prices and ensure the financial viability of electricity distributors.

We wouldn't want to speculate on what the OEB will be recommending in its report.

The OEB has been asked to report back to the Minister on rate options, cost and funding mechanisms and program development issues by January 1, 2017.

Q. Why are urban customers subsidizing rural consumers? Isn't this just a tax on some to provide relief for others? How does this rate relief benefit the electricity system?

The RRRP has been in place since 2001 and replaces a similar program that was in place prior to 1998.

Our energy system is being transformed and we are making needed investments to modernize the system. We chose to replace coal-fired generation with cleaner sources of energy, which will not only benefit our environment but also the health of Ontarians.

We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

We know that these changes have come at a cost to Ontario's residential and business consumers. Recognizing this, we are proposing news measures that would take effect January 1, 2017.

****

Additional QAs provided by the Ministry of Finance

Q. How would the Ontario Rebate for Electricity Consumers impact Ontario's plans for a balanced budget?

The Ontario Rebate for Electricity Consumers would help make everyday life easier for Ontario families, small businesses and farms with electricity costs by providing a rebate that is equal to the eight per cent provincial portion of HST. This eight per cent rebate would appear directly on the consumer's electricity bill.

The government remains committed to balancing the budget by 2017-18 while continuing to invest in the economy, our people and a healthy, clean and prosperous low-carbon future. These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth.

Q. Do other provinces provide harmonized sales tax (HST) rebates related to energy?

Currently, there are no federally-administered point-of-sale rebates for electricity in any of the other provinces participating in the HST.

Nova Scotia is the only province with a provincially administered home energy rebate program that is equal to the provincial portion of the HST, and applies to all sources of residential use energy, including electricity.

Newfoundland and Labrador had a “Residential Energy Rebate” that was eliminated, effective July 1, 2015. The rebate, which came into effect October 11, 2011, was a provincially administered energy rebate equal to the provincial portion of the HST on energy used for residential purposes, including electricity.

Q. Would the rebate affect HST paid by consumers?

No. The HST on electricity costs remains at 13 per cent.

Q. What happens to input tax credits claimed by businesses?

Most businesses engaged in commercial activities can claim input tax credits to recover the HST they pay to operate their business.

Following the introduction of the eight per cent rebate, businesses would continue to be able to claim the credits as usual.

With this rebate, businesses across Ontario would have even more opportunity to be competitive and manage their energy costs.

Q. How is Ontario helping to lower electricity costs for residential consumers?

Ontario has a number of programs in place to help low-to-moderate income individuals and families with energy costs, including the Ontario Energy and Property Tax Credit, the Ontario Electricity Support Program, the Ontario Sale Tax Credit.

The Ontario Rebate for Electricity Consumers would be another program that would help Ontario families, small businesses and farms with electricity costs in addition to the above mentioned programs, if consumers were eligible.

Q. Will the federal government be rebating its portion of the HST?

The federal government has not shared any plans to mitigate electricity costs for Canadians.

The Province continues to work with the federal government when there is an opportunity to partner or consult as it relates to regulatory and emerging issues.

Ontario remains committed to making everyday life easier for people across the province by lowering costs and enhancing convenience and choice.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy	
Meeting Date:	September 12, 2016	
Agenda Class:	Major	
Last reviewed by: N/A		**Tracking to:** Cabinet - September 12, 2016

SUBMISSION TITLE:	Electricity Price Mitigation

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): – Providing an 8% rebate to Regulated Price Plan consumers; – Expanding the Industrial Conservation Initiative; – Updating the Rural or Remote Rate Protection program; and, – Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets. • Approve $300M in Supplementary Estimates for electricity price mitigation. • Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives • Recommend proceeding to Cabinet with the proposed legislation amendments to existing regulations to implement the initiatives.	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	300.0	1100.0	1100.0
Initiative cost recommended	300.0	1100.0	1100.0
Recommended program base	300.0	1100.0	1100.0
Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives	0.0	(60.0)	(60.0)
Total Fiscal Impact	300.0	1040.0	1040.0

IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B eligible electricity consumers (i.e., commercial, institutional and small industrial).
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

	Measure	Annual Impact	Targeted Recipients
Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)			
1.	8% Rebate to Regulated Price Plan	Fiscal $1100M	Residential, small business and small farms, and other small users
2a.	Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development).	($270M) in cap and trade proceeds to offset $270M in costs for reducing rates No Fiscal Impact	The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation. See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M)
2b.	While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan.	Fiscal ($60M)	Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions.
	Total Fiscal Impact	$1040M	Matches Financial Summary on page 1 for 2017-18

	Measure	Annual Impact	Targeted Recipients
Ratepayers cover the costs (No impact to the Province's Fiscal Plan)			
3	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors
4.	Updating Rural or Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

	Average Annual Fiscal Impact	Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact	Regulated Price Plan (Residential) Benefit		Class B (Commercial) Benefit	Class A (Industrial) Benefit	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*		*Existing*	*New*
• 8% rebate to Regulated Price Plan eligible consumers • ICI Expansion • RRRP Update • Proceeds Recycling	$1.0 billion annually	$0.27 billion annually (Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment)	-$11/ month (-8%)	-$45/ month (-20%)	-$3/MWh (-2%)	-$3/ MWh (-3%)	Up to -$52/MWh (-34%)

Notes: * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.1 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset

the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and could incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on

both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reduction in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,100,000,000 in 2017-18 and $1,100,000,000 in 2018-19, and $1,200,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change to invest an estimated amount of up to $1,080,000,000, from 2017-18 to 2020-21, of cap and trade auction proceeds for non- Regulated Price Plan commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan that reduce greenhouse gas emissions.

In this regard:

1) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21, which was allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with the Premier's Office and Cabinet Office on the development and implementation of an integrated communications strategy.

APPENDIX B: FINANCIAL TABLES

FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE					TABLE B1
		Fiscal Plan Basis			*Appropriations Basis*

APPENDIX C: ELECTRICITY SECTOR BACKGROUND

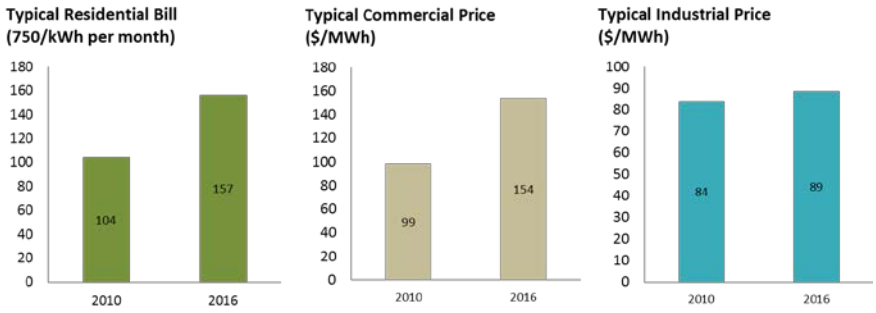
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

	Regulated Price Plan	Class B	Class A
Consumer Types	• Residential • Small Business • Farms	• Commercial • Institutional • Small industrial	• Large commercial • Large industrial
Load Size	Below 0.05 MW	Between 0.05 MW and 3 MW	Above 3 MW*
Total Consumption	58 TWh	57 TWh	26 TWh
Share of Consumption	41.1%	40.4%	18.4%

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



Note: 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

Cost Shift Impact	2011	2012	2013	2014	2015	2016
Residential Bill ($/month for 750 kWh)	3.55	4.07	3.85	4.46	5.68	6.55
Commercial – Class B ($/MWh)	4.74	5.43	5.14	5.94	7.57	8.73
Industrial – Class A ($/MWh)	-20.97	-25.26	-22.38	-24.68	-32.56	-31.55

Note: Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

Eligible for the 8% rebate (< 50 kW or < 250,000 kWh/year)	**Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year)

• Residential Regulated Price Plan consumers
• Residential retail consumers
• Multi-unit residential buildings and other facilities used as residential rental units
• Long-term care homes and school residences
• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)
• Small businesses
  – Coffee / snack retailer
  – Convenience store
  – Apparel store
  – Hair salon
  – Small insurance office
	• Class A consumers
	  – Manufacturer
	  – Large grocery store
	  – Mines
	  – Auto assembly plants
	• Class B consumers
	  – Commercial offices (low rise)
	  – Hotel
	  – General warehousing

2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short-term	Up to 21%	80	47	Increase of $0.42/month
Long-term	Up to 34%	165	82	Increase of $0.74/month

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

APPENDIX F: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

	Current Bill (before tax)	Current Rate mitigation initiatives*	New Rate Mitigation initiatives	New Bill (before tax)
Average Residential (Toronto – 750 kWh/month)	$139 /month	N/A	8% pre-tax rebate: - $11	$128 /month
Rural Residential (Hydro One R2 – 1000 kWh/month)	$229 /month	RRRP: –$32	8% pre-tax rebate + Updated RRRP: - $45	$184 /month
Low-income Residential ** (Toronto – 750 kWh/month)	$101 /month	OESP: -$38	8% pre-tax rebate: - $8	$93 /month
Small Business (Toronto – 403,200 kWh/month)	$149 /MWh	N/A	8% pre-tax rebate: - $12/MWh	$137 /MWh
Small Farm (Hydro One R1 – 4,000 kWh/month)	$203 /MWh	N/A	8% pre-tax rebate: - $16/MWh	$187 /MWh

Notes:

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

	Current Rate	Current Rate mitigation initiatives*	New Rate Mitigation initiatives	New Rate
Large Institutional (Toronto – distribution-connected, 10 MW)	$108 /MWh	ICI: -$49/MWh	Proceeds Recycling: -$2.60/MWh (2017-2020 average)	$105 /MWh
Large Industrial (Timmins – transmission-connected, 10 MW)	$69 /MWh	ICI + NIERP: -$69/MWh	Proceeds Recycling: -$2.60/MWh	$66 /MWh
Small Industrial – opt-in to ICI (Toronto – 2 MW)	$152 /MWh	N/A	Proceeds Recycling + ICI: Up to -$52/MWh	$100 /MWh
Large Commercial – does not opt-in to ICI (Toronto – 2 MW)	$152 /MWh	N/A	Proceeds Recycling: -$2.60/MWh	$149 /MWh
Small Institutional (Toronto – 500 kw)	$154 /MWh	N/A	Proceeds Recycling: -$2.60/MWh	$151 /MWh

Notes:

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	September 12, 2016
Agenda Class:	Major
Last reviewed by: N/A	**Tracking to:** Cabinet - September 12, 2016

SUBMISSION TITLE:	Electricity Price Mitigation

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): – Providing an 8% rebate to Regulated Price Plan eligible consumers; – Expanding the Industrial Conservation Initiative; – Updating the Rural or Remote Rate Protection program; and, – Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets. • Approve $300M in 2016-17 in Supplementary Estimates for electricity price mitigation. • Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives. • Recommend proceeding to Cabinet with the proposed legislation and amendments to existing regulations to implement the initiatives.	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	300.0	1006.0	1004.0
Initiative cost recommended	300.0	1006.0	1004.0
Recommended program base	300.0	1006.0	1004.0
Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives	0.0	(60.0)	(60.0)
Total Fiscal Impact	300.0	946.0	944.0

IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to additional commercial, institutional and small industrial consumers.
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

	Measure	Annual Impact	Targeted Recipients
Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)			
1.	8% Rebate to Regulated Price Plan	Fiscal About $1.0B	Residential, small business and farms, and other small users
2a.	Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development).	($270M) in cap and trade proceeds to offset $270M in costs for reducing rates No Fiscal Impact	The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation. See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M)
2b.	While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan.	Fiscal ($60M)	Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions.
	Total Fiscal Impact	$946M	Matches Financial Summary on page 1 for 2017-18

	Measure	Annual Impact	Targeted Recipients
Ratepayers cover the costs (No impact to the Province's Fiscal Plan)			
3	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors
4.	Updating Rural or Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity ratepayers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

	Average Annual Fiscal Impact	Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact	Regulated Price Plan (Residential) Benefit		Class B (Commercial) Benefit	Class A (Industrial) Benefit	
			Average (750 kWh/ month)	*Rural (1000 kWh/ month)*		*Existing*	*New*
• 8% rebate to Regulated Price Plan eligible consumers • ICI Expansion • RRRP Update • Proceeds Recycling	$1.0 billion annually	$0.27 billion annually (Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment)	-$11/ month (-8%)	-$45/ month (-20%)	-$3/MWh (-2%)	-$3/ MWh (-3%)	Up to -$52/MWh (-34%)

Notes: * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.0 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural or remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reductions in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) do not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,006,000,000 in 2017-18 and $1,004,000,000 in 2018-19, and $1,004,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Further to the Cabinet Minute of May 11, 2016 and the Treasury Board Minute of May 19, 2016, note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change, Treasury Board Secretariat, Ministry of Finance, Cabinet Office and Office of the Premier, to allocate up to $1,080,000,000, from 2017-18 to 2020-21, of Cap and Trade auction proceeds to address rate-impacts on non-Regulated Price Plan electricity consumers (e.g., industrial, commercial and institutional) related to cap and trade and the expansion of other rate-based programs, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of Energy to work with the Ministry of the Environment and Climate Change and report back to Cabinet by the end of 2016 with options on the appropriate mechanism.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and allow electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with Office of the Premier and Cabinet Office on the development and implementation of an integrated communications strategy.

APPENDIX C: ELECTRICITY SECTOR BACKGROUND

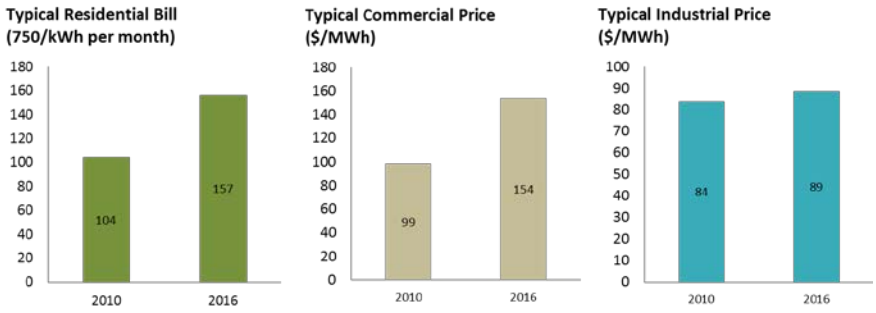
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

	Regulated Price Plan	Class B	Class A
Consumer Types	• Residential • Small Business • Farms	• Commercial • Institutional • Small industrial	• Large commercial • Large industrial
Load Size	Below 0.05 MW	Between 0.05 MW and 3 MW	Above 3 MW*
Total Consumption	58 TWh	57 TWh	26 TWh
Share of Consumption	41.1%	40.4%	18.4%

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



Note: 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

- The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- The Rural or Remote Rate Protection (RRRP) program is provided to rural or remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

Cost Shift Impact	2011	2012	2013	2014	2015	2016
Residential Bill ($/month for 750 kWh)	3.55	4.07	3.85	4.46	5.68	6.55
Commercial – Class B ($/MWh)	4.74	5.43	5.14	5.94	7.57	8.73
Industrial – Class A ($/MWh)	-20.97	-25.26	-22.38	-24.68	-32.56	-31.55

Note: Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

Eligible for the 8% rebate (< 50 kW or < 250,000 kWh/year)	**Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year)
• Residential Regulated Price Plan consumers • Residential retail consumers • Multi-unit residential buildings and other facilities used as residential rental units • Long-term care homes and school residences • Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan) • Small businesses – Coffee / snack retailer – Convenience store – Apparel store – Hair salon – Small insurance office	• Class A consumers – Manufacturer – Large grocery store – Mines – Auto assembly plants • Class B consumers – Commercial offices (low rise) – Hotel – General warehousing

2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short-term	Up to 21%	80	47	Increase of $0.42/month
Long-term	Up to 34%	165	82	Increase of $0.74/month

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

3. Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

APPENDIX E: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

	Current Bill (before tax)	Current Rate mitigation initiatives*	New Rate Mitigation initiatives	New Bill (before tax)
Average Residential (Toronto – 750 kWh/month)	$139 /month	N/A	8% pre-tax rebate: - $11	$128 /month
Rural Residential (Hydro One R2 – 1000 kWh/month)	$229 /month	RRRP: –$32	8% pre-tax rebate + Updated RRRP: - $45	$184 /month
Low-income Residential ** (Toronto – 750 kWh/month)	$101 /month	OESP: -$38	8% pre-tax rebate: - $8	$93 /month
Small Business (Toronto – 403,200 kWh/month)	$149 /MWh	N/A	8% pre-tax rebate: - $12/MWh	$137 /MWh
Small Farm (Hydro One R1 – 4,000 kWh/month)	$203 /MWh	N/A	8% pre-tax rebate: - $16/MWh	$187 /MWh

Notes:

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

	Current Rate	Current Rate mitigation initiatives*	New Rate Mitigation initiatives	New Rate
Large Institutional (Toronto – distribution-connected, 10 MW)	$108 /MWh	ICI: -$49/MWh	Proceeds Recycling: -$2.60/MWh (2017-2020 average)	$105 /MWh
Large Industrial (Timmins – transmission-connected, 10 MW)	$69 /MWh	ICI + NIERP: -$69/MWh	Proceeds Recycling: -$2.60/MWh	$66 /MWh
Small Industrial – opt-in to ICI (Toronto – 2 MW)	$152 /MWh	N/A	Proceeds Recycling + ICI: Up to -$52/MWh	$100 /MWh
Large Commercial – does not opt-in to ICI (Toronto – 2 MW)	$152 /MWh	N/A	Proceeds Recycling: -$2.60/MWh	$149 /MWh
Small Institutional (Toronto – 500 kw)	$154 /MWh	N/A	Proceeds Recycling: -$2.60/MWh	$151 /MWh

Notes:

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

APPENDIX F: ILLUSTRATIVE BILL MOCK-UP

APPENDIX G: BACKGROUND CONTEXT

Budget commitment (*2016 Ontario Budget - Chapter I: Building Prosperity and Creating Jobs*)**:**

The government will also take steps to ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers.

CCAP public document (under *Action Area – Buildings and Homes: Reduce emissions from fossil-fuel use in buildings*)**:**

Keep Electricity Rates Affordable: Use cap and trade proceeds to offset the cost of greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.

CCAP policy minute (May 11, 2016)**:**

ENERGY develop additional options to addressing rate-impacts on electricity consumers and work with MOECC, the Premier's Office and Cabinet Office regarding the selected option for inclusion in the action plan

CCAP TB/MBC minute (May 19, 2016)**:**

i) Approve-in-principle the following estimated ranges to guide potential investment of cap and trade proceeds over four years, from 2017-18 to 2020-21, should proceeds be available:

CCAP Action	**Initiative**	**Potential Funding range from proceeds over 4-year period**	**Estimated GHG reduction in 2020 associated with potential funding**
Moving toward a lower-carbon energy supply with adequate capacity and affordable low-carbon electricity.	Eliminate Carbon Price Impacts / Grid Emission Reductions to Ratepayers	· Range - $1,000,000,000 to $1,320,000,000	3,000,000 Tonnes (Energy Planning)

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	September 13, 2016
Agenda Class:	Major
Last reviewed by: N/A	**Tracking to:** Cabinet - September 14, 2016

SUBMISSION TITLE:	Electricity Price Mitigation

NO MATERIALS RECEIVED –BASED ON FPC SUBMISSION

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): – Providing an 8% rebate to Regulated Price Plan consumers; – Expanding the Industrial Conservation Initiative; – Updating the Rural and Remote Rate Protection program; and, – Using cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade. • Approve in principle an expenditure increase of $261M in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund. • Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement. • Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD).	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	261.0	1006.0	1004.0
Initiative cost recommended	261.0	1006.0	1004.0
Recommended program base	261.0	1006.0	1004.0
Offset Recommended	0.0	60.0 (TBD)	60.0 (TBD)
Total Fiscal Impact	261.0	946.0	944.0

IV. Key Comments and Considerations

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online.

As part of the 2016 Budget, the government committed to mitigating electricity cost impacts that were anticipated from the cap and trade program. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. In order to achieve this, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers:

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to OCEB
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Use of cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade.

Fiscal Impact

- Slide 25 of the final version of the recent Electricity Price Mitigation Options deck notes that “proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year”.
- The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

$ millions	**2017**	**2018**	**2019**	**2020**
	1,003	1,014	975	1,049
Avg. 2017-20	1,010			

- On a fiscal year basis, the above estimates become:

$ millions	**2016-17**	**2017-18**	**2018-19**	**2019-20**
	261	1,006	1,004	994
3-Year Avg.	1,001			

- Ministry staff are in the process of developing a refined estimate of the cost.
- Consumer impacts of proposal are TBD.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers. While residential consumers would benefit from the 8% rebate, this does not apply to non-Regulated Price Plan consumers (most industrial and commercial consumers). As such, in addition to providing supports to these consumers through ICI expansion and input tax credits, ENE is proposing to direct cap and trade auction proceeds to industrial and commercial consumers to mitigate the cost impact.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Other Considerations

- This request does not align with 2016 Budget fiscal plan; no proposed offsets.
- Program design could include phase-in options to reduce the fiscal impact over the near-term or introduce a cap to limit the rate mitigation to a monthly level of consumption (similar to the 3000kwh cap that was in effect for OCEB).
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit).
- New legislation would be required (based on Ontario Clean Energy Benefit Act, 2010). Also amendments to various regulations to expand ICI and RRRP would be required.
- Potential for overlapping revenue offsets with the Ontario Sales Tax Credit (OSTC) and the energy component of the Ontario Energy and Property Tax Credit (OEPTC) will require review.
    - The Province may also need to change the reporting for the cost of the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy. The energy component is currently reported as an offset of HST revenue. If the provincial portion of HST is no longer levied or reduced as source, this credit would be considered a transfer through the tax system and be reported as an appropriated expense.

SUBMISSION TITLE: Electricity Price Mitigation

NO MATERIALS RECEIVED –BASED ON FPC SUBMISSION

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

Board Judgment

- Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):
  - Providing an 8% rebate to Regulated Price Plan consumers;
  - Expanding the Industrial Conservation Initiative;
  - Updating the Rural and Remote Rate Protection program; and,
  - Using cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade. Balance of proceeds intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets (to be confirmed by Energy).
- Approve in principle an expenditure increase of $261M in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund.
- Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement.
- Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD).
- Ensure Local Distribution Companies provide accurate data to inform future policy proposal similar to previous OCEB program, with enhancements on accuracy.

Commented [RK1]: Should this be noted upfront as a pre-tax 8% rebate?

Commented [RK2]: Should this be in square brackets as per Energy's qualification that this iestimate is being refined?

Commented [RK3]: This should be discussed with Energy first. Would TBS staff do that, or have you discussed with, e.g., Daniel Cayley in Steen's area?

III. FINANCIAL SUMMARY

$ Millions	2016-17	2017-18	2018-19
Initiative cost requested	261.0	1006.0	1004.0
Initiative cost recommended	261.0	1006.0	1004.0

Recommended program base	261.0	1006.0	1004.0
Offset Recommended	0.0	60.0 (TBD)	60.0 (TBD)
Total Fiscal Impact	261.0	946.0	944.0

IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online.

As part of the 2016 Budget, the government committed to mitigating electricity cost impacts that were anticipated from the cap and trade program. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. ~~In order to achieve this, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.~~

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal *(based on FPC materials; proposal still being refined by Ministry)*

The Ministry is proposing the following to mitigate electricity prices for consumers:

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small businesses and small farms), similar to OCEB but without the 3,000 kilowatt-hour per month~~a~~ cap.
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Use of cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade.

	Measure	Annual Impact	Targeted Recipients
1.	8% Rebate to Regulated Price Plan	Fiscal ($1B)*	Residential, ~~Farms~~, Small businesses and small Farms, and other small users

Commented [RK4]: The proposed mitigation goes beyond cap and trade and the Budget 2016 commitment.

Commented [RK5]: As this submission is responding to more than the CCAP commitment, and providing more mitigation than that commitment, suggest moving this down and adding context on OCEB and the HST too.

Commented [RK6]: As per slide 37 of Energy's FPC deck – but should ask Energy to verify for accuracy to the RPP. Differs from the OCEB eligibility table in the appendix of the EFB note,

Commented [RK7]: For clarity, RPP did not include all farms, but farms to the extent they used up to 250,000 kWh per year or had demand less than 50 kW.

Commented [RK8]: As per slide 37 of Energy's FPC deck – but should ask Energy to verify for accuracy to the RPP.

2.	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	~~Small~~Intermediate and large-sized Industrial, Commercial and Institutional consumers above 1MW in all sectors
3.	Updating Rural and Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.
4.	Redirecting proceed recycling to Commercial and Industrial or provide fiscal offsets to the 8% rebate	TBD	TBD

* Annual ~~N~~numbers from ENERGY.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behaviour.

Consumer impacts of the proposal are TBD.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#2 and #3) benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

Fiscal Impact

- Slide 25 of the final version of the recent Electricity Price Mitigation Options deck notes that "proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year." ~~.~~
- The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

$ millions	**2017**	**2018**	**2019**	**2020**
	1,003	1,014	975	1,049
Avg. 2017-20	1,010			

- On a fiscal year basis, the above estimates become:

$ millions	**2016-17**	**2017-18**	**2018-19**	**2019-20**
	261	1,006	1,004	994
3-Year Avg.	1,001			

- Ministry staff are in the process of developing a refined estimate of the cost.
- ~~Consumer impacts of proposal are TBD.~~

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers, on average.

While residential and other consumers would benefit from the 8% rebate (note that as this would greatly exceed the $2/month Budget 2016 commitment, the Ministry is not proposing to direct any cap and trade proceeds towards additional mitigation for these consumers), this does not apply to non-Regulated Price Plan consumers (~~most~~larger industrial ~~and~~, commercial, and other consumers). As such, in addition to providing ~~supports~~price mitigation to ~~these~~ consumers with one megawatt (MW) or more of electricity demand through ICI expansion, ~~ENE~~ the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and

Formatted: English (Canada)

Commented [RK9]: RRRP is recovered through Wholesale Market Service Charges, not the Global Adjustment.

Commented [RK10]: They are relatively few in number, with most non-residential consumers in RPP – perhaps 400,00 plus, vs about 50,000 non-RPP – but, Energy would need to confirm the actual numbers.

commercial consumers not in the RPP to mitigate impacts.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan~~;~~ and there are no proposed offsets.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average cap and trade commitment.
- To inform future policies with the 8% rebate and its effects on conservation and consumption profiles, suggest LDCs provide reporting on rebate amounts, consumption, and volumes, for the various classes of consumers, similar to what was done under the Ontario Clean Energy Benefit (OCEB) program, with enhancements on accuracy.
- Reduction in electricity prices that does not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit -- NOEC).
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.
- New legislation would be required (may be~~based on~~ similar to the Ontario Clean Energy Benefit Act, 2010; however, would not be time-limited, and OCEB eligibility differed somewhat from RPP). Also amendments to various regulations to expand ICI and RRRP would be required. It is recommended that an end date for the program be specified in legislation.
-

Formatted: Font: Verdana, Bold, Underline

Commented [RK11]: Should discuss this with Energy.

Formatted

Formatted: English (Canada)

Commented [JK12]: For clarity, this was not our feedback. We did note that OCEB had an end date.

Commented [RK13R12]: Whose feedback was this then? It does not seem consistent with the direction on the 8%, and does not make sense on RRRP or ICI expansion.

Suggest not including that feedback, unless the above can be clarified and supported.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	September 13, 2016
Agenda Class:	Major
Last reviewed by: N/A	**Tracking to:** Cabinet - September 14, 2016

SUBMISSION TITLE:	Electricity Price Mitigation

NO MATERIALS RECEIVED –BASED ON FPC SUBMISSION

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): – Providing an 8% rebate to Regulated Price Plan consumers; – Expanding the Industrial Conservation Initiative; – Updating the Rural and Remote Rate Protection program; and, – Using cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade. Balance of proceeds intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets (to be confirmed by Energy). • Approve in principle an expenditure increase of $261M in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund. • Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement. • Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD). • Ensure Local Distribution Companies provide accurate data to inform future policy proposal similar to previous OCEB program, with enhancements on accuracy.	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	261.0	1006.0	1004.0
Initiative cost recommended	261.0	1006.0	1004.0

Recommended program base	261.0	1006.0	1004.0
Offset Recommended	0.0	60.0 (TBD)	60.0 (TBD)
Total Fiscal Impact	261.0	946.0	944.0

IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online.

As part of the 2016 Budget, the government committed to mitigating electricity cost impacts that were anticipated from the cap and trade program. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. In order to achieve this, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal *(based on FPC materials; proposal still being refined by Ministry)*

The Ministry is proposing the following to mitigate electricity prices for consumers:

- Provide an 8% rebate to Regulated Price Plan consumers (i.e., residential, small business and farms), similar to OCEB but without a cap.
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Use of cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade.

	Measure	Impact	Targeted Recipients
1.	8% Rebate to Regulated Price Plan	Fiscal ($1B)*	Residential, Farms, Small business and other small users
2.	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	Small Industrial, Commercial and Institutional consumers above 1MW in all sectors
3.	Updating Rural and Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.
4.	Redirecting proceed recycling to Commercial and Industrial or provide fiscal offsets to the 8% rebate	TBD	TBD

* Annual ~~N~~numbers from ENERGY.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Consumer impacts of the proposal are TBD.

Due to the nature of the Global Adjustment mechanism, the rate base proposals (#2 and #3) benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

Fiscal Impact

- Slide 25 of the final version of the recent Electricity Price Mitigation Options deck notes that “proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year”.
- The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

$ millions	**2017**	**2018**	**2019**	**2020**
	1,003	1,014	975	1,049
Avg. 2017-20	1,010			

- On a fiscal year basis, the above estimates become:

$ millions	**2016-17**	**2017-18**	**2018-19**	**2019-20**
	261	1,006	1,004	994
3-Year Avg.	1,001			

- Ministry staff are in the process of developing a refined estimate of the cost.
- ~~Consumer impacts of proposal are TBD.~~

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers. While residential and other consumers would benefit from the 8% rebate, this does not apply to non-Regulated Price Plan consumers (most industrial and commercial consumers). As such, in addition to providing supports to these consumers through ICI expansion, ~~ENE~~ the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers to mitigate impacts.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Other Considerations

- This request does not align with 2016 Budget fiscal plan~~,~~ and there are no proposed offsets.
- To inform future policies with the 8% rebate and its effects on conservation and consumption profiles, suggest LDCs provide reporting on rebate amounts, consumption, and volumes, for the various classes of consumers, similar to what was done under the Ontario Clean Energy Benefit (OCEB) program, with enhancements on accuracy.
- Reduction in electricity prices that does not consider consumption amounts does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario

Energy Credit).

- New legislation would be required (based on Ontario Clean Energy Benefit Act, 2010). Also amendments to various regulations to expand ICI and RRRP would be required. It is recommended that an end date for the program be specified in legislation.

Commented [JK1]: For clarity, this was not our feedback. We did note that OCEB had an end date.

SUBMISSION TITLE:	Electricity Price Mitigation

NO MATERIALS RECEIVED –BASED ON FPC SUBMISSION

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

Board Judgment

- Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):
  - Providing ~~an~~ a pre-tax 8% rebate to Regulated Price Plan consumers;
  - Expanding the Industrial Conservation Initiative;
  - Updating the Rural and Remote Rate Protection program; and,
  - Using cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade. Balance of proceeds intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets (to be confirmed by Energy).

- Approve in principle an expenditure increase estimated at ~~of~~ $261M [estimate subject to refinement from ENERGY] in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund.

- Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement.

- Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD).

- ~~Ensure Local Distribution Companies provide accurate data to inform future policy proposal similar to previous OCEB program, with enhancements on accuracy.~~

Commented [RK1]: Should this be noted upfront as a pre-tax 8% rebate?

Commented [SK2R1]: Done

Commented [RK3]: Should this be in square brackets as per Energy's qualification that this iestimate is being refined?

Commented [SK4R3]: Addressed

Commented [RK5]: This should be discussed with Energy first. Would TBS staff do that, or have you discussed with, e.g., Daniel Cayley in Steen's area?

Commented [SK26R5]: Delete for now

III. FINANCIAL SUMMARY

IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online.

As part of the 2016 Budget, the government committed to mitigating electricity cost impacts that were anticipated from the cap and trade program. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. ~~In order to achieve this, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.~~

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal *(based on FPC materials; proposal still being refined by Ministry)*

The Ministry is proposing the following to mitigate electricity prices for consumers:

- Provide an 8% pre-tax rebate to Regulated Price Plan consumers (i.e., residential, small businesses and small farms), similar to OCEB but without the 3,000 kilowatt-hour per month~~a~~ cap.
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Use of cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade.

	Measure	Annual Impact	Targeted Recipients
1.	8% Rebate to Regulated Price Plan	Fiscal ($1B)*	Residential, ~~Farms~~, Small businesses and small Farms, and other small users
2.	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	~~Small~~Intermediate and large-sized Industrial, Commercial and Institutional consumers above 1MW in all sectors
3.	Updating Rural and Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.
4.	Redirecting proceed recycling to Commercial and Industrial or provide fiscal offsets to the 8%	TBD	TBD

Commented [RK7]: The proposed mitigation goes beyond cap and trade and the Budget 2016 commitment.

Commented [RK8]: As this submission is responding to more than the CCAP commitment, and providing more mitigation than that commitment, suggest moving this down and adding context on OCEB and the HST too.

Commented [RK9]: As per slide 37 of Energy's FPC deck – but should ask Energy to verify for accuracy to the RPP. Differs from the OCEB eligibility table in the appendix of the EFB note,

Commented [RK10]: For clarity, RPP did not include all farms, but farms to the extent they used up to 250,000 kWh per year or had demand less than 50 kW.

Commented [RK11]: As per slide 37 of Energy's FPC deck – but should ask Energy to verify for accuracy to the RPP.

	rebate		

* Annual ~~N~~numbers from ENERGY.
** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behaviour.

Consumer impacts of the proposal are TBD.
Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#2 and #3) benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

Commented [RK12]: RRRP is recovered through Wholesale Market Service Charges, not the Global Adjustment.

Commented [SK213R12]: Ok Done.

Fiscal Impact

- Slide 25 of the final version of the recent Electricity Price Mitigation Options deck notes that "proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year.".
- The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

$ millions	**2017**	**2018**	**2019**	**2020**
	1,003	1,014	975	1,049
Avg. 2017-20	1,010			

- On a fiscal year basis, the above estimates become:

$ millions	**2016-17**	**2017-18**	**2018-19**	**2019-20**
	261	1,006	1,004	994
3-Year Avg.	1,001			

- Ministry staff are in the process of developing a refined estimate of the cost.
- ~~Consumer impacts of proposal are TBD.~~

Cap and Trade Proceeds
The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers, on average.

While residential and other consumers would benefit from the 8% pre-tax rebate (note that as this would greatly exceed the $2/month Budget 2016 commitment, the Ministry is not proposing to direct any cap and trade proceeds towards additional mitigation for these consumers), this does not apply to non-Regulated Price Plan consumers (~~most~~larger industrial ~~and~~, commercial, and other consumers). As such, in addition to providing ~~supports~~price mitigation to ~~these~~ consumers with one megawatt (MW) or more of electricity demand through ICI expansion, ~~ENE~~ the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to mitigate impacts.

Commented [RK14]: They are relatively few in number, with most non-residential consumers in RPP – perhaps 400,00 plus, vs about 50,000 non-RPP – but, Energy would need to confirm the actual numbers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan~~,~~ and there are no proposed offsets.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average cap and trade commitment.
- ~~To inform future policies with the 8% rebate and its effects on conservation and consumption profiles, suggest LDCs provide reporting on rebate amounts, consumption, and volumes, for the various classes of consumers, similar to what was done under the Ontario Clean Energy Benefit (OCEB) program, with enhancements on accuracy.~~
- Reduction in electricity prices that does not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit -- NOEC).
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.
- New legislation would be required (may be~~based on~~ similar to the Ontario Clean Energy Benefit Act, 2010; however, would not be time-limited, and OCEB eligibility differed somewhat from RPP). Also amendments to various regulations to expand ICI and RRRP would be required. It is recommended that an end date for the program be specified in legislation.
-
-

Commented [RK15]: Should discuss this with Energy.

Commented [JK16]: For clarity, this was not our feedback. We did note that OCEB had an end date.

Commented [RK17R16]: Whose feedback was this then? It does not seem consistent with the direction on the 8%, and does not make sense on RRRP or ICI expansion.

Suggest not including that feedback, unless the above can be clarified and supported.

Commented [SK218R16]: [Internal Comment, to delete when sending out]

IV. Key Comments and Considerations

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online.

As part of the 2016 Budget, the government committed to mitigating electricity cost impacts that were anticipated from the cap and trade program. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. ~~In order to achieve this, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.~~

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal *(based on FPC materials; proposal still being refined by Ministry)*

The Ministry is proposing the following to mitigate electricity prices for consumers:

- Provide an 8% pre-tax rebate to Regulated Price Plan consumers (i.e., residential, small businesses and small farms), similar to OCEB but without the 3,000 kilowatt-hour per month~~a~~ cap.
- Provide targeted business support by expanding the ICI eligibility threshold to customers above 1MW in all sectors.
- Provide relief to rural customers by updating Rural and Remote Rate Protection (RRRP).
- Use of cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade.

	Measure	Annual Impact	Targeted Recipients
1.	8% Rebate to Regulated Price Plan	Fiscal ($1B)*	Residential~~, Farms~~, Small businesses and small Farms, and other small users

Commented [RK1]: The proposed mitigation goes beyond cap and trade and the Budget 2016 commitment.

Commented [RK2]: As per slide 37 of Energy's FPC deck – but should ask Energy to verify for accuracy to the RPP. Differs from the OCEB eligibility table in the appendix of the EFB note,

Commented [RK3]: For clarity, RPP did not include all farms, but farms to the extent they used up to 250,000 kWh per year or had demand less than 50 kW.

2.	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	~~Small~~Intermediate and large-sized Industrial, Commercial and Institutional consumers above 1MW in all sectors
3.	Updating Rural and Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.
4.	Redirecting proceed recycling to Commercial and Industrial or provide fiscal offsets to the 8% rebate	TBD	TBD

* Annual ~~N~~numbers from ENERGY.
** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behaviour.

Consumer impacts of the proposal are TBD.
Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#2 and #3) benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

Fiscal Impact

- Slide 25 of the final version of the recent Electricity Price Mitigation Options deck notes that "proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year." ~~.~~
- The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

$ millions	**2017**	**2018**	**2019**	**2020**
	1,003	1,014	975	1,049
Avg. 2017-20	1,010			

- On a fiscal year basis, the above estimates become:

$ millions	**2016-17**	**2017-18**	**2018-19**	**2019-20**
	261	1,006	1,004	994
3-Year Avg.	1,001			

- Ministry staff are in the process of developing a refined estimate of the cost.
- ~~Consumer impacts of proposal are TBD.~~

Cap and Trade Proceeds
The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers, on average.

While residential and other consumers would benefit from the 8% pre-tax rebate (note that as this would greatly exceed the $2/month Budget 2016 commitment, the Ministry is not proposing to direct any cap and trade proceeds towards additional mitigation for these consumers), this does not apply to non-Regulated Price Plan consumers (~~most~~larger industrial ~~and~~, commercial, and other consumers). As such, in addition to providing ~~supports~~price mitigation to ~~these~~ consumers with one megawatt (MW) or more of electricity demand through ICI expansion, ~~ENE~~ the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and

commercial consumers not in the RPP to mitigate impacts.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan~~,~~ and there are no proposed offsets.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average cap and trade commitment.
- Reduction in electricity prices that does not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit -- NOEC).
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.
- New legislation would be required (may be~~based on~~ similar to the Ontario Clean Energy Benefit Act, 2010; however, would not be time-limited, and OCEB eligibility differed somewhat from RPP). Also amendments to various regulations to expand ICI and RRRP would be required. It is recommended that an end date for the program be specified in legislation.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	September 13, 2016
Agenda Class:	Major
Last reviewed by: N/A	**Tracking to:** Cabinet - September 14, 2016

SUBMISSION TITLE:	Electricity Price Mitigation

NO MATERIALS RECEIVED –BASED ON DRAFT POLICY SUBMISSION

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): – Providing a pre-tax 8% rebate to Regulated Price Plan consumers; – Expanding the Industrial Conservation Initiative; – Updating the Rural and Remote Rate Protection program; and, – Using cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade (A 1% reduction in rates). Balance of proceeds intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets. • Approve in principle an expenditure increase estimated at $261M in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund. [estimate subject to refinement from the Ministry] • Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement. • Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD).	*Board Judgment*

Total Fiscal Impact	261.0	946.0	944.0

IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)
- Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers
- Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest (1%) reduction in rates

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017 (it could be prescribed earlier), along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Recycling

cap and trade proceeds would commence in 2017.

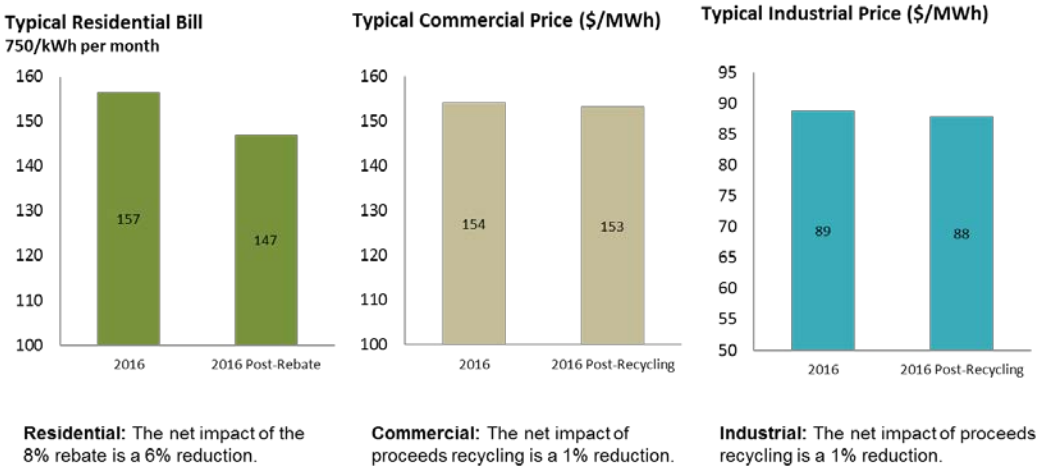
The following table provides an overview of the four initiatives, recipients, projected financial impact, and whether taxpayers or ratepayers cover the costs:

	Measure	Annual Impact	Targeted Recipients
1.	8% Rebate to Regulated Price Plan	Fiscal ($1B)*	Residential, small business and small farms, and other small users
2.	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors
3.	Updating Rural and Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.
4.	Use cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.	$270M	The projected $330M in cap and trade proceeds/year were estimated to go to different electricity consumer classes: - $120M residential consumers - $170M commercial consumers - $40M for industrial consumers The 8% rebate above allows for cap and trade previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan, requiring about $60M less in proceeds

* Annual numbers from ENERGY.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

The following graphic from the Ministry highlights the bill impacts by electricity consumer class.



Residential: The net impact of the 8% rebate is a 6% reduction.

Commercial: The net impact of proceeds recycling is a 1% reduction.

Industrial: The net impact of proceeds recycling is a 1% reduction.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#2 and #3) benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

Fiscal Impact

The most recent Electricity Price Mitigation Options deck notes that "proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year".

The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

$ millions	**2017**	**2018**	**2019**	**2020**
	1,003	1,014	975	1,049
Avg. 2017-20	1,010			

- On a fiscal year basis, the above estimates become:

$ millions	**2016-17**	**2017-18**	**2018-19**	**2019-20**
	261	1,006	1,004	994
3-Year Avg.	1,001			

The Ministry also indicates the current proposal would provide recycling of cap and trade proceeds to commercial and industrial consumers on a volumetric basis. This would require an estimated $60 million less per year in proceeds than previously estimated (i.e., providing fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan).

There are no details as this point if the $261M in 2016-17 would be offset from the Treasury Board Contingency Fund or provided through supplementary estimates.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to go beyond mitigating cap and trade impacts and provide a 1% bill impact (shown in the graphic at the bottom of page 3).

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates will consult with LDCs (possibly

through Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills could be implemented (A bill mock-up is pending from the Ministry). The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets.
- The 8% rebate would provide a typical residential consumer about an $11 per month

benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average cap and trade commitment. Also, the budget committed to offsetting the impact of cap an trade on industrial and commercial consumers, a 1% reduction is being proposed using cap and trade proceeds, which could be recycled elsewhere on GHG reduction initiatives.

- Reduction in electricity prices that does not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit).
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

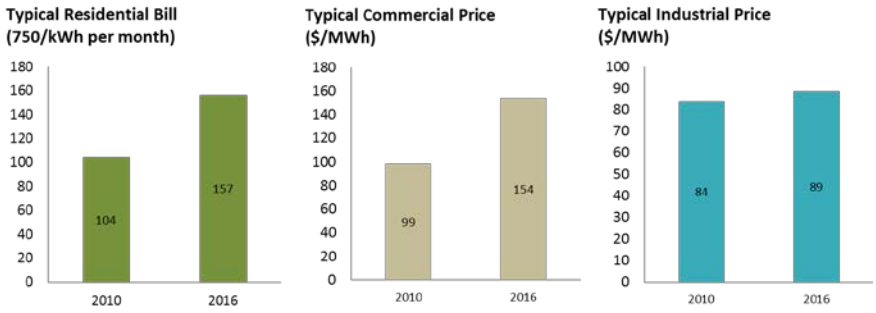
APPENDIX C: ELECTRICITY SECTOR BACKGROUND

The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

	Regulated Price Plan	Class B	Class A
Consumer Types	• Residential • Small Business • Farms	• Commercial • Institutional • Small industrial	• Large commercial • Large industrial
Load Size	Below 0.05 MW	Between 0.05 MW and 3 MW	Above 3 MW*
Total Consumption	58 TWh	57 TWh	26 TWh
Share of Consumption	41.1%	40.4%	18.4%

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



Note: 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - OCEB provided a tax-base rebate of 10% rebate on the total cost of electricity charges related to electricity consumption on eligible bills between 2011 and 2015.
- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).

- Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

- The following slides provide an overview of the programs currently available to different electricity consumer classes along with the cost shift associated with several of the programs:

Program	Consumer Type	Rate/Tax-based	Description
Northern Ontario Energy Credit	**Residential**	Tax	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year.
Ontario Energy and Property Tax Credit		Tax	Also delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families.
Ontario Electricity Support Program		Rate	Provides ongoing assistance directly on the bills of eligible low-income electricity consumers.
Rural or Remote Rate Protection		Rate	Provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
saveONenergy Conservation Programs (including Home Assistance Program for low income customers)		Rate	Delivered by LDCs which provide financial incentives for electricity-saving measures like LEDs, ENERGYSTAR certified ceiling fans, baseboard programmable thermostats, clotheslines, and advanced powerbars.
saveONenergy Conservation Programs (including Retrofit Program for Buildings and other programs)	**Commercial**	Rate	saveONenergy suite of electricity conservation programs for commercial customers offered by local distribution companies (LDCs) help businesses save energy to better manage their electricity consumption and reduce their annual electricity costs. See Appendix for more information.
Industrial Conservation Initiative	**Industrial**	Rate	Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills.
Industrial Accelerator Program		Rate	Provides financial incentives of up to $10 million to transmission-connected electricity consumers, to invest in energy-efficiency or self-generation which would reduce the amount of electricity withdrawn from the provincial grid.
Industrial Electricity Incentive		Rate	Provides reduced electricity rates for companies starting or expanding operations in Ontario.
Northern Industrial Electricity Rate Program		Tax	Provides $20 megawatt per hour (MWh) rebate for qualifying large northern industrial consumers.
Demand Response		Rate	Provides payments to businesses and industry to shift consumption at times when the electricity system is stressed. DR currently provides ~500 MW of capacity to the system.

Ontario has implemented several programs that have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial). The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

Cost Shift Impact	2011	2012	2013	2014	2015	2016
Residential Bill ($/month for 750 kWh)	3.55	4.07	3.85	4.46	5.68	6.55
Commercial – Class B ($/MWh)	4.74	5.43	5.14	5.94	7.57	8.73
Industrial – Class A ($/MWh)	-20.97	-25.26	-22.38	-24.68	-32.56	-31.55

Note: Negative values indicate a benefit; positive values denote an incremental charge.

A number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.

- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

he following information has been provided by the Ministry.

1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

Eligible for the 8% rebate (< 50 kW or < 250,000 kWh/year)	**Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year)
• Residential Regulated Price Plan consumers • Residential retail consumers • Multi-unit residential buildings and other facilities used as residential rental units • Long-term care homes and school residences • Regulated Price Plan eligible farms • Small businesses – Coffee / snack retailer – Convenience store – Apparel store – Hair salon – Small insurance office	• Class A consumers – Manufacturer – Large grocery store – Mines – Auto assembly plants • Class B consumers (except farms that have opted out of the Regulated Price Plan) – Commercial offices (low rise) – Hotel – General warehousing

2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:

- Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

	Benefit to New ICI Participants	**System Benefit**	**Financial Impact**	**Residential Bill Impact**
	Bill Savings	**Peak Demand Reduction (MW)**	**GA shifted to Class B ($M)**	
Short-term	Up to 21%	80	47	Increase of $0.42/month
Long-term	Up to 34%	165	82	Increase of $0.74/month

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110Mn in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

The following table identifies the illustrative impacts.

	Average Annual Fiscal Impact	Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact	Regulated Price Plan (Residential) Impact		Class B (Commercial) Impact	Class A (Industrial) Impact	
			Average (750 kWh/ month)	*Rural** (1000 kWh/ month)*		*Existing*	*New*
• 8% rebate to Regulated Price Plan consumers • ICI Expansion • RRRP Update • Proceeds Recycling	$1.0 billion	$270 million annually	-$10/ month (-6%)	-$45/ month (-20%)	-$1/MWh (-1%)	-$1/ MWh (-1%)	Up to -$52/MWh (-34%)

***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers)

APPENDIX E: PROPOSED POLICY MINUTE

CABINET AGREED THAT:

1. THE MINISTRY OF ENERGY (ENERGY), WITH SUPPORT FROM THE MINISTRY OF FINANCE (MOF), SHALL PREPARE LEGISLATION THAT WOULD PROVIDE AN EIGHT PERCENT (8%) REBATE ON THE PRE-TAX COST OF ELECTRICITY FOR THE FOLLOWING CLASSES OF CONSUMERS:
   A. ALL CONSUMERS ELIGIBLE TO BE BILLED UNDER THE ONTARIO ENERGY BOARD'S REGULATED PRICE PLAN; AND
   B. ANY OTHER CONSUMERS WHO WERE ELIGIBLE FOR FINANCIAL ASSISTANCE UNDER THE *ONTARIO CLEAN ENERGY BENEFIT ACT, 2010* (OCEBA) DURING THE PERIOD THAT PROGRAM WAS IN PLACE.

2. THE LEGISLATION SHALL BE GENERALLY MODELLED UPON THE OCEBA, AND WOULD INCLUDE THE FOLLOWING ELEMENTS:
   A. THE REBATE WOULD BE AVAILABLE STARTING JANUARY 1, 2017 AND BEFORE SUCH DATE AS MAY BE PRESCRIBED;
   B. THE REBATE WOULD NOT BE SUBJECT TO A CAP UNLESS A CAP IS PRESCRIBED;
   C. THE LEGISLATION WOULD SPECIFY THE TYPES OF COSTS TO WHICH THE REBATE WOULD OR WOULD NOT BE APPLIED, WITH AUTHORITY TO MAKE CHANGES BY REGULATION;
   D. THE LEGISLATION WOULD ADDRESS INVOICING REQUIREMENTS, INCLUDING AUTHORITY TO PRESCRIBE HOW THE REBATE IS TO APPEAR ON CONSUMER ELECTRICITY BILLS;
   E. THE LEGISLATION WOULD INCLUDE AUTHORITY TO PRESCRIBE THE WAY IN WHICH THE REBATE IS TO BE FLOWED THROUGH TO CONSUMERS, AND THE WAY IN WHICH ELECTRICITY VENDORS PROVIDING THE REBATE ARE TO BE REIMBURSED;
   F. THE LEGISLATION WOULD INCLUDE RECORD-KEEPING REQUIREMENTS FOR ELECTRICITY VENDORS AND ANY OTHER PRESCRIBED PERSONS; AND
   G. THE LEGISLATION WOULD INCLUDE INSPECTION POWERS FOR INSPECTORS APPOINTED BY THE MINISTER OF FINANCE, INCLUDING POWERS RELATED TO RECOVERY OF OVERPAYMENTS.
3. ENERGY AMEND O. REG. 429/04 (ADJUSTMENTS UNDER SECTION 25.33 OF THE ACT) MADE UNDER THE ELECTRICITY ACT, 1998 TO EXPAND ELIGIBILITY FOR CLASS A CONSUMERS AND CLASS A MARKET PARTICIPANTS UNDER THE INDUSTRIAL CONSERVATION INITIATIVE (ICI) TO ALL ELECTRICITY CONSUMERS AND MARKET PARTICIPANTS WITH A PEAK DEMAND ABOVE AN AVERAGE OF ONE MEGAWATT (1MW) WITH NO SECTORAL RESTRICTIONS ON PARTICIPATION.
4. ENERGY AMEND O. REG 442/01 (RURAL OR REMOTE ELECTRICITY RATE PROTECTION) MADE UNDER THE ONTARIO ENERGY BOARD ACT, 1998 TO INCREASE THE TOTAL AMOUNT OF RATE PROTECTION AVAILABLE TO LOW DENSITY HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE RATE PROTECTION PROGRAM BY $110 MILLION, EFFECTIVE JANUARY 1, 2017.
5. ENERGY CONSIDER AND, IF APPROPRIATE, UTILIZE A MECHANISM TO PERIODICALLY ADJUST THE TOTAL ANNUAL AMOUNT OF RATE PROTECTION AVAILABLE TO HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE ELECTRICITY RATE PROTECTION REGULATION / PROGRAM, EFFECTIVE JANUARY 1, 2018.
6. ENERGY TO RECYCLE UP TO AN AVERAGE OF $270 MILLION OF CAP AND TRADE AUCTION PROCEEDS FROM THE GREENHOUSE GAS REDUCTION ACCOUNT PER YEAR OVER THE FIRST COMPLIANCE PERIOD (2017-2020) TO COMMERCIAL AND INDUSTRIAL ELECTRICITY CONSUMERS.
7. ENERGY AND MOF TO WORK WITH CABINET OFFICE (CO) AND PREMIER'S OFFICE (PO) ON COMMUNICATIONS PLAN.

Tab 12

TREASURY BOARD / MANAGEMENT BOARD OF CABINET
REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	September 13, 2016
Agenda Class:	Major
Last reviewed by: N/A	**Tracking to:** Cabinet - September 14, 2016

SUBMISSION TITLE: Electricity Price Mitigation

FINALIZED ~~NO~~ MATERIALS NOT YET RECEIVED – BASED ON DRAFT POLICY SUBMISSION

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): – Providing a pre-tax 8% rebate to Regulated Price Plan consumers; – Expanding the Industrial Conservation Initiative; – Updating the Rural ~~and~~ or Remote Rate Protection program; and, – Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade (A 1% reduction in rates). Balance of proceeds, $60M, intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets. • Approve in principle an expenditure increase estimated at $261M in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund. [estimate subject to refinement from the Ministry] • Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement. • Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD). •	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	261.0	1006.0	1004.0
Initiative cost recommended	261.0	1006.0	1004.0
Recommended program base	261.0	1006.0	1004.0

Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives	0.0	60.0 (TBD)	60.0 (TBD)
Total Fiscal Impact	261.0	946.0	944.0

IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)
- Update the Rural ~~and~~ or Remote Rate Protection (RRRP) program, to provide relief to rural customers
- Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest (1%) reduction in rates

Public high-profile communications would coincide with introduction of legislation (September

2016). Currently, the 8% rebate would be available starting January 1, 2017 (it could be prescribed earlier), along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Recycling cap and trade proceeds would commence in 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

	Measure	Annual Impact	Targeted Recipients
Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)			
1.	8% Rebate to Regulated Price Plan	Fiscal $1B*	Residential, small business and small farms, and other small users
2a.	Use cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates. (Implementation details under development).	($270M) in cap and trade proceeds to offset $270M in costs of reducing rates by 1%. No Fiscal Impact	For the 2016 Budget, cap and trade proceeds were projected at $330M/year. See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M)
2b.	The 8% rebate above allows for a portion of cap and trade proceeds to be redirected to other GHG reduction initiatives already in the fiscal plan.	($60M)	Provides Fiscal Plan flexibility of $60M only if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions.
	Total Fiscal Impact	$946M	Matches Financial Summary on page 1 for 2017-18

* Annual numbers from ENERGY.

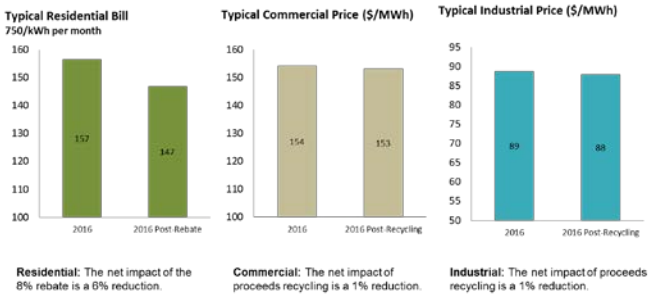
	Measure	Annual Impact	Targeted Recipients
Ratepayers cover the costs (No impact to the Province's Fiscal Plan)			
3	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors
4.	Updating Rural ~~and~~ or Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all

other electricity rate payers in Ontario.

The graphic from the Ministry on the following page highlights the bill impacts by electricity consumer class.



The residential net impact of the 8% rebate is a 6% reduction due to the costs of RRRP and ICI expansion being factored in after the 8% pre-tax rebate is calculated and applied. The original HST amount is then added in. The net benefit for residential is the 8% rebate less the cost of RRRP and ICI expansion.

Fiscal Impact

~~The most recent Electricity Price Mitigation Options deck notes that~~ "ENERGY estimates that proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year".

Commented [SK21]: Suggest deleting. We've received decks after this.

The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

$ millions	**2017**	**2018**	**2019**	**2020**
	1,003	1,014	975	1,049
Avg. 2017-20	1,010			

- On a fiscal year basis, the above estimates become:

$ millions	**2016-17**	**2017-18**	**2018-19**	**2019-20**
	261	1,006	1,004	994
3-Year Avg.	1,001			

The Ministry also indicates the current proposal would provide recycling of cap and trade proceeds to commercial and industrial consumers on a volumetric basis. This would require an estimated $60 million less per year in proceeds than previously estimated (i.e., providing fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan).

There are no details as this point if the $261M in 2016-17 would be offset from the Treasury Board Contingency Fund or provided through supplementary estimates.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to go beyond mitigating cap and trade impacts and provide a 1% bill impact (shown in the graphic at top of page 4).

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented (A bill mock-up is pending from the Ministry). The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and

effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural ~~and~~ or remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average cap and trade commitment. Also, the budget committed to offsetting the impact of cap and trade on industrial and commercial consumers, a 1% reduction is being proposed using cap and trade proceeds, which could be recycled elsewhere on GHG reduction initiatives.
- Reduction in electricity prices that does not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit).
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

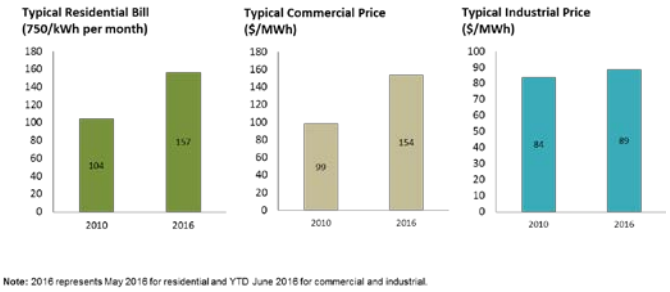
APPENDIX C: ELECTRICITY SECTOR BACKGROUND

The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

	Regulated Price Plan	Class B	Class A
Consumer Types	• Residential • Small Business • Farms	• Commercial • Institutional • Small industrial	• Large commercial • Large industrial
Load Size	Below 0.05 MW	Between 0.05 MW and 3 MW	Above 3 MW*
Total Consumption	58 TWh	57 TWh	26 TWh
Share of Consumption	41.1%	40.4%	18.4%

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



Note: 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - OCEB provided a tax-base rebate of 10% rebate on the total cost of electricity charges related to electricity consumption on eligible bills between 2011 and 2015.
- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).

- Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

- The following slides provide an overview of the programs currently available to different electricity consumer classes along with the cost shift associated with several of the programs:

Program	Consumer Type	Rate/Tax -based	Description
Northern Ontario Energy Credit	**Residential**	Tax	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year.
Ontario Energy and Property Tax Credit		Tax	Also delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families.
Ontario Electricity Support Program		Rate	Provides ongoing assistance directly on the bills of eligible low-income electricity consumers.
Rural or Remote Rate Protection		Rate	Provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
saveONenergy Conservation Programs (including Home Assistance Program for low income customers)		Rate	Delivered by LDCs which provide financial incentives for electricity-saving measures like LEDs, ENERGYSTAR certified ceiling fans, baseboard programmable thermostats, clotheslines, and advanced powerbars.
saveONenergy Conservation Programs (including Retrofit Program for Buildings and other programs)	**Commercial**	Rate	saveONenergy suite of electricity conservation programs for commercial customers offered by local distribution companies (LDCs) help businesses save energy to better manage their electricity consumption and reduce their annual electricity costs. See Appendix for more information.
Industrial Conservation Initiative	**Industrial**	Rate	Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills.
Industrial Accelerator Program		Rate	Provides financial incentives of up to $10 million to transmission-connected electricity consumers, to invest in energy-efficiency or self-generation which would reduce the amount of electricity withdrawn from the provincial grid.
Industrial Electricity Incentive		Rate	Provides reduced electricity rates for companies starting or expanding operations in Ontario.
Northern Industrial Electricity Rate Program		Tax	Provides $20 megawatt per hour (MWh) rebate for qualifying large northern industrial consumers.
Demand Response		Rate	Provides payments to businesses and industry to shift consumption at times when the electricity system is stressed. DR currently provides ~500 MW of capacity to the system.

Ontario has implemented several programs that have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial). The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

Cost Shift Impact	2011	2012	2013	2014	2015	2016
Residential Bill ($/month for 750 kWh)	3.55	4.07	3.85	4.46	5.68	6.55
Commercial – Class B ($/MWh)	4.74	5.43	5.14	5.94	7.57	8.73
Industrial – Class A ($/MWh)	-20.97	-25.26	-22.38	-24.68	-32.56	-31.55

Note: Negative values indicate a benefit; positive values denote an incremental charge.

A number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.

- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

he following information has been provided by the Ministry.

1. **Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

   The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

   - Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
   - An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

Eligible for the 8% rebate (< 50 kW or < 250,000 kWh/year)	**Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year)
• Residential Regulated Price Plan consumers • Residential retail consumers • Multi-unit residential buildings and other facilities used as residential rental units • Long-term care homes and school residences • Regulated Price Plan eligible farms • Small businesses – Coffee / snack retailer – Convenience store – Apparel store – Hair salon – Small insurance office	• Class A consumers – Manufacturer – Large grocery store – Mines – Auto assembly plants • Class B consumers (except farms that have opted out of the Regulated Price Plan) – Commercial offices (low rise) – Hotel – General warehousing

2. **Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

   Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

   ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:

   - Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
   - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
   - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

	Benefit to New ICI Participants	**System Benefit**	**Financial Impact**	**Residential Bill Impact**
	Bill Savings	**Peak Demand Reduction (MW)**	**GA shifted to Class B ($M)**	
Short-term	Up to 21%	80	47	Increase of $0.42/month
Long-term	Up to 34%	165	82	Increase of $0.74/month

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110Mn in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

The following table identifies the illustrative impacts.

	Average Annual Fiscal Impact	Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact	Regulated Price Plan (Residential) Impact		Class B (Commercial) Impact	Class A (Industrial) Impact	
			Average (750 kWh/ month)	*Rural** (1000 kWh/ month)*		*Existing*	*New*
• 8% rebate to Regulated Price Plan consumers • ICI Expansion • RRRP Update • Proceeds Recycling	$1.0 billion	$270 million annually	-$10/ month (-6%)	-$45/ month (-20%)	-$1/MWh (-1%)	-$1/ MWh (-1%)	Up to -$52/MWh (-34%)

***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers)

APPENDIX E: PROPOSED POLICY MINUTE

CABINET AGREED THAT:

1. THE MINISTRY OF ENERGY (ENERGY), WITH SUPPORT FROM THE MINISTRY OF FINANCE (MOF), SHALL PREPARE LEGISLATION THAT WOULD PROVIDE AN EIGHT PERCENT (8%) REBATE ON THE PRE-TAX COST OF ELECTRICITY FOR THE FOLLOWING CLASSES OF CONSUMERS:
   A. ALL CONSUMERS ELIGIBLE TO BE BILLED UNDER THE ONTARIO ENERGY BOARD'S REGULATED PRICE PLAN; AND
   B. ANY OTHER CONSUMERS WHO WERE ELIGIBLE FOR FINANCIAL ASSISTANCE UNDER THE *ONTARIO CLEAN ENERGY BENEFIT ACT, 2010* (OCEBA) DURING THE PERIOD THAT PROGRAM WAS IN PLACE.

2. THE LEGISLATION SHALL BE GENERALLY MODELLED UPON THE OCEBA, AND WOULD INCLUDE THE FOLLOWING ELEMENTS:
   A. THE REBATE WOULD BE AVAILABLE STARTING JANUARY 1, 2017 AND BEFORE SUCH DATE AS MAY BE PRESCRIBED;
   B. THE REBATE WOULD NOT BE SUBJECT TO A CAP UNLESS A CAP IS PRESCRIBED;
   C. THE LEGISLATION WOULD SPECIFY THE TYPES OF COSTS TO WHICH THE REBATE WOULD OR WOULD NOT BE APPLIED, WITH AUTHORITY TO MAKE CHANGES BY REGULATION;
   D. THE LEGISLATION WOULD ADDRESS INVOICING REQUIREMENTS, INCLUDING AUTHORITY TO PRESCRIBE HOW THE REBATE IS TO APPEAR ON CONSUMER ELECTRICITY BILLS;
   E. THE LEGISLATION WOULD INCLUDE AUTHORITY TO PRESCRIBE THE WAY IN WHICH THE REBATE IS TO BE FLOWED THROUGH TO CONSUMERS, AND THE WAY IN WHICH ELECTRICITY VENDORS PROVIDING THE REBATE ARE TO BE REIMBURSED;
   F. THE LEGISLATION WOULD INCLUDE RECORD-KEEPING REQUIREMENTS FOR ELECTRICITY VENDORS AND ANY OTHER PRESCRIBED PERSONS; AND
   G. THE LEGISLATION WOULD INCLUDE INSPECTION POWERS FOR INSPECTORS APPOINTED BY THE MINISTER OF FINANCE, INCLUDING POWERS RELATED TO RECOVERY OF OVERPAYMENTS.
3. ENERGY AMEND O. REG. 429/04 (ADJUSTMENTS UNDER SECTION 25.33 OF THE ACT) MADE UNDER THE ELECTRICITY ACT, 1998 TO EXPAND ELIGIBILITY FOR CLASS A CONSUMERS AND CLASS A MARKET PARTICIPANTS UNDER THE INDUSTRIAL CONSERVATION INITIATIVE (ICI) TO ALL ELECTRICITY CONSUMERS AND MARKET PARTICIPANTS WITH A PEAK DEMAND ABOVE AN AVERAGE OF ONE MEGAWATT (1MW) WITH NO SECTORAL RESTRICTIONS ON PARTICIPATION.
4. ENERGY AMEND O. REG 442/01 (RURAL OR REMOTE ELECTRICITY RATE PROTECTION) MADE UNDER THE ONTARIO ENERGY BOARD ACT, 1998 TO INCREASE THE TOTAL AMOUNT OF RATE PROTECTION AVAILABLE TO LOW DENSITY HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE RATE PROTECTION PROGRAM BY $110 MILLION, EFFECTIVE JANUARY 1, 2017.
5. ENERGY CONSIDER AND, IF APPROPRIATE, UTILIZE A MECHANISM TO PERIODICALLY ADJUST THE TOTAL ANNUAL AMOUNT OF RATE PROTECTION AVAILABLE TO HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE ELECTRICITY RATE PROTECTION REGULATION / PROGRAM, EFFECTIVE JANUARY 1, 2018.
6. ENERGY TO RECYCLE UP TO AN AVERAGE OF $270 MILLION OF CAP AND TRADE AUCTION PROCEEDS FROM THE GREENHOUSE GAS REDUCTION ACCOUNT PER YEAR OVER THE FIRST COMPLIANCE PERIOD (2017-2020) TO COMMERCIAL AND INDUSTRIAL ELECTRICITY CONSUMERS.
7. ENERGY AND MOF TO WORK WITH CABINET OFFICE (CO) AND PREMIER'S OFFICE (PO) ON COMMUNICATIONS PLAN.

TREASURY BOARD / MANAGEMENT BOARD OF CABINET REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	September 13, 2016
Agenda Class:	Major
Last reviewed by: N/A	**Tracking to:** Cabinet - September 14, 2016

SUBMISSION TITLE:	Electricity Price Mitigation

NO MATERIALS RECEIVED –BASED ON DRAFT POLICY SUBMISSION

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): – Providing a pre-tax 8% rebate to Regulated Price Plan consumers; – Expanding the Industrial Conservation Initiative; – Updating the Rural and Remote Rate Protection program; and, – Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade (A 1% reduction in rates). Balance of proceeds, $60M, intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets. • Approve in principle an expenditure increase estimated at $261M in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund. [estimate subject to refinement from the Ministry] • Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement. • Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD). •	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	261.0	1006.0	1004.0
Initiative cost recommended	261.0	1006.0	1004.0
Recommended program base	261.0	1006.0	1004.0
Offset Recommended – Applies if cap and trade proceeds	0.0	60.0 (TBD)	60.0 (TBD)

diverted to in-plan initiatives			
Total Fiscal Impact	261.0	946.0	944.0

IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)
- Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers
- Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest (1%) reduction in rates

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017 (it could be

prescribed earlier), along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Recycling cap and trade proceeds would commence in 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

	Measure	Annual Impact	Targeted Recipients
Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)			
1.	8% Rebate to Regulated Price Plan	Fiscal $1B*	Residential, small business and small farms, and other small users
2a.	Use cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates. (Implementation details under development).	($270M) in cap and trade proceeds to offset $270M in costs of reducing rates by 1%. No Fiscal Impact	For the 2016 Budget, cap and trade proceeds were projected at $330M/year. See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M)
2b.	The 8% rebate above allows for a portion of cap and trade proceeds to be redirected to other GHG reduction initiatives already in the fiscal plan.	($60M)	Provides Fiscal Plan flexibility of $60M only if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions.
	Total Fiscal Impact	$946M	Matches Financial Summary on page 1 for 2017-18

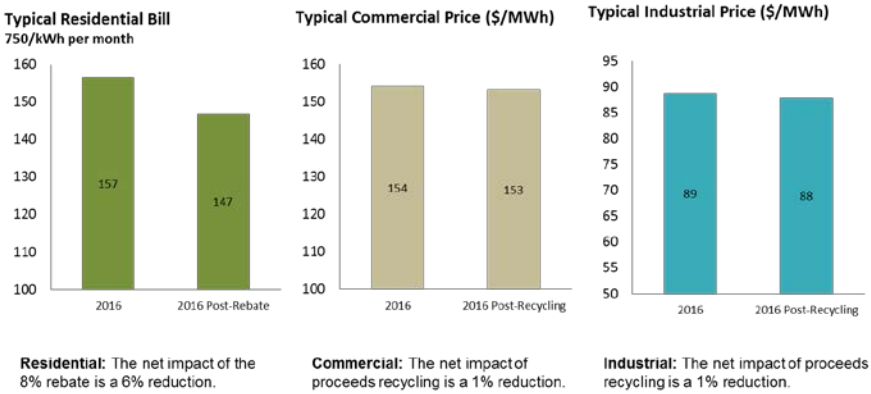
* Annual numbers from ENERGY.

	Measure	Annual Impact	Targeted Recipients
Ratepayers cover the costs (No impact to the Province's Fiscal Plan)			
3	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors
4.	Updating Rural and Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

The graphic from the Ministry on the following page highlights the bill impacts by electricity consumer class.



The residential net impact of the 8% rebate is a 6% reduction due to the costs of RRRP and ICI expansion being factored in after the 8% pre-tax rebate is calculated and applied. The original HST amount is then added in. The net benefit for residential is the 8% rebate less the cost of RRP and ICI expansion.

Fiscal Impact

The most recent Electricity Price Mitigation Options deck notes that "proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year".

The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

$ millions	**2017**	**2018**	**2019**	**2020**
	1,003	1,014	975	1,049
Avg. 2017-20	1,010			

- On a fiscal year basis, the above estimates become:

$ millions	**2016-17**	**2017-18**	**2018-19**	**2019-20**
	261	1,006	1,004	994
3-Year Avg.	1,001			

The Ministry also indicates the current proposal would provide recycling of cap and trade proceeds to commercial and industrial consumers on a volumetric basis. This would require an estimated $60 million less per year in proceeds than previously estimated (i.e., providing fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan).

There are no details as this point if the $261M in 2016-17 would be offset from the Treasury Board Contingency Fund or provided through supplementary estimates.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on

average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to go beyond mitigating cap and trade impacts and provide a 1% bill impact (shown in the graphic at top of page 4).

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates will consult with LDCs (possibly through Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented (A bill mock-up is pending from the Ministry). The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are

subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

<u>Other Considerations</u>

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average cap and trade commitment. Also, the budget committed to offsetting the impact of cap an trade on industrial and commercial consumers, a 1% reduction is being proposed using cap and trade proceeds, which could be recycled elsewhere on GHG reduction initiatives.
- Reduction in electricity prices that does not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit).
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

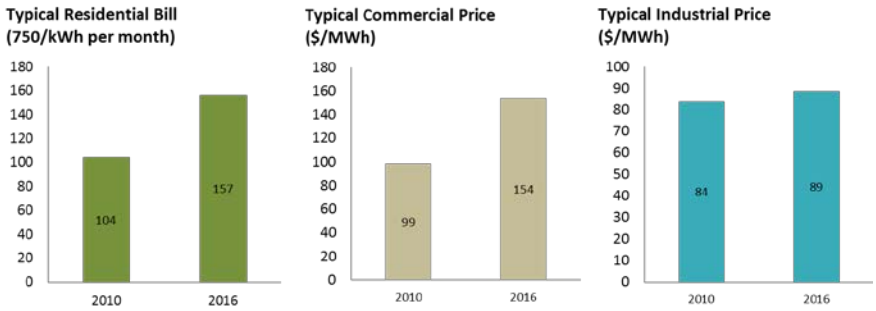
APPENDIX C: ELECTRICITY SECTOR BACKGROUND

The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

	Regulated Price Plan	Class B	Class A
Consumer Types	• Residential • Small Business • Farms	• Commercial • Institutional • Small industrial	• Large commercial • Large industrial
Load Size	Below 0.05 MW	Between 0.05 MW and 3 MW	Above 3 MW*
Total Consumption	58 TWh	57 TWh	26 TWh
Share of Consumption	41.1%	40.4%	18.4%

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



Note: 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - OCEB provided a tax-base rebate of 10% rebate on the total cost of electricity charges related to electricity consumption on eligible bills between 2011 and 2015.
- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).

- Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

- The following slides provide an overview of the programs currently available to different electricity consumer classes along with the cost shift associated with several of the programs:

Program	Consumer Type	Rate/Tax-based	Description
Northern Ontario Energy Credit	**Residential**	Tax	Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year.
Ontario Energy and Property Tax Credit		Tax	Also delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families.
Ontario Electricity Support Program		Rate	Provides ongoing assistance directly on the bills of eligible low-income electricity consumers.
Rural or Remote Rate Protection		Rate	Provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
saveONenergy Conservation Programs (including Home Assistance Program for low income customers)		Rate	Delivered by LDCs which provide financial incentives for electricity-saving measures like LEDs, ENERGYSTAR certified ceiling fans, baseboard programmable thermostats, clotheslines, and advanced powerbars.
saveONenergy Conservation Programs (including Retrofit Program for Buildings and other programs)	**Commercial**	Rate	saveONenergy suite of electricity conservation programs for commercial customers offered by local distribution companies (LDCs) help businesses save energy to better manage their electricity consumption and reduce their annual electricity costs. See Appendix for more information.
Industrial Conservation Initiative	**Industrial**	Rate	Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills.
Industrial Accelerator Program		Rate	Provides financial incentives of up to $10 million to transmission-connected electricity consumers, to invest in energy-efficiency or self-generation which would reduce the amount of electricity withdrawn from the provincial grid.
Industrial Electricity Incentive		Rate	Provides reduced electricity rates for companies starting or expanding operations in Ontario.
Northern Industrial Electricity Rate Program		Tax	Provides $20 megawatt per hour (MWh) rebate for qualifying large northern industrial consumers.
Demand Response		Rate	Provides payments to businesses and industry to shift consumption at times when the electricity system is stressed. DR currently provides ~500 MW of capacity to the system.

Ontario has implemented several programs that have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial). The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

Cost Shift Impact	2011	2012	2013	2014	2015	2016
Residential Bill ($/month for 750 kWh)	3.55	4.07	3.85	4.46	5.68	6.55
Commercial – Class B ($/MWh)	4.74	5.43	5.14	5.94	7.57	8.73
Industrial – Class A ($/MWh)	-20.97	-25.26	-22.38	-24.68	-32.56	-31.55

Note: Negative values indicate a benefit; positive values denote an incremental charge.

A number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.

- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

he following information has been provided by the Ministry.

1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

Eligible for the 8% rebate (< 50 kW or < 250,000 kWh/year)	**Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year)
• Residential Regulated Price Plan consumers • Residential retail consumers • Multi-unit residential buildings and other facilities used as residential rental units • Long-term care homes and school residences • Regulated Price Plan eligible farms • Small businesses – Coffee / snack retailer – Convenience store – Apparel store – Hair salon – Small insurance office	• Class A consumers – Manufacturer – Large grocery store – Mines – Auto assembly plants • Class B consumers (except farms that have opted out of the Regulated Price Plan) – Commercial offices (low rise) – Hotel – General warehousing

2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:

- Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short-term	Up to 21%	80	47	Increase of $0.42/month
Long-term	Up to 34%	165	82	Increase of $0.74/month

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110Mn in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

The following table identifies the illustrative impacts.

	Average Annual Fiscal Impact	Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact	Regulated Price Plan (Residential) Impact		Class B (Commercial) Impact	Class A (Industrial) Impact	
			Average (750 kWh/ month)	*Rural** (1000 kWh/ month)*		*Existing*	*New*
• 8% rebate to Regulated Price Plan consumers • ICI Expansion • RRRP Update • Proceeds Recycling	$1.0 billion	$270 million annually	-$10/ month (-6%)	-$45/ month (-20%)	-$1/MWh (-1%)	-$1/ MWh (-1%)	Up to -$52/MWh (-34%)

***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers)

APPENDIX E: PROPOSED POLICY MINUTE

CABINET AGREED THAT:

1. THE MINISTRY OF ENERGY (ENERGY), WITH SUPPORT FROM THE MINISTRY OF FINANCE (MOF), SHALL PREPARE LEGISLATION THAT WOULD PROVIDE AN EIGHT PERCENT (8%) REBATE ON THE PRE-TAX COST OF ELECTRICITY FOR THE FOLLOWING CLASSES OF CONSUMERS:
   A. ALL CONSUMERS ELIGIBLE TO BE BILLED UNDER THE ONTARIO ENERGY BOARD'S REGULATED PRICE PLAN; AND
   B. ANY OTHER CONSUMERS WHO WERE ELIGIBLE FOR FINANCIAL ASSISTANCE UNDER THE *ONTARIO CLEAN ENERGY BENEFIT ACT, 2010* (OCEBA) DURING THE PERIOD THAT PROGRAM WAS IN PLACE.

2. THE LEGISLATION SHALL BE GENERALLY MODELLED UPON THE OCEBA, AND WOULD INCLUDE THE FOLLOWING ELEMENTS:
   A. THE REBATE WOULD BE AVAILABLE STARTING JANUARY 1, 2017 AND BEFORE SUCH DATE AS MAY BE PRESCRIBED;
   B. THE REBATE WOULD NOT BE SUBJECT TO A CAP UNLESS A CAP IS PRESCRIBED;
   C. THE LEGISLATION WOULD SPECIFY THE TYPES OF COSTS TO WHICH THE REBATE WOULD OR WOULD NOT BE APPLIED, WITH AUTHORITY TO MAKE CHANGES BY REGULATION;
   D. THE LEGISLATION WOULD ADDRESS INVOICING REQUIREMENTS, INCLUDING AUTHORITY TO PRESCRIBE HOW THE REBATE IS TO APPEAR ON CONSUMER ELECTRICITY BILLS;
   E. THE LEGISLATION WOULD INCLUDE AUTHORITY TO PRESCRIBE THE WAY IN WHICH THE REBATE IS TO BE FLOWED THROUGH TO CONSUMERS, AND THE WAY IN WHICH ELECTRICITY VENDORS PROVIDING THE REBATE ARE TO BE REIMBURSED;
   F. THE LEGISLATION WOULD INCLUDE RECORD-KEEPING REQUIREMENTS FOR ELECTRICITY VENDORS AND ANY OTHER PRESCRIBED PERSONS; AND
   G. THE LEGISLATION WOULD INCLUDE INSPECTION POWERS FOR INSPECTORS APPOINTED BY THE MINISTER OF FINANCE, INCLUDING POWERS RELATED TO RECOVERY OF OVERPAYMENTS.
3. ENERGY AMEND O. REG. 429/04 (ADJUSTMENTS UNDER SECTION 25.33 OF THE ACT) MADE UNDER THE ELECTRICITY ACT, 1998 TO EXPAND ELIGIBILITY FOR CLASS A CONSUMERS AND CLASS A MARKET PARTICIPANTS UNDER THE INDUSTRIAL CONSERVATION INITIATIVE (ICI) TO ALL ELECTRICITY CONSUMERS AND MARKET PARTICIPANTS WITH A PEAK DEMAND ABOVE AN AVERAGE OF ONE MEGAWATT (1MW) WITH NO SECTORAL RESTRICTIONS ON PARTICIPATION.
4. ENERGY AMEND O. REG 442/01 (RURAL OR REMOTE ELECTRICITY RATE PROTECTION) MADE UNDER THE ONTARIO ENERGY BOARD ACT, 1998 TO INCREASE THE TOTAL AMOUNT OF RATE PROTECTION AVAILABLE TO LOW DENSITY HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE RATE PROTECTION PROGRAM BY $110 MILLION, EFFECTIVE JANUARY 1, 2017.
5. ENERGY CONSIDER AND, IF APPROPRIATE, UTILIZE A MECHANISM TO PERIODICALLY ADJUST THE TOTAL ANNUAL AMOUNT OF RATE PROTECTION AVAILABLE TO HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE ELECTRICITY RATE PROTECTION REGULATION / PROGRAM, EFFECTIVE JANUARY 1, 2018.
6. ENERGY TO RECYCLE UP TO AN AVERAGE OF $270 MILLION OF CAP AND TRADE AUCTION PROCEEDS FROM THE GREENHOUSE GAS REDUCTION ACCOUNT PER YEAR OVER THE FIRST COMPLIANCE PERIOD (2017-2020) TO COMMERCIAL AND INDUSTRIAL ELECTRICITY CONSUMERS.
7. ENERGY AND MOF TO WORK WITH CABINET OFFICE (CO) AND PREMIER'S OFFICE (PO) ON COMMUNICATIONS PLAN.

Ontario

TREASURY BOARD / MANAGEMENT BOARD OF CABINET REQUEST ASSESSMENT NOTE

Ministry:	Energy
Meeting Date:	September 12, 2016
Agenda Class:	Major
Last reviewed by: N/A	**Tracking to:** Cabinet - September 12, 2016

SUBMISSION TITLE: Electricity Price Mitigation

NO MATERIALS RECEIVED –BASED ON DRAFT POLICY SUBMISSION

I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

II. RECOMMENDATIONS:

• Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval): – Providing a pre-tax 8% rebate to Regulated Price Plan consumers; – Expanding the Industrial Conservation Initiative; – Updating the Rural and Remote Rate Protection program; and, – Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds, $60M, intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets. • Approve $300M in Supplementary Estimates for electricity price mitigation. • Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives • Recommend proceeding to Cabinet with the proposed legislation amendments to existing regulations to implement the initiatives.	*Board Judgment*

III. FINANCIAL SUMMARY

$ Millions	**2016-17**	**2017-18**	**2018-19**
Initiative cost requested	300.0	1006.0	1004.0
Initiative cost recommended	300.0	1006.0	1004.0
Recommended program base	300.0	1006.0	1004.0
Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives	0.0	(60.0)	(60.0)
Total Fiscal Impact	300.0	946.0	944.0

IV. Key Comments and Considerations

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial).
- Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to

implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

	Measure	Annual Impact	Targeted Recipients
Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)			
1.	8% Rebate to Regulated Price Plan	Fiscal $1B*	Residential, small business and small farms, and other small users
2a.	Use cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates. (Implementation details under development).	($270M) in cap and trade proceeds to offset $270M in costs of reducing rates No Fiscal Impact	For the 2016 Budget, cap and trade proceeds were projected at $330M/year. See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M)
2b.	The 8% rebate above allows for a portion of cap and trade proceeds to be redirected to other GHG reduction initiatives already in the fiscal plan.	($60M)	Provides fiscal plan flexibility of $60M only if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions.
	Total Fiscal Impact	$946M	Matches Financial Summary on page 1 for 2017-18

* Annual numbers from ENERGY.

	Measure	Annual Impact	Targeted Recipients
Ratepayers cover the costs (No impact to the Province's Fiscal Plan)			
3	Expanding ICI eligibility to customers above 1MW in all sectors	Rate base ($47M/$82M)**	Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors
4.	Updating Rural and Remote Rate Protection	Rate base ($110M)	Residents in rural or remote locations: Hydro One's lowest-density R2 customers.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

The follow table from the Ministry highlights the benefits by electricity consumer class.

	Average Annual Fiscal Impact	Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact	Regulated Price Plan (Residential) Benefit		Class B (Commercial) Benefit	Class A (Industrial) Benefit	
			Average (750 kWh/ month)	*Rural*** (1000 kWh/ month)*		*Existing*	*New*
• 8% rebate to Regulated Price Plan eligible consumers • ICI Expansion • RRRP Update • Proceeds Recycling	$1.0 billion annually	$0.27 billion annually (Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment)	-$11/ month (-8%)	-$45/ month (-20%)	-$3/MWh (-2%)	-$3/ MWh (-3%)	Up to -$52/MWh (-34%)

- **Notes:** The above benefits do not include the cost of ICI expansion, and the RRRP update (total impact of $1.74/MWh).

- The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Proceeds recycling is an estimated average over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year.

The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by

The Ministry also indicates the current proposal would provide recycling of cap and trade proceeds to commercial and industrial consumers on a volumetric basis. This would require an estimated $60 million less per year in proceeds than previously estimated (i.e., providing fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan).

The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction to maintain the incentive to shift consumption from on-peak to off-peak hours.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates will consult with LDCs (possibly through Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented (A bill mock-up is pending from the Ministry). The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be

characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. Also, the budget committed to offsetting the impact of cap an trade on industrial and commercial consumers, a modest rate reduction is being proposed using cap and trade proceeds, which could be invested elsewhere on GHG reduction initiatives.
- Reduction in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2004.

c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

a) Approve:

1. The creation of a new item entitled "Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

2. The creation of a new Transfer Payment entitled "Rebate for Electricity Consumers", with a placeholder amount of $1,000 in Rebate for Electricity Consumers (Vote/Item 2905-3).

3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Note future year impacts of $1,006,000,000 in 2017-18 and $1,004,000,000 in 2018-19 and ongoing.

2. Note that the above will be implemented through Supplementary Estimates in the Fall of 2016.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review Renewal and Transformation on updated future year impacts.

iv) Note the proposed use of Cap and Trade proceeds:

a) As part of the Climate Change Action Plan, Treasury Board/Management Board of Cabinet approved-in-principle potential investment of cap and trade proceeds, including up to $1,320,000,000, from 2017-18 to 2020-21, to eliminate carbon price impacts/ grid emission reductions to ratepayers.

b) The Ministry of Energy to work with the Ministry of the Environment and Climate Change to invest an estimated amount of up to $1,080,000,000, from 2017-18 to 2020-21, of Cap and Trade auction proceeds for non- Regulated Price Plan commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

c) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan that reduce greenhouse gas emissions.

In this regard:

1) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21, which was allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support

through the Rural and Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with the Premier's Office and Cabinet Office on the development and implementation of an integrated communications strategy.

APPENDIX B: FINANCIAL TABLES

APPENDIX C: ELECTRICITY SECTOR BACKGROUND

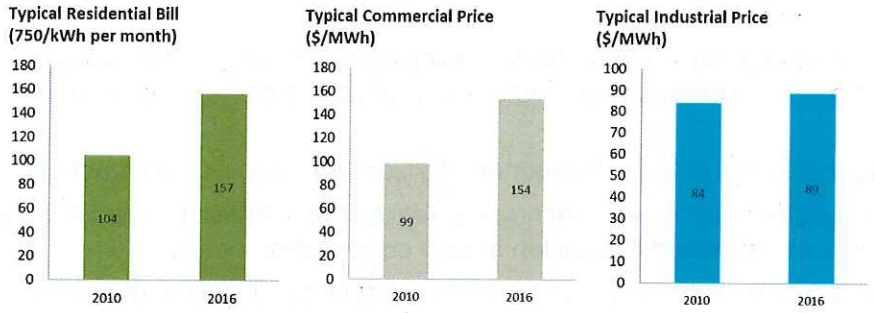
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

	Regulated Price Plan	Class B	Class A
Consumer Types	• Residential • Small Business • Farms	• Commercial • Institutional • Small industrial	• Large commercial • Large industrial
Load Size	Below 0.05 MW	Between 0.05 MW and 3 MW	Above 3 MW*
Total Consumption	58 TWh	57 TWh	26 TWh
Share of Consumption	41.1%	40.4%	18.4%

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



Note: 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

- The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

Cost Shift Impact	2011	2012	2013	2014	2015	2016
Residential Bill ($/month for 750 kWh)	3.55	4.07	3.85	4.46	5.68	6.55
Commercial – Class B ($/MWh)	4.74	5.43	5.14	5.94	7.57	8.73
Industrial – Class A ($/MWh)	-20.97	-25.26	-22.38	-24.68	-32.56	-31.55

Note: Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

1. **Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

   The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

   - Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
   - An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

Eligible for the 8% rebate (< 50 kW or < 250,000 kWh/year)	**Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year)

• Residential Regulated Price Plan consumers
• Residential retail consumers
• Multi-unit residential buildings and other facilities used as residential rental units
• Long-term care homes and school residences
• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)
• Small businesses
  - Coffee / snack retailer
  - Convenience store
  - Apparel store
  - Hair salon
  - Small insurance office
	• Class A consumers
	  - Manufacturer
	  - Large grocery store
	  - Mines
	  - Auto assembly plants
	• Class B consumers
	  - Commercial offices (low rise)
	  - Hotel
	  - General warehousing

2. **Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

   Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

   ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

   - Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
   - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
   - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

	Benefit to New ICI Participants	System Benefit	Financial Impact	Residential Bill Impact
	Bill Savings	Peak Demand Reduction (MW)	GA shifted to Class B ($M)	
Short-term	Up to 21%	80	47	Increase of $0.42/month
Long-term	Up to 34%	165	82	Increase of $0.74/month

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110Mn in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

APPENDIX E: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

	Current Bill (after cost of new programs, before tax)	Current Rate mitigation initiatives*	New Rate Mitigation initiatives	New Bill (after cost of new programs, before tax)
Average Residential (Toronto – 750 kWh/month)	$140 /month	N/A	8% pre-tax rebate: - $11	$129 /month
Rural Residential (Hydro One R2 – 1000 kWh/month)	$231 /month	RRRP: –$32	8% pre-tax rebate + Updated RRRP: - $45	$186 /month
Low-income Residential ** (Toronto – 750 kWh/month)	$102 /month	OESP: -$38	8% pre-tax rebate: - $8	$94 /month
Small Business (Toronto – 403,200 kWh/month)	$150 /MWh	N/A	8% pre-tax rebate: - $12/MWh	$138 /MWh
Small Farm (Hydro One R1 – 4,000 kWh/month)	$204 /MWh	N/A	8% pre-tax rebate: - $16/MWh	$188 /MWh

* **Note:** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

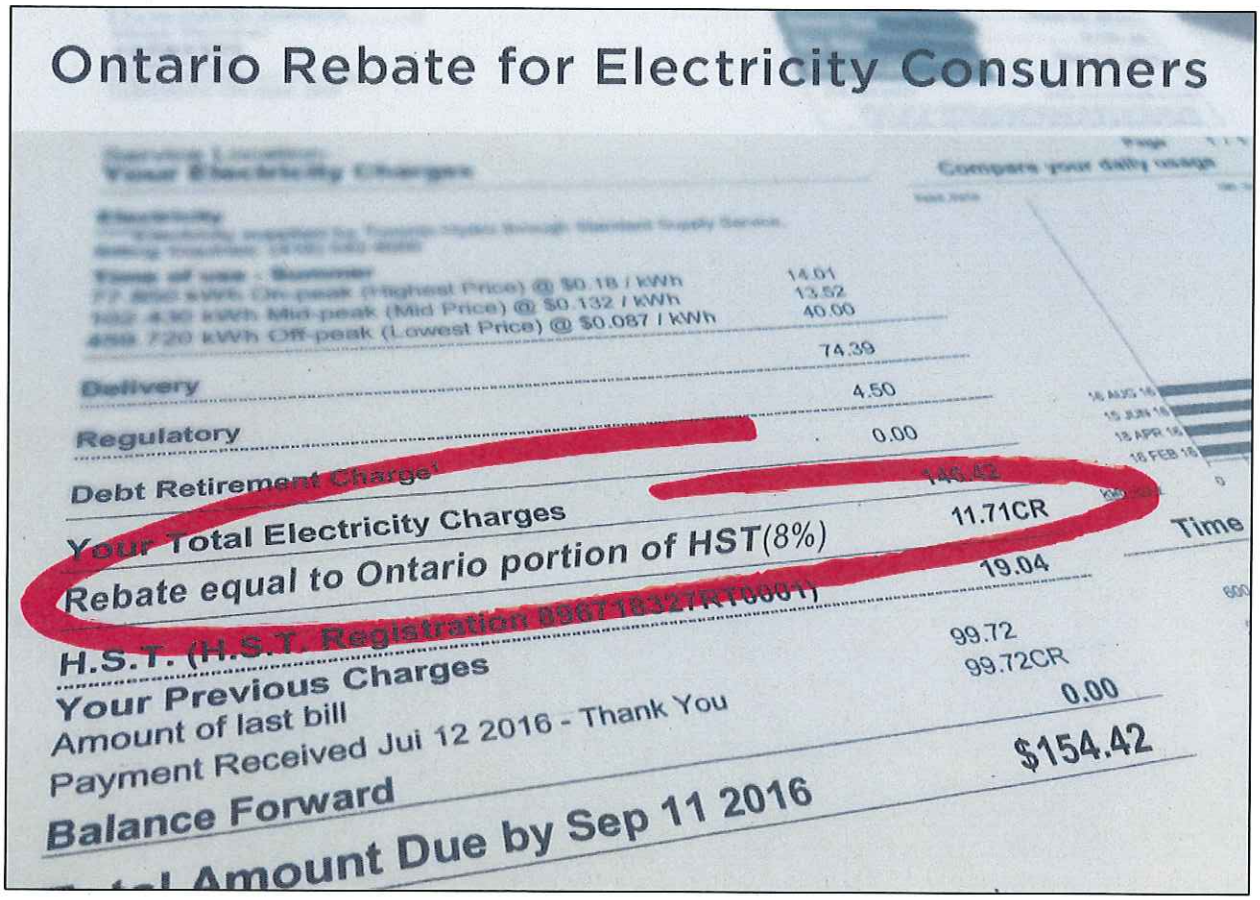
Totals may not add due to rounding.

	Current Rate	Current Rate mitigation initiatives*	Cost of new initiatives (RRRP and ICI)	New Rate Mitigation initiatives	Net Impact,	New Rate,
Large Institutional (Toronto – distribution-connected, 10 MW)	$108 /MWh	ICI: -$49/MWh	$1.74 /MWh	Proceeds Recycling: -$2.60/MWh (2017-2020 average)	-$0.90 /MWh (-1%)	$107 /MWh
Large Industrial (Timmins – transmission-connected, 10 MW)	$69 /MWh	ICI + NIERP: -$69/MWh	$1.74 /MWh	Proceeds Recycling: -$2.60/MWh	-$0.90 /MWh (-1%)	$68 /MWh
Small Industrial – opt-in to ICI (Toronto – 2 MW)	$152 /MWh	N/A	$1.74 /MWh	Proceeds Recycling + ICI: -$53.90/MWh	-$52 /MWh (-34%)	$100 /MWh
Large Commercial – does not opt-in to ICI (Toronto – 2 MW)	$152 /MWh	N/A	$1.74 /MWh	Proceeds Recycling: -$2.60/MWh	-$0.90 /MWh (-1%)	$151 /MWh
Small Institutional (Toronto – 500 kw)	$154 /MWh	N/A	$1.74 /MWh	Proceeds Recycling: -$2.60/MWh	-$0.90 /MWh	$153 /MWh

Notes:

1) There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI, proceeds recycling).
2) The impact of cap and trade would not be added to electricity bills until 2017 and varies per year over the course of the first compliance period. For illustrative purposes, the estimated average benefit of proceeds recycling is shown above.

APPENDIX E: ILLUSTRATIVE BILL MOCK-UP



Note: Final bill presentment pending submission to LRC.

Attachment 1: OEPTC Data for Electricity Finance Branch.xlsx

Hi Shajee

Please find attached the OEPTC figures that you requested. Sorry for the delay in getting back to you.

If you have any questions, please let us know.

Michael

Subject: OEPTC

Hi Michael,

Don't think we've met before, I work in the Electricity Finance Branch at the OFA. I got your name from Bruno.

We're updating some decks, and were wondering if you would be able to provide actual and forecasted numbers for the costs of the Ontario Energy Property Tax Credit (OEPTC).

In particular we're interested in the Energy component. If it's broken down even further by components electricity vs other forms of energy, that would be even better, but our past data wasn't broken down to that fine level of detail.

Happy to chat further about this request if you'd like.

Thanks,
Shajee

Re: Changes in Eligibility for the Regulated Price Plan ("RPP")
Board File No. EB-2009-0317

As of November 1, 2009, the consumers eligible for the RPP will change as per Ontario Regulation 95/05 — *Classes of Consumers and Determination of Rate*s (made under the *Ontario Energy Board Act, 1998*) (altogether, the "Regulation"). A complete list of which consumers are still eligible for the RPP can be found in the above noted Regulation.

As a group, the consumers that will cease to be eligible for the RPP on November 1, 2009 are the "designated consumers". The term "designated consumers" is defined in section 56 of the *Ontario Energy Board Act, 1998* and includes the MUSH sector (i.e., municipalities, universities, schools, and hospitals). While "designated consumers" are no longer eligible as a group, some of those consumers may still be eligible for the RPP under the other eligibility provisions of the Regulation. For the list of the provisions under which consumers will be eligible for the RPP after November 1, 2009, please see Appendix A.

The Board expects distributors to ensure, in a timely manner, that their affected customers are informed of the forthcoming changes to their electricity pricing. The Board also expects distributors to assist their affected customers in understanding the implications of the forthcoming changes to their electricity pricing. Distributors are expected to provide the affected consumers with information regarding: the pricing that the consumer will be subject to based on the consumer's metering and the final settlement variance the consumer would be subject to. Distributors are also expected to inform affected consumers of their option to request an interval meter, if they do not currently have one, for the purpose of receiving the hourly Ontario energy price.

To that end, the Board is requiring distributors to file a report with the Board confirming that the distributors have notified all of their affected customers of the upcoming

change. The distributors' reports must include information on what steps the distributor took in order to notify their affected customers, and should include a sample of any written communications provided to consumers. The reports must be filed with the Board no later than September 9, 2009. The subject line should state: "[Distributor Name]: Report on Notification re Eligibility for the Regulated Price Plan".

Parties must file two paper copies and one electronic copy. The electronic copy should be in searchable Adobe Acrobat (PDF), and be filed through the Board's web portal at www.errr.oeb.gov.on.ca. If the Board's web portal is not available, electronic copies of submissions may be filed by e-mail to boardsec@oeb.gov.on.ca, or on a CD. All submissions must quote file number **EB-2009-0317,** include your name, address, e-mail address, telephone number, and fax number and be received by the Board Secretary by **4:45 pm** on the required date.

The IESO has developed a number of consumer information tools in order to assist distributors. The Board encourages distributors to make use of these materials. The IESO's consumer information pamphlet is available at http://www.ieso.ca/imoweb/pubs/bi/public-sector-2009.pdf.

Should a distributor have questions regarding this matter, they are encouraged to direct those questions to the Market Operations hotline at market.operations@oeb.gov.on.ca.

Yours truly

Original Signed By

Kirsten Walli
Board Secretary

Appendix A

Ontario Regulation 95/05

Classes of Consumers and Determination of Rates

Definitions

1. In this Regulation,

"generation station service" has the same meaning as in the market rules;

"interval meter" means a meter that measures and records electricity use on at least an hourly basis or a time-of-use meter that is capable of providing data on at least an hourly basis. O. Reg. 95/05, s. 1.

2., **3.** Revoked: O. Reg. 58/08, s. 1.

Class of consumers, s. 79.16

4. (1) Before November 1, 2009, the following are prescribed as the class of consumers for the purposes of subsection 79.16 (1) of the Act:

1. Designated consumers.

2. Low-volume consumers. O. Reg. 58/08, s. 1; O. Reg. 115/09, s. 1 (1).

(2) On and after November 1, 2009, the following are prescribed as the class of consumers for the purposes of subsection 79.16 (1) of the Act:

1. Low-volume consumers.

2. A consumer who has a demand of 50 kilowatts or less.

3. A consumer who has an account with a distributor, if the account relates to,

   i. a dwelling,

   ii. a property as defined in the *Condominium Act, 1998*,

   iii. a residential complex as defined in the *Residential Tenancies Act, 2006*, or

   iv. a property that includes one or more dwellings and that is owned or leased by a co-operative as defined in the *Co-operative Corporations Act*.

4. A consumer who annually uses at least 150,000 but not more than 250,000 kilowatt hours of electricity and who is not otherwise eligible for treatment under clause 79.16 (1) (b) of the Act pursuant to a regulation made under the Act.

5. A consumer who has an account with a distributor if,

   i. the consumer carries on a farming business within the meaning of the *Farm Registration and Farm Organizations Funding Act, 1993*,

ii. either the consumer holds a valid registration number assigned under the *Farm Registration and Farm Organizations Funding Act, 1993* or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act, and

iii. the consumer is not otherwise eligible for treatment under clause 79.16 (1) (b) of the Act with respect to its farming business pursuant to a regulation made under the Act. O. Reg. 58/08, s. 1; O. Reg. 115/09, s. 1 (2).

Prescribed date, s. 79.16

5. April 1, 2005 is the prescribed date for the purpose of clause 79.16 (1) (b) of the Act. O. Reg. 95/05, s. 5.

Determining rates, s. 79.16

6. (1) For the purpose of clause 79.16 (1) (b) of the Act, the Board shall determine rates in the following manner:

1. The Board shall determine rates in a manner that is consistent with the Standard Supply Service Code issued by the Board.

2. The first rates determined by the Board shall remain in effect for not less than 12 months. The Board shall determine separate rates after that time for periods of not more than 12 months or for such shorter time periods as the Minister may direct.

3. In determining the rates, the Board shall forecast the cost of electricity to be consumed by the consumers to whom the rates apply, taking into consideration adjustments required under section 25.33 of the *Electricity Act, 1998* and shall ensure that the rates reflect those costs. O. Reg. 95/05, s. 6 (1).

(2) In making its forecast under paragraph 3 of subsection (1) for the purpose of determining its first rates, the Board shall take into account any potential rebate payment from Ontario Power Generation Inc. that results from Order-in-Council 207/2005, dated February 16, 2005. O. Reg. 95/05, s. 6 (2).

Exemptions, s. 79.16

7. (1) Clause 79.16 (1) (b) of the Act does not apply to a consumer in respect of electricity retailed to the consumer by Fort Frances Power Corporation Distribution Inc. pursuant to its obligations under section 29 of the *Electricity Act, 1998* for the volume of electricity supplied to Fort Frances Power Corporation Distribution Inc. by Abitibi-Consolidated Inc. O. Reg. 95/05, s. 7 (1).

(2) Clause 79.16 (1) (b) of the Act does not apply to a designated consumer described in paragraph 8 of subsection 1 (2) of Ontario Regulation 161/99 (Definitions and Exemptions) made under the Act for that portion of electricity consumption identified in the signed declaration provided to the distributor or retailer under clause 3.1.1 (4) (b) of Ontario Regulation 339/02 (Electricity Pricing) made under the Act as not relating to farming business. O. Reg. 95/05, s. 7 (2).

(3) Subsection 79.16 (1) of the Act does not apply to a consumer with respect to generation station service. O. Reg. 95/05, s. 7 (3).

Criteria for purpose of s. 79.16 (4) (b)

8. (1) For the purposes of clause 79.16 (4) (b) of the Act,

(a) the criterion is that the consumer must file a written statement in accordance with clause 79.16 (4) (a) of the Act, if before November 1, 2009, the consumer is not a low-volume consumer or a consumer otherwise referred to in subsection 4 (2); or

(b) the criteria are, if the consumer is a low-volume consumer or a consumer otherwise referred to in subsection 4 (2),

(i) the consumer must file a written statement in accordance with clause 79.16 (4) (a) of the Act, and

(ii) the statement must relate to a property for which an interval meter, that measures the amount of electricity used, is used for billing purposes. O. Reg. 115/09, s. 2.

(2) A consumer who on or before March 31, 2005 meets the criteria of subsection 79.4 (2) of the Act shall be deemed to meet the criteria set out in subsection (1). O. Reg. 95/05, s. 8 (2).

9. Omitted (provides for coming into force of provisions of this Regulation). O. Reg. 95/05, s. 9.

What is the OCEB Sub-Metering Provider Reporting Application?

The information collected will support the Ministry of Revenue (MOR) in developing and executing an OCEB audit plan, inform the Ontario Financing Authority's (OFA) forecasting of OCEB expenditures and support the Ministry of Energy (ENERGY) in the overall program management of the Ontario Clean Energy Benefit (OCEB) program.

What can the OCEB Sub-Metering Provider Reporting Application do for me?

Overview

In order to support audit, program management and fiscal planning of the OCEB program, the application allows Sub-Metering Providers (SMPs) to report monthly to the ministry on how much OCEB credit was applied to customers, how much electricity was used and the number of customers receiving the OCEB, broken down into several consumer rate classes. It also collects a rolling three month forecast on the amount of OCEB claims to be submitted to the IESO on a monthly basis.

The OCEB SUB-METERING PROVIDER Reporting Application will:

- Facilitate user login and security requirements
- Post collected data for review
- Provide tools for viewing
- Ensure secure data storage

Design Assumptions:

- Data is collected monthly
- All data that is provided and uploaded by SMPs is private - SMPs cannot see each other's data
- SMPs have an ability to upload data collected via extranet URL using online forms

Reporting Process

Monthly reporting will be submitted by Sub-Metering Providers in a secure, standardized electronic format. The submission period shall take place during the first 4 business days of each month (with the exception of the 1st data entry period).

Reporting Requirements

1. OCEB Claim, Number of Eligible Accounts, Volume of Electricity

Every Sub-Metering Provider shall provide the following information:

1. The amount of financial assistance submitted to the IESO for the month and any adjustments to be made in respect of earlier months (i.e. consistent with amounts claimed through the Independent Electricity System Operator's (IESO) settlement process).

2. The number of sub-metered accounts attributable to the amount of financial assistance provided for the month in item 1 of this section.

3. The volume of electricity, in kilowatt hours as measured by the sub-metering provider, consumed by all OCEB-eligible consumers during the month.

DRAFT

2. Fees and Charges

Every Sub-Metering Provider shall report the weighted average of the fees and charges for unit sub-metering applied to customers eligible for the OCEB, as described in section 5 of Ontario Regulation 495/10 (General).

Every Sub-Metering Provider (SMP) shall confirm that no portion of the amount submitted for reimbursement to the IESO for the month is attributable to charges other than its fees and charges for unit sub-metering.

3. Short-Term OCEB Forecast

Every Sub-Metering Provider shall provide a monthly forecast of OCEB claims to be submitted to the IESO for the three upcoming consecutive months.

4. Additional Reporting Requirements

In addition to the monthly reporting outlined above, every Sub-Metering Provider shall submit written responses to the attached questions. The Ministry of Energy may request that sub-metering providers provide updates to this information in order to maintain reasonably current data over the duration of the program.

Data Validation Rules

- Mandatory – All fields except Market Participant ID
- Integer (no negative) – No. of customers fields
- Decimal (2 decimal places, positive only) – Fees and Charges, Forecast fields
- Decimal (2 decimal places, positive or negative) – OCEB Claim and Volume fields

Late Reporting Process

Late data entry adjustments will be accommodated in case of a significant data entry error(s) that needs to be fixed immediately rather than using the "Previous Months' Adjustments" field in the next reporting cycle. The data entry change outside of the first four business days each month will require intervention by the OCEB Sub-Metering Providers Reporting Application administrator. The administrator can "unlock" the submitted data entry record for two hours based on the request (phone call or email) from an SMP's primary contact. After the two hours, the data record will be closed again. Alternatively, the OCEB Sub-Metering Providers Reporting Application administrator can make the changes directly based on the direct communication with a Sub-Metering Provider's primary contact.

Please note that this process should be used very infrequently and not as a substitute for timely monthly data submission.

Additional Reporting Requirements

In addition to a regular monthly data collection, SMPs are asked to provide additional initial information. This additional information may be collected and/or updated on an annual basis or more frequently as needed.
To collect this additional information, a predefined Microsoft Excel Workbook template is made available for download from the OCEB Sub-Metering Providers Reporting Application Website. Users also have the ability to upload their own spreadsheets to answer these questions. After downloading the template, fill in the required information and then upload it to the designated library on the OCEB Sub-Metering Providers Reporting Application Website.

Downloading the Sub-Metering Provider User Guide

You can download the Sub-Metering Provider User Guide from "**Shared Documents**" library available from OCEB Sub-Metering Providers Reporting Application home page:
https://extra.sse.gov.on.ca/sites/moen-oceb/Shared%20Documents/Forms/AllItems.aspx)

OCEB Sub-Metering Provider Reporting Application Site Information

The OCEB Sub-Metering Provider Reporting Application is a web-based solution that uses SharePoint Service Enterprise (SSE). Data is entered and collected via an online form.

The **Sub-Metering Provider Data entry form** has 13 data entry fields (3 calculated fields) plus 6 data entry fields for 'forecast' data.

Lookup fields / optional-mandatory field:

- IESO Market Participant ID (Optional)
- Date Submitted (Mandatory)
- Submitter (Mandatory)
- Settlement Period (Mandatory)
- Accounting Method (Mandatory – values "Billed or Accrual")

Data Entry Fields / characteristics:

Section 1

Monthly Claim

- OCEB Claim ($) column / No. of Customers column / Volume (kWh) column
- (DE) Current Month (empty default, field level validation numeric)
- (DE) Previous Months' Adjustments (empty default, field level validation numeric)
- (CAL) Total (for each column, sum of previous 2 data entry row cell entries)

Section 2

- Fees and Charges (Numeric value for this settlement period)

Section 3: "Short Term Monthly cash forecast (Total Customer Base)

- Lookup for next 3 month rolling data displayed

2. FEES AND CHARGES: Enter the weighted average of the fees and charges for this settlement period:

Weighted Average Fees and Charges[2] ($):	0.00

3. SHORT-TERM MONTHLY CASH FORECAST: For the next three consecutive months enter the corresponding OCEB cash forecast for that month

Month	Forecast ($)
November 2011	
December 2011	
January 2012	

DRA

Site Access Levels

The OCEB Sub-Metering Provider Reporting Application is based upon permissions and roles and access rights which empower users to enter and edit submitted data, view and organize the data using custom views with filters and sorts, maintain and administer data and users, export data to multiple formats and monitor the application performance.

For the user Login and authentication process, each user was assigned a username and temporary password. This was sent to the primary contact of each SMP who can then decide who to manage the login/password.

Once the SMP logs into the system, they can change the user password or, if required, request for a password reset as long as the email address listed is in the system, i.e., either the CEO default or whomever to the CEO designated as the primary user.

Notes:

There will be 12 data entries per calendar year, 1 data entry per month. Each Sub-Metering Provider will have its own designated folder that will contain the compiled data entry submissions for all months. Only the current month submission will be UNLOCKED and accessible for editing. All other past submissions will be available in a view mode only.

Each Sub-Metering Provider can only gain access to their respective entity data solely.

SMPs:

- *Can submit and view their own records only*
- *Can enter the data, edit and review for accuracy (view or edit mode)*
- *Cannot see the records submitted by other SMPs*

DRAFT

Process to Login, Enter and Submit Data

Log in to OCEB Sub-Metering Provider Reporting Application Website using the following URL:

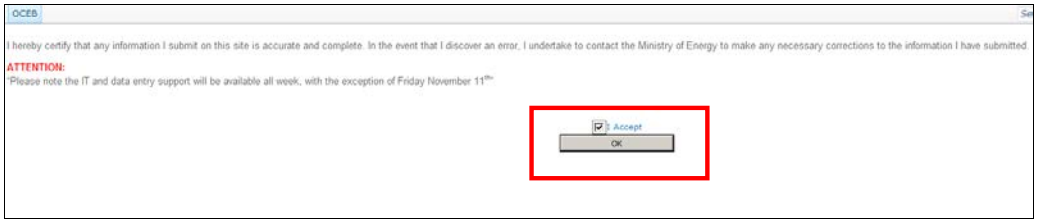
https://extra.sse.gov.on.ca/sites/moen-oceb

Field Code Changed

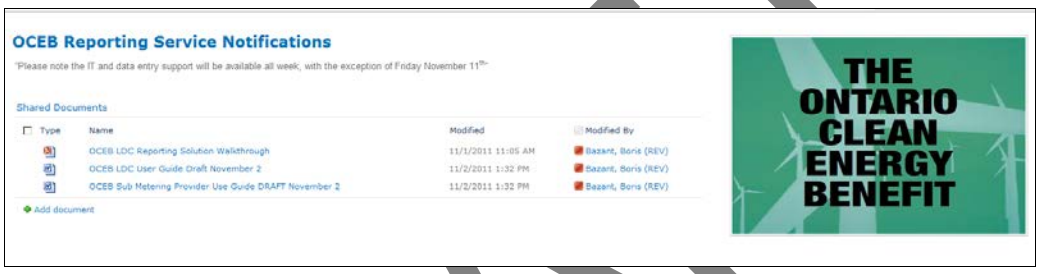
Type in your user name and initial password provided to you. Do **not** click on "Click Here to Login With OPS Credentials".

Next, you will see the **Disclaimer page** and need to accept it by clicking on the "**I Accepted**" box; then click the **OK** button.

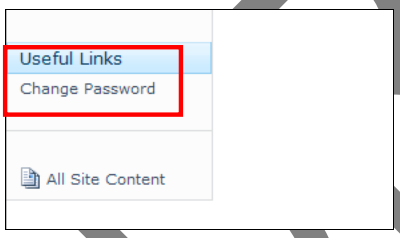
DRAFT



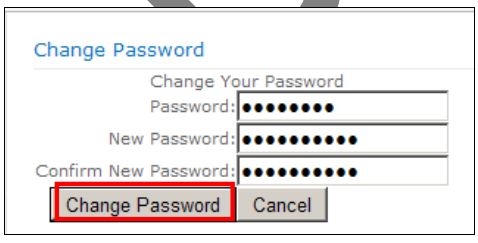
After the acceptance of the Disclaimer, you will be redirected to the **Landing Page** for the OCEB Sub-Metering Provider Reporting Application Website. This is the page you use as a starting point for all other activities such as data entry submission, data editing and additional reporting requirements submission.



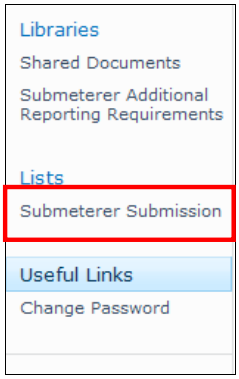
Before continuing with your data entry, we recommend that you change your initial password. To change your password, use the "**Change Password**" link.



Type in the old password, then the new password and click the "**Change Password**" button to save the changes.

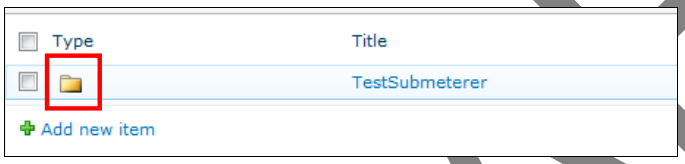


The first step in the data entry process and submitting is to click on the "**Submeterer Submission**" link on the right hand side.

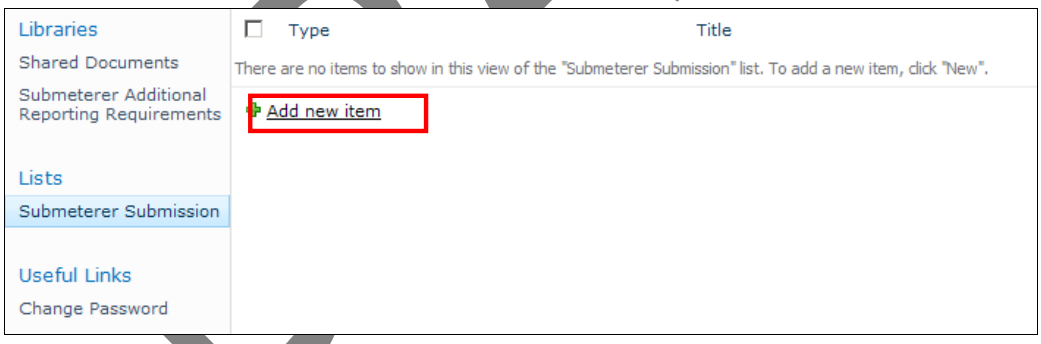


You will be redirected to the page that displays a Sub-Metering Provider's company specific folder for the data entry.

Click on the icon representing your SMP's company folder - this is the location for the monthly data entry.



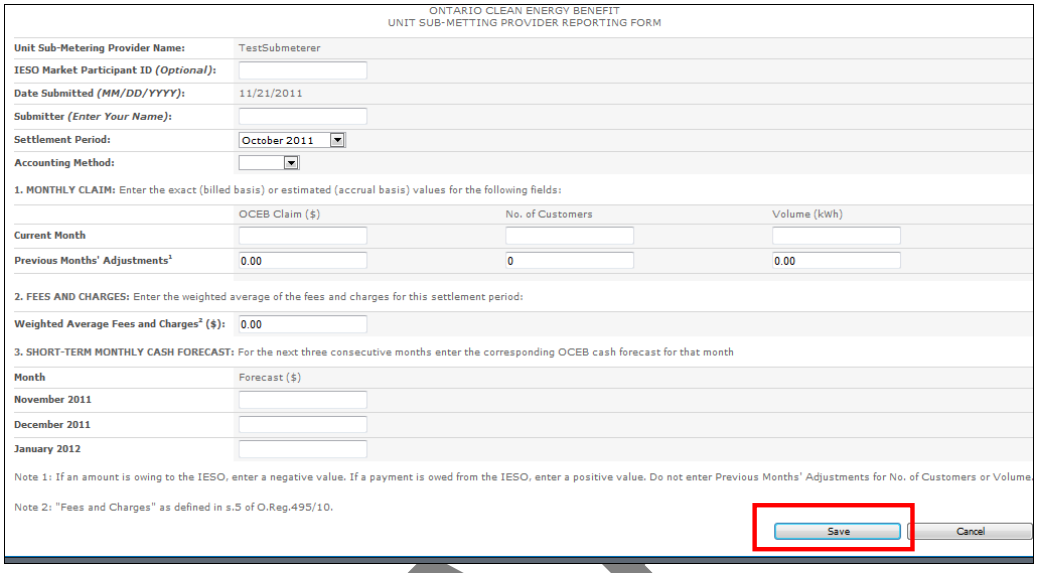
To create a new data entry, click on the "**Add new item"** link.



You will be redirected to the "**Submeterer Submission**" page where you make all your data entries. Many fields have data validation implemented and will require you to enter a correct data – see Data Validation Rules section earlier in the document for more details on the data validation rules implemented. If any mandatory data is missing or incorrect, the error message will be displayed in red at the top and the bottom of the **Submeterer Submission** form.

After all the data is entered, click the "**Save**" button (located at the bottom of your data entry form) to submit your data.

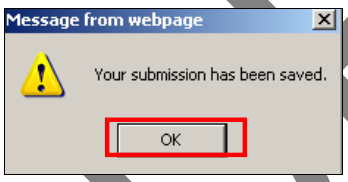
DRAFT



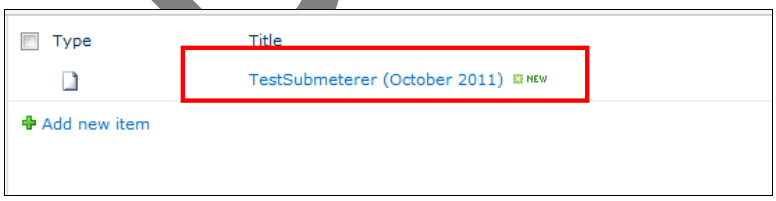
Note:

Make sure you select the correct Settlement Period – September 2011 or October 2011 for the first data submission period.

At any point, you can also cancel the current data entry by clicking on the "**Cancel**" button. The entered data will not be saved. You will see the on screen confirmation that your data was saved successfully. Click the **OK** button to finish the data entry submission.

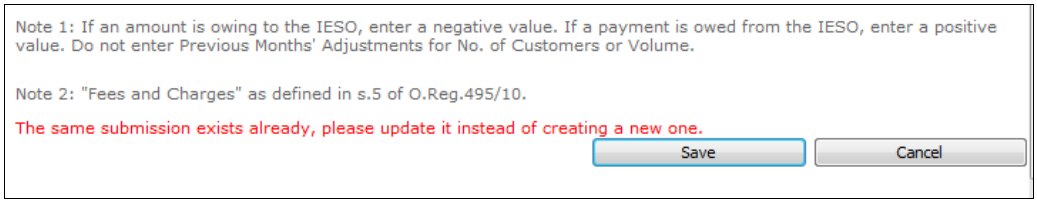


After your data entry is saved, you will see the new submission item listed.



There can be only one data submission record created for each month. If you try to create a duplicate record for any month (by clicking on "Add new item" link), you will see the following error message:

DRAFT

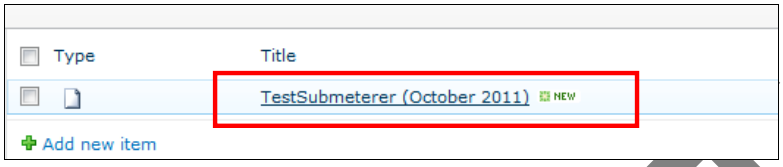


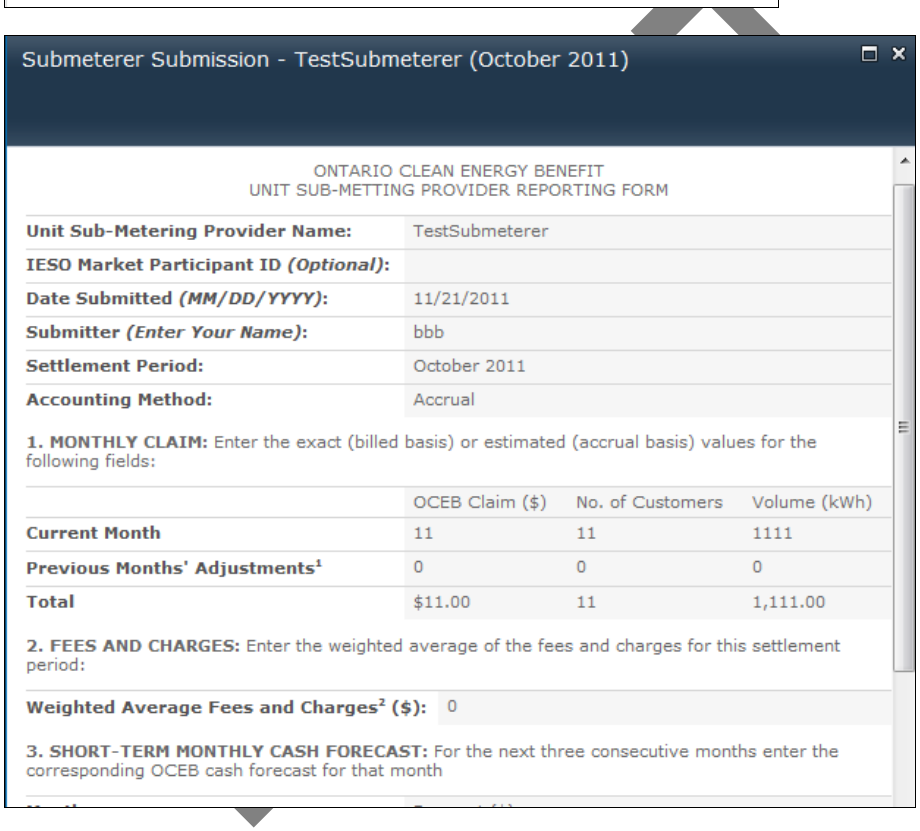
Once the data entry record is submitted, you can still view it, edit or correct it.

DRAFT

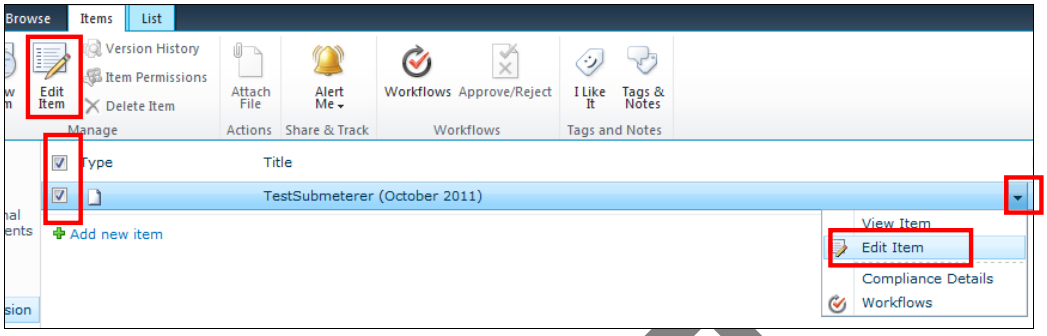
Data Entry Viewing and Editing

To **view** the existing record, select the existing record from the appropriate folder by clicking its title.

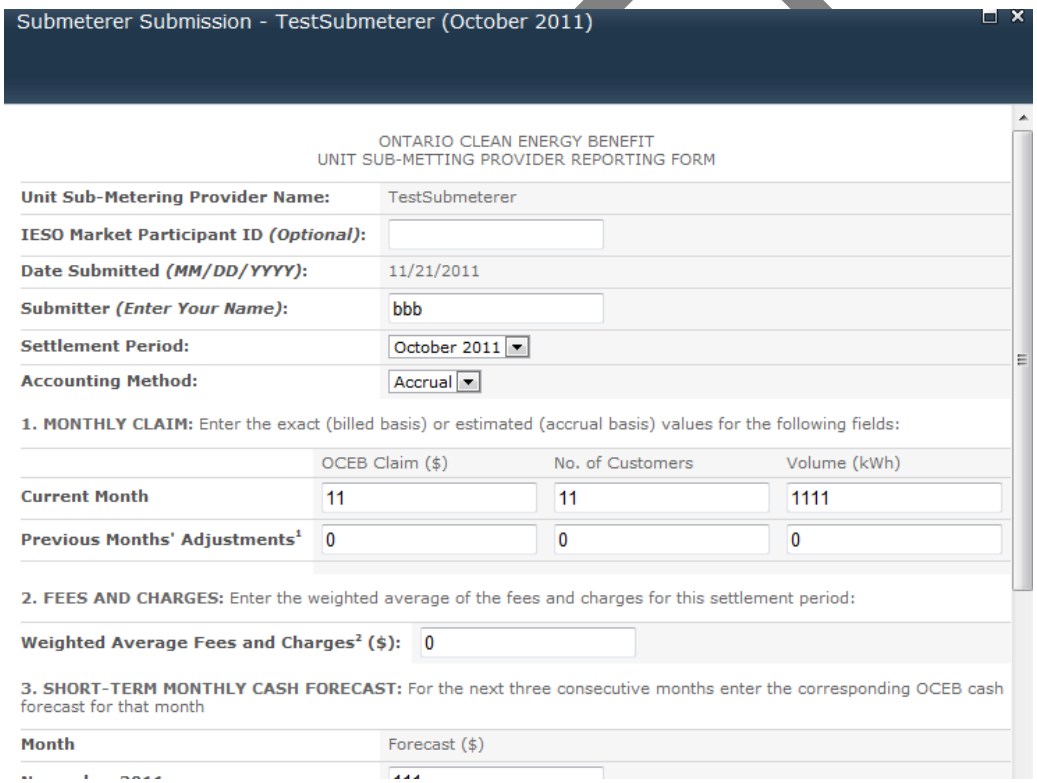


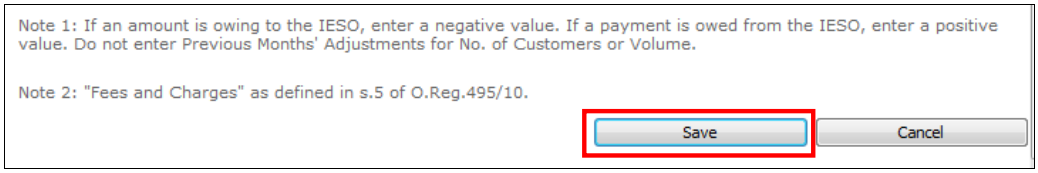


To **edit** the already submitted data click the box under "**Type**" heading and then either use the "**Edit Item"** button in the main menu ribbon or select the "**Edit Item"** option from the menu list on the right.



The existing data entry record will display in “edit” mode, allowing you to make necessary edits and/or corrections.





After you edit and/or correct your data, click the "**Save**" button (located at the bottom of your data entry form) to resubmit your data.

An SMP's data entry record will be considered submitted once the data entry period (typically, the first 4 business days of each month) is over.

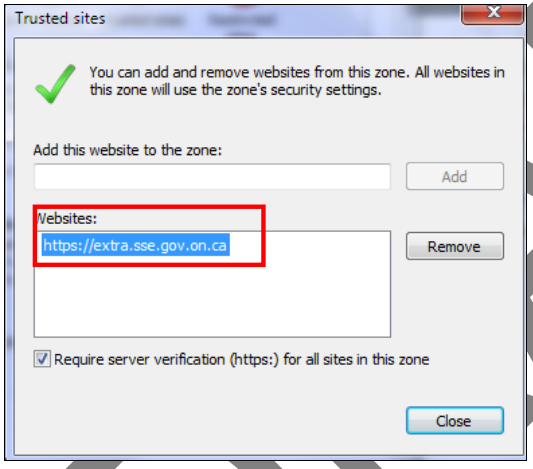
DRAFT

Additional Reporting Requirements Submission

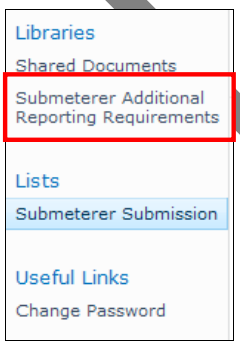
In addition to a regular monthly data collection, SMPs will be asked to provide additional information. This additional information may be collected and/or updated on an annual or more frequent basis as needed.
To collect this additional information, a predefined Microsoft Excel Workbook template is available for download from the OCEB Sub-Metering Provider Reporting Application Website. After downloading the template, fill in the required information and then upload it to the designated library on the OCEB Sub-Metering provider Reporting Application Website.

Steps to download the predefined Microsoft Excel Workbook template:

Before downloading the predefined Microsoft Excel Workbook template for Submeterers Additional Reporting Requirements, make sure that the OCEB website URL is added to your trusted sites. A failure to do so may cause unexpected behaviour when downloading or editing & saving the Submeterers Additional Reporting Requirements file(s).

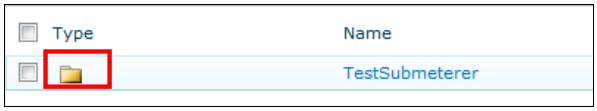


In the OCEB Sub-Metering Provider Reporting Application home page, select the **Submeter Additional Reporting Requirements** link.

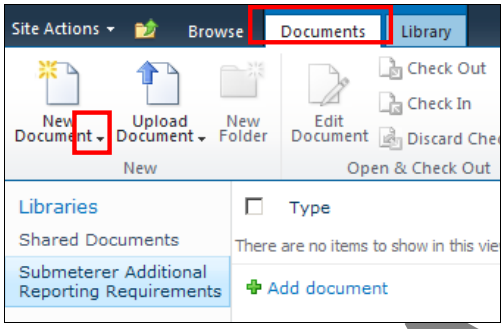


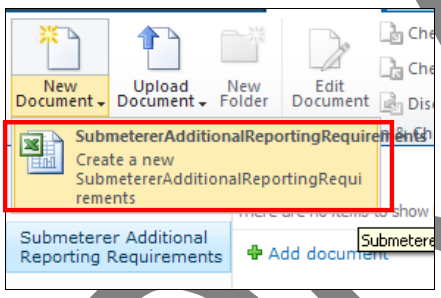
DRAFT

Click on the folder icon to open your additional information folder.



Click on the **Documents** tab under **Library Tools,** then click the arrow pointing down under the **New Document** button in the ribbon menu and select "**SubmetererAdditionalDReportingRequirements**" Excel template:





Save the Excel Template locally to your hard disk. Use the Excel 2003 file format (*.xls) when saving the file. Provide the required information and upload the finished Excel Workbook to the OCEB Sub-Metering Provider Reporting application library.

Use the following file name convention when saving and later on uploading the finished Excel workbook:

<Company name> OCEB Report <month-year>

Example: File submitted by Stratacon Inc. in October 2011

Stratacon OCEB Report 10-2011

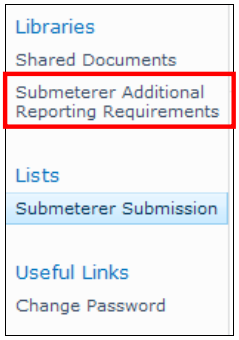
SMPs are asked to use Excel when submitting this data. If this is problematic, the SMP should call the Ministry contact(s).

DRAFT

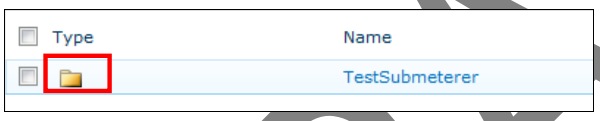
Steps to upload the finished Sub-Metering Provider Additional Reporting Requirements Excel Workbook:

After you finished the additional reporting requirements entry, upload the file to your folder in the **Submeterer Additional Reporting Requirements** library.

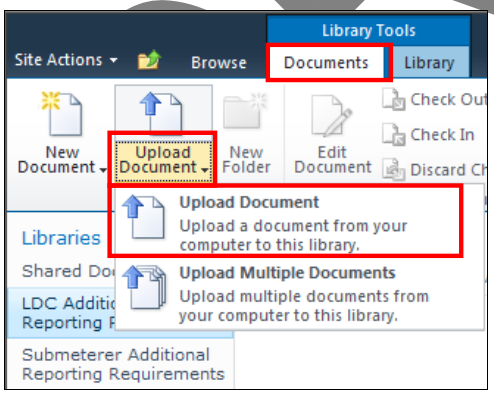
In the OCEB Sub-Metering Provider Reporting Application home page, select **Submeterer Additional Reporting Requirements** link.



Click on the folder icon to open your additional information folder.

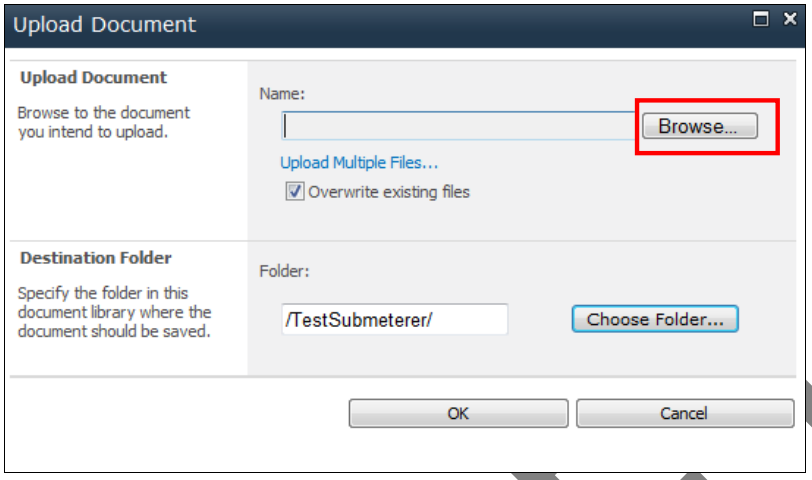


Click on the **Documents** tab under **Library Tools,** then click the arrow pointing down under the **Upload Document** button and select **Upload Document**.

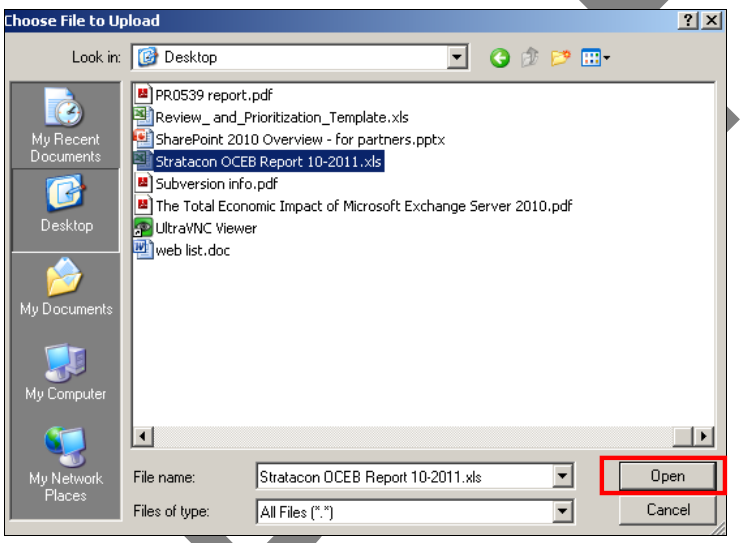


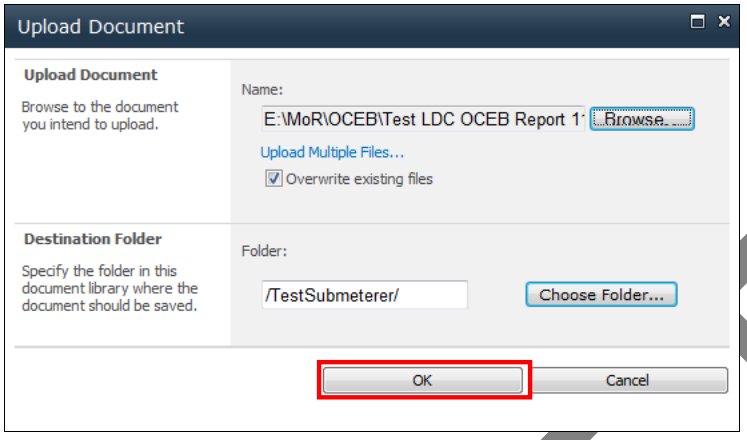
Click on the **Browse** button

DRAFT

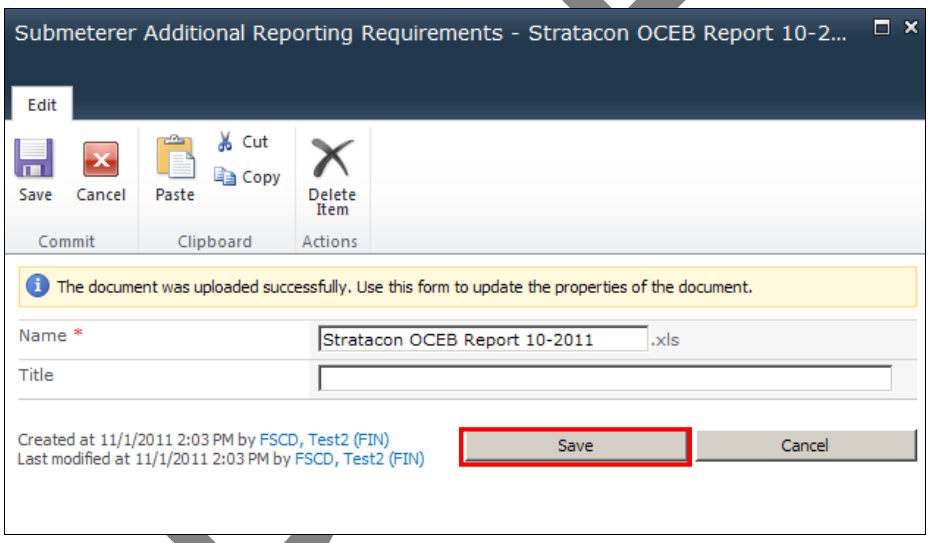


Browse to your saved Excel Workbook, click the **Open** button, then click the **OK** button.

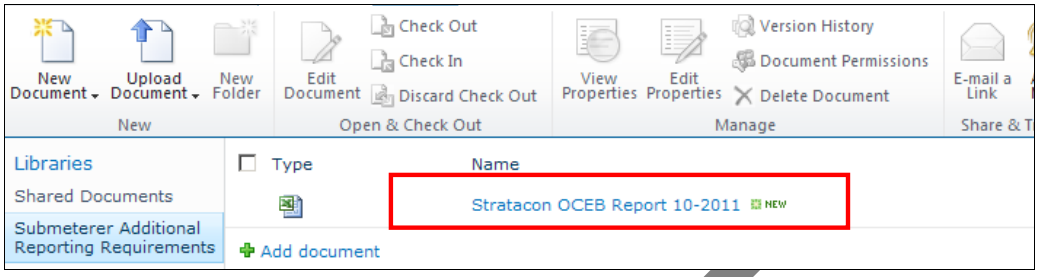




Click the Save button to save your **Additional Reporting Requirements** workbook to the **Submeterer Additional Reporting Requirements** library.



You will see your **Additional Reporting Requirements** workbook listed and saved.



Note:

*The same security rules used for regular monthly Data Entry will be used for the **Additional Reporting Requirements** library submissions as well.*

<u>Sub-Metering Providers can:</u>

- *Submit and view their own information only*
- *Cannot see the information submitted by other Sub-Metering Providers*

Support Model and Contact Information for Application Technical Support

Support for the OCEB Sub-Metering Provider Reporting application is available via email or phone. When an SMP experiences a problem with the OCEB site, or doesn't understand how to do some specific task within the site, the user has various options depending on the situation. The technical support for the OCEB Sub-Metering Provider Reporting application will be provided Monday to Friday, 9 AM to 5 PM, excluding holidays.

The Sub-Metering Provider User Guide is available for download at:

https://extra.sse.gov.on.ca/sites/MOEN-oceb/Shared%20Documents/Forms/AllItems.aspx

November 1 to January 31, 2012:

Ministry of Energy
Contact Name: Michael Beare
Phone Number: 416-327-5313
Email Address: michael.beare@ontario.ca

Contact Name: Michael Nucciarone
Phone Number: 416-326-9101
Email Address: michael.nucciarone@ontario.ca

From January 31, 2012 forward:

OPS Help Desk
Phone Numbers: 888-677-4873 (888-OPS-ITSD) or 416-246-7171 in the GTA. TTY: 877–889-4873

Frequently Asked Questions (FAQs)

1. What is the OCEB Sub-Metering Provider Reporting application URL and how do I log in?

Answer:

Log in to OCEB Sub-Metering Provider Reporting Application Website using the following URL:

https://extra.sse.gov.on.ca/sites/moen-oceb

Field Code Changed

2. How do I contact OCEB Sub-Metering Provider Reporting Application technical support?

Answer:

For the period of November 1, 2011 to January 31, 2012:

Ministry of Energy
Contact Name: Michael Beare
Phone Number: 416-327-5313
Email Address: michael.beare@ontario.ca

Contact Name: Michael Nucciarone
Phone Number: 416-326-9101
Email Address: michael.nucciarone@ontario.ca

You will be contacted by the OCEB Sub-Metering Provider Reporting Application Support within 1 business day.

For the period following January 31, 2012 the single point of contact for all OCEB Sub-Metering Provider Reporting Application support will be OPS Help Desk.

Phone Numbers: 888-677-4873 (888-OPS-ITSD) or 416 -246 - 7171 in the GTA. TTY: 877- 889 - 4873

3. How do I change the company contact information (name, email address, phone number)?

Answer:

To change your company contact information, use the following contact information:

For the period of November 1, 2011 to January 31, 2012:
Ministry of Energy
Contact Name: Michael Beare
Phone Number: 416-327-5313
Email Address: michael.beare@ontario.ca

Contact Name: Michael Nucciarone
Phone Number: 416-326-9101
Email Address: michael.nucciarone@ontario.ca

For the period following January 31, 2012 the single point of contact for all OCEB Sub-Metering Provider Reporting Application support will be OPS Help Desk.

Phone Numbers: 888-677-4873 (888-OPS-ITSD) or 416 -246 - 7171 in the GTA. TTY: 877- 889 - 4873

The changes will be made by OCEB Sub-Metering Provider Reporting Application support personnel and you will be notified of the changes made via email. The requested changes will be made within 1 business day.

4. What are the technical support hours?

Answer:

OCEB Sub-Metering Provider Reporting Application support will be available Monday to Friday 9 AM to 5 PM, excluding holidays.

5. How do I change my password?

Answer:

To change your password, use the “Change Password” link on the OCEB home page (https://extra.sse.gov.on.ca/sites/moen-oceb/SitePages/Home.aspx) and follow the instructions - you will need to provide your old and new password.

6. I forgot my password; how do I reset it?

Answer:

To reset your company password use the following contact information:

For the period of November 1, 2011 to January 31, 2012:
Ministry of Energy
Contact Name: Michael Beare
Phone Number: 416-327-5313
Email Address: michael.beare@ontario.ca

Contact Name: Michael Nucciarone
Phone Number: 416-326-9101
Email Address: michael.nucciarone@ontario.ca

For the period following January 31, 2012 the single point of contact for all OCEB Sub-Metering Provider Reporting Application support will be OPS Help Desk.

Phone Numbers: 888-677-4873 (888-OPS-ITSD) or 416 -246 - 7171 in the GTA. TTY: 877- 889 - 4873

The password reset will be done by OCEB Sub-Metering Provider Reporting Application support and you will be notified of the new initial password via email. It is recommended that you change the initial password after receiving the email with the new password. The requested password reset will be done within 1 business day.

7. What are the validation rules for data entry form?

Answer:

- Mandatory – All fields except Market Participant ID
- Integer (no negative) – No. of customers fields
- Decimal (2 decimal places, positive only) – Fees and Charges, Forecast fields
- Decimal (2 decimal places, positive or negative) – OCEB Claim and Volume fields

8. What security model is implemented; what can I do & see?

Answer:

There will be 12 data entries per calendar year, 1 data entry per month. Each Sub-Metering Provider will have its own folder designated that will contain the compiled data entry submissions for all months. Only the current month submission will be UNLOCKED and accessible for editing. All other past submissions will be available in a view mode only.

Each Sub-Metering Provider can only gain access to their respective entity data solely.

SMPs:
- Can submit and view their records only
- Can enter the data, edit and review for accuracy (view or edit mode)
- Cannot see the records submitted by other SMPs

9. What is the data entry period each month?

Answer:

- The default data entry period is the first four business days of each month unless otherwise notified.

10. How do I correct or edit submitted data?

Answer:

- To view the existing record, select the existing record from the appropriate folder by clicking its title. For more details see the “Data Entry Viewing and Editing” section of the Submeterer User Guide.

Ontario Rebating Provincial Tax on Electricity Bills

More Than Five Million Families, Farms and Small Businesses will see bill reductions

NEWS September 15, 2016

To help people in their everyday lives, Ontario is taking action and rebating the provincial portion of taxes from residential and small business electricity bills starting January 1, 2017. Additionally, the government intends to introduce new measures to further reduce bills for rural families, and introduce expanded relief programs for commercial and industrial electricity consumers.

Over the last number of years, Ontario's economy has fully recovered from the impact of the global recession. While the province and independent economic analysis projects consistent economic growth for Ontario, many families are not yet feeling the impact of the recovery in their everyday lives. Therefore, Ontario's government intends to take action to help with the costs related to electricity.

Together, these actions would provide a benefit to all electricity consumers in Ontario, including:

- Reducing the average Ontario residential electricity bill by 8% or about $11 each month
- Decreasing ~~rural delivery~~ charges for eligible rural customers by about $45 each month
- Empowering more than 1,000 businesses to reduce bills by up to one-third ~~through~~ by expanding the Industrial Conservation Initiative (ICI). This would reduce cost pressures on the electricity system by enabling more consumers to lower their electricity demand during peak periods.

Through these initiatives, more than five million residential consumers and more than 1,000 ~~industrial~~ business customers could see a reduction in their electricity bills. Eligible rural electricity consumers would be provided an additional $110 million in support by modernizing the Rural ~~and~~ or Remote Rate Protection program (RRRP).

Helping Ontarians with the cost of everyday living and helping businesses compete are part of the government's plan to build Ontario up. The government's four-part economic plan includes investing in talent and skills, including helping more people get and create the jobs of the future by expanding access to high-quality college and university education. The plan is making the largest investment in public infrastructure in Ontario's history and investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUOTES

"The actions we're announcing today would benefit all ratepayers in a meaningful way. Rural and ~~northern~~ remote customers would receive significant rate relief through these initiatives. Expanding incentives across Ontario would create more opportunity for businesses to be competitive and manage their electricity costs. The proposed rebate would provide additional ~~an extra~~ relief for families, farms and small businesses."
- Glenn Thibeault, Minister of Energy

Commented [WJ1]: ENERGY is aware of Legal concerns that HST is not a Provincial tax. Language is preferred by MO

Commented [SK22]: Assuming this bullet point refers to expanded RRRP **and** 8% rebate.

Suggest deleting 'delivery' as 8% reduction applies to the entire bill.

Commented [SK23]: ICI expansion not limited to industrial.

Replaced with 'business' as a catch-all term.

DR

QUICK FACTS

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40% of our current supply.
- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80% since 2003.
- Earlier this year, the province introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements.
- The government is recycling proceeds from the Greenhouse Gas Reduction Account (GGRA) to offset the costs to industrial and commercial consumers of ongoing emissions reduction initiatives. This meets the 2016 Budget commitment that ~~that~~ business electricity costs would not be negatively affected by cap and trade.

Ontario Rebating Provincial Portion of HST on Electricity Bills

More Than Five Million Families, Farms and Small Businesses will see bill reductions

NEWS September 15, 2016

To help people in their everyday lives, Ontario is taking action to provide an eight per cent rebate equal to the provincial portion of the HST - from residential and small business electricity bills starting January 1, 2017. As well, the government intends to introduce new measures to further reduce bills for rural families, and introduce expanded relief programs for commercial and industrial electricity consumers.

Ontario's economy is recovering well from the impact of the global recession. While the province and independent economic forecasters project consistent economic growth for Ontario, many families are not yet feeling the impact of the recovery in their everyday lives. Therefore, Ontario's government intends to take action to help with the costs related to electricity.

Together, these actions would provide a benefit to all electricity consumers in Ontario, including:

- Providing residential customers with an eight per cent rebate equal to the provincial portion of the HST, totalling about $130 on average per year for the typical household.
- Decreasing electricity charges for eligible rural customers by about $45 each month
- Empowering more than 1,000 businesses to reduce bills by up to one-third through by expanding Industrial Conservation Initiative (ICI). This would reduce cost pressures on the electricity system by enabling more consumers to lower their electricity demand during peak periods.

Through these initiatives, more than five million residential consumers and more than 1,000 ICI eligible businesses could see a reduction in their electricity bills. Eligible rural electricity consumers would be provided an additional $110 million in support by modernizing the Rural or Remote Rate Protection program.

Helping Ontarians with the cost of everyday living and helping businesses compete are part of the government's plan to build Ontario up. The government's four-part economic plan includes investing in talent and skills, including helping more people get and create the jobs of the future by expanding access to high-quality college and university education. Ontario is making a historic investment in public infrastructure in Ontario's history and investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUOTES

"The actions we're announcing today would benefit all ratepayers in a meaningful way. Rural as well as remote customers would receive significant rate relief through these initiatives. Expanding incentives across Ontario would create more opportunity for businesses to be competitive and manage their electricity costs. The proposed rebate would provide additional relief for families, farms and small businesses."

- Glenn Thibeault, Minister of Energy

QUICK FACTS

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40 per cent of our current supply.
- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80 per cent since 2003.
- Earlier this year, the province introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements.
- These actions support priorities laid out in the government's Climate Change Action Plan to direct cap and trade proceeds towards greenhouse gas reduction initiatives that keep electricity rates affordable. Furthermore, this meets the 2016 Budget commitment to ensure the net impact of cap and trade does not result in an overall increase in electricity cost for commercial and industrial consumers.

Ontario Rebating Provincial ~~Tax~~ Portion of HST on Electricity Bills

More Than Five Million Families, Farms and Small Businesses will see bill reductions

NEWS September 15, 2016

To help people in their everyday lives, Ontario is taking action ~~and~~ to ~~rebating~~ provide an eight per cent ~~-~~rebate equal to the provincial portion of ~~taxes~~ the HST ~~-~~ from residential and small business electricity bills starting January 1, 2017. As well, ~~Additionally,~~ the government intends to introduce new measures to further reduce bills for rural families, and introduce expanded relief programs for commercial and industrial electricity consumers.

~~Over the last number of years,~~ Ontario's economy is recovering well ~~has fully recovered~~ from the impact of the global recession. While the province and independent economic forecasters ~~analysis~~ project~~s~~ consistent economic growth for Ontario, many families are not yet feeling the impact of the recovery in their everyday lives. Therefore, Ontario's government intends to take action to help with the costs related to electricity.

Together, these actions would provide a benefit to all electricity consumers in Ontario, including:

- Providing residential customers with an eight per cent rebate equal to the provincial portion of the HST, totalling about $130 on average per year for the typical household. ~~Reducing the average Ontario residential electricity bill by 8% or $11 each month~~
- Decreasing ~~rural delivery~~ electricity charges for eligible rural customers by about $45 each month
- Empowering more than 1,000 businesses to reduce bills by up to one-third through ~~the~~ by expanding Industrial Conservation Initiative (ICI). This would reduce cost pressures on the electricity system by enabling more consumers to lower their electricity demand during peak periods.

Through these initiatives, more than five million residential consumers and more than 1,000 ~~industrial~~ ICI eligible ~~customers~~ businesses could see a reduction in their electricity bills. Eligible rural electricity consumers would be provided an additional $110 million in support by modernizing the Rural or ~~and~~ Remote Rate Protection program. ~~(RRRP).~~

Helping Ontarians with the cost of everyday living and helping businesses compete are part of the government's plan to build Ontario up. The government's four-part economic plan includes investing in talent and skills, including helping more people get and create the jobs of the future by expanding access to high-quality college and university education. Ontario is ~~The plan is~~ making a historic ~~the largest~~ investment in public infrastructure in Ontario's history and investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUOTES

"The actions we're announcing today would benefit all ratepayers in a meaningful way. Rural as well as remote ~~and northern~~ customers would receive significant rate relief through these initiatives. Expanding incentives across Ontario would create more opportunity for businesses to be competitive

and manage their electricity costs. The proposed rebate would provide additional ~~an extra~~ relief for families, farms and small businesses."
- Glenn Thibeault, Minister of Energy

QUICK FACTS

- Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables – this represents about 40 per cent~~%~~ of our current supply.
- Ontario has taken action to replace coal-fired generation with cleaner sources of energy which has decreased electricity sector emissions by approximately 80 per cent~~%~~ since 2003.
- Earlier this year, the province introduced the Ontario Electricity Support Program (OESP) to provide a monthly credit to low-income households who have applied and meet the eligibility requirements.
- ~~The government is recycling proceeds from the Greenhouse Gas Reduction Account (GGRA) to offset the costs to industrial and commercial consumers of ongoing emissions reduction initiatives. This meets the 2016 Budget commitment that that business electricity costs would not be negatively affected by cap and trade.~~
- These actions support priorities laid out in the government's Climate Change Action Plan to direct cap and trade proceeds towards greenhouse gas reduction initiatives that keep electricity rates affordable. Furthermore, this meets the 2016 Budget commitment to ensure the net impact of cap and trade does not result in an overall increase in electricity cost for commercial and industrial consumers.

Sub-Metering Provider (SMP) Frequently Asked Questions

Login Issues

Q: Is it possible to change the settings for the 'sign me in automatically' box, which is automatically selected by default?

A: No, you should not attempt to make changes to this setting as this may cause problems with the portal. Different versions of Excel require this box to be checked in order for certain forms to be downloaded correctly.

Q: Will Sub-Metering Providers (SMPs) involved in the portal testing be able to keep the new passwords they created for use in the post-testing phase?

A: Yes.

Q: Is it possible for an SMP to have more than one portal login account, or one portal login account with separate passwords for all staff members involved in the data entry process?

A: Each user will only receive one portal login account, however, a username and password can be distributed to different staff members.

Q: Can you change security settings so that only one session can be opened and logged into at a time?

A: Currently, this is not possible. However, the last changes made in the portal will be saved.

Q: Can alerts be set up to be received by two or three email addresses?

A: No, alerts can only be made to one email address and will be received by the person identified as the primary contact.

The primary contact is responsible for distributing the email communications as required within each company.

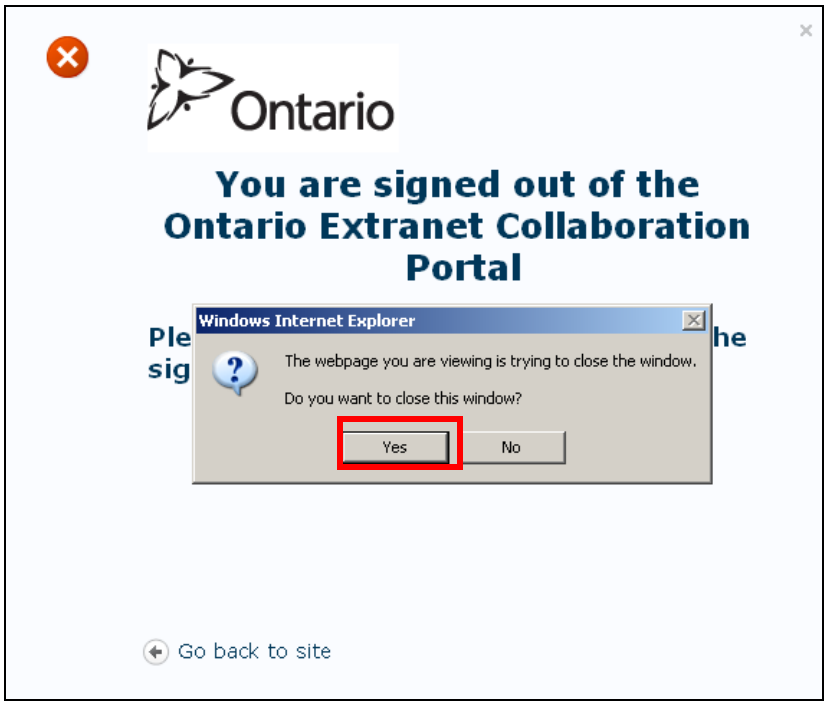
Q: Can SMPs change the primary contact associated with their account?

A: Yes, the primary contact can be changed; however, the changes cannot be made directly by the SMP from within the portal. The SMPs primary contact must email the Ministry contact to request this change.

Q: Is there a logout process?

A: Users may logout by clicking on the arrow next to the username in the top right corner or by simply closing the window.

Click **Yes** button to close the browser window.



Forms

Q: Under section 1, is the amount of financial assistance for eligible customers the same as the amount submitted to the IESO every month?

A: Yes, these values should be the same

Q: Is there a prescribed methodology for carrying out the 3 month OCEB cash forecast? Are these forecasts expected to be within a specific margin of error of the actual?

A: There is no prescribed methodology for the 3 month OCEB cash forecasting. SMPs are asked to make their best effort at providing an accurate forecast.

Q: How do I print the form? Is it possible to include a print button or to allow for greater customization of the size of the form?

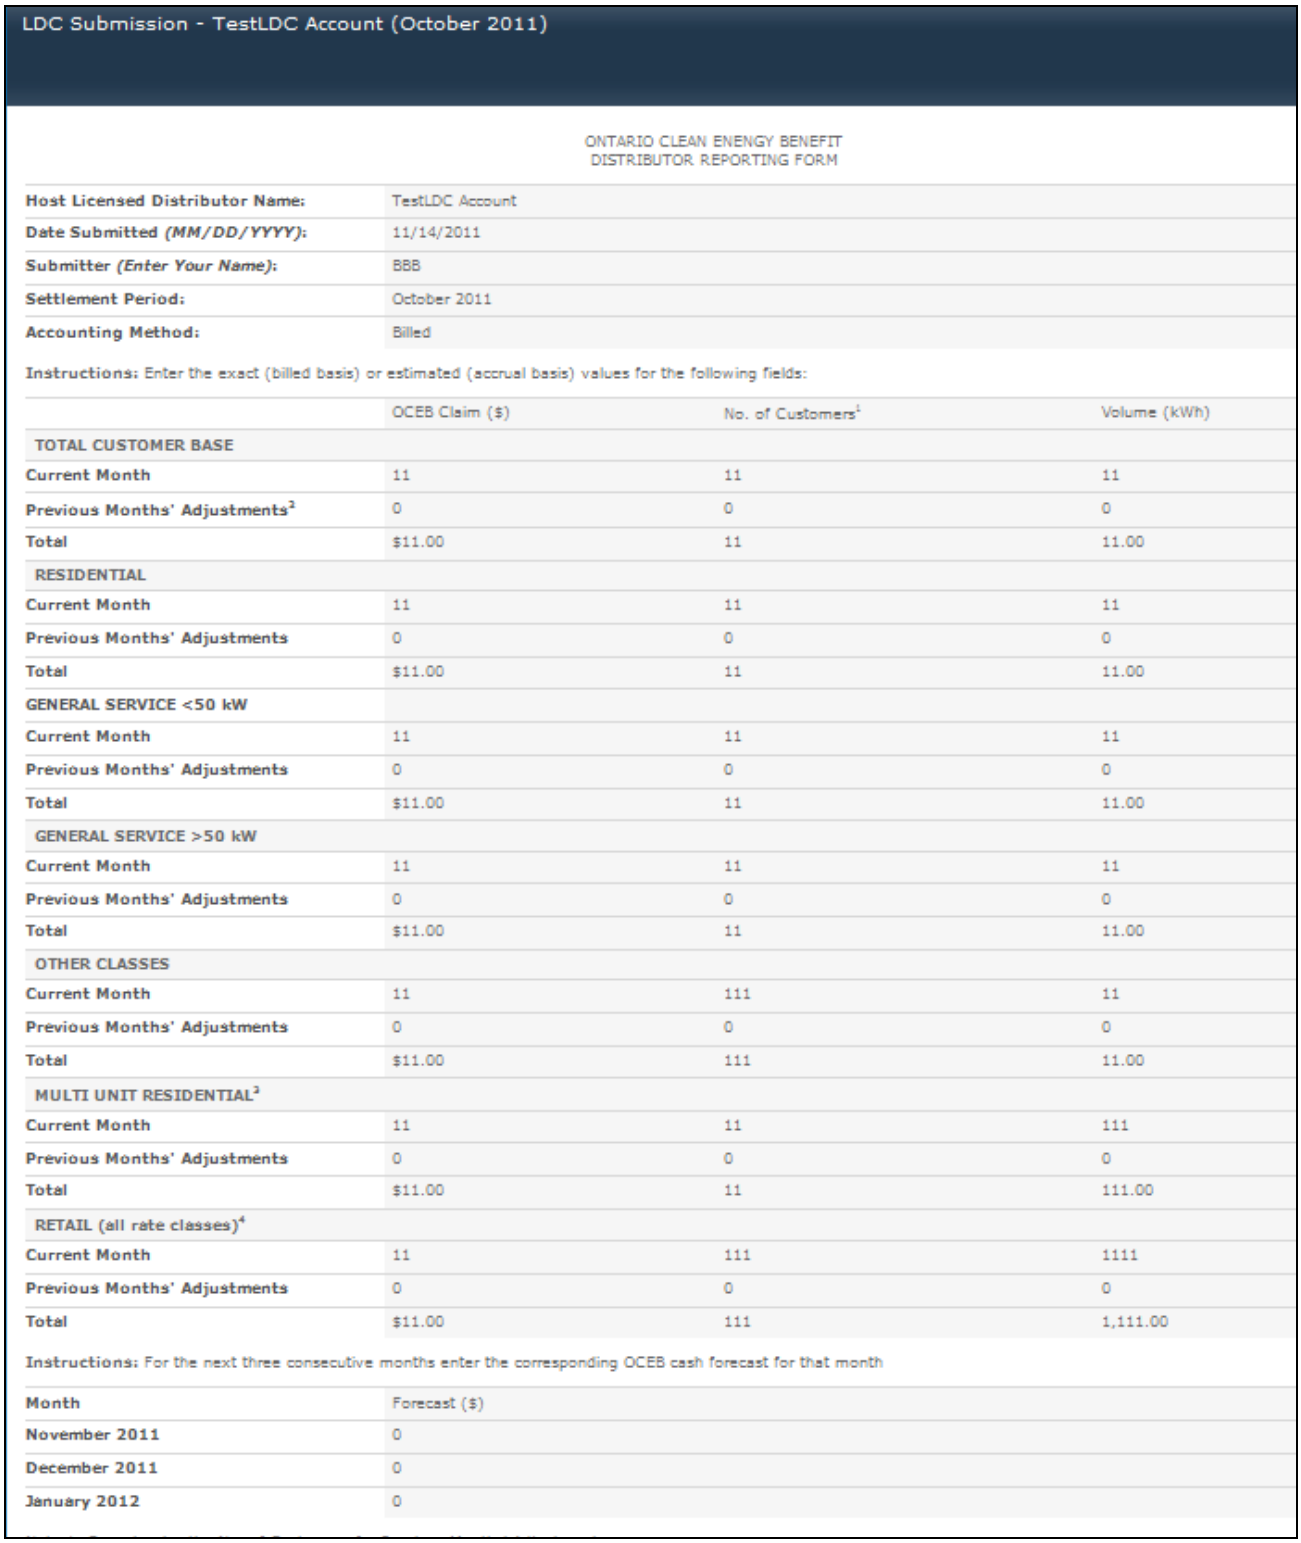
A: The form can be printed by right clicking on the form, clicking “Select All”, then simultaneously hitting “Ctrl” and “c”, and pasting the form into a word processing document. Printing options will be enhanced in the near future.

More details:

It may be desirable to print out or capture the content of submission form for verification or validation purposes. There are several printing & saving options available for you:

Option 1:

- Open the existing submission (view only) by clicking on its title. You may need to adjust your browser zoom settings and maximize the entry form window size to make sure that all submitted data on the form is visible.



LDC Submission - TestLDC Account (October 2011)

Q: We are on cash accounting and do not have all of the billed data for the month of October to report by the fourth business day of the following month. How do we report for OCEB?

A: Please use the same approach when seeking reimbursement through the Independent Electricity System Operator (IESO). As stated in Jon Norman's letter dated August 8, 2011, the amount of financial assistance reported for the month must be the same as the amount submitted to the IESO for the month.

Q: When reporting Volume (kWh), should the adjusted kWh be reported?

A: Yes, please report the adjusted kWh which includes line loss.

Additional Reporting Requirements

Q: There is not enough space to answer some of the questions asked in the Additional Reporting Requirements Excel spreadsheet. Can SMPs alter the Excel template in order to answer questions?

A: Yes, the form can be altered if the existing format does not allow you to submit your responses in a viewable fashion.

Q: I am not an active sub-metering company. Am I required to report?

A: We ask that non-active sub-metering companies file a zero return.

Q: Are we required to update the information submitted in section 4 – additional reporting requirements?

A: We request that the information submitted for the additional reporting requirements be updated on an annual basis or as needed. The Ministry will communicate with users when an update is required.

General Questions:

Q: Do we still have to report to the IESO?

A: Yes, reporting to the IESO still has to be done for reimbursement of the OCEB.

Q: Since the reporting is beginning in November, do we still have to report September data?

A: Yes, for the November data entry period, we require SMPs to report data for September and October.

Q: Is this reporting expected to continue for the entire 5 year program life?

A: Yes, the reporting will continue through the completion of the OCEB program.

Relief on electricity bills

- The government will introduce legislation that w~~ill~~ould rebate — directly on consumers' monthly residential electricity bills — an amount equal to the eight per cent provincial portion of the Harmonized Sales Tax~~, an eight per cent saving~~
- The rebate would go into effect on January 1, 2017
- Eligible rural and remote customers will receive additional savings, which would result in a~~n on-bill~~ monthly saving of about 20 per cent — about $45 a month

Removing the Debt Retirement Charge from electricity bills

- This measure is saving a typical residential electricity user about $70 each year with the removal of the debt retirement charge, as of January 1, 2016

Ontario Electricity Support Program

- The ~~new~~ Ontario Electricity Support Program (OESP), in place effective January 1, 2016, ~~which~~ is ~~now~~ accepting applications and is~~,~~ ~~will~~ helping make electricity more affordable for low-income families
- The OESP was developed by the Ontario Energy Board and is designed to lower electricity bills through an on-bill credit. Consumers will receive an on-bill credit of between $30 and $50 a month
- [The OESP offers a larger credit to low-income consumers whose homes are electrically heated, and those who rely on certain medical devices. Eligible First Nation and Metis households also qualify for a larger credit. The credit for those receiving a larger reduction is between $45 and $75 a month.]

Commented [SK21]: My understanding of the current RRRP program is that the rebate is embedded in the delivery portion of the bill.

As such the RRRP expansion will not show up on the bill, unless there are changes made stipulating it be visible on the bill. However the 8% rebate will be shown (no issue with the first bullet).

See page 10 of this pdf:
http://www.hydroone.com/RegulatoryAffairs/Documents/EB-2015-0079/Rate_Order_HONI_Dx%20_20160114.pdf

Commented [JK2]: While a factcheck, the omission seems relevant.

DIVISION: QA_DIVISION

Ontario Rebate for Electricity Consumers (8% Electricity Rebate)

Q: Does the 8% electricity rebate give me 8% off of my electricity bill?

A: The 8% electricity rebate will provide residential, small business and farm consumers, directly on their electricity bills, a rebate of an amount equal to the eight per cent provincial portion of the Harmonized Sales Tax (HST).

The 8% rebate is equal in value to 8% of the consumer's electricity charges, not including HST.

The rebate does not reduce the consumer's total electricity bill (electricity charges plus tax) by 8%. But it does reduce the size of their bill as if the 8% provincial portion of the HST had been removed.

Q: Why are you rebating "an amount equal to" the eight per cent provincial portion of the HST from residential consumers', farms' and small businesses' electricity bills? Why didn't you just rebate the HST?

A: The HST is a federally administered and imposed tax with a combined rate of 13 per cent - Ontario's portion is eight per cent and the federal portion is five per cent.

HST can only be removed from electricity bills by the federal government.

- To date, the federal government has not shared any plans to ease electricity costs for Canadians.
- The Province continues to work with the federal government when there is an opportunity to partner or consult as it relates to regulatory and emerging issues.

Because Ontario remains committed to making everyday life easier for people across the province, Ontario will provide a *provincially-administered* rebate, equal to the 8% provincial portion of the HST.

Q. Isn't this just another version of the Ontario Clean Energy Benefit (OCEB) — except it's eight per cent instead of 10 per cent? Why didn't you just keep the OCEB?

A. The OCEB was a five year temporary program that ended, as planned, on December 31, 2015.

The OCEB was introduced to help families, farms and small businesses, manage their costs during our transition from coal-fired electricity generation towards a clean, modern and more reliable electricity system.

The good news is that Ontario has already done the heavy lifting in terms of rebuilding aging transmission infrastructure and transitioning off coal-fired generation. Because of these investments, Ontarians aren't forecast to see the kind of energy cost increases coal-dependent provinces like Alberta and Saskatchewan are.

We understand the price of electricity can still be a particular challenge for those that pay a higher share of their income towards their bill — such as low-income families, seniors on a fixed income, and homeowners that heat with electricity.

Recognizing this, we have introduced new measures that will take effect January 1, 2017.

These initiatives will give Ontario's residential consumers, small businesses and farms more ways to manage their electricity costs while we continue to make the critical investments needed to maintain our energy system.

Q. OCEB had a cap of 3,000 kWh per month. There's no cap on the 8% rebate. Doesn't this reward those who use more electricity – how does this encourage conservation?

A. We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

As we plan for Ontario's energy needs for the next 20 years, conservation will be the first resource considered, wherever cost-effective.

It is the cleanest and most cost-effective energy resource, offers consumers a way to reduce their energy bills and reduces the need to build new generation, transmission and distribution infrastructure.

We encourage all Ontarians to participate in conservation programs offered through their Local Distribution Company (LDC) and the Independent Electricity System Operator (IESO).

Q. The money to pay for the 8% rebate comes from tax revenue, not from electricity charges. Aren't you just making the taxpayer subsidize the electricity ratepayer?

A. The government is dedicated to reducing electricity costs wherever possible, while maintaining reliability for all consumers.

This new rebate will deliver significant on-bill savings for eligible electricity consumers. The new rebate will help Ontarians with increasing costs of electricity by providing an 8% rebate equal to the provincial portion of HST on electricity bills.

With this new rebate in place and as a result of the government's prudent fiscal management, the Ontario government remains committed to balancing the budget in 2017-18, recognizing that balance provides the foundation for the long-term well-being and prosperity of Ontarians.

Q. What will be the cost of providing the 8% rebate to Ontarians?

A. The rebate will help make everyday life easier for Ontario families, small businesses and farms with electricity costs by providing a rebate that is equal to the 8% provincial portion of HST. This 8% rebate will appear directly on the consumer's electricity bill.

- The 8% rebate is expected to cost approximately $1 billion per year.

The government remains committed to balancing the budget in 2017-18 while continuing to invest in the economy, our people and a healthy, clean and prosperous low-carbon future. These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth.

Q. Will the 8% rebate affect the amount of HST paid by consumers?

A. No. The HST on electricity costs remains at 13 per cent. The relief being provided by Ontario does not impact the HST calculation on a consumer's bill.

Q. What the 8% rebate affect the input tax credits claimed by businesses?

A. No. Businesses that receive the rebate will continue to be able to claim the input tax credits as usual.

The amount of the rebate will not affect the amount of input tax credits that small businesses and farms can claim.

With this rebate, businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

Q. How will customers receive the 8% rebate? Is it permanent? Are there any requirements to be eligible? Who will be receiving this rebate? How much can an average customer expect to save off of their electricity bill?

A. The 8% rebate will be available to all consumers eligible for the Regulated Price Plan — including about five million residential consumers, small businesses and farms.

Our government has heard from Ontarians and is committed to helping them with their everyday living costs.

Consumers won't have to do anything to receive the rebate; it will be automatically added to their bills.

A typical Ontario residential consumer will save about $11 per month, or about $130 a year.

Q. Will any other programs be affected by the 8% rebate? For example, will recipients of the Ontario Electricity Support Program also receive the rebate?

A. The 8% rebate will be available to all consumers eligible for the Regulated Price Plan regardless of income, status or location.

The rebate will work with other existing programs, such as the Ontario Electricity Support Program.

DIVISION: QA_DIVISION

Ontario Rebate for Electricity Consumers (8% Electricity Rebate)

Q: Does the 8% electricity rebate give me 8% off of my electricity bill?

A: The 8% electricity rebate will provide residential, small business and farm consumers, directly on their electricity bills, a rebate of an amount equal to the eight per cent provincial portion of the Harmonized Sales Tax (HST).

The 8% rebate is equal in value to 8% of the consumer's electricity charges, not including HST.

The rebate does not reduce the consumer's total electricity bill (electricity charges plus tax) by 8%. But it does reduce the size of their bill as if the 8% provincial portion of the HST had been removed.

Q: Why are you rebating "an amount equal to" the eight per cent provincial portion of the HST from residential consumers', farms' and small businesses' electricity bills? Why didn't you just rebate the HST?

A: The HST is a federally administered and imposed tax with a combined rate of 13 per cent - Ontario's portion is eight per cent and the federal portion is five per cent.

HST can only be removed from electricity bills by the federal government.

- To date, the federal government has not shared any plans to ease electricity costs for Canadians.
- The Province continues to work with the federal government when there is an opportunity to partner or consult as it relates to regulatory and emerging issues.

Ontario introduced legislation, passed in October 2016, to provide a provincially administered rebate, equal to the provincial portion of the HST to effectively mitigate electricity costs for families, small businesses and farms.

This rebate is part of the larger plan that proposed new and expanded energy relief programs to reduce electricity costs wherever possible for eligible consumers. ~~Because Ontario remains committed to making everyday life easier for people across the province, Ontario will provide a *provincially-administered* rebate, equal to the 8% provincial portion of the HST.~~

Commented [GH1]: Updated to be consistent with our Q&As

Q. Isn't this just another version of the Ontario Clean Energy Benefit (OCEB) — except it's eight per cent instead of 10 per cent? Why didn't you just keep the OCEB?

A. The OCEB was a five year temporary program that ended, as planned, on December 31, 2015.

The OCEB was introduced to help families, farms and small businesses, manage their costs during our transition from coal-fired electricity generation towards a clean, modern and more reliable electricity system.

The good news is that Ontario has already done the heavy lifting in terms of rebuilding aging transmission infrastructure and transitioning off coal-fired generation. Because of these investments, Ontarians aren't forecast to see the kind of energy cost increases coal-dependent provinces like Alberta and Saskatchewan are.

We understand the price of electricity can still be a particular challenge for those that pay a higher share of their income towards their bill — such as low-income families, seniors on a fixed income, and homeowners that heat with electricity.

Recognizing this, we have introduced new measures that will take effect January 1, 2017.

These initiatives will give Ontario's residential consumers, small businesses and farms more ways to manage their electricity costs while we continue to make the critical investments needed to maintain our energy system.

Q. OCEB had a cap of 3,000 kWh per month. There's no cap on the 8% rebate. Doesn't this reward those who use more electricity – how does this encourage conservation?

A. We're taking steps to ensure a clean, reliable and affordable energy system for all Ontarians.

We know that these changes have come at a cost to Ontario's residential and business consumers.

Recognizing this, we are proposing the new measures, some of which would take effect on January 1, 2017.

As we plan for Ontario's energy needs for the next 20 years, conservation will be the first resource considered, wherever cost-effective.

It is the cleanest and most cost-effective energy resource, offers consumers a way to reduce their energy bills and reduces the need to build new generation, transmission and distribution infrastructure.

We encourage all Ontarians to participate in conservation programs offered through their Local Distribution Company (LDC) and the Independent Electricity System Operator (IESO).

Q. The money to pay for the 8% rebate comes from tax revenue, not from electricity charges. Aren't you just making the taxpayer subsidize the electricity ratepayer?

A. The government is dedicated to reducing electricity costs wherever possible, while maintaining reliability for all consumers.

This new rebate will deliver significant on-bill savings for eligible electricity consumers. The new rebate will help Ontarians with increasing costs of electricity by providing an 8% rebate equal to the provincial portion of HST on electricity bills.

With this new rebate in place and as a result of the government's prudent fiscal management, the Ontario government remains committed to balancing the budget in 2017-18, recognizing that balance provides the foundation for the long-term well-being and prosperity of Ontarians.

Q. What will be the cost of providing the 8% rebate to Ontarians?

A. The rebate will help make everyday life easier for Ontario families, small businesses and farms with electricity costs by providing a rebate that is equal to the 8% provincial portion of HST. This 8% rebate will appear directly on the consumer's electricity bill.

- The 8% rebate is expected to cost approximately $1 billion per year.

The government remains committed to balancing the budget in 2017-18 while continuing to invest in the economy, our people and a healthy, clean and prosperous low-carbon future. These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth.

Q. Will the 8% rebate affect the amount of HST paid by consumers?

A. No. The HST on electricity costs remains at 13 per cent. The relief being provided by Ontario does not impact the HST calculation on a consumer's bill.

Q. What the 8% rebate affect the input tax credits claimed by businesses?

A. No. Businesses that receive the rebate will continue to be able to claim the input tax credits as usual.

The amount of the rebate will not affect the amount of input tax credits that small businesses and farms can claim.

With this rebate, businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

Q. How will customers receive the 8% rebate? Is it permanent? Are there any requirements to be eligible? Who will be receiving this rebate? How much can an average customer expect to save off of their electricity bill?

A. The 8% rebate will be available to all consumers eligible for the Regulated Price Plan — including about five million residential consumers, small businesses and farms.

Our government has heard from Ontarians and is committed to helping them with their everyday living costs.

Consumers won't have to do anything to receive the rebate; it will be automatically added to their bills.

A typical Ontario residential consumer will save about $11 per month, or about $130 a year.

A typical rural customer, eligible for the enhanced Rural or Remote Electricity Rate Protection (RRRP) program, that consumes 1,000 kWh per month will see an annual benefit of approximately $540 or a monthly benefit of approximately $45, when combined with the eight per cent provincial rebate.

A farm or small business will see an annual benefit of 8% before tax as well.

Q. Will any other programs be affected by the 8% rebate? For example, will recipients of the Ontario Electricity Support Program also receive the rebate?

A. The 8% rebate will be available to all consumers eligible for the Regulated Price Plan regardless of income, status or location.

The rebate will work with other existing programs, such as the Ontario Electricity Support Program.
