considered substantive - the jurisdiction reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Therefore there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. The sale of the EAs is accounted for using "settlement date" accounting in respect of revenue recognition (See discussion on revenue recognition in Section 5 for further analysis).

Once cash has been transferred from participant's sub-account to the jurisdiction's escrow account it is an asset of the Province as it is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the settlement completion date which is a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue. Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) prior to either cash deposit or settlement of the LOC/LOG would not be recognized as an asset of the Province under settlement date accounting. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract. Amounts receivable would only be recognized if the EAs had been delivered prior to receipt of payment. However the settlement process arrangements mean that this does not occur. As there is no amount receivable there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 5 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

[Update with rejected view from above – e.g. participant sub-account recognition vs not on bid guarantee date]

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 5 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement create a derivative that needs to be recognized as a contract exists from the certification date to the settlement date for the Province to sell the specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy

objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs. This alternative view would be consistent with a view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 4 below.

It was considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. Therefore the right to receive an EA is also not an asset. The Province does not control how many EAs may be received back that can be re-sold (i.e. those remitted for increased compliance obligations) and so any recognition of an asset for the right to receive back was recognized for all EAs, would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not appropriate accounting.

e) Failure of participant to pay increased compliance obligation:

The Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations. As participants can settle their obligations with EAs (including those from a future compliance period) and EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (c) above there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognized the receivable would be recognized at the amount expected to be received at the time of initial recognition. This would take into account the expected settlement of the receivable. For example, some or part of the amount might be settled by the a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not

settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation.

4. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance

PS 1000, Financial statement concepts

PS 3200, Liabilities

PS 3300, Contingent liabilities

PS 3310, Loan guarantees

PS 3450, Financial instruments

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liability for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There may be an implicit loan guarantee by the Province to the extent that there are funds held in escrow for the participants that are not recognized as assets of the Province, but for which the Province may have a duty to repay to the participants in the case of insolvency issues at the escrow agent. Absent any specific information to the contrary regarding DB's solvency it would usually be considered not likely that the Province would have to pay any amounts in respect of the escrow proceeds and no accrual would be made. To the extent such implicit guarantees exist over the balance sheet date disclosures of the implicit loan guarantee should be made, if material.

[NTD – position to be confirmed based on discussion of insolvency risk with DB accounts. I'm not sure there is, but if it is considered to be "public money" prior or post auction then the Province might have a duty to repay it.]

Analysis

a) Financial liabilities: Under the cap and trade legislation the Province will issue a certain number of EAs under the program (the cap) and, as EAs are financial assets, being inventory held-for-sale (see Section 3 (a) above) this is an obligation to deliver financial assets. However the obligation, such that it exists (see also (b) below), is not a contractual obligation with the participants, as it is brought about through the cap and trade legislation and regulations not individual contracts with participants.

Once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them in a manner that results in a sacrifice of economic benefits. Under the legislation, the EAs can only be redeemed to settle a participant's compliance obligation under the legislation and cannot be redeemed for cash or any other financial asset, or exchanged for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach and recognizes a liability for the obligation to repatriate or redeem the EAs for their emissions value to the participant (Dr Cash (auction EAs) or Dr Expense (free EAs) and Cr Liability for Emissions Notes for market price), along with a right to receive EAs from participants to settle the EA obligation as emissions occur (Dr Receivable, Cr Revenue). This accounting has the benefit of being most symmetrical with the common accounting methods used by participants under other Frameworks such as IFRS.

Our understanding is that New Zealand took this view, in part, because their EAs (NZUs) are interchangeable with "Kyoto AAU's" (International units), which may create an obligation for New Zealand to accept Kyoto AAUs for NZUs under terms that could be unfavourable. However, this view was rejected as based on the cap and trade program applied by Ontario the obligation to repatriate or redeem the Emissions Notes does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 5 below.

c) Loan guarantees and contingent liabilities: To the extent that escrow amounts are recognized on the Province's balance sheet there would be a corresponding liability already recognized in respect of the requirement to return the participants deposit or in respect of deferred revenue. However to the extent that participants have submitted cash bid guarantees in Escrow that are not recognized in the Public Accounts of the Province there may an implied guarantee to the participants that their financial assurance will be returned to them if the auction does not run or they are not successful. [TBD – To be supported by facts, if any, which indicate the Province may be liable for the return of amounts held in escrow if DB goes insolvent and does not return the escrowed amounts to participants. If it is concluded that there is no implicit guarantee or contingent liability because the Province cannot be liable for the return of the escrowed amounts, the facts will support that position.]

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts.

5. Revenue recognition under the cap and trade program as sponsoring government

This section is divided into three sub-sections. The first examines whether the transactions being accounted for are exchange (reciprocal) or non-exchange (non-reciprocal) transactions. The second considers what performance obligations exist. The third section looks at the pattern and timing of revenue recognition for the performance obligations identified.

Sale of EAs as exchange or non-exchange transactions

Relevant guidance - See Appendix A for details.

PS 3510, Tax revenue (definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles (non-authoritative due process document)

Preliminary position –The sale of EAs are exchange transactions.

Analysis:

The auctioning of the EAs is meets the definition of an "exchange transaction" in PS 3510 as participants receive an asset (an EA) and gives approximately equal value in exchange. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see Section 3 (a) above).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

The analysis above is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the PSAS Revenue Statement of principles, as the EAs are considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. The Province's right to payment from a participant arises from the auction process and not

solely from legislation. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no or reduced inflows to the Province.

Alternative positions considered and rejected: An alternative view is that the cap and trade legislation forces mandatory participants to purchase EAs in order to settle a legislative obligation. Participants *must* obtain EAs in order to meet their compliance obligations which are created by legislation, and initially EAs are only available from the Province. Therefore, in substance the purchase of EAs equates to a pre-paid "tax" on emissions, and therefore there is a non-reciprocal transaction as participants do not get anything of economic benefit in exchange, but rather have an outflow of cash to the Province that they previously did not have to pay prior to the cap and trade legislation. This view was rejected for the reasons given in support of "exchange transactions" above as the nature of the cap and trade program and the auction mechanisms are designed to create a carbon market, and under this system EAs become a "good" that has economic value. Therefore the characterization of the sale of EAs as non-exchange transaction would not be consistent with the substance of the cap and trade program.

Revenue recognition for sale of EAs (Exchange transactions)

Relevant guidance - See Appendix A for details.

PS 1000, Financial statement concepts

PS 1150, Generally accepted accounting principles

Other GAAP accounting frameworks

Preliminary position: Revenue is recognized for the sale of EAs on the auction date as there are no further substantive performance obligations by the Province.

Analysis:

a) What is the performance obligation? A performance obligation is defined in IFRS 15/ASC 606 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the PSAS Revenue Statement of Principles which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". This analysis has applied the IFRS concept, as permitted under PS 1150. In both IFRS 15/ASC 606 and the PSAS Revenue Statement of Principles, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the standard auction process. The completion of the auction bid process creates the enforceable right of the province to payment and the obligation to credit the EA to the participant, as well as creating the right of the participant to the EA and the obligation to pay the Province. The auction mechanisms are published and standardized such that each participant understands the enforceable rights and obligations that are entered into when an auction occurs.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix A for definition of "distinct goods and services")

Based on the above analysis, a contract is created when a participant successfully bids at auction, the Province has only one distinct performance obligation to each successful bidder under this contract, which is the delivery of the EAs.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 4 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to redeem an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the sale of EAs. Finally, it is noted that there is no legislative provisions for the termination of the program, and there are no contractual provisions embedded in the EAs

that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written of implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15/ASC 606 the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400 or IAS 18 there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the PSAS Revenue Statement of Principles proposes a "control" model similar to IFRS 15/ASC 606, so this approach has been applied in the analysis. Under IFRS 15/ASC 606 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

   IFRS 15/ASC 606 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the PSAS Revenue Statement of Principles and have been considered in this analysis. See IFRS 15.38 in Appendix A. The indicators have been assessed as follows:

   Present right to payment – As noted in Section 3 above, there is considered to be a contract from the auction certification date, and payment must be received by the Province prior to the financial settlement date.

   Legal title to the asset – Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs. Participants can only trade or use the EAs when they are credited to the participants account. This occurs after the settlement process is completed.

   The entity has transferred physical possession of the asset – This indicator is not relevant as EAs do not have physical form.

   The customer has significant risks and rewards of ownership of the asset – The participant has significant risks and rewards of ownership of the asset from the date of transfer to their CITSS account, which is the settlement date of the contract. The participant can decide what to do with the EA – sell it, keep it or use it to settle a compliance obligation - from the date of the transfer into the participant's account. Therefore the participant has access to the rights inherent in the EA only after it has been transferred to their account.

   The customer has accepted the asset – There are no customer acceptance clauses. While the auction process is subject to certification this is not performed by the participant, but rather by the Province.

   Based on the balance of the indicators above it can be concluded that there is support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant.

   Alternatives considered and rejected:

   Certification date: It was considered whether revenue should be recognized at a point in time when the contract to purchase/sell the EAs is agreed upon i.e. the auction certification date (if substantive) or the auction date if certification is not substantive. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset", and it could be argued that the delayed delivery of the EAs is only because of the financial settlement process to ensure payment is received and does not indicate that control has not passed earlier. This view was ultimately rejected because of the lack of legal title to the EAs (as they are not "property")

and the intangible nature of the EAs means that control cannot be evidenced as passing earlier until the EAs are credited to the participants account.

Trade date accounting: It was considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix A for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets"

in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

6. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

7. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

8. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

9. Implementation risks and audit considerations

Appendix A – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35-.37. PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not defined under PSAS. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and OS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049). After the adoption of PS 3450, which is currently effective for the Province for fiscal 2020, financial assets may be designated into the "fair value" category but only if they are managed and evaluated on a fair value basis in accordance with a risk management or investment strategy or they contain embedded derivatives.

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3200 does not contain measurement guidance for liabilities. Other standards such as PS 3250, *Retirement benefits* and PS 3260, *Liability for contaminated sites* use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate).

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - “Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations.”

PS 3100.04 (a) - “External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used.”

PS 3100.11 - “Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified.”

PS 3100.27-.28 - Designated assets – “...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises....”

Cap and Trade accounting implications - memorandum to file v4 November 3 DRAFT.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations

Commented [LD1]: O/S – MOECC was to provide comments on accuracy of background terminology .

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (~~mandatory~~ capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations ~~T~~there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many ~~MOECC determines how many~~ EAs of each vintage will be available at each auction (after the distribution of free EAs).~~, and how many of each "the vintage" of the EAs is available.~~ The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". ~~, but m~~More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are

held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province ~~(and a market monitor, for WCI auctions)~~ reviews the results for compliance with the ~~Province's~~ regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). ~~regulations.~~ When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and ~~, in which case~~ the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and ~~payment has been received~~ the EAs are transferred to the respective participant CITSS accounts. ~~[Question for MOECC – up to the date of auction can a registered participant remove themselves from the auction and get back their cash/LOC or are they locked in until after the auction date?]~~

[o/s is to determine if there is an insolvency risk prior to the auction period; if there is, has the Province effectively guaranteed the return of the bid collateral if the escrow holder became insolvent]

Auction timeline illustration

Free allowances

C~~Mandatory and c~~apped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

Formatted: Font: Italic

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs ~~available~~ issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are ~~cancelled~~retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "~~credits for early action~~early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall. There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). ~~Any p~~Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund

costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that provinces that do not have either a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. Therefore actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix A

PS 1000, Financial statement concepts

PS 1200, Financial statement presentation

PS 3210, Assets

PS 3450, Financial instruments

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation and sales of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not ~~cancelled~~ retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

~~b) [NTD preliminary conclusions subject to change, based on further understanding of escrow accounts, whether "delivery of EAs" is substantive, importance of certification date vs auction date and subject to discussion with TBS.]~~

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the ~~date of the auction.~~transfer of funds into the Province's escrow settlement account.

   ~~On the auction date, a receivable is recognized by the Province for the sale of EAs.~~ After auction certification cash from successful bidders is transferred to the Province's escrow settlement account,

Formatted: Indent: Hanging: 0.96 cm, Numbered + Level: 1 + Numbering Style: a, b, c, … + Start at: 1 + Alignment: Left + Aligned at: 0.79 cm + Indent at: 1.43 cm

resulting in recognition of an asset (cash). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants ~~A corresponding amount is recognized in Revenue~~ (see Part 5). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation are not recognized as assets, whether sold at auction or issued as free allowances.

d) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

~~*On auction date*~~*As payment from successful bidders is received and placed into Ontario Settlement account:*

Dr ~~Receivable~~ Cash (~~from successful participants/~~in Escrow~~ed amounts~~)

Cr Deferred Revenue

~~Dr Cost of sales (expected to be nil cost)~~

~~Cr Inventory held-for-sale (expected to be nil cost)~~

On settlement date:

Dr ~~Cash~~Deferred revenue

Cr ~~Receivable~~ Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)~~(from successful participants/Escrowed amounts)~~

Dr Cost of sales (expected to be nil cost)

Cr Inventory held-for-sale (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) On creation and sales of free and auctioned EAs:

EAs are created to be sold to participants. These sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. Therefore despite being intangible in nature, the EAs also meet the definition of inventories held-for-sale and could be given accounting

Formatted: Indent: First line: 1.27 cm

Formatted: Indent: Left: 1.27 cm, First line: 1.27 cm

Formatted: Indent: First line: 1.27 cm

recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount.

EAs that are returned to the government and not ~~cancelled~~ retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities). PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

~~It is noted that upon the adoption of PS 3450 in fiscal 2020, inventories held-for-sale would be in scope of PS 3450 as they are classified as financial assets under PS 1201 (currently PS 1200). PS 3450 requires financial assets other than equity instruments that are quoted in an active market to be measured at amortized cost, net of any allowance for recovery. While EAs may be considered to trade in an active market, if an active market develops, EAs are not equity instruments and therefore will not be required to be measured at fair value.~~

~~Under PS 3450 financial assets can be designated as measured at fair value when they are part of a portfolio of instruments that is managed at fair value or contain an embedded derivative. It is unlikely that the Province would be considered to manage newly created EAs on a fair value basis and there have not been any embedded derivatives identified in the EAs. Therefore EAs held as inventory must be measured at cost.~~

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view was ultimately rejected because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and ~~lead~~ provide an opportunity ~~to~~for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

[EITHER]

An asset is recognized by the province as cash is received into a participant's escrow "sub-account".

Any Escrowed cash amounts held in participants sub-accounts are still held for the benefit of the Minister as they are sub-accounts of the Province's escrow account and are only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid

Formatted: No underline

guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead. Therefore any escrowed cash amounts are similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. It is noted that based on amounts of bid guarantees posted in cash in other WCI jurisdictions it is not expected that these amounts would be material. Any cash posted as bid guarantees would be considered to be restricted cash as it is held in a separate account and is not available for general use by the government.

Any LOC or LOG amounts received into a participant's sub-account are not assets as they are in the form of a commitment but do not represent either cash or the contractual right to receive cash.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date. This view is supported because the certification process by the Province is considered substantive - the jurisdiction reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Therefore there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. The sale of the EAs is accounted for using "settlement date" accounting in respect of revenue recognition (See discussion on revenue recognition in Section 5 for further analysis).

Once cash has been transferred into a participant's sub-account it is an asset of the Province as it is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the settlement completion date as this is a matter of time and the settlement process. Therefore during the settlement process, as cash payments are received from participants and deposited into the participant's escrow settlement account or an LOC/LOG is drawn upon and deposited these would be recognized as cash. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue. After the certification date any cash recognized for successful bid participants would not be considered to be restricted cash as it is no longer required to be returned to the bidder and is no longer externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) prior to either cash deposit or settlement of the LOC/LOG would not be recognized as an asset of the Province under settlement date accounting. While there is a contract between the participant and the province from the certification date neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract. Amounts receivable would only be recognized if the EAs had been delivered prior to receipt of payment. However the settlement process arrangements mean that this does not occur. As there is no amount receivable there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank

account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash". The revenue implications of settlement date and delivery of EAs are discussed in Section 5.

[OR]

~~b)~~ An asset is recognized by the province as cash is transferred to the jurisdiction's escrow settlement account.

Prior to the auction process, the Province does not control the cash ~~proceeds~~or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party ~~(DB)~~ in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids, or if their bids are successful and therefore whether the Province has any rights to the escrow proceeds prior to the auction being held. Rather the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. ~~[NTD – Add additional support if bidders can retract bid guarantees prior to auction date.]~~ If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. [NTD – to confirm]

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date. This view is supported because the certification process by the Province is considered substantive - the jurisdiction reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Therefore there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. The sale of the EAs is accounted for using "settlement date" accounting in respect of revenue recognition (See discussion on revenue recognition in Section 5 for further analysis).

Once cash has been transferred from participant's sub-account to the jurisdiction's escrow account it is an asset of the Province as it is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the settlement completion date which is a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue. Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) prior to either cash deposit or settlement of the LOC/LOG would not be recognized as an asset of the Province under settlement date accounting. While there is a contract between the participant and the province neither

Commented [LD3]: To confirm nature of the Escrow sub-accounts
Based on legal analysis?

Formatted: Normal, Indent: Left: 1.9 cm

party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract. Amounts receivable would only be recognized if the EAs had been delivered prior to receipt of payment. However the settlement process arrangements mean that this does not occur. As there is no amount receivable there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 5 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Formatted: Indent: Left: 1.9 cm, Don't add space between paragraphs of the same style

~~From the auction date there is a contract between the Province and the purchasers of EAs. While the Province has not yet credited EAs to the recipient's account, the process of crediting EAs is considered not to be substantive as EAs are not in physical form and the Province controls the recording of EAs in the participants' accounts. Rather, the legal and contractual rights of the EAs are obtained by a purchaser on the auction date. In addition, the participant has also substantially performed under the contract as payment has already been made either through a cash bid guarantee or by the submission of an adequate LOC or LOG. The Province would recognize this as a receivable to the extent that the cash has not been received from Deutsche Bank.~~

~~This position is also analogous to "trade date" accounting which is required by PS 3450.A16 for financial assets traded on a recognized exchange in regular way purchases and sales. While the initial auction of EAs is not on a recognized exchange, they are financial assets and they are auctioned into a market place on a regular basis and give rise to a fixed price commitment between the participant and the government, therefore an analogy to the trade date requirement may be appropriate.~~

Alternative positions considered and rejected:

[Update with rejected view from above – e.g. participant sub-account recognition vs not on bid guarantee date]

Formatted: Highlight

Formatted: Highlight

~~Three alternative views were considered for asset recognition – 1) at the posting of bid guarantees; 2) on settlement date; and 3) on auction certification date.~~

~~*Posting of bid guarantees:* For this option, escrow amounts meet definition of an asset when the participant posts a bid guarantee in cash. Under this view it is argued that the Province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders, therefore effectively controlling the escrowed amounts. The cash held in escrow is therefore held on behalf of the Province (an asset) with a corresponding liability to either return the cash or EAs. This view was rejected as the use of escrow~~

~~accounts, as opposed to deposits lodged directly with the Province, sets out the relevant terms as to how and when escrow proceeds are released and therefore the Province does not have discretion to direct the funds as they wish. As the Province has not yet delivered any EAs they do not have a right to the amounts in escrow, and nor do they have legal title. Therefore, the Province does not have any substantive mechanisms of control over the escrow accounts.~~

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 5 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement create a derivative that needs to be recognized as a contract exists from the certification date to the settlement date for the Province to sell the specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

~~*On settlement date:* It could be considered that the contract is wholly unperformed until the Province has received the cash released from escrow (or other cash payment from participants) as this cash must be received before the EAs are credited to participant accounts. Under this view an asset and revenue is only recorded once cash has been received. This view was rejected as the bid guarantee and escrow process means it is only a matter of time before the funds are received by the Province and therefore this is not substantive enough to preclude asset recognition as the Province controls a right to cash from the date of auction under the cap and trade auction mechanism.~~

~~*On auction certification date:* It could be considered was that the certification date is the point for asset recognition as prior to this the auction may not have been valid. This was rejected because the certification date is only to confirm compliance and does not change the date that the contractual arrangements between the Province and the participant for the sale of EAs was made. However, if the certification process rejected certain sales or the auction as a whole, this would be an adjusting~~

Formatted: Underline

Formatted: Indent: Left: 2.06 cm

Formatted: Indent: Left: 2.06 cm, No bullets or numbering

~~subsequent event that would be considered in determining whether assets/revenue from the auction process should be recognized.~~

~~c)~~d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are ~~cancelled~~ retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs. This alternative view would be consistent with a view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 4 below.

It was considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. Therefore the right to receive an EA is also not an asset. The Province does not control how many EAs may be received back that can be re-sold (i.e. those remitted for increased compliance obligations) and so any recognition of an asset for the right to receive back was recognized for all EAs, would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then ~~cancelled~~retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not appropriate accounting.

~~d)~~e) Failure of participant to pay increased compliance obligation:

The Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations. As participants can settle their obligations with EAs (including those from a future compliance period) ~~that~~ and EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (c) above there is no asset of the Province until ~~. It is only when~~ a participant has not settled with EAs ~~that~~ and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognized the receivable would be recognized at the amount expected to be received at the time of initial recognition. This would take into account the expected settlement of the receivable. For example, some or part of the amount might be settled by the a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation.

4. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance

PS 1000, Financial statement concepts

PS 3200, Liabilities

PS 3300, Contingent liabilities

PS 3310, Loan guarantees

PS 3450, Financial instruments

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liability for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: ~~**EITHER** There may be an implicit loan guarantee by the Province in respect of the funds held in escrow for the participants prior to the auction date and up to the date of settlement.~~ There may be an implicit loan guarantee by the Province to the extent that there are funds held in escrow for the participants that are not recognized as assets of the Province, but for which the Province may have a duty to repay to the participants in the case of insolvency issues at the escrow agent. Absent any specific information to the contrary regarding DB's solvency it would usually be considered not likely that the Province would have to pay any amounts in respect of the escrow proceeds and no accrual would be made. To the extent ~~that there are escrowed proceeds held over a balance sheet date~~such implicit guarantees exist over the balance sheet date disclosures of the implicit loan guarantee should be made, if material.

~~**OR** There are no contingent liabilities or loan guarantees by the Province in respect of the funds held in escrow for the participants either prior to the auction date or between the auction date and settlement date.~~

[NTD – position to be confirmed based on discussion of insolvency risk with DB accounts. I'm not sure there is, but if it is considered to be "public money" prior or post auction then the Province might have a duty to repay it.]

Analysis

a) Financial liabilities: Under the cap and trade legislation the Province will issue a certain number of EAs under the program (the cap) and, as EAs are financial assets, being inventory held-for-sale (see Section 3 (a) above) this is an obligation to deliver financial assets. However the obligation, such that it exists (see also (b) below), is not a contractual obligation with the participants, as it is brought about through the cap and trade legislation and regulations not individual contracts with participants.

Once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them in a manner that results in a sacrifice of economic benefits. Under the legislation, the EAs can only be redeemed to settle a participant's compliance obligation under the legislation and cannot be redeemed for cash or any other financial asset, or exchanged for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of ~~cancelled~~ retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach and recognizes a liability for the obligation to repatriate or redeem the EAs for their emissions value to the participant (Dr Cash (auction EAs) or Dr Expense (free EAs) and Cr Liability for Emissions Notes for market price), along with a right to receive EAs from participants to settle the EA obligation as emissions occur (Dr Receivable, Cr Revenue). This accounting has the benefit of being most symmetrical with the common accounting methods used by participants under other Frameworks such as IFRS.

Our understanding is that New Zealand took this view, in part, because their EAs (NZUs) are interchangeable with "Kyoto AAU's" (International units), which may create an obligation for New Zealand to accept Kyoto AAUs for NZUs under terms that could be unfavourable. However, this view was rejected as based on the cap and trade program applied by Ontario the obligation to repatriate or redeem the Emissions Notes does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to ~~deliver~~ transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is ~~Ultimately however, the delivery of free EAs is~~ a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that

liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

~~and is at the discretion of the Province, rather than a contractual or constructive obligation to the participants, as the Province retains discretion over the issuance of free EAs. [To confirm with MOECC – may have to switch to the alternative view if MOECC not comfortable with the idea there is no obligation to issue free EAs.]~~

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected: ~~It could be argued that there is a constructive (rather than contractual) obligation to deliver free allowances to certain participants, due to actions and communications of the Province that have raised valid expectations for specific participants that they will receive free allowances in order to meet their compliance obligations. The obligation would be settled when free allowances are issued. However, even if this view is taken, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material.~~

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 5 below.

c) Loan guarantees and contingent liabilities: To the extent that escrow amounts are recognized on the Province's balance sheet there would be a corresponding liability already recognized in respect of the requirement to return the participants deposit or in respect of deferred revenue. However to the extent that participants have submitted cash bid guarantees in Escrow that are not recognized in the Public Accounts of the Province there may an implied guarantee to the participants that their financial assurance will be returned to them if the auction does not run or they are not successful. [TBD – To be supported by facts, if ~~any, that~~any, which indicate the Province may be liable for the return of amounts held in escrow if DB goes insolvent and does not return the escrowed amounts to participants. If it is concluded that there is no implicit guarantee or contingent liability because the Province cannot be liable for the return of the escrowed amounts, the facts will support that position.]

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts.

5. *Revenue recognition under the cap and trade program as sponsoring government*

This section is divided into three sub-sections. The first examines whether the transactions being accounted for are exchange (reciprocal) or non-exchange (non-reciprocal) transactions. The second considers what performance obligations exist. The third section looks at the pattern and timing of revenue recognition for the performance obligations identified.

Sale of EAs as exchange or non-exchange transactions

Relevant guidance - See Appendix A for details.

PS 3510, Tax revenue (definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles (non-authoritative due process document)

Preliminary position –The sale of EAs are exchange transactions.

Analysis:

The auctioning of the EAs is meets the definition of an "exchange transaction" in PS 3510 as participants receive an asset (an EA) and gives approximately equal value in exchange. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see Section 3 (a) above).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

The analysis above is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the PSAS Revenue Statement of principles, as the EAs are considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. The Province's right to payment from a participant arises from the auction process and not solely from legislation. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no or reduced inflows to the Province.

Alternative positions considered and rejected: An alternative view is that the cap and trade legislation forces mandatory participants to purchase EAs in order to settle a legislative obligation. Participants *must* obtain EAs in order to meet their compliance obligations which are created by legislation, and initially EAs are only available

from the Province. Therefore, in substance the purchase of EAs equates to a pre-paid "tax" on emissions, and therefore there is a non-reciprocal transaction as participants do not get anything of economic benefit in exchange, but rather have an outflow of cash to the Province that they previously did not have to pay prior to the cap and trade legislation. This view was rejected for the reasons given in support of "exchange transactions" above as the nature of the cap and trade program and the auction mechanisms are designed to create a carbon market, and under this system EAs become a "good" that has economic value. Therefore the characterization of the sale of EAs as non-exchange transaction would not be consistent with the substance of the cap and trade program.

Revenue recognition for sale of EAs (Exchange transactions)

Relevant guidance - See Appendix A for details.

PS 1000, Financial statement concepts

PS 1150, Generally accepted accounting principles

Other GAAP accounting frameworks

Preliminary position: Revenue is recognized for the sale of EAs on the auction date as there are no further substantive performance obligations by the Province.

Analysis:

a) What is the performance obligation? A performance obligation is defined in IFRS 15/ASC 606 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the PSAS Revenue Statement of Principles which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". This analysis has applied the IFRS concept, as permitted under PS 1150. In both IFRS 15/ASC 606 and the PSAS Revenue Statement of Principles, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the standard auction process. The completion of the auction bid process creates the enforceable right of the province to payment and the obligation to credit the EA to the participant, as well as creating the right of the participant to the EA and the obligation to pay the Province. The auction mechanisms are published and standardized such that each participant understands the enforceable rights and obligations that are entered into when an auction occurs.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix A for definition of "distinct goods and services")

   Based on the above analysis, a contract is created when a participant successfully bids at auction, the Province has only one distinct performance obligation to each successful bidder under this contract, which is the delivery of the EAs.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 4 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario ~~has an obligation to redeem only~~accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore ~~this obligation to redeem~~Ontario has no obligation to redeem an EA that ~~cannot arise~~arises from the original exchange transaction and ~~is therefore~~therefore there is ~~not~~no ~~a~~ performance obligation ~~of that transaction~~that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the sale of EAs. Finally, it is noted that there is no legislative provisions for the termination of the program, and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written of implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15/ASC 606 the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400 or IAS 18 there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the PSAS Revenue Statement of Principles proposes a "control" model similar to IFRS 15/ASC 606, so this approach has been applied in the analysis. Under IFRS 15/ASC 606 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15/ASC 606 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the PSAS Revenue Statement of Principles and have been considered in this analysis. See IFRS 15.38 in Appendix A. The indicators have been assessed as follows:

Present right to payment – As noted in Section 3 above, there is considered to be a contract from the auction certification date, and payment must be received by the Province prior to the financial settlement date. ~~present right to payment at the auction date.~~

Legal title to the asset – Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs. ~~Legal title is transferred when~~ Participants can only trade or use the ~~the~~ EAs when they are credited to the participants account. This occurs after the ~~auction certification and~~ settlement process is completed. ~~[MOECC implementation group to confirm when legal title transfers is this analysis correct?]~~

The entity has transferred physical possession of the asset – This indicator is not relevant as EAs do not have physical form.

The customer has significant risks and rewards of ownership of the asset – The participant has significant risks and rewards of ownership of the asset from the ~~auction~~ date of transfer to their CITSS account, which is the settlement date of the contract. ~~If the price of EAs increases after the auction date, the customer can benefit from this increase by selling the EA. Similarly if the price decreases after the auction date, the customer bears this decrease in value.~~ The participant can decide what to do with the EA – sell it, keep it or use it to settle a compliance obligation - from the date of the ~~auction~~transfer into the participant's account. Therefore the participant has access to the rights inherent in the EA only after it has been transferred to their account. ~~While EAs are credited to a participants account only after auction certification and settlement process are completed, these are administrative processes that do not substantively change the risks and rewards of ownership of the EAs.~~

The customer has accepted the asset – There are no customer acceptance clauses. While the auction process is subject to certification this is not performed by the participant, but rather by the Province.

Based on the balance of the indicators above it can be concluded that there is support for recognizing revenue on a "point in time" basis on the ~~auction date~~date when the EAs are transferred to the participant.

Alternatives considered and rejected:

Certification date: It was considered whether revenue should be recognized at a point in time when the contract to purchase/sell the EAs ~~are~~ is agreed upon i.e. the auction certification date (if substantive) or the

Formatted: Underline

auction date if certification is not substantive. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset", and it could be argued that the delayed delivery of the EAs is only because of the financial settlement process to ensure payment is received and does not indicate that control has not passed earlier. This view was ultimately rejected because of the lack of legal title to the EAs (as they are not "property") and the intangible nature of the EAs means that control cannot be evidenced as passing earlier until the EAs are credited to the participants account.

Trade date accounting: It was considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

~~credited to the participant account (legal title to the asset has transferred). This was rejected as the delay between the auction date and crediting the participant account is to confirm the settlement of the auction payment and that the auction was carried out legally and in accordance with the regulations. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset". Therefore, limited weight was placed on the fact that the participant's accounts are not credited until some time after the auction.~~

Restrictions on Greenhouse Gas Reduction Account

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted. [~~NTD – to confirm that all interested parties agree with this statement~~]

6. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

7. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

8. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

9. Implementation risks and audit considerations

Appendix A – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35-.37. PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not defined under PSAS. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and OS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049). After the adoption of PS 3450, which is currently effective for the Province for fiscal 2020, financial assets may be designated into the "fair value" category but only if they are managed and evaluated on a fair value basis in accordance with a risk management or investment strategy or they contain embedded derivatives.

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3200 does not contain measurement guidance for liabilities. Other standards such as PS 3250, *Retirement benefits* and PS 3260, *Liability for contaminated sites* use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate).

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - “Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations.”

PS 3100.04 (a) - “External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used.”

PS 3100.11 - “Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified.”

PS 3100.27-.28 - Designated assets – “...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises....”

Attachment 2: Cap and Trade accounting implications - memorandum to file v5 November 2....docx

---

Attachments are “privileged and confidential”

updated memo attached for tomorrow’s discussion.

Upon arrival, please call Shyrose Virani at 416 325 1448 to gain entry into our building.

Thanks
Shyrose

As per recent discussion, this meeting will be to review the proposed accounting treatment for Ontario’s Cap and Trade program. Subject to any changes in the proposed approach, OPCD will initiate a discussion with the Auditor General’s office to review the planned accounting treatment.

Pre-reading materials will be provided in advance of the meeting.

Cap and Trade accounting implications - memo for Nov 23 meeting.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [NTD – *MOECC to provide comments on accuracy of background terminology*]

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, after the distribution of free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular

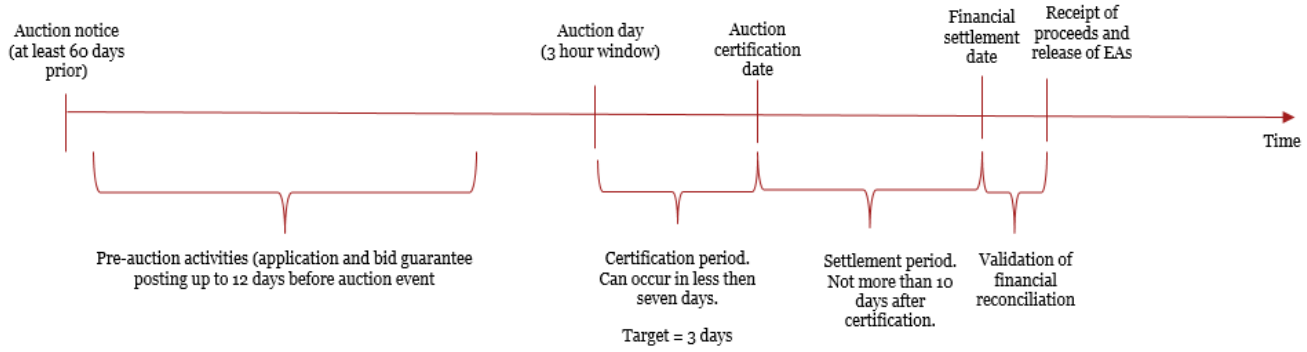
auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts.

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the

participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director

under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program

means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction

and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the

payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

4. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants (see section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On date of receipt of proceeds to GGRA and transfer of EAs to participant CITSS accounts:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations or increased compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) <u>On creation of free and auctioned EAs</u>:

EAs are "goods" created to be sold or distributed to participants (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs therefore meet the definition of inventories held-for-sale as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount. PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no

cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids and therefore if their bids are successful. Only successful bids give the Province any rights to the escrow proceeds. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those

deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected:

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 5 below and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. The only exception is when EAs for a future compliance period are received as part of the 3 for 1 increased compliance obligation as these may be re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations. Any recognition of an asset for the right to receive back applied to all EAs would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not a fair presentation.

e) Failure of participant to pay increased compliance obligation:

An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations as they can purchase additional EAs on the market at the market price. EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognize the receivable at the amount expected to be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance

obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub- accounts.

Analysis

a) Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them for cash or any other financial asset, or exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an

Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 6 below.

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

6. Revenue recognition under the cap and trade program as sponsoring government

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix C for details.

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the date of delivery of the EAs as this is when the performance obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) <u>What is the performance obligation for the sale of EAs?</u> A performance obligation is defined in IFRS 15 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the Revenue SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". The following analysis has applied the IFRS concept, as permitted under PS 1150.

   In both IFRS 15 and the Revenue SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix C for definition of "distinct goods and services")

   Based on the above analysis, a contract is created when a participant successfully bids at auction as confirmed in the auction certification process. The Province has distinct performance obligations to deliver each EA to each successful bidder under these contracts.

   <u>Alternative positions considered and rejected:</u> It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon

in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to redeem an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) <u>When is the performance obligation satisfied?</u> There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15 the performance obligations are satisfied as control

of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the Revenue SOP proposes a "control" model similar to IFRS 15, so this approach has been applied in the analysis. Under IFRS 15 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the Revenue SOP and have been considered in this analysis. See IFRS 15.38 in Appendix C. The indicators have been assessed as follows:

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset.				

Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or suffering from the fluctuations in the market price of EAs	Possibly – the price that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	Yes – From this date the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	N/A already met	N/A already met

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected:

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.

- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the

requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.	

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049).

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

Cap and Trade accounting implications - memorandum to file v5 November 2....pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [INTD – MOECC to provide comments on accuracy of background terminology]

Formatted: Highlight

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (~~mandatory~~capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: ~~There~~In accordance with the Regulations there are four auctions a year. ~~MOECC determines~~ EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, ~~and how many of each "the vintage"~~after the distribution of ~~the EAs is available.~~free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage~~", but more~~". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which

Formatted: Tab stops: 17.62 cm, Left

case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value~~.~~, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

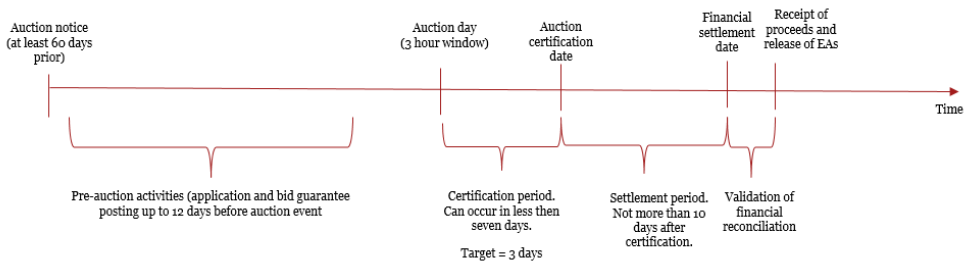
Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB~~).~~.) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province ~~(and a market monitor, for WCI auctions)~~ reviews the results for compliance with the ~~Province's regulations.~~regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices~~.~~ by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days~~, in~~ into their sub-account, which ~~case~~ is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once ~~payment has~~all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts. ~~[Question for MOECC – up to the date of auction can a registered participant remove themselves from the auction and get back their cash/LOC or are they locked in until after the auction date?]~~

~~[o/s is to determine if there is an insolvency risk prior to the auction period; if there is, has the Province effectively guaranteed the return of the bid collateral if the escrow holder became insolvent]~~

Auction timeline illustration



Free allowances

~~Mandatory and capped~~Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the participant~~.~~ and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period~~.~~ (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs ~~available~~issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations~~.~~ and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are ~~cancelled~~retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If

they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits ~~for early action~~" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall~~.~~, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). ~~Any~~Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities

of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

Formatted: Line spacing: At least 12 pt

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

~~3.~~4. *Identification of assets relating to the cap and trade program as sponsoring government*

Summary of relevant guidance – See Appendix ~~A~~C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation ~~and sales~~ of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not ~~cancelled~~retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

~~b) [NTD preliminary conclusions subject to change, based on further understanding of escrow accounts, whether "delivery of EAs" is substantive, importance of certification date vs auction date and subject to discussion with TBS.]~~

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the ~~date of the auction~~transfer of funds into the Province's escrow settlement account.

   ~~On the~~After auction ~~date, a receivable~~certification cash from successful bidders is ~~recognized by the Province for the sale of EAs.~~transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized ~~in Revenue~~as deferred revenue until the contract is settled by the transfer of EAs to the participants (see ~~Part 5).~~section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

~~c)~~d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

~~d)~~e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants~~/Escrowed amounts~~

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations or increased compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

~~*Analysis*~~

Formatted: Font: Italic

Formatted: Font: Italic

Formatted: Font: Not Italic

Formatted: List Paragraph, Line spacing: single

a) On creation ~~and sales~~ of free and auctioned EAs:

EAs are "goods" created to be sold or distributed to participants~~. These~~ (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. ~~Therefore despite being intangible in nature,~~ PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs ~~also~~therefore meet the definition of inventories held-for-sale ~~and~~as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount.

~~EAs that are returned to the government and not cancelled due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).~~ PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory. ~~[ASK MOECC CREATION PROCESS – EXPECTATION IS THAT NO FIXED PRODUCTION OVERHEADS EITHER – ALL WOULD BE GENERAL MANAGEMENT I.E. IF NO PRODUCTION OCCURRED WOULD ANY OVERHEAD COSTS BE ELIMINATED.]~~

~~It is noted that upon the adoption of PS 3450 in fiscal 2020, inventories held-for-sale would be in scope of PS 3450 as they are classified as financial assets under PS 1201 (currently PS 1200). PS 3450 requires financial assets other than equity instruments that are quoted in an active market to be measured at amortized cost, net of any allowance for recovery. While EAs may be considered to trade in an active market, if an active market develops, EAs are not equity instruments and therefore will not be required to be measured at fair value.~~

~~Under PS 3450 financial assets can be designated as measured at fair value when they are part of a portfolio of instruments that is managed at fair value or contain an embedded derivative. It is unlikely that the Province would be considered to manage newly created EAs on a fair value basis and there have not been any embedded derivatives identified in the EAs. Therefore EAs held as inventory must be measured at cost.~~ EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for

production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and ~~lead to~~provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the ~~proceeds~~ cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party ~~(DB)~~ in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids~~, or~~ and therefore if their bids are successful ~~and therefore whether~~. Only successful bids give the Province ~~has~~ any rights to the escrow proceeds ~~prior to the auction being held. Rather~~. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. ~~[NTD – Add additional support if bidders can retract bid guarantees prior to auction date.]~~ If no auction occurs for any reason then the Province does not have any right to the escrowed ~~amounts. [NTD – to confirm]~~cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

~~From the auction date there is a contract between the Province and the purchasers of EAs. While the Province has not yet credited EAs to the recipient's account, the process of crediting EAs is considered not to be substantive as EAs are not in physical form and the Province controls the recording of EAs in the participants' accounts. Rather, the legal and contractual rights of the EAs are obtained by a purchaser on the auction date. In addition, the participant has also substantially performed under the contract as payment has already been made either through a cash bid guarantee or by the submission of an adequate LOC or LOG. The Province would recognize this as a receivable to the extent that the cash has not been received from Deutsche Bank.~~

~~This position is also analogous to "trade date" accounting which is required by PS 3450.A16 for financial assets traded on a recognized exchange in regular way purchases and sales. While the initial auction of EAs is not on a recognized exchange, they are financial assets and they are auctioned into a~~

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

Formatted: Normal, Indent: Left: 1.9 cm, Line spacing: Multiple 1.15 li, Tab stops: Not at 1.9 cm

~~market place on a regular basis and give rise to a fixed price commitment between the participant and the government, therefore an analogy to the trade date requirement may be appropriate.~~

~~*Measurement of receivable:* The receivable would be measured at the auction price, being the amount of consideration expected to be received from the sale. Due to the bid guarantees it would be expected that the full auction price would be received. [IF EXPOSED TO DB CREDIT RISK MAY NEED TO ADD SOMETHING REGARDING BAD DEBT EXPENSE]~~

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the

restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected: ~~Three alternative views were considered for asset recognition – 1) at the posting of bid guarantees; 2) on settlement date; and 3) on auction certification date.~~

~~*Posting of bid guarantees:* For this option, escrow amounts meet definition of an asset when the participant posts a bid guarantee in cash. Under this view it is argued that the Province~~It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders~~, therefore effectively controlling the escrowed amounts. The cash held in escrow is therefore held on behalf of the Province (an asset) with a corresponding liability to either return the cash or EAs. This view was rejected as the use of escrow accounts, as opposed to deposits lodged directly with the Province, sets out the relevant terms as to how and when escrow proceeds are released and therefore the Province does not have discretion to direct the funds as they wish. As the Province has not yet delivered any EAs they do not have a right to the amounts in escrow, and nor do they have legal title. Therefore, the Province does not have any substantive mechanisms of control over the escrow accounts.~~. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued

Formatted: Normal, Indent: Left: 1.9 cm

that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected: ~~*On settlement date:* It could be considered that the contract is wholly unperformed until the Province has received the cash released from escrow (or other cash payment from participants) as this cash must be received before the EAs are credited to participant accounts. Under this view an asset and revenue is only recorded once cash has been received. This view was rejected as the bid guarantee and escrow process means it is only a matter of time before the funds are received by the Province and therefore this is not substantive enough to preclude asset recognition as the Province controls a right to cash from the date of auction under the cap and trade auction mechanism.~~

Formatted: Font: Not Italic, No underline

~~*On auction certification date:* It could be considered was that the certification date is the point for asset recognition as prior to this the auction may not have been valid. This was rejected because the certification date is only to confirm compliance and does not change the date that the contractual arrangements between the Province and the participant for the sale of EAs was made. However, if the certification process rejected certain sales or the auction as a whole, this would be an adjusting subsequent event that would be considered in determining whether assets/revenue from the auction process should be recognized.~~

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

~~e)~~d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can

deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are ~~cancelled~~retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs~~. This alternative view would be consistent with a~~ as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section ~~4~~5 below~~.~~ and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. ~~Therefore~~ The only exception is when EAs for a future compliance period are received as part of the ~~right to receive an EA is also not an asset. The~~3 for 1 increased compliance obligation as these may be

re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold ~~(i.e. those remitted~~ or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations~~) and so any~~. Any recognition of an asset for the right to receive back ~~was recognized for~~ applied to all EAs~~,~~ would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then ~~cancelled~~retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not ~~appropriate accounting~~a fair presentation.

~~d)~~e) Failure of participant to pay increased compliance obligation:

~~The~~An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations~~. As participants~~ as they can ~~settle their obligations with~~purchase additional EAs ~~that~~on the market at the market price. EAs do not enhance or create expected economic future benefits for the government~~. It~~ for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is ~~only when~~linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs ~~that~~and under legislation the Province has a right to demand cash as settlement of the compliance obligation~~.~~ (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: ~~The~~ There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues*. However, it would be consistent with PS 3510 and other standard to recognize the receivable ~~would be recognized~~ at the amount expected to ~~-~~be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

~~4.~~5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial ~~liability~~liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub-accounts.

Formatted: Not Highlight

~~*Analysis*Loan guarantees and contingent liabilities: **EITHER** There may be an implicit loan guarantee by the Province in respect of the funds held in escrow for the participants prior to the auction date and up to the date of settlement. Absent any specific information to the contrary regarding DB's solvency it would usually be considered not likely that the Province would have to pay any amounts in respect of the escrow proceeds and no accrual would be made. To the extent that there are escrowed proceeds held over a balance sheet date disclosures of the implicit loan guarantee should be made, if material.~~

~~**OR** There are no contingent liabilities or loan guarantees by the Province in respect of the funds held in escrow for the participants either prior to the auction date or between the auction date and settlement date.~~
~~[NTD – position to be confirmed based on discussion of insolvency risk with DB~~

~~c)~~ Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once~~accounts. I'm not sure there is, but if it is considered to be "public money" prior or post auction then the Province might have a duty to repay it.]~~

Formatted: Not Highlight

Formatted: Font: Not Italic

Formatted: List Paragraph, Line spacing: single

~~*Analysis*~~

a) ~~Financial liabilities: Under the cap and trade legislation the Province will issue a certain number of EAs under the program (the cap) and, as EAs are financial assets, being inventory held-for-sale (see Section 3 (a) above) this is an obligation to deliver financial assets. However the obligation, such that it exists (see also (b) below), is not a contractual obligation with the participants, as it is brought about through the cap and trade legislation and regulations not individual contracts with participants.~~

a) ~~Once~~ the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them ~~in a manner that results in a sacrifice of economic benefits. Under the legislation, the EAs can only be redeemed to settle a participant's compliance obligation under the legislation and cannot be redeemed~~ for cash or any other financial asset, or ~~exchanged~~exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

Formatted: Indent: Left: 0.95 cm, Hanging: 0.95 cm, Numbered + Level: 1 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 0.63 cm + Indent at: 1.27 cm

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of ~~cancelled~~retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach ~~and recognizes a liability for the obligation to repatriate or redeem the EAs for their emissions value to the participant (Dr Cash (auction EAs) or Dr Expense (free EAs) and Cr Liability for Emissions Notes for market price), along with a right to receive EAs from participants to settle the EA obligation as emissions occur (Dr Receivable, Cr Revenue). This accounting has the benefit of being most symmetrical with the common accounting methods used by participants under other Frameworks such as IFRS.~~. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

~~Our understanding is that New Zealand took this view, in part, because their EAs (NZUs) are interchangeable with "Kyoto AAU's" (International units), which may create an obligation for New Zealand to accept Kyoto AAUs for NZUs under terms that could be unfavourable. However, this view was rejected as based on the cap and trade program applied by Ontario the obligation to repatriate or redeem the Emissions Notes does not result in an outflow or sacrifice of future economic benefits as~~

there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to deliver transfer "goods" (being the free EAs) in total or to specific participants. Ultimately however, the The delivery of free EAs is a transition mechanism and is at the discretion of the Province, rather than a contractual or constructive obligation non-reciprocal (as opposed to the participants, as the Province retains discretion over the issuances sale of EAs which is a reciprocal transaction). The transfer of free EAs. [To confirm with MOECC – may have to switch to the alternative view if MOECC EAs is not comfortable with the idea technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is no an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs]. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

~~*Alternative positions considered and rejected:* It could be argued that there is a constructive (rather than contractual) obligation to deliver free allowances to certain participants, due to actions and communications of the Province that have raised valid expectations for specific participants that they will receive free allowances in order to meet their compliance obligations. The obligation would be settled when free allowances are issued. However, even if this view is taken, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material.~~

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the

Formatted: Tab stops: 1.9 cm, Left

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Font: Georgia, 10 pt

Formatted: Font: Not Italic, No underline

Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section ~~5~~6 below.

~~c) Loan guarantees and contingent liabilities: [TBD – To be supported by facts, if any, that indicate the Province may be liable for the return of amounts held in escrow if DB goes insolvent and does not return the escrowed amounts to participants. If it is concluded that there is no implicit guarantee or contingent liability because the Province cannot be liable for the return of the escrowed amounts, the facts will support that position.]~~

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

~~5.~~6. Revenue recognition under the cap and trade program as sponsoring government

Formatted: Font: 10 pt, Not Bold, Not Italic, Font color:

Formatted: Indent: Left: 1.98 cm, Line spacing: At least 12 pt

This section is divided into three sub-sections. The first examines whether the transactions being accounted for are exchange (reciprocal) or non-exchange (non-reciprocal) transactions. The second considers what performance obligations exist. The third section looks at the pattern and timing of revenue recognition for the performance obligations identified.

Sale of EAs as exchange or non-exchange transactions

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix AC for details.

PS 3510, Tax revenue (definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles (non-authoritative due process document)

Preliminary position – The sale of EAs are exchange transactions.

***Analysis*:**

The auctioning of the EAs is meets the definition of an "exchange transaction" in PS 3510 as participants receive an asset (an EA) and gives approximately equal value in exchange. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see Section 3 (a) above).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

The analysis above is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the PSAS Revenue Statement of principles, as the EAs are considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. The Province's right to payment from a participant arises from the auction process and not solely from legislation. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no or reduced inflows to the Province.

***Alternative positions considered and rejected*:** An alternative view is that the cap and trade legislation forces mandatory participants to purchase EAs in order to settle a legislative obligation. Participants *must* obtain EAs in

Formatted: Font: +Headings (Georgia), Italic

Formatted: Line spacing: Multiple 1.15 li

Formatted: Font: +Headings (Georgia)

Formatted: Indent: Left: 0 cm, First line: 0 cm

Formatted: Line spacing: At least 12 pt

Formatted: Underline

~~order to meet their compliance obligations which are created by legislation, and initially EAs are only available from the Province. Therefore, in substance the purchase of EAs equates to a pre-paid "tax" on emissions, and therefore there is a non-reciprocal transaction as participants do not get anything of economic benefit in exchange, but rather have an outflow of cash to the Province that they previously did not have to pay prior to the cap and trade legislation. This view was rejected for the reasons given in support of "exchange transactions" above as the nature of the cap and trade program and the auction mechanisms are designed to create a carbon market, and under this system EAs become a "good" that has economic value. Therefore the characterization of the sale of EAs as non-exchange transaction would not be consistent with the substance of the cap and trade program.~~

~~Revenue recognition for sale of EAs (Exchange transactions)~~

~~*Relevant guidance* - See Appendix A for details.~~

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Formatted: Tab stops: 16.21 cm, Left

Preliminary position: Revenue is recognized for the sale of EAs on the ~~auction~~ date of delivery of the EAs as ~~there are no further substantive~~this is when the performance ~~obligations~~obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) What is the performance obligation~~?~~ for the sale of EAs? A performance obligation is defined in IFRS 15~~/ASC 606~~ a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". ~~This~~The following analysis has applied the IFRS concept, as permitted under PS 1150.

Formatted: Indent: Left: 0.63 cm, No bullets or numbering

~~a)~~ In both IFRS 15~~/ASC 606~~ and the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the ~~standard auction process. The completion of the auction bid process creates the enforceable right of the province to payment and the obligation to credit the EA to the participant, as well as creating the right of the participant to the EA and the obligation to pay the Province. The auction mechanisms are published and standardized such that each participant understands the~~

~~enforceable rights and obligations that are entered into when an auction occurs.~~auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix ~~A~~C for definition of "distinct goods and services")

Based on the above analysis, a contract is created when a participant successfully bids at auction~~,~~ as confirmed in the auction certification process. The Province has ~~only one~~ distinct performance ~~obligation~~obligations to deliver each EA to each successful bidder under ~~this contract, which is the delivery of the EAs~~these contracts.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in ~~4~~5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario ~~has an obligation to redeem only~~accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions~~.~~ as settlement of their compliance obligations. Therefore ~~this~~Ontario has no obligation to redeem ~~cannot arise~~an EA that arises from the original exchange transaction and ~~is~~ therefore ~~not a~~there is no performance obligation ~~of~~ that ~~transaction~~exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at

auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program~~,~~ and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written ~~of~~or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15~~/ASC 606~~ the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP proposes a "control" model similar to IFRS 15~~/ASC 606~~, so this approach has been applied in the analysis. Under IFRS 15~~/ASC 606~~ an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15~~/ASC 606~~ provides indicators of when a point-in-time obligation has been satisfied. These are also included in the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP and have been considered in this analysis. See IFRS 15.38 in Appendix ~~A~~C. The indicators have been assessed as follows:

~~Present right to payment – As noted in Section 3 above, there is a present right to payment at the auction date.~~

~~Legal title to the asset – Legal title is transferred when the EAs are credited to the participants account. This occurs after the auction certification and settlement process is completed. [MOECC implementation group to confirm when legal title transfers is this analysis correct?]~~

~~The entity has transferred physical possession of the asset – This indicator is not relevant as EAs do not have physical form.~~

~~The customer has significant risks and rewards of ownership of the asset – The participant has significant risks and rewards of ownership of the asset from the auction date. If the price of EAs increases after the auction date, the customer can benefit from this increase by selling the EA. Similarly if the price decreases after the auction date, the customer bears this decrease in value. The participant can decide what to do with the EA – sell it, keep it or use it to settle a compliance obligation - from the date of the auction. While EAs are credited to a~~

~~participants account only after auction certification and settlement process are completed, these are administrative processes that do not substantively change the risks and rewards of ownership of the EAs.~~

~~The customer has accepted the asset – There are no customer acceptance clauses. While the auction process is subject to certification this is not performed by the participant, but rather by the Province.~~

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset. Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or	Possibly – the price	Yes – From this date	N/A already met	N/A already met

suffering from the fluctuations in the market price of EAs	that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.		

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the ~~auction date.~~date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected: ~~It was considered whether revenue should be recognized at a point in time when the EAs are credited to the participant account (legal title to the asset has transferred). This was rejected as the delay between the auction date and crediting the participant account is to confirm the settlement of the auction payment and that the auction was carried out legally and in accordance with the regulations. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset". Therefore, limited weight was placed on the fact that the participant's accounts are not credited until some time after the auction.~~

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for

participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.

- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix ~~A~~C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted. ~~[NTD – to confirm that all interested parties agree with this statement]~~

~~6.~~7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

~~7.~~8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

~~8.~~9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

~~9.~~10. Implementation risks and audit considerations

Formatted Table

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.

Formatted Table

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35~~-.37.~~.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not ~~defined under PSAS.~~specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and ~~OS~~PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049). ~~After the adoption of PS 3450, which is currently effective for the Province for~~

~~fiscal 2020, financial assets may be designated into the "fair value" category but only if they are managed and evaluated on a fair value basis in accordance with a risk management or investment strategy or they contain embedded derivatives.~~

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

~~PS 3200 does not contain measurement guidance for liabilities. Other standards such as PS 3250, *Retirement benefits* and PS 3260, *Liability for contaminated sites* use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate).~~

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

updated memo attached for tomorrow’s discussion.

Upon arrival, please call Shyrose Virani at 416 325 1448 to gain entry into our building.

Thanks
Shyrose

As per recent discussion, this meeting will be to review the proposed accounting treatment for Ontario’s Cap and Trade program. Subject to any changes in the proposed approach, OPCD will initiate a discussion with the Auditor General’s office to review the planned accounting treatment.

Pre-reading materials will be provided in advance of the meeting.

Cap and Trade accounting implications - memo for Nov 23 meeting.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [NTD – *MOECC to provide comments on accuracy of background terminology*]

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, after the distribution of free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular

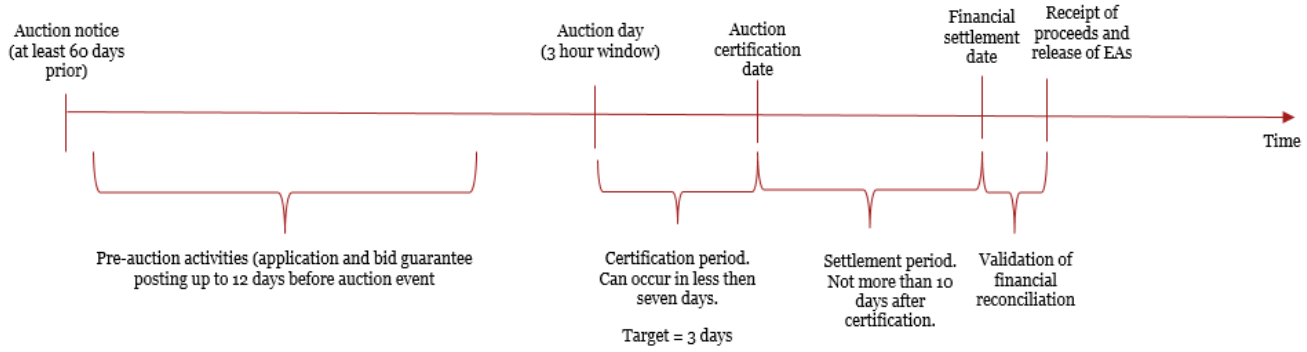
auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts.

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the

participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director

under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program

means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction

and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the

payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

4. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants (see section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On date of receipt of proceeds to GGRA and transfer of EAs to participant CITSS accounts:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations or increased compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) <u>On creation of free and auctioned EAs</u>:

EAs are "goods" created to be sold or distributed to participants (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs therefore meet the definition of inventories held-for-sale as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount. PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no

cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids and therefore if their bids are successful. Only successful bids give the Province any rights to the escrow proceeds. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those

deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected:

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 5 below and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. The only exception is when EAs for a future compliance period are received as part of the 3 for 1 increased compliance obligation as these may be re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations. Any recognition of an asset for the right to receive back applied to all EAs would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not a fair presentation.

e) Failure of participant to pay increased compliance obligation:

An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations as they can purchase additional EAs on the market at the market price. EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognize the receivable at the amount expected to be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance

obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub- accounts.

Analysis

a) Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them for cash or any other financial asset, or exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an

Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 6 below.

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

6. Revenue recognition under the cap and trade program as sponsoring government

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix C for details.

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the date of delivery of the EAs as this is when the performance obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) <u>What is the performance obligation for the sale of EAs?</u> A performance obligation is defined in IFRS 15 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the Revenue SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". The following analysis has applied the IFRS concept, as permitted under PS 1150.

   In both IFRS 15 and the Revenue SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix C for definition of "distinct goods and services")

   Based on the above analysis, a contract is created when a participant successfully bids at auction as confirmed in the auction certification process. The Province has distinct performance obligations to deliver each EA to each successful bidder under these contracts.

   <u>Alternative positions considered and rejected:</u> It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon

in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to redeem an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) <u>When is the performance obligation satisfied?</u> There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15 the performance obligations are satisfied as control

of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the Revenue SOP proposes a "control" model similar to IFRS 15, so this approach has been applied in the analysis. Under IFRS 15 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the Revenue SOP and have been considered in this analysis. See IFRS 15.38 in Appendix C. The indicators have been assessed as follows:

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset.				

Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or suffering from the fluctuations in the market price of EAs	Possibly – the price that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	Yes – From this date the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	N/A already met	N/A already met

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected:

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.

- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the

requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.	

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049).

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

This paper can be found at: http://www.ipsasb.org/system/files/meetings/files/Agenda-item-14.pdf

Cap and Trade accounting implications - memorandum to file v5 November 2....pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [INTD – MOECC to provide comments on accuracy of background terminology]

Formatted: Highlight

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (~~mandatory~~capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: ~~There~~In accordance with the Regulations there are four auctions a year. ~~MOECC determines~~ EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, ~~and how many of each "the vintage"~~after the distribution of ~~the EAs is available.~~free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage~~", but more~~". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which

Formatted: Tab stops: 17.62 cm, Left

case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value~~.~~, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

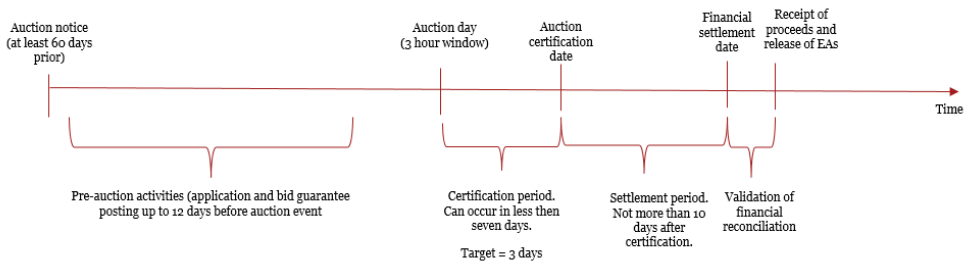
Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB~~).~~.) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province ~~(and a market monitor, for WCI auctions)~~ reviews the results for compliance with the ~~Province's regulations.~~regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices~~.~~ by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days~~, in~~ into their sub-account, which ~~case~~ is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once ~~payment has~~all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts. ~~[Question for MOECC – up to the date of auction can a registered participant remove themselves from the auction and get back their cash/LOC or are they locked in until after the auction date?]~~

~~[o/s is to determine if there is an insolvency risk prior to the auction period; if there is, has the Province effectively guaranteed the return of the bid collateral if the escrow holder became insolvent]~~

Auction timeline illustration



Free allowances

~~Mandatory and capped~~Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the participant~~.~~ and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period~~.~~ (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs ~~available~~issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations~~.~~ and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are ~~cancelled~~retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If

they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits ~~for early action~~" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall~~.~~, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). ~~Any~~Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities

of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

Formatted: Line spacing: At least 12 pt

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

~~3.~~4. *Identification of assets relating to the cap and trade program as sponsoring government*

Summary of relevant guidance – See Appendix ~~A~~C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation ~~and sales~~ of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not ~~cancelled~~retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

~~b) [NTD preliminary conclusions subject to change, based on further understanding of escrow accounts, whether "delivery of EAs" is substantive, importance of certification date vs auction date and subject to discussion with TBS.]~~

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the ~~date of the auction~~transfer of funds into the Province's escrow settlement account.

   ~~On the~~After auction ~~date, a receivable~~certification cash from successful bidders is ~~recognized by the Province for the sale of EAs.~~transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized ~~in Revenue~~as deferred revenue until the contract is settled by the transfer of EAs to the participants (see ~~Part 5).~~section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

~~c)~~d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

~~d)~~e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Formatted: Indent: Hanging: 0.96 cm, Numbered + Level: 1 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 0.79 cm + Indent at: 1.43 cm

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

~~*On auction date:*~~

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr ~~Receivable (from successful participants/Escrowed amounts)~~

~~Cr Revenue~~

~~Dr Cost of sales~~Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

~~*On settlement date:*~~

~~Dr Cash~~

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants~~/Escrowed amounts~~

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations or increased compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

~~*Analysis*~~

Formatted: Font: Italic

Formatted: Font: Italic

Formatted: Font: Not Italic

Formatted: List Paragraph, Line spacing: single

a) On creation ~~and sales~~ of free and auctioned EAs:

EAs are "goods" created to be sold or distributed to participants~~. These~~ (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. ~~Therefore despite being intangible in nature,~~ PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs ~~also~~therefore meet the definition of inventories held-for-sale ~~and~~as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount.

~~EAs that are returned to the government and not cancelled due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).~~ PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory. ~~[ASK MOECC CREATION PROCESS – EXPECTATION IS THAT NO FIXED PRODUCTION OVERHEADS EITHER – ALL WOULD BE GENERAL MANAGEMENT I.E. IF NO PRODUCTION OCCURRED WOULD ANY OVERHEAD COSTS BE ELIMINATED.]~~

~~It is noted that upon the adoption of PS 3450 in fiscal 2020, inventories held-for-sale would be in scope of PS 3450 as they are classified as financial assets under PS 1201 (currently PS 1200). PS 3450 requires financial assets other than equity instruments that are quoted in an active market to be measured at amortized cost, net of any allowance for recovery. While EAs may be considered to trade in an active market, if an active market develops, EAs are not equity instruments and therefore will not be required to be measured at fair value.~~

~~Under PS 3450 financial assets can be designated as measured at fair value when they are part of a portfolio of instruments that is managed at fair value or contain an embedded derivative. It is unlikely that the Province would be considered to manage newly created EAs on a fair value basis and there have not been any embedded derivatives identified in the EAs. Therefore EAs held as inventory must be measured at cost.~~ EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for

production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and ~~lead to~~provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the ~~proceeds~~ cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party ~~(DB)~~ in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids~~, or~~ and therefore if their bids are successful ~~and therefore whether~~. Only successful bids give the Province ~~has~~ any rights to the escrow proceeds ~~prior to the auction being held. Rather~~. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. ~~[NTD – Add additional support if bidders can retract bid guarantees prior to auction date.]~~ If no auction occurs for any reason then the Province does not have any right to the escrowed ~~amounts. [NTD – to confirm]~~cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

~~From the auction date there is a contract between the Province and the purchasers of EAs. While the Province has not yet credited EAs to the recipient's account, the process of crediting EAs is considered not to be substantive as EAs are not in physical form and the Province controls the recording of EAs in the participants' accounts. Rather, the legal and contractual rights of the EAs are obtained by a purchaser on the auction date. In addition, the participant has also substantially performed under the contract as payment has already been made either through a cash bid guarantee or by the submission of an adequate LOC or LOG. The Province would recognize this as a receivable to the extent that the cash has not been received from Deutsche Bank.~~

~~This position is also analogous to "trade date" accounting which is required by PS 3450.A16 for financial assets traded on a recognized exchange in regular way purchases and sales. While the initial auction of EAs is not on a recognized exchange, they are financial assets and they are auctioned into a~~

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

Formatted: Normal, Indent: Left: 1.9 cm, Line spacing: Multiple 1.15 li, Tab stops: Not at 1.9 cm

~~market place on a regular basis and give rise to a fixed price commitment between the participant and the government, therefore an analogy to the trade date requirement may be appropriate.~~

~~*Measurement of receivable:* The receivable would be measured at the auction price, being the amount of consideration expected to be received from the sale. Due to the bid guarantees it would be expected that the full auction price would be received. [IF EXPOSED TO DB CREDIT RISK MAY NEED TO ADD SOMETHING REGARDING BAD DEBT EXPENSE]~~

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the

restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected: ~~Three alternative views were considered for asset recognition – 1) at the posting of bid guarantees; 2) on settlement date; and 3) on auction certification date.~~

~~*Posting of bid guarantees:* For this option, escrow amounts meet definition of an asset when the participant posts a bid guarantee in cash. Under this view it is argued that the Province~~It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders~~, therefore effectively controlling the escrowed amounts. The cash held in escrow is therefore held on behalf of the Province (an asset) with a corresponding liability to either return the cash or EAs. This view was rejected as the use of escrow accounts, as opposed to deposits lodged directly with the Province, sets out the relevant terms as to how and when escrow proceeds are released and therefore the Province does not have discretion to direct the funds as they wish. As the Province has not yet delivered any EAs they do not have a right to the amounts in escrow, and nor do they have legal title. Therefore, the Province does not have any substantive mechanisms of control over the escrow accounts.~~. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued

Formatted: Normal, Indent: Left: 1.9 cm

that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected: ~~*On settlement date:* It could be considered that the contract is wholly unperformed until the Province has received the cash released from escrow (or other cash payment from participants) as this cash must be received before the EAs are credited to participant accounts. Under this view an asset and revenue is only recorded once cash has been received. This view was rejected as the bid guarantee and escrow process means it is only a matter of time before the funds are received by the Province and therefore this is not substantive enough to preclude asset recognition as the Province controls a right to cash from the date of auction under the cap and trade auction mechanism.~~

Formatted: Font: Not Italic, No underline

~~*On auction certification date:* It could be considered was that the certification date is the point for asset recognition as prior to this the auction may not have been valid. This was rejected because the certification date is only to confirm compliance and does not change the date that the contractual arrangements between the Province and the participant for the sale of EAs was made. However, if the certification process rejected certain sales or the auction as a whole, this would be an adjusting subsequent event that would be considered in determining whether assets/revenue from the auction process should be recognized.~~

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

~~e)~~d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can

deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are ~~cancelled~~retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs~~. This alternative view would be consistent with a~~ as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section ~~4~~5 below~~.~~ and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. ~~Therefore~~ The only exception is when EAs for a future compliance period are received as part of the ~~right to receive an EA is also not an asset. The~~3 for 1 increased compliance obligation as these may be

re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold ~~(i.e. those remitted~~ or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations~~) and so any~~. Any recognition of an asset for the right to receive back ~~was recognized for~~ applied to all EAs~~,~~ would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then ~~cancelled~~retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not ~~appropriate accounting~~a fair presentation.

~~d)~~e) Failure of participant to pay increased compliance obligation:

~~The~~An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations~~. As participants~~ as they can ~~settle their obligations with~~purchase additional EAs ~~that~~on the market at the market price. EAs do not enhance or create expected economic future benefits for the government~~. It~~ for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is ~~only when~~linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs ~~that~~and under legislation the Province has a right to demand cash as settlement of the compliance obligation~~.~~ (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: ~~The~~ There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues*. However, it would be consistent with PS 3510 and other standard to recognize the receivable ~~would be recognized~~ at the amount expected to ~~-~~be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

~~4.~~5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial ~~liability~~liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub-accounts.

Formatted: Not Highlight

~~*Analysis*Loan guarantees and contingent liabilities: **EITHER** There may be an implicit loan guarantee by the Province in respect of the funds held in escrow for the participants prior to the auction date and up to the date of settlement. Absent any specific information to the contrary regarding DB's solvency it would usually be considered not likely that the Province would have to pay any amounts in respect of the escrow proceeds and no accrual would be made. To the extent that there are escrowed proceeds held over a balance sheet date disclosures of the implicit loan guarantee should be made, if material.~~

~~**OR** There are no contingent liabilities or loan guarantees by the Province in respect of the funds held in escrow for the participants either prior to the auction date or between the auction date and settlement date.~~
~~[NTD – position to be confirmed based on discussion of insolvency risk with DB~~

~~c)~~ Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once~~accounts. I'm not sure there is, but if it is considered to be "public money" prior or post auction then the Province might have a duty to repay it.]~~

Formatted: Not Highlight

Formatted: Font: Not Italic

Formatted: List Paragraph, Line spacing: single

~~*Analysis*~~

a) ~~Financial liabilities: Under the cap and trade legislation the Province will issue a certain number of EAs under the program (the cap) and, as EAs are financial assets, being inventory held-for-sale (see Section 3 (a) above) this is an obligation to deliver financial assets. However the obligation, such that it exists (see also (b) below), is not a contractual obligation with the participants, as it is brought about through the cap and trade legislation and regulations not individual contracts with participants.~~

a) ~~Once~~ the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them ~~in a manner that results in a sacrifice of economic benefits. Under the legislation, the EAs can only be redeemed to settle a participant's compliance obligation under the legislation and cannot be redeemed~~ for cash or any other financial asset, or ~~exchanged~~exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

Formatted: Indent: Left: 0.95 cm, Hanging: 0.95 cm, Numbered + Level: 1 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 0.63 cm + Indent at: 1.27 cm

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of ~~cancelled~~retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach ~~and recognizes a liability for the obligation to repatriate or redeem the EAs for their emissions value to the participant (Dr Cash (auction EAs) or Dr Expense (free EAs) and Cr Liability for Emissions Notes for market price), along with a right to receive EAs from participants to settle the EA obligation as emissions occur (Dr Receivable, Cr Revenue). This accounting has the benefit of being most symmetrical with the common accounting methods used by participants under other Frameworks such as IFRS.~~. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

~~Our understanding is that New Zealand took this view, in part, because their EAs (NZUs) are interchangeable with "Kyoto AAU's" (International units), which may create an obligation for New Zealand to accept Kyoto AAUs for NZUs under terms that could be unfavourable. However, this view was rejected as based on the cap and trade program applied by Ontario the obligation to repatriate or redeem the Emissions Notes does not result in an outflow or sacrifice of future economic benefits as~~

there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to deliver transfer "goods" (being the free EAs) in total or to specific participants. Ultimately however, the The delivery of free EAs is a transition mechanism and is at the discretion of the Province, rather than a contractual or constructive obligation non-reciprocal (as opposed to the participants, as the Province retains discretion over the issuances sale of EAs which is a reciprocal transaction). The transfer of free EAs. [To confirm with MOECC – may have to switch to the alternative view if MOECC EAs is not comfortable with the idea technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is no an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs]. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

~~*Alternative positions considered and rejected:* It could be argued that there is a constructive (rather than contractual) obligation to deliver free allowances to certain participants, due to actions and communications of the Province that have raised valid expectations for specific participants that they will receive free allowances in order to meet their compliance obligations. The obligation would be settled when free allowances are issued. However, even if this view is taken, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material.~~

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the

Formatted: Tab stops: 1.9 cm, Left

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Font: Georgia, 10 pt

Formatted: Font: Not Italic, No underline

Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section ~~5~~6 below.

~~c) Loan guarantees and contingent liabilities: [TBD – To be supported by facts, if any, that indicate the Province may be liable for the return of amounts held in escrow if DB goes insolvent and does not return the escrowed amounts to participants. If it is concluded that there is no implicit guarantee or contingent liability because the Province cannot be liable for the return of the escrowed amounts, the facts will support that position.]~~

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

~~5.~~6. Revenue recognition under the cap and trade program as sponsoring government

Formatted: Font: 10 pt, Not Bold, Not Italic, Font color:

Formatted: Indent: Left: 1.98 cm, Line spacing: At least 12 pt

This section is divided into three sub-sections. The first examines whether the transactions being accounted for are exchange (reciprocal) or non-exchange (non-reciprocal) transactions. The second considers what performance obligations exist. The third section looks at the pattern and timing of revenue recognition for the performance obligations identified.

Sale of EAs as exchange or non-exchange transactions

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix AC for details.

PS 3510, Tax revenue (definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles (non-authoritative due process document)

Preliminary position – The sale of EAs are exchange transactions.

***Analysis*:**

The auctioning of the EAs is meets the definition of an "exchange transaction" in PS 3510 as participants receive an asset (an EA) and gives approximately equal value in exchange. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see Section 3 (a) above).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

The analysis above is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the PSAS Revenue Statement of principles, as the EAs are considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. The Province's right to payment from a participant arises from the auction process and not solely from legislation. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no or reduced inflows to the Province.

***Alternative positions considered and rejected*:** An alternative view is that the cap and trade legislation forces mandatory participants to purchase EAs in order to settle a legislative obligation. Participants *must* obtain EAs in

Formatted: Font: +Headings (Georgia), Italic

Formatted: Line spacing: Multiple 1.15 li

Formatted: Font: +Headings (Georgia)

Formatted: Indent: Left: 0 cm, First line: 0 cm

Formatted: Line spacing: At least 12 pt

Formatted: Underline

~~order to meet their compliance obligations which are created by legislation, and initially EAs are only available from the Province. Therefore, in substance the purchase of EAs equates to a pre-paid "tax" on emissions, and therefore there is a non-reciprocal transaction as participants do not get anything of economic benefit in exchange, but rather have an outflow of cash to the Province that they previously did not have to pay prior to the cap and trade legislation. This view was rejected for the reasons given in support of "exchange transactions" above as the nature of the cap and trade program and the auction mechanisms are designed to create a carbon market, and under this system EAs become a "good" that has economic value. Therefore the characterization of the sale of EAs as non-exchange transaction would not be consistent with the substance of the cap and trade program.~~

~~Revenue recognition for sale of EAs (Exchange transactions)~~

~~*Relevant guidance* - See Appendix A for details.~~

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Formatted: Tab stops: 16.21 cm, Left

Preliminary position: Revenue is recognized for the sale of EAs on the ~~auction~~ date of delivery of the EAs as ~~there are no further substantive~~this is when the performance ~~obligations~~obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) What is the performance obligation~~?~~ for the sale of EAs? A performance obligation is defined in IFRS 15~~/ASC 606~~ a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". ~~This~~The following analysis has applied the IFRS concept, as permitted under PS 1150.

Formatted: Indent: Left: 0.63 cm, No bullets or numbering

~~a)~~ In both IFRS 15~~/ASC 606~~ and the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the ~~standard auction process. The completion of the auction bid process creates the enforceable right of the province to payment and the obligation to credit the EA to the participant, as well as creating the right of the participant to the EA and the obligation to pay the Province. The auction mechanisms are published and standardized such that each participant understands the~~

~~enforceable rights and obligations that are entered into when an auction occurs.~~auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix ~~A~~C for definition of "distinct goods and services")

Based on the above analysis, a contract is created when a participant successfully bids at auction~~,~~ as confirmed in the auction certification process. The Province has ~~only one~~ distinct performance ~~obligation~~obligations to deliver each EA to each successful bidder under ~~this contract, which is the delivery of the EAs~~these contracts.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in ~~4~~5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario ~~has an obligation to redeem only~~accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions~~.~~ as settlement of their compliance obligations. Therefore ~~this~~Ontario has no obligation to redeem ~~cannot arise~~an EA that arises from the original exchange transaction and ~~is~~ therefore ~~not a~~there is no performance obligation ~~of~~ that ~~transaction~~exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at

auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program~~,~~ and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written ~~of~~or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15~~/ASC 606~~ the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP proposes a "control" model similar to IFRS 15~~/ASC 606~~, so this approach has been applied in the analysis. Under IFRS 15~~/ASC 606~~ an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15~~/ASC 606~~ provides indicators of when a point-in-time obligation has been satisfied. These are also included in the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP and have been considered in this analysis. See IFRS 15.38 in Appendix ~~A~~C. The indicators have been assessed as follows:

~~Present right to payment – As noted in Section 3 above, there is a present right to payment at the auction date.~~

~~Legal title to the asset – Legal title is transferred when the EAs are credited to the participants account. This occurs after the auction certification and settlement process is completed. [MOECC implementation group to confirm when legal title transfers is this analysis correct?]~~

~~The entity has transferred physical possession of the asset – This indicator is not relevant as EAs do not have physical form.~~

~~The customer has significant risks and rewards of ownership of the asset – The participant has significant risks and rewards of ownership of the asset from the auction date. If the price of EAs increases after the auction date, the customer can benefit from this increase by selling the EA. Similarly if the price decreases after the auction date, the customer bears this decrease in value. The participant can decide what to do with the EA – sell it, keep it or use it to settle a compliance obligation - from the date of the auction. While EAs are credited to a~~

~~participants account only after auction certification and settlement process are completed, these are administrative processes that do not substantively change the risks and rewards of ownership of the EAs.~~

~~The customer has accepted the asset – There are no customer acceptance clauses. While the auction process is subject to certification this is not performed by the participant, but rather by the Province.~~

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset. Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or	Possibly – the price	Yes – From this date	N/A already met	N/A already met

suffering from the fluctuations in the market price of EAs	that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.		

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the ~~auction date.~~date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected: ~~It was considered whether revenue should be recognized at a point in time when the EAs are credited to the participant account (legal title to the asset has transferred). This was rejected as the delay between the auction date and crediting the participant account is to confirm the settlement of the auction payment and that the auction was carried out legally and in accordance with the regulations. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset". Therefore, limited weight was placed on the fact that the participant's accounts are not credited until some time after the auction.~~

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for

participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.

- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix ~~A~~C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted. ~~[NTD – to confirm that all interested parties agree with this statement]~~

~~6.~~7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

~~7.~~8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

~~8.~~9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

~~9.~~10. Implementation risks and audit considerations

Formatted Table

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.

Formatted Table

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35~~-.37.~~.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not ~~defined under PSAS.~~specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and ~~OS~~PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049). ~~After the adoption of PS 3450, which is currently effective for the Province for~~

~~fiscal 2020, financial assets may be designated into the "fair value" category but only if they are managed and evaluated on a fair value basis in accordance with a risk management or investment strategy or they contain embedded derivatives.~~

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

~~PS 3200 does not contain measurement guidance for liabilities. Other standards such as PS 3250, *Retirement benefits* and PS 3260, *Liability for contaminated sites* use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate).~~

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

Attachment 1: Cap and Trade accounting implications - memo for Nov 23 meeting.docx

---

updated memo attached for tomorrow's discussion.

Upon arrival, please call Shyrose Virani at 416 325 1448 to gain entry into our building.

Thanks
Shyrose

As per recent discussion, this meeting will be to review the proposed accounting treatment for Ontario's Cap and Trade program. Subject to any changes in the proposed approach, OPCD will initiate a discussion with the Auditor General's office to review the planned accounting treatment.

Pre-reading materials will be provided in advance of the meeting.

Cap and Trade accounting implications - memo for Nov 23 meeting.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [NTD – *MOECC to provide comments on accuracy of background terminology*]

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, after the distribution of free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular

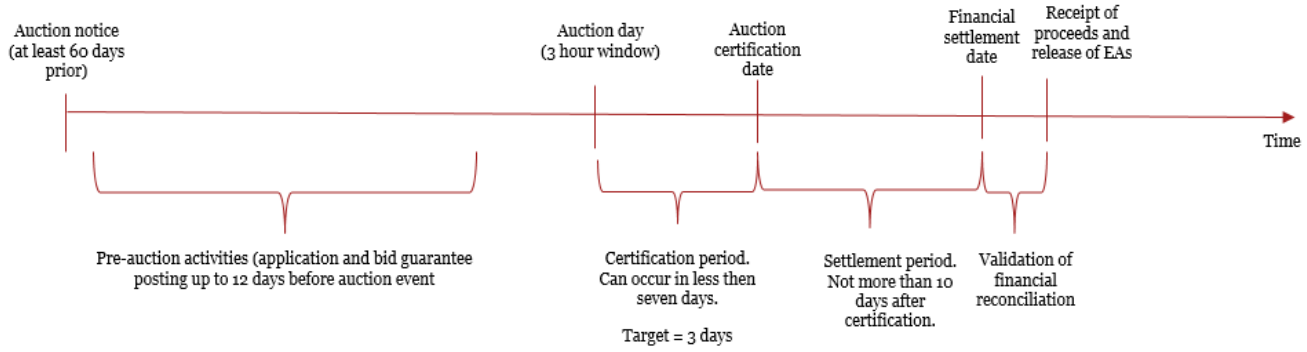
auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts.

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the

participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director

under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program

means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction

and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the

payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

4. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants (see section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On date of receipt of proceeds to GGRA and transfer of EAs to participant CITSS accounts:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations or increased compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) <u>On creation of free and auctioned EAs</u>:

EAs are "goods" created to be sold or distributed to participants (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs therefore meet the definition of inventories held-for-sale as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount. PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no

cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids and therefore if their bids are successful. Only successful bids give the Province any rights to the escrow proceeds. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those

deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected:

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 5 below and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. The only exception is when EAs for a future compliance period are received as part of the 3 for 1 increased compliance obligation as these may be re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations. Any recognition of an asset for the right to receive back applied to all EAs would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not a fair presentation.

e) Failure of participant to pay increased compliance obligation:

An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations as they can purchase additional EAs on the market at the market price. EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognize the receivable at the amount expected to be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance

obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub- accounts.

Analysis

a) Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them for cash or any other financial asset, or exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an

Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 6 below.

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

6. Revenue recognition under the cap and trade program as sponsoring government

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix C for details.

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the date of delivery of the EAs as this is when the performance obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) <u>What is the performance obligation for the sale of EAs?</u> A performance obligation is defined in IFRS 15 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the Revenue SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". The following analysis has applied the IFRS concept, as permitted under PS 1150.

   In both IFRS 15 and the Revenue SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix C for definition of "distinct goods and services")

   Based on the above analysis, a contract is created when a participant successfully bids at auction as confirmed in the auction certification process. The Province has distinct performance obligations to deliver each EA to each successful bidder under these contracts.

   <u>Alternative positions considered and rejected:</u> It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon

in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to redeem an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) <u>When is the performance obligation satisfied?</u> There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15 the performance obligations are satisfied as control

of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the Revenue SOP proposes a "control" model similar to IFRS 15, so this approach has been applied in the analysis. Under IFRS 15 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the Revenue SOP and have been considered in this analysis. See IFRS 15.38 in Appendix C. The indicators have been assessed as follows:

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset.				

Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or suffering from the fluctuations in the market price of EAs	Possibly – the price that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	Yes – From this date the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	N/A already met	N/A already met

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected:

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.

- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the

requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.	

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049).

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

Attachment 1: Cap and Trade accounting implications - memo for Nov 23 meeting.docx

---

updated memo attached for tomorrow's discussion.

Upon arrival, please call Shyrose Virani at 416 325 1448 to gain entry into our building.

Thanks
Shyrose

As per recent discussion, this meeting will be to review the proposed accounting treatment for Ontario's Cap and Trade program. Subject to any changes in the proposed approach, OPCD will initiate a discussion with the Auditor General's office to review the planned accounting treatment.

Pre-reading materials will be provided in advance of the meeting.

Cap and Trade accounting implications - memo for Nov 23 meeting.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [NTD – *MOECC to provide comments on accuracy of background terminology*]

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, after the distribution of free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular

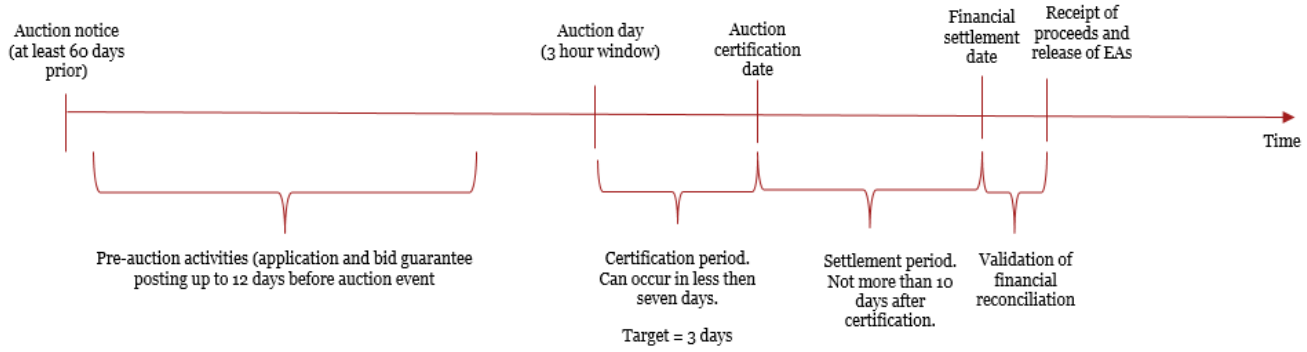
auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts.

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the

participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director

under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program

means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction

and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the

payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

4. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants (see section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On date of receipt of proceeds to GGRA and transfer of EAs to participant CITSS accounts:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations or increased compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) <u>On creation of free and auctioned EAs</u>:

EAs are "goods" created to be sold or distributed to participants (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs therefore meet the definition of inventories held-for-sale as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount. PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no

cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids and therefore if their bids are successful. Only successful bids give the Province any rights to the escrow proceeds. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those

deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected:

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 5 below and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. The only exception is when EAs for a future compliance period are received as part of the 3 for 1 increased compliance obligation as these may be re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations. Any recognition of an asset for the right to receive back applied to all EAs would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not a fair presentation.

e) Failure of participant to pay increased compliance obligation:

An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations as they can purchase additional EAs on the market at the market price. EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognize the receivable at the amount expected to be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance

obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub- accounts.

Analysis

a) Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them for cash or any other financial asset, or exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an

Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 6 below.

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

6. Revenue recognition under the cap and trade program as sponsoring government

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix C for details.

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the date of delivery of the EAs as this is when the performance obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) <u>What is the performance obligation for the sale of EAs?</u> A performance obligation is defined in IFRS 15 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the Revenue SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". The following analysis has applied the IFRS concept, as permitted under PS 1150.

   In both IFRS 15 and the Revenue SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix C for definition of "distinct goods and services")

   Based on the above analysis, a contract is created when a participant successfully bids at auction as confirmed in the auction certification process. The Province has distinct performance obligations to deliver each EA to each successful bidder under these contracts.

   <u>Alternative positions considered and rejected:</u> It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon

in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to redeem an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) <u>When is the performance obligation satisfied?</u> There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15 the performance obligations are satisfied as control

of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the Revenue SOP proposes a "control" model similar to IFRS 15, so this approach has been applied in the analysis. Under IFRS 15 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the Revenue SOP and have been considered in this analysis. See IFRS 15.38 in Appendix C. The indicators have been assessed as follows:

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset.				

Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or suffering from the fluctuations in the market price of EAs	Possibly – the price that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	Yes – From this date the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	N/A already met	N/A already met

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected:

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.

- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the

requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.	

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049).

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

This paper can be found at: http://www.ipsasb.org/system/files/meetings/files/Agenda-item-14.pdf

Attachment 1: Cap and Trade accounting implications - memo for Nov 23 meeting.docx

---

updated memo attached for tomorrow's discussion.

Upon arrival, please call Shyrose Virani at 416 325 1448 to gain entry into our building.

Thanks
Shyrose

As per recent discussion, this meeting will be to review the proposed accounting treatment for Ontario's Cap and Trade program. Subject to any changes in the proposed approach, OPCD will initiate a discussion with the Auditor General's office to review the planned accounting treatment.

Pre-reading materials will be provided in advance of the meeting.

Cap and Trade accounting implications - memo for Nov 23 meeting.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [NTD – *MOECC to provide comments on accuracy of background terminology*]

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, after the distribution of free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular

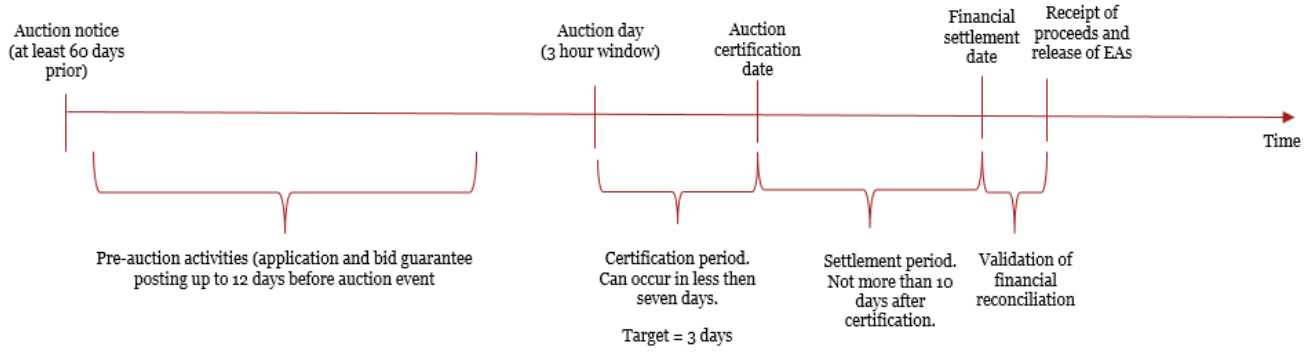
auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts.

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the

participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director

under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program

means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction

and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the

payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

4. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants (see section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On date of receipt of proceeds to GGRA and transfer of EAs to participant CITSS accounts:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations or increased compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) <u>On creation of free and auctioned EAs</u>:

EAs are "goods" created to be sold or distributed to participants (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs therefore meet the definition of inventories held-for-sale as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount. PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no

cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids and therefore if their bids are successful. Only successful bids give the Province any rights to the escrow proceeds. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those

deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected:

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 5 below and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. The only exception is when EAs for a future compliance period are received as part of the 3 for 1 increased compliance obligation as these may be re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations. Any recognition of an asset for the right to receive back applied to all EAs would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not a fair presentation.

e) Failure of participant to pay increased compliance obligation:

An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations as they can purchase additional EAs on the market at the market price. EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognize the receivable at the amount expected to be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance

obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub- accounts.

Analysis

a) Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them for cash or any other financial asset, or exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an

Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 6 below.

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

6. Revenue recognition under the cap and trade program as sponsoring government

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix C for details.

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the date of delivery of the EAs as this is when the performance obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) <u>What is the performance obligation for the sale of EAs?</u> A performance obligation is defined in IFRS 15 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the Revenue SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". The following analysis has applied the IFRS concept, as permitted under PS 1150.

   In both IFRS 15 and the Revenue SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix C for definition of "distinct goods and services")

   Based on the above analysis, a contract is created when a participant successfully bids at auction as confirmed in the auction certification process. The Province has distinct performance obligations to deliver each EA to each successful bidder under these contracts.

   <u>Alternative positions considered and rejected:</u> It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon

in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to redeem an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) <u>When is the performance obligation satisfied?</u> There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15 the performance obligations are satisfied as control

of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the Revenue SOP proposes a "control" model similar to IFRS 15, so this approach has been applied in the analysis. Under IFRS 15 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the Revenue SOP and have been considered in this analysis. See IFRS 15.38 in Appendix C. The indicators have been assessed as follows:

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset.				

Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or suffering from the fluctuations in the market price of EAs	Possibly – the price that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	Yes – From this date the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	N/A already met	N/A already met

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected:

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.

- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the

requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.	

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049).

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

This paper can be found at: http://www.ipsasb.org/system/files/meetings/files/Agenda-item-14.pdf

Meeting to review proposed Cap and Trade accounting.rtf

Date: Tuesday, November 15, 2016 13:38:38

Myra/Doris

Pls extend the invite to appropriate staff.

Upon arrival, please call Shyrose Virani at 416 325 1448 to gain entry into our building.

Thanks
Shyrose

As per recent discussion, this meeting will be to review the proposed accounting treatment for Ontario's Cap and Trade program. Subject to any changes in the proposed approach, OPCD will initiate a discussion with the Auditor General's office to review the planned accounting treatment.

Pre-reading materials will be provided in advance of the meeting.

updated memo attached for tomorrow’s discussion.

Upon arrival, please call Shyrose Virani at 416 325 1448 to gain entry into our building.

Thanks
Shyrose

As per recent discussion, this meeting will be to review the proposed accounting treatment for Ontario’s Cap and Trade program. Subject to any changes in the proposed approach, OPCD will initiate a discussion with the Auditor General’s office to review the planned accounting treatment.

Pre-reading materials will be provided in advance of the meeting.

Cap and Trade accounting implications - memo .pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [NTD – *MOECC to provide comments on accuracy of background terminology*]

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, after the distribution of free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular

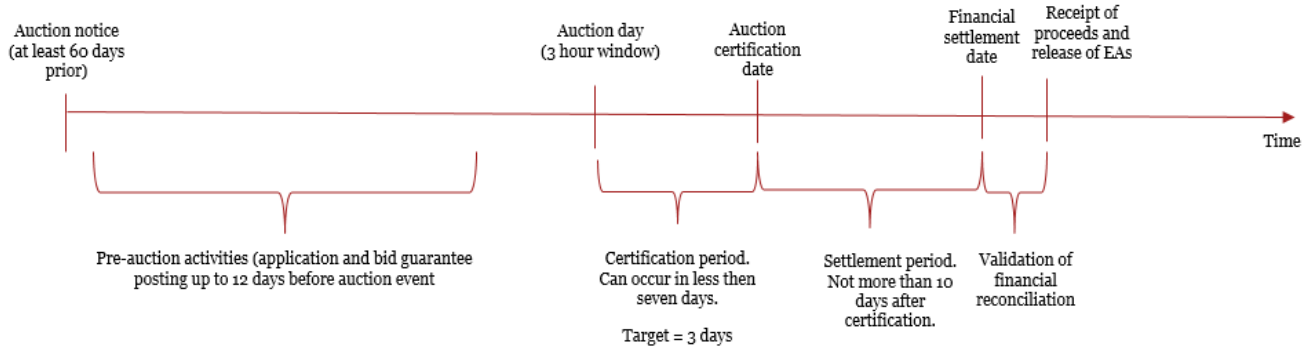
auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts.

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the

participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director

under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program

means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction

and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the

payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

4. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants (see section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On date of receipt of proceeds to GGRA and transfer of EAs to participant CITSS accounts:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations or increased compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) <u>On creation of free and auctioned EAs</u>:

EAs are "goods" created to be sold or distributed to participants (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs therefore meet the definition of inventories held-for-sale as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount. PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no

cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids and therefore if their bids are successful. Only successful bids give the Province any rights to the escrow proceeds. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those

deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected:

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 5 below and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. The only exception is when EAs for a future compliance period are received as part of the 3 for 1 increased compliance obligation as these may be re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations. Any recognition of an asset for the right to receive back applied to all EAs would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not a fair presentation.

e) Failure of participant to pay increased compliance obligation:

An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations as they can purchase additional EAs on the market at the market price. EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognize the receivable at the amount expected to be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance

obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub- accounts.

Analysis

a) Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them for cash or any other financial asset, or exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an

Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 6 below.

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

6. Revenue recognition under the cap and trade program as sponsoring government

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix C for details.

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the date of delivery of the EAs as this is when the performance obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) <u>What is the performance obligation for the sale of EAs?</u> A performance obligation is defined in IFRS 15 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the Revenue SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". The following analysis has applied the IFRS concept, as permitted under PS 1150.

   In both IFRS 15 and the Revenue SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix C for definition of "distinct goods and services")

   Based on the above analysis, a contract is created when a participant successfully bids at auction as confirmed in the auction certification process. The Province has distinct performance obligations to deliver each EA to each successful bidder under these contracts.

   <u>Alternative positions considered and rejected:</u> It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon

in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to redeem an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) <u>When is the performance obligation satisfied?</u> There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15 the performance obligations are satisfied as control

of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the Revenue SOP proposes a "control" model similar to IFRS 15, so this approach has been applied in the analysis. Under IFRS 15 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the Revenue SOP and have been considered in this analysis. See IFRS 15.38 in Appendix C. The indicators have been assessed as follows:

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset.				

Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or suffering from the fluctuations in the market price of EAs	Possibly – the price that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	Yes – From this date the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	N/A already met	N/A already met

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected:

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.

- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the

requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.	

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049).

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

This paper can be found at: http://www.ipsasb.org/system/files/meetings/files/Agenda-item-14.pdf

Cap and Trade accounting implications - memor.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [INTD – MOECC to provide comments on accuracy of background terminology]

Formatted: Highlight

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (~~mandatory~~capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: ~~There~~In accordance with the Regulations there are four auctions a year. ~~MOECC determines~~ EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, ~~and how many of each "the vintage"~~after the distribution of ~~the EAs is available.~~free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage~~", but more~~". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which

Formatted: Tab stops: 17.62 cm, Left

case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value~~.~~, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

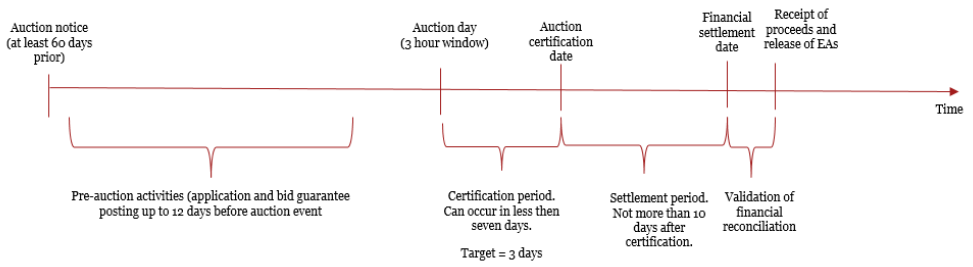
Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB~~).~~.) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province ~~(and a market monitor, for WCI auctions)~~ reviews the results for compliance with the ~~Province's regulations.~~regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices~~.~~ by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days~~, in~~ into their sub-account, which ~~case~~ is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once ~~payment has~~all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts. ~~[Question for MOECC – up to the date of auction can a registered participant remove themselves from the auction and get back their cash/LOC or are they locked in until after the auction date?]~~

~~[o/s is to determine if there is an insolvency risk prior to the auction period; if there is, has the Province effectively guaranteed the return of the bid collateral if the escrow holder became insolvent]~~

Auction timeline illustration



Free allowances

~~Mandatory and capped~~Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the participant~~.~~ and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period~~.~~ (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs ~~available~~issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations~~.~~ and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are ~~cancelled~~retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If

they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits ~~for early action~~" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall~~.~~, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). ~~Any~~Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities

of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

Formatted: Line spacing: At least 12 pt

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

~~3.~~4. *Identification of assets relating to the cap and trade program as sponsoring government*

Summary of relevant guidance – See Appendix ~~A~~C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation ~~and sales~~ of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not ~~cancelled~~retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

~~b) [NTD preliminary conclusions subject to change, based on further understanding of escrow accounts, whether "delivery of EAs" is substantive, importance of certification date vs auction date and subject to discussion with TBS.]~~

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the ~~date of the auction~~transfer of funds into the Province's escrow settlement account.

   ~~On the~~After auction ~~date, a receivable~~certification cash from successful bidders is ~~recognized by the Province for the sale of EAs.~~transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized ~~in Revenue~~as deferred revenue until the contract is settled by the transfer of EAs to the participants (see ~~Part 5).~~section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

~~c)~~d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

~~d)~~e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Analysis

~~*Analysis*~~

Formatted: Font: Italic

Formatted: Font: Italic

Formatted: Font: Not Italic

Formatted: List Paragraph, Line spacing: single

a) On creation ~~and sales~~ of free and auctioned EAs:

EAs are "goods" created to be sold or distributed to participants~~. These~~ (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. ~~Therefore despite being intangible in nature,~~ PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs ~~also~~therefore meet the definition of inventories held-for-sale ~~and~~as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount.

~~EAs that are returned to the government and not cancelled due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).~~ PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory. ~~[ASK MOECC CREATION PROCESS – EXPECTATION IS THAT NO FIXED PRODUCTION OVERHEADS EITHER – ALL WOULD BE GENERAL MANAGEMENT I.E. IF NO PRODUCTION OCCURRED WOULD ANY OVERHEAD COSTS BE ELIMINATED.]~~

~~It is noted that upon the adoption of PS 3450 in fiscal 2020, inventories held-for-sale would be in scope of PS 3450 as they are classified as financial assets under PS 1201 (currently PS 1200). PS 3450 requires financial assets other than equity instruments that are quoted in an active market to be measured at amortized cost, net of any allowance for recovery. While EAs may be considered to trade in an active market, if an active market develops, EAs are not equity instruments and therefore will not be required to be measured at fair value.~~

~~Under PS 3450 financial assets can be designated as measured at fair value when they are part of a portfolio of instruments that is managed at fair value or contain an embedded derivative. It is unlikely that the Province would be considered to manage newly created EAs on a fair value basis and there have not been any embedded derivatives identified in the EAs. Therefore EAs held as inventory must be measured at cost.~~ EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for

production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and ~~lead to~~provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the ~~proceeds~~ cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party ~~(DB)~~ in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids~~, or~~ and therefore if their bids are successful ~~and therefore whether~~. Only successful bids give the Province ~~has~~ any rights to the escrow proceeds ~~prior to the auction being held. Rather~~. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. ~~[NTD – Add additional support if bidders can retract bid guarantees prior to auction date.]~~ If no auction occurs for any reason then the Province does not have any right to the escrowed ~~amounts. [NTD – to confirm]~~cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

~~From the auction date there is a contract between the Province and the purchasers of EAs. While the Province has not yet credited EAs to the recipient's account, the process of crediting EAs is considered not to be substantive as EAs are not in physical form and the Province controls the recording of EAs in the participants' accounts. Rather, the legal and contractual rights of the EAs are obtained by a purchaser on the auction date. In addition, the participant has also substantially performed under the contract as payment has already been made either through a cash bid guarantee or by the submission of an adequate LOC or LOG. The Province would recognize this as a receivable to the extent that the cash has not been received from Deutsche Bank.~~

~~This position is also analogous to "trade date" accounting which is required by PS 3450.A16 for financial assets traded on a recognized exchange in regular way purchases and sales. While the initial auction of EAs is not on a recognized exchange, they are financial assets and they are auctioned into a~~

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

Formatted: Normal, Indent: Left: 1.9 cm, Line spacing: Multiple 1.15 li, Tab stops: Not at 1.9 cm

~~market place on a regular basis and give rise to a fixed price commitment between the participant and the government, therefore an analogy to the trade date requirement may be appropriate.~~

~~*Measurement of receivable:* The receivable would be measured at the auction price, being the amount of consideration expected to be received from the sale. Due to the bid guarantees it would be expected that the full auction price would be received. [IF EXPOSED TO DB CREDIT RISK MAY NEED TO ADD SOMETHING REGARDING BAD DEBT EXPENSE]~~

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the

restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected: ~~Three alternative views were considered for asset recognition – 1) at the posting of bid guarantees; 2) on settlement date; and 3) on auction certification date.~~

~~*Posting of bid guarantees:* For this option, escrow amounts meet definition of an asset when the participant posts a bid guarantee in cash. Under this view it is argued that the Province~~It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders~~, therefore effectively controlling the escrowed amounts. The cash held in escrow is therefore held on behalf of the Province (an asset) with a corresponding liability to either return the cash or EAs. This view was rejected as the use of escrow accounts, as opposed to deposits lodged directly with the Province, sets out the relevant terms as to how and when escrow proceeds are released and therefore the Province does not have discretion to direct the funds as they wish. As the Province has not yet delivered any EAs they do not have a right to the amounts in escrow, and nor do they have legal title. Therefore, the Province does not have any substantive mechanisms of control over the escrow accounts.~~. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued

Formatted: Normal, Indent: Left: 1.9 cm

that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected: ~~*On settlement date:* It could be considered that the contract is wholly unperformed until the Province has received the cash released from escrow (or other cash payment from participants) as this cash must be received before the EAs are credited to participant accounts. Under this view an asset and revenue is only recorded once cash has been received. This view was rejected as the bid guarantee and escrow process means it is only a matter of time before the funds are received by the Province and therefore this is not substantive enough to preclude asset recognition as the Province controls a right to cash from the date of auction under the cap and trade auction mechanism.~~

Formatted: Font: Not Italic, No underline

~~*On auction certification date:* It could be considered was that the certification date is the point for asset recognition as prior to this the auction may not have been valid. This was rejected because the certification date is only to confirm compliance and does not change the date that the contractual arrangements between the Province and the participant for the sale of EAs was made. However, if the certification process rejected certain sales or the auction as a whole, this would be an adjusting subsequent event that would be considered in determining whether assets/revenue from the auction process should be recognized.~~

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

~~e)~~d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can

deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are ~~cancelled~~retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs~~. This alternative view would be consistent with a~~ as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section ~~4~~5 below~~.~~ and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. ~~Therefore~~ The only exception is when EAs for a future compliance period are received as part of the ~~right to receive an EA is also not an asset. The~~3 for 1 increased compliance obligation as these may be

re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold ~~(i.e. those remitted~~ or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations~~) and so any~~. Any recognition of an asset for the right to receive back ~~was recognized for~~ applied to all EAs~~,~~ would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then ~~cancelled~~retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not ~~appropriate accounting~~a fair presentation.

~~d)~~e) Failure of participant to pay increased compliance obligation:

~~The~~An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations~~. As participants~~ as they can ~~settle their obligations with~~purchase additional EAs ~~that~~on the market at the market price. EAs do not enhance or create expected economic future benefits for the government~~. It~~ for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is ~~only when~~linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs ~~that~~and under legislation the Province has a right to demand cash as settlement of the compliance obligation~~.~~ (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: ~~The~~ There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues*. However, it would be consistent with PS 3510 and other standard to recognize the receivable ~~would be recognized~~ at the amount expected to ~~-~~be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

~~4.~~5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial ~~liability~~liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub-accounts.

Formatted: Not Highlight

~~*Analysis*Loan guarantees and contingent liabilities: **EITHER** There may be an implicit loan guarantee by the Province in respect of the funds held in escrow for the participants prior to the auction date and up to the date of settlement. Absent any specific information to the contrary regarding DB's solvency it would usually be considered not likely that the Province would have to pay any amounts in respect of the escrow proceeds and no accrual would be made. To the extent that there are escrowed proceeds held over a balance sheet date disclosures of the implicit loan guarantee should be made, if material.~~

~~**OR** There are no contingent liabilities or loan guarantees by the Province in respect of the funds held in escrow for the participants either prior to the auction date or between the auction date and settlement date.~~
~~[NTD – position to be confirmed based on discussion of insolvency risk with DB~~

~~c)~~ Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once~~accounts. I'm not sure there is, but if it is considered to be "public money" prior or post auction then the Province might have a duty to repay it.]~~

Formatted: Not Highlight

Formatted: Font: Not Italic

Formatted: List Paragraph, Line spacing: single

~~*Analysis*~~

a) ~~Financial liabilities: Under the cap and trade legislation the Province will issue a certain number of EAs under the program (the cap) and, as EAs are financial assets, being inventory held-for-sale (see Section 3 (a) above) this is an obligation to deliver financial assets. However the obligation, such that it exists (see also (b) below), is not a contractual obligation with the participants, as it is brought about through the cap and trade legislation and regulations not individual contracts with participants.~~

a) ~~Once~~ the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them ~~in a manner that results in a sacrifice of economic benefits. Under the legislation, the EAs can only be redeemed to settle a participant's compliance obligation under the legislation and cannot be redeemed~~ for cash or any other financial asset, or ~~exchanged~~exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

Formatted: Indent: Left: 0.95 cm, Hanging: 0.95 cm, Numbered + Level: 1 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 0.63 cm + Indent at: 1.27 cm

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of ~~cancelled~~retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach ~~and recognizes a liability for the obligation to repatriate or redeem the EAs for their emissions value to the participant (Dr Cash (auction EAs) or Dr Expense (free EAs) and Cr Liability for Emissions Notes for market price), along with a right to receive EAs from participants to settle the EA obligation as emissions occur (Dr Receivable, Cr Revenue). This accounting has the benefit of being most symmetrical with the common accounting methods used by participants under other Frameworks such as IFRS.~~. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

~~Our understanding is that New Zealand took this view, in part, because their EAs (NZUs) are interchangeable with "Kyoto AAU's" (International units), which may create an obligation for New Zealand to accept Kyoto AAUs for NZUs under terms that could be unfavourable. However, this view was rejected as based on the cap and trade program applied by Ontario the obligation to repatriate or redeem the Emissions Notes does not result in an outflow or sacrifice of future economic benefits as~~

there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to deliver transfer "goods" (being the free EAs) in total or to specific participants. Ultimately however, the The delivery of free EAs is a transition mechanism and is at the discretion of the Province, rather than a contractual or constructive obligation non-reciprocal (as opposed to the participants, as the Province retains discretion over the issuances sale of EAs which is a reciprocal transaction). The transfer of free EAs. [To confirm with MOECC – may have to switch to the alternative view if MOECC EAs is not comfortable with the idea technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is no an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs]. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

~~*Alternative positions considered and rejected:* It could be argued that there is a constructive (rather than contractual) obligation to deliver free allowances to certain participants, due to actions and communications of the Province that have raised valid expectations for specific participants that they will receive free allowances in order to meet their compliance obligations. The obligation would be settled when free allowances are issued. However, even if this view is taken, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material.~~

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the

Formatted: Tab stops: 1.9 cm, Left

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Font: Georgia, 10 pt

Formatted: Font: Not Italic, No underline

Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section ~~5~~6 below.

~~c) Loan guarantees and contingent liabilities: [TBD – To be supported by facts, if any, that indicate the Province may be liable for the return of amounts held in escrow if DB goes insolvent and does not return the escrowed amounts to participants. If it is concluded that there is no implicit guarantee or contingent liability because the Province cannot be liable for the return of the escrowed amounts, the facts will support that position.]~~

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

~~5.~~6. Revenue recognition under the cap and trade program as sponsoring government

Formatted: Font: 10 pt, Not Bold, Not Italic, Font color:

Formatted: Indent: Left: 1.98 cm, Line spacing: At least 12 pt

This section is divided into three sub-sections. The first examines whether the transactions being accounted for are exchange (reciprocal) or non-exchange (non-reciprocal) transactions. The second considers what performance obligations exist. The third section looks at the pattern and timing of revenue recognition for the performance obligations identified.

Sale of EAs as exchange or non-exchange transactions

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix AC for details.

PS 3510, Tax revenue (definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles (non-authoritative due process document)

Preliminary position – The sale of EAs are exchange transactions.

***Analysis*:**

The auctioning of the EAs is meets the definition of an "exchange transaction" in PS 3510 as participants receive an asset (an EA) and gives approximately equal value in exchange. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see Section 3 (a) above).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

The analysis above is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the PSAS Revenue Statement of principles, as the EAs are considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. The Province's right to payment from a participant arises from the auction process and not solely from legislation. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no or reduced inflows to the Province.

***Alternative positions considered and rejected*:** An alternative view is that the cap and trade legislation forces mandatory participants to purchase EAs in order to settle a legislative obligation. Participants *must* obtain EAs in

Formatted: Font: +Headings (Georgia), Italic

Formatted: Line spacing: Multiple 1.15 li

Formatted: Font: +Headings (Georgia)

Formatted: Indent: Left: 0 cm, First line: 0 cm

Formatted: Line spacing: At least 12 pt

Formatted: Underline

~~order to meet their compliance obligations which are created by legislation, and initially EAs are only available from the Province. Therefore, in substance the purchase of EAs equates to a pre-paid "tax" on emissions, and therefore there is a non-reciprocal transaction as participants do not get anything of economic benefit in exchange, but rather have an outflow of cash to the Province that they previously did not have to pay prior to the cap and trade legislation. This view was rejected for the reasons given in support of "exchange transactions" above as the nature of the cap and trade program and the auction mechanisms are designed to create a carbon market, and under this system EAs become a "good" that has economic value. Therefore the characterization of the sale of EAs as non-exchange transaction would not be consistent with the substance of the cap and trade program.~~

~~Revenue recognition for sale of EAs (Exchange transactions)~~

~~*Relevant guidance* - See Appendix A for details.~~

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Formatted: Tab stops: 16.21 cm, Left

Preliminary position: Revenue is recognized for the sale of EAs on the ~~auction~~ date of delivery of the EAs as ~~there are no further substantive~~this is when the performance ~~obligations~~obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) What is the performance obligation~~?~~ for the sale of EAs? A performance obligation is defined in IFRS 15~~/ASC 606~~ a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". ~~This~~The following analysis has applied the IFRS concept, as permitted under PS 1150.

Formatted: Indent: Left: 0.63 cm, No bullets or numbering

~~a)~~ In both IFRS 15~~/ASC 606~~ and the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the ~~standard auction process. The completion of the auction bid process creates the enforceable right of the province to payment and the obligation to credit the EA to the participant, as well as creating the right of the participant to the EA and the obligation to pay the Province. The auction mechanisms are published and standardized such that each participant understands the~~

~~enforceable rights and obligations that are entered into when an auction occurs.~~auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix ~~A~~C for definition of "distinct goods and services")

Based on the above analysis, a contract is created when a participant successfully bids at auction~~,~~ as confirmed in the auction certification process. The Province has ~~only one~~ distinct performance ~~obligation~~obligations to deliver each EA to each successful bidder under ~~this contract, which is the delivery of the EAs~~these contracts.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in ~~4~~5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario ~~has an obligation to redeem only~~accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions~~.~~ as settlement of their compliance obligations. Therefore ~~this~~Ontario has no obligation to redeem ~~cannot arise~~an EA that arises from the original exchange transaction and ~~is~~ therefore ~~not a~~there is no performance obligation ~~of~~ that ~~transaction~~exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at

auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program~~,~~ and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written ~~of~~or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15~~/ASC 606~~ the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP proposes a "control" model similar to IFRS 15~~/ASC 606~~, so this approach has been applied in the analysis. Under IFRS 15~~/ASC 606~~ an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15~~/ASC 606~~ provides indicators of when a point-in-time obligation has been satisfied. These are also included in the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP and have been considered in this analysis. See IFRS 15.38 in Appendix ~~A~~C. The indicators have been assessed as follows:

~~Present right to payment – As noted in Section 3 above, there is a present right to payment at the auction date.~~

~~Legal title to the asset – Legal title is transferred when the EAs are credited to the participants account. This occurs after the auction certification and settlement process is completed. [MOECC implementation group to confirm when legal title transfers is this analysis correct?]~~

~~The entity has transferred physical possession of the asset – This indicator is not relevant as EAs do not have physical form.~~

~~The customer has significant risks and rewards of ownership of the asset – The participant has significant risks and rewards of ownership of the asset from the auction date. If the price of EAs increases after the auction date, the customer can benefit from this increase by selling the EA. Similarly if the price decreases after the auction date, the customer bears this decrease in value. The participant can decide what to do with the EA – sell it, keep it or use it to settle a compliance obligation - from the date of the auction. While EAs are credited to a~~

~~participants account only after auction certification and settlement process are completed, these are administrative processes that do not substantively change the risks and rewards of ownership of the EAs.~~

~~The customer has accepted the asset – There are no customer acceptance clauses. While the auction process is subject to certification this is not performed by the participant, but rather by the Province.~~

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset. Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or	Possibly – the price	Yes – From this date	N/A already met	N/A already met

suffering from the fluctuations in the market price of EAs	that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.		

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the ~~auction date.~~date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected: ~~It was considered whether revenue should be recognized at a point in time when the EAs are credited to the participant account (legal title to the asset has transferred). This was rejected as the delay between the auction date and crediting the participant account is to confirm the settlement of the auction payment and that the auction was carried out legally and in accordance with the regulations. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset". Therefore, limited weight was placed on the fact that the participant's accounts are not credited until some time after the auction.~~

Formatted: Font: Italic, Underline

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for

participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.

- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix ~~A~~C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted. ~~[NTD – to confirm that all interested parties agree with this statement]~~

~~6.~~7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

~~7.~~8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

~~8.~~9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

~~9.~~10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.

Formatted Table

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35~~-.37.~~.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not ~~defined under PSAS.~~specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and ~~OS~~PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049). ~~After the adoption of PS 3450, which is currently effective for the Province for~~

~~fiscal 2020, financial assets may be designated into the "fair value" category but only if they are managed and evaluated on a fair value basis in accordance with a risk management or investment strategy or they contain embedded derivatives.~~

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

~~PS 3200 does not contain measurement guidance for liabilities. Other standards such as PS 3250, *Retirement benefits* and PS 3260, *Liability for contaminated sites* use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate).~~

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

This paper can be found at: http://www.ipsasb.org/system/files/meetings/files/Agenda-item-14.pdf

Hi Shayan:

I work for Nadine Petsche and she advised me that you and other folks will be coming to our office tomorrow for the meeting. Since I have to register you all, can you please provide me with the names of all staff attending tomorrow's meeting so that I could register you at the security desk. We are located at 7 Queen's Park Crescent, 2nd Floor, Frost South, upon arrival, please call Shyrose at 416 325 1448 from the lobby phone to gain the entry into our office building.

Thanks

Shyrose

p.s. at the same time time, I need the names and email address of the staff who will be working on the actuarial file so that I could get the clearances for all of you. Attached, please find:

1. Confidentiality Agreement form, please have everyone involved in this file complete the form and return it to me at your earliest.

2. Tax Declaration form – to be completed and return to me.

Thanks

Shyrose Virani

confidentiality agreement.pdf

CONFIDENTIALITY AGREEMENT

Confidentiality Agreement

During and following the term of the Agreement between **Ernst & Young LLP** (the "Vendor") and Her Majesty the Queen in right of Ontario as represented by the **Treasury Board Secretariat** and during and following the term of each Statement of Work entered into by the Vendor and pursuant to the Agreement (collectively, the "Agreements"), the undersigned agrees with the Vendor to keep confidential and secure all Confidential Information to which the undersigned may have access to in the course of the performance of services pursuant to any of the Agreements (including requests for services) or otherwise in connection with any of the Agreements (including requests for services). "Confidential Information" means all information of the Ontario Public Service and of the Client's subcontractors at any tier of subcontracting that is confidential by its nature or in the circumstances in which it is received, including all confidential information in the custody or control of the Ontario Public Service, regardless of whether it is identified as confidential or not, and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge, possession or control of the Vendor in connection with any of the Agreements. "Ontario Public Service" means the ministries and other administrative units of Her Majesty the Queen in right of Ontario ("Ontario") over which ministers of Ontario preside, and for the purposes of this Confidentiality Agreement, includes Ontario and Ontario's agencies, boards, commissions and Crown corporations, offices of an officer of the Legislative Assembly or of the Ontario Legislature and Listed Entities, and "**OPS**" has the same meaning.

The undersigned acknowledges that the Client is bound to maintain custody of or control over information, material and records, however recorded, within the meaning of the *Freedom of Information and Protection of Privacy Act* ("FIPPA"). The undersigned agrees to comply with the privacy provisions of the Agreements in the course of providing services pursuant to the Agreements.

The undersigned shall not directly or indirectly disclose, destroy, exploit or use any Confidential Information except for the purpose of performing services pursuant to the Agreements. The undersigned shall not copy any Confidential Information, in whole or in part, unless copying is essential for the performance of services pursuant to the Agreements. On each copy, the undersigned must reproduce all notices that appear on the original.

The undersigned acknowledges that the Vendor is obliged to implement and maintain measures to ensure the security and integrity of Confidential Information and to protect it against loss, alteration and destruction and against access by unauthorized persons, and to select, implement, use and maintain the most appropriate products, tools, measures and procedures to do so. The undersigned covenants and agrees to adhere to all of the measures instituted by the Vendor.

The undersigned agrees to return all Confidential Information, including all copies and portions thereof, to the Vendor or to the Client with no copy kept by the undersigned as soon as the need to possess them ends, at the request of the Client, and in any event, prior to concluding the performance of services pursuant to the applicable Agreements.

Appendix D – Tax Compliance Declaration Form

The Ontario Government expects all suppliers to meet their Ontario tax obligations on a timely basis. In this regard, proponents are advised that their Ontario tax obligations, if any, must be in good standing in order to be considered for a contract award (see Section 3.2.3 of the RFP). In order to be considered for a contract award, the proponent must submit the following tax compliance status statement and the following consent to disclosure:

Declaration

I/WE hereby certify that **Ernst & Young LLP** (the "Proponent") at the time of submitting its proposal, is in full compliance with all applicable Ontario tax statutes, whether administered by the Treasury Board Secretariat or by the Canada Revenue Agency, and that, in particular, all returns required to be filed have been filed and all taxes due and payable under those statutes have been paid or satisfactory arrangements for their payment have been made and maintained; or the Proponent will take all necessary steps prior to being considered for contract award in order to be in full compliance with all applicable Ontario tax statutes.

(Please check applicable box)

The Proponent ❑ is / ❑ is not a corporation subject to Ontario corporate tax under the *Taxation Act, 2007* (Ontario).

(Please insert Proponent's Business Number) _____

Consent to Disclosure

The Proponent consents to the Ministry of Finance releasing the taxpayer information to the Ministry of Finance as necessary for the purpose of verifying the Proponent's compliance with Ontario tax statutes.

The Proponent consents to the Ministry of Finance releasing taxpayer information to the Requesting Ministry as necessary for the purpose of verifying the Proponent's compliance with Ontario tax statutes.

Good morning Lucy.

Just in case it helps, the OTPP accounts for the bulk of our reported pension assets, so a focus on that plan for purposes of the analysis would be appropriate

RE: RFS-TBS-OTB-OPCD-22

The Ministry is pleased to advise that you are the selected proponent pursuant to the above-noted procurement process.

Enclosed please find two (2) copies of the Agreement for your signature. Please return one copy of the executed Agreement within five (5) business days of receipt of this notice:

Please be advised that this notice of selection letter should not be construed as permission from the Ministry to begin the work detailed in the Agreement. The Ministry will not be responsible or liable for any expenses related to the Deliverables, and the selected proponent is not to accept work requests prior to the execution of the Agreement by the Ministry. Work may begin pursuant to the Agreement when:

(a) the Agreement signed by both parties is returned to the selected proponent, and

(b) written permission is expressly given to the Supplier by the Ministry Representative to begin work under the Agreement.

.../2

If you have any questions concerning this process, please feel free to contact me at 416-325-8027.

Sincerely,

Mark Donaldson
Director, Accounting Policy and Financial Reporting Branch
Office of the Provincial Controller Division

FORM OF STATEMENT OF WORK – OPS ENTITY

Statement of Work for Management Consulting Services

This statement of Work No. **RFS-TBS-OTB-OPCD-22** made in **duplicate and effective December 11, 2017 ending on June 15, 2019.**

Ernst & Young LLP (the "vendor" or "EY") and her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of June 16, 2014 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* – The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term of provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* – The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price* - C$75,000.00 does not include HST.

4. *Project Start Date* – December 11, 2017

5. *Project End Date* – June 15, 2019

6. *Scope of Services and Deliverables* – The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

    - Working with management of the Office of the Provincial Controller's Accounting Policy and Financial Reporting Branch (APFRB), the provider will provide actuarial/accounting services related to the following possible areas:
        - Review the economic assumptions (i.e. management best estimates) used for the accounting valuations of the pension plans and non-pension benefits reported by the Province.
        - Review the actual and forecast numbers prepared by APFR staffs for the Province's various pension and non-pension benefits, including assessing the reasonableness

and completeness of assumptions used by APFRB staff in the models, including any sensitivity analysis as required.
    - From time to time provide recommendations, if any on improvements in the pension and non-pension benefits accounting models.
    - Perform ceiling test requirements in accordance with PS3250.50 to PS3250.59 for all sole sponsor or joint sponsor pension plans that are in an accrued benefit asset position.
    - Provide advice on any accounting issues related to pension and non-pension benefits, as required.
    - Participate in discussions with internal and external stakeholders, as required.

- The Vendor will participate in meetings as necessary to support the engagement objectives.

7. *Ownership and Licenses* – Attachment D of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* – The structure of Ernst & Young's working relationship with OPCD is vital to the success of their engagement. The Project Lead that will handle OPCD work is Uros Karadzic. Ernst & Yong's communication strategy will be centered on periodic project update meetings, the frequency of which will be determined by the OPCD and Ernst & Young.

9. *Work Location* – All meetings will be within Greater Toronto.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:30 a.m. to 4:30 p.m. Monday to Friday inclusive.

    If required by the Client, the Vendor must provide Services outside of the normal working hours and/or non-Business days. The Vendor will not be entitled to charge more than the Fixed Price or Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Billing and Payment Process* – The Vendor shall provide the Client with quarterly billing statements that outline the per diem charges no later than 10 Business Days after the end of each quarter.

    Billing statements should include all billing information as set out in the Master Agreement.

13. Names of Roles of Vendor's Personnel:

Name of Individual	**Level**
Uros Karadzic	Senior Consultant/Project Lead
Christina Chan	Intermediate Consultant/Project Analyst

14. *Invoices* – Invoices for payment of any charges under this Statement of Work shall be sent to:

    Client: Treasury Board Secretariat
    Office of the Provincial Controller
    Accounting Policy and Financial Reporting Branch
    Mark Donaldson
    Director, Accounting and Policy Reporting
    Tel: 416 325 8027
    E mail: mark.donaldson@ontario.ca

15. *Knowledge Transfer* – The Vendor will work closely with the Client to ensure knowledge transfer to the Client's designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* – The Vendor shall destroy all information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Indemnity* – the indemnity set out in the Master Agreement applies to this assignment.

18. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	Treasury Board Secretariat
Client Representative:	Mark Donaldson
Telephone Number:	416 325 8027
E-mail:	mark.donaldson@ontario.ca

19. *Vendor Representative and Receipt of Notices*

Attention: Mr. Uros Karadzic

RE: Proposed change to Statement of Work No. TBS-OTB-OPCD-20 dated February 3, 2017, as amended, ("the Statement of Work") made between Her Majesty the Queen in right of Ontario as represented by the President of Treasury Board and Ernst & Young LLP.

The purpose of this letter is to document our agreement to increase the Ceiling Price under the Statement of Work by $149,000.00 for the additional support to a new Maximum Price of $299,000.00.

This letter is sent to you in duplicate. Please indicate your receipt of this letter and your agreement to the change in Ceiling Price by signing where indicated on both copies, and returning the duplicate copy within five days of receipt of this letter.

This letter, when signed by both parties, will constitute a Change Order to the Statement of Work. The parties confirm that, except for the change referred to above, the Statement of Work will remain unchanged and unmodified.

.../2

Thank you for your continued cooperation and support.

Sincerely,

Attention: Mr. Uros Karadzic

RE: Proposed change to Statement of Work No. TBS-OTB-OPCD-20 dated February 3, 2017, as amended, ("the Statement of Work") made between Her Majesty the Queen in right of Ontario as represented by the President of Treasury Board and Ernst & Young LLP.

The purpose of this letter is to document our agreement to increase the Ceiling Price under the Statement of Work by $149,000.00 for the additional support to a new Maximum Price of $299,000.00.

This letter is sent to you in duplicate. Please indicate your receipt of this letter and your agreement to the change in Ceiling Price by signing where indicated on both copies, and returning the duplicate copy within five days of receipt of this letter.

This letter, when signed by both parties, will constitute a Change Order to the Statement of Work. The parties confirm that, except for the change referred to above, the Statement of Work will remain unchanged and unmodified.

.../2

Thank you for your continued cooperation and support.

Sincerely,

N. Petsche

Nadine Petsche
Director, Accounting Policy and Financial Reporting Branch
Office of the Provincial Controller Division

The undersigned hereby acknowledges receipt of this letter and agrees to the above on behalf of Ernst & Young LLP as of the date indicated above.

We look forward to receiving a revised draft.

Thanks. Nadine

OPSEU - Accounting for Plan surpluses_V4 (PPU_REDLINE).pdf

1.0 Preamble

This document addresses the accounting for a net pension asset under Public Sector Accounting Standards (PSAS) by the Province of Ontario in relation to the Ontario Public Sector Employee Union Pension Plan (OPSEUPP).

As at March 31, 2016, OPSEUPP had an accrued asset position for accounting purposes of $520.

The details of the accounting valuation for the plan as of March 31, 2016 are as follows:

(all figures in $M)	**Total plan**	**50% Share of the plan**
Market related value of assets	17,380	8,690
Value of obligation	15,557	7,778
Surplus (deficit)	1,823	912
Unamortized (gains) losses	(96)	(48)
Adjustment for March 31, 2016	(583)	(292)
Asset (liability) position	1,144	572
Specific Government adjustment		(52)
Final Asset (liability) position on balance sheet		520

2.0 Issue to be considered

1. For accounting purposes, how should OPSEUPP be classified under PSAS?
2. As a result of the classification, how should the Province of Ontario recognize the pension surplus (for accounting purposes) of OPSEUPP in the Public Accounts?
3. How should a pension asset of OPSEUPP be measured in the Public Accounts of the Province of Ontario?

3.0 Conclusions

1. OPSEUPP is a Joint Defined Benefit Plan under PS 3250
2. The Province of Ontario should account for the OPSEUPP as a defined benefit plan for its proportionate share of the surplus or obligation that arises under the plan.
3. The Province of Ontario should record ~~is~~ its proportionate share of the asset and apply the asset ceiling test under PS 3250. The Province believes that the asset is recoverable through the reduction of future contributions and as such, no valuation allowance is necessary.

Commented [MPM1]: Province versus Government. Should one term be used for consistency (excluding the times Province of Ontario is used)?

4.0 Background information

4.1 Overview of OPSEUPP

The OPSEU Ppension Pplan (the "Plan") is jointly sponsored by the Ontario government and the executive of OPSEU. The Plan is managed by ~~OP Trust~~OPTrust, a 10-member Board of Trustees, five of whom are appointed by OPSEU and five by the Government. ~~OPSEU represents the various public servants, while the Government represents~~ employers.

Commented [MPM2]: The Government does not represent employers. As a Plan sponsor, they are subject to general legal obligations at common law, as well as in legislation (Pension benefits Act). Different obligations apply to the plan sponsor depending on whether it is acting in its capacity as "employer" or as "plan administrator" in performing a particular duty.

DRAFT

OPSEU and the Government are equally responsible for ensuring the pension plan has enough money to meet its long-term pension obligations. Section 4.6 of the Plan Text notes that the Employer, shall pay into the Fund an amount equal to the aggregate amount of all contributions deducted from the members.

~~In addition, they appoint experienced, professional experts to the pension plan's Board.~~

~~The assets of the Plan are held by OP Trust~~OPTrust ~~in trust for the beneficiaries of the plan – Ontario public servants. The Government does not have unilateral access to the assets of the trust (including changing contribution amounts, taking contribution holidays, or withdrawals). Actions of this nature require negotiation and agreement between the two sponsors.~~

In addition, they appoint experienced, professional experts to the pension plan's Board.

The assets of the Plan are held by OPTrust in trust for the beneficiaries of the plan – Ontario public servants. The Government does not have unilateral access to the assets of the trust (including changing contribution amounts, taking contribution holidays, or withdrawals). Actions of this nature require negotiation and agreement between the two sponsors.

Commented [MPM3]: This is not always true.

Commented [NP4]: Expand, if details available, how many appointed by whom (understand that it is equal appointees, with joint appointment of the Chair)

Commented [NP5]: More specific please

Commented [NP6]: However, there is a question w.r.t. unilateral access to 'surplus' vs. the assets generically. Confirm.

The Funding Policy, Board-Approved Policy, dated July 17, 2014

~~OP Trust~~OPTrust provides the following regarding the use of Plan Surpluses:

~~OP Trust~~OPTrust recognizes that decisions on the use of surplus are reserved to the Sponsors. However, in the interests of providing information to the Sponsors, ~~OP Trust~~OPTrust has recommended a number of principles for the Sponsors to consider when determining how to use surplus that arises from time to time, designed to minimize the risk to future Plan funding. They are as follows, in order:

1. Use surplus to pay for any past unfunded liability that has not been fully paid through previous valuations where amortization of prior deficits is incomplete.

2. Restore benefits previously lost due to prior deficits.

3. Restore stabilization reserves to recommended levels to protect against future adverse actuarial and investment experience.

4. If the current employee and employer contribution rates are above the normal rate specified in ~~OP Trust~~OPTrust Management studies, use surplus to return contributions back to the normal rate.

5. If surplus is still available, consider temporary contribution reductions as the most predictable way to reduce the surplus in the Plan.

DRAFT

6. When considering Plan improvements, establish a preference for temporary benefit improvements over permanent Plan changes since temporary improvements will be prepaid from existing surplus and are less likely to have an impact on future contribution rates.

7. When considering permanent Plan improvements, recommend those that better rationalize the overall Plan design, such as provisions that present an undue hardship or level of unfairness to Plan members.

Member and Employer Rate Stabilization Reserves

The Sponsors of the OPSEUPP have established two stabilization reserves to deal with ~~surpluses~~ actuarial gains when they arise. The Employer and Member Stabilization ~~Funds~~ Reserves are the remaining employer's and members' share of the net actuarial gain. These ~~funds~~ reserves are to be used as a buffer against any future actuarial losses that may arise.

Gains (and losses) are shared equally by the employer and OPSEU, subject to the following:
(i) 50% of the gain or such other amount as may be collectively bargained shall be used for the benefit of employers, to be applied against any special payments required to be made by any employers and thereafter to reduce employers' normal costs [SA, s. 56 (c) (i)]; and
(ii) 50% of the gain or such other amount as may be collectively bargained shall be used for the benefit of Plan members [SA, s. 56 (c) (ii)].

Excerpts from Plan Text on Withdrawal of Surplus

Section 18.2 of the Plan text notes that, if the Plan is wound up in whole or in part, the assets in the Fund shall first be allocated for the provision of benefits in accordance with terms of the Plan, the Pension Benefits Act, the Income Tax Act (Canada) and any other applicable legislation or agreement between the sponsors.

Section 18.3 also notes that if after provision for benefits payable to or in respect of members of the wind up, in whole or in part, of the plan, assets remain in the Fund or the part of the Fund affected by a partial windup, such assets shall be applied as determined by OPSEU subject to the Pension Benefits Act and the Income Tax Act (Canada) for the exclusive benefit of the members and former members, their beneficiaries and dependents.

4.2 Accounting for OPSEUPP by the Province

The Province of Ontario's Public Accounts include a pension asset of $520M that represents the employer's share of the OPSEUPP surplus position based on the accounting actuarial valuation for the plan. This situation has arisen because, to this point in time, the government's share of the total contributions to the Plan plus the actual investment returns on the Plan's assets have exceeded the government's share of the accumulated retirement benefit expense. The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame.

Commented [MPM7]: "Very long"? Is the timeframe the remaining expected participant's working lifetime? Do we have this measure? Is it closer to 80 or to 18 years.

DRAFT

The Province recognizes 50% of the Accounting Surplus on the statement of financial position, which represents the Province's Share of the Pension Plan.

5.0 Question 1 – Classification of the OPSEUPP

5.1 Relevant Guidance on Classification

PS 3250 has specific application guidance to Joint Defined Benefit Plans:

Joint defined benefit plans

.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.081 *When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans*. [SEPT. 2001]

.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

5.2 Conclusion on classification

Application of PS 3250 to Joint Defined Benefit Plans

A joint defined benefit plan is a unique retirement benefit plan where the sponsors have shared control over the plan. No one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. Paragraph .081 of PS 3250 clearly states that a government should account for its portion of the Plan in accordance with the standards for defined benefit plans. As a result, the Province of Ontario accounts for its proportionate share of the Plan and has historically recorded its share as 50% of the plan.

DRAFT

6.0 Question 2 – Recognition of surplus

6.1 Standards in the PSA Handbook

The following standards were considered relevant when determining whether an asset can be recognized on the Public Accounts:

.081 *When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans*. [SEPT. 2001]

.050 *An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.* [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

6.2 Analysis

PS 3250.50 requires that an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. This comparison between the adjusted benefit asset and the expected future benefit informs whether a valuation allowance is required and if so, how much of a valuation allowance should be recorded.

PS 3250.52 contemplates that there are two ways in which a government can benefit from an accrued benefit asset. A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. As such, an expected future benefit would include the ability to either withdraw plan assets from the plan or reduce future contributions.

PS3250.52 also goes on to consider that an accrued benefit asset may become impaired when there is a plan surplus that the government is not entitled to benefit from fully. The paragraphs in the standard

DRAFT

that follow determine how a government would go about considering the extent of any impairment, which would give rise to a valuation allowance. In order to make this determination, the government is required to consider the "expected future benefit", which would effectively create a ceiling for the asset. Here the guidance diverges between benefit expected to be realized through future reductions in contributions and those to be realized through withdrawal of surplus.

Specifically with respect to withdrawal of surplus, PS 3250.59 is very clear that expected future benefit can only be asserted where the government has a current legally enforceable right to withdraw assets from the Plan. This guidance was considered as to whether it should be applied to cases where the expected future benefit related to the Pension Asset is expected to be realized through reduced ~~contributions,~~contributions; however it was concluded that the guidance does not apply in this situation. While PS 3250.59 does introduce the concept of a legally enforceable right, it does so solely in the context of a government's future withdrawal of a Plan surplus, and not in the context of a government's reduction of future contributions.

OPSEUPP has established two rate stabilization ~~funds~~reserves, being one for the employers and one for the employees. The Funding Management Policy establishes that gains must be shared equally amongst the sponsors. As actuarial gains are generated, the Province has the ability to use its 50% of the gain to reduce contributions.

6.3 Conclusion

The Province should account for OPSEUPP as a joint defined benefit plan, which means applying PS 3250 defined benefit accounting for its share of the plan. As the plan is in an asset position, the Province should reflect its proportion of the asset (50%) subject to any valuation allowance.

7.0 Question 3 – Measurement of a pension asset

7.1 Standards in the PSA Handbook

The following standards are relevant to determining how the Pension Asset should be measured

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.50 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

DRAFT

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities

7.2 Calculating the limit on the carrying amount of an accrued benefit asset

Section PS 3250 paragraphs .053 to .058 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in Section PS3250 paragraph .055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus". A valuation allowance is recorded against the pension asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test

DRAFT

under Section PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as defined in Section 3250 paragraph .56.

Therefore in accordance with Section PS 3250 paragraph .56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and
b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Each of these is discussed separately.

7.3 Considerations re: withdrawal of the surplus (Section PS 3250 paragraph .056 (b))

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, Section 3250 paragraph .059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

For OPSEUPP, the Funding Policy does not contemplate surplus withdrawal and so for the purposes of this analysis, it is assumed that any surplus withdrawal would have to be negotiated between the sponsors.

There are no provisions in the ~~HOOPP~~ OPSEU Plan text to permit the withdrawal of a surplus. PS 3250.59 indicates that the expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. As there is no certainty that the Province will be able to access ~~the~~ an OPSEUPP ~~s~~Surplus through withdrawal, the Province does not rely on withdrawal of surplus to support the measurement of the OPSEUPP asset.

Commented [MPM8]: OPSEU correxct?

7.4 Considerations re: reduced future contributions (Section PS 3250 paragraph .056 (a))

Section PS 3250 paragraph .056(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus.

DRAFT

In the event of a surplus, ~~the OP Trust~~OPTrust recommends to the sponsors that certain principles be followed when determining how to use the surplus. The recommendation from ~~the~~ OP~~T~~ Trust is to ~~use~~ allocate ~~surpluses~~ actuarial gains to ~~fund~~ any unfunded liabilities or restore cuts to benefits due to prior deficits, before moving into ~~replenishing~~ the stabilization reserves, reducing contributions, and then restoring benefits. As such, there are two significant indicators that lead the Province to believe that future contributions can be reduced, which are:

1. The Province has its own stabilization reserve that can be utilized to reduce future contributions (so the Province has some autonomy and segregation of its 50% of the surplus)
2. The Funding Principles of the plan put an emphasis on restoring unfunded liabilities (which will reduce contributions in the future), and reducing current contributions, before enhancing benefits.

In determining the expected future benefit of the asset, the Province has looked at the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the Province is required to make regardless of any surplus. As there are no minimum contributions that the Province is required regardless of surplus, the expected future benefit will exceed the plan asset because the expected future benefit will equate to the expected future accruals for service for the current active employees (less employee contributions).

Commented [MPM9]: I do not understand what is being described here. Are you saying the Government does not have a minimum cash contribution requirement? Not sure what's the thought here.

7.8 Conclusion on measurement

The OPSEUPP is in an Accounting ~~S~~surplus position and can recognize an asset on the balance sheet. The measurement of that asset is subject to the asset ceiling test. The expected future benefit from the asset is the amount of contributions that could be reduced in the future from this surplus. As management has its own stabilization reserve and the Funding Policy promotes contribution reduction ahead of benefit improvement, the expected future benefit exceeds the net plan asset, which means that no valuation allowance should be recorded.

Commented [MPM10]: Capitalized Accounting Surplus consistent with pg 3 sec. 4.2 last paragraph.

Commented [MPM11]: As of December 31, 2015, the Plan is fully funded on a going-concern basis. The excess actuarial surplus, pursuant to section 147.2(2) of the Income Tax Act (Canada), is $0. Based on the solvency of the Plan, a deficit exists, as defined in the Regulation to the Pension Benefits Act (Ontario) of $(691) million.

---

Matt/Pina,

Please find attached the OPSEUPP paper with comments and suggested edits. It would be helpful to include information on the history of use of surpluses which I believe was provided previously (perhaps as an appendix). In addition, reference to the ceiling test work that Martin performed should be included.

Thanks. Talk to you soon.

OPSEU - Accounting for Plan surpluses_dec 1.pdf

1.0 Preamble

This document addresses the accounting for an accrued benefit asset under Canadian Public Sector Accounting Standards (PSAS) by the Province of Ontario in relation to the Ontario Public Sector Employees Union ("OPSEU") Pension Plan ("OPSEUPP" or the "Plan").

As at March 31, 2016, OPSEUPP had an accrued asset position for accounting purposes of $~~520~~ 521 million.

The details of the accounting valuation for the plan for purposes of reporting by the Province as of March 31, 2016 are as follows:

(all figures in $M)	**Total plan**	**50% Share of the plan**
Market related value of assets	17,380	8,690
Value of obligation	15,557	7,778
Surplus (deficit)	1,823	912
Unamortized (gains) losses	(96)	(48)
Adjustment for March 31, 2016	(583)	(~~292~~291)
Asset (liability) position	1,144	~~572~~ 573
Specific Province of Ontario adjustment		(52)
Final Accrued Benefit Asset (liability) position on balance sheet		~~520~~521

2.0 Issue to be considered

1. For accounting purposes, how should OPSEUPP be classified under PSAS?
2. As a result of the classification, how should the Province of Ontario recognize the pension surplus (for accounting purposes) of OPSEUPP in the Public Accounts?
3. How should a pension asset of OPSEUPP be measured in the Public Accounts of the Province of Ontario?

3.0 Conclusions

1. OPSEUPP is a Joint Defined Benefit Plan under PS 3250
2. The Province of Ontario should account for ~~the~~ OPSEUPP as a defined benefit plan for its proportionate share of the surplus or obligation that arises under the plan.
3. The Province of Ontario should record its proportionate share of the asset and apply the asset ceiling test under PS 3250. The Province of Ontario believes that the asset is recoverable through the reduction of future contributions and as such, no valuation allowance is necessary.

4.0 Background information

4.1 Overview of OPSEUPP

The Plan is jointly sponsored by the Province of Ontario and the executive of OPSEU. The Plan is managed by OPTrust, a 10-member Board of Trustees, five of whom are appointed by OPSEU and five by the Province of Ontario. OPSEU and the Province of Ontario are equally responsible for ensuring the

DRAFT

pension plan has the financial resources to meet its long-term pension obligations. Section 4.6 of the Plan Text notes that the Employer, shall pay into the Plan an amount equal to the aggregate amount of all contributions deducted from the members.

In addition, ~~they~~ the sponsors appoint experienced, professional experts to the ~~pension plan's~~OPTrust's Board. More specifically, the Province of Ontario and OPSEU each appoint to the Board of Trustees one experienced member to fill the position of Chair and Vice-Chair, with the roles alternating between Province of Ontario and OPSEU appointees every two years

The assets of the Plan are held by OPTrust in trust for the beneficiaries of the plan – Ontario public servants who work in the broader public sector (approximately 130,000 members across Ontario). The Province of Ontario does not have unilateral access to the assets of the trust (including changing contribution amounts, taking contribution holidays, or withdrawals). Actions of this nature require negotiation and agreement between the two sponsors. While access to the assets of the Trust is not in the Province of Ontario's sole control, it should be noted that the Province of Ontario, as a sponsor of the plan, has established a rate stabilization reserve in which surpluses are allocated to so that the Province's share of the surplus from the plan is identified and can be used for future decision making on funding and benefit improvements.

The Funding Policy, Board-Approved Policy, dated July 17, 2014

OPTrust provides the following regarding the use of Plan Surpluses:

OPTrust recognizes that decisions on the use of surplus are reserved to the Sponsors. However, in the interests of providing information to the Sponsors, OPTrust has recommended a number of principles for the Sponsors to consider when determining how to use surplus that arises from time to time, designed to minimize the risk to future Plan funding. They are as follows, in order:

1. Use surplus to pay for any past unfunded liability that has not been fully paid through previous valuations where amortization of prior deficits is incomplete.

2. Restore benefits previously lost due to prior deficits.

3. Restore stabilization reserves to recommended levels to protect against future adverse actuarial and investment experience.

4. If the current employee and employer contribution rates are above the normal rate specified in OPTrust Management studies, use surplus to return contributions back to the normal rate.

5. If surplus is still available, consider temporary contribution reductions as the most predictable way to reduce the surplus in the Plan.

6. When considering Plan improvements, establish a preference for temporary benefit improvements over permanent Plan changes since temporary improvements will be prepaid from existing surplus and are less likely to have an impact on future contribution rates.

DRAFT

7. When considering permanent Plan improvements, recommend those that better rationalize the overall Plan design, such as provisions that present an undue hardship or level of unfairness to Plan members.

Member and Employer Rate Stabilization Reserves
The Sponsors of the OPSEUPP have established two stabilization reserves to deal with actuarial gains when they arise. The Employer and Member Stabilization Reserves are the remaining employer's and members' share of the net actuarial gain. These stabilization reserves are intended to be used as a buffer against any future actuarial losses that may arise.

Gains (and losses) are shared equally by Plan members, subject to the following:
(i) 50% of the gain or such other amount as may be collectively bargained shall be used for the benefit of employers, to be applied against any special payments required to be made by any employers and thereafter to reduce employers' normal costs [SA, s. 56 (c) (i)]; and
(ii) 50% of the gain or such other amount as may be collectively bargained shall be used for the benefit of Plan members [SA, s. 56 (c) (ii)].

Excerpts from Plan Text on Withdrawal of Surplus

Section 18.2 of the Plan Text notes that, if the Plan is wound up in whole or in part, the assets in the Fund shall first be allocated for the provision of benefits in accordance with terms of the Plan, the Pension Benefits Act, the Income Tax Act (Canada) and any other applicable legislation or agreement between the sponsors.

Section 18.3 also notes that if after provision for benefits payable to or in respect of members of the wind up, in whole or in part, of the plan, assets remain in the Fund or the part of the Fund affected by a partial windup, such assets shall be applied as determined by OPSEU subject to the Pension Benefits Act and the Income Tax Act (Canada) for the exclusive benefit of the members and former members, their beneficiaries and dependents.

4.2 Accounting for OPSEUPP by the Province of Ontario

The Province of Ontario's Public Accounts as of March 31, 2016 include an accrued pension asset of $521~~0~~M that represents the employer's share of the OPSEUPP surplus position based on the accounting actuarial valuation for the plan. This situation has arisen because, to this point in time, the Province of Ontario's share of the total contributions to the Plan plus the actual investment returns on the Plan's assets have exceeded the Province of Ontario's share of the accumulated retirement benefit expense. The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering the remaining life time of the employees.

The Province of Ontario recognizes 50% of the accrued benefit asset on its consolidated statement of financial position, which represents the Province of Ontario's Share of the Pension Plan.

DRAFT

5.0 Question 1 – Classification of the OPSEUPP

5.1 Relevant Guidance on Classification

PS 3250 has specific application guidance to Joint Defined Benefit Plans:

Joint defined benefit plans

.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.081 *When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans*. [SEPT. 2001]

.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

5.2 Conclusion on classification

Application of PS 3250 to Joint Defined Benefit Plans

A joint defined benefit plan is a unique retirement benefit plan where the sponsors have shared control over the plan. No one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. This is the case for OPSEUPP where the Province and OPSEU are joint sponsors. This classification has been applied consistently by the Province for OPSEUPP for over the last 10 years. Paragraph .081 of PS 3250 clearly states that a government should account for its portion of the Plan in accordance with the standards for defined benefit plans. As a result, the Province of Ontario accounts for its proportionate share of the Plan and has historically recorded its share as 50% of the Plan.

DRAFT

6.0 Question 2 – Recognition of surplus

6.1 Standards in the PSA Handbook

The following standards were considered relevant when determining whether an asset can be recognized ~~on~~ in the Public Accounts:

.081 *When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans*. [SEPT. 2001]

.050 *An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.* [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

6.2 Analysis

PS 3250.50 requires that an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. This comparison between the adjusted benefit asset and the expected future benefit informs whether a valuation allowance is required and if so, how much of a valuation allowance should be recorded.

PS 3250.52 contemplates that there are two ways in which a government can benefit from an accrued benefit asset. A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. As such, an expected future benefit would include the ability to either withdraw plan assets from the Plan or reduce future contributions.

PS3250.52 also goes on to consider that an accrued benefit asset may become impaired when there is a Plan surplus that the government is not entitled to benefit from fully. The paragraphs in the standard

DRAFT

that follow determine how a government would go about considering the extent of any impairment, which would give rise to a valuation allowance. In order to make this determination, the government is required to consider the "expected future benefit", which would effectively create a ceiling for the asset. Here the guidance diverges between benefit expected to be realized through future reductions in contributions and those to be realized through withdrawal of surplus.

Specifically with respect to withdrawal of surplus, PS 3250.59 is very clear that expected future benefit can only be asserted where the Province of Ontario has a current legally enforceable right to withdraw assets from the Plan. This guidance was considered as to whether it should be applied to cases where the expected future benefit related to the Pension Asset is expected to be realized through reduced contributions; however it was concluded that the guidance does not apply in this situation. While PS 3250.59 does introduce the concept of a legally enforceable right, it does so solely in the context of a government's future withdrawal of a Plan surplus, and not in the context of a government's reduction of future contributions.

OPSEUPP has established two rate stabilization reserves, being one for the employers and one for the employees. The Funding Management Policy establishes that actuarial gains must be shared equally amongst the Sponsors. As actuarial gains are generated, the Province of Ontario has the ability to use its 50% of the gain to reduce contributions.

6.3 Conclusion

The Province of Ontario should account for OPSEUPP as a joint defined benefit plan, which means applying PS 3250 defined benefit accounting for its share of the Plan. As the Plan is in an asset position, the Province of Ontario should reflect its proportion of the asset (50%) subject to any valuation allowance.

7.0 Question 3 – Measurement of a pension asset

7.1 Standards in the PSA Handbook

The following standards are relevant to determining how the Pension Asset should be measured

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.50 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

DRAFT

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities

7.2 Calculating the limit on the carrying amount of an accrued benefit asset

Section PS 3250 paragraphs .053 to .058 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in Section PS3250 paragraph .055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus". A valuation allowance is recorded against the pension asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test

DRAFT

under Section PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as defined in Section 3250 paragraph .56.

Therefore in accordance with Section PS 3250 paragraph .56 the Province of Ontario calculated the expected future benefit as the sum of:

> a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and
> b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Each of these is discussed separately.

7.3 Considerations re: withdrawal of the surplus (Section PS 3250 paragraph .056 (b))

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, Section 3250 paragraph .059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

For OPSEUPP, the Funding Policy does not contemplate surplus withdrawal and so for the purposes of this analysis, it is assumed that any surplus withdrawal would have to be negotiated between the sponsors.

There are no provisions in the OPSEU Plan text to permit the withdrawal of a surplus. PS 3250.59 indicates that the expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. As there is no certainty that the Province will be able to access an OPSEUPP surplus through withdrawal, the Province cannot rely on withdrawal of surplus to support the measurement of the OPSEUPP accrued benefit asset.

7.4 Considerations re: reduced future contributions (Section PS 3250 paragraph .056 (a))

Section PS 3250 paragraph .056(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus.

DRAFT

In the event of a surplus, OPTrust recommends to the Sponsors ~~that~~ certain principles be followed when determining how to use the surplus. The recommendation from OPTrust is to allocate actuarial gains to any unfunded liabilities or restore cuts to benefits due to prior deficits, before moving into the rate stabilization reserves, reducing contributions, and then restoring benefits. As such, there are two significant indicators that lead the Province to believe that future contributions can be reduced, which are:

1. The Province has its own rate stabilization reserve that can be utilized to reduce future contributions (so the Province has some autonomy and segregation of its 50% of the surplus)
2. The Funding Principles of the plan put an emphasis on restoring unfunded liabilities (which will reduce contributions in the future), and reducing current contributions, before enhancing benefits.

In determining the expected future benefit of the asset, the Province has looked at the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the Province is required to make regardless of any surplus. As there are no minimum contributions that the Province is required regardless of surplus, the expected future benefit will exceed the plan asset because the expected future benefit will equate to the expected future accruals for service for the current active employees (less employee contributions).

7.5 Conclusion on measurement

The OPSEUPP is in an ~~Accounting S~~surplus position for accounting purposes and therefore it is appropriate to recognize an accrued benefit asset on the Province of Ontario's consolidated statement of financial position. The measurement of that accrued benefit asset is subject to the asset ceiling test. The expected future benefit from the asset is the amount of contributions that could be reduced in the future from this surplus. As each of the Plan Sponsors have their own stabilization reserves, and the Funding Policy promotes contribution reduction ahead of benefit improvement, the expected future benefit exceeds the net plan asset, which means there is no basis to require the recording of a valuation allowance.

---

Hi Nadine,

Attached is the asset ceiling test document for OPSEUPP. The context of this document is similar to the document for OTPP. We will make the same changes to this document to address for any additional comments you/Cindy may have on the last version of the document for OTPP.

The most significant difference between the two documents is that we have reflected the RSF for OPSEUPP in our analysis. As you are aware, the most updated RSF information we've received from your team is as at 31 December 2014.

Once you have a chance to review the attached, we think it's best for us to schedule a call to discuss.

I will be following up with our weekly status update email shortly.

Regards,

Christina

7 April 2017

Ontario Public Service Employees' Union Pension Plan - DRAFT
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Public Service Employees' Union Pension Plan ("OPSEUPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

This document provides the results of our analysis and recommendations to OPCD management regarding the recognition of an accrued benefit asset for OPSEUPP as at 31 March 2017. The purpose of this document is to support OPCD in forming its opinion on appropriate accounting related to OPSEUPP in the Province's financial statements. This document does not constitute an accounting opinion and should not be used as such. This document is intended for OPCD's use only. Please inform us in writing if you would like to share this document more broadly.

As at 31 March 2017, prior to considering the possible need for a valuation allowance, OPCD determined the following:

- Plan's accrued benefit asset is $1.95B (obligation of $16.60B, market related-value of asset of $18.51B, unamortized actuarial loss of $0.04B)
- The Province's portion (50%) of the accrued benefit asset is $0.61B[1]. This amount does not reflect any adjustment for the differential use of the Rate Stabilization Fund ("RSF") by the joint sponsors discussed later in this document.

Since our analysis determined that a valuation allowance is not required at 31 March 2017, it would appear appropriate to report the Province's portion of the accrued benefit asset of $0.65B ($0.61B, adjusted for the estimated differential use of the RSF) for its respective portion of the Plan.

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS.

[1] Reflects specific downward net adjustment of $0.37B by OPCD to the Province's portion of the Plan for the Province's financial statements

- The Plan is jointly sponsored by the Province, represented by the Chair of the Management Board of Cabinet, and the Ontario Public Service Employees' Union ("OPSEU"), representing the employees.
- Funding valuations must be filed at least once every three years.
- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors in accordance with the plan text and sponsorship agreement:
  - Employers match the contributions of the members.
  - Any emerging actuarial gains and losses are to be shared equally between the sponsors.
  - Any surplus is to be shared equally between the joint sponsors under the current arrangement (the proportion may be collectively bargained).
  - Any deficit is to be funded by the joint sponsors and required contributions will increase in equal amounts.
- The Plan has established a Rate Stabilization Fund ("RSF"), as the sum of past unspent surpluses which were evenly allocated between the joint sponsors. Each sponsor may decide, without the other joint sponsor's consent, the use of its portion of the surplus.
- As at 31 December 2014, the date of the most recently completed funding valuation, the Province's RSF balance was $0.1B and the OPSEU's RSF balance was $0.01B. This means that the OPSEU joint sponsor has historically used $0.09B more surplus than the Province.
- While the joint sponsors established a trust ("OPTrust"), the Board of Trustees is responsible for the administration of the Plan and the investment of the assets. Decisions related to amendments to the trust agreement, plan text, and sponsorship agreement (e.g. contribution level, benefit to be provided) are the responsibility of the joint sponsors.
- The funding policy provides the joint sponsors a recommended framework for addressing the priorities for surplus use and deficit funding.
- The Plan documents explicitly state that no surplus shall be paid out of the fund to either sponsors.
- Contribution holiday does not constitute a surplus withdrawal according to the sponsorship agreement. Furthermore, the sponsorship agreement permits contribution holiday (i.e. sponsors may use their respective RSF to meet any additional contribution requirements).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (the use of this earlier measurement date is permitted under PSAS 3250.039). We do not anticipate that the conclusion would be different at 31 March 2017
- Valuation discount rate: 5.90%
- Inflation rate: 2.00%
- Salary escalation rate: 1.75% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS 3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

Under the current arrangement, the Province has an equal share (50%) in the costs and risks of the OPSEUPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and the employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province. A further adjustment may need to be made to account for differential use of RSF by each of the joint sponsors. The need for RSF adjustment was also noted in the Pension Asset Expert Advisory Panel report.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs"*.

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. The Plan text explicitly prohibits any surplus withdrawal by both joint sponsors. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Province may use its portion of the RSF for contribution reduction without any restriction and does not require consent by the other sponsor. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$18.90B
Market-related value of assets ("MVRA")	$(18.51)B
Actuarial gains/(losses) not recognized due to smoothing	$0.39B
Unamortized actuarial gains/(losses), on MRVA basis	$(0.04)B
Unamortized actuarial gains/(losses), on MVA basis	$0.35B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$18.90B
Obligation	$(16.60)B
Plan surplus	$2.30B
Unamortized losses	$0.00B
Adjusted benefit asset (PS 3250.053)	$2.30B

The adjusted benefit asset for the Plan is $2.30B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

According to the accounting results letter provided by OPTrust, the Plan's actuary (Willis Towers Watson, "WTW") has determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $0.39B
- The total present value of expected future accruals is $13.88B as at 31 December 2016

The letter indicates that the present value of expected future accruals has been calculated on an open group basis (i.e. the current number of active employees). This is in line with PSAS requirements.

We have validated the actuary's calculation of the total present value of expected future accruals of $13.88B. We have estimated the present value of the Plan's expected future accruals to be approximately $12.38B, on an open group basis using a perpetuity approach (i.e. the current number of active employees) and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)
- Discount rate of 5.90%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $0.39B / (0.059-0.0275) = $12.38B.

We note that our estimate is approximately $1.5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuary to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no minimum fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no minimum contributions that the Province is required to make, regardless of any surplus. Moreover, since there is no restriction on the sponsor's use of its RSF, the contribution can be reduced to zero for the sponsors without each other's consent. The sponsorship agreement explicitly explains that a contribution holiday can be taken when there

is a surplus. Therefore, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS. It is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OPSEUPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OPSEUPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan). This interpretation is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Plan surplus that can be withdrawn

No plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$13.88B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	0.0B
Expected future benefit (PS 3250.056)	$13.88B

The Plan's expected future benefit is $13.88B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$2.30B
Plan's expected future benefit (PS 3250.056)	$13.88B
Valuation allowance (PS 3250.054) [max (0, $2.30B – 13.88B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$1.95B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$1.95B

Based on the RSF allocation as at 31 December 2014, the most recent funding valuation date, OPSEU has utilized their RSF $0.09B more than the Province:

OPSEU's RSF balance at 31 December 2014	$0.01B
Province's RSF balance at 31 December 2014	0.10B
Adjustment for the differential use of RSF by the joint sponsors	$0.09B

In other words, the Province has $0.09B more of unused RSF than OPSEU at 31 December 2014.

Accordingly, the Province's portion of the Plan's accrued benefit asset, adjusted for the relative position of the sponsors' RSFs and net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$1.95B
Adjustment for the differential use of RSF by the joint sponsors	(0.09)B
Plan's accrued benefit asset to be divided equally between the joint sponsors	1.86B
Province's portion of the accrued benefit asset to be divided evenly (50% x 1.86B)	0.93B
Province's unused RSF in excess of OPSEU's RSF	0.09B
Other Province specific adjustment made by OPCD	(0.37)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$0.65B

Based on the results of the analysis above, OPCD may conclude that an accrued benefit asset of $0.65B could be recognized for the Province's financial reporting under PSAS. This asset is after an adjustment for the differential use of RSF by the joint sponsors. No asset impairment is required.

While the analysis in this document has been prepared independently, the conclusions overall are consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Appendix
Information Provided

Our analysis is based on the following information we received:

- Province's financial reporting information under PSAS as at 31 March 2017, prepared by OPCD
- Actuarial Information for the OPESU Pension Plan provided by OPSEU Pension Trust (related to 2016 year-end financial information, including to actuarial calculations performed by Willis Towers Watson)
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re: OPESU Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- OPSEUPP actuarial valuation funding report as at 31 December 2014 by Willis Towers Watson
- OPSEU actuarial gain or loss allocation history (up to 31 December 2014)
- OPSEUPP plan text
- The Sponsorship Agreement for OPESUPP
- Ontario Public Service Employees' Union Pension Act
- OPTrust Funding Policy: Board-Approved Policy
- Pension Asset Expert Advisory Panel report

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement

benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Hi Lucy

Can you please sign the attached Confidentiality Agreement and return it to me asap. Please back date it to when the contract was signed. Also, if you can please have Martin, Sean and Michael sign as well.

Thanks

Shyrose

Confidentiality Agreement

During and following the term of the Agreement between **Pricewaterhouse Coopers LLP** (the "Vendor") and Her Majesty the Queen in right of Ontario as represented by the **President of Treasury Board Secretariat** and during and following the term of each Statement of Work entered into by the Vendor and pursuant to the Agreement (collectively, the "Agreements"), the undersigned agrees with the Vendor to keep confidential and secure all Confidential Information to which the undersigned may have access to in the course of the performance of services pursuant to any of the Agreements (including requests for services) or otherwise in connection with any of the Agreements (including requests for services). "Confidential Information" means all information of the Ontario Public Service and of the Client's subcontractors at any tier of subcontracting that is confidential by its nature or in the circumstances in which it is received, including all confidential information in the custody or control of the Ontario Public Service, regardless of whether it is identified as confidential or not, and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge, possession or control of the Vendor in connection with any of the Agreements. "Ontario Public Service" means the ministries and other administrative units of Her Majesty the Queen in right of Ontario ("Ontario") over which ministers of Ontario preside, and for the purposes of this Confidentiality Agreement, includes Ontario and Ontario's agencies, boards, commissions and Crown corporations, offices of an officer of the Legislative Assembly or of the Ontario Legislature and OPS Entities, and "**OPS**" has the same meaning.

The undersigned acknowledges that the Client is bound to maintain custody of or control over information, material and records, however recorded, within the meaning of the Freedom of Information and Protection of Privacy Act ("FIPPA"). The undersigned agrees to comply with the privacy provisions of the Agreements in the course of providing services pursuant to the Agreements.

The undersigned shall not directly or indirectly disclose, destroy, exploit or use any Confidential Information except for the purpose of performing services pursuant to the Agreements. The undersigned shall not copy any Confidential Information, in whole or in part, unless copying is essential for the performance of services pursuant to the Agreements. On each copy, the undersigned must reproduce all notices that appear on the original.

The undersigned acknowledges that the Vendor is obliged to implement and maintain measures to ensure the security and integrity of Confidential Information and to protect it against loss, alteration and destruction and against access by unauthorized persons, and to select, implement, use and maintain the most appropriate products, tools, measures and procedures to do so. The undersigned covenants and agrees to adhere to all of the measures instituted by the Vendor.

The undersigned agrees to return all Confidential Information, including all copies and portions thereof, to the Vendor or to the Client with no copy kept by the undersigned as soon as the need to possess them ends, at the request of the Client, and in any event, prior to concluding the performance of services pursuant to the applicable Agreements.

Lucy,

Attached are a few excerpts from a few documents that might help with your analysis. This information was provided by our Income Security and Pension Policy Division. I will send additional document in separate emails as well. Nadine

From the 2000 Financials – p. 17-18

Pursuant to the *Partners' Agreement* between the Ontario Teachers' Federation (OTF) and the Province, the Partners entered into negotiations to decide how to utilize the gain. Pursuant to the agreement reached on April 18, 1998, the Partners agreed to share the 1998 actuarial gain of $6.78 billion and future gains in the following sequence:

(i) $2.24 billion would be spent on improving benefits;

(ii) special payments on the pre-1990 unfunded liability would be eliminated at an estimated cost

of $8.45 billion; and

(iii) a further $8.45 billion less the $2.24 billion would be spent on improved benefits or member contribution rate reductions, subject to the Province's consent prior to April 1, 2001; or held in a contingency reserve as determined by the OTF.

As a result, $2.24 billion of the gain was used to improve benefits under the Plan, and the remaining $4.54 billion of the gain was used to eliminate the obligation of the Province to make special payments after November 30, 2008.

From this summary of Key funding Decisions

A preliminary $6.8 billion surplus was distributed: $2.2 billion to pay for the 85 factor window from 1998 to 2002 and further lower the CPP reduction to 0.6%;

$4.6 billion to reduce the value of special payments owed by the Ontario government.

OTF and the Ontario government agree future surplus would be used to eliminate the government's remaining special payments, and the next $6.2 billion surplus would be available to OTF for benefit improvements.

From the Annual Report 2000 (pg. 6)

In 1998, the Ontario Teachers' Federation (OTF) and the Ontario government signed an agreement under which they improved benefits and allowed the government to use surplus to eliminate the special payments it was making to pay off the pre-1990 unfunded liability.

This occurred in 1998 and 1999. The OTF would then receive a similar amount, set at $6.2 billion, for use at its discretion. The plan started 2001 with a funding surplus of $6.8 billion. Effective April 1 2001, $6.2 billion of this surplus will be used by the OTF to improve benefits.

Key Funding Decisions.pdf

Key Funding Decisions Since 1990

The Ontario Teachers' Federation (OTF) and the Ontario government, which jointly sponsor the Ontario Teachers' Pension Plan, must file a funding valuation with the provincial pension regulator at least every three years. A valuation must be filed with assets and liabilities (the cost of future pensions) in balance.

OTF and the Ontario government can file a valuation earlier than required to help manage the plan's funding status.

The following chart shows how OTF and the Ontario government have used surplus funds or resolved funding shortfalls for each valuation filed with the regulator since the inception of the Ontario Teachers' pension plan as an independent entity in 1990.

For more information on plan funding, visit the Corporate section of our website at www.otpp.com.

Funding decisions

YEAR	VALUATION STATUS AND KEY DECISIONS
1990	A preliminary unfunded liability of $7.8 billion to be amortized over 40 years by special payments from the Ontario government; basic contribution rate increased to 8% from 7%.
1993	A preliminary $1.5 billion surplus was distributed: $1.2 billion used to reduce government's special payments; $0.3 billion used to offset government cost reductions in the education sector (social contract days).
1996	A preliminary $0.7 billion surplus was distributed: $0.6 billion used to reduce early retirement penalty to 2.5% from 5% for each point short of 90 factor and lower the CPP reduction after age 65 (to 0.68% from 0.7%).
1998	A preliminary $6.8 billion surplus was distributed: $2.2 billion to pay for the 85 factor window from 1998 to 2002 and further lower the CPP reduction to 0.6%; $4.6 billion to reduce the value of special payments owed by the Ontario government. OTF and the Ontario government agree future surplus would be used to eliminate the government's remaining special payments, and the next $6.2 billion surplus would be available to OTF for benefit improvements.
1999	A preliminary $3.5 billion surplus was distributed to eliminate government's remaining special payments.

YEAR	VALUATION STATUS AND KEY DECISIONS
2000	$4.5 billion surplus; no changes to benefits or contribution levels.
2001	A preliminary $6.8 billion surplus was distributed: $6.2 billion to pay for benefit improvements, including a permanent 85 factor; 10-year pension guarantee; reduced pension as early as age 50; lower CPP reduction (to 0.45%); 5-year average Year's Maximum Pensionable Earnings (YMPE) to calculate CPP reduction; pension recalculation based on approximate best-5 salary years for older pensioners; and top-up waived for Long-Term Income Protection (LTIP) contributions. The remaining $76 million was set aside in a contingency reserve to be used by OTF at a later date.
2002	$1.9 billion surplus; no changes to benefits or contribution levels.
2003	$1.5 billion surplus; no changes to benefits or contribution levels. Funding Management Policy adopted by plan sponsors.
2005	A preliminary $6.1 billion shortfall was resolved, leaving plan with a $0.1 billion surplus. Shortfall resolved with special contribution rate increases, totalling 3.1% of base earnings by 2009 for teachers, the Ontario government and other employers. OTF used the $76 million contingency reserve set aside in 2001 to reduce contribution rate increases for members in 2008.
2008	A preliminary $12.7 billion shortfall was resolved with the introduction of conditional inflation protection for pension benefits earned after 2009 and an increase in the basic contribution rate for members and the government to 9% from 8%. Employers agree to make special payments equal to any annual pension increases retirees forgo to a maximum of 50% missed inflation.
2009	A preliminary $2.5 billion shortfall was resolved primarily by assuming a slightly higher long-term rate of return on investments: yield on real-return bonds plus 1.5%, versus real-return bonds plus 1.4%. Other minor changes made to assumptions to reflect recent plan experience.
2011	A preliminary $17.2 billion shortfall was resolved with a 1.1% contribution rate increase (phased in over three years), slightly smaller annual cost-of-living increases for teachers who retired after 2009, and recognition of current contribution rate as the permanent base rate.
2012	$9.6 billion preliminary shortfall adjusted to reflect changes in mortality assumptions and impact of two-year freeze on teachers' salaries. 2012 shortfall resolved by making inflation protection for pension credit earned after 2013 fully conditional on plan's funded status and providing slightly smaller pension increases, beginning in 2014, for members who retired after 2009. These changes enabled the plan to assume a slightly higher discount rate. The changes left the plan with a $200 million surplus at Jan. 1, 2012.

YEAR	VALUATION STATUS AND KEY DECISIONS
2014	$5.1 billion preliminary funding surplus used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided each year since they retired. The surplus funds were also used to raise conditional inflation protection to 60% of the increase in the cost of living for the portion of retirees' pensions earned after 2009. Both changes are effective with January 2015 pension payments.
2015	Some of the $6.8 billion preliminary funding surplus was used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided on January 1, 2015. The surplus funds were also used to raise conditional inflation protection for pension credit earned after 2009 to 70% from 60% of the increase in the cost of living. Both changes were effective January 2016. In addition, some surplus funds were reserved to help facilitate stability in contribution and benefit levels should a future funding valuation show a decline in assets or increase in pension costs.

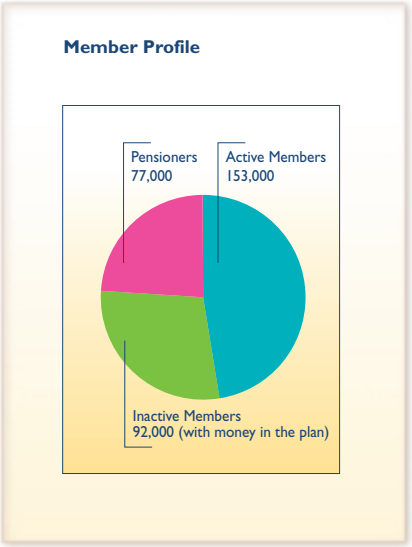
Teachers' Pension Plan Board

Conseil du régime de retraite des enseignantes et des enseignants

2000 ANNUAL REPORT

CORPORATE VISION

OUTSTANDING SERVICE TODAY, RETIREMENT SECURITY TOMORROW



CORPORATE PROFILE

The Ontario Teachers' Pension Plan Board is responsible for the future retirement income of 153,000 elementary and secondary school teachers, 77,000 retired teachers and their survivors, and 92,000 former teachers with entitlements in the plan. The plan is sponsored by a partnership between the Ontario government and the plan members, represented by the Ontario Teachers' Federation. The co-sponsors negotiate the use of surplus and have an equal say in the plan's design, including changes in benefits.

The pension board's current asset-mix policy is 60 percent equities, such as shares in public and private companies and equity-return derivative contracts; 22 percent inflation-sensitive assets such as real estate, real-rate bonds and commodities; and 18 percent fixed-income securities, largely federal and provincial government bonds.

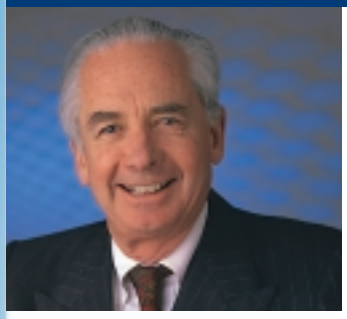
CHAIR'S REPORT



ROBERT W. KORTHALS
CHAIR

Financial markets were highly volatile in 2000, a trend we expect to continue. Despite the less reliable investment climate, the pension board's investment staff have done a great job of creating value by exceeding market returns.

Since 1990, strong stock markets around the world have helped the fund grow faster than the increase in the cost of future pension benefits. However, what has really made the difference are deliberate decisions that allowed us to do better than the market.

Over the past decade we have gained exposure to foreign markets through equity-based derivatives and partnerships with external managers to earn value-added returns from active equity selection. We have built one of the largest merchant banks in Canada to earn premium returns from private equity markets. We have introduced innovative portfolio management techniques to earn above-market returns from equity and fixed-income index funds. Most recently, we purchased The Cadillac Fairview Corporation, making us one of the largest Canadian owners of North American real estate.

BEST-EVER VALUE ADDED

These and other initiatives paid off handsomely in 2000, with portfolio managers achieving $2.6 billion in value added. This amount is the difference between the total fund return of 9.3 percent and the 5.3 percent return for the composite benchmark. All this confirms the importance of actively managing the asset base and rewarding investment managers and senior executives for their effort.

Looking back at the value added to the fund over the last four years, the investment team averaged 13 percent against a benchmark of 12.5 percent. Since inception, they averaged 13.1 percent, beating the benchmark of 10.7 by 2.4 percent. In dollar terms, that means our investment team has created $6 billion in value added since 1990.

On behalf of the Board of Directors, I want to congratulate our entire investment team for their professionalism, foresight and innovation to meet the growing needs of the pension plan with value added investment income. It has been, and continues to be, a job well done.

AVOIDING UNDUE LOSS

The emphasis on maximizing returns also means trying to avoid unnecessary losses when markets turn for the worse. It is difficult, of course, for a large investment fund to predict short-term trends. Nevertheless, the pension board is attentive to prudent opportunities.

A good example in 2000 concerned technology stocks. Going into the year, we believed that most technology stocks were overvalued. The pension board took proactive action by reducing its technology holdings in Canadian and American stocks. As a result, we avoided substantial losses that would otherwise have occurred.

Managing Our Technology Exposure

(percent)	Q1	Q2	Q3	Q4
Technology Stocks % of TSE 300 Index	31.1	41.5	38.4	26.0
% Underweight in our portfolios	3.4	4.8	5.8	3.6

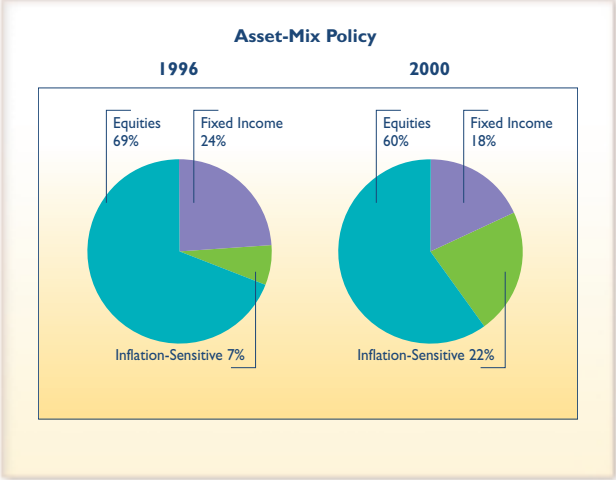
We reduced our exposure to technology stocks as a percentage of the TSE 300 Index throughout 2000.

PROTECTING THE FUND

Finding ways to add value by maximizing returns without incurring undue loss is a priority in view of the increasing number of pensioners. Since the mid-1990s, we have modified our investment approach to meet the changing needs of the pension plan.

Our asset mix continues to shift from equities and bonds to inflation-sensitive assets, especially commercial real estate properties, real-rate bonds and

commodities. These investment classes have been chosen specifically for their ability to rise in value with inflation, mitigating the long-term cost impact of inflation on growing liabilities, and safeguarding the fund if current expectations of lower returns from investment in stocks over the next decade are realized.



The asset-mix policy has changed over the past five years as we strive to better match assets that react to inflation with the indexed nature of pension benefits.

ACKNOWLEDGEMENTS

We are pleased with the investment performance of the pension fund in 2000 and prior years, and remain confident that our investment strategy, implemented by innovative portfolio managers, will continue to add value to the fund. We are impressed with the progress made to provide members of the plan with faster, more personalized service.

We are also pleased that both partners recognize the need for a strong and independent Board of Directors to oversee the pension board. We thank them for appointing directors with the skills and knowledge relevant to governing both a large investment and customer service organization.

ROBERT W. KORTHALS

CHAIR

BOARD OF DIRECTORS

ROBERT W. KORTHALS
Former President of the Toronto-Dominion Bank
Chair of the Board and Chair of Human Resources and Compensation Committee

JALYNN H. BENNETT
President of Jalynn H. Bennett & Associates Ltd., a consulting firm specializing in strategic planning and organizational development

GARY PORTER
Chartered accountant and founding partner of the accounting firm Porter Hétu International, and a past president of the Certified General Accountants Association of Ontario
Member of the Audit and Actuarial and Governance Committees

All board members serve on the Investment and the Human Resources and Compensation Committees.

CLAUDE LAMOUREUX
PRESIDENT AND CHIEF EXECUTIVE OFFICER

The pension plan enjoyed another strong year in 2000, despite the negative performance of foreign equity markets, where we had about one-third of our assets invested. The total fund return of 9.3 percent produced $6.2 billion in investment income, increasing the value of net assets to $73.1 billion at year end. These results compared with a 17.4 percent total fund return and $10.1 billion in investment income in 1999.

IMPORTANCE OF THE FUNDING SURPLUS

As most readers of annual reports know, the most important number is often hidden in a footnote in the back of the report. This report is no exception – if you look at page 41, you'll find the surplus based on the funding valuation. I want to explain its significance and the resulting funding surplus. It is this figure – the funding surplus – that is particularly important to active and retired teachers because it is the amount available to the co-sponsors for plan changes.

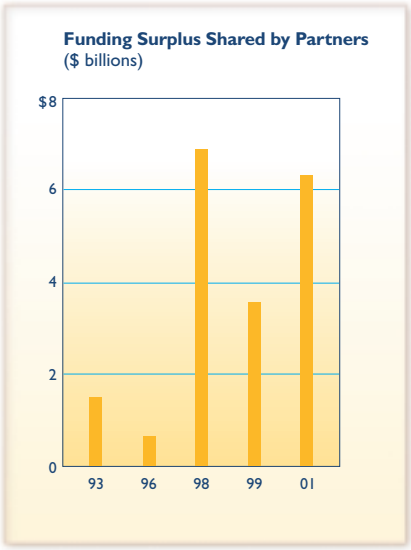
However, in our annual report, we focus on the "financial surplus" for financial statement purposes (sometimes called "management's best-estimate"). Both the annual and funding valuations look to the future, estimating the length of a teaching career, inflation and salary increases, and how long teachers will live. However, the annual valuation only looks at the financial situation at year-end and does not include the benefits that members will accrue in the future. For example, if a teacher taught for 10 years, the financial statement surplus takes into account that the plan has enough money to pay the pension equivalent for 10 years' credit.

The funding valuation, used to determine the funding surplus available to spend on benefit improvements, is a different calculation. In addition to the factors already mentioned, the funding valuation takes into account the pension that will be earned in the future, not just what has been earned up to the end of last year. In comparison, if a teacher taught for 10 years, the funding valuation includes 10 years of credit plus estimates how much money will be needed to pay the pension if he or she teaches to the 85 factor in 20 more years. It also includes how much more the teacher and the government will contribute over that time, and how much investments will grow.

USE OF SURPLUS

In 1998, the Ontario Teachers' Federation (OTF) and the Ontario government signed an agreement under which they improved benefits and allowed the government to use surplus to eliminate the special payments it was making to pay off the pre-1990 unfunded liability. This occurred in 1998 and 1999. The OTF would then receive a similar amount, set at $6.2 billion, for use at its discretion.

The plan started 2001 with a funding surplus of $6.8 billion. Effective April 1 2001, $6.2 billion of this surplus will be used by the OTF to improve benefits.



The partners will have used $18.7 billion in surplus by April 2001 to pay off the pre-1990 unfunded liability and make benefit improvements, including early retirement incentives.

A funding valuation by an independent actuary is required at least every three years. It determines whether the plan has sufficient funds to meet all future pension obligations resulting in a funding surplus or deficit, and is used as a guide to set contribution rates.

The funding valuation is a comprehensive calculation about the pension plan's financial future. It estimates the length of a teaching career, inflation and salary increases, teacher and government contributions over the length of a career, how long teachers will live, and how much investments will grow in the future.

The accompanying chart demonstrates how the funding valuation surplus is calculated.

Funding Valuation Results (before surplus allocation)

($ Billions) (at January 1)	**2001**	2000	1999	1998	1996	1993	1990
Net assets	**73.1**	68.3	59.1	54.5	40.1	29.4	21.0
Smoothing reserve	**4.3**	7.3	5.1	6.0	1.8	—	—
Value of assets	**68.8**	61.0	54.0	48.5	38.3	29.4	21.0
Future contributions	**14.4**	13.4	12.0	12.6	14.5	14.3	12.2
Future special payments*	**—**	—	3.7	8.5	8.4	8.4	—
Actuarial assets	**83.2**	74.4	69.7	69.6	61.2	52.1	33.2
Future benefits	**76.4**	69.8	66.2	62.8	60.5	50.6	41.0
Surplus (deficit)	**6.8**	4.6	3.5	6.8	0.7	1.5	(7.8)

* Payments by the government toward the pre-1990 unfunded liability.

Most of the surplus will be used in April 2001 to improve benefits, including a permanent 85 factor.

Value of assets is the value of net assets minus the smoothing reserve.

Actuarial assets refers to the value of assets as determined by the market plus the present value of future contributions by existing plan members.

Future benefits is an actuarial estimate of what it will cost to pay promised pensions over the lifetime of all current members. The cost fluctuates with market conditions and is not smoothed.

Surplus refers to the "funding surplus" (or deficit) above the cost of all future pension benefits for current members.

ASSUMPTIONS

Underlying the valuation are economic and demographic assumptions. The three most important assumptions are identified in the accompanying table.

Funding Valuation Assumptions

(percent) (at January 1)	**2001**	2000	1999	1998	1996	1993	1990
Discount rate	**6.25**	6.5	7.5	7.5	8.0	8.0	8.5
Salary escalation	**3.20**	3.25	4.5[2]	4.5[1]	5.0	5.0[1]	5.75
Inflation rates	**2.20**	2.25	3.5[3]	3.5[1]	4.0	4.0[1]	4.5

[1] except 2% for 2 years.
[2] except 2% for 2 years, 3.25% for 1 year
[3] except 2% for 2 years, 2.75% for 1 year

Salary changes affect the cost of future benefits because pension calculations are based on each member's best five years' salary. Pensions are fully indexed to inflation, which also increases pension costs.

Starting in 2000, we use the same assumptions for the annual valuation included in the financial statements.

Discount rate refers to the long-term market rate of return used to determine the present value of all future pension benefits and assets. It is assumed, as shown in the chart, that the discount rate will exceed inflation by approximately four percent.

Salary escalation and inflation rates It is assumed that, over the long term, increases in teachers' salaries will exceed inflation by one percent.

Even a seemingly small economic or demographic change can have a major impact on the plan's funding position. For example, a male teacher retiring at 57 years of age in 1995 had a life expectancy of 24.0 years, compared with 25.1 years for a similarly aged male teacher retiring in 2000. Changing the assumptions to reflect this improvement in the mortality experience of male retirees increases the plan's liability costs by $800 million.

PARTNERSHIP

As sole plan sponsor from 1917 until 1992, the Ontario government was responsible for all funding deficits and entitled to all funding surplus.

In 1992, the Ontario Teachers' Federation negotiated a partnership with the government. Teachers are now responsible for half of any surplus or deficit. As stated earlier, the partners negotiate the use of surplus and also have an equal say in the plan's design, including changes in benefits. The past use of actuarial surplus is discussed in note 9 to the financial statements.

NEED FOR A SURPLUS POLICY

Since 1990, whenever a funding surplus has existed, it has been used to eliminate special contributions or increase benefits.

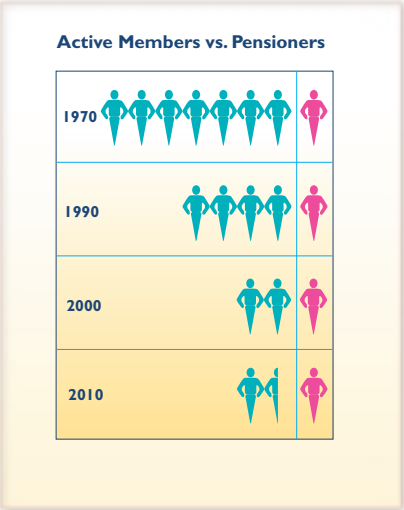
The partners know this level of yearly surplus creation is not sustainable. We are very concerned that current contribution rates will not be sufficient to cover the cost of future benefits, particularly if our current market forecasts for the next 10 years prove correct.

We encourage the partners to create a surplus policy, and we will commit resources to assist them. This policy would include the level above which the funding surplus would be used, and would be similar to the legislated capital reserve policies for banks and insurance companies. This would help to ensure some stability for contribution rates.

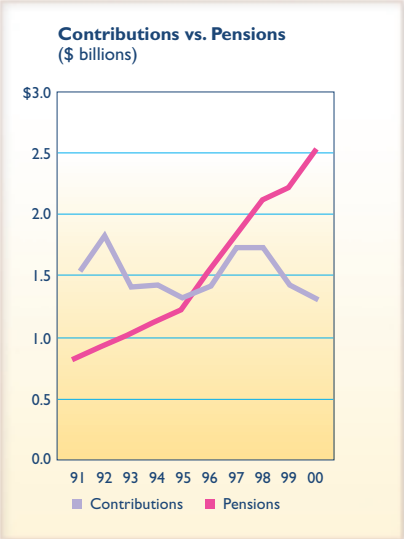
We believe it is essential to begin working today on a policy for the future because, if the plan is underfunded at a statutory valuation in the future, it will be the responsibility of the partners to make up the shortfall.

Small surplus The present value of all pensions is rising rapidly as the plan matures, totalling $76.4 billion at January 1, 2001. Sufficient assets were in place to meet these obligations with actuarially valued assets of $68.8 billion and future contributions valued at $14.4 billion, leaving a surplus of $6.8 billion. After these funds are assigned to plan improvements in April 2001, the plan will have only a small surplus of $600 million, less than one percent of liabilities.

Changing profile The profile of the plan has changed leaving fewer contributors while the number of teachers on pension continues to grow. Therefore, even an increase in contribution rates will have a reduced ability to compensate for a deficit. Ten years ago, future contributions were sufficient to cover about one-third of future benefits. Today, those contributions would only cover 19 percent.

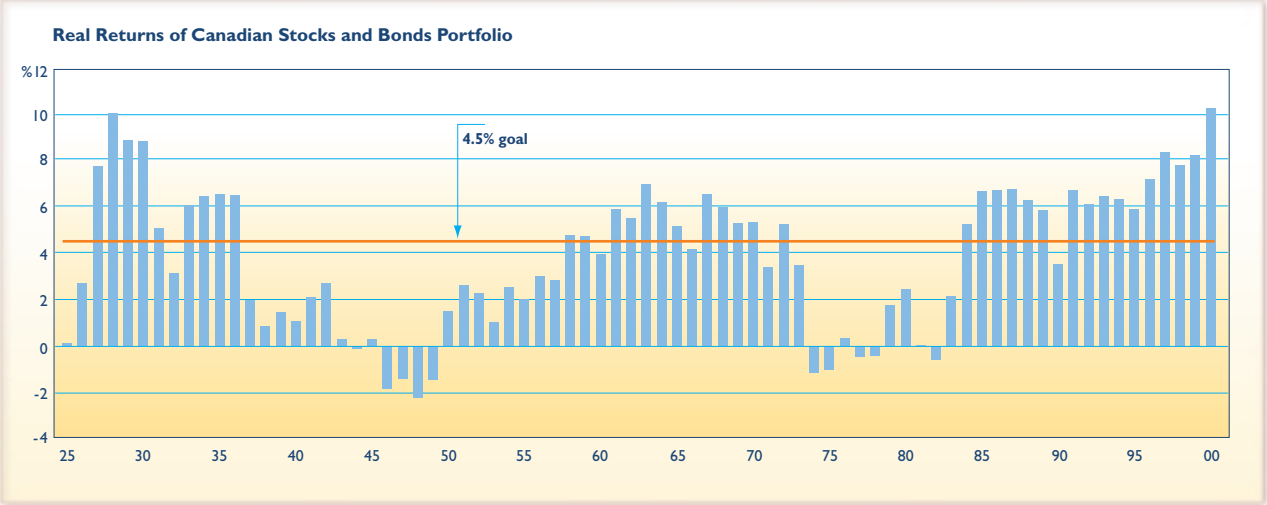


With only two active members for every pensioner today, there are half as many contributors per retiree as there were 10 years ago.



The gap between contributions and pension payments continues to widen. In 2000, 153,000 teachers and the government contributed $1.3 billion and we paid out $2.5 billion in benefits.

Increased risk In future, we expect modest real rates of return from stock and bond markets compared with the past 10 years. If history repeats itself, low or negative real-rate returns are possible over multiple years, as the accompanying chart illustrates. We are more concerned now about the impact of short-term market volatility on our ability to keep contributions stable than we were 10 years ago.



This chart tracks the rolling 10-year average real rate performance of an index-based portfolio consisting of two-thirds Canadian stocks and one-third Canadian bonds. The portfolio would reach our long-term investment target of 4.5% less than half the time.

WORKING WITH THE PARTNERS

Based on current valuation assumptions and the benefit improvements on April 1, the plan could require at least a 1.5 percent increase (matched by the government) in the contribution rates from the current average of 8 percent of salary. In the absence of such an increase in contribution rates, the plan must rely on investment returns above the actuarial assumption to make up the difference.

Our job as investment managers is to ensure that teachers receive the pensions they are promised. In the interest of prudent management, we will support the partners in developing a policy on surplus because we believe a large increase in the contribution rate would be unacceptable to plan members. Having a surplus policy in place would also help us plan our investment strategy, allowing us to build the most appropriate asset mix and investment programs around the policy.

In the meantime, we assure plan members that the pension board is committed to maximizing investment returns so that asset values have a better chance of keeping pace with the rising value of promised pensions.

STRIVING FOR EFFICIENCY

In seeking above-average investments, as well as providing timely and personalized member services, we strive to be an efficient organization. Last year, it cost $133 million to operate the pension board. Ongoing administrative costs were $106 per member. Investment expenses at 14 cents per $100 of net assets were low compared with many other institutional investors. These costs are tabulated in note 12 to the financial statements.

ACKNOWLEDGEMENTS

Our bi-annual employee survey showed that the pension board continues to be an attractive place to work. The positive attitudes and professionalism of staff are behind our standing as one of the consistent top investment performers in the pension fund industry as well as our highest-ever customer satisfaction rating from teachers and retirees. We remain committed to doing an even better job in the future.

CLAUDE LAMOUREUX

PRESIDENT AND CHIEF EXECUTIVE OFFICER

The challenge of faster, better and friendlier service

We are a customer-focused organization with a broad mandate that covers dozens of benefit entitlements and we serve more than 300,000 clients. Our services extend far beyond calculating and paying pensions; we respond to the ever-changing needs of our plan members and pensioners.

Member Services Volumes

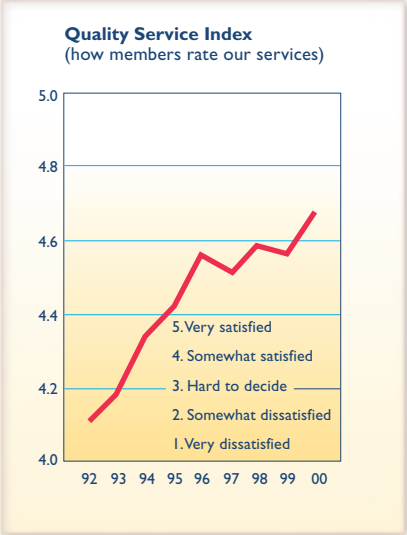
	2000	1999
Telephone calls	**94,296**	78,654
Purchase of credit	**12,541**	18,021
Pension inceptions	**7,034**	6,397
Pension estimates	**5,880**	6,331
Changes to survivor benefits	**3,358**	3,455
Termination estimates	**2,512**	2,736
Death benefits	**2,656**	2,713
Plan transfers	**2,019**	2,208
Marriage breakdown calculations	**806**	836
Commuted value payouts	**761**	612

Last year, we advised more than 2,800 teachers on their options at retirement planning workshops throughout Ontario, sent out 153,000 personalized annual benefit statements to active members, and collected $615 million in pension contributions from teachers through their employers. We paid out benefits of $2.5 billion to approximately 77,000 pensioners and members who left the plan.

HIGHEST-EVER CUSTOMER SATISFACTION

Our commitment to providing outstanding immediate and personalized service to all plan members and pensioners earned us the highest-ever customer satisfaction rating in 2000. The strongest improvements were in satisfaction with our services in providing pension inceptions, estimates, transfers, terminations and purchases of credit.

In 2001, we will replace the satisfaction survey, based on written member responses collated by staff, with an extensive random telephone survey conducted by an independent market research firm. The new approach

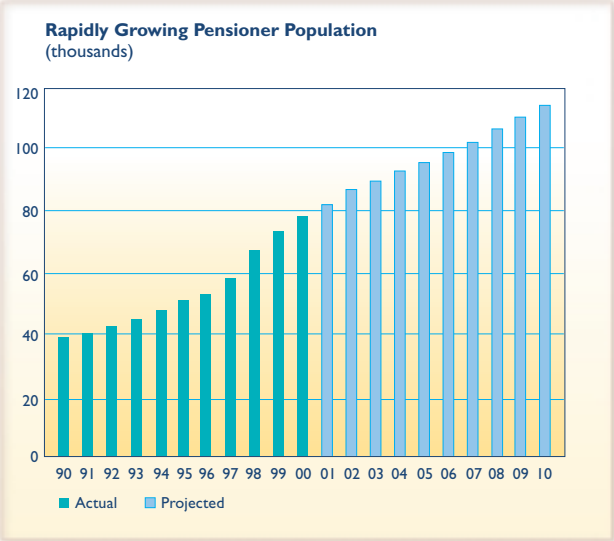


will measure a broader range of customer interactions, with the emphasis on services and service levels. This should provide a more informative evaluation of our personalized relationship with members.

EXPANDING PENSIONER POPULATION

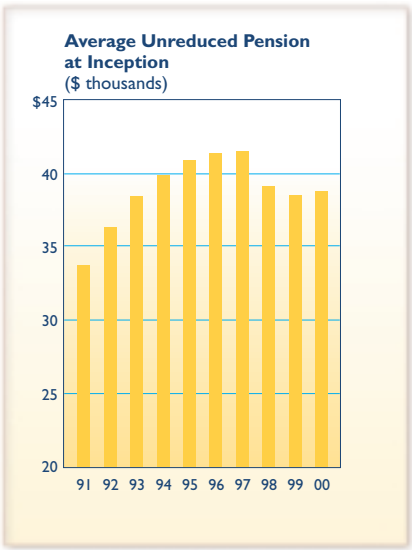
In the past three years, 21,800 teachers retired with two out of three taking advantage of the 85 factor. This increased the pensioner population to 77,000 at the end of 2000.

A large proportion of teachers is in the 45 to 55 age range and will retire in the current decade. As they consider their retirement options, these teachers will require frequent interaction with the pension board by telephone, e-mail, the Internet and one-on-one meetings.



The pension board is positioned to handle the influx of personal service needs from an expected 50,000 retirements over the current decade.

To provide better and faster customer service, we believe we have put in place some of the best technology and information management systems of any pension plan in North America. Personal service is delivered by 60 pension benefit specialists, who deal with situations ranging from members coping with the death of a spouse to requests for information on commuted value pay-outs. Staff are continuously retrained on best business practices, and we closely track our performance based on member feedback.

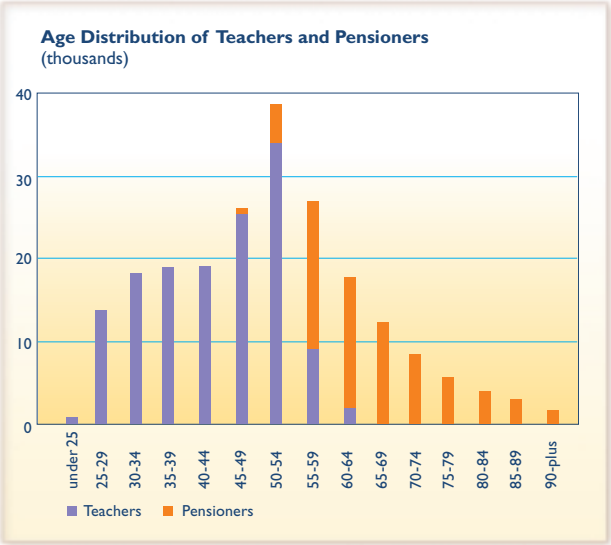


The average unreduced pension has declined from $42,000 in 1997 to $38,400 in 2000 due to early retirements under the 85 factor.

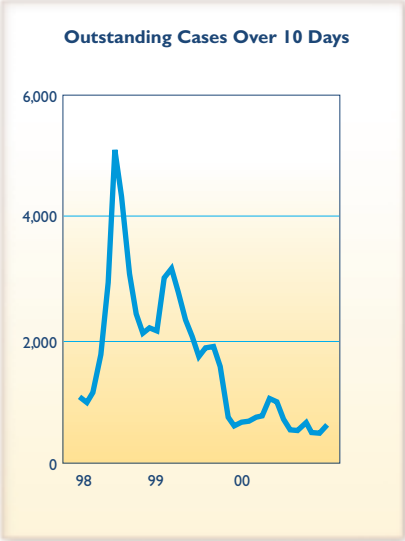
IMPROVED SERVICES

An example of how we use technology to improve service is our Computer Telephone Integration system that automatically recognizes a member's telephone number. By the time the member talks to a pension benefit specialist seconds later, the member's file is open on the specialist's computer.

The friendliness of our specialists is one reason why our customer satisfaction level is so high. Another reason for higher satisfaction is our new easier-to-read member's annual personal statement of benefits, including greater disclosure such as commuted value (the lump sum required to replace the individual's future entitlements).

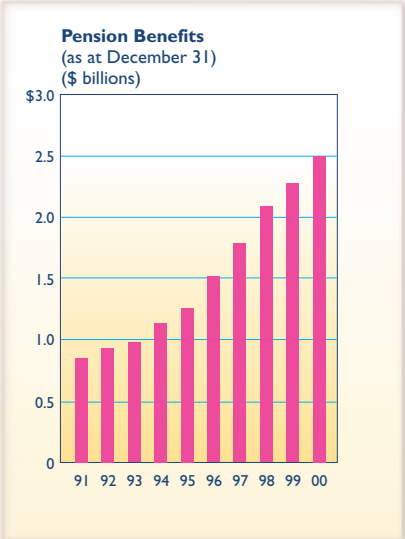


Over the past 10 years, retirees in their 50s have increased as a percentage of the pensioner population. The average pensioner age has decreased to 66.5 years.



Introduction of the 85 factor in 1998 caused a backlog in our workload. Our goal is to handle all member requests, no matter how complex, within 10 working days.

The commitment to outstanding service is evident in the time it takes to handle and complete requests from members. Outstanding requests more than 10 days old peaked at 5,000 in June 1998, following introduction of the 85 factor, and have remained well below 1,000 for most of the past year.

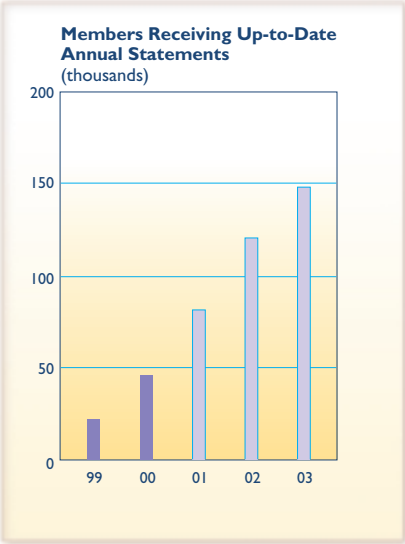


Benefits paid to retirees and their survivors continue to rise rapidly as a large number of teachers enter normal retirement or opt for early retirement.

We are also working with 218 employers to improve the quality and timeliness of member information we receive, including service credit and salary information on each active teacher.

By the end of 2000, 17 percent of employers, with more than 75,000 members, had been transferred from annual to payroll-based reporting. This also means that 75,000 members will now get annual statements that are one to two years more up to date than before.

With the continued cooperation of school boards, we expect to complete the transfer of all plan members to payroll-based reporting – and thus to up-to-date annual statements – by the end of 2003.

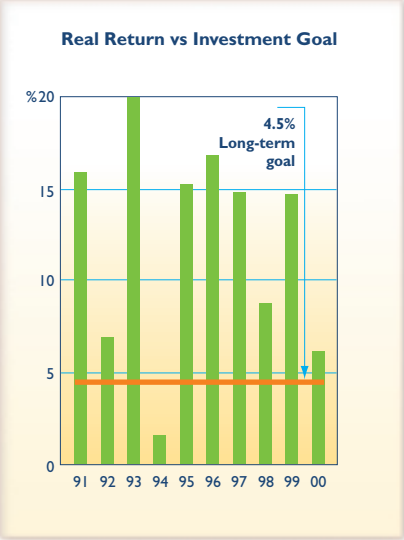


Typically, statements are only current as of August of the previous year, a situation we expect to correct for all members by the end of 2003.

The challenge of earning above-market returns

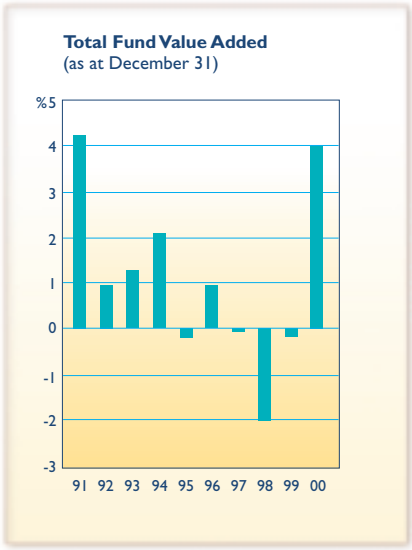
Our long-term goal is to create a surplus by growing assets faster than pension liabilities. To match average liability growth, assets must generate an annual real return of 4.5 percent (that is, 4.5 percent above the rate of inflation).

Over the long term, we believe that investing mostly in stocks will earn the level of real returns the plan needs. Consequently, our asset-mix policy has always been weighted much more to equities, a strategy that has paid off since 1990 with real returns substantially above the long-term goal. However, equity returns over the current decade could be below our target of 4.5 percent.



Because of exceptional investment markets, we exceeded the long-term investment objective in the 1990s, an achievement that will be more difficult over the next decade.

Because it will be more difficult to earn the required level of returns from passive investing alone – that is, by replicating market indices for stocks, bonds and commodities – we have reduced our index funds by shifting capital to active portfolios where we can add value. Over the past 10 years, active management and tactical asset allocation improved the returns we would otherwise have received from passive index investing by 1.1 percent.



Active management produces higher returns than the markets in which we invest can produce on their own. In 2000, this approach created $2.6 billion in value added.

INVESTMENT MANAGEMENT TEAM

We employ about 95 investment professionals, from portfolio managers, bond traders and stock analysts to foreign exchange managers, merchant bankers, and derivative traders. In addition, we employ a large staff at our wholly owned real estate subsidiary, The Cadillac Fairview Corporation Limited.

About 60 finance professionals support our investment effort. They ensure compliance with rigorous operational controls, policy guidelines and risk management limits. Every day, they settle transactions, forecast liquidity requirements, and report on investment positions, portfolio risk and returns.

Approximately 35 information technology professionals maintain and enhance our trading, risk management and reporting systems. They are developing a system that instantly routes orders from portfolio managers to various trading desks and allows for electronic execution and settlement of trades.

MAXIMIZING INVESTMENT RETURNS

To maximize returns, we actively manage 36 percent of invested assets. Even the indexed equity and fixed-income portfolios are partially actively managed through quantitative, arbitrage and other performance-enhancing strategies. We also use derivative products to manage risk and maximize returns. As a result, we are one of the largest international traders of equity-based swaps, futures and options. Many of our active strategies are independent of market direction.

We allocate a risk capital budget to each investment portfolio with the expectation of earning a minimum 10 percent return on this risk capital. The budget allocation varies among portfolios and is proportionately smaller, for example, for fixed-income securities than for merchant banking. In aggregate, the risk capital budgets are approximately 5 percent of invested assets.

We also macro-manage the total fund through "overlay" programs. For example, the asset-mix policy allows equity exposure to vary between 50 and 70 percent of net assets relative to a target of 60 percent. In 2000, we under-weighted equities and reallocated capital to fixed-income securities and real-rate bonds.

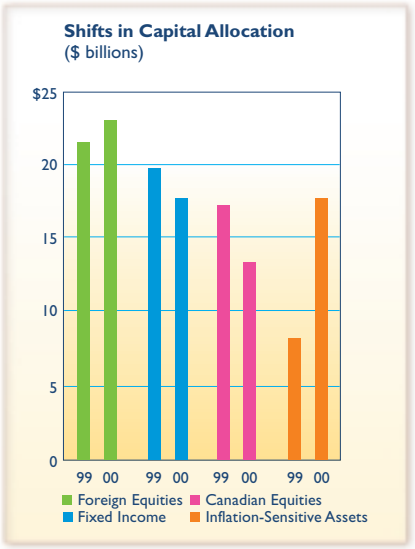
When we invest abroad, we earn a return on the investment and incur a gain or loss as a result of currency fluctuations. To reduce the volatility of returns from foreign currency fluctuations, we hedge 50 percent of investments in major foreign currencies that have a low correlation to the Canadian dollar.

Portfolio managers are rewarded for optimizing total assets and not just their own portfolios. An investment planning committee meets every two weeks to review the asset-mix policy and develop a tactical asset allocation response to current market conditions.

INDEX BANKING

We believe in being fully invested, and consider cash a drag on investment returns. Excess cash is normally invested in equity and fixed-income index funds until we identify opportunities that can earn above-market returns.

For example, to improve returns above the Canadian market benchmark, we have developed quantitative portfolios that invest in TSE 300 stocks based on models that attempt to identify strategies and stocks that should outperform the index. These portfolios have exceeded the TSE 300 returns for eight consecutive years. We account for about 4 percent of the value of trading volume in TSE 300 companies and have minimized transaction costs by trading large blocks of individual stocks or baskets of different stocks in a single transaction. Greater use of electronic trading is further reducing costs.



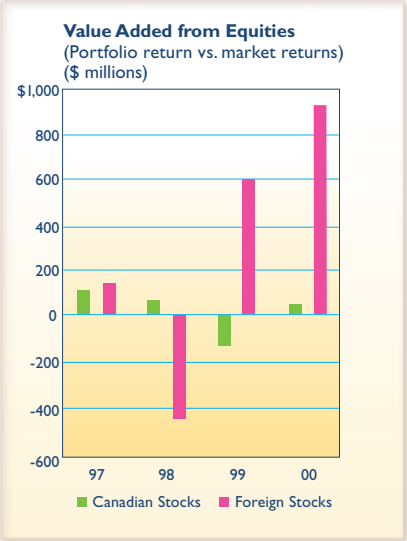
We reduced most asset classes as we transferred capital to inflation-sensitive assets such as real estate, real-rate bonds and commodities.

In the case of foreign equity index funds, our staff invest entirely in equity-based derivatives to earn market returns. Since the correlation of these investments to market performance is extremely high, these portfolios achieve market returns on a consistent basis.

ACTIVELY MANAGED EQUITY PORTFOLIOS

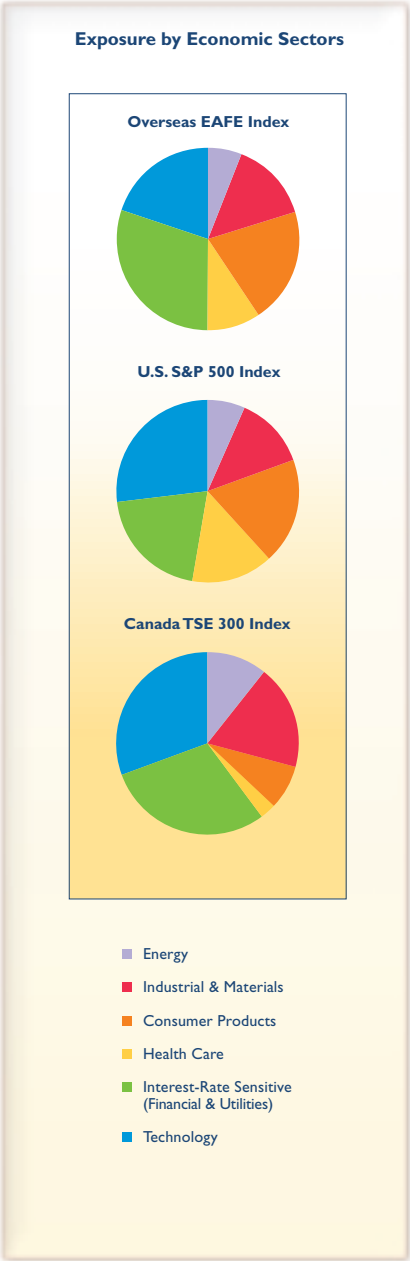
Stocks We have considerable experience as an active equity investor in Canada. In 2000, we began to expand this expertise to the global marketplace by transferring capital from foreign equity index funds to internally managed global equity programs. At the end of 2000, our staff managed more than $640 million of a total $8.3 billion in global equities.

At the same time, we remain committed to external foreign equity managers who have earned exceptional returns for the plan for many years. Building our skills in active global investing will strengthen our relationships with these managers and improve our understanding of their investment decisions.



In Canada, we have added value above equity benchmarks (indicated as zero). Outside Canada, the value-added has been more volatile and more spectacular.

Opportunities to invest in public companies in Canada are limited. The Canadian market is relatively small compared to the capital held by large institutional investors. For this and other reasons, it is important to look beyond Canada for additional investment opportunities. Focusing on global opportunities should reduce fund risks and enhance returns because global markets provide a greater diversity of economic sectors. A more global focus also allows us to select companies that are world competitors with strong performance prospects.



Greater economic diversification outside Canada offers investment opportunities that should reduce risk and improve long-term returns.

Corporate governance We attempt to improve shareholder value in public companies by voting our shares, encouraging boards of directors to practice good corporate governance, and being more involved in certain companies.

We now publish our proxy voting record on our web site **www.otpp.com**. Sharing our voting inten-

tions with management, shareholders and plan members in advance of shareholder meetings increases the transparency of our decisions and strengthens our corporate relationships with the companies in which we invest.

2000 Proxy-Voting Record

	For	Against
Employee Stock Options	46	89
Shareholder Rights Plans	1	36
Other	246	135

The most contentious issue is excessive stock options that dilute shareholders' value. In our view, the cost of options should be recorded in financial statements so that shareholders know the full financial impact of these awards.

The proxy voting record shown in the table has changed little over the past three years. We intend to be more active in working with other large investors to bring about change.

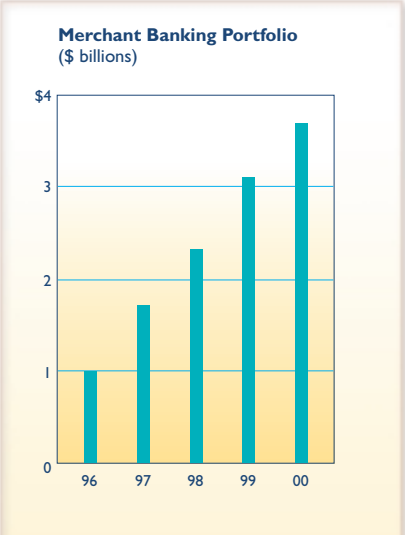
Our involvement with select companies is intended to support their boards of directors in requiring management to develop a value-added strategy with growth targets. In 2000, we made direct investments in four such companies in telecommunications, energy and industrial products. The investments are 10 to 20 percent of each firm's outstanding shares and totalled $810 million. These commitments doubled the value of our relationship investing portfolio to $1.5 billion with direct and indirect investments in eight U.S., seven Canadian and 21 U.K. companies.

Merchant banking We have developed expertise in all facets of merchant banking and ended 2000 with $3.9 billion in over 100 investments in the consumer products, communications, industrial products, entertainment & media, financial services, retail, and energy industries. We invest directly in Canadian firms, which represent 40 percent of the merchant banking portfolio. In the United States and Europe, we invest both directly and indirectly through limited partnerships.

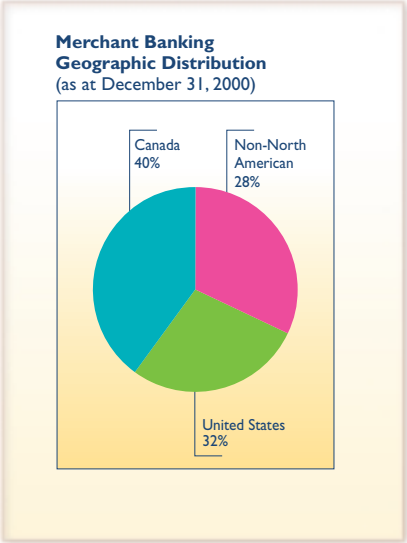
There are many opportunities to earn premium returns in the private market, where we are specialists in identifying value-added prospects. For example, we invested $14.8 million in a Canadian technology company in 1992 as part of a management buyout. In late 1993, the refinanced and refocused company was taken public. We divested our interest in stages and, by the time the last shares were sold in 2000, had realized $131 million in gains. In 2000, we sold positions in eight companies acquired for $201 million to realize net proceeds of $310 million.

Our equity and mezzanine debt investments facilitate management buyouts, business expansions, acquisitions, financial restructurings, ownership changes and taking companies private or public. In 2000, we participated with four U.S. funds in the management buyout of Shoppers Drug Mart and acquired a significant minority interest.

We first offered mezzanine debt in 1999 and had $244 million invested by the end of 2000. This product appeals to many companies as an alternative to equity and senior debt, filling the void in Canada served by the high-yield market in the U.S.



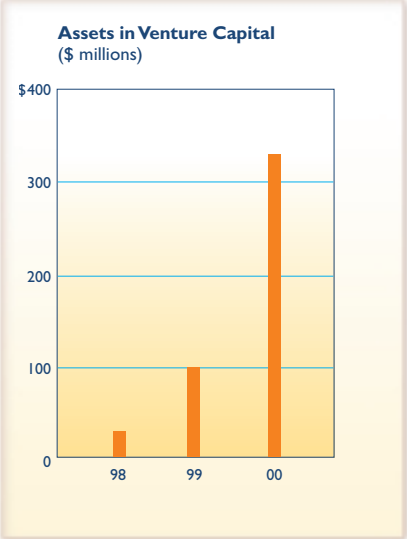
Our merchant bank has grown to be one of the largest in Canada, earning annual returns in excess of 23% since 1991.



We are increasingly adopting a global perspective in our search for premium investment returns from merchant banking.

Our merchant banking portfolio includes a venture capital fund launched three years ago that ranks among the top sources of early-stage capital in Canada. Investing in start-up enterprises carries higher risks in the expectation of higher rewards. Our size, long-term investment perspective and diverse asset base allow us to take risks in the most promising opportunities on the assumption that the successes will exceed the costs of failures.

At the end of 2000, we had $329 million invested in 24 companies and 12 venture capital funds, principally in life sciences and information technology. These investments typically involve multiple rounds of financing of $3 million to $20 million each. Approximately 54 percent of our venture capital investments are in Canada and 46 percent in the United States.

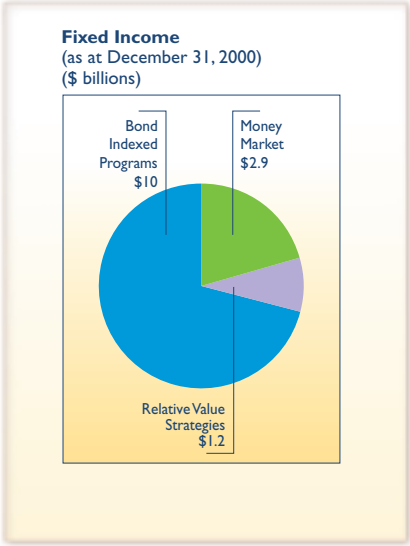


We are committed to Canadian venture capital investments where there are reasonable prospects of earning good returns for the risks involved.

FIXED-INCOME PORTFOLIOS

During the past two years, our consolidated bond portfolios have been among the top quartile of fixed-income performers.

Our basic approach is to invest the majority of fixed-income assets in bond indexed programs to replicate the Scotia Capital Canada Universe, which contains federal government bonds. Our portfolio contains substantial holdings in Government of Canada bonds, more than three percent of the Bank of Canada's domestic public debt. However, we use relative value strategies to attempt to earn returns 20 to 30 basis points above this benchmark.



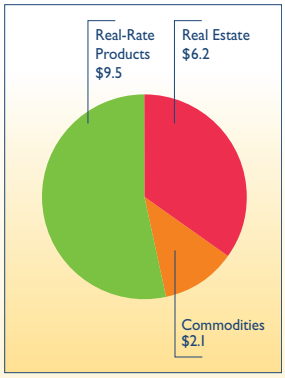
The fixed-income group manages $14.1 billion in assets.

Fixed income includes $2.9 billion allocated to the money-market portfolio and $1.2 billion in programs where we use relative value strategies to enhance returns. We have also expanded the relative value approach to include Canadian high-yield corporate securities that are well diversified by industry and economic segment. At year-end, this portfolio totalled $286 million. We are targeting the high-yield U.S. market for future expansion. We also continue to develop quantitative techniques to improve analytics, capture mispricing, and find other relative value opportunities in both bond and money markets. In this way we benefit from diversification by implementing strategies where expected returns have a low correlation to the fixed-income market overall.

INFLATION-SENSITIVE INVESTMENTS

The assets that best match the plan's liabilities have stable real returns and a high correlation with inflation. Nominal bonds are only a good fit during periods of stable inflation. Stocks have high average returns and a positive long-term correlation with inflation, but are highly volatile in the short run. Real estate, real-rate bonds and commodities are highly sensitive to inflation.

Inflation-Sensitive Investments
(as at December 31, 2000)
($ billions)



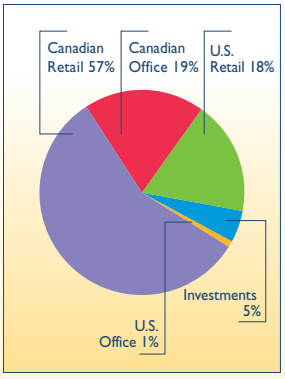
To better match inflation-indexed pensions, we are building up ownership of inflation-sensitive investments.

Since late 1998, we have managed these investments as a separate asset class. While we strive to maximize long-term real returns from these assets, their primary role is to shield the fund's surplus from the short-term risks we experienced in 2000 – a rapid rise in liabilities due to higher inflation from 2.6 to 3.2 percent and falling real interest rates from 4 to 3.4 percent.

Real estate We own a $10.4 billion real estate portfolio ($6.2 billion net of liabilities), managed by Cadillac Fairview, our wholly owned subsidiary. Approximately 95 percent of the portfolio consists of full or partial ownership of 69 shopping centres and 48 office buildings in Canada and the United States.

Our current strategy is to reposition the North American office and retail assets through a combination of redevelopment, acquisitions and dispositions with the goal of owning premier properties in key markets. This strategy is being implemented by Cadillac Fairview. We previously owned 22 percent of this company and acquired full ownership in March 2000 for $2.4 billion. As a result, we own Canada's best property portfolio and the industry's top property management company.

Real Estate Portfolio
(as at December 31, 2000)

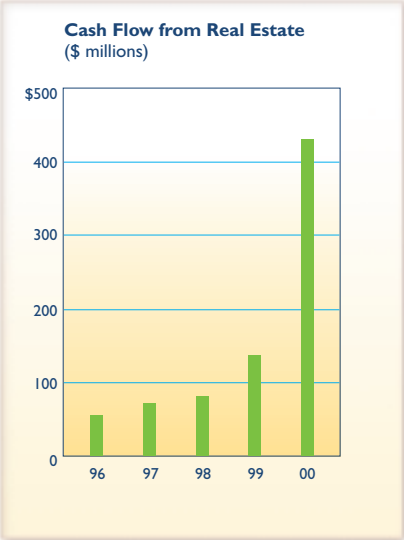


Our plan is to increase ownership of high-quality office buildings and large shopping centres in North America.

The Canadian portfolio includes premier properties, such as the Toronto Eaton Centre, Vancouver's Pacific Centre and the Toronto-Dominion Centre complex in Toronto. We recently purchased full ownership of these properties from the previous co-investor. We also strengthened our retail ownership in the Toronto area by acquiring Sherway Gardens. In the United States we own 23 shopping centres in the major markets of 10 states.

Owning Cadillac Fairview provides exclusive access to the expertise of 1,750 employees dedicated to maximizing the value of the plan's real estate assets. The Cadillac Fairview brand is internationally renowned and the company is the first call for major American and European retailers seeking a presence in the leading shopping centres. A testament to the market-draw of our shopping centres was the decision by Sears in 2000 to open five of its seven new Eatons stores in our properties.

The size and quality of our real estate portfolio provides large and predictable income. In 2000, the portfolio generated approximately $427 million in cash flow from operations.



The cash flow from real estate in 2000 was equivalent to paying close to 13,000 annual pensions.

Real-rate bonds Real-rate bonds are an excellent match against plan liabilities and, along with index-linked mortgages, are risk free with respect to inflation. As a result, we continue to be a keen buyer of these securities. In 2000, we increased our holdings of Canadian real-rate products from $4.2 billion to $5.8 billion and entered the U.S. market by acquiring $3.7 billion of U.S. Treasury Inflation-Protected Securities (TIPS). At year- end, our consolidated portfolio of real-rate securities totalled $9.5 billion.

Commodities Commodities generally have high real returns when there is unanticipated inflation and provide a hedge against short-term inflation risks in the value of the plan's liabilities. We invest through derivatives in the Goldman Sachs Commodity Index, which is heavily weighted to oil and gas, and doubled the plan's holdings to $2.1 billion in 2000.

This section of the annual report provides an overview of our operations and provides a more detailed explanation of the consolidated financial statements. It should be read in conjunction with the financial statements. Our objective is to present readers with a view of the pension board through the eyes of management by interpreting the material trends and uncertainties that affected the operating results, liquidity or financial condition of the pension plan in the last fiscal year. In addition to historical information, this section contains forward-looking statements that reflect management's objectives and expectations as at the date of this report, which involve risks and uncertainties. Our actual results may differ materially from those anticipated in these forward-looking statements.

YEAR-END FINANCIAL POSITION

The plan's accrued pension liabilities increased from $52.1 billion to $58.6 billion during 2000. The actuarial assumptions used to determine these liabilities for financial statement purposes reflect management's best estimate of teachers' salaries, inflation, demographic factors, and market-based yields. These estimates at the end of 2000 were in line with the markets.

Valuation Assumptions

(as at December 31) (percent)	2000	1999
Discount rate	**6.25**	6.75
Salary escalation	**3.20**	3.25
Inflation rate	**2.20**	2.25

Both the financial statement and funding valuations now use the same assumptions.

Benefit payments In 2000, the plan paid $2.5 billion in benefits, an increase of $200 million over the previous year. The increase principally reflected 6,200 teachers retiring, bringing to 77,000 the number of retired members and their survivors receiving benefits.

Accrued Pension Benefits

($ Billions)	2000	1999
Accrued pension benefits, beginning of year	**$ 52.11**	$ 49.63
Interest on accrued pension benefits	**3.48**	3.49
Benefits earned	**1.36**	1.30
Benefits paid	**(2.54)**	(2.28)
	54.41	52.14
Changes in actuarial assumptions	**3.89**	0.77
Experience gains	**0.26**	(0.80)
Accrued pension benefits, end of year	**$ 58.56**	$ 52.11

The 2000 payments included $164 million in commuted value transfers (versus $108 million in 1999) and a 1.5 percent cost-of-living adjustment. To calculate the inflation adjustment rate, we average the annual change in inflation for 12 months ending in September each year. The inflation adjustment paid in January 2001 was 2.5 percent.

Change in net assets The plan began 2000 with $68.3 billion in net assets available for benefits. During the year, the plan gained $7.5 billion of income – $6.2 billion from investments, compared with $10.1 billion in 1999, and $1.3 billion from contributions, compared with $1.4 billion a year earlier.

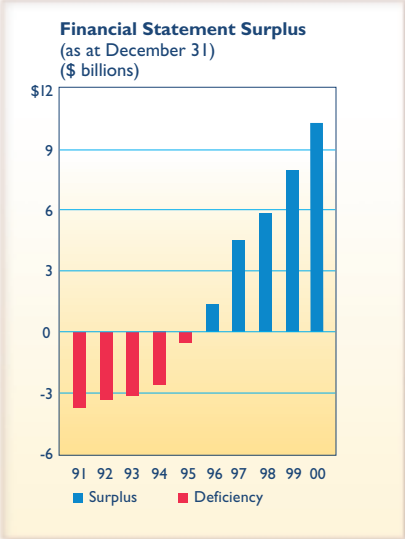
Changes in Net Assets

($ Billions)	2000	1999
Income		
Investment income	**$ 6.21**	$ 10.12
Contributions	**1.28**	1.41
	7.49	11.53
Expenditures		
Benefits	**2.54**	2.28
Operating expenses		
Member services	**0.03**	0.03
Investments	**0.10**	0.09
	2.67	2.40
Increase in net assets	**$ 4.82**	$ 9.13

Expenditures, including benefits paid to members and survivors, totalled $2.5 billion and $133 million to operate the pension board.

As a result of these changes, net assets available for benefits grew by $4.8 billion to $73.1 billion by the end of 2000.

Surplus The plan had a surplus for financial statement purposes of $10.2 billion at December 31, 2000. This compared with $7.9 billion a year earlier on a restated basis.



The year-end surplus, based on the financial statements, quantifies the plan's financial position from an accounting perspective.

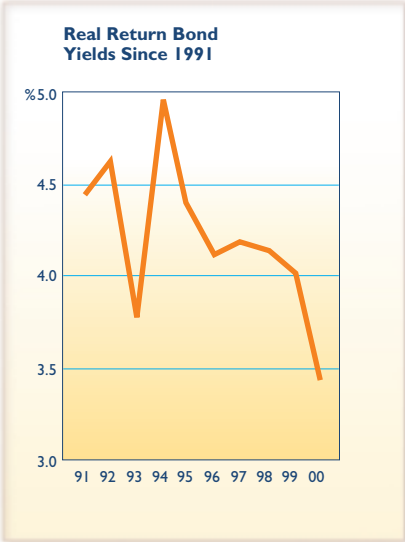
In the past, management used its best estimate of the long-term rate of return to determine the present value of all future pension benefits and assets. Net asset gains that exceed the actuarial assumptions were amortized over five years to smooth out the impact of market volatility from one year to the next.

Beginning in 2000, and as explained in note 2 to the financial statements, a market interest rate is now used to determine fair value for both fixed-income assets and accrued pension benefits. The value of equities (including real estate and commodities) continues to be adjusted for actuarial purposes to reflect the difference between the actual equity asset returns at year-end and management's best estimate of future equity returns. The difference in dollar terms (the actuarial asset value adjustment) is then amortized over five years. Strong performance by fixed-income assets increased our financial statement surplus.

MATCHING ASSETS AND LIABILITIES

To create a funding surplus we manage the relationship between investment assets and pension liabilities. Our goal is an asset mix that balances risks and rewards, avoids excessive volatility, and maintains stable contribution rates.

Because both assets and liabilities are sensitive to interest rate changes, one of our goals is to reduce the risk that liabilities will increase more than assets in response to lower real interest rates. Unfortunately,



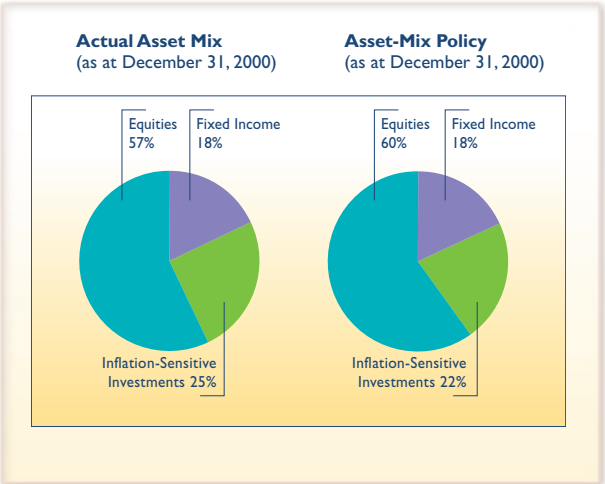
Real return yields declined by 59 basis points in 2000, after remaining within a 10 basis point range for the three previous years.

that is what happened in 2000. The sharp decline in real rates of return increased the value of total liabilities by $3 billion. During the year, we shifted assets from fixed-income and equity portfolios to real-rate products and real estate. Debt securities, along with inflation-sensitive assets, outperformed total equities to produce the healthy accounting surplus.

ASSET-MIX POLICY

The asset-mix policy is reviewed annually by management and the board of directors and changes are made as necessary to reflect changes in our asset/liability model. The asset mix is crucial to long-term performance. Studies show that approximately 90 percent of the variability of returns over time is driven by the asset-mix decision with the remaining 10 percent influenced by active management. In recent years, we have reduced our exposure to both stocks and fixed-income securities and created an asset class of inflation-sensitive assets that correlate well with the inflation-sensitive nature of our liabilities. The change in asset-mix policy also recognized that stock markets, especially in Canada, were overvalued on both a short-term and long-term basis.

Our current asset-mix policy, set in early 2000, is 60 percent equities, 22 percent inflation-sensitive assets (specifically real estate, real-rate products, and commodities), and 18 percent fixed-income securities. This asset-mix policy has a high probability of ensuring assets grow at least as fast as the liabilities over the long term. We estimate that the change in asset-mix policy contributed $600 million of value added during 2000 in addition to the $2.6 billion in benchmark outperformance.



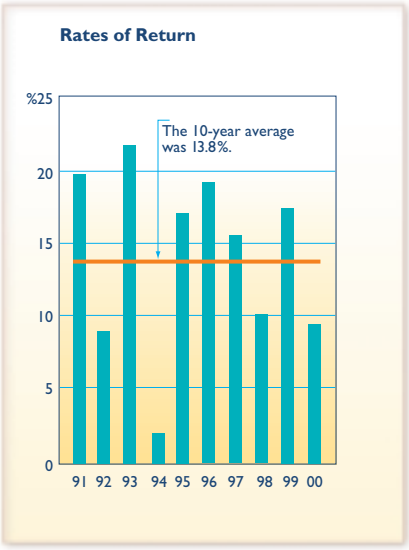
In 2000, we reduced equity investments below policy and ended the year overweight in inflation-sensitive investments compared with the new policy level.

INVESTMENT PERFORMANCE

Net investments increased to $72 billion in 2000, compared with $67.1 billion at the end of 1999.

2000 total fund performance During a year of volatile and generally negative stock markets, we achieved a 9.3 percent total fund rate of return in 2000, compared with 17.4 percent the prior year. After inflation of 3.2 percent, the real return was 6.1 percent, compared with 14.8 percent in 1999. The 2000 return generated $6.2 billion in investment income, compared with $10.1 billion a year earlier. Approximately one-third of equities are exposed to foreign markets, which had negative returns in 2000.

Four-year return We calculate average performance on a four-year cycle to produce a less volatile and more reliable measure than a single year's results. Our four-year average return was 13.0 percent, compared with 12.5 percent for the benchmark. The real rate of return (after inflation of 1.9 percent) was 11.1 percent – well in excess of the investment objective of 4.5 percent on average over the long term.



Over the current decade, returns are expected to revert to historical performance levels, which are closer to the long-term goal.

Rates of Return Compared to Benchmarks

(percent)	Investment returns	Benchmark return	Composite Benchmark
Fixed income and short-term securities	15.6	13.7	Scotia Capital Treasury Bills (91 days) Scotia Capital Canada Universe Scotia Capital Long Bond
Canadian equity	13.5	7.4	TSE 300
U.S. equity	(4.1)	(5.5)	S&P 500
Non-North American equity	(8.5)	(13.5)	Morgan Stanley EAFE, EMF National Index
Inflation-sensitive	19.9	18.0	Scotia Capital Real Return Bond Custom US Treasury Inflation-Protected Securities Goldman Sachs Commodities CPI plus 4%
Total Plan	9.3	5.3	Benchmark weighted by the policy asset mix

Ten-year return The average annual compounded rate of return for the past 10 years was 13.8 percent. The real return (after inflation of 1.9 percent) of 11.9 percent was substantially above the long-term goal.

PERFORMANCE VS. BENCHMARKS

The **total fund benchmark** aggregates the benchmark returns for each asset class, using our asset-mix policy weights. In 2000, the 9.3 percent total fund return compared with 5.3 percent for the benchmark. As a result, our portfolio managers created $2.6 billion of value above the returns that the markets in which we invested would have produced on their own. This was our largest one-year gain in value added. Included in our total fund return is our global tactical asset allocation program, which generated $519 million of value above the composite benchmark. (Performance incentives are based on the results achieved versus the benchmark, less 34 basis points for implementation and overhead costs).

Fixed income securities returned 15.6 percent, a dramatic turnaround from two percent a year earlier. These assets exceeded their benchmark of 13.7 percent to earn $229 million of value added.

Canadian equities (actively managed, enhanced index, and merchant banking) posted a 13.5 percent return versus 7.4 percent for the Canadian equity benchmark. Our enhanced quantitative index funds portfolio beat its benchmark for the eighth consecutive year to earn value added of $252 million. Our actively managed Canadian equity portfolios earned $21 million above their benchmark.

Merchant banking earned a 21.8 percent return – almost three times its benchmark to generate $427 million in value added. This $3.9 billion portfolio has contributed considerable value to total returns over the past 10 years.

Foreign equities (actively managed and enhanced index) returned a negative 4.1 percent in the U.S. and negative 8.5 percent for Non-North America (including $30 million in implementation costs) compared with negative 5.5 percent and 13.5 percent for their respective benchmarks. We increased our exposure to foreign stock markets during the year and ended 2000 with $23.1 billion in these assets. We also shifted capital from foreign equity index funds to actively managed programs. As a result, our actively managed programs produced $894 million above benchmark.

Inflation-sensitive investments of real-rate products, commodities and real estate earned 19.9 percent versus 18 percent for the composite benchmark. Real-rate bonds had a return of 17.3 percent, or $15 million better than the benchmark return. Commodities returned an exceptional 54.4 percent, though $15 million less than the benchmark due to unavoidable implementation costs. Our real estate portfolio had one of its best years, earning 13.0 percent, versus 7.2 percent for its benchmark to add $288 million in value.

RISKS AND RISK MANAGEMENT

We manage **surplus risk** using a Value at Risk (VaR) methodology. VaR has forced us to think of surplus risk as the aggregate of liability risk, asset-mix policy risk, and active management risk, taking into account correlation and diversification between the components.

The main source of **liability risk** is a drop in real interest rates, which increases the present value of future pensions accumulated up to that point. It makes new pension liabilities more difficult to finance, and puts upward pressure on contribution rates. Higher real interest rates have the opposite effect.

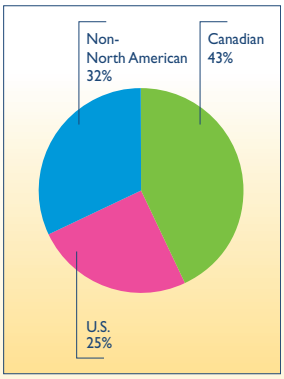
Asset-mix policy risk would be the mirror image of liability risk, and surplus risk would be zero, if investments perfectly matched the plan's long-term objective that asset growth will average a real rate of about 4.5 percent plus inflation. Real return bonds come close, but fall a bit short on yield.

The absence of a perfectly matching asset forces us to consider assets that individually do not always behave like our pension promise, but collectively give us the best trade-off between longer term expected surplus return and acceptable short-term surplus risk. Consequently, our asset mix is heavily weighted to equities because they meet our long-term goals, while our inflation-sensitive investments give more modest real returns but dampen surplus risk.

Active management risk is the potential risk of under-performing the benchmark by trying to improve on the return we get from passive implementation of asset-mix policy. The incremental surplus risk from active management is small. We control active risk through policy guidelines and procedures. Again using VaR, we assign each manager "risk capital" to go along with that manager's value added target with an expectation of a specific return on that risk capital. Risk from active positions is measured daily against the risk limits. One additional benefit from these risk measures has been an improvement in operational risk management.

Changes in the value of the Canadian dollar relative to foreign currencies can increase or decrease returns on our foreign investments, creating **foreign exchange risk**. We hedge 50 percent of our exposure to the main currencies in our asset-mix policy, and had $11.8 billion of foreign currency hedges in place at the end of 2000 to reduce volatility.

Equities
(as at December 31, 2000)



Through global diversification, we aim to reduce **excessive sensitivity to Canadian asset returns** by investing in foreign stocks and equity derivative contracts. Overall, Canada remains our primary equity market, where the plan had $17.7 billion invested in equities in 2000, followed by $10.1 billion in the United States, $2.8 billion in the United Kingdom, and $2.3 billion in Japan. However, we are concerned about the limited availability of stocks on the TSE 300. Many leading

Canadian corporations are closely owned, or listed in the U.S., further diminishing the investment pool in Canada.

With respect to **liquidity risk**, after payment of pension benefits and operating costs, the increase in net assets available for benefits totalled $4.8 billion in 2000. Cash flow came from $6.2 billion of investment income (dividends, interest income, rental income, and realized and unrealized gains) and $1.3 billion in contributions.

The cash needs for pension payments and operating expenses are predictable. On the investment side, our major liquidity risk is associated with our equity derivative contracts. A drop in foreign equity markets sustained for more than three months would require us to pay more cash to counterparties than we would otherwise expect.

We regularly assess the fund's ability to withstand the liquidity effects of a catastrophic 25 percent drop in all markets. Because the equity contracts have been profitable, we currently hold $493 million in net cash collateral from counterparties. This cash collateral, along with marketable short-term securities, annual cash flow, and other liquid assets, is more than sufficient to cover the fund's liquidity risk.

Every investment exposes us to the risk that a security issuer could default on payments or become insolvent. **Credit risk** exists with security issuers, such as governments and corporations, as well as with financial institutions and investment dealers with whom we have investment contracts. The largest credit exposure (note 3e) is to the Province of Ontario, which owes the plan $12.2 billion of non-marketable debentures valued at $15.7 billion, and $1.3 billion in contributions receivable. The next largest credit exposure is to the Government of Canada at $14.5 billion.

In the case of security issuers and derivative counterparties, we continuously monitor credit risk and, depending on the credit rating, restrict debt and equity investment in a single corporation or financial institution to between one and five percent of total fund assets.

In the case of swap counterparties, we deal primarily with 19 financial institutions rated Single A or better. Unrealized gains and losses on equity swaps are exchanged every three to six months. We exchange cash flows on interest rate swaps every six months, reducing the potential impact of a counterparty defaulting on its contractual obligations.

OUTLOOK

Our current expectation is that returns will not be as strong in the future as they have been in the past 10 years. We will continue to monitor financial markets and adjust our asset mix to achieve the best possible performance in the coming years. In the meantime, we assure all members that our first priority is to maximize returns without incurring undue risk.

Financials2000.pdf

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING

The consolidated financial statements of the Ontario Teachers' Pension Plan have been prepared by management, which is responsible for the integrity and fairness of the data presented, including the many amounts which must, of necessity, be based on estimates and judgements. The accounting policies followed in the preparation of these consolidated financial statements conform with Canadian generally accepted accounting principles. Financial information presented throughout the annual report is consistent with the consolidated financial statements.

Systems of internal control and supporting procedures are maintained to provide assurance that transactions are authorized, assets are safeguarded and proper records maintained. These controls include quality standards in hiring and training of employees, a code of conduct, the establishment of an organizational structure that provides a well-defined division of responsibilities and accountability for performance, and the communication of policies and guidelines through the organization. Internal controls are reviewed and evaluated by internal audit programs which are subject to scrutiny by the external auditors.

Ultimate responsibility for the consolidated financial statements rests with the Board of Directors. The board is assisted in its responsibilities by the Audit and Actuarial Committee, consisting of five directors who are not officers or employees of the plan administrator. In addition, the committee reviews the recommendations of the internal and external auditors for improvements in internal control and the action of management to implement such recommendations. In carrying out its duties and responsibilities, the committee meets regularly with management and with both the external and internal auditors to review the scope and timing of their respective audits, to review their findings and to satisfy itself that their responsibilities have been properly discharged. This committee reviews the consolidated financial statements and recommends them for approval by the board.

The plan's external auditors, Deloitte & Touche LLP, have conducted an independent examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards, performing such tests and other procedures as they consider necessary to express the opinion in their Report to the Administrator. The external auditors have full and unrestricted access to the Audit and Actuarial Committee to discuss their audit and related findings as to the integrity of the plan's financial reporting and the adequacy of internal control systems.

CLAUDE LAMOUREUX
PRESIDENT AND CHIEF EXECUTIVE OFFICER

ANDREW JONES
VICE-PRESIDENT, FINANCE

FEBRUARY 14, 2001

AUDITORS' REPORT TO THE ADMINISTRATOR

We have audited the consolidated statement of net assets available for benefits and accrued pension benefits and surplus of the Ontario Teachers' Pension Plan as at December 31, 2000 and the consolidated statements of changes in net assets available for benefits, changes in accrued pension benefits and changes in surplus for the year then ended. These consolidated financial statements are the responsibility of the Plan's administrator. Our responsibility is to express an opinion on these consolidated financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the consolidated financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the net assets available for benefits and accrued pension benefits and surplus of the Plan as at December 31, 2000 and the changes in its net assets available for benefits, changes in accrued pension benefits and changes in surplus for the year then ended in accordance with Canadian generally accepted accounting principles.

CHARTERED ACCOUNTANTS
TORONTO, CANADA

FEBRUARY 14, 2001

ACTUARIES' OPINION

William M. Mercer Limited was retained by the Ontario Teachers' Pension Plan Board (the "Board") to perform an actuarial valuation of the assets and the going concern liabilities of the Ontario Teachers' Pension Plan (the "Plan") as at December 31, 2000, for inclusion in the Plan's consolidated financial statements. As part of the valuation, we examined the Plan's recent experience with respect to the non-economic assumptions and presented our findings to the Board.

The valuation of the Plan's actuarial liabilities was based on:

- membership data provided by the Ontario Teachers' Pension Plan Board as at December 31, 1999;
- methods prescribed by the Canadian Institute of Chartered Accountants for pension plan financial statements;
- real and nominal interest rates on long term Canada bonds at the end of 2000;
- assumptions about future events (for example, future rates of inflation and future retirement rates) which have been communicated to us as the Board's best estimate of these events;
- information obtained from the Ontario Ministry of Labour and published reports on negotiated wage settlements in the 1999/2000 and 2000/01 school years; and
- an estimate of the salary grid increase for the 2000/01 school year based on the information above, along with input from the Partners.

The objective of the consolidated financial statements is to fairly present the financial position of the Plan on December 31, 2000 as a going concern. This is different from the statutory valuation [the actuarial valuation required by the *Teachers' Pension Act* and the *Pension Benefits Act [Ontario]*], which uses actuarial methods prescribed by the *Teachers' Pension Act* and cautious assumptions about future events to establish a prudent level for future contributions.

While the actuarial assumptions used to estimate liabilities for the Plan's consolidated financial statements represent the Board's best estimate of future events and market conditions at the end of 2000, and while in our opinion these assumptions are reasonable, the Plan's future experience will inevitably differ, perhaps significantly, from the actuarial assumptions. Any differences between the actuarial assumptions and future experience will emerge as gains or losses in future valuations, and will affect the financial position of the Plan, and the contributions required to fund it, at that time.

We have tested the data for reasonableness and consistency, and we believe it to be sufficient and reliable for the purposes of the valuation. We also believe that the methods employed in the valuation and the assumptions are, in aggregate, appropriate for the purposes of the valuation. Our opinions have been given, and our valuation has been performed, in accordance with accepted actuarial practice.

LESTER J. WONG, F.C.I.A.

MALCOLM P. HAMILTON, F.C.I.A.

FOR THE YEAR ENDED DECEMBER 31, 2000

DESCRIPTION OF PLAN

The following description of the Ontario Teachers' Pension Plan (the Plan) is a summary only. For more complete information, reference should be made to the *Teachers' Pension Act* (the TPA) as amended.

(a) General The Plan is governed by the TPA. It is a contributory defined benefit pension plan co-sponsored by the Partners who are the Province of Ontario (the Province) and Plan members, represented by the Ontario Teachers' Federation (the OTF). The terms of the Plan are set out in the *Partners' Agreement.*

The Plan is registered with the Financial Services Commission of Ontario and with the *Income Tax Act (Canada)* (registration number 0345785) as a Registered Pension Plan not subject to income taxes.

The Plan is administered and the investments are managed by the Ontario Teachers' Pension Plan Board (the Board). Under the TPA, the Board is constituted as a corporation without share capital to which the *Corporations Act (Ontario)* does not apply.

(b) Funding Plan benefits are funded by contributions and investment earnings. Contributions are made by active members of the Plan and matched by the Province and designated private schools and organizations. The determination of the value of the benefits and required contributions is made on the basis of periodic actuarial valuations (note 9).

(c) Retirement pensions A retirement pension is available based on the number of years of credited service, the average of the best five annual salaries and the age of the member at retirement. A member is eligible for a reduced retirement pension from age 55. An unreduced retirement pension is available at age 65 or at any age if the member has 35 years' credit or if the sum of a member's age and qualifying service equals 90. An early retirement window covering the period between June 1, 1998 and December 31, 2002 is currently provided, during which time a member can retire with an unreduced pension if the sum of the member's age and qualifying service equals 85 rather than 90.

(d) Disability pensions A disability pension is available at any age to a disabled member with a minimum of 10 years of credited service. The type of disability pension is determined by the extent of the disability.

(e) Death benefits Death benefits are available on the death of an active member and may be available on the death of a retired member. The benefit may take the form of a survivor pension, lump sum payment or both.

(f) Escalation of benefits Pension benefits are adjusted annually for inflation at 100 percent of the Consumer Price Index, subject to a limit of 8 percent in any one year with any excess carried forward.

(g) Retirement Compensation Arrangement The Retirement Compensation Arrangement (RCA) has been created by agreement between the Partners as a supplementary plan to provide the members of the Plan with benefits that, due to limitations imposed by the *Income Tax Act (Canada)* and its regulations, cannot be provided under the Registered Pension Plan. Because the RCA is a separate trust, the net assets available for benefits and accrued benefits of the RCA are not included in these financial statements (note 13).

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

(a) Basis of presentation

These financial statements present the financial position and the results of operations of the Plan and are prepared in accordance with Canadian generally accepted accounting principles.

The financial statements of wholly-owned subsidiary companies are consolidated as part of the Plan's financial statements.

Certain comparative figures have been reclassified to conform with the current year's presentation.

(b) Investments and investment-related assets and liabilities

Fair Value Investments and investment-related assets and liabilities are stated at fair value. Fair value is an estimate of the amount of consideration that would be agreed upon in an arm's length transaction between knowledgeable, willing parties who are under no compulsion to act.

Where ascertainable, fair values are based on public market prices or quotations from investment dealers. Where public market prices or quotations are not ascertainable, fair values are derived using methods such as discounted cash flows, earnings multiples, appraisals, prevailing market rates for instruments with similar characteristics and other pricing models, as appropriate.

Trade date reporting Purchases and sales of investments and derivative contracts are recorded as of the trade date (the date upon which the substantial risks and rewards have been transferred).

Investment income Dividend income is recognized based on ex-dividend date and interest income and real estate operating income is recognized on the accrual basis as earned. Investment income also includes realized and unrealized gains and losses.

(c) Foreign currency translation

Assets and liabilities denominated in foreign currencies are translated into Canadian dollars at the exchange rates prevailing on the year-end date. Income and expenses are translated into Canadian dollars at the exchange rates prevailing on the dates of the transactions. The realized and unrealized gains and losses arising from these translations are included in investment income.

(d) Accrued pension benefits

The value of accrued pension benefits and changes therein during the year are based on an actuarial valuation prepared by an independent firm of actuaries. The valuation is made as at the start of the year and then extrapolated to year-end. It uses the projected benefit method prorated on service and management's best estimate, as at valuation date, of various economic and non-economic assumptions (note 5).

(e) Actuarial asset value adjustment

The actuarial value of net assets available for benefits is determined by reference to market trends consistent with assumptions underlying the valuation of accrued pension benefits. The adjustment represents the difference between the actual and management's best estimate of return on the Plan's equity investments (including real estate and commodities) amortized over five years. Fixed income securities are valued at fair value on a basis consistent with the discount rate used to value the Plan's accrued pension benefits.

The year-over-year change in the actuarial asset value adjustment is reflected in the Consolidated Statement of Changes in Surplus.

(f) Use of estimates

In preparing these financial statements, management must make certain estimates and assumptions that primarily affect the reported values of assets and liabilities, related income and expenses and related disclosures.

2. CHANGES IN ACCOUNTING POLICY– ACCRUED PENSION BENEFITS

Consistent with a new Canadian Institute of Chartered Accountants standard on Employee Future Benefits, the Board changed its method of determining the best estimate assumptions used in valuing the accrued pension benefits. The Board now uses a market interest rate to discount the accrued pension benefits, in order to arrive at the fair value of the Plan's liabilities. In prior years, the Board used a rate which reflected management's best estimate of the expected long-term asset rate of return.

With this change to the determination of the discount rate, the method for calculating the actuarial asset value adjustment has also been modified. In prior years, the adjustment represented the difference between the actual and management's best estimate of return on all Plan assets, amortized over five years. The actuarial asset value now values fixed income securities at fair value, consistent with the measurement of the Plan's liabilities at fair value. For the Plan's equity investments, an actuarial asset value adjustment is calculated as the difference between the actual and management's best estimate of return on the Plan's equity assets, amortized over five years.

The changes in accounting policy referred to above have been applied retroactively in the financial statements and have the following impact on 1999 figures previously reported:

($ Millions)	1999 Reported	1999 Restated
Net assets available for benefits	$68,303	$68,303
Actuarial asset value adjustment	(7,264)	(8,316)
Actuarial value of net assets available for benefits	$61,039	$59,987
Accrued pension benefits – opening	$48,636	$49,626
Changes during the year	3,469	2,479
Accrued pension benefits – closing	52,105	52,105
Surplus, beginning of year	5,747	4,381
Increase in net assets available for benefits	9,132	9,132
Change in actuarial asset value adjustment (note 1e)	(2,476)	(3,152)
Increase in actuarial value of assets available for benefits	6,656	5,980
Net increase in accrued pension benefits	(3,469)	(2,479)
Surplus, end of year	8,934	7,882
Accrued benefits and surplus	$61,039	$59,987

3. INVESTMENTS

The Plan invests directly or through derivatives in fixed income, equities and inflation-sensitive investments in accordance with its policy of asset diversification. The purpose of such diversification is to minimize the likelihood of an overall reduction in surplus and maximize the opportunity for gains across the investment portfolio.

(a) Investments[1] before allocating the effect of derivative contracts and investment-related receivables and liabilities

The schedule below summarizes the Plan's investments, including net accrued interest and dividends of $388 million (1999 – $454 million), before allocating the effect of derivative contracts and investment-related receivables and liabilities, as at December 31:

($ Millions)	2000		1999	
	Fair Value	**Cost**	Fair Value	Cost
Fixed income				
Debentures	**$15,715**	**$12,205**	$16,328	$12,991
Bonds	**13,218**	**12,696**	13,303	13,198

Derivative-related, net	**(3,712)**	**(1,199)**	(2,231)	(2,294)
Net investments (note 3c)	**$72,043**	**$61,227**	$67,092	$51,158

(1) For additional details, refer to the Schedule of Investments for our holdings over $50 million on page 45.

(2) Comprised of hedge funds, managed futures accounts and fund of funds programs.

(b) Derivative contracts

Derivative contracts are financial contracts, the value of which is derived from the value of underlying assets, indices, interest rates or currency rates. Derivative contracts are transacted either in the over-the-counter market or on regulated exchanges. The Plan utilizes derivatives to manage its asset mix, as well as its exposure to interest rates, foreign currencies, and credit. Derivatives are also utilized for trading purposes in a manner consistent with the Plan's investment objectives.

Notional amounts of derivative contracts serve as the basis upon which the returns from, and the fair value of, the contracts are determined.

The following schedule summarizes the Plan's derivative contracts as at December 31:

($ Millions)	**2000**		1999	
	Notional	**Fair Value**	Notional	Fair Value
Asset conversion				
Interest rate swaps	**$6,353**	**$(933)**	$ 6,091	$(763)

Over-the-counter options	**83**	**1.6**	102	2.1
Forwards	**23**	**1.4**	—	—

(c) Investment asset mix

The Plan has established a long-term asset-mix policy of approximately 60 percent equities, 18 percent fixed income and 22 percent inflation-sensitive investments.

The Plan's investments, after allocating the effect of derivative contracts and investment-related receivables and liabilities, as at December 31 are summarized below:

	2000		1999	
	Effective Net Investments at Fair Value *($ millions)*	**Asset Mix *%***	Effective Net Investments at Fair Value *($ millions)*	Asset Mix *%*
Fixed income				
Bonds	**$10,771**	**15%**	$14,926	22%
Money market and equivalents	**2,548**	**3**	2,378	4
	13,319	**18**	17,304	26
Equities				
Canadian	**17,739**	**25**	19,885	30
United States	**10,119**	**14**	8,191	12
Non–North American	**13,022**	**18**	13,568	20
	40,880	**57**	41,644	62
Inflation-sensitive investments				
Commodities	**2,098**	**3**	1,090	2
Real estate (note 6)	**6,201**	**9**	2,815	4
Real rate products	**9,545**	**13**	4,239	6
	17,844	**25**	8,144	12
Total net investments	**$72,043**	**100%**	$67,092	100%

(d) Interest rate risk

The value of the Plan's assets is affected by short-term changes in nominal interest rates and equity markets. Pension liabilities are exposed to long-term market interest rates as well as expectations for salary escalation.

The Plan's primary exposure is to a decline in the long-term real rate of return which may result in higher contribution rates required to meet pension obligations. As at December 31, 2000, holding the inflation and salary escalation assumptions constant, a 1 percent decrease in the assumed real long-term rates of return would result in an increase in the pension liabilities of approximately 13 percent (1999 – 16 percent).

After giving effect to the derivative contracts and investment-related receivables and liabilities discussed in note 3b, a 1 percent increase in nominal interest rates would result in a decline in the value of the fixed income securities of 6.6 percent (1999 – 7.7 percent).

(e) Credit risk

At December 31, 2000, the Plan's most significant concentration of credit risk is with the Government of Canada and the Province of Ontario. This concentration relates primarily to the holding of $14.5 billion of Government of Canada-issued securities and $15.7 billion of non-marketable Province of Ontario Debentures, a receivable from the Province of $1.3 billion and future provincial funding requirements of the Plan.

The Plan limits derivative contract credit risk by dealing principally with counterparties that have a credit rating of A or higher, and by utilizing an internal credit limit monitoring process, as well as through the use of credit mitigation techniques such as master netting arrangements and obtaining collateral where appropriate.

(f) Foreign currency risk

Foreign currency exposure arises from the Plan's holdings of foreign currency-denominated investments and related derivative contracts.

The Plan uses a currency overlay program to hedge a portion of its asset-mix policy allocation to U.S. and Non-North American equities. The Plan also takes trading positions in foreign currencies with the objective of adding incremental returns. The Plan's net foreign currency exposure in Canadian dollars after giving effect to the related policy hedge, as at December 31, is as follows:

($ Millions)	**2000**			1999
	Foreign Currency Exposure	**Net Foreign Currency Hedge**	**Net Foreign Currency Exposure**	Net Foreign Currency Exposure
United States Dollar	**$12,021**	**$5,389**	**$6,632**	$4,854
Euro	**5,920**	**2,528**	**3,392**	2,245
British Pound Sterling	**3,370**	**1,405**	**1,965**	1,537
Swiss Franc	**1,561**	**483**	**1,078**	252
Japanese Yen	**2,489**	**1,774**	**715**	1,280
Other	**2,165**	**187**	**1,978**	1,532
	$27,526	**$11,766**	**$15,760**	$11,700

(g) Securities lending

The Plan lends securities as a means of generating incremental income or supporting other investment strategies. As at December 31, 2000, the Plan's investments included loaned securities with a fair value of $3,402 million (1999 – $3,280 million). The fair value of collateral in respect of these loans was $3,590 million (1999 – $3,444 million).

4. RECEIVABLE FROM THE PROVINCE OF ONTARIO

The receivable from the Province consists of required matching contributions and interest thereon.

($ Millions)	**2000**	1999
Contributions receivable	**$1,194**	$1,194
Accrued interest receivable	**57**	58
	$1,251	$1,252

The receivable from the Province consists of $636 million to be received in 2001 and $615 million to be received in 2002.

5. ACCRUED PENSION BENEFITS

(a) Actuarial assumptions

The actuarial assumptions used in determining the value of accrued pension benefits of $58.6 billion (1999 – $52.1 billion), reflect management's best estimate of future economic events and involve both economic and non-economic assumptions. The non-economic assumptions include considerations such as mortality, withdrawal rates and retirement rates. The primary economic assumptions include the discount rate, salary escalation rate and the inflation rate. As discussed in note 2, the discount rate is now set at the market rate, as at the valuation date, of debt obligations with characteristics similar to the Plan's liabilities. The inflation rate is the difference between the yield on federal long-term nominal bonds and federal real return bonds. The salary escalation rate incorporates the inflation rate assumption and long-term expectation of growth in real wages. A summary of the primary economic assumptions, as at December 31, is as follows:

	2000	1999
Discount rate	**6.25%**	6.75%
Salary escalation rate	**3.20%**	3.25%
Inflation rate	**2.20%**	2.25%

The main economic assumptions were changed as a result of changes in capital markets during 2000. These changes resulted in a net increase in the value of accrued pension benefits of $3,297 million. In addition, a change was made to the assumed post-retirement mortality rates to better reflect the Plan's experience. This change increased the value of accrued pension benefits by a further $596 million. In 1999, changes to the actuarial assumptions resulted in a net increase in the value of accrued pension benefits of $766 million.

(b) Experience gains and losses

An experience loss of $262 million (1999 – gain of $803 million), arising from differences between the actuarial method and assumptions and actual results, relates primarily to current experience for members' salary and inflation rates.

6. INVESTMENT IN REAL ESTATE

(a) Acquisition of Cadillac Fairview Corporation ("CFC")

On March 17, 2000, pursuant to a plan of arrangement, the Plan acquired the remaining 78.2 percent of the common shares that it did not previously own of CFC, a fully integrated commercial real estate operating company, and $100 million of CFC convertible debentures for total consideration of $2,355 million.

The fair value of CFC's net assets acquired is summarized below:

($ Millions)	
Real estate properties	$5,730
Other assets	403
	6,133
Debt on real estate properties	(2,892)
Other liabilities	(324)
Net assets of CFC	2,917
Less: Investment in CFC previously held	(562)
Total consideration	**$2,355**

(b) Investment in Real Estate

The Plan's investment in real estate, which is comprised of real estate–related investments that are either owned or managed on behalf of the Plan by The Cadillac Fairview Corporation Limited, as at December 31, is as follows:

($ Millions)	**2000**		1999	
	Fair Value	**Cost**	Fair Value	Cost
Assets				
Real estate properties	**$9,635**	**$8,901**	$2,454	$2,411
Investments	**526**	**577**	485	498
Other assets	**232**	**233**	7	7
Investment in CFC	**—**	**—**	562	304
Total assets	**10,393**	**9,711**	3,508	3,220
Liabilities				
Debt on real estate properties	**3,833**	**3,694**	693	710
Other liabilities	**359**	**308**	—	—
Total liabilities	**4,192**	**4,002**	693	710
Net investment in real estate	**$6,201**	**$5,709**	$2,815	$2,510

(c) Real Estate Income[1]

The Plan's real estate income for the year ended December 31, is as follows:

($ Millions)	**2000**	1999
Revenue		
Rental	**$1,140**	$263
Investment	**41**	24
	1,181	287
Expenses		
Property operating	**447**	101
Interest	**242**	41
Management	**42**	7
Other	**23**	—
	754	149
Operating income	**427**	138
Realized gain (loss)	**14**	(16)
Unrealized gain	**187**	190
Net income	**$628**	$312

(1) Operating income, on a fair value basis, excludes a charge for depreciation and amortization.

7. INVESTMENT INCOME

(a) Investment income, before allocating the effect of derivative contracts

Investment income, before allocating the effect of derivative contracts and before allocating the realized and unrealized net gains/losses, for the year ended December 31, is as follows:

($ Millions)	**2000**	1999
Fixed income interest		
Debentures (net of interest incurred on swap contracts of $1,039 million; 1999 – $753 million)	**$386**	$762
Money market securities	**197**	104
Bonds	**720**	633
	1,303	1,499
Equity dividend income		
Canadian equity	**222**	271
United States equity	**13**	13
Non–North American equity	**234**	241
	469	525
Inflation-sensitive investments		
Real estate operating income (note 6c)	**427**	138
Real rate products interest income		
Canadian	**189**	152
United States	**92**	14
	708	304
	2,480	2,328
Net gain on investments [1]	**3,731**	7,793
	$6,211	$10,121

(1) Includes net unrealized gains (losses) of $(4,145) million (1999 – $1,075 million).

(b) Investment income

Investment income by asset class, after allocating the effect of the derivative contracts and net gains, including foreign currency losses of $71 million (1999 – $1,106 million gain), for the year ended December 31, is as follows:

($ Millions)	**2000**	1999
Fixed income	**$1,689**	$(347)
Canadian equity	**2,523**	4,475
United States equity	**316**	1,559
Non–North American equity	**(694)**	3,697
Inflation-sensitive investments	**2,377**	737
	$6,211	$10,121

8. INVESTMENT RETURNS AND RELATED BENCHMARK RETURNS

Investment returns and related benchmark returns by investment asset class for the year ended December 31 are as follows:

	2000		1999	
	Investment Returns	**Investment Benchmark Returns**	Investment Returns	Investment Benchmark Returns
Fixed income	**15.6%**	**13.7%**	2.0%	2.8%
Canadian equity	**13.5**	**7.4**	30.4	32.0
United States equity	**(4.1)**	**(5.5)**	12.7	14.1
Non–North American equity	**(8.5)**	**(13.5)**	27.7	21.6
Inflation-sensitive investments	**19.9**	**18.0**	12.0	9.8
Total Plan	**9.3%**	**5.3%**	17.4%	17.6%

Investment returns have been calculated in accordance with the acceptable methods set forth by the Association for Investment Management and Research and the Pension Investment Association of Canada.

The Plan identifies benchmarks to evaluate the performance of the investment management process. The performance of each asset class is measured against a benchmark that simulates the results of the markets in which the managers invest, except that the inflation-sensitive investments composite benchmark includes real estate which is measured against an inflation-related benchmark.

The total return of the Plan is measured against a Canadian dollar denominated composite benchmark produced by aggregating Canadian dollar equivalent returns from each of the policy asset class benchmarks, using the Plan's asset mix policy weights. The total return incorporates the Plan's tactical asset allocation decisions.

9. FUNDING POLICY

Statutory actuarial valuations are prepared periodically in accordance with the *Teachers' Pension Act* to determine the funding requirements of the Plan. Active members are currently required to contribute 7.3 percent of the portion of their salaries covered by the Canada Pension Plan and 8.9 percent of salaries above this level. Aggregate member contributions are matched by the Province and other employers.

The actuarial assumptions and methods used to determine statutory pension liabilities are different than those used to calculate the amounts disclosed in these financial statements. The statutory valuations use a more conservative approach than the valuations used in these financial statements (note 5) and also take into account benefits to be earned and contributions to be made after the valuation date.

The initial statutory valuation of the Plan, prepared by William M. Mercer Limited as at January 1, 1990 disclosed an unfunded liability of $7.8 billion which was the amount by which the Plan's liabilities exceeded its assets. This liability was the responsibility of the Province and was to be paid off with interest by a series of special payments over a 40 year period, which began January 1, 1990. Subsequent statutory valuations have treated the present value of the remaining special payments as an asset.

The statutory valuation as at January 1, 1998 disclosed the present value of special payments to be $8.45 billion, with an actuarial gain of $6.78 billion. Pursuant to the *Partners' Agreement* between the Ontario Teachers' Federation (OTF) and the Province, the Partners entered into negotiations to decide how to utilize the gain. Pursuant to the agreement reached on April 18, 1998, the Partners agreed to share the 1998 actuarial gain of $6.78 billion and future gains in the following sequence:

(i) $2.24 billion would be spent on improving benefits;
(ii) special payments on the pre-1990 unfunded liability would be eliminated at an estimated cost of $8.45 billion; and
(iii) a further $8.45 billion less the $2.24 billion would be spent on improved benefits or member contribution rate reductions, subject to the Province's consent prior to April 1, 2001; or held in a contingency reserve as determined by the OTF.

As a result, $2.24 billion of the gain was used to improve benefits under the Plan, and the remaining $4.54 billion of the gain was used to eliminate the obligation of the Province to make special payments after November 30, 2008. These changes consumed the actuarial gain. The present value of the remaining special payments after application of gains was $3.91 billion as at January 1, 1998.

The statutory valuation as at January 1, 1999 disclosed the present value of the remaining special payments to be $3.65 billion with an actuarial gain of $3.52 billion. Pursuant to the 1998 agreement noted above, all of this gain was used to eliminate the obligation of the Province to make special payments after April 1999.

The statutory valuation as at January 1, 2001 disclosed an actuarial gain of $6.78 billion (2000 – $4.54 billion).

(c) Executive compensation

The compensation table represents full disclosure of base salary, annual bonus, long-term incentives and other compensation earned in 1998, 1999 and 2000 by the Chief Executive Officer and the four other most highly compensated executives.

Name and Principal Position	Year	Base Salary	Annual Bonus[1]	Long-term Incentive Plan[3]	Group Term Life Insurance	Other Compensation
Claude Lamoureux	2000	$389,169	$504,500	$790,100	$1,119	$9,600[4]
President & CEO	1999	357,637	196,100	131,900	1,033	9,600
	1998	349,077	177,600	0	964	9,600
Robert Bertram	2000	$302,800	$404,000	$627,000	$ 870	$13,962[5]
Executive V.P. Investments	1999	276,309	102,600	101,800	798	13,343
	1998	269,053	63,200	0	777	13,209
Neil Petroff	2000	$196,130	$338,500	$451,900	$ 561	$ 0
Sr. V.P. International Equity Indexes, Fixed Income & Foreign Exchange	1999	175,444	202,800	51,400	507	0
	1998	170,606	124,700	0	490	0
Morgan McCague	2000	$186,384	$323,800	$460,000	$ 533	$ 0[6]
Sr. V.P. Quantitative Investments	1999	164,863	188,000	53,200	476	3,218
	1998	155,037	162,900	0	448	3,009
Allan Reesor	2000	$237,976	$319,200[2]	$280,100	$ 682	$ 4,808[6]
Executive V.P., Member Services and C.I.O.	1999	195,619	100,900	40,797	564	3,792
	1998	188,736	94,400	59,600	545	3,654

[1] Bonuses for investment professionals are based on a combination of total fund, asset class, and individual performance, measured in dollars of value added. Performance versus benchmark is measured over four annual performance periods.

Bonuses for other executive staff are based on achievement of annual corporate and divisional objectives.

[2] Includes deferred annual incentive for 1999.

[3] The investment long-term incentive program was restructured in 1999 following a review of competitive market practices. The new program continues to be based on four-year performance periods. Initial grants are adjusted by the four-year total fund rate of return and by a performance modifier, based on total fund dollar value-added over a composite benchmark.

[4] Automobile allowance.

[5] Includes an automobile allowance of $8,000 per annum plus unused vacation cashout.

[6] Unused vacation cashout.

13. RETIREMENT COMPENSATION ARRANGEMENT

The Retirement Compensation Arrangement (RCA) is established pursuant to an agreement between the Province of Ontario and the Ontario Teachers' Federation (the Partners), to provide to the members of the Plan certain benefits that would have been provided under the Registered Pension Plan, but for amendments made to the *Income Tax Act (Canada)* and its Regulations that restrict benefits that may be provided under a registered plan for periods of service after 1991 and for certain periods before 1992 that are credited after 1991.

The RCA is administered under a trust separate from the assets of the Registered Pension Plan. The Board has been appointed by the Partners to act as the trustee of the RCA.

Because the RCA is a separate trust, the net assets available for benefits and the value of accrued benefits and deficiency, referred to below, have not been included in the accompanying financial statements of the Registered Pension Plan on pages 26 to 28.

The RCA is funded on a pay-as-you-go basis from a portion of the contributions made to the Board by teachers, the Province of Ontario and designated private schools and organizations. The portion is based on a rate determined periodically by the Board's independent actuary in a manner that is expected to be sufficient to pay the benefits over the next 12 months. Due to the funding policy adopted by the Partners, the assets will continue to be substantially less than the liabilities.

In addition, since it is difficult to predict the benefits expected to be paid over the next 12 months, it is possible that the assets may be insufficient to pay the benefits. In such a case, the payment of benefits will be temporarily suspended and the contributions raised in order to fund the payments that are due under the RCA.

A summary of the balance sheet for the RCA as at December 31 is as follows:

($ Thousands)	**2000**	1999
Net assets available for benefits		
Assets	**$2,200**	$1,799
Liabilities	**(408)**	(655)
	$1,792	$1,144
Accrued benefits and deficiency		
Accrued benefits	**$305,900**	$238,768
Deficiency	**(304,108)**	(237,624)
	$1,792	$1,144

The actuarial assumptions used in determining the value of accrued benefits are consistent with the assumptions used in the Plan except that the assumed discount rate has been adjusted to reflect the impact of the 50 percent refundable tax under the RCA.

The estimate of the value of accrued benefits is highly sensitive to salary increases, both actual and assumed. Any changes to the salary assumptions will have a significant impact on the liabilities for future benefits. In addition, significant uncertainty exists in projecting the liabilities of the RCA due to changes in the number of future participants as well as changes to the income tax regulations relating to pensions.

14. COMMITMENTS

The Plan has committed to enter into investment transactions, which will be funded over the next several years in accordance with the terms and conditions agreed to. As at December 31, 2000, these commitments totalled $2,824 million (1999 – $1,634 million).

Alex Killoch, Director
BPS Pensions Branch
Ministry of Finance
1st Floor, Frost Building South
7 Queen's Park Crescent
Toronto, Ontario
M7A 1Y7

Dear Alex:

As requested, we are outlining the annual process for providing actuarial and financial information about the Ontario Teachers' Pension Plan (Plan) to the Ministry of Finance. We are also providing information related to the funding valuation of the Plan and in particular, the discount rate setting process. Copies of various documents, correspondence and memos have been attached for reference purposes with applicable dates noted below.

Annual Process Related to the Province of Ontario Budget

Each December, the Ministry of Finance provides a request for information to the President and CEO of the Plan to assist in the preparation of the Ontario Budget. Specific assumptions to be used in the analysis are provided including return on investment, inflation, real rate of return and anticipated salary growth. The Province selects the best estimate assumptions in accordance with the Chartered Professional Accountants of Canada Public Sector Accounting Board Handbook. (December 11, 2015 request from the Province attached).

The external Plan actuary – Mercer – prepares the liability and current service cost calculations using the "projected benefit method, pro-rated on services" and economic assumptions are requested by the Province. Supporting information including contribution and benefit information is provided by the Plan. (January 26, 2016 correspondence from Mercer and the Plan attached).

Supplemental information was prepared by Mercer at the request of the Province in June of 2016 to assist in addressing inquiries from the Office of the Auditor General of Ontario. (June 17, 2016 Memo attached).

Annual Funding Valuation Process

On an annual basis, Mercer prepares a preliminary valuation for review by the Ontario Teachers' Pension Plan Board (Board). It is the Board's responsibility to decide key actuarial assumptions in close collaboration with the Plan actuary. The independent actuary must confirm that the

assumptions are independently reasonable and are appropriate in aggregate in accordance with the Canadian Institute of Actuaries Standards of Practice.

The annual assumption setting exercise is robust. The determination of the discount rate is informed by the Funding Management Policy (described below) and the Discount Rate Review process which reflects what the Plan's assets can reasonably be expected to earn over the long run less expenses and less provisions for adverse deviation (PFAD). The Plan takes into consideration two key PFADs: plan maturity and insufficient return. PFADs are set with reference to the demographic profile of the Plan, the risk tolerance and intergenerational fairness between members. A key challenge is the maturity of the Plan with the ratio of active members to pensioners being 1.4 to 1 with the ratio projected to decrease in the future. Longevity compounds this challenge as Teachers in Ontario live longer than the general Canadian population and their life expectancy continues to increase.

For the January 1, 2016 funding valuation (which will be filed with the regulatory authorities by September 30th), the nominal discount rate is 4.8% with an underlying real return of 2.75%. This real return takes into account PFADs of approximately 150 basis points.

Funding versus Accounting Valuations

The funding valuation assesses the Plan's long-term financial health to facilitate determination of future contribution rates and benefit levels. For the Plan, the cost method used is the aggregate method which allows the Plan to address funding surpluses and deficits through future benefits changes (eg. Conditional Inflation Protection (CIP)) and enables the Plan to factor in cash flows from future service. This differs from accounting standards which requires use of the projected benefit method prorated on services.

There are also differences in the assumption setting process. The Plan's assumption setting process for the annual funding valuation is noted above. Please refer to the attached Memo prepared by Mercer dated September 15, 2016, which outlines key methods and assumptions to be used to value pension plans per Canadian Public Sector Accounting Standards (PS3250).

Funding Management Policy

The Plan Sponsors (the Province of Ontario and Ontario Teachers' Federation) are jointly-responsible for two key decisions: a) what pension benefits the Plan will provide, and b) the contribution rate needed to ensure the Plan's benefits are fully funded over the long term. In doing so, the Sponsors negotiate the use of surplus funds and, when there is a funding shortfall, both share responsibility for eliminating it.

In March 2003, the Sponsors adopted a Funding Management Policy (FMP) as a supplement to the Partners' Agreement, with the objective to provide a guidance framework for decision making when there is a funding surplus or shortfall. A key component in the creation of the FMP was the concept of 'funding zones', each defined by a range. The funding zones provide a point of reference for whether action is required by the Sponsors, and if so, guidance is provided on how to use any surplus funds or resolve any shortfall – specifically, answering the question of when is it prudent to increase or decrease benefits, raise or lower contribution rates, or simply conserve assets for an uncertain time. While the FMP outlines preferred mechanisms

associated with its various funding zones, it is ultimately the Sponsors' responsibility to decide what actions to take.

In March 2015, a zone for Temporary Plan Improvements was added to the FMP, to allow for temporary contribution decreases, surplus distribution and/or benefit improvements (so long as they do not increase the long-term cost of the Plan) when assets exceed the projected cost of future benefits when valued using the Temporary Basis. Uses of surplus in this zone are paced, amortized over a period between three and 10 years, with an annual spending limit applied to amortization terms shorter than 10 years. The zone includes a provision that temporary improvements cease if a significant market event occurs. (FMP Framework and Summary attached).

As noted in Mercer's June 17th Memo, "should the plan earn future returns that are equal to the valuation discount rate adopted by the Province for financial statement reporting purposes, it is possible that some of the future contribution requirements could be reduced by agreement of the Sponsors as experience gains would be recognized in the funding valuation based on the assumptions currently used for funding purposes".

*****

We trust that the above information and various attachments provide a helpful overview of the annual process for providing financial information to the Ministry of Finance as well as the process in place for the annual funding valuation. Please do not hesitate to call if you have any questions or require further information.

Sincerely,

Barbara Zvan, FSA, FCIA, CERA

Ontario

December 11, 2015

Mr. Ron Mock
President and Chief Executive Officer
Ontario Teachers' Pension Plan Board
5650 Yonge Street, Suite 400
Toronto, Ontario
M2M 4H5

Dear Mr. Mock:

In preparation for the 2016 Ontario Budget, I am writing to request actuarial and financial information, as at December 31, 2015, on the Teachers' Pension Plan (TPP) and the Teachers' Retirement Compensation Arrangement (TRCA). This information is required for calculating the Province's 2015-16 pension expense and pension liability.

To ensure that the information requested in this letter is consistent with the Province's best estimates (as required by the Public Sector Accounting Board [PSAB]), please use the following economic assumptions in your actuarial calculations for the requested TPP information.

Economic Assumption (annual rates)	Basis 1	Basis 2	Basis 3	Basis 4
Return on Investment	6.50%	6.25%	6.25%	6.00%
Inflation	2.25%	2.25%	2.00%	2.00%
Real Rate of Return	4.25%	4.00%	4.25%	4.00%
Salary Growth	2.25% for 2016 to 2019 and 3.25% thereafter	2.25% for 2016 to 2019 and 3.25% thereafter	2.00% for 2016 to 2019 and 3.00% thereafter	2.00% for 2016 to 2019, 3.00% thereafter

Despite the salary growth assumption above, please reflect in the valuation a 1% lump sum increase for the school year 2015-16, a 1% increase for the school year 2016-17 and additional 0.5% increase half-way through the school year 2016-17.

...2

We understand the Board may be preparing its financial statements based on International Financial Reporting Standards and Canadian Institute of Chartered Accountant Standard Section 4600. There has not been any change in reporting requirements under the Public Sector Accounting Board. Therefore, the actuarial and financial information we are requesting in this letter should be prepared in the same manner as has been provided to us in prior years.

Please provide the following actuarial and financial information with one set of calculations for each set of assumptions outlined in the table above. In these calculations for the TPP, please use the projected benefit method, prorated on services:

1. Actuarial present value (APV) of accrued benefit obligations, as at December 31, 2015. ***Basis 4 in last year's letter was used by the Province for 2015. Please include an APV reconciliation on that basis from December 31, 2014 to December 31, 2015 for all four bases.***

2. Actuarial value and market value of pension fund assets, as at December 31, 2015. The actuarial value of assets should be determined on the same basis as in prior years.

3. Interest on accrued benefits, cost of benefits accrued (separating out current period benefit cost, cost related to any plan amendments, transfers and other costs), actuarial adjustments, and the benefits paid (separate retirement pensions from other benefit payments) for the year ended December 31, 2015.

4. Contributions broken down by employee contribution, Province of Ontario contribution and other transfers for the year ended December 31, 2015 and the additional payments from the Province of Ontario with respect to "payments re foregone inflation adjustment" under subsection 5(2.1) of the *Teachers' Pension Act* for the year ended December 31, 2015. Please provide the same level of detail as would be disclosed in the "Contributions" note to the TPP's 2015 financial statements.

5. Return on investment, inflation and salary escalation assumptions that will be used in the TPP's 2015 financial statements.

6. Expected average remaining service life of active employees, as at December 31, 2015.

7. Net gain and loss for the year ended December 31, 2015 that would be subject to smoothing on the same basis as in prior years. Please also provide the same level of detail as in prior years.

...3

8. The "Schedule of Contributions and Interest Receivable from the Province of Ontario" (due in early January, 2016).

9. Number of pensioners and active members, as at December 31, 2015.

10. Please provide a brief, high level explanation of the source(s) of the actuarial gains and losses for 2015.

11. Please provide the 2016 service cost for all requested bases.

12. 2015 financial statements of the TPP and the TRCA as soon as they are available.

Please provide items 1 to 5 above for the TRCA based on what will be reported in the TRCA's 2015 financial statements. Note that we do not require that the information on the TRCA be based on the Province's economic assumptions.

Although the TPP has been amended to provide conditional inflation protection for service after December 31, 2009, the intention of the Partners is to provide 100% inflation protection to the extent possible. As such, please provide us with the actuarial calculation for #1 and #3 above assuming that inflation protection for post 2009 service will be provided at 100% and at 50% of the annual increase in the Consumer Price Index.

We require these estimates by **January 29, 2016.** Should you have any questions, please contact Mr. Rob Pomykacz at robert.pomykacz@ontario.ca, or by telephone at (416) 327-0156.

To expedite the preparation of Ontario's 2015-16 *Public Accounts*, I would also ask that you communicate by letter by April 30, 2016 whether, to the best of your knowledge, there were any events between December 31, 2015 and March 31, 2016, which would in your opinion, affect these valuation results in a material way.

Please forward all the information requested in this letter to:

Mark Rozic, Manager (Acting)
External Reporting Branch
Office of the Provincial Controller Division
Treasury Board Secretariat
2nd Floor, Office 260, Frost Building South
7 Queen's Park Crescent
Toronto, Ontario M7A 1Y7

Dear Mr. Rozic:

I am responding to a letter dated December 11, 2015 from Ms. Leah Myers that requested actuarial and financial information about the Ontario Teachers' Pension Plan (registered pension plan - RPP) and the Retirement Compensation Arrangement (RCA) at December 31, 2015.

Items 1, 3 (except the benefit payment breakdown), 6, 10 and 11 are included in the enclosed letter from Mercer (Canada) Limited.

Item 2 - Market Value of Pension Fund Assets ($ millions)

Please note that we no longer use an asset smoothing method for our financial statements. As such, there is no separate "actuarial" value of assets.

Market value of assets at December 31, 2015	Not yet available

Item – 3(a) RPP Benefits Paid ($ millions)

Retirement Pensions	$ 5,056
Survivor Pensions	273
Disability Pensions	27
Lump Sum Death Benefits	71
Refunds	1
Commuted Value Transfers	74
Transfers to Other Plans	8
Family Law Value Transfers	27
Total	$ 5,537

Item – 3(b) RCA Benefits Paid

The RCA pension payments made in 2015 were $7.40 million and the RCA lump sum payments in 2015 were $4.87 million.

Item - 4(a) RPP Contributions ($ millions)

Members		
Current Service	$	1,580
Optional Credit		35
Total	$	1,615
Province of Ontario		
Current Service	$	1,568
Interest		37
Optional Credit		32
Total	$	1,637
Other Employers	$	33
Transfers from Other Plans		14
Total	$	47
Grand Total	$	3,299

Item 4(b) - RCA Contributions ($ millions)

Members	$	5.6
Province of Ontario		3.3
Other Employers		2.4
Total	$	11.3

Item 4(c) - Payments re: Foregone Inflation Adjustments

The foregone inflation amounts for 2014 payments which are part of the government billing for payment in January 2016 are as follows:

		Total		**Province of Ontario**
RPP	$	1,130,253	$	1,106,279
RCA		12,205		11,946
Total	$	1,142,458	$	1,118,225

Item 5 - Economic Assumptions	**RPP**	**RCA**
Discount Rate	3.25%	1.625%
Salary Escalation Rate	2.50%	2.50%
Inflation Rate	1.50%	1.50%
Real Rate	1.70%	0.125%

Item 7 - Net Gain and Loss on Actuarial Value of Assets

Not applicable. Please note that we no longer use an asset smoothing method for our financial statements. As such, there is no separate "actuarial" value of assets.

Item 8 - Schedule of Contributions and Interest Receivable ($ millions)

Contributions	$	3,157
Interest		51
Total	$	3,208

Item 9 - Number of Pensioners and Active Members as at December 31, 2015

Pensioners	133,000
Active Members	183,000

Item 12 – Financial Statements

Not yet available.

We will provide any outstanding information as soon as it is available. In addition, we will send an updated version of this letter if any of the information contained herein is subsequently changed.

Please do not hesitate to call if you have any questions.

Sincerely,

Mary Cover, FSA, FCIA

Subject: December 31, 2015 Valuation Results Using the Province's Assumptions

Dear Mary,

As requested, we have provided you with information for the Ontario Teachers' Pension Plan (OTPP) on points 1, 3, 6, 10 and 11 in the December 11, 2015 letter from the Ministry of Finance to Mr. Ron Mock. As instructed in the Ministry letter, the following sets of assumptions have been used in calculating the liabilities as at December 31, 2015:

	Basis 1	**Basis 2**	**Basis 3**	**Basis 4**
Valuation discount rate	6.50%	6.25%	6.25%	6.00%
Inflation rate	2.25%	2.25%	2.00%	2.00%
Real valuation discount rate	4.25%	4.00%	4.25%	4.00%
Salary escalation rate	2.25% for the years 2016 to 2019, 3.25% thereafter	2.25% for the years 2016 to 2019, 3.25% thereafter	2.00% for the years 2016 to 2019, 3.00% thereafter	2.00% for the years 2016 to 2019, 3.00% thereafter

For each basis, all the other assumptions and the valuation methods are those used by the Ontario Teachers' Pension Plan Board in the December 31, 2015 valuation for financial statement purposes. This includes proposed demographic assumption changes as well as negotiated salary increases providing a 1% lump sum increase at September 1, 2015, a 1% increase at September 1, 2016 and a 0.5% increase half-way through the school year commencing September 1, 2016. The demographic assumptions were updated to reflect recent experience of Plan members related to retirement, termination of plan membership, re-

instatement of inactive members and increases in salaries related to experience. The changes to the demographic assumptions are described in the presentation material from our meeting with the Technical Committee on January 13, 2016. The remaining demographic assumptions are provided in our Report on the Actuarial Valuation for Financial Statement Purposes as at December 31, 2014. We expect that our report on the December 31, 2015 actuarial valuation will be finalized in March, 2016.

For the sake of clarity, we note that the assumed increases in the YMPE and maximum pension limits under the Income Tax Act are the same rates as the long-term salary growth rates noted for each of the four bases.

The Province has requested that we prepare the results assuming that inflation protection for post 2009 service will be provided at 100% and at 50% of the assumed inflation rate. In this letter we have included results using both of these alternative inflation protection levels. We note that at the time of preparing this letter, the Plan provides for 70% of conditional inflation protection for post 2009 service.

At the Province's request, the liabilities have been calculated using the "projected benefit method, pro-rated on services". In the calculations presented in this letter, we have used the projected benefit method, pro-rated on service with three attribution periods to reflect the different indexing provisions for service accrued to December 31, 2009, service accrued from January 1, 2010 to December 31, 2013 and service accrued from January 1, 2014. However, we note that the same level of indexing was applied to all service from January 1, 2010 to December 31, 2015 for purposes of calculating the liabilities provided in this letter (whether the results are based on 100% or 50% conditional indexing).

We have included information regarding the experience gain/loss incurred relative to salary growth during the year as well as the impact on the December 31, 2015 liabilities due to changing the rate of inflation and salary growth assumption in Bases 3 and 4 in our tables relative to the assumptions from Bases 1 and 2. We note that since the assumed increases in salaries determined by the Province are set equal to the assumed inflation rate plus 1%, we have not separately identified the changes in salary only without the corresponding changes in inflation.

The results as at December 31, 2015 are summarized in the following tables.

Results using 100% conditional indexing for post 2009 service (results in $ millions)

	Basis 1	Basis 2	Basis 3	Basis 4
Valuation discount rate:	**6.50%**	**6.25%**	**6.25%**	**6.00%**
Inflation rate:	**2.25%**	**2.25%**	**2.00%**	**2.00%**
Salary escalation rate:	**2.25% for the years 2016 to 2019, 3.25% thereafter**	**2.25% for the years 2016 to 2019, 3.25% thereafter**	**2.00% for the years 2016 to 2019, 3.00% thereafter**	**2.00% for the years 2016 to 2019, 3.00% thereafter**
1. Actuarial present value (APV) of accrued pension benefits at December 31, 2014 using **Last Year's Basis 4**	$113,801	$113,801	$113,801	$113,801
2. Increase in the APV of accrued pension benefits				
Interest on the APV of accrued pension benefits	$7,310	$7,310	$7,310	$7,310
Current Service Cost (mid-year)	2,868	2,868	2,868	2,868
Contributions for optional credit	34	34	34	34
Repayment of refunds	0	0	0	0
Transfers from other plans	14	14	14	14
Change in valuation assumptions and methods:				
Change in demographic assumptions	350	350	350	350
Change in interest rate from Basis 1	0	4,142	4,142	8,309
	$10,576	$14,718	$14,718	$18,885
3. Decrease in the APV of accrued pension benefits				
Pensions paid	$5,356	$5,356	$5,356	$5,356
Refund of contributions	0	0	0	0
Lump sum payments and transfers	180	180	180	180
Salary experience gains	1,028	1,028	1,028	1,028
All other experience gains	552	552	552	552
Negotiated Salary Increases	1,161	1,161	1,161	1,161
Change in inflation rate and salary growth rates from Basis 1	0	0	3,829	3,829
Change in other actuarial assumptions and methods	46[1]	46	46	46
	$8,323	$8,323	$12,152	$12,152
4. Net increase in the APV of accrued pension benefits	$2,253	$6,395	$2,566	$6,733
5. APV of accrued pension benefits at December 31, 2015	$116,054	$120,196	$116,367	$120,534
6. Annual current service cost at January 1, 2016 (BOY)	$2,880	$3,058	$2,899	$3,079

[1] Change to commuted value assumption to value benefits payable upon termination

Results using 50% conditional indexing for post 2009 service (results in $ millions)

	Basis 1	Basis 2	Basis 3	Basis 4
Valuation discount rate:	**6.50%**	**6.25%**	**6.25%**	**6.00%**
Inflation rate:	**2.25%**	**2.25%**	**2.00%**	**2.00%**
Salary escalation rate:	**2.25% for the years 2016 to 2019, 3.25% thereafter**	**2.25% for the years 2016 to 2019, 3.25% thereafter**	**2.00% for the years 2016 to 2019, 3.00% thereafter**	**2.00% for the years 2016 to 2019, 3.00% thereafter**
1. Actuarial present value (APV) of accrued pension benefits at December 31, 2014 using **Last Year's Basis 4**	$112,004	$112,004	$112,004	$112,004
2. Increase in the APV of accrued pension benefits				
Interest on the APV of accrued pension benefits	$7,182	$7,182	$7,182	$7,182
Current Service Cost (mid-year)	2,508	2,508	2,508	2,508
Contributions for optional credit	34	34	34	34
Repayment of refunds	0	0	0	0
Transfers from other plans	14	14	14	14
Change in valuation assumptions and methods:				
Change in demographic assumptions	322	322	322	322
Change in interest rate from Basis 1	0	3,975	3,975	7,990
	$10,060	$14,035	$14,035	$18,050
3. Decrease in the APV of accrued pension benefits				
Pensions paid	$5,356	$5,356	$5,356	$5,356
Refund of contributions	0	0	0	0
Lump sum payments and transfers	180	180	180	180
Salary experience gains	979	979	979	979
All other experience gains	545	545	545	545
Negotiated Salary Increases	1,104	1,104	1,104	1,104
Change in inflation rate and salary growth rates from Basis 1	0	0	3,461	3,461
Change in other actuarial assumptions and methods	36[2]	36	36	36
	$8,200	$8,200	$11,661	$11,661
4. Net increase in the APV of accrued pension benefits	$1,860	$5,835	$2,374	$6,389
5. APV of accrued pension benefits at December 31, 2015	$113,864	$117,839	$114,378	$118,393
6. Annual current service cost at January 1, 2016 (BOY)	$2,523	$2,671	$2,574	$2,727

[2] Change to commuted value assumption to value benefits payable upon termination

We have the following comments on the results:

- Our valuation of the actuarial present value of the accrued pension benefits as at December 31, 2015 and the 2016 current service costs are based on membership data as at August 31, 2015. The actuarial present value of accrued pension benefits as at August 31, 2015 is then extrapolated forward to December 31, 2015, reflecting expected cashflows and the actual inflation adjustment as at January 1, 2016 of 1.30% for pre-2010 service and 0.91% for post-2009 service. The 2015 mid-year current service is based on membership data as at August 31, 2014. A summary of the membership data as at August 31, 2015 was included with our email of October 23rd, 2015 to Glen Tunney.

- We understand that the Province adopted Last Year's Basis 4 in establishing the actuarial present value of accrued pension benefits as at December 31, 2014. This is the same as Basis 1 for the current year.

- We have assumed that any change in the Province's assumptions (i.e. nominal and real discount rates, inflation rate, and salary escalation rate would occur at December 31, 2015).

The Expected Average Remaining Service Lifetime (EARSL) of active employees at August 31, 2015 and estimated for December 31, 2015, is 15.3 years. The increase in the EARSL from the prior year is primarily attributable to the change in assumed termination and retirement rates.

The net experience gain incurred on the plan liability since the prior year was primarily attributable to the lower than expected level of inflation for the January 1, 2016 indexing. Other experience gains and losses were relatively small.

The figures presented in this letter exclude the Ontario Teachers' Retirement Compensation Arrangement ("OTRCA"), which provides benefits to members that are in excess of those permitted to be provided from the registered pension plan. The Province has requested information on the OTRCA based on what will be reported in the OTRCA's 2015 financial statements, and does not require calculations on any other basis.

While the actuarial demographic assumptions used to estimate liabilities for the Plan represent the Ontario Teachers' Pension Plan Board's best estimate of future events and the economic assumptions are as provided by the Province, and while in our opinion the assumptions used for the valuation are appropriate provided the Province selected the economic assumptions in accordance with the Chartered Professional Accountants of Canada Public Sector Accounting Board Handbook ("PSAB Handbook"), the Plan's future experience will inevitably differ, perhaps significantly, from the actuarial assumptions. Any differences between the actuarial

assumptions and future experience will emerge as gains or losses in future valuations, and will affect the financial position of the Plan at that time.

We have tested the data for reasonableness and consistency, and in my opinion, the membership data on which the valuation is based are sufficient and reliable for the purpose of the valuation. In my opinion, the calculations have been made in accordance with my understanding of the reporting requirements under the PSAB Handbook and this report has been prepared, and, my opinions given, in accordance with accepted actuarial practice in Canada.

If you have any questions, please do not hesitate to call.

Sincerely,

Lise Houle

MEMO

TO: Mary Cover, Ontario Teachers' Pension Plan
DATE: 17 June 2016
FROM: Lise Houle
SUBJECT: Ministry of Finance Request for Supplemental Accounting Results
COPY: Scott Clausen, Jason Lipping, Mercer

As a follow-up to the accounting results we provided to you with our letter of January 26th, 2016, determined using the actuarial assumptions provided by the Ministry of Finance, we understand that the Ministry has requested supplemental information from the Ontario Teachers' Pension Plan as the Ministry addresses inquiries from the Office of the Auditor General of Ontario.

In particular, the Ministry has requested the following information relating to the Ontario Teachers' Pension Plan, using Bases 3 and 4 described in our January 26th letter:

- Present value of future current service accruals,
- Present value of future basic contributions, and
- Present value of future supplemental contributions

The requested information, calculated as at August 31, 2015 and rolled forward to December 31, 2015 is as follows:

	Basis 3	**Basis 4**
Valuation Discount Rate	6.25%	6.00%
Inflation Rate	2.00%	2.00%
Real Valuation Discount Rate	4.25%	4.00%
Salary Escalation Rate	2.00% for the years 2016 to 2019, 3.00% thereafter	2.00% for the years 2016 to 2019, 3.00% thereafter
PV of future service accruals	$36,767 million	$39,563 million
PV of future basic contributions	$36,073 million	$36,826 million
PV of future supplemental contributions	$2,888 million	$2,924 million

The present value of future service accruals is calculated as the difference between the actuarial present value of total projected pension benefits (ie aggregate liabilities) less the actuarial present value of accrued pension benefits as at December 31, 2015. The benefits used in our calculations reflect 100% conditional indexing for both pre-2010 and post-2009 service. The actuarial present

value of accrued pension benefits as at December 31, 2015 are those provided in our January 26th letter while the actuarial present value of total projected pension benefits are calculated using the same approach, but captures all projected service to date of expected decrement.

The actuarial present value of basic contribution reflects both expected basic employee and employer contributions to be paid to date of assumed decrement.

The actuarial present value of future service accruals and of basic contributions only considers current active and inactive members of the Ontario Teachers' Pension Plan. In keeping with the approach used for the funding valuation, the present value of future supplemental contributions is determined on an open-group basis and reflects scheduled contributions to December 31, 2026.

It is our understanding that the province intends to use these figures to perform a high level test to consider if there should be a limit applied to the asset/surplus held as at December 31, 2015. We note that, should the plan earn future returns that are equal to the valuation discount rate adopted by the Province for financial statement reporting purposes, it is possible that some of the future contribution requirements could be reduced by agreement of the Sponsors as experience gains would be recognized in the funding valuation based on the assumptions currently used for funding purposes.

For more details on the actuarial assumptions, methods and data used in our calculations, please refer to our January 26th letter. The demographic assumptions are summarized in our Report on the Actuarial Valuation for Financial Statement Purposes as at December 31, 2015.

MEMO

TO: Mary Cover, Ontario Teachers' Pension Plan
DATE: 15 September 2016
FROM: Scott Clausen, Mercer
SUBJECT: Canadian Public Sector Accounting Standards (PS3250)

As discussed, the purpose of this memo is to provide section references from Canadian Public Sector Accounting Standards (PS 3250) that refer to the selection of methods and assumptions to be used to value pension plans for the purpose of the province's financial reporting. All Section references shown in this memo refer to Sections from PS3250.

Actuarial Cost Method:

.029
The projected benefit method prorated on services should be used to attribute the cost of retirement benefits to the periods of employee service.

.030
When a retirement plan provides benefits that accrue in a non-uniform manner, the projected benefit method prorated on services may need to be adjusted to reflect the manner in which retirement benefits are earned by employees. For example, a pension plan formula may state that the pension benefit accrues at one percent of salary for the first 15 years and at two percent of salary for the final 20 years. In this circumstance, the prorating of the total estimated benefit to each accounting period would be adjusted to reflect the rates at which pension benefits are earned in that 35-year period.

.032
In other retirement plans, regular benefit increases for inflation protection may be provided even when such protection is not promised in a contractual agreement or in legislation. For those plans, careful analysis and professional judgment are needed to determine the substance of a government's obligation. If a regular pattern of benefit increases can be established over a reasonable period, it may be appropriate to incorporate the cost of such inflation protection in the cost of retirement benefits earned to the accounting date and reported as an accrued benefit obligation.

Asset Valuation:

.035

When determining a government's retirement benefit liability and expenditure / expense, plan assets would be valued at market-related values. Under this method, plan assets are recorded at market value or they are adjusted to market value over a period not to exceed five years. Values adjusted to market closely approximate current economic value in a manner that can minimize short-term fluctuations. Market-related values would be used because they are objective and verifiable. Once a basis of valuation is chosen it would be applied consistently.

Actuarial Assumptions:

.042

Actuarial assumptions should be based on the government's best estimates of expected long-term experience and short-term forecasts.

.044

The actuarial assumptions underlying the valuation of the retirement benefit liability and expenditure / expense would be internally consistent. For example, when a government determines its discount rates by reference to its plan asset earnings, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the short-term forecast of rates of return on assets currently held in the fund. When a government determines its discount rates by reference to its cost of borrowing, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the specific rates of interest and the periods committed to by the government on the amounts borrowed.

Limit on Accrued Benefit Asset:

.050

An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in operations for the period in which the change occurs.

.053

To determine the extent to which an accrued benefit asset may be impaired, the government first determines the **adjusted benefit asset**. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054

The adjusted benefit asset is then compared to the **expected future benefit**. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055

The objective of the Recommendation in paragraph .050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056

A government determines its expected future benefit as the sum of:

a. the present value of its expected future annual accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and
b. the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Actuarial Gains and Losses:

.061

Actuarial gains and losses would be amortized over a reasonable future period because of their tentative nature and because further adjustments will likely be required in the future. A reasonable future period is the **expected average remaining service life of the related employee group**. Amortization may commence in the period following the determination of the adjustment. Actuarial gains and losses would be determined on a market value basis or a basis adjusted to market value, consistent with paragraph .035.

Past Service Costs:

.066

The cost of plan amendments related to prior period employee services should be accounted for in the period of the plan amendment.

Joint Defined Benefit Plans:

.079

Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. **Joint defined benefit plans** are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.081

When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the Recommendations for defined benefit plans.

FUNDING MANAGEMENT POLICY (FMP) FRAMEWORK DESCRIPTION

Valuation Basis

Assets = 110% of Liabilities valued at interest rates + 0.5%

Zone:	**Permanent Plan Improvements**
Mechanism:	**Improve benefits as negotiated**
Funding Risk:	Plan is essentially fully funded at Government of Canada long bond rates. Funding security is desired to ensure the Plan can support these benefits continually in the future. The impact of new teachers is important as they will create losses.

That is, Assets ~ 133% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1.25%

Zone:	**Temporary Plan Improvements**
Mechanism:	**Improve benefits or lower contributions as negotiated[1]**
Funding Risk:	Plan is well funded and can afford changes that temporarily provide a benefit enhancement (as long as it does not create a long term cost) and/or lower the contributions being paid into the Plan.

[1] Amortization period used to determine temporary benefit

That is, Assets ~ 107% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1.55%

Zone:	**Fully Funded (Do Nothing)**
Mechanism:	**Maintain Base Benefits and Contributions**
Funding Risk:	Plan is adequately funded to provide base benefits supported by the base contributions. Given the volatility of market factors and the numerous assumptions in the funding valuation, "fully funded" is considered a range.

Zone:	**Additional Support Required From Current FMP Levers**
Mechanism:	**Raise Contribution Rates and/or Invoke Conditional Inflation Protection as negotiated**
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions. An increase to the contribution rate (within FMP maximum) and/or a decrease to the level of indexing being provided are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

Zone:	**Additional Support Required From New/Additional Changes**
Mechanism:	**Negotiate other plan changes**
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions and CIP is fully invoked and contribution rates are increased to maximum outlined in FMP. Plan changes are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
Application (Article I):	**Section 1.01 and 1.02** ▪ Requires the Board to use Board's "best estimates assumptions," including a margin for adverse deviation in the case of the discount rate. ▪ Sets out what best estimates economic assumptions may be based on. ▪ Requires the Board to maintain indices to record inflation adjustments for post-2009 service. **Sections 1.03 and 1.04** ▪ If the Board uses a discount rate different from that outlined in the FMP and this discount rate is more penalizing (that is, produces a larger deficit or a smaller surplus), the FMP becomes void in 12 months unless both Partners notify the Board otherwise. These sections serve as an "exit" provision for the Partners. **Section 1.05** sets out under what circumstances each section of the FMP applies. **Section 1.06** limits surplus distributions or contribution decreases to those permitted by law. **Section 1.07** makes temporary improvements conditional on not having a restoration basis deficit.
Definitions (Article II):	**Section 2.01** Defines key terms, including: ▪ Basic contributions (contributions as per Sch.1 on January 1, 2012), which is used throughout the FMP as the target contribution rate (10.4% on earnings up to the YMPE/12% above the YMPE). ▪ Run-rate benefits (benefits as per Sch.1 on January 1, 2009), which include 100% inflation protection and assume basic contributions. ▪ Reference Rate (rate chosen by the Board representing Government of Canada nominal and real return bonds, which may be based on market or smoothed data; has recently been 3 year smoothed nominal and real return bonds). ▪ Remaining amortization value (difference between the temporary improvement value and the commitment value). ▪ Temporary improvement value (present value of a temporary improvement amortized over 3-10 years; if amortized over fewer than 10 years, improvement for a year is limited to the amount of basic contributions paid during a year).
Restore basic contributions and benefits (Article III):	**Section 3.01** ▪ Restoration basis is used (*reference rate* + 1.55%). ▪ Defines assets (refers to PBA Regulations) and current and revised liabilities. **Section 3.02** ▪ Sets out that current and revised liabilities are calculated using the restoration basis, plus an adjustment. The phrase "plus an adjustment" is used throughout the FMP and reflects the fact that the Board often files using a basis that is higher than required under the FMP. **Section 3.03** ▪ Outlines how indexing is accounted for in the valuation (that is, level of indexing provided in current filing zone continues).
Restoration Basis: *Surplus* (Article III continued)	*Sections 3.04 to 3.08 apply when surplus exists using the restoration basis and current contributions are higher than target, partial indexing (for previous years or go forward) exists or other benefits have been reduced.* **Section 3.04** Sets conditions under which sections 3.05-3.08 apply: ▪ If Assets > Liabilities (surplus reported); and ▪ Current contributions > Basic contributions (i.e., contributions are above long-term target level); or ▪ Current Benefits < Run-Rate Benefits (i.e. contributions are above long-term target level or benefits are below the long-term target level). **Section 3.06** Sets out the order of how to restore past benefit reductions or contribution increases: ▪ Actions can consist of increasing benefits to run-rate (long-term target) including prospective restoration or lowering contributions to basic (target) or a combination. ▪ First, increase go-forward indexing to 50% for post-2013 service period, then to 100% on all post-2009 service periods. Second, restore current pension amounts to run rate level, as much as possible, starting with the years where indexing was less than 50% until all years of partial indexation are restored to the same level and then restore to 100% for all service periods. ▪ Partners reserve the right to reconsider order in the future. **Section 3.07** A number of conditions apply after a decision: ▪ Assets equal to or greater than revised liabilities (i.e. no deficit created); ▪ Inflation indexing restored to no more than if 100% of inflation was provided;

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
	▪ Inflation indexing restored to no less than current level (i.e. can't lower prior inflation indexing given); ▪ The value of revised benefits needs to be between current and run-rate benefits (similarly, contributions must be between current and target). **Section 3.08** (Expires December 30, 2017) Sets out the limits from the 2013 Term Sheet (commonly known as the JSPP Agreement) with respect to escalated adjustments and benefit improvements: ▪ Escalated adjustments if assets are greater than 100% of the current liabilities (and not below 100% after). ▪ Benefit improvement or restoration if net assets available for benefits are greater than 105% of the current (unsmoothed) liabilities (and not below 105% after).
Restoration Basis: *Deficit* (Article III continued)	*Sections 3.09 to 3.14 apply when the liabilities are greater than the assets using the restoration basis; thus the Partners must raise contribution rates, lower the amount of indexing and/or decrease other benefits.* **Section 3.09** Sets conditions under which Sections 3.10 to 3.14 apply: ▪ If Current liabilities > Assets (i.e., deficit reported). **Section 3.11** Sets out that deficit can be eliminated by changing contributions or benefits provided that: ▪ Assets are equal to or greater than revised liabilities; and ▪ Revised member contributions are no more than 15% (above YMPE). **Section 3.12** The Partners can agree to change benefits or contribution level as long as: ▪ Partners have entered into a written agreement governing the manner in which contributions by the Minister and the Employers will be adjusted to offset any reduction in benefits; and ▪ No indexing granted gets taken away. **Section 3.13** Outlines the current intention that member contributions will be increased up to 15% (above YMPE) before benefits are reduced or less than full indexing is provided. **Section 3.14** Sets out the limits with respect to the 2013 Term Sheet regarding employer contribution increases.
Funding Zone: Temporary (Article IV):	**Section 4.01** ▪ Temporary basis is used (*reference rate* + 1.25%). ▪ Defines: - Assets (either market value of net assets or assets defined in PBA Regulations; that is, if smoothing creates surplus that otherwise would not exist, it cannot be spent). - Current liabilities (liabilities including the greater of current and run-rate benefits and any remaining amortization value from a previous temporary commitment). - Revised liabilities (liabilities including the greater of revised and run-rate benefits and any remaining amortization value from a previous temporary commitment). - Reference rate (ensures that smoothed data is not used to get a surplus if there otherwise would not be surplus). **Section 4.02** Sets out that the liabilities are calculated using the temporary basis, plus an adjustment. *Sections 4.03 to 4.06 apply when the plan has a surplus using the temporary basis; that is, there is surplus available for improving benefits, decreasing contributions or distributing surplus, all on a temporary basis. The surplus spend is amortized over a period of three to ten years, at the partners' choice. If amortization period is less than ten years, the annual spend limit is the amount of basic contributions for a year.* **Section 4.03** Sets out conditions under which Sections 4.04 and 4.05 apply: - If assets > liabilities; and - Current Contributions ≤ Basic Contributions (current contributions are equal to or lower than long-term target); and - Current Benefits ≥ Run-Rate Benefits (current benefits are equal to or higher than long-term target); and - Full inflation indexing has been provided. **Section 4.04**

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
	The Board reports the commitment value (the amount of surplus that can be used to provide a temporary improvement). **Section 4.05** The Partners can agree to temporary improvements so long as after the change, assets over revised liabilities are equal to or greater than zero. **Section 4.06** provides a requirement for a side agreement setting out how Minister contributions are adjusted if there is a surplus distribution or temporary improvement of benefits.
"Do Nothing" Zone (Article IV continued):	*Sections 4.07 to 4.09 apply if assets are equal to or less than current liabilities using the temporary basis; that is, if there is a deficit using the temporary basis.* **Section 4.09** States that the Partners will not provide new improvements if there is a temporary basis deficit. That is, the Partners will do nothing, and Article III (restoration basis) will apply. However, no actions result from move to restoration because contributions and indexing are already at run-rate in order to be in temporary zone. The Partners could, however, have to file a valuation (using the restoration basis) if the filing schedule required a filing.
Funding Zone: Distributions (Article V):	**Section 5.01** ▪ Distribution basis is used (*reference rate* + 0.5%). ▪ Defines: - Assets (either market value of net assets or assets defined in PBA Regulations; that is, if smoothing creates surplus that otherwise would not exist, it cannot be spent) - Liabilities (includes remaining amortization value) - Current targeted funding amount - Revised targeted funding amount - Reference rate (ensures that smoothed data is not used to get a surplus if there otherwise would not be surplus) **Section 5.02** Sets out that the liabilities are calculated using the distribution basis, plus an adjustment. *Sections 5.03 to 5.05 apply when the plan has a surplus using the distribution basis; that is, there is usable surplus for improving benefits above run-rate permanently or decreasing contributions below target level permanently.* **Section 5.03** Sets out conditions under which Sections 5.04 and 5.05 apply: - If Assets > 110% of Liabilities; and - Current Contributions ≤ Basic Contributions (current contributions are equal to or lower than long-term target); and - Current Benefits ≥ Run-Rate Benefits (current benefits are equal to or higher than long-term target); and - Full inflation indexing has been provided prospectively and benefits are fully restored. **Section 5.05** The Partners can agree to change benefits or contributions so long as after the change assets remain greater than 110% of the liabilities and a side agreement has been entered into to set out how Minister contributions are adjusted if there is a surplus distribution or temporary improvement of benefits. *Sections 5.06 to 5.08 apply when the plan has a funding ratio that is at least 100% but less than 110% and valued using contribution rates at the basic or target level, full indexing provided prospectively and benefits fully restored.* **Section 5.06** Sets out the conditions under which Sections 5.07 and 5.08 apply: ▪ If Assets ≤ 110% of Liabilities; and ▪ Current Contributions ≤ Basic Contributions (current contributions are equal to or lower than long-term target); and ▪ Current Benefits ≥ Run-Rate Benefits (current benefits are equal to or higher than long-term target); and ▪ Full inflation indexing has been provided prospectively and benefits are fully restored. **Section 5.08** If the conditions in Section 5.06 are satisfied, there is not sufficient surplus to provide a permanent improvement; therefore, Article IV will apply to determine whether there is surplus using the temporary basis.

Subject	Summary of Provisions
Post-December 30, 2017 Valuations (Article VI):	*This section articulates at a high level the use of the surplus credits (earned pre-January 1, 2018) after December 30, 2017. OTF earns surplus credit for any unmatched forgone inflation (i.e., inflation indexing less than 50%) prior to January 1, 2018 or via other benefit reductions made before January 1, 2018. See the JSPP Agreement for more detail.* **Section 6.01** ▪ Restoration basis is used (reference rate + 1.55%). ▪ Defines: - Assets (PBA regulations) - Current Liabilities - Revised Liabilities **Section 6.02** Provides overriding provision for post-December 30, 2017: for valuations where assets are greater than current liabilities, Section 6.03 applies (with reference to the 2013 Term Sheet). **Section 6.03** Sets out the use of surplus credits: ▪ OTF has first call on surplus up to a limit;
Valuation frequency and filing (Article	*This section reinforces an earlier section of the Partners' Agreement that specifies that it is the Partners' joint decision whether to file (other than in a required filing year).* ▪ Partners' decision when to file. ▪ Partners will notify the Board within 7 months of valuation date.
Arbitration (Article VIII):	Refers to Arbitration already in prior section of the Partners' Agreement.
Limitations (Article IX):	FMP does not apply for changes required by law or for changes that increase the liabilities by less than 0.5% or for changes that use the $76m in section 60 *(Note $76m was utilized with January 1, 2008 filing).*

Hi Lucy,

I'm attaching some info on the decision announced this week regarding the increase in indexation from 70 to 90%. As you were asking about the share the pain payments, I thought that these docs might provide additional background. n

From: Paul, Joshua (EDU)
Sent: September-13-16 11:40 AM
Subject: AG-OTPP Follow Up
Importance: High

Hello,

This email attempts to follow up in two ways:

1. Provide the documentation the AG requested on the upcoming filing; and

2. Provide the responses to Cindy's questions below.

1. Documentation

Attached are two documents. The first is a Minister's decision note package on the move from 70 to 90. The second is a letter from both partners to the plan providing the direction. Again, this is a decision that has yet to be announced so is highly confidential. The announcement is planned for tomorrow.

The decision note does not highlight how the 8.6 breaks down, but does flag the share the pain issue. If the AG wanted more detail on the 8.6 breakdown, they could go directly to the OTPP.

2. Answers to questions

See below. I would suggest that the current decision is the easiest one to highlight as the 2015 was a bit more complex.

2016 Valuation and Filing

$13.2 billion preliminary funding valuation (as of January 1, 2016).

The $8.6 billion cost of moving to 90% conditional inflation protection is made up primarily of two parts:

1. Approximately $4.3 billion increase in future payments to members, to provide inflation protection at 90% instead of 70%

2. Approximately $4.3 billion reduction in future “share the pain” payments by the Province to the Plan

2015 Valuation and Filing

$6.8 billion preliminary funding valuation (as of January 1, 2015). A $3.7 billion cost of moving to 70% conditional inflation protection made up primarily of two parts:

1. Approximately $1.85 billion increase in future payments to members, to provide inflation protection at 70% instead of 60%

2. Approximately $1.85 billion reduction in future “share the pain” payments by the Province to the Plan

Hope this helps and happy to discuss.

Ron Mock
President and CEO
Ontario Teachers' Pension Plan
5650 Yonge Street
Toronto, ON M2M 4H5

Dear Ron Mock:

Re: Filing of the January 2016 Plan Valuation

The preliminary valuation of the Ontario Teachers' Pension Plan ("the Plan") as at January 1, 2016 indicates that the Plan has a going concern surplus of approximately $13 Billion. Although this valuation is not required to be filed with the Financial Services Commission of Ontario, the Partners have decided that it would be to our mutual advantage to do so.

On account of the surplus and in keeping with the commitment made to Plan members when conditional inflation protection was introduced, we propose that for post-2009 service, inflation protection should be raised to 90 percent starting with the January 1, 2017 adjustment. Further, we propose to restore pensions to the level that would have been payable if full inflation protection had been provided since retirement, also effective January 1, 2017. It is our understanding that both of these measures can be taken within the framework of the available surplus funds.

We request that you instruct the Plan Actuary to prepare a revised valuation based on the Plan amendments outlined above so that this valuation may be filed with the regulator in accordance with the relevant regulations.

We are most grateful to you and your staff for your assistance in filing this valuation.

Yours sincerely,

Francine LeBlanc-Lebel

MEMORANDUM TO: The Honourable Mitzie Hunter
Minister of Education

THROUGH: Nancy Matthews
Deputy Minister

FROM: Gabriel F. Sékaly
Assistant Deputy Minister
Financial Policy and Business

DATE: July 14, 2016

SUBJECT: Funding Valuation of the Ontario Teachers' Pension Plan

---

Attached is a decision note seeking direction to file the 2016 funding valuation of the Ontario Teachers' Pension Plan (OTPP) with the Financial Services Commission of Ontario (FSCO), the Provincial pension plan regulator.

The funding valuation is an assessment of the long-term financial health of the pension plan. The valuation uses a number of assumptions to compare the value of pension plan assets (such as stocks and bonds, as well as future contributions) to the value of pension plan liabilities (the amount required to pay accrued and future pension benefits). Pension plans in Ontario are required under the *Pension Benefits Act* to undertake a valuation annually and file a balanced valuation with FSCO once every three years. A balanced valuation must show that the plan has enough assets to pay out the projected cost of future pension benefits.

It is the responsibility of the OTPP sponsors, the Ontario Teachers' Federation and the Ontario government, to determine when to file the annual valuation with FSCO. The sponsors are also responsible for negotiating the use of any surplus funds and, when there is a funding shortfall, implementing a strategy to eliminate it.

The preliminary valuation of the OTPP as of January 1, 2016 indicates a surplus of about $13.2 billion. This means the pension plan has 107% of the assets it needs to pay future pensions to all members, based on current contribution and benefit levels. The surplus is primarily the result of strong returns on plan investments in 2015. Because the Plan is financially balanced, it is recommended that this valuation be filed with FSCO and that a portion of the surplus be used to continue to restore member benefits. This is consistent with the past two valuation filings, where the sponsors agreed to use surplus to partially restore inflation protection for members in accordance with the Plan's Funding Management Policy.

My staff and I are available to provide you or your staff with further information as required.

Gabriel F. Sékaly,
Assistant Deputy Minister

Ministry of Education
MINISTER'S DECISION NOTE

2016 Preliminary Funding Valuation of the
Ontario Teachers' Pension Plan (OTPP)

Confidential Advice to Minister

PURPOSE:

To provide an overview of the OTPP's preliminary valuation as at January 1, 2016 and seek direction to pursue the filing of the valuation, with partially restored inflation protection measures.

KEY INFORMATION:

Valuation of the OTPP

- Each year, the OTPP is required to undergo a funding valuation to determine the status of the plan. The OTPP retains Mercer, a third party actuary, to perform the valuation.
- The funding valuation looks ahead 70+ years to assess the actuarial value of the OTPP's assets and liabilities. Assets are what the pension plan owns (stocks, bonds, real estate, future contributions) while liabilities are the present value of members' and retirees' pension benefits.
    - If the assets are equal to or exceed the liabilities, the plan is financially balanced. An excess of assets represents a surplus, while an excess of liabilities represents a deficit.
- According to the OTPP's preliminary funding valuation (as at January 1, 2016) the Plan has a surplus of about $13.2B with a discount rate of 2.75%. This surplus means the Plan has about 107% of the funds required to meet its long-term pension obligations.
    - The surplus is primarily due to steps the sponsors previously took to adjust plan provisions (i.e. introducing inflation protection conditional on the health of the Plan and special contributions). Without these measures the Plan's funded status would be in deficit.
- The discount rate plays a key role in projecting whether the pension plan has enough assets to meet its future pension obligations by assessing how much the plan's assets can reasonably be expected to earn over the long term. The higher the discount rate, the lower the projected cost of future pensions and vice versa (eg. a 0.25% decrease in the discount rate would increase the projected future pension obligation by about $7B).
    - For the 2014 valuation, the discount rate was increased from 2.75% to 2.85% in acknowledgement of the aforementioned steps taken by the sponsors, which improved the sustainability of the Plan. This discount rate was maintained in 2015.
    - For the 2016 valuation, the Plan has reduced the discount rate back to 2.75% given the volatile global investment outlook and the plan's demographic profile.

Restoring Inflation Protection

- Conditional Inflation Protection (CIP) was first introduced in 2008 as a lever to give the sponsors the ability to manage deficits by decreasing inflation protection on pension payments for future service. Under these provisions:

    - Service accrued prior to 2010 fully inflation protected; and
    - Service accrued after 2009 is subject to conditional inflation protection:
        - Inflation protection for service accrued during 2010-2013 is guaranteed at 50% and can be adjusted upwards to 100% depending on the financial status of the plan; and
        - Inflation protection for service accrued after 2013 is not guaranteed. CIP can be adjusted upwards to 100% or downwards to 0% depending on the financial status of the plan.
- It is the stated intention of the sponsors that inflation protection will be reinstated as the funded status of the OTPP improves. Consistent with this commitment, last year's preliminary surplus was used to restore inflation protection from 60% to 70% beginning in 2016.
    - The sponsors also decided to restore the level of base pensions, for the purposes of future CIP calculations, to what would have been payable if full inflation protection had been provided since retirement (known as restoring the run-rate).
- The sponsors propose to use a portion of this year's surplus to partially restore inflation protection to 90% and restore the run rate. This change would begin in 2017 and would remain in place until the next funding valuation is filed.
    - The OTF have indicated that they are not willing to file the valuation with CIP at 85% or lower. The OTPP is supportive of filing the valuation with the CIP increase to 90%, but cautioned the sponsors that should the plan experience future deficits, they would be forced to make changes (invoke further CIP again and/or increase contributions).

<u>Filing the January 1, 2016 Valuation</u>

- The *Pension Benefits Act* (PBA) requires a valuation to be filed with the Financial Services Commission of Ontario (FSCO), the government regulator responsible for overseeing the insurance and pension industries, at least once every 3 years.
- The OTPP last filed a valuation with the FSCO as of January 1, 2015. This means that the OTPP could either:
    - voluntarily file the valuation as of January 1, 2016 or 2017; or
    - file a mandatory valuation as of January 1, 2018.
- As co-sponsors of the OTPP, the government and the Ontario Teachers' Federation (OTF) must jointly decide on whether or not to file.
    - The OTF have indicated that they support filing the January 1, 2016 valuation and using part of the surplus to provide inflation protection at 90% for the period starting January 1, 2017 until the next valuation is filed.
    - Should the decision be made to file this year, the sponsors have until September 30, 2016 to officially file the valuation. To meet that legislated deadline, OTPP would need a decision in writing by September 1, 2016 to give Mercer sufficient time to prepare the formal valuation report.
- Filing this year's valuation would ensure that there is adequate time to continue to monitor the funded status of the OTPP, develop plans to address any potential shortfalls that arise over the next three years, and consult with OTPP members about their preferences before changes to pension benefits are made.

RISK SUMMARY:

- **Medium.** Filing the January 1, 2016 valuation and partially restoring inflation protection will likely be positively received by teachers and federations. However, should 2016 and beyond result in lower investment returns, the CIP lever could be reduced again to maintain the Plan's financial health and may be met with objection from teachers and federations.

RISK ANALYSIS:

Risk Factor	Context	Level of Risk	Mitigating Factor
Increase in benefits may have to be clawed back if there is a shortfall in the next filing.	When filed with FSCO, the valuation must show that the pension plan is balanced. If there is a deficit, the filing must outline actions that will be taken to address the shortfall and balance the plan, through increasing contribution rates or adjusting the accrual of pension benefits for future years. If there is a shortfall in the next filing, OTPP may have to reduce CIP again to balance the plan.	Medium	CIP is an established Plan provision that has been consistently invoked by the sponsors to keep the plan viable and affordable in the long-term. The sponsors have also honoured their commitment to restore inflation protection as the funded status of the Plan has improved.

FINANCIAL IMPLICATIONS:

- Providing inflation protection at 90% from 70% would cost approximately $8.6B of the Plan's identified surplus.
- OTPP contributions will continue to be frozen at the current rate until December 30, 2017, the end of the contribution freeze period in the Jointly Sponsored Pension Plans (JSPP) agreement.
- Providing inflation protection at 90% will mean the government will continue to make "sharing the pain" payments to OTPP.
    - As part of the 2008 agreement to introduce CIP, the government agreed to a "sharing the pain" provision. The provision states that for years where members receive less than 100% inflation protection, the government is required to make additional contributions to the Plan equal to the amount forgone by members. Contributions are made up to 50% for CIP on service accrued after 2013 (e.g. if CIP for this period was 40% the government is required to make additional contributions at 50%, not 60%).

COMMUNICATIONS STRATEGY:

- An OTPP Communications Working Group (CWG) made up of members of OTF, the Government and the OTPP is responsible for drafting the joint announcement of the valuation results.
- Once developed, the announcement will go through the appropriate approvals.
- The approach will follow the practices used for most filing announcements since the formation of CWG in 2009.

NEXT STEPS:

- Sponsors meet to confirm agreement on valuation terms as detailed above.
- If the sponsors decide to file the 2016 valuation, they will send a joint letter to the OTPP directing them to have the actuaries prepare a revised valuation based on the terms detailed above (i.e. partially restore inflation protection measures, and restore the run rate). The Plan would then file the revised valuation with FSCO.
    - Ministry staff will seek Ministerial approval of this letter once the valuation terms have been confirmed.

OPTIONS:

- Option 1: Direct the OTPP to file the January 1, 2016 valuation and restore inflation protection measures as described above. **(Recommended)**
- Option 2: Do not file the January 1, 2016 valuation of the OTPP.

Hi Nadine,

Attached is a draft version of our letter related to the accrued benefit asset recognition (i.e. asset ceiling analysis) for OTPP for your review. Let us know if you have any comments or concerns. We welcome a meeting/call to discuss.

Upon confirming the letter is satisfactory, we will follow up with a similar letter for OPSEU.

Regards,

Christina

30 March 2017

Ontario Teacher's Pension Plan - DRAFT
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to provide pension accounting support with the preparation of financial statements for the Province of Ontario (the "Province"). This document has been prepared to determine the extent to which an accrued benefit asset may be recognized as at 31 March 2017 in respect of the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

As at 31 March 2017, prior to any valuation allowance (if any), OPCD determined the followings:

- Plan's accrued benefit asset is $26.9B (obligation of $123.8, market related-value of asset of $169.8B, unamortized actuarial gain of $19.1B)
- The Province's portion (50%) of the accrued benefit asset is $12.3B[1]

Our analysis determined that a valuation allowance is not required at 31 March 2017 and the Province's portion of the accrued benefit asset of $12.3B in respect of the Plan may be recognized as an asset without any impairment.

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan a Joint Defined Benefit Plan ("JDBP") under PSAS. The Plan is jointly sponsored by the Province, through the Minister of Education, and the Ontario Teachers' Federation ("OTF"), representing the employees.
- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors under the Teacher's Pension Act ("Act").
- Funding valuations must be filed at least once every three years. If there is a surplus/deficiency on a funding valuation basis, the joint sponsors must negotiate and agree to changes in future contribution levels or benefit levels to result in an actuarially balanced valuation.

[1] reflects specific downward net adjustment of $1.2B by OPCD to the Province's portion of the Plan for the Province's financial statements

- Changes to contribution levels and benefit levels must reflect the sharing principle in that each joint sponsor is responsible for their share of deficit or entitled to their share of surplus.
- The Act or the Plan documents do not prohibit contribution holidays (i.e. surpluses belonging to the joint sponsors may be applied to reduce contributions).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (this earlier measurement date is permitted under PSAS 3250.039)
- Assumed inflation protection for post-2009 service will be provided at 100% of the assumed inflation rate
- Valuation discount rate: 6.00%
- Inflation rate: 2.00%
- Salary escalation rate: 2.00% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition the recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of JDBP.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

The Province has an equal share (50%) in the costs and risks of the OTPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the*

expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs".

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. Based on Ontario case law and the Ontario Pension Benefits Act ("PBA"), it is difficult to establish the right of a plan sponsor to withdraw surplus. For purposes of determining the expected future benefit, our assumption is that the Province does not have a right to surplus withdrawal. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Funding Management Policy sets out an agreed upon framework of priorities for the sponsors in jointly determining how any funding surpluses can be utilized. The sponsors may negotiate lower contributions or an increase in benefits. There is no minimum level of contribution requirements set out by the Plan and contributions levels are negotiated. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$175.6B
Market-related value of assets ("MVRA")	$(169.8)B
Actuarial gains/losses not recognized due to smoothing	$5.8B
Unamortized actuarial gains/(losses), on MRVA basis	$19.1B
Unamortized actuarial gains/(losses), on MVA basis	$24.9B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$175.6B
Obligation	$(123.8)B
Plan surplus	$51.8B
Unamortized losses	$0.0B
Adjusted benefit asset (PS 3250.053)	$51.8B

The adjusted benefit asset for the Plan is $51.8B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

Mercer's accounting results letter determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $3.1B
- The total present value of expected future accruals is $100.1B as at 31 December 2016

Mercer also noted the present value of expected future accruals has been calculated on an open group basis using a perpetuity approach (i.e. the current number of active employees), by projecting the current service cost with the assumed salary scale and discounting with interest. This is in line with PSAS requirements.

We have validated Mercer's calculation of the total present value of expected future accruals of $100.1B. We have estimated the present value of the Plan's expected future accruals to be approximately $95B, based on the current number of active employees and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)

- Discount rate of 6.00%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $3.1B / (0.06-0.0275) = $95B.

We note that our estimate is approximately $5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuaries to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no contributions that the Province is required to make, regardless of any surplus. The sponsors of the Plan can agree to any level of contribution through negotiation that leads to an actuarially balanced funding valuation. The Plan's funding level has an impact on the contribution rates, i.e. they are made with consideration for the Plan's funding surplus. Further, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OTPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OTPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan).

Plan surplus that can be withdrawn

As discussed in Section 2, we have assumed no Plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$100.1B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	(0.0)B
Expected future benefit (PS 3250.056)	$100.1B

The Plan's expected future benefit is $100.1B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$51.8B
Plan's expected future benefit (PS 3250.056)	$100.1B
Valuation allowance (PS 3250.054) [max (0, $51.8B – 100.1B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$26.9B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B

Accordingly, the Province's portion of the Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B
Province's portion of the accrued benefit asset (50%) [PS3250.050 x 50%]	13.5B
Other Province specific adjustment made by OPCD	(1.2)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$12.3B

The accrued benefit asset of $12.3B without any asset impairment should be recognized for the Province's financial reporting under PSAB.

Appendix
Information Provided

Our analysis is based on the following information we received:

- Actuarial valuation report for OTPP as at 1 January 2016 prepared by Mercer for funding purposes
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re; Ontario Teachers' Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- Teachers' Pension Act
- OTPP Funding Management Policy
- Letter Re: Accounting results as at 31 March 2017 prepared by Mercer

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement

benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

---

Hi Christina and Shayan.

Thanks for sharing the draft analysis on OTPP. I was hoping you might be available for a 15 minute call later today or tomorrow to discuss my comments (attached) and next steps.

Shyrose can help to set up a time to chat.

Thanks.

Nadine

Ontario Teacher's Pension Plan - DRAFT
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").
~~provide pension accounting support with the preparation of financial statements for the Province of Ontario (the "Province").~~ This document provides the results of our analysis and recommendations to OPCD management regardgin the ~~has been prepared to determine the~~recognition of ~~extent to which~~ an accrued benefit asset for OTPP ~~may be recognized~~ as at 31 March 2017. ~~in respect of the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").~~

As at 31 March 2017, prior to considering the possible need for a~~any~~ valuation allowance ~~(if any)~~, OPCD determined the followings:

- Plan's accrued benefit asset is $26.9B (obligation of $123.8, market related-value of asset of $169.8B, unamortized actuarial gain of $19.1B)
- The Province's portion (50%) of the accrued benefit asset is $12.3B[1]

Since o~~O~~ur analysis determined that a valuation allowance is not required at 31 March 2017, ~~and~~it would appear appropriate to report the Province's portion of the accrued benefit asset of $12.3B for it's respective potion of the plan ~~in respect of the Plan may be recognized as an asset without any impairment~~.

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS. The Plan is jointly sponsored by the Province, through the Minister of Education, and the Ontario Teachers' Federation ("OTF"), representing the employees.
- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors under the Teacher's Pension Act ("Act").
- Funding valuations must be filed at least once every three years. If there is a surplus/deficiency on a funding valuation basis, the joint sponsors must negotiate and agree to changes in future contribution levels or benefit levels to result in an actuarially balanced valuation.

Commented [npp1]: May wish to highlight the relevance of this requirement w.r.t. negating possibility of minimum contributions

[1] reflects specific downward net adjustment of $1.2B by OPCD to the Province's portion of the Plan for the Province's financial statements

- Changes to contribution levels and benefit levels must reflect the sharing principle in that each joint sponsor is responsible for their share of deficit or entitled to their share of surplus.
- The Act or the Plan documents do not prohibit contribution holidays (i.e. surpluses belonging to the joint sponsors may be applied to reduce contributions).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (this earlier measurement date is permitted under PSAS 3250.039)
- Assumed inflation protection for post-2009 service will be provided at 100% of the assumed inflation rate
- Valuation discount rate: 6.00%
- Inflation rate: 2.00%
- Salary escalation rate: 2.00% per annum to 2019 and 2.75% thereafter

Commented [npp2]: Does EY wish to include reference/comments regarding stub period considerations by OPCD? See Pauline/Bharat for history of OAG comments.

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition ~~the recognition~~ of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

The Province has an equal share (50%) in the costs and risks of the OTPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the*

expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs".

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. Based on Ontario case law and the Ontario Pension Benefits Act ("PBA"), it is difficult to establish the right of a plan sponsor to withdraw surplus. For purposes of determining the expected future benefit, our assumption is that the Province does not have a right to surplus withdrawal. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Funding Management Policy sets out an agreed upon framework of priorities for the sponsors in jointly determining how any funding surpluses can be utilized. The sponsors may negotiate lower contributions or an increase in benefits. There is no minimum level of contribution requirements set out by the Plan and contributions levels are negotiated. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$175.6B
Market-related value of assets ("MVRA")	$(169.8)B
Actuarial gains/losses not recognized due to smoothing	$5.8B
Unamortized actuarial gains/(losses), on MRVA basis	$19.1B
Unamortized actuarial gains/(losses), on MVA basis	$24.9B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$175.6B
Obligation	$(123.8)B
Plan surplus	$51.8B
Unamortized losses	$0.0B
Adjusted benefit asset (PS 3250.053)	$51.8B

The adjusted benefit asset for the Plan is $51.8B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

Mercer's accounting results letter determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $3.1B
- The total present value of expected future accruals is $100.1B as at 31 December 2016

Mercer also noted the present value of expected future accruals has been calculated on an open group basis using a perpetuity approach (i.e. the current number of active employees), by projecting the current service cost with the assumed salary scale and discounting with interest. This is in line with PSAS requirements.

We have validated Mercer's calculation of the total present value of expected future accruals of $100.1B. We have estimated the present value of the Plan's expected future accruals to be approximately $95B, based on the current number of active employees and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)

- Discount rate of 6.00%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $3.1B / (0.06-0.0275) = $95B.

We note that our estimate is approximately $5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuaries to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no contributions that the Province is required to make, regardless of any surplus. The sponsors of the Plan can agree to any level of contribution through negotiation that leads to an actuarially balanced funding valuation. The Plan's funding level has an impact on the contribution rates, i.e. they are made with consideration for the Plan's funding surplus. Further, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS.

Commented [npp3]: See note above. To discuss.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OTPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OTPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan).

Plan surplus that can be withdrawn

As discussed in Section 2, we have assumed no Plan surplus can be withdrawn by the joint

sponsors. Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$100.1B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	(0.0)B
Expected future benefit (PS 3250.056)	$100.1B

The Plan's expected future benefit is $100.1B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$51.8B
Plan's expected future benefit (PS 3250.056)	$100.1B
Valuation allowance (PS 3250.054) [max (0, $51.8B – 100.1B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$26.9B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B

Accordingly, the Province's portion of the Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B
Province's portion of the accrued benefit asset (50%) [PS3250.050 x 50%]	13.5B
Other Province specific adjustment made by OPCD	(1.2)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$12.3B

The accrued benefit asset of $12.3B without any asset impairment should be recognized for the Province's financial reporting under PSAB.

Commented [npp4]: Let's discuss

Commented [npp5]: Let's discuss

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement

benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

---

Hi Christina and Shayan.

Thanks for sharing the draft analysis on OTPP. I was hoping you might be available for a 15 minute call later today or tomorrow to discuss my comments (attached) and next steps.

Shyrose can help to set up a time to chat.

Thanks.

Nadine

Ontario Teacher's Pension Plan - DRAFT
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").
~~provide pension accounting support with the preparation of financial statements for the Province of Ontario (the "Province").~~ This document provides the results of our analysis and recommendations to OPCD management regardgin the ~~has been prepared to determine the~~recognition of ~~extent to which~~ an accrued benefit asset for OTPP ~~may be recognized~~ as at 31 March 2017. ~~in respect of the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").~~

As at 31 March 2017, prior to considering the possible need for a~~any~~ valuation allowance ~~(if any)~~, OPCD determined the followings:

- Plan's accrued benefit asset is $26.9B (obligation of $123.8, market related-value of asset of $169.8B, unamortized actuarial gain of $19.1B)
- The Province's portion (50%) of the accrued benefit asset is $12.3B[1]

Since o~~O~~ur analysis determined that a valuation allowance is not required at 31 March 2017, ~~and~~it would appear appropriate to report the Province's portion of the accrued benefit asset of $12.3B for it's respective potion of the plan ~~in respect of the Plan may be recognized as an asset without any impairment~~.

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS. The Plan is jointly sponsored by the Province, through the Minister of Education, and the Ontario Teachers' Federation ("OTF"), representing the employees.
- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors under the Teacher's Pension Act ("Act").
- Funding valuations must be filed at least once every three years. If there is a surplus/deficiency on a funding valuation basis, the joint sponsors must negotiate and agree to changes in future contribution levels or benefit levels to result in an actuarially balanced valuation.

Commented [npp1]: May wish to highlight the relevance of this requirement w.r.t. negating possibility of minimum contributions

[1] reflects specific downward net adjustment of $1.2B by OPCD to the Province's portion of the Plan for the Province's financial statements

- Changes to contribution levels and benefit levels must reflect the sharing principle in that each joint sponsor is responsible for their share of deficit or entitled to their share of surplus.
- The Act or the Plan documents do not prohibit contribution holidays (i.e. surpluses belonging to the joint sponsors may be applied to reduce contributions).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (this earlier measurement date is permitted under PSAS 3250.039)
- Assumed inflation protection for post-2009 service will be provided at 100% of the assumed inflation rate
- Valuation discount rate: 6.00%
- Inflation rate: 2.00%
- Salary escalation rate: 2.00% per annum to 2019 and 2.75% thereafter

Commented [npp2]: Does EY wish to include reference/comments regarding stub period considerations by OPCD? See Pauline/Bharat for history of OAG comments.

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition ~~the recognition~~ of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

The Province has an equal share (50%) in the costs and risks of the OTPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the*

expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs".

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. Based on Ontario case law and the Ontario Pension Benefits Act ("PBA"), it is difficult to establish the right of a plan sponsor to withdraw surplus. For purposes of determining the expected future benefit, our assumption is that the Province does not have a right to surplus withdrawal. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Funding Management Policy sets out an agreed upon framework of priorities for the sponsors in jointly determining how any funding surpluses can be utilized. The sponsors may negotiate lower contributions or an increase in benefits. There is no minimum level of contribution requirements set out by the Plan and contributions levels are negotiated. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$175.6B
Market-related value of assets ("MVRA")	$(169.8)B
Actuarial gains/losses not recognized due to smoothing	$5.8B
Unamortized actuarial gains/(losses), on MRVA basis	$19.1B
Unamortized actuarial gains/(losses), on MVA basis	$24.9B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$175.6B
Obligation	$(123.8)B
Plan surplus	$51.8B
Unamortized losses	$0.0B
Adjusted benefit asset (PS 3250.053)	$51.8B

The adjusted benefit asset for the Plan is $51.8B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

Mercer's accounting results letter determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $3.1B
- The total present value of expected future accruals is $100.1B as at 31 December 2016

Mercer also noted the present value of expected future accruals has been calculated on an open group basis using a perpetuity approach (i.e. the current number of active employees), by projecting the current service cost with the assumed salary scale and discounting with interest. This is in line with PSAS requirements.

We have validated Mercer's calculation of the total present value of expected future accruals of $100.1B. We have estimated the present value of the Plan's expected future accruals to be approximately $95B, based on the current number of active employees and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)

- Discount rate of 6.00%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $3.1B / (0.06-0.0275) = $95B.

We note that our estimate is approximately $5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuaries to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no contributions that the Province is required to make, regardless of any surplus. The sponsors of the Plan can agree to any level of contribution through negotiation that leads to an actuarially balanced funding valuation. The Plan's funding level has an impact on the contribution rates, i.e. they are made with consideration for the Plan's funding surplus. Further, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS.

Commented [npp3]: See note above. To discuss.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OTPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OTPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan).

Plan surplus that can be withdrawn

As discussed in Section 2, we have assumed no Plan surplus can be withdrawn by the joint

sponsors. Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$100.1B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	(0.0)B
Expected future benefit (PS 3250.056)	$100.1B

The Plan's expected future benefit is $100.1B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$51.8B
Plan's expected future benefit (PS 3250.056)	$100.1B
Valuation allowance (PS 3250.054) [max (0, $51.8B – 100.1B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$26.9B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B

Accordingly, the Province's portion of the Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B
Province's portion of the accrued benefit asset (50%) [PS3250.050 x 50%]	13.5B
Other Province specific adjustment made by OPCD	(1.2)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$12.3B

The accrued benefit asset of $12.3B without any asset impairment should be recognized for the Province's financial reporting under PSAB.

Commented [npp4]: Let's discuss

Appendix
Information Provided

Our analysis is based on the following information we received:

- Actuarial valuation report for OTPP as at 1 January 2016 prepared by Mercer for funding purposes
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re; Ontario Teachers' Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- Teachers' Pension Act
- OTPP Funding Management Policy
- Letter Re: Accounting results as at 31 March 2017 prepared by Mercer
-

Commented [npp5]: Let's discuss

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement

benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Subject: RE: OTPP Summary of Discussion

Hi Cindy,

I've read through Mercer's response. I have no issue with the slight changes they proposed for the first 4 bullets, as they do not change the meaning, but rather provide additional clarity.

I'm struggling a bit with their logic on the last bullet. They agree that there are no minimum required contributions that would persist even if the plan was in a surplus position, yet seem to be reticent to say that the present value would be nil because the employees are currently making contributions. I don't see how this holds together. A good parallel is the interpretation of "minimum funding requirements" under IFRIC 14 – in Canadian jurisdictions where posting a Letter of Credit is available as a funding alternative, any cash contributions that the employer is actually making aren't considered as "required" if they have an alternative to post an LOC instead. This is widespread interpretation that Mercer uses for all its clients. So it should be possible for them to accept the concept that while some contributions are being made, they are not meeting the specific contribution definition in the standard ("required regardless of any surplus" under PSAB, in this case).

Practically, I see a couple of alternatives:

- We press them a bit further on this point, and ask them to explain why they think this present value would not be nil.
- We accept all their suggested changes, but ask that they add some language to the last bullet point to get to where we need to be (eg. adding at the end "Therefore, it is reasonable to expect that the province will be able to benefit from a surplus in the plan through future contribution reductions, meeting one of the requirements to recognize the surplus as an asset on the balance sheet."
- Organize an in-person meeting with you, us, Mercer and OTPP to dive into this in more detail and get to the same joint statement on this.

As a side comment, but perhaps relevant if we need to get into more detail on this, I don't see why there is an emphasis on the split between employee and employer contributions. In reality, neither of the plan sponsors has any requirements to continue overfunding a plan already in surplus, since as joint sponsors they have control over benefit and contribution levels.

Please let me know your thoughts.

Ms. Mary Cover
Managing Director, Pension Strategy & Enterprise Risk
Ontario Teachers' Pension Plan Board
5650 Yonge Street
Toronto, ON
M2M 4H5

Dear Ms. Cover,

I understand based on discussion with Uros Karadzic from EY, the following bullets reflect the key points discussed on the call between Uros Karadzic, Scott Clausen, Lise Houle and yourself on July 26, 2018 regarding the Ontario Teacher's Pension Plan. Could you please review and confirm that you are in agreement with the bullets, or if not, provide any amendments required to reflect your understanding of the key points of the discussions:

- During the actuarial call on July 26, it was clarified that the present value calculations presented in the letters to Mary Cover on January 26, 2018 and discussed further in July 2018, were calculated under the assumption that the plan terms and the contribution rates remain indefinitely as they currently are today

- Looking longer term, with reference to funding management policy (FMP), it is reasonable to expect that the contribution and benefit levels would change in response to an emerging surplus in the plan. For example, the employees could chose to apply some of the surplus to improving benefits, while the province could chose to reduce contribution rates. The 50/50% sharing mechanism would be maintained.

- There is no requirement under FMP or otherwise that any contributions continue regardless of any surplus in the plan. In other words, if there are surplus assets in the plan, the plan sponsors (employees and the province) can chose to use that surplus, while maintaining 50/50% sharing mechanism, in various ways including reducing contributions. There is no minimum level of contributions that must continue regardless of any surplus.

- The requirement for the province to match employee contributions at 100% may not carry past the point that surplus emerges. FMP also contemplates payout of surplus to the plan members (but likely not the province).

- Therefore, while the above referenced calculations are actuarially correct if one assumed no changes to contribution rates of benefits at any point in the future, if we were to take a broader view of present valuing only those contributions that would have to be made regardless of any surplus in the plan, such present value would be nil (since there is no requirement for any minimum level of contributions even if the plan was already in a surplus position).

We would appreciate if you could respond at your earliest convenience, and if possible by August 3, 2018.

Regards,

Further to our meeting this afternoon, the attached document describes key characteristics, current and proposed accounting treatment, and some additional considerations for the plans discussed.

We will look into the year-end adjustment for HOOPP and get back to you with our observations. In addition, we will prepare adjusted figures based on the proposed accounting treatment in the attached document for the remaining plans.

Please let us know if you have any questions.

Regards,

Shayan

Accounting Approach Ontario pension plans.pdf

Accounting Approach - Ontario Pension Plans

		OTPP	OPSEUPP	PSPP	HOOPP	CAATPP
Key characteristics	Joint sponsored	Yes	Yes	No	Yes	Yes
	Proportion related to other non-consolidated employers	2.0%	4.7%	4.8%	15.5%	0%
	Do non-consolidated employers bear funding risk?	Yes - contribution increases impact all employers	Yes - contribution increases impact all employers	No - Province is responsible for special payments to fund deficiencies, other employers only responsible for ongoing costs	Yes - contribution increases impact all employers	n/a
Accounting treatment - Current state	Assets and obligations	50% allocated to Province	50% allocated to Province	100% allocated to Province	84.5% of employer portion allocated to Province	50% allocated to Province
	Contributions	Only Province contributions considered, i.e. 49% of total contributions	Only Province contributions considered, i.e. 47.65% of total contributions	Only Province contributions considered, i.e. 47.6% of total contributions	Only Province contributions considered, i.e. consistent with expense, assets and obligations	50% allocated to Province
	Expense	50% of total plan expense allocated to Province, plus amortization of certain adjustments.	50% of total plan expense allocated to Province, plus amortization of certain adjustments.	Expense appears to be reduced to reflect contributions of non-consolidated employers	84.5% of employer sponsor portion of expense allocated to Province	50% allocated to Province
	Impact to year-end	Inconsistency between contributions and expense leads to balance sheet understatement. Corrected over time through amortization.	Inconsistency between contributions and expense leads to balance sheet understatement. Corrected over time through amortization.	An adjustment to balance sheet is applied to reflect difference between Province and total employer contributions leading to balance sheet understatement.	No impact aside from adjustments due to slippage - to be reviewed.	No impact
Proposed accounting treatment	Proposed treatment	Reduce employer share to reflect participation of non-consolidated employers (consistent with HOOPP)	Reduce employer share to reflect participation of non-consolidated employers (consistent with HOOPP)	Apply offset to expense to reflect participation of non-consolidated employers. Expense reduced but risk retained.	No change	No change
	Impact of proposed treatment	Reduction in annual expense, improvement to balance sheet asset from removal of current year-end adjustment, reduction in balance sheet asset and annual income to reflect reduced share of plan	Reduction in annual expense, improvement to balance sheet asset from removal of current year-end adjustment, reduction in balance sheet asset to reflect reduced share of plan	Improvement in balance sheet asset to reflect removal of current year-end adjustment	No change	No change
	Financial impact - Balance Sheet	+$251M removal of year-end adjustment -$246M due to reflecting 49% vs 50% of plan	+$116M removal of year-end adjustment at 3/31/17 combined with PSPP -$29M due to reflecting 47.65% vs 50% of plan	+$116M removal of year-end adjustment at 3/31/17 combined with OPSEU	No change	No change
	Financial impact - P&L	-$10M net reduction in pension income	$4M net increase in pension expense	No change	No change	No change
Additional considerations		Imprecise to apply a single percentage to all components of calculation. DBO/SC. However, likely reasonable if the participation of other employers does not change significantly each year.	Imprecise to apply a single percentage to all components of calculation. DBO/SC. However, likely reasonable. Need to consider how to reflect other consolidated employers.	Contributions from other non-consolidated employers treated similar to employee contributions. Need to consider how to reflect other consolidated employers.	Consider determining % based on proportion of contributions rather than headcount prorate as contributions relate more closely to costs.	Should an adjustment be made for the fact that the Province does not provide 100% of the CAAT budget (30%)

Cindy Veinot
Assistant Deputy Minister and Provincial Controller
Province of Ontario

Dear Ms. Vienot:

Re: Legal Opinion Concerning Surplus Rights in regard to the Ontario Teachers' Pension Plan, the OPSEU Pension Plan, the British Columbia Municipal Pension Plan, the British Columbia Public Service Pension Plan, the British Columbia Teachers' Pension Plan and the British Columbia Colleges Pension Plan
Our File No.: 162080

You have requested our legal opinion concerning the authorities of the sponsors and plan administrators of the above-captioned Plans with respect to ongoing surpluses in those plans.

In general, the sponsors of these pension arrangements are governments and sometimes other employer associations (the employer sponsor), and trade unions (the employee sponsor, or 'partner'). The 'plan administrators' of each Plan are either boards of trustees or, in the case of the OTPP, a board of directors. Plan administrators are independent entities that owe fiduciary obligations to the members of the Plan they administer.

The constating documents for each Plan set out the respective rights of the sponsors of each arrangement, and describe as well the powers of the fiduciary administrator of each Plan. In some cases, there is a clear differentiation between the powers of the sponsors and the powers of the plan administrators; in other cases, both the sponsors and the fiduciary administrator may have powers with respect to the same issue.

Below, we briefly review the relevant provisions of the constating documents for each of these Plan arrangements. Then, we summarize our opinions concerning the respective powers of the Plan sponsors and the fiduciary administrators in regard to surpluses arising under each arrangement.

This opinion is based on the documents referenced herein. In the event that there are any other constating documents with respect to any of the Plans described below, the conclusions expressed in this opinion may change and cannot be relied upon.

In general, the Plans' constating documents sometimes refer to "surplus", and other times to "actuarial gains" or "excess assets". The term "surplus" may refer either to an ongoing surplus, or to a surplus that is crystalized upon the termination and wind-up of a plan. For the purposes of this opinion, we treat these terms as being equivalent.

KOSKIE MINSKY
JUSTICE MATTERS

I. ONTARIO PLANS

A. Ontario Teachers' Pension Plan ("OTPP")

The OTPP is governed by:

(a) the *Teachers' Pension Act*, R.S.O. 1990, c.T.1 (the "TPA");

(b) Plan text for the OTPP (the "Plan text");

(c) an Agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training (the "Minister") and The Ontario Teachers' Federation represented by its Executive (the "OTF"), dated July 15, 1991 (the "Partners' Agreement"), as amended; and

(d) a Funding Management Policy, attached as Appendix "A" to the Partners Agreement.

The TPA provides, at sections 5(1) and 5(1.1), that the Minister of Finance is required to pay from the Consolidated Revenue Fund contributions payable by the Minister of Education and provides that the total amount of such contributions "…shall not exceed the amount of contributions payable by or on behalf of active Plan members in respect of credited service for that year" (section 5(1.1)). The Plan text requires, at section 25, "that the Minister of Education contribute to the OTPP an amount equal to the required contributions made during the year before the preceding year by or on behalf of those members for whom the Minister is required to make employer contributions" (section 25(1)). Additional provisions of section 25 of the Plan text contain other provisions with respect to the Minister's obligation to make contributions to the OTPP.

The Partners' Agreement stipulates, at section 8 that the Partners are generally responsible for benefits and contribution rates:

> "8. The partners will be responsible for designing the plan structure, setting the benefits of the plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, making changes to the plan, this agreement or other plan documents, deciding whether or not to file a valuation more frequently than required by the *Pension Benefits Act,* appointing the Board, and defining the role of the Board."

By contrast, section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the partners to the OTPP have the authority to utilize ongoing surpluses.

The process governing the use of ongoing surpluses by th Partners is set out in the partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73). The Partners are then required to bargain in good faith with respect to the disposition of any surpluses, or any adjustments to address Plan deficiencies (section 74). Section 77 of the Partners' Agreement anticipates that the Partners may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the

appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

B. The OPSEU Pension Plan ("OPTrust")

The OPTrust is governed by:

(a) a Sponsorship Agreement made as of April 18, 1994 between Her Majesty the Queen in right of the Province of Ontario as represented by the Chair of the Management Board of Cabinet ("Ontario") and the Ontario Public Service Employees' Union ("OPSEU") (the "Sponsorship Agreement");

(b) an Agreement and Declaration of Trust of the Trust Fund dated October 25, 1994 (the "Trust Agreement"); and

(c) OPTrust Plan text.

Section 56 of the Sponsorship Agreement addresses the use of actuarial gains disclosed under an actuarial valuation report prepared after March 31, 1997. Section 56(d) provides that once the 'Transferred Initial Unfunded Liability' of the OPTrust has been fully liquidated (we understand that it has been liquidated), then actuarial gains disclosed by a valuation of the OPTrust are divided into two equal pools, one of which "…shall be used for the benefit of Ontario, to be applied against any special payments required to be made by Ontario and thereafter to reduce Ontario's normal costs…" and the other pool is to be used by OPSEU for the benefit of Plan Members (section 56(c) of the Sponsorship Agreement). Section 56(d) also anticipates that OPSEU and Ontario may collectively bargain an allocation of gains that is different from 50/50.

The Trust Agreement provides that only the Sponsors (Ontario and OPSEU) may amend the Plan (section 4.02), and further specifies that the plan administrator, i.e. the Board of Trustees of the OPTrust, "…shall have no power to amend either the Plan or this Agreement" (section 4.03). Accordingly, under the Sponsorship Agreement and Trust Agreement, the OPTrust plan administrator has no authority to utilize actuarial gains. Rather, that authority is conferred, by section 56 of the Sponsorship Agreement on the Sponsors, being Ontario and OPSEU. Moreover, the OPTrust Board of Trustees is not able to increase OPTrust benefits using ongoing surpluses, as only the Sponsors of the OPTrust are able to amend the Plan.

II. BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsorred pension plans to jointly sponsored plans in accordance with the *Public Sector Pension Plans Act*, S.B.C. 1999, c.44 (the PSPPA").

KOSKIE MINSKY
JUSTICE MATTERS

A. ***British Columbia Municipal Pension Plan (the "MPP")***

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at

the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan ("PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[1] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed

[1] It is noteworthy that s. 14.2(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the same way as the other BC Plans.

The Partners have the authority (s.14(2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the

administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities.

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario *Pension Benefits Act*, R.S.O. 1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

OPTrust - The OPTrust governing documents also stipulate that it is the Sponsors of the OPTrust, being the Province of Ontario and OPSEU, who have the authority to utilize ongoing Plan surpluses. OPTrust's Board of Trustees, being the OPTrust administrator for purposes of the Ontario PBA, has no authority to utilize ongoing Plan surpluses. Pursuant to section 56(c) of the OPTrust Sponsorship Agreement, ongoing surpluses are divided into two equal pools (although the equal division may be altered through collective bargaining), and each of Ontario and OPSEU may utilize those pools without the agreement of the other party. In other words, Ontario may unilaterally determine the disposition of its pool, and OPSEU may unilaterally determine the disposition of its pool, subject only to Ontario's PBA. Neither OPSEU nor Ontario requires the agreement of the other party in order to utilize its allocated amount of ongoing surplus.

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or

increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations. At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations.

Transitional Period - In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

We trust that these comments have been of assistance to you. Should you have any questions in regard to them, please do not hesitate to contact the undersigned.

Yours truly,

Dear Sirs:

Accounting Treatment of Surplus in the Ontario Teachers' Pension Plan

I. BACKGROUND

We understand the pertinent background facts to be the following:

1. The Ontario Teachers' Pension Plan (the **"OTPP"**) is a jointly-sponsored defined benefit pension plan established under the *Teachers' Pension Act* (Ontario) and is, subject to certain exceptions, required to comply with the *Pension Benefits Act* (Ontario) as well as the *Income Tax Act* (Canada).

2. The sponsors of the OTPP are the Province of Ontario (the **"Province"**) and the Ontario Teachers' Federation (the **"OTF"**) (collectively, the **"Sponsors"**).

3. We understand that as at March 31, 2016 the Province's Statement of Financial Position (the **"Public Accounts"**) includes a pension asset totalling $10.6 billion (the **"Pension Asset"**) related in part to an accounting surplus under the OTPP.[1]

4. The Office of the Auditor General has indicated that because the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and in the absence of that right, because the Province does not have an agreement in place with the OTF as of March 31, 2016 with respect to how the surplus would be utilized such that it would provide a benefit to the Province, the Pension Asset as presented in the Public Accounts should be removed.[2]

You asked us to consider the processes pursuant to which the Province may utilize surplus assets in the OTPP in accordance with the Plan Documentation (as defined below), and to identify any considerations that might inform the expectations of the Province as a Sponsor regarding the basis upon which decisions will be made relating to surplus utilization. We are not providing an opinion on the proper application of the accounting standards to the present situation, as that is an issue for the accountants to address.

II. SCOPE OF OPINION

For the purposes of our opinion, we considered the following documentation (collectively, the **"Plan Documentation"**):

1. The Ontario Teachers' Pension Plan (the **"OTPP"** or **"plan"**);

2. The Agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive (the **"Partners' Agreement"**);

3. The Funding Management Policy (the **"FMP"**), which forms Appendix "A" to the Partners' Agreement; and

4. The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the **"2013 Term Sheet"**) describing the implications of the Freeze Period (as defined below) on the FMP.

---

1 See letter from Bonnie Lysyk (Auditor General) to Greg Orencsak (Deputy Minister, Treasury Board) and Scott Thompson (Deputy Minister, Ministry of Finance), dated September 13, 2016. Part of the surplus relates to another pension plan; we understand that $10.1 billion relates to the OTPP.

2 *Ibid.*

We have also considered the following legislation/regulations:

1. The *Teachers' Pension Act* (Ontario) (the **"Teachers' Act"**); and

2. The *Pension Benefits Act* (Ontario) (the **"PBA"**) and the regulations thereunder (the **"PBR"**).

As per your instructions, we have not evaluated the ability of the Province to benefit from the *withdrawal* of surplus assets from the OTPP (although certain provisions of the FMP cited herein relate to both the withdrawal and other utilization of surplus). Rather, this opinion identifies the processes pursuant to which the Province may receive a financial benefit through the *utilization* of OTPP surplus (e.g., as a result of either a temporary reduction in the Province's contribution obligations (a contribution holiday) or through changes to the contribution formula that reduce the Province's contribution obligations).

We note that the concept of an *accounting* surplus is distinct from surplus identified in a funding valuation prepared in respect of the OTPP (a **"Funding Valuation"**). Where surplus has been identified in a Funding Valuation, the Plan Documentation provides the Sponsors with certain avenues pursuant to which the Funding Valuation surplus can be utilized. Any reference to "surplus" in this opinion, unless expressly stated otherwise, relates to the surplus identified by the actuary for the OTPP in a Funding Valuation and not to the accounting surplus identified in the Public Accounts. We understand that pursuant to the applicable accounting standards, the recognition of part or all of the accounting surplus on the Public Accounts depends on the ability of the Province to benefit from any surplus in the pension fund over the life of plan.

This opinion does not purport to draw any conclusions, express or implied, about the application of the accounting standards to the present circumstances; rather, it is solely intended to provide the Province with information concerning the legal framework governing the utilization of surplus under the OTPP so as to allow the Province's accountants to determine whether a related Pension Asset should appear on the Public Accounts.

III. SUMMARY OF OUR CONCLUSIONS

A brief summary of our material conclusions is set forth below (all capitalized terms are defined herein):

1. Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a

fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

    a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

    b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

    c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

    Notwithstanding the foregoing, under the FMP the Sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the Sponsors to agree upon the manner in which surplus is to be utilized, neither Sponsor has a legally enforceable right to unilaterally utilize surplus in the OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What the Province does have, however, is a right to negotiate with the OTF the use of surplus that may arise under the plan, at least in the context of an actuarial valuation that discloses surplus and that is to be filed with the regulators.

4. Notwithstanding the foregoing, the Plan Documentation and applicable legislation give rise to the following considerations which may shape the Sponsors' expectation as to the basis upon which surplus will be utilized (and potentially lead to an expectation of equal sharing of the benefit of any surplus, at least over time):

    a. The Teachers' Act prohibits the total amount of the contributions payable by the Province (and other participating employers) to exceed the amount of contributions paid by or on behalf of active members in respect of credited service for the year (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund).[3] In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.[4]

    b. The history of surplus utilization after the OTPP became a jointly-sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time. Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the Sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.

    c. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right), and the requirement to negotiate and agree (or in the absence of agreement, arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.

    d. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement may include the obligation to take into account the

---

3 Teachers' Act, subsections 5(1.1), (3) and (7).

4 We note that for the period from January 1, 2008 to December 31, 2008, the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the Year's Maximum Pensionable Earnings ("**YMPE**") (9.6%/11.2% versus 10.4%/12%, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference. See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/10179/20940/-/5e471c2b-23f1-44e6-b5c1-d22e3e50dbc3/How+Contribution+Rates+Have+Evolved.pdf

"sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan.

We note that it is our understanding that it is certainly the Province's expectation that the benefit of any surplus under the plan will in fact be shared equally between the Province and the members, over time.

5. In the event that the Sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, the matter can be submitted to an arbitration board of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

   As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

IV. FRAMEWORK IN THE PLAN DOCUMENTATION FOR SURPLUS UTILIZATION BY THE SPONSORS

1. Joint Sponsorship Plan Design and Cost Sharing

The OTPP qualifies as a "jointly sponsored pension plan" (**"JSPP"**) under the PBA, which has three material implications relevant to the present analysis:

1. Plan Governance – Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan.[5]

2. Funding – The OTPP (and certain other prescribed JSPPs) are exempt from solvency funding requirements under the PBR.[6]

3. Cost Sharing – In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency.[7]

With respect to the cost-sharing principle referred to in #3 above, the Teachers' Act contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

> 5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.

Despite this general principle, under the Teachers' Act the Province is required to make additional contributions to the OTPP fund in the event that there are insufficient assets to make required payments out of the fund in any particular year.[8] The Province is also permitted to make additional contributions in respect of a solvency deficiency[9] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a *cap* on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, we understand that in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and for the majority of periods of time since the

---

5 PBR, subsection 3.1(1).

6 PBR, subsection 1.3.1(3).

7 See PBA, subsection 1(2) and subsection 55(4).

8 Teachers' Act, subsection 5(3).

9 Teachers' Act, subsection 5(7).

inception of the plan in 1917).[10] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Currently, the Sponsors are also required to mutually agree upon how any plan deficits are to be addressed.[11] While not binding upon the Sponsors, the FMP indicates that deficits may be addressed through increases to the contribution rates, lowering the amount of indexation and/or other decreases in benefits.

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under the JSPP plan design, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the FMP requires the Sponsors to negotiate and agree upon decisions relating to surplus utilization. Accordingly, the Sponsors can be said to have equal *opportunity* to benefit from surplus utilization through the negotiation process.

2. Provisions in the Legislation and Plan Documentation Relating to the Utilization of Surplus

(a) *Pension Benefits Act*

While they do address surplus withdrawals (which are not addressed in this opinion), the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act, and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.

(b) *Teachers' Pension Act* (Ontario)

Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a

---

[10] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/10179/20940/-/5e471c2b-23f1-44e6-b5c1-d22e3e50dbc3/How+Contribution+Rates+Have+Evolved.pdf As noted above, for the period from January 1, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.2% versus 10.4%/12%, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.

[11] See, for example, Section 3.09 and 3.11 of the FMP.

fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized.

(c) Partners' Agreement and FMP

While the Partners' Agreement itself does not address the utilization of surplus, the notion that the Sponsors have "agreed to establish a partnership" for the purposes of designing and administering the OTPP and managing the OTPP fund[12] is reinforced throughout the Partners' Agreement. For example, Section 4 of the Partners' Agreement provides that "[t]he partnership established by this agreement is intended to govern all aspects of the plan and the fund..." Similarly, Section 8 of the Partners' Agreement notes that the partners are jointly responsible for "designing the plan structure, setting the benefits of the plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, making changes to the plan, this agreement or other plan documents, deciding whether or not to file a valuation more frequently than required by the *Pension Benefits Act*, appointing the Board, and defining the role of the Board". The expectations of the Sponsors regarding how surpluses are to be utilized are presumably informed by the commitment noted above for the partnership established "to govern all aspects of the plan and the fund".

The procedures pursuant to which surplus may be withdrawn or utilized from the OTPP are identified in the FMP (which forms Appendix "A" to the Partners' Agreement).

We understand that the FMP was first established in March 2003, as a supplement to the Partners' Agreement, to provide a guidance framework to the Sponsors for decision-making when the OTPP has a funding surplus or shortfall. Prior to the creation of the FMP, the OTPP was considered fully funded (and surplus could be utilized, including through permanent benefit improvements) where assets equalled at least 100% of liabilities. The FMP is intentionally conservative through prioritizing the preservation of assets until a sufficient surplus "cushion" has been built to justify the utilization of surplus for contribution reductions or benefit improvements.

The FMP contemplates five "funding zones", each defined by a range. These funding zones provide the Sponsors with guidance as to when, based upon the funding level of the plan, it may be appropriate to (amongst other things) increase or decrease benefits, raise or lower contribution rates or conserve assets. The Sponsors always have the discretion, however, to agree to pursue a course of action that is not expressly provided for in the

---

[12] Partners' Agreement, section 1.

FMP. As will be discussed below, the ultimate discretion of the Sponsors is reflected throughout various provisions of the FMP.[13]

In the context of plan surpluses, three funding zones are of relevance, each of which is discussed below in greater detail.

(i) Restoration Zone

Article III of the FMP (Funding Zone – Restoration) (the **"Restoration Zone"**) is the "fully funded" zone where assets equal at least the liabilities, determined on the basis set out in the FMP. It is our understanding that the OTPP is currently in the Restoration Zone.

In the Restoration Zone, benefits cannot be improved and contributions cannot be reduced until certain actions are taken to restore past benefit reductions or past contribution increases. In this regard, Section 3.06 of the FMP provides the following:

> Section 3.06 *Application of Restoration Basis Excess*: For purposes of clarity, excesses identified pursuant to Section 3.05 shall be applied in the following order, provided that the partners reserve the right to reconsider such application having regard to the contribution rate and benefits then in effect, prevailing economic circumstances and other relevant factors:
>
> (a) *Bring Escalated Adjustments to 50% for Post-2013 Service*: to provide escalated adjustments up to 50% of the CPI adjustment in respect of service accrued after 2013 for the period covered by the valuation, and assumed thereafter at the same rate;
>
> (b) *Bring Escalated Adjustments to 100%*: to provide escalated adjustments up to 100% of the CPI adjustment for the period covered by the valuation, and assumed thereafter at the same rate;
>
> (c) *Restore Escalated Adjustments for Post-2013 Years*: to provide escalated adjustments to increase, to the extent possible, the current accumulated adjustment ratio for each year after 2013, to the current accumulated adjustment ratio for the period from 2010 to 2013, beginning with the first year in which current escalated adjustments were less than 50% of the run-rate escalated adjustments;
>
> (d) *Restore Escalated Adjustments for Post-2009 Years*: to provide escalated adjustments to increase, to the extent possible, the current

[13] See, for example, the opening words of Section 3.06 of the FMP, which section provides for various uses of surplus: "... provided that the partners reserve the right to reconsider such application having regard to the contribution rate and benefits then in effect, prevailing economic circumstances and other relevant factors". See also Section 4.05 and 5.05.

> accumulated adjustment ratio for each year after 2009 to the run-rate accumulated adjustment ratio, beginning with the first year in which current escalated adjustments were less than run-rate escalated adjustments;
>
> (e) *Provide Benefit Increases or Contribution Rate Reductions*: to provide the following:
>
> (i) an increase in benefits, where the present value of current benefits is less than the present value of run-rate benefits,
> (ii) a reduction in contribution rates, where the present value of current contributions exceeds the present value of basic contributions, or
> (iii) a combination of (i) and (ii).

In summary, the Restoration Zone allows for surplus to be utilized to "restore" foregone indexation (Sections 3.06(a)-(d))[14] and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions to the basic target rate (or a combination of these two options) (Section 3.06(e)). While the FMP contemplates that the actions will typically be taken sequentially (i.e., starting with Section 3.06(a) and ending with the actions in Section 3.06(e)), the Sponsors are required to first agree to the actions taken under Section 3.06 and have the discretion to apply the actions in a different order or to take different action (or to take no action to utilize the surplus).[15]

As noted, under Section 3.06(e), surplus can be utilized to reduce contribution rates "where the present value of current contributions exceed the present value of basic contributions" (the **"Restoration Contribution Reduction"**). We understand that in 2001 the Sponsors agreed to a 1.1% increase to both member/employer contributions (phased in over a three year period) to address a funding deficit in the OTPP and that the Restoration Contribution Reduction under Section 3.06(e) would permit these additional contributions to be eliminated, thus restoring contributions to the "basic" level.

The 2013 Term Sheet sets out an agreement between the Sponsors that is in effect from December 31, 2012 to December 30, 2017 (the **"Freeze Period"**), the terms of which are reflected in the FMP. Under Section 3.08 of the FMP, there are certain limits (relating to

---

[14] This is achieved by first increasing go-forward indexing to 50% for the post-2013 service period, then to 100% on all post-2009 service periods and next, by restoring current pension amounts to a certain prescribed level starting with the years where indexing was less than 50% until all years of partial indexation are restored to the same level and then by restoring indexation to 100% for all service periods.

[15] As noted above, pursuant to Section 3.06 of the FMP, "the partners reserve the right to reconsider such application having regard to the contribution rate and benefits then in effect, prevailing economic circumstances and other relevant factors…"

the funded status of the OTPP) on the ability to make escalated adjustments or to improve benefits pursuant to Section 3.06 during the Freeze Period.

As noted below, no action can be taken under the Temporary Improvement Zone (as defined below) or the Permanent Improvement Zone (as defined below) until all restorative actions under Section 3.06 of the FMP have been provided for (subject to the general discretion of the Sponsors to deviate from the guidelines set out in the FMP).

(ii) Temporary Improvement Zone

Article IV of the FMP (Funding Zone – Temporary Improvements) (the **"Temporary Improvement Zone"**) was added to the FMP in March 2015 and allows for: (i) temporary contribution decreases (a contribution holiday), (ii) surplus distribution, and/or (iii) benefit improvements, provided in each case that the plan's funding level reaches thresholds set out in the FMP.

We understand that in this zone the plan is considered well-funded and able to afford temporary changes, so long as they do not increase the long-term cost of the OTPP. Surplus cannot be utilized under the Temporary Improvement Zone until the Sponsors have provided for all of the changes specified in Section 3.06 of the Restoration Zone (again, subject to the general discretion of the Sponsors to deviate from the guidelines set out in the FMP).[16]

In all cases the Sponsors' prior agreement is required in order for there to be a temporary contribution decrease, a surplus distribution or a benefit improvement.[17] Where the Sponsors agree to a change that would result in surplus being distributed or utilized for a temporary benefit improvement, the Sponsors are required to enter into a written agreement "governing the manner in which the contributions by the Minister and employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities."[18] We understand that this provision is a recognition of the partnership of the Province and the OTF, and requires the Sponsors to enter into an agreement addressing the possible value to be obtained by the Province where there is a decision to provide value to the members (but the provision is not a guarantee that such value will in fact be provided to the Province).

We note that, as a temporary measure, the OTF has "first call" rights on 100% of the surplus disclosed in valuation report with a valuation date after December 30, 2017, up to

---

16 FMP, section 4.03

17 FMP, section 4.05.

18 FMP, section 4.06

certain amounts as set out in the FMP (the **"OTF Call Right"**).[19] The 2013 Term Sheet indicates that "[t]his is a one-time arrangement intended to compensate Plan members for absorbing 100% (rather than 50%) of funding shortfalls arising in the government initiated Freeze Period." In other words, this one-time opportunity to benefit from surplus utilization is directly linked to the asymmetrical assumption of risk by OTPP plan participants during the Freeze Period. In light of the Freeze Period and the OTF Call Right, it is our understanding that no actions under the Temporary Improvement Zone will be permitted until the Freeze Period has ended and the OTF Call Right in Article VI of the FMP has been satisfied.[20]

To summarize, the OTF has a contractual right to the future utilization of surplus, up to the value of the OTF Call Right. OTF cannot utilize any surplus available in the OTPP under this negotiated right until the Freeze Period has ended (on December 30, 2017) and a valuation after such date identifies the existence of surplus available for utilization. In light of this negotiated right, surplus cannot be utilized under the Temporary Improvement Zone or the Permanent Improvement Zone (e.g., to cause a temporary or permanent reduction to contributions) until the OTF Call Right has first been satisfied. Once the OTF Call Right has been satisfied, the *status quo* under the FMP will be restored (i.e., the agreement of the parties will be required for any utilization of surplus). In other words, the OTF Call Right reflects a "one-time" agreement and is expressly "without prejudice or precedent for any future situation".[21] It is our understanding that the quantum of the OTF Call Right is not presently expected to be material.

(iii) Permanent Improvement Zone

Where the surplus reaches certain levels as set out in the FMP, Article V of the FMP (Funding Zone – Permanent Improvements) (the **"Permanent Improvement Zone"**) will apply. We understand that in the Permanent Improvement Zone adequate funding security is considered to exist to support permanent changes (either an improvement in benefits or a reduction in contributions).

Under the FMP framework, these changes can be introduced only once the Sponsors have already provided for the changes specified in Section 3.06 (i.e., no further action to restore benefits remains to be taken under the Restoration Zone), subject to the general discretion of the Sponsors to deviate from the guidelines set out in the FMP.[22]

---

19 FMP, section 6.03.

20 See FMP, subsection 1.05(f) and sections 4.05 and 4.09.

21 2013 Term Sheet, paragraph 11(d).

22 FMP, section 5.03.

The Sponsors are required to mutually agree to any change made in the Permanent Improvement Zone. As in the Temporary Improvement Zone, where the Sponsors have agreed to a change which would result in an improvement to member benefits, the Sponsors would be required to enter into a written agreement "governing the manner in which the contributions by the Minister and employers may be adjusted to offset any change in current benefits that is reflected in the value of the liabilities."[23]

In light of the Freeze Period and the OTF Call Right, it is our understanding that no actions under the Permanent Improvement Zone will be permitted until the Freeze Period has ended and the OTF Call Right in Article VI of the FMP has been satisfied.[24]

3. History of Surplus Utilization

The history of OTPP surplus utilization from the time the OTPP became a jointly-sponsored pension plan[25] to the date that the FMP was established (in March 2003) demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0

[23] FMP, section 5.05(b).

[24] See FMP, sections 5.05 and 5.08.

[25] The Partners' Agreement is dated July 15, 1991.

1999	$3.5 billion	N/A	$3.5 billion to reduce the value of remaining special payments	$0
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		**$9.3 Billion**	**$9.3 Billion**	

* Source: Ontario Teachers' Pension Plan Board "Report on Funding" (April 2002)

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the Sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).[26]

As noted above, the FMP was introduced in March 2003 to provide a guidance framework to the Sponsors when the OTPP has a funding surplus or shortfall. It is our understanding that there have been at least 2 material amendments to the FMP framework since its introduction. Below is a summary of the key funding decisions since the introduction of the FMP:

Year	**Valuation Status and Key Decisions**
2003	$1.5 billion surplus; no changes to benefits or contribution levels. Funding Management Policy adopted by plan sponsors.
2005	A preliminary $6.1 billion shortfall was resolved, leaving plan with a $0.1 billion surplus. Shortfall resolved with special contribution rate increases, totalling 3.1% of base earnings by

[26] See Ontario Teachers' Pension Plan, "Key Funding Decisions Since 1990", available at: https://www.otpp.com/documents/10179/765840/-/d4e2fea5-624d-420f-af15-e2daf9bc2711/Key+Funding+Decisions.pdf

	2009 for teachers, the Ontario government and other employers. OTF used the $76 million contingency reserve set aside in 2001 to reduce contribution rate increases for members in 2008.
2008	A preliminary $12.7 billion shortfall was resolved with the introduction of conditional inflation protection for pension benefits earned after 2009 and an increase in the basic contribution rate for members and the government to 9% from 8%. Employers agree to make special payments equal to any annual pension increases retirees forgo to a maximum of 50% missed inflation.
2009	A preliminary $2.5 billion shortfall was resolved primarily by assuming a slightly higher long-term rate of return on investments: yield on real-return bonds plus 1.5%, versus real-return bonds plus 1.4%. Other minor changes made to assumptions to reflect recent plan experience.
2011	A preliminary $17.2 billion shortfall was resolved with a 1.1% contribution rate increase (phased in over three years), slightly smaller annual cost-of-living increases for teachers who retired after 2009, and recognition of current contribution rate as the permanent base rate.
2012	$9.6 billion preliminary shortfall adjusted to reflect changes in mortality assumptions and impact of two-year freeze on teachers' salaries. 2012 shortfall resolved by making inflation protection for pension credit earned after 2013 fully conditional on plan's funded status and providing slightly smaller pension increases, beginning in 2014, for members who retired after 2009. These changes enabled the plan to assume a slightly higher discount rate. The changes left the plan with a $200 million surplus at Jan. 1, 2012.
2014	$5.1 billion preliminary funding surplus used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided each year since they retired. The surplus funds were also used to raise conditional inflation protection to 60% of the increase in the cost of living for the portion of retirees' pensions earned after 2009. Both changes are effective with January 2015 pension payments.
2015	Some of the $6.8 billion preliminary funding surplus was used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided on January 1, 2015. The surplus funds were also used to raise conditional inflation protection for pension credit earned after 2009 to 70% from 60% of the increase in the cost of living. Both changes were effective January 2016. In addition, some surplus funds were reserved to help facilitate stability in contribution and benefit levels should a future funding valuation show a decline in assets or increase in pension costs.

* Source: Ontario Teachers' Pension Plan, "Key Funding Decisions Since 1990"

In September 2016, the Sponsors announced that a portion of the $13.2 billion in funding surplus would be utilized to restore inflation increases, with the remaining surplus funds

to be reserved "to help facilitate stability in contribution and benefit levels should a future funding valuation show a decline in assets or increase in pension costs".[27]

In summary, surplus has been utilized three times since the FMP was introduced – in each of 2014, 2015 and 2016 escalated adjustments were provided to increase the pensions of members who had retired after 2009. As noted above, the OTPP is currently in the Restoration Zone which, pursuant to Section 3.06, prioritizes the utilization of surplus to "restore" foregone indexation before any other actions are taken with respect to surplus. In other words, since the FMP was established the OTPP has not reached a level of surplus under the FMP which would allow for the Sponsors to enter into an agreement regarding its utilization under the Temporary Improvement Zone or the Permanent Improvement Zone.

It is also notable that, consistent with the 50/50 cost sharing principle under the plan, there is recent precedent for the Sponsors agreeing to equally share in the cost of funding a plan deficit (as with the case of surplus utilization, the Sponsors are required to mutually agree upon how to address any funding deficit in the OTPP). Specifically, the preliminary $17.2 billion shortfall identified in 2011 was resolved through a 1.1% increase to the contribution rate for both the participating employers and plan members (phased in over a three-year period).

Given the historical use of surplus under joint sponsorship of the OTPP prior to the adoption of the FMP, and the fact that over that time the Sponsors shared equally in surpluses, it may be that the Sponsors will expect to also share future surpluses on an equal basis, at least over time (we understand that it is certainly the Province's expectation that this will happen). In any event, based on the Plan Documentation, both parties will have an equal opportunity to benefit from surplus utilization through the negotiation process.

V. LEGAL RIGHT OF THE PROVINCE TO UNILATERALLY UTILIZE SURPLUS

As discussed in Part IV of this opinion, the Plan Documentation allows for the Sponsors to agree to utilize surplus in a variety of circumstances, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may potentially receive a financial benefit through the utilization of surplus:

---

27 Ontario Teachers' Pension Plan, "Funding News", available at: https://www.otpp.com/corporate/plan-funding/funding-updates. We assume that a written agreement was reached by the Sponsors in this regard; however, we have not been provided with a copy of such agreement.

1. In the Restoration Zone, a Restoration Contribution Reduction may be agreed upon, once certain other requisite conditions have been met.

2. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

3. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, as noted above, the Sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner agreed upon. (For example, Section 5.05 which relates to the Permanent Improvement Zone provides that "the partners may apply all or part of the [surplus] to change current benefits, current contributions, or both", subject to certain conditions.)

Any enforceable legal right of the Province to utilize surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract, the Partners' Agreement and the appended FMP being a contract between the Sponsors. A contract is an agreement "...which gives rise to an obligation that may be enforced in the courts."[28] It is our view that the relevant provisions in the Partners' Agreement[29] that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus do not, by themselves, give rise to a legally enforceable right to unilaterally dictate the use of surplus. Such a legally enforceable right would only arise by agreement between the Sponsors, either through negotiations or mediation, or if an order were issued by a board of arbitration as contemplated by the dispute resolution mechanisms found in the Partners' Agreement (see Section VI of this Opinion for further discussion of the impact of binding arbitration on the Sponsors' legal rights).

In this regard, the FMP can be thought of as being similar to an "agreement to agree," which does not create an enforceable legal interest in relation to the utilization of surplus.[30] What the Province does have, however, is a right to negotiate with the OTF the

---

28 CED – Contracts – I Basis of Contract – 1 – Contract Defined.

29 Article III, Section 3.06; Article IV, Section 4.05; and Article V, Section 5.05.

30 For a statement of the principle that an "agreement to "agree" is not an enforceable legal interest, see, for example: *Simpson v. Canada (Attorney General)*, 2011 ONSC 5637 at para. 60 citing *Ward v. Ward*, 2011 ONCA 178 and *Bawitko Investments Ltd. v. Kernels Popcorn Ltd.*, 1991 CanLII 2734 (Ont CA). See also G. H. L. Fridman, *The Law of Contract in Canada*, 6th ed (Toronto: Carswell

use of surplus that may arise under the plan, at least in the context of an actuarial valuation that discloses surplus and that is to be filed with the regulators.

In addition, when a valuation is prepared to be filed and the Sponsors have to discuss the treatment of a surplus disclosed in the valuation, section 74 of the Partners' Agreement requires the Sponsors "to bargain in good faith and make every reasonable effort to reach an agreement on the changes, if any, that will be made to the plan". One might therefore argue that that obligation of good faith may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan.

As will be discussed below, where the Sponsors are unable to agree upon the utilization of surplus pursuant to the negotiation/mediation processes set forth in the Partners' Agreement, there is an ability for the Sponsors to submit the matter to arbitration. The issuance of an order by an appointed board of arbitration regarding the use of surplus funds under the OTPP would create a legally enforceable right, as the submission to the board of arbitration would constitute a proceeding under the *Arbitrations Act* – as specified in paragraph 87 of the Partners' Agreement – that is enforceable by a court.[31]

VI. IMPACT OF BINDING ARBITRATION ON THE SPONSORS' LEGAL RIGHTS

Section 8.01 of the FMP provides the following:

> Section 8.01 Unless the partners mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

We first note that the mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the Sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the Sponsors do not agree to file the valuation, then the Sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

The processes in paragraphs 74 to 100 of the Partners' Agreement that are referred to in Section 8.01 of the FMP provide, amongst other things, for the following:

Publishing, 2011) at 23 where the author states "There cannot be a contract to enter into a contract. Nor can there be a contract to negotiate, i.e., an agreement to agree."

[31] Section 50(1) of the *Arbitration Act, 1991*, SO 1991, c 17 states "A person who is entitled to enforcement of an award made in Ontario or elsewhere in Canada may make an application to the court to that effect."

- The Sponsors are required to meet to bargain in good faith and make every reasonable effort to reach an agreement on the changes, if any, that will be made to the plan (section 74);

- The parties may at any point appoint a mediator by agreement of the parties or by a method to which they agree at that time (section 77);

- If the parties agree, the mediator may be appointed as a mediator/arbitrator in which case the appointee will decide on the process and time frame for conducting mediation/arbitration (section 80);

- Within 30 days of appointment, the mediator will prepare a confidential report setting out his or her views on the positions of the two partners and containing a recommendation (section 82);

- If the partners do not accept the report within 14 days of its being delivered to them it will be destroyed and an arbitration board will be appointed (section 84);

- This agreement together with a referral to a board of arbitration constitutes a submission under the *Arbitration Act, 1991*[32] (section 87);

- The board of arbitration in making an award will consider prevailing economic conditions and the overall state of the provincial economy (section 91);

- The award made by the board of arbitration, must comply with certain prescribed requirements, including to "provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members" (section 92(c));

- The Board will prepare a final valuation of the plan which implements all of the changes to the plan which have been awarded or agreed to by the partners (section 94);

- The Sponsors may agree to change the procedure described in this agreement, either for one round of negotiations or for all future negotiations; and

- Pursuant to Section 8.02 of the FMP, certain limitations on amendments set out in the FMP also apply to an award made by a board of arbitration (generally, these limitations are intended to ensure that the plan is adequately funded after providing for the utilization of surplus).

---

32 SO 1991, c. 17 (the "***Arbitration Act***").

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners' Agreement provides for the possibility of voluntary arbitration. We are not aware of any instance where the arbitration provisions have been invoked by the parties since the FMP was established. It is not immediately clear whether disputes relating to the utilization of surplus under Article IV of the FMP (i.e., the Temporary Improvement Zone) and under Article V of the FMP (i.e., the Permanent Improvement Zone) would be subject to arbitration.[33] It is our understanding from discussions with OTPP's internal legal counsel, however, that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction.[34] The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the *Arbitration Act*). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners'

---

[33] On the one hand, Section 8.01 of the FMP provides for the procedures in the Partners' Agreement relating to arbitration to apply "when determining the plan changes arising from Section 3.07". This may suggest that only disputes relating to the utilization of surplus under Article III (i.e., the Restoration Zone) can be arbitrated. On the other hand, Section 8.03 of the FMP provides that "Subject to the 2013 Term Sheet, nothing in Article II to Article IX affects the timing of the triennial negotiation, mediation and arbitration process referred to in paragraph 72 to 100", which may suggest that any agreement relating to the utilization of surplus, including under Article IV or Article V of the FMP, may be subject to arbitration (when a valuation is to be filed the parties have to agree on how any surplus – including surplus in the Temporary Improvement Zone and Permanent Improvement Zone, if any – will be used).

[34] See for example: *Desputeaux v. Éditions Chouette* (1987) Inc., [2003] 1 SCR 178, para. 22.

Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Yours truly,

Osler, Hoskin & Harcourt LLP

Hi Lucy.

As discussed, the attached version of the paper outline includes proposed section allocations. Please let me know if any of the notes are inconsistent with your understanding.

Thanks and have a wonderful Thanksgiving weekend!

Nadine

Outline of position paper proposed alloations Oct 7.pdf

Outline of position paper

Background Summary of facts relevant to plan, incorporating: • Facts in Deloitte opinion • Facts in Oslers opinion • Facts in Koskie Minsky opinion Summary of build-up of accounting asset since 2001-02, including components -- current service cost, interest on obligation, expected interest on assets; also include economic assumptions used each year and explanation of market related value impact (may need to include an explanation of the accounting for a JSPP) • Pauline has all of this information • Summary of the difference between OTPP's f/s, the funding valuation and the government's accounting • Commentary on discount rate differences, OTPP as an outlier re: use of corporate borrowing rate (Pauline has an analysis), and whether there is any interaction between the various valuations of the projected benefit obligation	Jim Keates with input from Pauline Fong
Accounting Analysis Question 1 – Recognition What standard governs the recognition of a pension asset? Views a. PS 3250 o PS 3250 contemplates the existence of an asset, 50-59 are measurement standards which would only be needed if an asset exists o PS 3250 was developed based on the existing conceptual framework – e.g. developed in the context of the current definition of an asset b. Go beyond 3250 • Shared control i. Used in definition of a joint defined benefit plan ii. Set up of criteria for government partnership has parallels to definition of joint defined benefit plan iii. Consider consultation with PSAB – what was considered when PS 3250 was developed (developed after government partnerships); what is meant by footnote 3 in PS 3060; if 3250 was meant to be excluded from 3060 why wasn't it listed as a scope exclusion [Note – Stephenie Fox at CPA Canada was the project manager on PS 3250] iv. Contrast the governance framework of the Ontario plans (OTTP and OPSEUPP) to the BC plans (Koskie Minsky) and NB plans

DRAFT

Outline of position paper

c. Go beyond 3250 • Control i. One of the criteria to meet the definition of an asset ii. Does control have to be unilateral iii. What other assets are recognized based on an expected future benefit • Income taxes – don't control generating future income • Regulatory assets -- don't control decision of regulator • Others? iv. What does the profile of recognition look like if no asset is recognized until you have an agreement with the co-sponsor d. Go beyond 3250 • Contingent asset i. Assess definition and criteria of a contingent asset Conclusion re: recognition	
Question 2 – Measurement Is uncertainty factored into the calculation or does uncertainty have to be eliminated to have a valuation allowance of less than the value of the asset? a. Uncertainty is factored into the calculation • Number of factors articulated in Deloitte opinion to consider i. Structure of agreements re: shared decision making ii. History of decisions made iii. Impact of "share-the-pain" payments iv. CRA cap v. Impact of improving benefits vs. reducing contributions b. Uncertainty has to be NIL to recognize an asset • Analogy to receivable • Assume contributions at the current level continue into perpetuity in the absence of another agreement with the co-sponsor • How does an asset get recognized under this model – e.g. what is impact on the model • c. Other factors • Benefit realization (surplus withdrawal vs. contribution reductions vs. fungibility of compensation-related benefits • Impact of benefit improvement to use of surplus and obligation PV Conclusion re: measurement	
Need to ensure that all of AG's views are incorporated into the position paper,

PWC SOW Pensions Accounting Opinion 20160915 clean v2 to Lucy.pdf

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective September 16, 2016.

PricewaterhouseCoopers LLP (the "Vendor" or "PwC") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client" or the "Province") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of March 22, 2016 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$100,000.00, excluding HST.

4. *Project Start Date:* September 16, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide accounting advice (the "accounting advisory services") regarding the acceptability of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards. The accounting advice may include:

   - Review of background information, position papers developed by the Client or third parties that have been engaged by the Client to draft accounting positions on accounting for the recognition and measurement of pension assets for jointly-sponsored pension plans, and other supporting information.
   - Provide written or oral comments on draft position papers as provided by the Client with respect to the application of Canadian Public Sector Accounting Standards.
   - Participation in discussions with internal and external stakeholders and other parties as directed by the Client.

   During the course of this project, the Client will provide to PwC a written statement of all relevant facts and assumptions, and a description of the circumstances and the nature of any relevant disagreements with the Client's auditor. If an accounting opinion is to be provided, the Client's auditor will confirm to us in writing that the information the Client

has provided to PwC is complete and consistent with their knowledge of the facts and circumstances of the specific transaction.

If requested to by the Client during the course of the project, the Vendor shall provide an accounting opinion (the "accounting opinion"), prepared in accordance with Section 7600, *Reports on the application of accounting principles* of the CPA Canada Handbook – Assurance ("Section 7600"), regarding the appropriateness of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards.

Vendor may be required to participate in meetings with the Client and other stakeholders, and to support the Client with respect to the Vendor's accounting advice or accounting opinion (if applicable), including discussions with the Office of the Auditor General.

The Client agrees that any accounting advisory services are solely for the information and use of the Client. Subject to the obligations in Article 27 (Privacy) of the Master Agreement and as required by law by the Client's independent auditors, the Client agrees that any written work product of PwC will not be made available to any other persons or entities. An accounting opinion prepared in accordance with Section 7600 will, in compliance with Canadian GAAS, include restriction of use language identifying the parties to whom use is restricted and a statement that the report is not intended to be and should not be used by anyone other than the specified parties or for any other purposes. However the Client may provide access to PwC's observations and an accounting opinion prepared under Section 7600 (if applicable) to the Client's independent auditors solely for their informational purposes. Except as provided for in the preceding sentence, the Client agrees to seek and obtain the Vendor's written consent before including our accounting opinion (if applicable) or referring to the Vendor in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent. The Client agrees that prior to or as part of providing their independent auditors with any written work product of PwC, including an accounting opinion prepared under Section 7600, the Client will notify its independent auditors that it is PwC's desire to be notified of, and to consent to, the disclosure of any PwC written work product or reference to any PWC work product in any materials to be disclosed to third parties. PwC agrees that the Client's obligation is only to notify its independent auditors of PwC's desire to be notified about, and to consent to, disclosure, and that the Client is not making any representation or warranty that its independent auditors will notify PwC or seek PwC's consent.

Acknowledgements and agreements

The Client acknowledges and agrees to the following:

a. The performance of the accounting advisory services does not constitute an engagement to provide audit, compilation, review or attest services in accordance with professional standards issued by the Chartered Professional Accountants of Canada ("CPA Canada") and, therefore, PwC will not express an opinion or any other form of assurance with respect to the accounting advisory services.
b. The accounting advisory services and accounting opinion (if applicable) to be provided do not include the delivery of any verbal or written advice on the application of accounting principles to a hypothetical transaction.
c. This engagement cannot be relied on to disclose internal control deficiencies, errors or fraud, should they exist.

d. PwC has no responsibility for updating the accounting advisory services or accounting opinion or for performing any additional services, except as agreed to in writing with the Client.
e. The Client's purpose for engaging PwC to perform the accounting advisory services is to supplement management's own technical accounting resources in performing accounting analysis and to assist management in making its determination as to the application of accounting principles and not to obtain an opinion from PwC as to such application, unless an accounting opinion is requested by the Client.
f. The Client shall be solely responsible for, among other things: (a) making all management decisions and performing all management functions; (b) designating one or more individuals who possess suitable skill, knowledge and/or experience, preferably within senior management to oversee the accounting advisory services (c) evaluating the adequacy and results of the accounting advisory services; (d) accepting responsibility for the results of the accounting advisory services; and (e) establishing and maintaining internal controls, including, without limitation, monitoring ongoing activities.
g. All management decisions and final conclusions reached in connection with the accounting advisory services will be the responsibility of the Client. PwC will not perform any management functions, make management decisions, or perform in a capacity equivalent to that of an employee of the Client.
h. PwC has no responsibility related to the Client's accounting or disclosure conclusions, whether or not such conclusions of the Client are related to the accounting advisory services and PwC has no responsibility for any disagreements between the Client and its independent auditor related to the Client's accounting.
i. The Client will be solely responsible for all decisions regarding the accounting treatment of any item or transaction and acknowledges that the accounting advisory services do not include the recording of any amounts in the Client's books or records. All amounts derived from the performance of the accounting advisory services will be reviewed and approved by, and will be the responsibility of, the Client's management.
j. The nature, scope and design of the accounting advisory services and the accounting opinion are solely the responsibility of the Client. PwC will rely, without independent verification, on the facts, information and assumptions provided by the Client. PwC will make no representation nor provide any assurance with respect to the adequacy of the services for the Client's purposes. Furthermore, PwC has no responsibility to advise the Client of other procedures that might be performed.
k. The Client will be solely responsible for providing accurate and complete information requested by PwC. PwC has no responsibility for the accuracy or completeness of the information provided by or on behalf of the client.
l. PwC's accounting and technical assistance will be based on the existing public sector generally accepted accounting principles. Should those generally accepted accounting principles be amended, superseded or revised in any manner, PwC's advice might change. PwC has no responsibility to inform the Client of any changes in generally accepted accounting principles that may occur after the completion of the engagement or any other oral or written work product prepared hereunder that would impact PwC's advice on the appropriate application of generally accepted accounting principles or to update its recommendations or any other oral or written work produce to take any such changes into account.
m. This engagement does not create a relationship between PwC and any person or party other than the Client. This engagement is not intended for the express of implied benefit of any third party.

n. The Client will identify an appropriate individual to serve as the project manager, including overseeing the accounting advisory services.

7. *Ownership and Licences* - **Attachment D** of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* - The structure of Vendor's working relationship with OPCD is vital to the success of their engagement. Vendor's main point of contact will be Lucy Durocher who is the engagement leader.

9. *Work Location* - All meetings will be within the Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive. If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Charges On Per Diem Rate Basis*– The Vendor and the Client agree that Work performed under this Statement of Work will be charged on a Per Diem Rate basis. The Per Diem Rate will vary, based on the nature of the final deliverable, as follows:

Nature of final deliverable	Per Diem Rate	Service Category	Estimated hours	Per Diem Rate
Accounting Advisory	General Consultant, Level 2	Service Category 2	20-25	$390/hour
Accounting Opinion	General Consultant, Level 2	Service Category 2	30-35	$990/hour

13. *Billing and Payment Process* – The Vendor shall invoice the Client in accordance with the requirements of the Master Agreement. Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Individual's Legal Name	Individual's Role and Experience Level	Service Category	Per Diem Rate
Lucy Durocher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Martin Boucher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Sean Cable (or alternative as agreed to by the Client)	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"
Michael Walke	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"

14. **Invoices** - Invoices for payment of any charges under this Statement of Work shall be sent to:

Client: Treasury Board Secretariat,
Office of the Provincial Controller Division
Branch: Accounting Policy and Financial Reporting

Representative:	Nadine Petsche
Title:	Director, Accounting Policy and Financial Reporting
Phone number:	416-325-8027
Email:	Nadine.petsche@ontario.ca

15. *Knowledge Transfer:* The Vendor will work closely with the Client to ensure knowledge transfer to the Clients designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* - The Vendor shall destroy all Confidential information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	**Treasury Board Secretariat**
Client Representative:	**Nadine Petsche**
Telephone number:	**416-325-8027**
E-mail:	**Nadine.petsche@ontario.ca**

18. *Vendor Representative and Receipt of Notices*

Vendor's address for receipt of notices:	**PricewaterhouseCoopers LLP, PwC Tower, 18 York Street, Suite 2600, Toronto ON M5J 0B2**
Vendor Representative:	**Lucy Durocher**
Telephone number:	**416-869-2311**

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective September 16, 2016.

PricewaterhouseCoopers LLP (the "Vendor" or "PwC") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client" or the "Province") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of March 22, 2016 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$100,000.00, excluding HST.

4. *Project Start Date:* September 16, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide accounting advice (the "accounting advisory services") regarding the acceptability of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards. The accounting advice may include:

   - Review of background information, position papers developed by the Client or third parties that have been engaged by the Client to draft accounting positions on accounting for the recognition and measurement of pension assets for jointly-sponsored pension plans, and other supporting information.
   - Provide written or oral comments on draft position papers as provided by the Client with respect to the application of Canadian Public Sector Accounting Standards.
   - Participation in discussions with internal and external stakeholders and other parties as directed by the Client.

   During the course of this project, the Client will provide to PwC a written statement of all relevant facts and assumptions, and a description of the circumstances and the nature of any relevant disagreements with the Client's auditor. If an accounting opinion is to be provided, the Client's auditor will confirm to us in writing that the information the Client

has provided to PwC is complete and consistent with their knowledge of the facts and circumstances of the specific transaction.

If requested to by the Client during the course of the project, the Vendor shall provide an accounting opinion (the "accounting opinion"), prepared in accordance with Section 7600, *Reports on the application of accounting principles* of the CPA Canada Handbook – Assurance ("Section 7600"), regarding the appropriateness of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards.

Vendor may be required to participate in meetings with the Client and other stakeholders, and to support the Client with respect to the Vendor's accounting advice or accounting opinion (if applicable), including discussions with the Office of the Auditor General.

The Client agrees that any accounting advisory services are solely for the information and use of the Client. Subject to the obligations in Article 27 (Privacy) of the Master Agreement and as required by law by the Client's independent auditors, the Client agrees that any written work product of PwC will not be made available to any other persons or entities. An accounting opinion prepared in accordance with Section 7600 will, in compliance with Canadian GAAS, include restriction of use language identifying the parties to whom use is restricted and a statement that the report is not intended to be and should not be used by anyone other than the specified parties or for any other purposes. However the Client may provide access to PwC's observations and an accounting opinion prepared under Section 7600 (if applicable) to the Client's independent auditors solely for their informational purposes. Except as provided for in the preceding sentence, the Client agrees to seek and obtain the Vendor's written consent before including our accounting opinion (if applicable) or referring to the Vendor in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent. The Client agrees that prior to or as part of providing their independent auditors with any written work product of PwC, including an accounting opinion prepared under Section 7600, the Client will notify its independent auditors that it is PwC's desire to be notified of, and to consent to, the disclosure of any PwC written work product or reference to any PWC work product in any materials to be disclosed to third parties. PwC agrees that the Client's obligation is only to notify its independent auditors of PwC's desire to be notified about, and to consent to, disclosure, and that the Client is not making any representation or warranty that its independent auditors will notify PwC or seek PwC's consent.

Acknowledgements and agreements

The Client acknowledges and agrees to the following:

a. The performance of the accounting advisory services does not constitute an engagement to provide audit, compilation, review or attest services in accordance with professional standards issued by the Chartered Professional Accountants of Canada ("CPA Canada") and, therefore, PwC will not express an opinion or any other form of assurance with respect to the accounting advisory services.
b. The accounting advisory services and accounting opinion (if applicable) to be provided do not include the delivery of any verbal or written advice on the application of accounting principles to a hypothetical transaction.
c. This engagement cannot be relied on to disclose internal control deficiencies, errors or fraud, should they exist.

d. PwC has no responsibility for updating the accounting advisory services or accounting opinion or for performing any additional services, except as agreed to in writing with the Client.
e. The Client's purpose for engaging PwC to perform the accounting advisory services is to supplement management's own technical accounting resources in performing accounting analysis and to assist management in making its determination as to the application of accounting principles and not to obtain an opinion from PwC as to such application, unless an accounting opinion is requested by the Client.
f. The Client shall be solely responsible for, among other things: (a) making all management decisions and performing all management functions; (b) designating one or more individuals who possess suitable skill, knowledge and/or experience, preferably within senior management to oversee the accounting advisory services (c) evaluating the adequacy and results of the accounting advisory services; (d) accepting responsibility for the results of the accounting advisory services; and (e) establishing and maintaining internal controls, including, without limitation, monitoring ongoing activities.
g. All management decisions and final conclusions reached in connection with the accounting advisory services will be the responsibility of the Client. PwC will not perform any management functions, make management decisions, or perform in a capacity equivalent to that of an employee of the Client.
h. PwC has no responsibility related to the Client's accounting or disclosure conclusions, whether or not such conclusions of the Client are related to the accounting advisory services and PwC has no responsibility for any disagreements between the Client and its independent auditor related to the Client's accounting.
i. The Client will be solely responsible for all decisions regarding the accounting treatment of any item or transaction and acknowledges that the accounting advisory services do not include the recording of any amounts in the Client's books or records. All amounts derived from the performance of the accounting advisory services will be reviewed and approved by, and will be the responsibility of, the Client's management.
j. The nature, scope and design of the accounting advisory services and the accounting opinion are solely the responsibility of the Client. PwC will rely, without independent verification, on the facts, information and assumptions provided by the Client. PwC will make no representation nor provide any assurance with respect to the adequacy of the services for the Client's purposes. Furthermore, PwC has no responsibility to advise the Client of other procedures that might be performed.
k. The Client will be solely responsible for providing accurate and complete information requested by PwC. PwC has no responsibility for the accuracy or completeness of the information provided by or on behalf of the client.
l. PwC's accounting and technical assistance will be based on the existing public sector generally accepted accounting principles. Should those generally accepted accounting principles be amended, superseded or revised in any manner, PwC's advice might change. PwC has no responsibility to inform the Client of any changes in generally accepted accounting principles that may occur after the completion of the engagement or any other oral or written work product prepared hereunder that would impact PwC's advice on the appropriate application of generally accepted accounting principles or to update its recommendations or any other oral or written work produce to take any such changes into account.
m. This engagement does not create a relationship between PwC and any person or party other than the Client. This engagement is not intended for the express of implied benefit of any third party.

n. The Client will identify an appropriate individual to serve as the project manager, including overseeing the accounting advisory services.

7. *Ownership and Licences* - **Attachment D** of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* - The structure of Vendor's working relationship with OPCD is vital to the success of their engagement. Vendor's main point of contact will be Lucy Durocher who is the engagement leader.

9. *Work Location* - All meetings will be within the Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive. If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Charges On Per Diem Rate Basis*– The Vendor and the Client agree that Work performed under this Statement of Work will be charged on a Per Diem Rate basis. The Per Diem Rate will vary, based on the nature of the final deliverable, as follows:

Nature of final deliverable	Per Diem Rate	Service Category	Estimated hours	Per Diem Rate
Accounting Advisory	General Consultant, Level 2	Service Category 2	20-25	$390/hour
Accounting Opinion	General Consultant, Level 2	Service Category 2	30-35	$990/hour

13. *Billing and Payment Process* – The Vendor shall invoice the Client in accordance with the requirements of the Master Agreement. Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Individual's Legal Name	Individual's Role and Experience Level	Service Category	Per Diem Rate
Lucy Durocher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Martin Boucher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Sean Cable (or alternative as agreed to by the Client)	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"
Michael Walke	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"

14. **Invoices** - Invoices for payment of any charges under this Statement of Work shall be sent to:

Client: Treasury Board Secretariat,
Office of the Provincial Controller Division
Branch: Accounting Policy and Financial Reporting

Representative:	Nadine Petsche
Title:	Director, Accounting Policy and Financial Reporting
Phone number:	416-325-8027
Email:	Nadine.petsche@ontario.ca

15. *Knowledge Transfer:* The Vendor will work closely with the Client to ensure knowledge transfer to the Clients designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* - The Vendor shall destroy all Confidential information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	**Treasury Board Secretariat**
Client Representative:	**Nadine Petsche**
Telephone number:	**416-325-8027**
E-mail:	**Nadine.petsche@ontario.ca**

18. *Vendor Representative and Receipt of Notices*

Vendor's address for receipt of notices:	**PricewaterhouseCoopers LLP, PwC Tower, 18 York Street, Suite 2600, Toronto ON M5J 0B2**
Vendor Representative:	**Lucy Durocher**
Telephone number:	**416-869-2311**
E-mail:	**Lucy.durocher@ca.pwc.com**
Backup Vendor Representative:	**Martin Boucher**
Telephone number:	**514-205-5415**
E-mail:	**Martin.boucher@ca.pwc.com**

IN WITNESS WHEREOF the parties hereto have executed this Statement of Work as of the date first above written.

HER MAJESTY THE QUEEN IN RIGHT OF ONTARIO, as represented by The President of the Treasury Board

Hi Matt.

It would be good if we could touch base on the upcoming PSAB ADG agenda as well as the pension related SOW.

With respect to the ADG, I understand that there will be a couple of items on the agenda for the November 18th meeting which may relate to/impact Ontario's financial reporting. Specifically, the ADG is expected to address whether an investment holdco could be accounted for as a GBE, as well as the determination of shared control.

I was told that both of these items arose from discussions among the large firms. I was hoping that you might be able to confirm your understanding that these items will be addressed at the November 18th ADG, and also that you might be able to share a copy of the ADG submissions for each of these items at your earliest convenience.

On pension-related matters, would like to touch base on next steps. As you know, the original SOW contemplated additional work by Deloitte beyond the initial assessments done by Martin. In light of the current Panel initiative, we would like to start some of the incremental work now.

Unfortunately, my schedule is pretty hectic, but Shyrose can help to find some time for us to chat on these two items. Talk to you soon.

Nadine

Attachment 1: Additional Asset Ceiling Detail (EY 12 June 2017).pdf

---

Hi Uros – hope all is well. Spring has finally arrived!

In reviewing our 2017-18 Audit Plan with the AG, the following request has been made:

· Request the asset ceiling test to be performed for each significant pension plan with an accrued benefit asset using the perpetuity assumption for both service costs and contributions.

Cindy has asked me to reach out to you and ask for the "additional advice" letter that was provided last year (see attached) w.r.t. the asset ceiling calculation. We would then appreciate your confirmation that we may share this letter with the Auditor General's office as it pertains to our 2017-18 audit.

If you require something more formal for this request, please let me know.

Happy to discuss,

Thanks.

Additional information on asset ceiling calculation

Dear Cindy,

This document is in response to the request received from Nadine Petsche on 6 June 2017 to provide our advice to you regarding the request from the Office of the Auditor General of Ontario (AG). In particular, we understand that you would like some additional advice related to the asset ceiling calculation we performed, and the AG's ask to prepare and provide a calculation of the asset ceiling test using the "perpetuity assumption" for both Service Cost and Contributions for each significant pension plan.

This document provides this additional advice and is intended to inform and support OPCD in forming its opinion on appropriate accounting related to OTPP and OPSEUPP in the Province's financial statements. This document does not constitute an accounting opinion and should not be used as such. This document is intended for OPCD's use only. Please inform us in writing of any parties outside of the OPCD that you would like to share this document with before it is shared.

Asset ceiling test for OTPP and OPSEUPP

As you know, we have completed our analysis and calculation of the asset ceiling tests for OTPP and OPSEUPP that was provided to your office via two draft documents dated 16 May 2017. [1]

The asset ceiling test analysis and calculation we prepared for you showed that there is no impact on the asset ceiling test, and that there is no valuation allowance required in respect of OTPP and OPSEUPP. This is because the expected future benefit exceeds the value of any contributions that the plan sponsors must make regardless of any contributions [PS 3250.50-59]. The following table summarizes the results:

As at 31 March 2017	OTPP	OPSEUPP
1. Adjusted benefit asset (PS 3250.053)	51.8B	2.30B
2. Expected future benefit (PS 3250.056)		
a. Present value of service cost (PS 3250.057)	100.1B	13.88B
b. Present value of minimum contribution requirement, regardless of any surplus (PS 3250.056a)	(0.0)B	(0.0)B
c. Expected future benefit [(2.a) – (2.b)]	100.1B	13.88B
3. Valuation allowance (PS 3250.054) [max (0, (1)-(2.c)]	0.0B	0.00B

[1] Those documents are in draft form to allow for a final update once the discussions on year-end adjustments are complete. However, our conclusions as they relate to the asset ceiling calculation, and in particular to the "perpetuity assumption" are not affected by any changes that may be made to that year-end adjustment process.]

4.	Accrued benefit assets	26.9B	1.95B
5.	Valuation allowance	(0.0)B	(0.0)B
6.	Accrued benefit assets, net of valuation allowance (PS3250.050) [(4) – (5)]	26.9B	1.95B
7.	Province's portion of accrued benefit asset	50%	50%
8.	Province's portion of accrued benefit asset [(6) x (7)]	13.5B	n/a
9.	Province's portion of accrued benefit asset, reflecting unused RSF in excess of OPSEU's RSF[2]	n/a	1.02B

The above analysis does not reflect any year-end adjustments to the balance sheet position by OPCD.

Since the plans have significant future service cost accruals, the present value of which exceeds the current surplus, it is reasonable to conclude that the government can benefit from the entire surplus asset and therefore can recognize it on the balance sheet under PSAS.

In the above analysis we have considered, in perpetuity, any minimum contributions that the plan sponsors (Province and the employee unions) are required to make regardless of any surplus, in accordance with 3250.56. As there are no minimum contributions that are required to be made regardless of any surplus for either OTPP or OPSEUPP, this present value in perpetuity is nil.

For ease of reference, we will refer to the "minimum contributions the government is required to make regardless of any surplus" in PS 3250.56(a) as "MCRS" in the remainder of this document.

For greater clarity, we have not included the currently required funding contributions, in perpetuity or otherwise, into the asset ceiling test calculation as it is our understanding that this would not be in compliance with PSAS. These contributions are currently in place to fund deficits, and to provide for current service costs for which there are no assets currently in place. However, there is no requirement for these contributions to continue regardless of any possible surplus in the plan (ie. they are not MCRS). When there is surplus, these contributions can be reduced, or a contribution holiday can be put in place, as permitted by the legislation and plan documents related to OTPP and OPSEUPP. There is no requirement in OTPP and OPSEUPP to maintain a minimum level of contributions regardless of any surplus that may exist. Because of this, for the purposes of the calculations we prepared for you we determined that there are no MCRS as per 3250.56(a) that would need to be included in the asset ceiling calculation for these plans.

Further detail on these points, and additional matters for your consideration, are contained in the remainder of this document.

[2] Based on the Rate Stabilization Fund ("RSF") allocation as at 31 December 2014, the most recent funding valuation date, OPSEU has utilized their RSF $0.09B more than the Province. The Province portion, reflecting RSF allocation is determined as 50% x (1.95B-0.09B) +0.09B

“Perpetuity Assumption” and MCRS considerations

PSAS guidance

PS 3250.56 states **“***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations”.*

The purpose of the asset ceiling test is to ensure that the financial statements do not include any assets that the government cannot expect to benefit form. A pension asset may have a value if it can be refunded from the pension plan to the government (PS 3250.56(b) above), or it may have value if it can be used to reduce future contributions that otherwise might need to be made (PS 3250.56(a)). We understand based on the pension legislation and plan documents, and our discussions with the OPCD, that it would be difficult or impossible for the plan sponsors to withdraw assets from either OTPP or OPSEUPP. Thus, the only way the plan sponsors may expect to benefit from any surplus assets in the plan is via future contribution reductions or holidays. The asset ceiling test is used to determine the amount of assets that can be used in this way, and hence the amount of assets that can therefore be recognized on the balance sheet.

As PS 3250.57 states, the test is performed by first determining the total present value of all future service costs. This present value represents the total cost of all benefits that will be earned by plan members in the future. This cost can either be met through future contributions, or if there is a surplus in the plan and the legislation and the plan terms permit, from that surplus. This is the maximum amount of surplus that could be used to offset future cost, and therefore the maximum pension asset that the government could recognize on its balance sheet. Reducing this maximum value would be any contributions that the government/plan sponsors are required to make regardless of any surplus. The logic here is that if the plan sponsors must continue contributing to the plan even if the plan was in surplus (ie. “regardless of any surplus”), then the government’s benefit from that surplus is reduced. The reduction in the asset equals to the present value of any such MCRS.

As discussed in detail in the Pension Expert Panel report, neither OTPP nor OPSEUPP have any requirements that would compel the plan sponsors to continue to contribute into these plans, even if the plans were in surplus. The contribution levels for both plans are negotiated directly by the plan sponsors who make them, and the funding level of the plan is a key determining factor in those negotiations, allowing the plan sponsors to increase or decrease contributions as they deem appropriate, and reducing or eliminating any contributions that may not be needed if the plan is already in a surplus position. This is in contrast to other plans, some of which have requirements to continue contributing regardless of any surplus. For example, the public service pension plan in New Brunswick has a minimum contribution level of 8% of payroll that cannot be reduced. Therefore, this plan would have MCRS (ie. 8% of payroll) that must be used in the asset ceiling test. In our understanding, it is this requirement that results in full valuation allowance and no pension asset being recognized in New Brunswick government’s financial statements.

Canadian practice

The MCRS language contained in PS3250.56 mirrors the same language in other current and former Canadian standards:

- Part II – Accounting Standards for Private Enterprises (where 3462.69 has the same reference to MCRS)
- Part III – Accounting Standards for Not-for-Profit Organizations (which incorporates 3462 provisions)
- Part V – pre-changeover CICA 3461 (where 3461.105 has the same reference to MCRS)

Under all these standards, in our experience, the Canadian practice has been to interpret the "perpetuity assumption" and MCRS as we describe in this document, and in the same manner as we applied it in our calculations shared with you on 16 May 2017 for OTPP and OPSEUPP. We have never seen MCRS interpreted in a way that would treat any and all contributions as MCRS; to do so would be more in line with the type of analysis that would need to be carried out under IFRIC 14. However, IFRIC 14 only refers to minimum funding requirements, and does not qualify them as the requirements that exist "regardless of any surplus". This is the main reason that adoption of IFRIC 14 in Canada caused significant concern and discussion, that highlighted differences between IFRIC 14 requirements and the existing Canadian practice, with the "regardless of any surplus" qualifier being one of the key difference areas. In the non-IFRIC 14 context, the only instances where the "regardless of any surplus" qualifier applied, and affected the asset ceiling tests, were those where the employer had committed to a minimum contribution level that was not dependent on the funding status of the plan (eg. a commitment to match employee contributions of 4% of earnings).

Expert panel report

The Pension Asset Expert Advisory Panel report ("Report") stated the following:

> "*A question arises as to whether the surplus that is contemplated in the phrase "regardless of any surplus" is an accounting surplus or a funding surplus. The Panel understands that in practice actuaries interpret this to be a funding surplus. If any contributions are required even when there is a funding surplus, these would be "minimum contributions the government is required to make regardless of any surplus". This interpretation rests on the logic that funding contributions, including any minimum funding requirements, are driven by funding surpluses/deficits, and not accounting surpluses/deficits."*

The Report also outlines in detail how the funding contributions are set for OTPP and OPSEUPP. It concludes that there are no contributions that would be required to continue even if the plans were in a surplus position.

The recommendations of the Report are therefore consistent with the approach we describe in this document, and with our asset ceiling calculations shared with you on 16 May 2017 for OTPP and OPSEUPP.

Purpose of Asset Ceiling under PSAS

In our view, the purpose of the asset ceiling tests under PSAS, as well as other standards, is to ensure that only those assets that the government can expect to benefit from should be included on the balance sheet. Any assets that the government cannot expect to be able to use should be written down via a valuation allowance.

It is important to note that the true ultimate cost of a pension promise (ie. the total of all benefits paid to pensioners over time) does not depend on the measurement of that cost. In other words, both the funding valuations and the accounting valuations are attempting to measure the same real costs, each for a different

depend on how we measure it. Accounting and funding valuations merely allocate those costs to periods of time. With that in mind, it is reasonable to expect that in some periods the surplus or deficit will be measured differently under the accounting standards vs. funding valuations. Nevertheless, the economic question that the asset ceiling is attempting to address is if at any point there may be a surplus in the plan that for some reason could not be used either by reducing contributions or withdrawing assets. Put another way, there should only be an asset impairment if the plan is both overfunded, and the contributions could not be reduced in order to use up excess assets. While this may be the case for some plans, we understand that this is not the case for OTPP and OPSEUPP.

Date: Saturday, September 10, 2016 08:54:05

Hi Matt.

Just wanted to get back to you on the possible need for an accounting opinion on the pension asset ceiling work (as related to OTPP at this time). We will draft a statement of facts. As our original SOW didn't envision an accounting opinion, it would be helpful if you could provide an estimate of cost for such an opinion and let me know how much is left on the original engagement (just to check if would be sufficient to cover). This information will be helpful in upcoming internal discussions (if required).

Thanks in advance.

Nadine

Hi Murray -

To confirm our discussion, you are going to provide a comparative legal/governance analysis of how the frameworks for the two Ontario pension plans we identified (OTPP and OPSEU) and the four BC plans we identified (municipal, teachers, college, public service) compare on the issue of the authority of the pension boards and the plan partners to determine the utilization of plan surpluses. Your preliminary thinking is that in Ontario this determination is left to the partners, while in BC either the boards or the partners can make this determination.

You expect that you can provide this analysis by Monday or Tuesday.

We've provided the relevant joint trust agreements for the plans noted above and you don't expect that you need further documentation from us to respond to this request, but you will let us know if any need arises.

Cindy, if the above is inconsistent with what you are looking for please advise.

Paul

Hi Shayan,

After our meeting today with Cindy, the direction right now is to open 2016-17 only and leave 2015-16 alone. As we are currently under tight deadlines for 2016-17 Public Accounts, we would like to know roughly how long it would take to do the detail re-modelling of OTPP, OPSEU & PSPP (including agency adjustments), using our current model and making changes it to align with the proposed?

As the detail modelling will likely involve the our team as well, we likely need you to come on site to go through things in detail so we are comfortable with all the pieces and incorporate any year-end adjustments we do as part of the model as well. Can you let me know tomorrow after having your internal discussions on the projected time-lines? Thanks.

Regards,

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective September 16, 2016.

PricewaterhouseCoopers LLP (the "Vendor" or "PwC") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client" or the "Province") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of March 22, 2016 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$100,000.00, excluding HST.

4. *Project Start Date:* September 16, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide accounting advice (the "accounting advisory services") regarding the acceptability of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards. The accounting advice may include:

   - Review of background information, position papers developed by the Client or third parties that have been engaged by the Client to draft accounting positions on accounting for the recognition and measurement of pension assets for jointly-sponsored pension plans, and other supporting information.
   - Provide written or oral comments on draft position papers as provided by the Client with respect to the application of Canadian Public Sector Accounting Standards.
   - Participation in discussions with internal and external stakeholders and other parties as directed by the Client.

   During the course of this project, the Client will provide to PwC a written statement of all relevant facts and assumptions, and a description of the circumstances and the nature of any relevant disagreements with the Client's auditor. If an accounting opinion is to be provided, the Client's auditor will confirm to us in writing that the information the Client

has provided to PwC is complete and consistent with their knowledge of the facts and circumstances of the specific transaction.

If requested to by the Client during the course of the project, the Vendor shall provide an accounting opinion (the "accounting opinion"), prepared in accordance with Section 7600, *Reports on the application of accounting principles* of the CPA Canada Handbook – Assurance ("Section 7600"), regarding the appropriateness of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards.

Vendor may be required to participate in meetings with the Client and other stakeholders, and to support the Client with respect to the Vendor's accounting advice or accounting opinion (if applicable), including discussions with the Office of the Auditor General.

The Client agrees that any accounting advisory services are solely for the information and use of the Client. Subject to the obligations in Article 27 (Privacy) of the Master Agreement the Client agrees that any written work product of PwC, other than an accounting opinion prepared in accordance with Section 7600, will not be made available to any other persons or entities. However the Client may provide access to PwC's observations to the Client's independent auditors solely for their informational purposes. The Client agrees to seek and obtain our written consent before including our accounting opinion (if applicable) or referring to us in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent. The Vendor acknowledges that the Auditor General at its discretion may include the accounting opinion or refer to PwC LLP in documents disclosed to third parties, or may require the Province to do so, and the vendor agrees that the client is not in breach of this statement of work should this occur.

Acknowledgements and agreements

The Client acknowledges and agrees to the following:

a. The performance of the accounting advisory services does not constitute an engagement to provide audit, compilation, review or attest services in accordance with professional standards issued by the Chartered Professional Accountants of Canada ("CPA Canada") and, therefore, PwC will not express an opinion or any other form of assurance with respect to the accounting advisory services.
b. The accounting advisory services and accounting opinion (if applicable) to be provided do not include the delivery of any verbal or written advice on the application of accounting principles to a hypothetical transaction.
c. This engagement cannot be relied on to disclose internal control deficiencies, errors or fraud, should they exist.
d. PwC has no responsibility for updating the accounting advisory services or accounting opinion or for performing any additional services, except as agreed to in writing with the Client.
e. The Client's purpose for engaging PwC to perform the accounting advisory services is to supplement management's own technical accounting resources in performing accounting analysis and to assist management in making its determination as to the application of accounting principles and not to obtain an opinion from PwC as to such application, unless an accounting opinion is requested by the Client.

f. The Client shall be solely responsible for, among other things: (a) making all management decisions and performing all management functions; (b) designating one or more individuals who possess suitable skill, knowledge and/or experience, preferably within senior management to oversee the accounting advisory services (c) evaluating the adequacy and results of the accounting advisory services; (d) accepting responsibility for the results of the accounting advisory services; and (e) establishing and maintaining internal controls, including, without limitation, monitoring ongoing activities.

g. All management decisions and final conclusions reached in connection with the accounting advisory services will be the responsibility of the Client. PwC will not perform any management functions, make management decisions, or perform in a capacity equivalent to that of an employee of the Client.

h. PwC has no responsibility related to the Client's accounting or disclosure conclusions, whether or not such conclusions of the Client are related to the accounting advisory services and PwC has no responsibility for any disagreements between the Client and its independent auditor related to the Client's accounting.

i. The Client will be solely responsible for all decisions regarding the accounting treatment of any item or transaction and acknowledges that the accounting advisory services do not include the recording of any amounts in the Client's books or records. All amounts derived from the performance of the accounting advisory services will be reviewed and approved by, and will be the responsibility of, the Client's management.

j. The nature, scope and design of the accounting advisory services and the accounting opinion are solely the responsibility of the Client. PwC will rely, without independent verification, on the facts, information and assumptions provided by the Client. PwC will make no representation nor provide any assurance with respect to the adequacy of the services for the Client's purposes. Furthermore, PwC has no responsibility to advise the Client of other procedures that might be performed.

k. The Client will be solely responsible for providing accurate and complete information requested by PwC. PwC has no responsibility for the accuracy or completeness of the information provided by or on behalf of the client.

l. PwC's accounting and technical assistance will be based on the existing public sector generally accepted accounting principles. Should those generally accepted accounting principles be amended, superseded or revised in any manner, PwC's advice might change. PwC has no responsibility to inform the Client of any changes in generally accepted accounting principles that may occur after the completion of the engagement or any other oral or written work product prepared hereunder that would impact PwC's advice on the appropriate application of generally accepted accounting principles or to update its recommendations or any other oral or written work produce to take any such changes into account.

m. This engagement does not create a relationship between PwC and any person or party other than the Client. This engagement is not intended for the express of implied benefit of any third party.

n. The Client will identify an appropriate individual to serve as the project manager, including overseeing the accounting advisory services.

7. *Ownership and Licences* - **Attachment D** of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* - The structure of Vendor's working relationship with OPCD is vital to the success of their engagement. Vendor's main point of contact will be Lucy Durocher who is the engagement leader.

9. *Work Location* - All meetings will be within the Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive. If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Charges On Per Diem Rate Basis*– The Vendor and the Client agree that Work performed under this Statement of Work will be charged on a Per Diem Rate basis. The Per Diem Rate will vary, based on the nature of the final deliverable, as follows:

Nature of final deliverable	Per Diem Rate	Service Category	Estimated hours	Per Diem Rate
Accounting Advisory	General Consultant, Level 2	Service Category 2	20-25	$390/hour
Accounting Opinion	General Consultant, Level 2	Service Category 2	30-35	$990/hour

13. *Billing and Payment Process* – The Vendor shall invoice the Client in accordance with the requirements of the Master Agreement. Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Individual's Legal Name	Individual's Role and Experience Level	Service Category	Per Diem Rate
Lucy Durocher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Martin Boucher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Sean Cable (or alternative as agreed to by the Client)	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"
Michael Walke	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"

14. **Invoices** - Invoices for payment of any charges under this Statement of Work shall be sent to:

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective ~~[insert date].~~September 16, 2016.

PricewaterhouseCoopers LLP (the "Vendor" or "PwC") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client~~")~~" or the "Province") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of ~~June 16, 2014~~ March 22, 2016 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$~~xx0~~60100,000.00, excluding HST.

4. *Project Start Date:* September ~~15~~16, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide ~~an accounting opinion~~accounting advice (the "accounting advisory services") regarding the acceptability of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards. The accounting advice may include:

   - Review of background information, position papers developed by the Client or third parties that have been engaged by the Client to draft accounting positions on accounting for the recognition and measurement of pension assets for jointly-sponsored pension plans, and other supporting information.
   - Provide written or oral comments on draft position papers as provided by the Client with respect to the application of Canadian Public Sector Accounting Standards.
   - Participation in discussions with internal and external stakeholders and other parties as directed by the Client.

   During the course of this project, the Client will provide to PwC a written statement of all relevant facts and assumptions, and a description of the circumstances and the nature of any relevant disagreements with the Client's auditor. If an accounting opinion is to be

Commented [LD1]: I do not have quick access to the copy of the Master Agreement. Per the Cap and Trade SOW this was March 22, 2016, so I am assuming it would be the same date for purposes of this SOW. Please confirm.

Commented [PN(2]: ok

Subject: Pension advisory - expiration of mandate
Date: Tuesday, March 21, 2017 11:07:09

Hi Nadine,

I just spoke to Shyrose and she told me that the pension advisory engagement was dated up to December 2016, and so has expired.

If you expect that you may need my assistance on some of the CAATPP/HOOPP issues then perhaps Shyrose can move the unused room forward to 2017/2018. However, do we need to sign something to extend the time frame to be able to do this into the next fiscal year? Please advise.

Thanks,
Lucy

Hi Nadine,

I didn't get a chance to catch up with you after our meeting yesterday - I think everyone had other things to get to. I wanted to ask you how the pension panel presentation went on Friday?

Michael has mentioned that the SOW for the panel is being worked on - I am connecting with him on this.

In the meanwhile, it seems it would be a good time to send you an invoice for the rest of the work performed on the memo and slide deck for the panel. We currently have a WIP balance of $14,097, based on the agreed upon hourly rates. If you agree, I can get my assistant to draft up an invoice.

Lucy

Position paper for Ontario Teachers' Pension Plan

Preamble

This document addresses the accounting for pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.

Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP.

As described in PSAS, a pension asset arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the asset balance (or plan surplus for accounting purposes) in OTPP is an asset to the province and it is suitable to reflect it in the financial results.

The OAG disagrees with this position. The OAG has indicated that because the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and in the absence of that right, because the Province does not have an agreement in place with the Ontario Teachers' Federation (OTF) with respect to how the surplus would be utilized such that it would provide a benefit to the Province, a pension asset in the Public Accounts is not appropriate.

Ontario had followed the same pension accounting treatment for all of the past 14 years. This had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals. There has been no change to the relevant PSAS (i.e. RETIREMENT BENEFIT, Section PS 3250) over the past 14 years.

A regulation was filed to allow the public service to sign-off on the impact of the OAG's view on accounting for pension assets in Ontario's 2015-16 financial statements. The regulation is time-limited and legislates the accounting for pension assets of its two jointly-sponsored pension plans (OTPP and

OPSEUPP) for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's accounting, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to reflect the Auditor General's interpretation of PSAS. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt.

Background

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1.

The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the Ontario Teachers' Federation represented by its Executive (the "OTF") (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. The OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for the OTPP ;

---

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
a. It provides defined benefits.
b. The defined benefits are contributory benefits.
c. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
d. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners Agreement (FMP);
f) The Ontario Teachers' Pension Plan; and
g) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to the OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5] The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and

Commented [CV1]: Let's discuss this next section – its new to me – was it in one of the legal opinions?

Yes, per the Osler September 20, 2016 letter – pages 7 and 8 – included in this section as we discuss that OTPP qualifies as a JSPP

Also – I'm confused by the footnotes below – 3. And 4. And then 2.3.4.?

The characteristics of a JSPP in footnote 1 includes 4 parts which were the first series of 1, 2, 3 and 4 – I have changed to a, b, c and d

Commented [CV2]: Does this have any impact on the JSPP status of the plan

I believe it is consistent with the characteristics of a JSPP- characteristic c

LD – I think there are a number of ways to interpret this clause It could be argued that the clause is there to ensure that there is sufficient money from a liquidity perspective. This does not necessarily negate the broader agreement to share on an equitable basis – i.e. it's not clear if this injection by the Province would be balanced by the OTF in some other form – one might argue that the rest of the arrangement (partner's agreement) would require it to.
The TPA does require that the assets of the pension fund should be maintained at a level that is reasonably sufficient to meet the liabilities. Therefore, if this requirement has been met then the requirements of subsection 5(3) would only be for liquidity/short term in nature and not for long term funding.

I can see how one might also argue that it indicates that residual risk is with the Province – for example, does this clause kick in when the pension plan has no more active members and runs out of assets to pay for the liabilities then is the Province on the hook. Again – the rest of the Plan's terms would indicate that this should not happen, While "should not" might not be the same as "cannot" it could be countered that the majority of the funding risk is not with the province, because the other requirements in the Partners' Agreement require shared funding.
However this would likely be a matter of interpreting the arrangement as a whole.

I don't know what the original thinking by mgt/OAG was when this was agreed upon to be a JDBP, but the above would be my guess as to how it was considered.

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).
[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).

for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Currently, the Sponsors are required to mutually agree upon how any plan deficits are to be addressed. [8] While not binding upon the Sponsors, the FMP indicates that deficits may be addressed through increases to the contribution rates, lowering the amount of indexation and/or other decreases in benefits.

Commented [CV3]: Not sure what we are referring re: the use of also

Section 3.11 of the FMP discusses options available to the partners to eliminate any deficit in the plan (i.e. change benefits, contributions, or both)

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the FMP requires the Sponsors to negotiate and agree upon decisions relating to surplus utilization. Accordingly, the Sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the Sponsors are included in appendix E. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

---

[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/101791209401-l5e47lc2b-23f1-44e6-b5cld22e3e50dbc3lHow+ Contribution+Rates*HaverEvolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20lo versus l0.4yo/l2Vo, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.

[8] See, for example, Section 3.09 and 3.11 of the FMP.

DRAFT

Position paper for Ontario Teachers' Pension Plan

DRAFT

1.0 Preamble

This document addresses the accounting for the net pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

2.0 Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed on an appropriate application of Public Sector Accounting Standards (PSAS) to net pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP. This position paper addresses the analysis for OTPP. A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, as well as HOOPP and CAAT.

This position paper addresses the following three questions in relation to the accounting for OTPP:

1. For accounting purposes, what type of pension plan is OTPP (i.e. how should OTPP be classified under Public Sector Accounting Standards (PSAS))?
2. As a result of the classification, how should the Province of Ontario account for the pension surplus of OTPP in the Public Accounts?
3. How should the pension asset of OTPP be measured in the Public Accounts of the Province of Ontario?

3.0 Conclusions

The following conclusions were reached regarding each of the above questions:

1. Classification of OTPP - The Province has concluded that OTPP meets the definition of a joint defined benefit plan as the Province and Ontario Teachers' Federation are shared sponsors of the plan. The Teachers' Pension Act, the Partners' Agreement and the plan text for OTPP collectively set out this shared control and equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a joint defined benefit plan in RETIREMENT BENEFITS, Section PS 3250 in PSAS. The classification of OTPP as a joint defined benefit plan for accounting purposes has been consistent since 2001 and had been consistently accepted without question by the OAG, including throughout the 2015/16 Public Accounts.

2. Recognition of a pension asset for a joint defined benefit plan - The Province has concluded that PSAS (Section PS 3250) supports the recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets be subject to unilateral control. Shared control is relevant and appropriate for a situation involving a joint defined benefit plan. The Province's share of OTPP's pension surplus meets the definition of an accrued benefit asset under Section PS 3250 which requires the Province to recognize its portion of the plan (50% for OTPP).
3. Measurement of a pension asset - The Province has concluded that the attributes of the joint defined benefit plan arrangements for the OTPP entitle the Province to access its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surpluses to reduce contributions in the future. The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of those models to date no valuation allowance appears to be required and the OTPP pension assets should be recorded on the books of the Province. The Province recognizes that professional judgement must be applied in deriving an estimate of a potential valuation allowance under Section PS 3250.

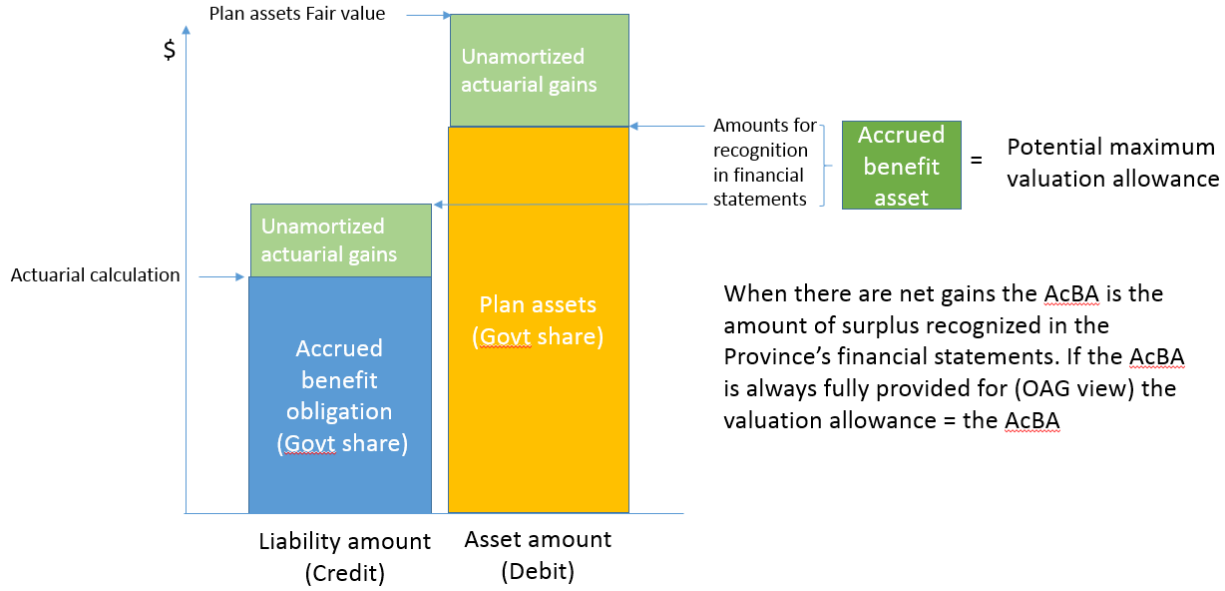
4.0 Background Information

4.1 Accrued benefit asset

As described in PSAS, an accrued benefit asset (net pension asset) arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. An Accrued Benefit Asset (AcBA) includes the effect of net unamortized experience gains or losses. Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation. OTPP currently has net unamortized experience gains. The following illustration reflects the compilation of the net pension asset (accrued benefit asset) reported on the Province's books for the OTPP.

DRAFT

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



It is important to note that contributions to the plan are based on funding objectives of the plan. In contrast, benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the net asset balance (plan surplus for accounting purposes) in OTPP is an asset to the Province and it is appropriate to reflect it in the financial results in accordance with PSAS. The Province has also concluded that no valuation allowance under PSAS is required against the asset as at March 31, 2016.

The OAG disagrees with the Province's position. Specifically, the OAG has indicated that the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and as such that the Province does not control the assets which the OAG interprets PSAS as requiring. Further, the OAG considers the lack of an enforceable agreement at year-end with the Ontario Teachers' Federation (OTF as the joint sponsor of the plan) that would provide for lower contributions in the future as requiring that a full asset valuation allowance be taken against the net asset under PSAS.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. RETIREMENT BENEFITS, Section PS 3250 of the PSA Handbook, addresses the accounting of obligations for employee retirement benefits in government financial statements. Since 2001, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the period is reflected in Appendix A. Unqualified audit reports have been received for each of the years from the

OAG on the Public Accounts. The pension accounting initially adopted by the Province for OTPP had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

In light of the contrasting views on interpretation of PS 3250 to the Province's jointly sponsored pension plans, a regulation was necessary to allow the public service to sign-off on the impact of the OAG's view on accounting for net pension assets in Ontario's 2015-16 financial statements. The regulation is time-limited and legislates the accounting for net pension assets of its two jointly-sponsored pension plans (OTPP and OPSEUPP) for 2015-16 in a manner that is consistent with the interpretation proposed by the Auditor General. The change in accounting treatment for 2015-16 resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the 2015-16 annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's interpretation, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to reflect the Auditor General's interpretation of PSAS. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt and would have only been appropriate if the government had agreed with the Auditor General's interpretation of PSAS which would have acknowledged errors in the prior year's comparative results.

4.2 Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1. The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the OTF (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
a. It provides defined benefits.
b. The defined benefits are contributory benefits.
c. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
d. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners' Agreement (FMP); and
f) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to OTPP in the event that there are insufficient assets to make required payments out of the plan in any

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).

particular year. [5] This clause has been interpreted as a short term solvency protection clause, rather than a clause that transfers substantive residual risk to the Province, as the rest of the arrangement is structured such that the risk of these payments is minimal and the risks of the long term funding of the plan must still be equitably shared. The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under OTPP). Notwithstanding that subsection 5(1.1) of OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under OTPP since OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Joint governance and cost sharing form two of the core features of OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the sponsors. In this regard, the Partner's Agreement requires the sponsors to negotiate and agree upon decisions relating to surplus or deficit utilization, which currently is outlined in the FMP. [8] The FMP indicates that deficits (or surpluses) may be addressed through increases (decreases) to the contribution rates, lowering (increasing) the amount of indexation and/or other decreases (increases) in benefits. While not binding upon the sponsors, as the sponsors can change the FMP at any time, any changes are required to have the mutual consent of both sponsors. Accordingly, the sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the sponsors are included in appendix B. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both

[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).
[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/10179/20940/-/5e471c2b-23f1-44e6-b5c1d22e3e50dbc3/How+ Contribution+Rates+Have+Evolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20% versus 10.4%/12%, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.
[8] See, for example, Section 3.09 and 3.11 of the FMP.

upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the sponsors regarding how any surpluses are to be utilized. We note that the sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the sponsors to utilize surplus in a variety of ways, depending on the funded status of OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, under the FMP the sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the sponsors to agree upon the manner in which surplus is to be utilized, neither sponsor has a legally enforceable right to unilaterally utilize surplus in OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What the Province does have, however, is a right to negotiate with the OTF the use of funding surpluses that may arise under the plan.

4. Negotiations on the use of the surplus occur as specified in the Partners' Agreement. The Partner's Agreement requires that any actuarial funding valuation submitted to the pension regulators must be "actuarially balanced" (Section 57 of the Partners' Agreement). This must occur at least once every three years, but can occur every year if the partners agree. If a preliminary funding valuation shows a funding surplus or deficit then the joint sponsors must negotiate how this surplus or deficit is to be resolved prior to filing the funding valuation.

4.3 Accounting for OTPP by the Province

Since fiscal year 2001-2002, the Province has recorded a net pension asset for OTPP on the Statement of Financial Position in accordance with Section PS 3250. A net pension asset has arisen because the government's share (50%) of the total contributions to OTPP plus recognized investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense (see illustrative examples in Appendix J). The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

The various valuations prepared for the OTPP – i.e. those for the Province's public accounts, those for the funding valuation and those for the OTPP stand-alone financial statements, can create confusion when assessing the Province's accounting. Therefore, this next section sets out the differences in those valuations.

With regards to any comparisons between surplus or deficit amounts reported in the Province's financial statements verses OTPP's financial statements or funding reports, it is important to acknowledge the different objectives of funding and accounting for a pension plan which are also explicitly addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*
>
> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.*

DRAFT

Section PS 3250 paragraph .051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: “Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…”

OTPP’s most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website (https://www.otpp.com/home). The Province’s relative portion of this surplus would be $6.6 billion. OTPP’s published stand-alone financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015, for which the Province’s portion would be a deficit of $900 million. The following background helps to clarify the reasons for these different results. OTPP’s financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook (“Part IV”), which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the net surplus or deficit for funding purposes.

Accounting for employee future benefits requires the use of assumptions and methodologies to calculate both the obligation incurred to date and the value of the assets already set aside to meet those obligations. Accounting frameworks differ in standards that must be applied in determining appropriate assumptions and methodologies. Further, the assumptions and methodologies used in developing a “funding valuation” on a going concern basis also differ from those required by accounting standards. These differences result in a number of different valuations for the same plan, depending on the purpose of the valuation and can be affected by certain choices made between acceptable options within each framework. A summary of the main differences between the methodologies used to calculate a going concern funding valuation, OTPP’s accounting valuation and the Province’s accounting valuation is shown in Appendix D.

Specifically, the discount rate used to value the obligations of the plan has a significant impact on the overall position of the plan. A lower discount rate results in a higher liability and a higher discount rate results in a lower liability, all else being equal. Put another way, a higher estimate of the time-value of money results in the value the promises made today that will be paid out in the future cheaper. OTPP uses a discount rate based on corporate/government bond rates in its financial statements, as permitted by Part IV. The Province uses a discount rate based on the expected asset return, as permitted by PSAS. The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds. Both a discount rate based on the expected asset return and one based on corporate/government bonds are “best estimate” rates; they must both be based on management’s best estimate of the applicable discount rate. In both cases the estimates must be supportable. The difference results not from one being more “right” or “wrong” relative to the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.

Typically the funding discount rate used for the funding valuation falls between the bond discount rate and the expected asset return, but it differs in that it does not purport to be the "best estimate" of the discount rate, rather it is designed to indicate the contributions that are required to fund the promised benefits with an additional conservative margin for adverse deviations. Note that over the long term the difference between funding valuations and accounting valuations would diminish as the impact of the discount rate unwinds and the asset valuation methods converge.

In practice, the discount rates used in the financial statements of government sponsored and joint defined benefit pension plans prepared under Part IV of the CPA Canada Handbook (Section 4600) use diverse methodologies. For example, in Alberta there are seven plans which prepare their financial statements under Part IV with reference to IFRS (same framework as OTPP). Of these none use a government bond discount rate and all use a discount rate calculated with some reference to a rate of return on invested assets, which may include factors for expenses, diversification and rebalancing. The analysis of a number of government sponsored plans is included as Appendix E. The analysis demonstrates that in their stand-alone financial statements, a significant number of government sponsored plans use a discount rate aligned to an asset investment return rather than a bond discount rate. OTPP is actually in the minority of plans that choose to use the rate required by IFRS, resulting in a lower discount rate and higher liability for financial reporting purposes.

The above analysis explains how different discount rates impact the net surplus/deficit reported on OTPP's financial statements, OTPP's funding reports and the Province's financial statements. The fact that OTPP reports a deficit on its financial statements, or that the 50% of the net surplus reported by OTPP for funding purposes is lower than the surplus reported on the government's financial statements under PSAS does not impact the net pension asset amount or pension expense reported by the Province for OTPP.

To further clarify, that there is a deficit reported in OTPP's stand-alone financial statements while the Province of Ontario calculates a surplus under PSAS requirements does not mean that there is no accounting surplus and therefore no reportable asset for the Province. In fact, **if** OTPP had chosen (as an acceptable accounting policy choice) to use a discount rate more consistent with its counterparts in other jurisdictions (see Appendix E) such as a discount rate based on an expected asset return which would be closer to that used by the Province, it would eliminate much of the existing difference between the reported net surplus/deficit amounts in OTPP's stand-alone financial statements and the Province's share of OTPP reported for accounting purposes in the Province's Public Accounts.

4.4 Applicability of PS 3250 as primary source of GAAP

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES, Section PS 1150 prescribes that, in developing and applying accounting policies, all primary sources of GAAP should be applied (Section PS 1150 paragraph .04). Primary sources of GAAP are Sections PS 1201-PS 3510, Public Sector Guidelines and appendices and illustrative material to those pronouncements. Only when there are no primary sources of generally accepted accounting principles (GAAP) that relate to the transactions or events under consideration, or more specific guidance is needed (Section PS 1150 paragraph .05), does an entity

consider other primary sources of GAAP dealing with similar issues and also the concepts described in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 (issued January 2003). Section PS 1000 is not, however, a "primary source of GAAP" under the PSA Handbook.

The primary sources of GAAP specific to the accounting for pension assets is RETIREMENT BENEFITS, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, also titled Section PS 3250).

Other primary sources of GAAP that deal with similar issues might also be considered where additional interpretation or guidance may be required. For the issues dealt with in this paper - recognition and measurement of a joint defined benefit plan - this could include standards that relate to shared control, as OTPP is a joint defined benefit plan, standards that relate to the definition of an asset and standards that relate to measurement uncertainty:

- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015, effective from April 1, 2017)
- CONTINGENT ASSETS, Section 3320 (issued in June 2015, effective from April 1, 2017)
- MEASUREMENT UNCERTAINTY, Section PS 2130 (issued in April 2005)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception of ASSETS, PS 3210 and CONTINGENT ASSETS, Section PS 3320 which are more recent and will be effective in for periods beginning on or after April 1, 2017. Section PS 3210 provides additional guidance on the various components of the existing asset definition found in Section PS 1000; it does not change the definition.

5.0 Question 1 – Classification of a pension asset

The analysis below addresses whether the Province's share of the pension surplus in OTPP, calculated in accordance with PSAS under Section PS 3250, represents a reportable asset to the Province of Ontario in the Public Accounts.

5.1 RETIREMENT BENEFITS PSAS 3250

The focus of the following analysis is on the accounting requirements in RETIREMENT BENEFITS, Section PS 3250 as this standard is a primary source of GAAP which specifically addresses the accounting for pension assets. The following highlights some key concepts and guidance contained in this standard.

5.1.1 Section PS 3250 – Purpose and Scope

The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250.003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

5.1.2 PS 3250 – Types of pension plans

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*
>
> *(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;*
>
> *(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;*
>
> *(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and*

> *(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.*
>
> *The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.*

Additional guidance on identifying joint defined benefit plans (JDBPs) is in Section PS 3250 paragraphs .79 to .80 which similarly highlight the importance of both shared control and shared risks and rewards in a JDBP as follows:

> *.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.*
>
> *.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.*

It should be noted that the definition of a JDBP under Section PS 3250 is not the same as the definition of a JSPP under the PBA, although there are some overlapping concepts between the two. A JDBP is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. The Province has concluded that OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 10(1)3 of the TPA for example).

The TPA, the Partners' Agreement and the plan text collectively set out this shared control and that the Province of Ontario has an equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a JDBP.

The classification of OTPP as a JDBP for accounting purposes [and a JSPP under the PBA] by the Office of the Provincial Controller has been consistent since 2001 and had been consistently accepted without question by the OAG, including throughout the 2015/16 Public Accounts.

5.2 Conclusion on classification

The Province has concluded that OTPP meets the definition of a joint defined benefit plan as the Province and Ontario Teachers' Federation are shared sponsors of the plan. The Teachers' Pension Act, the Partners' Agreement and the plan text for OTPP collectively set out this shared control and equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a joint defined benefit plan in RETIREMENT BENEFITS, Section PS 3250 in PSAS. The classification of OTPP as a joint defined benefit plan for accounting purposes has been consistent since 2001 and had been consistently accepted without question by the OAG, including throughout the 2015/16 Public Accounts.

6.0 Question 2 – Recognition of a pension asset for a JDBP

6.1 Standards in the PSA Handbook

RETIREMENT BENEFITS, Section PS 3250 paragraphs .081 to .082 provide guidance on the accounting for a JDBP in the financial statements of the government sponsor. As OTPP meets the definition of a JDBP for the reasons noted above, the relevant guidance for the Province for purposes of reporting retirement benefits in the Public Accounts includes:

> *.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]*
>
> *.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially*

> *curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.*

Section PS 3250 paragraph .081 clearly states that "The government should account for its portion of the plan in accordance with the standards for defined benefit plans". It is clear from this that only the government's portion of the plan is included in the government's financial statements consistent with the requirements of Section PS 3250 (recognition) and the measurement of that portion is based on the requirements of Section PS 3250 (measurement). It is also then clear that the requirements of the standard for recognition and measurement, including the Limit of the Carrying Amount of an Accrued Benefit Asset guidance, are designed to be applied to a shared control situation and not only to situations where there is unilateral control. If it was intended that no pension asset could be recognized because the asset was subject to shared control and not unilateral control Section PS 3250 paragraph .081 would have made this clear. This paper discusses the question of measurement separately in Question 3.

The balance sheet recognition guidance for retirement benefits is stated in Section PS 3250 paragraphs .016 to .017:

> *.016 The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date. [SEPT. 2001]*
>
> *.017 The components of the retirement benefit liability are:*
>
> > *(a) accrued benefit obligation including the effects of plan amendments, settlements and curtailments;*
> >
> > *(b) plan assets, if any; and*
> >
> > *(c) unamortized actuarial gains and losses.*

As OTPP is a funded plan there are plan assets that are recognized as part of the retirement benefit liability. When plan assets and the net impact of unamortized actuarial gains and losses exceed the accrued benefit obligation then there is an "Accrued benefit asset" (ABA). An ABA is defined in Section PS 3250 as follows:

> GLOSSARY - *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

Accordingly, the portion of the government's plan to be recognized includes their share of the accrued benefit obligation and also their share of the plan assets. In the case of the Province's portion of OTPP there is no uncertainty regarding the *existence* of an ABA for the government's portion of the plan; the

ABA is calculated by reference to accrued benefit obligation and plan assets, both determined based on the best estimate assumptions and the methodologies required by with Section PS 3250 for these items. As noted above an ABA is defined as the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance). For a jointly sponsored plan, this is the government's accumulated cash contributions less the government's share of the current and prior years' benefit expenses that are attributable to the government under the JDBP. The Province's portion of OTPP resulted in an ABA of $10.1 billion as at March 31, 2016. There is no uncertainty regarding the occurrence of the cash contributions made (and the interest earned thereon) measured in accordance with Section PS 3250 and the existence of the government's obligation. As Section PS 3250 paragraph .080 *requires* a government to account for its portion of the plan in accordance with the standards for defined benefit plans, this would include the recognition of any asset that meets the definition of an ABA under the standard.

Further, Section PS 3250 paragraph .050 refers to the presentation of the ABA; this amount is presented in the financial statements, net of any valuation allowance. This indicates that an ABA should be recognized in the financial statements, but measured in reference to the limit on the carrying amount of the asset - essentially a measurement requirement rather than a recognition requirement, as the limit could result in an ABA being measured at anything from $nil to its full amount. Note that the *measurement* of any net asset is subject to guidance in Section PS 3250 paragraphs .050-.059 and is discussed later in this paper.

To recognize only their share of the liability and not their share of the plan assets, or to recognize only a net liability (when the accrued benefit obligation exceeds plan assets) but never a net asset (when plan assets exceeds the accrued benefit obligation, subject to the valuation allowance guidance discussed in the Measurement section below), would indicate that the Province does not share equitably in the risks and rewards of OTPP because they bear only the risk of increased liabilities without being able to bear any rewards of investment returns on the plan assets and under this interpretation the plan would not therefore be a JDBP.

6.2 Concept of Shared Control and Asset Recognition

Included in the definition of a JDBP is the concept of shared control. Points (b) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of shared control resulting in a recognition of an asset could on the surface appear to conflict with the definition of an asset under FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210, as part of the definition of an asset under Section PS 1000 would suggest that the government must control the economic resource and access to the future economic benefits. Since shared control does not equate to control, there is a need to consider whether the recognition of any asset under PS 3250 is appropriate where there is only shared control.

The Province's position is that PSAS does not preclude asset recognition for assets under shared control and specifically for plan assets of JDBPs for the following reasons:

- As discussed above GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity. Section PS 3250 is a primary source of GAAP for dealing specifically with JDBPs and, as noted above, requires the government to account for their portion of the plan – both the accrued benefit obligation and plan assets in accordance with Section PS 3250. As such, reference to Section PS 3250 is sufficient to indicate that the recognition criteria are met for JDBP assets, no further source of PSAS guidance need be considered.

- Similarly, if other primary sources of GAAP are considered then it is relevant to consider GOVERNMENT PARTNERSHIPS, Section PS 3060 which also includes the concept of shared control. Under Section PS 3060, shared control is sufficient for asset recognition.

- The concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. With the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that the Public Sector Accounting Board (PSAB) did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

- The Province's reporting of a pension asset for the JDBP is therefore consistent with these primary sources of GAAP, subject to measurement guidance including impairment considerations.

The similarities between the definitions of a JDBP and a government partnership under PSAS are demonstrated in Appendix F to this paper, and further support Section PS 3060 as being a relevant primary source of GAAP dealing with similar circumstances, should it be considered necessary to go outside of the requirements of Section PS 3250 to look for further clarification and guidance on recognition.

Under Section PS 3060 a critical condition for a Government partnership is shared control. Section PS 3060 explicitly acknowledges that under shared control "none of the partners is in a position to exercise unilateral control over the government partnership" (Section PS 3060 paragraph .20), yet the accounting model required by Section PS 3060 for non- GBPs[9] is that of proportionate consolidation which is the recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership. JDBPs (or pension plans in general) are not specifically excluded from the scope of Section PS 3060 (Section PS

[9] Government business partnerships (GBPs) are accounted for under the modified equity method rather than proportionate consolidation.

3060 paragraph .05 lists a number of exclusions from its scope and pension plans are not noted), however some may interpret that they are excluded from the scope of Section PS 3060 on the basis that control is shared with employees rather than with a party outside of the reporting entity (Section PS 3060 paragraph .06 footnote 3). The Province of Ontario and OTF, which represents employees of the Province (Teachers), share control of OTPP. This interpretation indicates that such plans are excluded because of a closer relationship between the government and the other party than normally exists for government partnerships. Even when an independent third party shares control, Section PS 3060 still requires the recognition of a share in an asset subject to shared control, indicating that the PSAS framework does not require unilateral control in order to support asset recognition when there is shared control. It would not be appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3060 for proportionate consolidation, and similarly it is not appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3250 to account for the government's portion of a JDBP. In other words, Section PS 3250 is a primary source of GAAP and provides sufficient and complete guidance on how to account for assets related to JDBPs.

6.3 Concept of Contingent Asset

CONTINGENT ASSETS, Section PS 3320, provides guidance on the disclosure of contingent assets in a government's financial statements. It characterizes a contingent asset as one where there is uncertainty as to the existence of an asset (Section PS 3320 paragraph .04). It is the Province's position that the existence of the pension asset is not uncertain – there is an accrued benefit asset calculated in accordance with Section PS 3250 as noted above that is based on past transactions, being the impact of cumulative contributions and benefit expense. The fact that shared control exists with regards to access to the assets of the plan does not create additional uncertainty that would impact asset recognition under PSAS. The Province anticipates that in a broad sense, any OTPP surplus would be shared in an "equitable manner" under the terms of the arrangement, and this is enabled through the ability to negotiate the utilization of the surplus including the ability to prevent the utilization of the surplus in a manner that does not benefit the Province. This expectation is further supported by past history of surplus utilization (see Appendix G). The method, extent and timing during which the Province will obtain the expected future benefits (contributions reductions vs increase in benefits) is not certain. However Section PS 3320 also states "The mere fact that an estimate of an amount is involved (measurement uncertainty) does not, in and of itself, constitute the type of uncertainty that characterizes a contingent asset. For example, even though there may be measurement uncertainty related to income tax receivable, there is nothing uncertain about the fact that this asset exists. Any uncertainty is related solely to the amount thereof" (Section PS 3320 paragraph .07). Based on past history of surplus utilization for OTPP and based on the constating documents, expected future benefits for the Government are present. The uncertainty as with many types of assets relates to measurement uncertainty which will be discussed below.

6.4 Conclusion on recognition

Therefore the Province has concluded that PSAS supports the recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets must be subject to unilateral control. The Province's share of OTPP's pension surplus meets the definition of an Accrued Benefit Asset under Section PS 3250. The measurement of that accrued benefit asset is determined by reference to the guidance in Section PS 3250 regarding the Limit on the Carrying Amount of an Accrued Benefit Asset, discussed in Question 3 of this position paper.

7.0 Question 3 – Measurement of a pension asset

7.1 Standards in the PSA Handbook

Section PS 3250 addresses how to measure a pension asset. This is a two-step process for OTPP. Firstly the accrued plan obligation (a Credit) and the plan assets (a Debit) are measured in accordance with the standard, and adjusted for any unamortized actuarial gains or losses (a Debit for gains not yet realized, a Credit for losses not yet realized). This measurement results in a retirement benefit liability when it is a net liability (a Credit) amount or an accrued benefit asset when it is a net asset (a Debit) amount. When the resulting amount is an asset, the standard requires a second step to test that the asset is not impaired. It should be noted that impairment testing in some form is required for all assets recognized under PSAS standards except those carried at fair value, although the methodology of impairment tests will vary depending on the nature of the asset. The amount that is tested is the "adjusted benefit asset". When there are net unamortized gains the ABA is equal to the adjusted benefit asset. When there are net unamortized losses the ABA is reduced by those net unamortized losses to calculate the adjusted benefit asset. A graphical illustration of the calculation of the Accrued Benefit Asset (AcBA) and the Adjusted Benefit Asset (AdBA) are shown in appendix C. Section PS 3250 paragraphs .052 to .059 go on to explain what the standard means by expected future benefit and how a government may benefit from the ABA or adjusted benefit asset. Note that for OTPP the accrued benefit asset equals the adjusted benefit asset as there are net unamortized actuarial gains.

Section PS 3250 paragraphs .050-.059 are included here for completeness and ease of reference:

> ***Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)***
>
> *.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]*

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in Section PS 3250 paragraph .050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to

calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Section 3250 paragraph .052 states that a government may benefit from an ABA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions. This is an explanatory paragraph on how a government may benefit from an ABA and why a valuation allowance may be needed, rather than detailing the test to be applied. Part of this justification is to note that that an ABA may be impaired when "the government is not entitled to benefit from [the ABA] fully". Examples of when a government may not be entitled to benefit from the ABA fully are given, such as a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

Section PS 3250 paragraph .059 gives additional guidance to apply when an entity contemplates realizing future benefits <u>through a surplus withdrawal</u>: "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal". This introduces the concept of a legally enforceable right but only in the context of a government's withdrawal of surplus and <u>not in the context of contribution holidays</u>. If the standard setters had intended legal enforceability

to be the test throughout the standard, they would not have raised it only in the context of a withdrawal of surplus, but as a more fundamental notion in the guidance on expected future benefit. [10]

It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to shared control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Section 3250 paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays. When considering the ability to realize expected future benefits under Section PS 3250 paragraph .052, the Province's legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability which is not explicitly required by the standard to support recognition and measurement of JDBP pension assets. Specifically, the amount of pension asset that gets recorded needs to take into account considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a pension asset in the Public Accounts. Pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". Expected does not equate to certainty or the absence of uncertainty (Section PS 3250 paragraph .056).

Under the Plan and Partners' Agreement, if funding surpluses occur the partners are required to negotiate the use of the funding surplus (at least once every three years) and the Province is entitled to negotiate a reduction in contributions in respect of its share of the surplus. Under the Partners' Agreement any funding surplus must be dealt with (which includes the option of parking the surplus in the contingency reserve) so that the funding valuation becomes actuarially balanced. *In other words when there is a funding surplus over a certain range the "status quo" cannot be maintained, the surplus must be reduced by a combination of reductions in contributions, increases in benefits or withdrawals of surplus*. This is confirmed by the Partners' Agreement Section 57 that requires an actuarially balanced valuation to be prepared at least once every three years, allowing for a contingency reserve, combined with the FMP which sets out the framework for determining when a surplus or deficit outside of agreed upon ranges are met and action must be taken. While the Province might choose to accept an increase in member benefits rather than to reduce funding, any such decision is at the Province's discretion since the OTF cannot force the Province to increase benefits instead of reducing contributions. In other words

[10] Per page 10 of the October 2, 2016 dated letter from Deloitte LLP addressed to Ms. Karen Hughes, Associate Deputy Minister, Treasury Board Secretariat

it is at the Province's discretion whether to address the actuarial balancing requirements by allowing its portion of the surplus to be utilized through increased benefits. The OTF equally has the right to not agree to reduced contributions from the Province, but they do not have the right to force an inequitable sharing of the surplus. Therefore, the Province is entitled to negotiate their share of the JDBP which may include taking contribution holidays in future negotiations and can effectively use their power in negotiations to benefit from the ABA. The joint partners do have the ability to renegotiate all aspects of the partners' agreement including the FMP. However all changes require the agreement of both parties and as such the Province can veto any changes to the agreement. Note that while the negotiations are based on funding surplus amounts rather than accounting surplus amounts, any differences would be captured in the mechanics of the calculation of the expected future benefit rather than precluding an ability to benefit from any of the accounting surplus.

Further, Section PS 3250 paragraph .055 indicates "The objective of the standard in Section PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Many generally accepted accounting frameworks use "expected" in a number of principles and it is typically used in the probabilistic sense – something is expected when it is probable at some level, it does not equate to certainty. The Province has an expectation that they will benefit fully from the ABA by exercising their current rights under the plan arrangements to negotiate the use of current and future surpluses in the form of contribution holidays. This position is supported by the review of the constating documents and past history of negotiations that indicate[11]:

1. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) from exceeding the amount of contributions paid by or on behalf of active members in respect of credited service for the year[12] (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.
2. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix G for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.

[11] Per pages 3 to 6 of the September 20, 2016 dated letter from Osler, Hoskin & Harcourt LLP addressed to Len Hatzis and Paul Kaufman, Treasury Board Secretariat Legal Services
[12] TPA, subsection 5(1.1)

3. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right[13])[14], and the requirement to negotiate and agree (or in the absence of agreement, mediate and/or arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.
4. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement (section 74) may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan. Under the plan, contributions are generally borne equally by the Province and the employees. Employees benefit economically from both an increase in benefits and from a reduction of contributions. The Province benefits economically directly from a reduction in contributions. This makes it reasonable that at least some contribution reductions would be agreed to by the joint sponsors as a highly unequal weighting towards increases in benefits would not balance the interests of taxpayers and teachers therefore may be unlikely to be a reasonable outcome of “good faith” negotiations between the Province and the OTF.

   This is further supported by the historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses, and therefore, which should also be considered. In respect of conditional indexing, reduced indexation for current retirees was matched by an increase in payments by the Province for the first 50% of the indexation reduction. As the sponsors agreed to utilize the funding surplus to partially restore indexation, this restoration of indexation resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.98B for the 2015 change, and $1.68B for the 2014 change). This demonstrates that historically and over the long term an equitable sharing of the deficits and surpluses has resulted in changes in the Province’s contributions, even when there are decreases or increases to benefits for employees.

5. In the event that the sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, a mediator may be chosen by agreement of the sponsors (section 77 of the Partners’ Agreement). If the sponsors do not accept the report of the mediator, an arbitration board will be appointed (section 84 of the Partners’ Agreement). The arbitration board would consist of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would

[13] The OTF Call Right is a one-time arrangement intended to compensate Plan members for absorbing 100% (rather than 50%) of funding shortfalls arising the government initiated Freeze period. Part of a previously agreed upon arrangement to ensure equitable sharing of the risks and rewards over the long term of the plan, it is not a general unilateral right to utilize future surpluses beyond the recovery of the specific funding shortfalls.
[14] FMP, section 6.03

engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Based on the above analysis, the Province believes that the uncertainties around how and when to utilize a surplus in the OTPP do not result in an inability or lack of entitlement to utilize the surplus in accordance with Section PS 3250 paragraph .052.

7.2 Calculating the limit on the carrying amount of an accrued benefit asset

Section PS 3250 paragraphs .053 to .058 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in Section PS3250 paragraph .055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where actual realization of the benefit would be reflected in a reduction in future contributions. A valuation allowance is recorded against the pension asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test under Section PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as defined in Section 3250 paragraph .56.

Therefore in accordance with Section PS 3250 paragraph .56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Each of these is discussed separately.

7.3 Considerations re: withdrawal of the surplus (Section PS 3250 paragraph .056 (b))

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, Section 3250 paragraph .059 indicates “The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal.”

The TPA for OTPP does not specify a method for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution. The Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

The Province's position is that there is no amount of expected future benefit included in respect of withdrawable plan surplus.

7.4 Considerations re: reduced future contributions (Section PS 3250 paragraph .056 (a))

Section PS 3250 paragraph .056(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per Section PS 3250 paragraph.081 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

Section PS 3250 paragraph .055 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the pension asset value to be recorded in the accounts. For example, if the pension asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the pension asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. It is therefore relatively straightforward and is typically calculated based on the Province's share of the current service cost reported in the actuarial valuation taken into perpetuity unless there is evidence to indicate the workforce will significant diminish over time (for example a closed plan).

The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for

judgment in the above calculation is in this second part of the calculation. Note that consistent with the calculation of the expected future accruals for service, no amounts are considered for employee contributions as these relate to the OTF's portion of the plan. The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (Section PS 3250 paragraph .056(a)). There is no further guidance in Section PS 3250 as to how the calculation of minimum required contributions should be performed and what restrictions or parameters should be factored into this calculation. Typically for defined benefit plans minimum contributions include those that are required by the pension regulator to be made for funding. However, minimum contributions regardless of any surplus, may be required by plan text, legislation or other agreements with employees. For OTPP a key element of judgment is determining what contributions are required by the current plan arrangements "regardless of any surplus". The constating agreements for OTPP require that the parties negotiate every 3 years as a minimum, and when there is a funding surplus.

Determining the number of years of contributions to include should involve an assessment of the facts and circumstances of the plan and should consider uncertainty. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the contractual agreements between the sponsors that provide for the sharing of risks and benefits and specifically in respect of assessing the minimum contributions required by the plan agreements (there is no minimum contributions stipulated in the Plan text, legislation or Partners' Agreement) including the following:

- One view of minimum contributions might be that the agreed upon level of contributions are the minimum contributions until they are altered in the plan text. As this can only happen with agreement from OTF it cannot be assumed that changes will be made and therefore that the contribution formula as stated in the current agreements will continue in perpetuity. This view provides the most conservative view of minimum payments. However as the current contribution amounts are greater than the government's share of the annual current service cost for the existing workforce this indicates that continued contributions at this rate will result in ever increasing surpluses. Extrapolating the surpluses, at a certain point other requirements that are currently incorporated into the plan text, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan will apply to reduce the contributions. The effect of these caps on contributions would have to be estimated but cannot be ignored as they form part of the current contribution arrangements. Modelling could be performed to develop expectations as to when these CRA limits could be expected to be reached assuming no changes in the contribution levels. As is the most conservative view (highest minimum contributions) the impact of this has been considered, as discussed below.
- An alternative view of the minimum contributions required by the plan is that there is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'. On this basis it could be

argued that any agreed upon contribution levels are mandatory for only a three year period, after which the contributions must be renegotiated to stay the same, increase or decrease, such that the stated contribution level in the plan text constitute minimum payments for only three years. It should be noted that the plan text requires an actuarially balanced funding valuation, so to the extent that a funding deficit currently existed a contribution holiday (contributions lower than the annual cost of the plan) could not be negotiated. However because the funding situation at the time of future negotiations is not known it could be argued that no amount is a fixed "minimum contribution" in this context, because all of the contribution amount is subject to future changes in funding and negotiation by the joint sponsors.

- Other views of what the minimum contributions are would fall between these two views, such as that the current funding level is set to ensure that there is no funding deficit over a 11 year period and after that changes in contributions would be negotiated. This view has been used in calculating the actuarial calculation of the asset ceiling as noted in the table below.
- Another consideration might be the specific framework within the Funding Management Plan for OTPP which contemplates specified funding zones and expectations regarding possible contribution reductions by the sponsors. Informed stochastic modelling would be necessary to estimate when the different funding zones will be reached and probability of contribution reductions may be increased.
- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to use some of the funding surplus to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change, $1.98B for the 2015 change, and $1.68B for the 2014 change).

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (Section PS 2130 paragraph .03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in Section PS 2130 paragraph .13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

As part of the 2015/16 Public Accounts audit, the Office of the Provincial Controller engaged external consultants to conduct asset ceiling tests to assess the requirement for a valuation allowance against the $10.1 billion of net pension assets reported by the Province for OTPP . The results of those reports are summarized in Table 1 below.

Table 1: Summary of Asset Ceiling Models performed for OTPP

Model Assumptions	Expected Future Benefit or Asset Ceiling ($ Billions)	Results
1. There is no minimum employer contribution under the plan/legislation that is required if a surplus is present.	$44.6	There is no reduction in the expected future benefit (EFB) as at March 31, 2016.
2. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of the current funding report. Contribution requirements are $1.7B per year for 2015, 2016 and 2017.	$41.2	The minimum contribution requirement applies to the current period of the funding report and until a new report is completed. EFB is reduced for 2 years by $1.7B at March 31, 2016.
3. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of contribution requirement (i.e. 11 years through 2026) not just for the period of the current funding report.	$29.3	Uses a period to 2026 (11 year period) based on the funding report special contribution requirement. The EFB at March 31, 2016 is reduced by $15.3B.
4. The surplus is never used until the time it reaches the Income Tax Act (ITA) threshold. Once attained, the excess surplus is used at 50% for employees and 50% for the Province to reduce contributions in the following years.	$23.2	The ITA surplus limit is reached at the end of 2025, leading to forced contribution reductions from 2026. EFB is reduced by $21.4B at March 31, 2016
5. Every year, 50% of current	$12.9	The ITA surplus limit is reached at

DRAFT

year surplus is applied to improve member benefits and the remaining 50% of the current year surplus is retained and continues to accrue. Once the ITA threshold is attained, the excess surplus is used 50%-50% to reduce contributions by employees and the Province.		the end of 2041 leading to forced contribution reductions from 2042. EFB is reduced by minimum $31.7B at March 31, 2016.

Note: Models above made no assumption on any value of the surplus withdrawal.

In all 5 models above, the expected future benefit (EFB) for OTPP is greater than the accrued pension asset of OTPP of $10.1 billion, at March 31, 2016. Even under the most conservative model (number 5 above) under which 50% of the current year surplus is applied to improve member benefits while the remaining 50% is retained and continues to accrue a return on assets until the Income Tax Act (IITA) surplus threshold is reached, the EFB of $12.9 billion is greater than the accrued pension asset of $10.1 billion. As such no valuation allowance was required and reported for OTPP as of March 31, 2016.

For purposes of OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

In addition to the above calculations, the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan should also be considered. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that no valuation allowance is required.

The determination of the minimum contribution levels required as input to the calculation of the expected future benefit involves significant judgements, estimation and assumptions about future funding surplus levels. These judgements, estimates and assumptions should be made on a consistent basis with best estimates used in developing the accrued benefit obligations and plan asset amounts. Regardless of the need to apply judgements, estimates and assumptions for the calculation, this does not imply that no asset can be recognized or that it cannot be reliably measured. In fact, pension plans,

by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". From the Province's perspective, 'expected' does not equate to 'certainty' or the absence of uncertainty.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (Section PS 3250 paragraph .042) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (Section PS 3250 paragraph .041). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. Section PS 3250 paragraph .057 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on plan assets, which is one of the acceptable references suggested on Section PS 3250 paragraph .044.

The OAG and the Province differ in their interpretation regarding whether it needs to be "expected" that the Province will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in Section PS3250 paragraph .059. The Province considers that it needs to be expected that future economic benefits are to be obtained reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to benefit from a plan surplus.

7.5 Other guidance in the PSA Handbook on measurement

MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe would be a useful addition to the financial statements. Section PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would*

be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by experience of similar transactions and, in some cases, reports from independent experts. Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.

.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.

The estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the net pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is an acceptable alternative under PSAB and consistent with rates followed by other senior Canadian governments. Actual historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets reported in the Public Accounts. Appendix J includes a comparison of the OTPP funding rate assumptions, the Provincial discount rate for OTPP and the actual performance of OTPP from 2005 to 2016. Historical rates of return on plan assets have supported the past discount rates used by the Province in relation to OTPP.

7.6 Impact of valuation allowance

The current Auditor General's view challenges previous interpretations of the Provincial Controller and former Auditor Generals regarding the interpretation and application of Section PS 3250 to those JDBPs where the government is a joint sponsor. The impact of the OAG's view is that no net pension asset should be recognized in the Province's Public Accounts for JDBPs until the joint sponsors agree to a change in the plan text to provide for unilateral authority to the Province to access surplus or reduce future contributions or the sponsors enter into an agreement by year-end enabling the government to take a contribution holiday. In the absence of meeting either the criteria set out by the Auditor General, any ABA would therefore be fully provided for through a valuation allowance, impacting each year's

statement of operations by the amount by which the asset would otherwise increase in value. These results are counterintuitive with pension expense being higher in years in which increased funding is made and also higher when poor investment returns create actuarial losses that have not yet been amortized into the statement of operations. These examples are illustrated in Appendix C.

For information purposes, refer to Appendix H for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting for OTPP compared with following the Province's interpretation of the PSAS. Of particular note is the impact in 2008 when the deficit would have been lower by $3 billion in a year when pension asset values fell significantly because of the financial crisis.

7.7 Comparability of Ontario's accounting to other Provinces defined benefit plans

Not all of the jurisdictions noted in this comparative overview have joint defined benefit plans. Furthermore, the specific terms and conditions of any jurisdiction's plans will determine the appropriate accounting under PSAS. This information is provided for reference purposes only and has no direct impact on the Province's accounting treatment for OTPP or other defined benefit plans on the Province's financial reports.

The Province of British Columbia does have a jointly sponsored pension plan. Appendix I provides details from a legal opinion prepared by lawyers, Koskie Minsky which compared access to the pension surplus of OTPP relative to JDBPs in British Columbia. The Province of British Columbia does not report a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

The Province of Manitoba has a multi-employer defined benefit plan for their healthcare employees. The Province neither records the net pension liability or the net pension asset on their financial statements as the Province is not a direct sponsor of the plan. The Province of Manitoba appropriately reduces the accrued benefit asset to nil in accordance with Section PS 3250 paragraph .050 as the Province does not expect future benefits from any plan surplus in contrast to OTPP and the Province of Ontario.

The Province of Nova Scotia's Public Service Superannuation Plan transitioned to a joint governance structure in April 1, 2013. Due to the wording of the legislation, the Province has determined it no longer has any residual liability for the plan, and therefore has no entitlements to its assets. The legislation and funding policy alleviated the Province from any responsibility to fund shortfalls or to benefit from fund surpluses. As a result, the Province no longer records a net pension asset or liability in their financial statements. The Province of Nova Scotia therefore appropriately reduces the accrued

benefit asset to nil in accordance with Section PS 3250 paragraph .050 as the Province does not expect future benefits from any plan surplus in contrast to OTPP and the Province of Ontario.

Quebec has two joint sponsored plans: Government and Public Employees Retirement Plan, and Pension Plan Management Plan. These plans are structured such that employee and employer contributions are in separate funds. Currently both of these plans are in net pension liability positions.

In New Brunswick, the target benefit pension plans are governed by an Agreement and Declaration of Trust which restricts the Province's access to the plan assets. On this basis, the Province records the value of the plan net assets as nil when these plans are in a net asset position. These plans are shared risk plans that are governed by a Board of Trustees to which the Province has appointed one-half of the members. The Plans are jointly funded by employees and the Province. These target benefit plans target retirement benefits as opposed to guaranteeing them. Two of the four target benefit plans are in a net asset position, where a full allowance is taken by the Province against the net pension asset. The Province of New Brunswick appropriately reduces the accrued benefit asset to nil in accordance with Section PS 3250 paragraph .050 (there is no specific guidance on target benefit plans in PSAS) as the Province does not expect future benefits from any plan surplus in contrast to OTPP and the Province of Ontario.

As noted above, the constating documents for pension plans in other provinces are different than those of OTPP, therefore caution should be exercised when trying to compare accounting among the jurisdictions, or others.

7.8 Conclusion on measurement

As discussed, there is significant professional judgement and estimation in determining how to measure the valuation allowance under Section PS 3250, including the determination of the minimum contributions required by the current plan arrangements. It is the Province's position that the attributes of the JDBP arrangements for the OTPP entitle the Province to access its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surplus through reduced contributions.

The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of various actuarial assessments for the asset ceiling test date, no valuation allowance appears to be required and the OTPP pension assets should continue to be recorded on the books of the Province.

Appendix B – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Pension Act and to the Partners' Agreement and Funding Management Policy in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners (sponsors) can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners (sponsors) in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the PBA, appointing the OTTP Board, and defining the role of the Board. Section 10 requires that the partners meet and negotiate changes to the plan every three years. Section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the sponsors to the OTPP have the authority to utilize ongoing surpluses. Section 19 also requires the Board to prepare a valuation at least every three years to comply with the PBA.

DRAFT

Paragraph 57 requires a valuation prepared for filing with the Superintendent of Financial Services to be actuarially balanced so that the present value of benefits and costs to be paid out of the fund (plus any contingency reserve) be equal to the present value of sponsor contributions. An actuarial valuation for funding purposes of the pension fund shall be prepared by the Board's actuary as at the 1st day of January and filed annually with the Superintendent of Financial Services, unless the partners jointly agree to instruct the Board not to file the valuation. The partners shall establish a committee to deal with accounting matters relating to joint pension plan sponsorship and agree to contact the Public Sector Accounting Board to raise issues of concern to the partners.

Paragraphs 58 to 60 indicate the actions to be taken based on the preliminary results of a valuation prepared for filing with the Financial Services Commission of Ontario. If the valuation indicates a need to increase the contribution rate, the partners need to meet as soon as possible to discuss how to adjust for that need on an equally shared basis. If the valuation indicates the contribution rate can be decreased, the actuarial gain can be applied to reduce the payments required to liquidate any unamortized balance of a solvency deficiency.

The process governing the use of ongoing surpluses by the sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the sponsors on his or her views on the positions of the partners and provide a recommendation to the sponsors. If the sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one

representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented.

Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

The mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the sponsors do not agree to file the valuation, then the sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the sponsors' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Funding Management Policy (FMP)

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP. The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:

i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).

ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).

iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the sponsors are unable to agree the mediation process set out in the

Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the sponsors mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

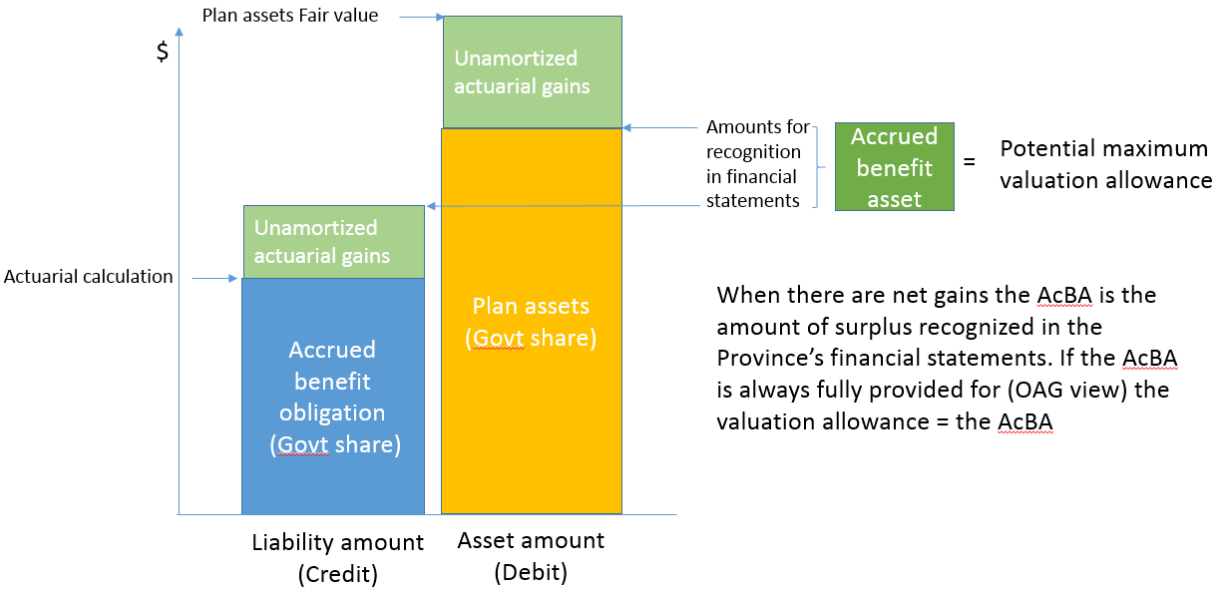
Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the

arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

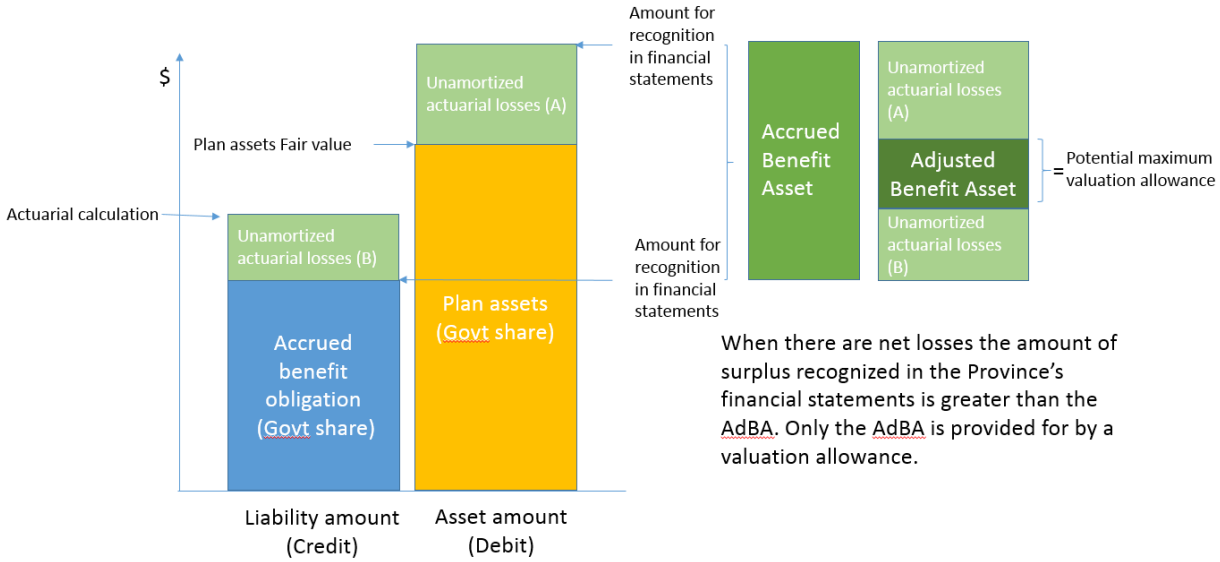
DRAFT

Appendix C – Overview of a Valuation Allowance on Pension Assets

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



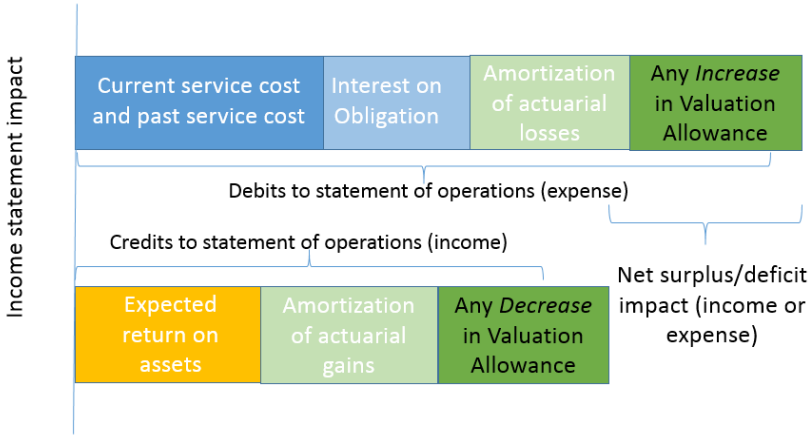
An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses



Components of Expense

The *change in* the valuation allowance flows directly through the statement of operations.

The change in valuation allowance = the change in the AcBA (or AdBA if applicable)



Changes in the Accrued Benefit Asset

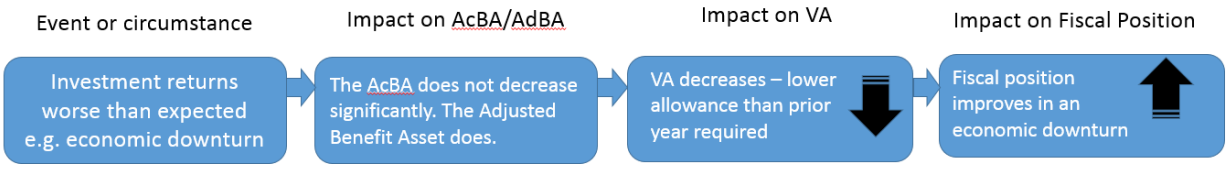
Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]

Event or circumstance	Impact on ABA	Impact on VA	Impact on Fiscal position
Contributions in excess of current service cost – i.e. additional funding	Plan assets increase more than the ABO	VA increases to reduce ABA to zero	Fiscal position worsens with additional funding
2015-2016 example: Contributions of $1,812M exceeded other elements of pension expense by $1,514M	2015-2016 example: Additional contributions increase plan assets. AcBA increases by $1,514M	2015-2016 example: AcBA increase of $1,514M results in an increase to the VA of $1,514M	2015-2016 example: Deficit increases by $1,514M. The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

Changes in the Accrued Benefit Asset

Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA or AdBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]



Plan assets fair values significantly lower in one year.
Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.

The AcBA is based on the higher, smoothed value of plan assets and does not change significantly. However the actuarial losses are subtracted from the AcBA to calculate an AdBA, which is smaller than the AcBA.

Prior year allowance was based on AcBA (no net amortized actuarial losses). Current year is based on AdBA because there are unamortized actuarial losses. The AdBA is smaller than the AcBA because of the increase in unamortized losses. Therefore the VA is reduced correspondingly.

Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. The increased actuarial losses would only impact the statement of operations in future years.

A similar impact would have been noted in 2008 if the OAG's position was reflected in the financial statements for that year.

[1] Impact of change, all other elements being held constant.

DRAFT

Appendix D – Summary of different valuation methodologies for pension valuations

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV of the CPA Canada Handbook – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits and to provide information on the financial position of the plan as of the valuation date on a funding basis in accordance with the Pension Benefits Act, the Income Tax Act as well as generally accepted actuarial practice.	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits, pension obligations and the financial position of the plan as of the valuation date in accordance with Part IV of the CPA Canada Handbook (Part I of the CPA Canada Handbook (i.e. IFRS) is referred to where Part IV is silent).	Measure and report the obligation for employee retirement benefits, attribute the costs of those benefits to the periods in which the related services are rendered and to provide information on the financial position of the plan in accordance with PSAS.
Actuarial cost method	Modified aggregate method (level cost method)	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	PSAS allows choice regarding the valuing of plan assets at market-related value. Market -related values, are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied

	moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values For funding valuation, the plan uses the actuarial value of assets which are the market value of assets adjusted for investment gains / losses spread over a period of 3 years.		consistently. The Province has chosen to value OTPP's plan assets by adjusting to market value over a period of 5 years in accordance with PSAS.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate. For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work	Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. OTPP follows Part I (IAS 19) which requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on	Not specified. However two methods are specifically acknowledged in PSAS – a) discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing. [15] The Province of Ontario uses a discount rate for OTPP determined by reference to the expected long-term

[15] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

	For the purpose of the funding valuation, the plan uses a discount rate which is based on market related rates averaged over a period of 36 months. The discount rate used in the most recent funding valuation for OTPP as at January 1, 2015 was 4.85%.	bonds issued by the Province of Ontario. As illustrated in Appendix E, this is inconsistent with other Provincial pension plans in Canada which use as a discount rate, the long-term rate of return on plan assets. The discount rate used by OTPP in their December 31, 2015 financial statements was 3.25%.	return on plan assets. The discount rate used by the Province to account for OTPP in their March 31, 2016 financial statements was 6.25%. This is the long-term rate of return on plan assets which is in accordance with PSAS.
Independent verification		OTPP's financial statements are audited by Deloitte LLP.	The Province's financial statements are audited by the OAG.
Underlying population data	All valuations use consistent underlying data of the population covered by the plan (membership data as at August 30 of the prior year projected to the valuation date is used].		
Inflation rate	All valuations treat inflation in a consistent manner (on a best estimate basis). Best estimate assumptions are derived based on the best estimate of future events. Best estimates of inflation by the Province may be different from those of the OTPP Board, even though they are both best estimate assumptions. In developing its best estimate assumptions, the Province references a broad range of available data, including the best estimate from the OTPP Board.		
Demographic assumptions	Valuations use consistent demographic assumptions (best estimate by the OTPP Board).		Under PSAS, the Province is not required to prescribe demographic assumptions.
Other economic assumptions	The OTPP Board develops its own salary escalation assumption to be used for both the funding and the Board's financial statement valuation. Economic assumptions other than the discount rate, inflation rate and salary assumptions are determined by the Board. These are the same for funding valuation and the Board's financial statement valuation.		The Province prescribes the future salary escalation rates. The Province develops this assumption by referencing the outcome of the most recent collective agreements as

DRAFT

		well as compensation policies issued from time to time by the government and the historic increases granted.

Appendix E - Comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP

Review of Discount Rates Across Jurisdictions

- In the inter-jurisdictional review of all funded provincial sponsored or joint sponsored plans which also have stand-alone plan financial statements:
  - the Ontario Teachers' Pension Plan (OTPP) is the only plan were the discount rate used in the plan's financial statements is more than 50 basis points below the discount rate used by the province.
  - OTPP stand-alone financial statements use the market rate of Provincial bonds.

- All other plans' financial statements (i.e. 23 plans across jurisdictions) use the long-term rate of return as the discount. The discount rate used by the plans' are lower than 50 basis points or less than the provinces' discount rate or at times higher than the provincial rate.

Appendix F – Comparison of definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, Section PS 3060 paragraph .06. Section PS 3060 was introduced into the Public Sector Accounting (PSA) Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;	Consistent in concept with the definition of a GP focusing on investments in the partnership and the

			definition of a JDBP focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

In addition to consistent wording, the concepts in the definitions of a government partnership and a JDBP are similar.

While similar in concept and wording, the definition of a JDBP is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including JDBPs.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

DRAFT

Appendix G – History of Surplus Utilization for OTPP

The history of OTPP surplus utilization from 1990 to the date that the FMP was established (in March 2003) demonstrates a past practice of the sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Contributions by teachers increased by 1 percentage point (from 7.9% to 8.9%) effective January 1, 1990 per legislation.	Legislated an increase in matching contributions (from 7.9% to 8.9%) effective January 1, 1990 and responsibility to finance the initial unfunded liability through a series of special payments	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to	$0

DRAFT

			reduce the value of remaining special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion	$9.3 Billion	

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

Appendix I – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the

event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan (''PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[16] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[16] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

DRAFT

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

Hi Uros.

I was hoping that you might have a few minutes to chat tomorrow regarding the AG's request to run the asset ceiling test under a perpetuity assumption.

Thanks,

Nadine

Position Paper V1 to cv.pdf

Draft Position Paper on Accounting for Joint Defined Benefit Plans
in the Province's 2015-16 Public Accounts (September 22, 2016)
Accounting Policy and Financial Reporting

Executive Summary

During the course of the audit of the 2015-16 consolidated financial statements for the Province, the Auditor General asked if the reported pension assets for OTPP and OPSEUPP might be impaired in accordance with PS3250 and requested an actuarial valuation.
Subsequent to being provided with the results of the actuarial assessment, the Office of the Auditor General communicated issues with the accounting treatment for the assets on the Province's books, in effect, challenging the Province's interpretation of PSAB standards which had been in place for the past 15 years.

According to the Auditor General's interpretation of PS 3250, the entire balance of $10.6 billion of pension assets related to OTPP and OPSEUPP would have to be written off of the Province's balance sheet as an error, and on a go forward basis, only the value of negotiated and agreed to benefits to the government through reduced contributions could be reported on the Province's financial statements, to the extent that the supporting agreements were in place as at fiscal yearend.

Based on input from an external audit opinion and management's knowledge of the frameworks in place for the pension plans, the province should retain past practice with regards to reporting the Province's share of the pension assets on the consolidated financial statements of the Province, and apply PS 3250 paras .050 - .059 as relevant to the substance of a joint defined benefit plan.

Furthermore, the Province should continue to work with the Auditor General and the Public Sector Accounting Board to work towards enhanced accounting guidance which more explicitly addresses expectations with regards to joint benefit pension plans and the application of the principle of substance over form with regards to such plans.

I. Background

i. Historical practice

The Province has reported an accrued pension asset for OTPP and OPSEUPP since 2001-02 Public Accounts. The accrued pension asset positions have been gradually growing since that time. As of March 31, 2016, the Province will reporting a net pension asset position of $10.1 billion for OTPP (excluding RCA) and $420[1] million for OPSEUPP.

ii. 2015/16 Public Accounts Reporting

Identification of potential accounting issues and areas of audit focus for the following year's audit are typically communicated through the Audit Findings Report for the prior

[1] Excludes consolidation agency adjustments for pension contributions reported as an expense by the government controlled organizations included in the government reporting entity.

year's audit. Per **Attachment 1**, the Audit Finding Report for the 2014-15 Public Accounts Audit (Page 4) makes reference to the AG's planned review of economic assumptions, excluding any reference to the Province's reporting for the defined pension assets.

The Auditor General's 2015 Annual Report (Attachment 2) also excludes any reference to any concerns regarding the Province's accounting for pensions, and the only reference to pension in Chapter 2 is in regards to PSAB's project on Employee Future Benefits.

As more detailed audit plans were developed, the Office of the Auditor General shared a copy of the draft Audit Planning Report in February, 2016 (**Attachment 3**) which reflected a focus on economic assumption in relation to pension related reporting on the Province's books (i.e. inflation, salary escalation rates, management's best estimates of return).

During subsequent audit planning discussions between the Office of the Provincial Controller and the Office of the Auditor General, no mention was made to any concerns with the accounting treatment of the pension assets related to OTPP or OPSEUPP. In June, 2016 the OAG audit staff started to enquire about the OTPP and OPSEUPP assets being reported on the Province's books. The OAG advises via email correspondence that the matter had not previously been identified as an issue (See June 14th email, **Attachment 4**).

In mid-June, the OAG staff requested that OPCD undertake an actuarial assessment to determine if asset impairment existed on the pension assets being reported on the Province's books (see **Attachment 5**). The correspondence did not include any reference to para. 059 in PS 3250 which we have subsequently learned is a focus of the Auditor General (i.e. unilateral right to withdraw surplus), nor were any questions raised regarding any agreements that the Province might have in place with OTF as at March 31, 2016.

- Following a competitive tendering process, in response to the OAG's request, an external firm was engaged to assess the applicability of the asset ceiling test for Ontario's 2015-16 financial statements.
- On August 19th, copies of the reports summarizing the results of the external firm's assessments for OTPP and OPSEUPP were shared with the Office of the Auditor General, including supporting documentation which had been reviewed by the external firm. (See **Attachment 6a** and **6b**)
- On August 26th, OPCD received an email from the OAG containing some follow up questions related to the external firm's analysis, including for the first time a reference to para .059 in PSAS 3250. (See **Attachment 7**)
- On September 1st, OPCD and the external firm met with representatives of OAG to review the results of their additional analysis and explain rational for the responses to the OAG's questions. (**see Attachment 8** – Responses to OAG Questions). During this discussion, OPCD enquired twice whether the OAG would require a legal opinion in relation to the work they were doing to which no requirement was identified. During the same meeting, staff made reference to the fact that British Columbia does not report any pension assets on its books.
- On September 6th, OPCD provided the OAG with additional background on how the ON plans were different than those in British Columbia. (**see Attachment 9**)
- On September 6th, OPCD received a response from the OAG which focused on legal rights. (See **Attachment 10**) Based on the responses to OPCD's questions during the meeting on September 1st, this new position was a surprise.
- Since September 6th, TBS and MOF representatives, including some discussions involving external advisors, has dialogued with the OAG in an effort to better understand the Auditor General's interpretation of the PSAB standard.

- A decision was made to build upon the Statement of Work already in place with the external firm to expand upon its advisory services with the intention of providing an accounting opinion. On September XX, the external firm completed its reported and provided it to TBS. The results of the report were used to inform the accounting policy for joint defined benefit based plans for purposes of the Province's consolidated financial reports.

iii. Impact on 2015-16 Public Accounts Audit Process

- As noted above, challenges raised by the Auditor General with regards to the Province's historical reporting of pension assets for the joint defined benefit plans arose very late in the audit.
- The AG did not clearly communicate any specific challenges to the Province's accounting treatment for the OTPP and OPSEUPP assets until very late in the audit process.
- As a result of the nature and timing of the concerns raised by the AG, TBS and MOF management were challenged to obtain sufficient, appropriate evidence to support their a potential change in the Province's historical practice which had received a clean audit opinion for the prior 15 years.
- While the AG advised that she had already received an accounting opinion(s) supporting her interpretation, TBS management undertook to acquire legal and accounting opinions on a timely basis to help inform judgment on the most appropriate basis to report the OTPP and OPSEUPP asset balance under PSAB.
- Obtaining external advice required working closely with external advisors and internal stakeholders to ensure a common and robust understanding of the facts to inform management's decision on the most appropriate basis of reporting to reflect the underlying economic substance of the Province's activities and financial position.
- Without adequate support to inform an opinion, Management would not be able to sign off on the Management Letter of Representation attesting to their judgment that the financial statements were prepared in accordance with PSAB, nor the Statement of Responsibility in the Province's Annual Report which contains similar attestation.

iv. External Advisor's Report

In collaboration with Income Security & Pension Policy (MOF), Pension Policy Unit (TBS), MOF engaged external actuaries to work on both the OTPP and OPSEUPP assessments. OPCD engaged an external firm to review the value of the pension assets reported on the Province's March 31, 2016 consolidated financial statements under PS 3250.

Based on a review of relevant documentation, the external review supported the reported asset values on the books as reflecting Province's expectation to benefit from the accrued benefit asset reported for both OTPP and OPSEUPP, either through withdrawing surplus or taking a contribution holiday in the future based on current funding management policy (FMP) of OTPP and OPSEUPP.

Based on the results of the initial analysis (Aug. 19), and subsequent support provided by Deloitte in response to the AG's August 26th follow-up questions, the Province's past accounting treatment appeared to be supported.

v. Auditor General's written position

In response to a request from TBS, the AG provided a written summary of her position which reflected input/advice that she had received from her own advisors and other sources. The letter (**Attachment 11**) stated that the AG's interpretation would require both a unilateral right to access the surplus by the Province, and that irrevocable written agreements be in place as at year-end in order for an asset to be reported on the province's books. Her letter stated that she would expect for 100% of the asset to be written off of the Province's balance sheet as at March 31, 2016.

vi. Meetings between TBS, MOF and the AG

Following receipt of the AG's letter, a meeting was held on September 14th which included staff from TBS, MOF, the OAG and representatives from the external advisory firm to allow the external advisors to better understand the AG's position as input to providing their accounting advisory services.

On September 15th, the Deputy Ministers of TBS and MOF had an audit closing meeting with the Auditor General to bring closure to all matters related to the 2015-16 Public Accounts audit, notwithstanding the pension asset ceiling matter for OTPP and OPSEUPP. During the meeting, the proposal was made to adopt legislated accounting as a solution to addressing the AG's position which would allow for the same impact to be reported as desired by the AG, and for management to sign off on the Management Letter of Representation and Statement of Responsibility. Initially, the Auditor General accepted this proposal but subsequently rejected it and said she would issue a qualified audit opinion.

Since that time, TBS continues to provide the external audit firm with access to materials and persons necessary to complete their work, and has also engaged a second firm to provide accounting advisory services on this matter.

vii. External Accounting Opinion

On Sept XX, the report of the external firm was received with XXXXX

Key considerations in the external firm's report include:

viii. Management's Responsibility

It remains management's responsibility to apply its discretion in deciding whether to accept the opinion of the external advisor. In this particular case, and after serious consideration, TBS and MOF management have decided that XXX.

For the 2015-16 Public Accounts, a valuation allowance is not required for both OTPP and OPSEUPP. The Province will continue to monitor and assess whether the accrued pension asset may become impaired in the future.

Commented [np1]: Legal terms being reviewed by LSB (unilateral access to 'surplus' pool).

Deloitte's opinion

Attachment X

Below are some extracts from the PS3250 which are relevant for calculating the limit on carrying amount of accrued benefit asset (the asset ceiling test) and the joint defined benefit which are relevant to the analysis and position taken for financial statement preparation.

Limit on the carrying amount of an accrued benefit asset

.050 *An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.* [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a. the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and

minimum contributions the government is required to make regardless of any surplus; and

b. the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise.
Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined

benefit plan.

.081 *When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]

.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

MEETING SUMMARY

TOPIC **OAG/Deloitte LLP/OPCD Discussion on Pension Asset Ceiling**

MEETING DATE(S): **September 21, 2016, 4:15 – 6:00 PM**

LOCATION: **7 Queen's Park,**
2nd Floor, Frost South, ADM Boardroom

ATTENDEES: Cindy Veinot (OPCD)
Nadine Petsche (OPCD)
Kerry Danyluk (Deloitte LLP)
Matthew Colley (Deloitte LLP)

Bonnie Lysyk (OAG)
Susan Klein (OAG)
Bill Pelow (OAG)
David Catarino (OAG)
Audelyn Budihardjo (OAG)
Benjamin Leung (OAG)

Note: This summary follows the order of the discussion between the Office of the Controller General, Deloitte LLP (external accounting advisors to OPCD), and staff of the Office of the Auditor General as at September 22, 2016.

DRAFT

Discussion Highlights

Remarks by Auditor General/OAG

- Stated that she was here just to listen to what Deloitte has concluded
- In terms of reasonable expectations, a key here is whether the $4.3B has been looked at. Wanted to get additional details on the calculation of this amount
- Referenced the OTPP's financial statements and different result vs. surplus. (OPCD and Deloitte LLP pointed out that the OTPP's financial statements are prepared on a different basis – IFRS- and use different assumptions. Discussed the fact that the $4.3M in value from the recent decision regarding indexation was calculated on a funding basis. Bonnie suggested that we putting forth a position that the funding source as the same value that should be reported for accounting purposes (to be used as a proxy for the asset value). Delotitte reiterated that it would not be suggesting a value in its opinion letter, and reminded that AG that for funding purposes, values are typically more conservative. OPCD remarked that the AG's comments did not reflect our position or what we were putting forth which is that no valuation allowance is necessary.
- The AG commented that the buildup of the pension asset is because of a difference between the discount rates used between the Plan and the government. (see discussion above regarding purpose of discount rates.)
- The AG suggested that the government was following a different approach to discount rates than other governments which explained the difference between the OTPP's rates and the government. OPCD referenced research analysis that had been shared with the OAG which showed that ON's practice is consistent with most other Senior governments in Canada with regards to using management's best estimates on return, and that in fact, it is the OTPP which is an outlier in using a rate 'other than the sponsor's' rate (management's best estimate of return) for its financial statements. It is this difference in OTPP's practice which accounts for the big difference between what the OTPP reports and what ON reports.
- The AG said that government would have to be comfortable commenting that they have entitlement to the $10.6 B of the teacher's retirement fund (that the asset is supposed to mean something).
- The OAG commented, in relation to the $4.3B benefit, that the accounting valuation doesn't respond at all because the f/s reflect 100% indexation (w.r.t. share the pain).
- The AG asked Deloitte to explain how the pension asset met the definition of an asset. Deloitte responded that there is no need to look to PS1000, since PS 3250 was developed within PSAB's conceptual framework which recognizes assets.
- The AG commented that she doesn't feel that uncertainty is ok, and that there were no agreements in place as at March 31/16. She observed that the asset was increased due to differences between the OTPP's and ON's rates. It is an accounting issue – PSAB allows different rates, but PS3250 requires that you have to see 'what is behind the asset'. It is more than just about applying PS 3250.
- The AG mentioned the BC example, stating that it was not a different situation and that it was the same scenario. She also mentioned a situation in QC where the assets had to be written down.
- The AG said that the value of the asset would need to be documented to really support the value. Would be looking for a document prepared between the OTF and the government (an agreement as at XXX), but none of this is documented to support the asset. Need documented, concrete evidence.
- Commented that the situation could change, and that the value could change not because nobody knew but because they didn't want to tell the AG until 3 months after year end.
- She suggested that perhaps Deloitte LLP didn't have all of the information that they needed to inform their decision, implying that the government was withholding information that they needed to complete a robust analysis.
- She said she appreciated that Deloitte LLP had looked at the situation, but wondered aloud why nothing

DRAFT

Discussion Highlights

is in front of her regarding the Province's position if we are all comfortable at out.

- The AG said that there may be some aspects worth looking at – an analytical review of the pension expense and how it impacts the fiscal plan. She said that for the most part that governments use the funds' rates of return. OPCD contradicted the AG's remarks and reminded the AG of our analysis which had been shared with her office which stated that the government's use the estimated rate of retune and the plans are for the most part using their sponsors' rates (that it is OTPP which is different)
- The AG said that there is a need to look behind the scenes at the negotiations between the OTF and the Ministry. She said that rates get tweaked with an objective of the impact on the bottom line, and that this is history on how it has played its way out over the past 10 years.
- She said that she would have expected a provincial position paper from the government.
- She feels that she has a strong position and doesn't agree with the position being taken.
- She wants proof for the asset value being reported.
- She referenced 2 faxes being received the night before a meeting that she was supposed to take into consideration w.r.t. asset values. (OPCD asked to clarify which faxes she was referring to. AG said it was the July and Aug docs related to the $4.3B, and that if we were suggesting that as the value of our asset that we should have provided more than that. OPCD reminded the AG that the docs were provided in response to a request she made in a telephone call earlier in the day but she didn't recall making such a request. OPCD also advised that the documents weren't intended to reflect our position of the asset value.)
- The AG commented on the Province's legal opinion (internal) as not being solid. Deloitte also stated that the legal letter will not confirm that there is a unilateral right to access an asset for surplus withdrawals (as would be relevant under para.059 only).
- The AG reiterated what she would need to see to report an asset is an 'irrevocable agreement in place as at March 31st'.
- She commented that the FMP is just an agreement to negotiate, and that negotiations are the next level up.
- She commented that there were also opportunities to improve our pension disclosure as the pension assets are current reported as a reduction to our pension liabilities.
- The AG made it clear that if the government would not change the financial statements in accordance with her view, that her messaging would be different than if we were to agree that the write-down of $10.6 B was an error. The AG reminded OPCD of her solution of recording the full impact to accumulated deficit over 15/16 and 16/17.
- With regards to her messaging, she said that she would say how over the past 10 years the government's deficits have been understated by XXX.
- The AG asked again how the asset would be used in the future. Her staff asked how the balance would be expected to decline in the future? They suggested that it will only continue to increase in value and that is why it has to be addressed. With regards to questions on future reduced contributions and the amount of share the pain contributions reflected in the actuarial valuations (~$1M), Deloitte clarified for the AG that it only relates to the teachers who have retired since 2009, and that prior to 2008 the plan was fully indexed. The previous negotiations lowered the benefit obligation to teachers but introduced the share the pain payments for funding purposes. For accounting purposes, the obligation has continued to be calculated at 100%.
- The AG asked how the taxpayers will ever see the benefit of the asset and suggested that the government's accounting was being used to manipulate the accounting, that it had grown from $200M to $10.6 B over the past 10 years.
- With regards to OPCD's observations that the AG's approach being susceptible to manipulation of the bottom line each year by having an agreement in place (which would be contrary to the spirit of the standard which addresses long term liabilities), the AG commented that she would be fine

DRAFT

Discussion Highlights

with that. She 'wouldn't disagree with being able to take the amount in the agreement back into revenue when there is an agreement at year end'. (Note that this would mean that the AG's approach would report the $4.3B indexation amount as revenue in 16/17).

- When asked for her position, Susan Klein, the Deputy AG, commented that she supports Bonnie's position on the mater, stating that they could take the intention of the standard as requiring that there is an agreement in place as at year end.

OPCD and Deloitte LLP comments

- Acknowledged and thanked the AG for her feedback on the Statement of Facts that Deloitte's had sent earlier in the week.
- Commented that certain parts of PS 3250 don't necessarily fit together
- Reiterated understanding that the AG was looking for there to be an agreement at year-end for which there was none
- With regards to the concept of a Joint Defined Benefit Plan(JDBP), it was observed that the rules were written for a liability situation (similar to the rest of the handbook) as opposed to assets, with a focus on risks
- Within PS 3250, the guidance says that JDBPs should follow the rest of the rules for defined benefit plans (e.g. para 50 – 59)
- With regards to the test for legal enforceability, Kerry does not see this as the applicable test when one is assessing benefits expected from contribution reductions
- Relevant parameters are para .052 which deals with uncertainties and the ability to use the surplus for either a contribution holiday or a reduction
- $4.6B from the funding basis. Using funding source to pay is the same.
- Kerry acknowledged that unlike a sole sourced plan, other parties do need to agree and in this regard, the TPA deals with matching contributions, but it is less clear about the applicability of surpluses. There is more judgement involved w.r.t. assessing uncertainty but not enough to suggest that there needs to be a full valuation allowance.
- With regards to testing for expectations and minimum contributions, there is a diversity of practice (whether should test every 3 years, every 15 years)
- Kerry pointed out that the government can negotiate a reduction and contemplates to share in surplus
- In terms of framing the thought process, it is important that the government feels good enough about the design of the plan to develop a reasonable expectation (para 55) to support the asset
- Kerry commented on the $10.6 B vs. $4.3 B (savings of what the government would have to pay anyway)
- Kerry commented that she wouldn't be able to take the rest to an opinion level
- Bonnie w.r.t. $4.3 billion – is it a reasonable explanation that ON could expect a benefit from the asset in its entirely over the fullness of time
- The funding position of the plan will determine how quickly the province will be able to utilize the asset. (once full indexation has been restored and out of the restoration zone). In terms of the $4.3B value for indexation – Cindy clarified for the AG that it represented the present value of payments you would have to make in the future (in perpetuity, until the end of the plan and the last teacher retires.) Deloitte clarified for the AG that the calculations are related to teachers retiring after 2009, and that the amounts could expect to get larger as more of those teachers retire. (This comment was made in response to the OAG's remarks regarding the amount reflected in the actuarial valuation where >$1M payments were made in relation to the fund in relation to indexation and questioning on how the $4.3B was calculated.)
- With regards to OTPP's financial statements, the AG
- With regards to the difference between a sole sponsored PP vs. a JDBP, with a SS plan, there was some discussion with regards to the expectation of reduced contributions. Reference was made to the Zones that would impact the ability of the government to expect a reduction in future contributions.

DRAFT

Discussion Highlights

- Deloitte restated its position that no agreement needs to be in place as at year end, but rather what is looked to is the framework that is in place and the reasonable expectation (looking at past history from the day that the plan has been in place. There is an expectation/contemplation that inflation protection will eventually be restored and that the government will benefit from reduced contributions.
- Deloitte and OPCD restated that the $4.3B that the AG kept referring to could NOT be crosswalked to the accounting numbers because it is calculated based on funding.
- OPCD commented that the $10.6B in reported asset value was also net of a $9 B unamortized gain balance which demonstrates that actual returns have actually exceeded management's best estimate of return.

Attachment 1: image002.jpg
Attachment 2: Public pension plans - comparison summary.xlsx

Hi Nadine,

As requested, we have completed our research on the public pension plans in British Columbia and Alberta for purposes of comparing reporting with the CAAT/HOOPP plans in Ontario. This email serves as a commentary to the file attached.

The summary file is set up with the key “criteria checklist” that we believe would simplify and assist with the comparison. We appreciate your offer to have your team research other plans. The file includes the plans in Manitoba and Saskatchewan that we have identified for your team to consider. We suggest that extracting the key plan information and summarizing it in the template as we have done for Alberta and BC plans would be most helpful in determining if the plans are comparable to CAAT/HOOPP. If a meeting with your team that will be doing the research will help clarify the task, please let us know.

We have focused on public sector plans in British Columbia, Alberta, Manitoba and Saskatchewan given the following considerations:

- Federal plans are not comparable as they are generally solely sponsored by the Federal government

- Public sector plans in the Eastern provinces (New Brunswick, Newfoundland, Nova Scotia, P.E.I.) were excluded due to the changing nature of the plans with the conversion to shared risk model in these provinces–

For British Columbia and Alberta, we considered the plans for which the provinces reported an obligation on a defined benefit basis. We excluded plans which are relatively small or plans with limited information available. Our analysis is based on the review of plan texts, funding policies, governance documentation and financial statements, as available on the government and pension plan websites.

Key observations

With the exception of the Alberta Teachers' Plan, all the public plans in British Columbia and Alberta we have researched appear to be comparable to CAAT/HOOPP:

- In particular, the Alberta UAPP appears to be most comparable as it also has a similar governance structure. The plan appears to have both employer and employee legal sponsors. Further, according to the sponsorship agreement (post 1992), the province is not a legal sponsor and does not appear to have direct control over benefit/contribution levels, similar to CAAT/HOOPP. The plan is accounted for on a joint defined benefit plan basis. The plan is currently in a deficit position at 31 March 2016.

- The respective boards of the other Alberta plans (PSPP, MEPP and LAPP) have control of the benefit/contributions levels. Alberta is listed as a "participating employer" for the MEPP and PSPP. We note that although the plans are contributory, they do not have a legal employee sponsor. Similar to the CAAT/HOOPP, other employers participating in the plans appear to apply defined contribution (DC) reporting. The plans are accounted for on a joint defined benefit plan basis. The plans are currently in deficit positions at 31 March 2016.

- For the BC plans, the province is clearly a legal sponsor of the plans, unlike CAAT/HOOPP. However, the province does not have the same degree of control over benefits and/or contribution levels as Ontario would have over OTPP or OPSEUPP. Rather, the respective boards have some authority to change benefits/contribution levels without the province's consent. The plans are accounted for on a joint defined benefit plan basis. A valuation allowance is applied to impair any balance sheet asset (where applicable), similar to Ontario's treatment of CAAT/HOOPP.

- The Province of Alberta is a legal sponsor of the Teachers Plan. It is unclear whether they have decision making authority on contribution/benefit levels.

Based on the observations above, the current defined benefit reporting of CAAT/HOOPP applied by the Province of Ontario is not inconsistent with the reporting of comparable pension plans in Alberta and British Columbia.

Let us know if you would like to further discuss.

Regards,

Christina

minister request.rtf

From: Petsche, Nadine (TBS) []
To: lucy.durocher@ca.pwc.com [lucy.durocher@ca.pwc.com]
Subject: minister request
Date: Friday, October 21, 2016 17:00:17

Lucy,

The minister has asked for a flow chart to help explain to the public in easy to follow presentation (flowchart?) how the AG's approach to determining pension expense impacts the fiscal plan. Specifically, he would like to be able to explain how a pension surplus becomes a pension expense because of the AG's different interpretation.

Apparently this is an urgent request that we have to complete by end of weekend. Wondering if you have any ideas or can help? Maybe you have something off the shelf? Not great odds I guess.

Thanks.

Nadine

Hi Lucy.

Just sending along additional items related to the pension file.

1) Notes below regarding Province's perspective (see below), including an overview attachment

2) Copy of the AG's issues note reflecting her position

3) Copy of government partnership guidance (PS 3060)which may have applicability to JSPPs like the situation involving OTF

I think that will be all for now w.r.t. materials. Thanks. Nadine

From the Province's perspective…

The Province continues to believe that the assets are appropriately stated in accordance with PSAB for the following reasons:

· The assets result from the excess of the contributions and asset returns over the projected benefit obligations. Given there have been no issues raised with respect to either the contributions or the asset returns, our analysis focuses on the impact of the projected benefit obligation.

· The project benefit obligation has been estimated using a discount rate based on the expected return on assets as permitted by PSAB (see paragraph .44 below). That method has been consistently applied by the Province since at least 2000.

· OTPP also used a discount rate based on the expected return on assets until 1999, at which point it changed its policy to use a rate based on high yield corporate bonds. We have attached the OTPP's year 2000 financial statements for ease of reference.

PS3250

.042 *Actuarial assumptions should be based on the government's best estimates of expected long-term experience and short-term forecasts.* [SEPT. 2001]

.043 One commonly used approach that meets this standard is the use of streamed rate assumptions. Under the streamed rate approach, the short-term forecast of fund asset earnings, for example, would reflect the rates of return that assets currently held in the fund will earn until their maturity. As those assets mature, assumptions about their expected earnings on reinvestment would move to the expected long-term rate. Similarly, there would be streamed rate assumptions for salary increases.

.020 The retirement benefits interest expense is the net of:

(a) the interest cost on the accrued benefit obligation determined by applying the discount rate determined at the beginning of the period in accordance with paragraph PS 3250.044 to the average value of the accrued benefit obligation for the period; and

(b) the expected return on plan assets for a defined benefit plan, determined by applying the assumed rate of return on plan assets to the average market-related value of assets for the period.

.044 The actuarial assumptions underlying the valuation of the retirement benefit liability and expense would be internally consistent. For example, **when a government determines its discount rates by reference to its plan asset earnings, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the short-term forecast of rates of return**

on assets currently held in the fund. When a government determines its discount rates by reference to its cost of borrowing, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the specific rates of interest and the periods committed to by the government on the amounts borrowed.

· Though 3250.044 indicates one option is to use discount rates by reference to the cost of borrowing, based on our jurisdictional scan of the other provinces' financial statements, we have not found any jurisdictions that use the government borrowing rate to value their pension obligations for plans that are funded by plan assets.

· We have included our analysis for your reference.

OTTP

OTTP prepares its financial statements in accordance with Part IV of the CPA Handbook. Section 4600 in part IV provides guidance on accounting for investments and pension obligations. For all other items, a pension plan chooses to follow IFRS or ASPE. OTTP has chosen to follow IFRS.

For the recording of the pension obligation, the guidance in Section 4600 is as follows:

22 *A pension plan shall measure the pension obligation required by paragraph* 4600.12*(g) in accordance with paragraph* 4600.05*(v). For this purpose,* ***a pension plan may measure the pension obligation at the defined benefit obligation amount determined by the plan's sponsor.***

.23 Guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 *Employee Benefits* in Part I of the Handbook.

4600.12(g) is the requirement to distinguish the pension obligation in the statement of

financial position and 4600.05(v) is the definition of a pension obligation of a defined benefit pension plan, which states the following, “A pension obligation of a defined benefit pension plan is the actuarial present value of accrued pension benefits determined by applying best estimate assumptions and the projected benefit method prorated on services.”

As noted, pension plans have a considerable amount of choice in determining how to account for their pension obligations – the amount as determined by the plan sponsor, using the guidance in ASPE, or using the guidance in IFRS.

OTTP has chosen to use the guidance in IFRS (IAS 19) and includes the following in its financial statements (December 2015 year end):

“The discount rate is based on market rates, as at the valuation date, of bonds issued by the Province

of Ontario, which have characteristics similar to the Plan’s liabilities. The discount rate was determined by applying a weighted average discount rate that reflects the estimated timing and amount of benefit payments. The inflation rate is the geometric difference between the yield on Government of Canada long-term nominal bonds and Government of Canada real-return bonds. The salary escalation rate incorporates the inflation rate assumption and long-term expectation of growth in real wages”.

We have included the guidance in from IAS 19 below for comparison:

<u>IAS 19</u>

83 The rate used to discount post-employment benefit obligations (both funded and

unfunded) shall be determined by reference to market yields at the end of the reporting period on high quality corporate bonds. For currencies for which there is no deep market in such high quality corporate bonds, the market yields (at the end of the reporting period) on government bonds denominated in that currency shall be used. The currency and term of the corporate bonds or government bonds shall be consistent with the currency and estimated term of the post-employment benefit obligations.

86 In some cases, there may be no deep market in bonds with a sufficiently long maturity to match the estimated maturity of all the benefit payments. In such cases, an entity uses current market rates of the appropriate term to discount shorter-term payments, and estimates the discount rate for longer maturities by extrapolating current market rates along the yield curve. The total present value of a defined benefit obligation is unlikely to be particularly sensitive to the discount rate applied to the portion of benefits that is payable beyond the final maturity of the available corporate or government bonds.

· OTTP is an outlier in using a discount rate based on the guidance in IAS 19 based on our review of the stand-alone financial statements of the provincially sponsored plans. We have attached our preliminary analysis (see above).

· With regards to any perception that the reported asset might be “fictitious”, we point out that the funding valuations completed by OTTP and submitted to FSCO have also demonstrate that the plan is overfunded. Based on the guidance provided to the members of the plan on the OTTP’s website, the surplus in the plan at March 31, 2016 (at 100%) is $13.1 billion. The difference between the $10 billion asset and the 50% of the $13.1 billion, or $6.5 billion is primarily based on the discount rate used. The preparation of the funding valuation is based on prescribed requirement and is not an accounting valuation. Nonetheless, it speaks to the fact that the plan, on a funding basis, has a surplus.

In summary, we don’t believe that an adjustment is warranted to the reported pension asset on the CFS on the basis that:

· The discount rates used to value the projected benefit obligation are consistent with the requirements of PSAB.

· The AG has reviewed the discount rate each year and based on the understanding of those involved in the current year and historically, has never raised a concern with the rates used.

· The asset recorded on the pension’s books is not fictitious and is supported by the OTPP’s own calculations and public disclosures.

Financial Statements 2000.pdf

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING

The consolidated financial statements of the Ontario Teachers' Pension Plan have been prepared by management, which is responsible for the integrity and fairness of the data presented, including the many amounts which must, of necessity, be based on estimates and judgements. The accounting policies followed in the preparation of these consolidated financial statements conform with Canadian generally accepted accounting principles. Financial information presented throughout the annual report is consistent with the consolidated financial statements.

Systems of internal control and supporting procedures are maintained to provide assurance that transactions are authorized, assets are safeguarded and proper records maintained. These controls include quality standards in hiring and training of employees, a code of conduct, the establishment of an organizational structure that provides a well-defined division of responsibilities and accountability for performance, and the communication of policies and guidelines through the organization. Internal controls are reviewed and evaluated by internal audit programs which are subject to scrutiny by the external auditors.

Ultimate responsibility for the consolidated financial statements rests with the Board of Directors. The board is assisted in its responsibilities by the Audit and Actuarial Committee, consisting of five directors who are not officers or employees of the plan administrator. In addition, the committee reviews the recommendations of the internal and external auditors for improvements in internal control and the action of management to implement such recommendations. In carrying out its duties and responsibilities, the committee meets regularly with management and with both the external and internal auditors to review the scope and timing of their respective audits, to review their findings and to satisfy itself that their responsibilities have been properly discharged. This committee reviews the consolidated financial statements and recommends them for approval by the board.

The plan's external auditors, Deloitte & Touche LLP, have conducted an independent examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards, performing such tests and other procedures as they consider necessary to express the opinion in their Report to the Administrator. The external auditors have full and unrestricted access to the Audit and Actuarial Committee to discuss their audit and related findings as to the integrity of the plan's financial reporting and the adequacy of internal control systems.

CLAUDE LAMOUREUX
PRESIDENT AND CHIEF EXECUTIVE OFFICER

ANDREW JONES
VICE-PRESIDENT, FINANCE

FEBRUARY 14, 2001

AUDITORS' REPORT TO THE ADMINISTRATOR

We have audited the consolidated statement of net assets available for benefits and accrued pension benefits and surplus of the Ontario Teachers' Pension Plan as at December 31, 2000 and the consolidated statements of changes in net assets available for benefits, changes in accrued pension benefits and changes in surplus for the year then ended. These consolidated financial statements are the responsibility of the Plan's administrator. Our responsibility is to express an opinion on these consolidated financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the consolidated financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the net assets available for benefits and accrued pension benefits and surplus of the Plan as at December 31, 2000 and the changes in its net assets available for benefits, changes in accrued pension benefits and changes in surplus for the year then ended in accordance with Canadian generally accepted accounting principles.

FEBRUARY 14, 2001

ACTUARIES' OPINION

William M. Mercer Limited was retained by the Ontario Teachers' Pension Plan Board (the "Board") to perform an actuarial valuation of the assets and the going concern liabilities of the Ontario Teachers' Pension Plan (the "Plan") as at December 31, 2000, for inclusion in the Plan's consolidated financial statements. As part of the valuation, we examined the Plan's recent experience with respect to the non-economic assumptions and presented our findings to the Board.

The valuation of the Plan's actuarial liabilities was based on:

- membership data provided by the Ontario Teachers' Pension Plan Board as at December 31, 1999;
- methods prescribed by the Canadian Institute of Chartered Accountants for pension plan financial statements;
- real and nominal interest rates on long term Canada bonds at the end of 2000;
- assumptions about future events (for example, future rates of inflation and future retirement rates) which have been communicated to us as the Board's best estimate of these events;
- information obtained from the Ontario Ministry of Labour and published reports on negotiated wage settlements in the 1999/2000 and 2000/01 school years; and
- an estimate of the salary grid increase for the 2000/01 school year based on the information above, along with input from the Partners.

The objective of the consolidated financial statements is to fairly present the financial position of the Plan on December 31, 2000 as a going concern. This is different from the statutory valuation [the actuarial valuation required by the *Teachers' Pension Act* and the *Pension Benefits Act [Ontario]*], which uses actuarial methods prescribed by the *Teachers' Pension Act* and cautious assumptions about future events to establish a prudent level for future contributions.

While the actuarial assumptions used to estimate liabilities for the Plan's consolidated financial statements represent the Board's best estimate of future events and market conditions at the end of 2000, and while in our opinion these assumptions are reasonable, the Plan's future experience will inevitably differ, perhaps significantly, from the actuarial assumptions. Any differences between the actuarial assumptions and future experience will emerge as gains or losses in future valuations, and will affect the financial position of the Plan, and the contributions required to fund it, at that time.

We have tested the data for reasonableness and consistency, and we believe it to be sufficient and reliable for the purposes of the valuation. We also believe that the methods employed in the valuation and the assumptions are, in aggregate, appropriate for the purposes of the valuation. Our opinions have been given, and our valuation has been performed, in accordance with accepted actuarial practice.

LESTER J. WONG, F.C.I.A.

MALCOLM P. HAMILTON, F.C.I.A.

FOR THE YEAR ENDED DECEMBER 31, 2000

DESCRIPTION OF PLAN

The following description of the Ontario Teachers' Pension Plan (the Plan) is a summary only. For more complete information, reference should be made to the *Teachers' Pension Act* (the TPA) as amended.

(a) General The Plan is governed by the TPA. It is a contributory defined benefit pension plan co-sponsored by the Partners who are the Province of Ontario (the Province) and Plan members, represented by the Ontario Teachers' Federation (the OTF). The terms of the Plan are set out in the *Partners' Agreement.*

The Plan is registered with the Financial Services Commission of Ontario and with the *Income Tax Act (Canada)* (registration number 0345785) as a Registered Pension Plan not subject to income taxes.

The Plan is administered and the investments are managed by the Ontario Teachers' Pension Plan Board (the Board). Under the TPA, the Board is constituted as a corporation without share capital to which the *Corporations Act (Ontario)* does not apply.

(b) Funding Plan benefits are funded by contributions and investment earnings. Contributions are made by active members of the Plan and matched by the Province and designated private schools and organizations. The determination of the value of the benefits and required contributions is made on the basis of periodic actuarial valuations (note 9).

(c) Retirement pensions A retirement pension is available based on the number of years of credited service, the average of the best five annual salaries and the age of the member at retirement. A member is eligible for a reduced retirement pension from age 55. An unreduced retirement pension is available at age 65 or at any age if the member has 35 years' credit or if the sum of a member's age and qualifying service equals 90. An early retirement window covering the period between June 1, 1998 and December 31, 2002 is currently provided, during which time a member can retire with an unreduced pension if the sum of the member's age and qualifying service equals 85 rather than 90.

(d) Disability pensions A disability pension is available at any age to a disabled member with a minimum of 10 years of credited service. The type of disability pension is determined by the extent of the disability.

(e) Death benefits Death benefits are available on the death of an active member and may be available on the death of a retired member. The benefit may take the form of a survivor pension, lump sum payment or both.

(f) Escalation of benefits Pension benefits are adjusted annually for inflation at 100 percent of the Consumer Price Index, subject to a limit of 8 percent in any one year with any excess carried forward.

(g) Retirement Compensation Arrangement The Retirement Compensation Arrangement (RCA) has been created by agreement between the Partners as a supplementary plan to provide the members of the Plan with benefits that, due to limitations imposed by the *Income Tax Act (Canada)* and its regulations, cannot be provided under the Registered Pension Plan. Because the RCA is a separate trust, the net assets available for benefits and accrued benefits of the RCA are not included in these financial statements (note 13).

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

(a) Basis of presentation

These financial statements present the financial position and the results of operations of the Plan and are prepared in accordance with Canadian generally accepted accounting principles.

The financial statements of wholly-owned subsidiary companies are consolidated as part of the Plan's financial statements.

Certain comparative figures have been reclassified to conform with the current year's presentation.

(b) Investments and investment-related assets and liabilities

Fair Value Investments and investment-related assets and liabilities are stated at fair value. Fair value is an estimate of the amount of consideration that would be agreed upon in an arm's length transaction between knowledgeable, willing parties who are under no compulsion to act.

Where ascertainable, fair values are based on public market prices or quotations from investment dealers. Where public market prices or quotations are not ascertainable, fair values are derived using methods such as discounted cash flows, earnings multiples, appraisals, prevailing market rates for instruments with similar characteristics and other pricing models, as appropriate.

Trade date reporting Purchases and sales of investments and derivative contracts are recorded as of the trade date (the date upon which the substantial risks and rewards have been transferred).

Investment income Dividend income is recognized based on ex-dividend date and interest income and real estate operating income is recognized on the accrual basis as earned. Investment income also includes realized and unrealized gains and losses.

(c) Foreign currency translation

Assets and liabilities denominated in foreign currencies are translated into Canadian dollars at the exchange rates prevailing on the year-end date. Income and expenses are translated into Canadian dollars at the exchange rates prevailing on the dates of the transactions. The realized and unrealized gains and losses arising from these translations are included in investment income.

(d) Accrued pension benefits

The value of accrued pension benefits and changes therein during the year are based on an actuarial valuation prepared by an independent firm of actuaries. The valuation is made as at the start of the year and then extrapolated to year-end. It uses the projected benefit method prorated on service and management's best estimate, as at valuation date, of various economic and non-economic assumptions (note 5).

(e) Actuarial asset value adjustment

The actuarial value of net assets available for benefits is determined by reference to market trends consistent with assumptions underlying the valuation of accrued pension benefits. The adjustment represents the difference between the actual and management's best estimate of return on the Plan's equity investments (including real estate and commodities) amortized over five years. Fixed income securities are valued at fair value on a basis consistent with the discount rate used to value the Plan's accrued pension benefits.

The year-over-year change in the actuarial asset value adjustment is reflected in the Consolidated Statement of Changes in Surplus.

(f) Use of estimates

In preparing these financial statements, management must make certain estimates and assumptions that primarily affect the reported values of assets and liabilities, related income and expenses and related disclosures.

2. CHANGES IN ACCOUNTING POLICY– ACCRUED PENSION BENEFITS

Consistent with a new Canadian Institute of Chartered Accountants standard on Employee Future Benefits, the Board changed its method of determining the best estimate assumptions used in valuing the accrued pension benefits. The Board now uses a market interest rate to discount the accrued pension benefits, in order to arrive at the fair value of the Plan's liabilities. In prior years, the Board used a rate which reflected management's best estimate of the expected long-term asset rate of return.

With this change to the determination of the discount rate, the method for calculating the actuarial asset value adjustment has also been modified. In prior years, the adjustment represented the difference between the actual and management's best estimate of return on all Plan assets, amortized over five years. The actuarial asset value now values fixed income securities at fair value, consistent with the measurement of the Plan's liabilities at fair value. For the Plan's equity investments, an actuarial asset value adjustment is calculated as the difference between the actual and management's best estimate of return on the Plan's equity assets, amortized over five years.

The changes in accounting policy referred to above have been applied retroactively in the financial statements and have the following impact on 1999 figures previously reported:

($ Millions)	1999 Reported	1999 Restated
Net assets available for benefits	$68,303	$68,303
Actuarial asset value adjustment	(7,264)	(8,316)
Actuarial value of net assets available for benefits	$61,039	$59,987
Accrued pension benefits – opening	$48,636	$49,626
Changes during the year	3,469	2,479
Accrued pension benefits – closing	52,105	52,105
Surplus, beginning of year	5,747	4,381
Increase in net assets available for benefits	9,132	9,132
Change in actuarial asset value adjustment (note 1e)	(2,476)	(3,152)
Increase in actuarial value of assets available for benefits	6,656	5,980
Net increase in accrued pension benefits	(3,469)	(2,479)
Surplus, end of year	8,934	7,882
Accrued benefits and surplus	$61,039	$59,987

3. INVESTMENTS

The Plan invests directly or through derivatives in fixed income, equities and inflation-sensitive investments in accordance with its policy of asset diversification. The purpose of such diversification is to minimize the likelihood of an overall reduction in surplus and maximize the opportunity for gains across the investment portfolio.

(a) Investments[1] before allocating the effect of derivative contracts and investment-related receivables and liabilities

The schedule below summarizes the Plan's investments, including net accrued interest and dividends of $388 million (1999 – $454 million), before allocating the effect of derivative contracts and investment-related receivables and liabilities, as at December 31:

($ Millions)	2000		1999	
	Fair Value	**Cost**	Fair Value	Cost
Fixed income				
Debentures	**$15,715**	**$12,205**	$16,328	$12,991

Derivative-related, net	**(3,712)**	**(1,199)**	(2,231)	(2,294)
Net investments (note 3c)	**$72,043**	**$61,227**	$67,092	$51,158

(1) For additional details, refer to the Schedule of Investments for our holdings over $50 million on page 45.

(2) Comprised of hedge funds, managed futures accounts and fund of funds programs.

(b) Derivative contracts

Derivative contracts are financial contracts, the value of which is derived from the value of underlying assets, indices, interest rates or currency rates. Derivative contracts are transacted either in the over-the-counter market or on regulated exchanges. The Plan utilizes derivatives to manage its asset mix, as well as its exposure to interest rates, foreign currencies, and credit. Derivatives are also utilized for trading purposes in a manner consistent with the Plan's investment objectives.

Notional amounts of derivative contracts serve as the basis upon which the returns from, and the fair value of, the contracts are determined.

The following schedule summarizes the Plan's derivative contracts as at December 31:

($ Millions)	**2000**		1999	
	Notional	**Fair Value**	Notional	Fair Value
Asset conversion				
Interest rate swaps	**$6,353**	**$(933)**	$ 6,091	$(763)
Equity and commodity swaps	**17,436**	**(215)**	13,719	3,257
		(1,148)		2,494

Over-the-counter options	**83**	**1.6**	102	2.1
Forwards	**23**	**1.4**	—	—

(c) Investment asset mix

The Plan has established a long-term asset-mix policy of approximately 60 percent equities, 18 percent fixed income and 22 percent inflation-sensitive investments.

The Plan's investments, after allocating the effect of derivative contracts and investment-related receivables and liabilities, as at December 31 are summarized below:

	2000		1999	
	Effective Net Investments at Fair Value *($ millions)*	**Asset Mix *%***	Effective Net Investments at Fair Value *($ millions)*	Asset Mix *%*
Fixed income				
Bonds	**$10,771**	**15%**	$14,926	22%
Money market and equivalents	**2,548**	**3**	2,378	4
	13,319	**18**	17,304	26
Equities				
Canadian	**17,739**	**25**	19,885	30
United States	**10,119**	**14**	8,191	12
Non–North American	**13,022**	**18**	13,568	20
	40,880	**57**	41,644	62
Inflation-sensitive investments				
Commodities	**2,098**	**3**	1,090	2
Real estate (note 6)	**6,201**	**9**	2,815	4
Real rate products	**9,545**	**13**	4,239	6
	17,844	**25**	8,144	12
Total net investments	**$72,043**	**100%**	$67,092	100%

(d) Interest rate risk

The value of the Plan's assets is affected by short-term changes in nominal interest rates and equity markets. Pension liabilities are exposed to long-term market interest rates as well as expectations for salary escalation.

The Plan's primary exposure is to a decline in the long-term real rate of return which may result in higher contribution rates required to meet pension obligations. As at December 31, 2000, holding the inflation and salary escalation assumptions constant, a 1 percent decrease in the assumed real long-term rates of return would result in an increase in the pension liabilities of approximately 13 percent (1999 – 16 percent).

After giving effect to the derivative contracts and investment-related receivables and liabilities discussed in note 3b, a 1 percent increase in nominal interest rates would result in a decline in the value of the fixed income securities of 6.6 percent (1999 – 7.7 percent).

(e) Credit risk

At December 31, 2000, the Plan's most significant concentration of credit risk is with the Government of Canada and the Province of Ontario. This concentration relates primarily to the holding of $14.5 billion of Government of Canada-issued securities and $15.7 billion of non-marketable Province of Ontario Debentures, a receivable from the Province of $1.3 billion and future provincial funding requirements of the Plan.

The Plan limits derivative contract credit risk by dealing principally with counterparties that have a credit rating of A or higher, and by utilizing an internal credit limit monitoring process, as well as through the use of credit mitigation techniques such as master netting arrangements and obtaining collateral where appropriate.

(f) Foreign currency risk

Foreign currency exposure arises from the Plan's holdings of foreign currency-denominated investments and related derivative contracts.

The Plan uses a currency overlay program to hedge a portion of its asset-mix policy allocation to U.S. and Non-North American equities. The Plan also takes trading positions in foreign currencies with the objective of adding incremental returns. The Plan's net foreign currency exposure in Canadian dollars after giving effect to the related policy hedge, as at December 31, is as follows:

($ Millions)	**2000**			1999
	Foreign Currency Exposure	**Net Foreign Currency Hedge**	**Net Foreign Currency Exposure**	Net Foreign Currency Exposure
United States Dollar	**$12,021**	**$5,389**	**$6,632**	$4,854
Euro	**5,920**	**2,528**	**3,392**	2,245
British Pound Sterling	**3,370**	**1,405**	**1,965**	1,537
Swiss Franc	**1,561**	**483**	**1,078**	252
Japanese Yen	**2,489**	**1,774**	**715**	1,280
Other	**2,165**	**187**	**1,978**	1,532
	$27,526	**$11,766**	**$15,760**	$11,700

(g) Securities lending

The Plan lends securities as a means of generating incremental income or supporting other investment strategies. As at December 31, 2000, the Plan's investments included loaned securities with a fair value of $3,402 million (1999 – $3,280 million). The fair value of collateral in respect of these loans was $3,590 million (1999 – $3,444 million).

4. RECEIVABLE FROM THE PROVINCE OF ONTARIO

The receivable from the Province consists of required matching contributions and interest thereon.

($ Millions)	**2000**	1999
Contributions receivable	**$1,194**	$1,194
Accrued interest receivable	**57**	58
	$1,251	$1,252

The receivable from the Province consists of $636 million to be received in 2001 and $615 million to be received in 2002.

5. ACCRUED PENSION BENEFITS

(a) Actuarial assumptions

The actuarial assumptions used in determining the value of accrued pension benefits of $58.6 billion (1999 – $52.1 billion), reflect management's best estimate of future economic events and involve both economic and non-economic assumptions. The non-economic assumptions include considerations such as mortality, withdrawal rates and retirement rates. The primary economic assumptions include the discount rate, salary escalation rate and the inflation rate. As discussed in note 2, the discount rate is now set at the market rate, as at the valuation date, of debt obligations with characteristics similar to the Plan's liabilities. The inflation rate is the difference between the yield on federal long-term nominal bonds and federal real return bonds. The salary escalation rate incorporates the inflation rate assumption and long-term expectation of growth in real wages. A summary of the primary economic assumptions, as at December 31, is as follows:

	2000	1999
Discount rate	**6.25%**	6.75%
Salary escalation rate	**3.20%**	3.25%
Inflation rate	**2.20%**	2.25%

The main economic assumptions were changed as a result of changes in capital markets during 2000. These changes resulted in a net increase in the value of accrued pension benefits of $3,297 million. In addition, a change was made to the assumed post-retirement mortality rates to better reflect the Plan's experience. This change increased the value of accrued pension benefits by a further $596 million. In 1999, changes to the actuarial assumptions resulted in a net increase in the value of accrued pension benefits of $766 million.

(b) Experience gains and losses

An experience loss of $262 million (1999 – gain of $803 million), arising from differences between the actuarial method and assumptions and actual results, relates primarily to current experience for members' salary and inflation rates.

6. INVESTMENT IN REAL ESTATE

(a) Acquisition of Cadillac Fairview Corporation ("CFC")

On March 17, 2000, pursuant to a plan of arrangement, the Plan acquired the remaining 78.2 percent of the common shares that it did not previously own of CFC, a fully integrated commercial real estate operating company, and $100 million of CFC convertible debentures for total consideration of $2,355 million.

The fair value of CFC's net assets acquired is summarized below:

($ Millions)	
Real estate properties	$5,730
Other assets	403
	6,133
Debt on real estate properties	(2,892)
Other liabilities	(324)
Net assets of CFC	2,917
Less: Investment in CFC previously held	(562)
Total consideration	**$2,355**

(b) Investment in Real Estate

The Plan's investment in real estate, which is comprised of real estate–related investments that are either owned or managed on behalf of the Plan by The Cadillac Fairview Corporation Limited, as at December 31, is as follows:

($ Millions)	**2000**		1999	
	Fair Value	**Cost**	Fair Value	Cost
Assets				
Real estate properties	**$9,635**	**$8,901**	$2,454	$2,411
Investments	**526**	**577**	485	498
Other assets	**232**	**233**	7	7
Investment in CFC	**—**	**—**	562	304
Total assets	**10,393**	**9,711**	3,508	3,220
Liabilities				
Debt on real estate properties	**3,833**	**3,694**	693	710
Other liabilities	**359**	**308**	—	—
Total liabilities	**4,192**	**4,002**	693	710
Net investment in real estate	**$6,201**	**$5,709**	$2,815	$2,510

(c) Real Estate Income[1]

The Plan's real estate income for the year ended December 31, is as follows:

($ Millions)	**2000**	1999
Revenue		
Rental	**$1,140**	$263
Investment	**41**	24
	1,181	287
Expenses		
Property operating	**447**	101
Interest	**242**	41
Management	**42**	7
Other	**23**	—
	754	149
Operating income	**427**	138
Realized gain (loss)	**14**	(16)
Unrealized gain	**187**	190
Net income	**$628**	$312

(1) Operating income, on a fair value basis, excludes a charge for depreciation and amortization.

7. INVESTMENT INCOME

(a) Investment income, before allocating the effect of derivative contracts

Investment income, before allocating the effect of derivative contracts and before allocating the realized and unrealized net gains/losses, for the year ended December 31, is as follows:

($ Millions)	**2000**	1999
Fixed income interest		
Debentures (net of interest incurred on swap contracts of $1,039 million; 1999 – $753 million)	**$386**	$762
Money market securities	**197**	104
Bonds	**720**	633
	1,303	1,499
Equity dividend income		
Canadian equity	**222**	271
United States equity	**13**	13
Non–North American equity	**234**	241
	469	525
Inflation-sensitive investments		
Real estate operating income (note 6c)	**427**	138
Real rate products interest income		
Canadian	**189**	152
United States	**92**	14
	708	304
	2,480	2,328
Net gain on investments [1]	**3,731**	7,793
	$6,211	$10,121

(1) Includes net unrealized gains (losses) of $(4,145) million (1999 – $1,075 million).

(b) Investment income

Investment income by asset class, after allocating the effect of the derivative contracts and net gains, including foreign currency losses of $71 million (1999 – $1,106 million gain), for the year ended December 31, is as follows:

($ Millions)	**2000**	1999
Fixed income	**$1,689**	$(347)
Canadian equity	**2,523**	4,475
United States equity	**316**	1,559
Non–North American equity	**(694)**	3,697
Inflation-sensitive investments	**2,377**	737
	$6,211	$10,121

8. INVESTMENT RETURNS AND RELATED BENCHMARK RETURNS

Investment returns and related benchmark returns by investment asset class for the year ended December 31 are as follows:

	2000		1999	
	Investment Returns	**Investment Benchmark Returns**	Investment Returns	Investment Benchmark Returns
Fixed income	**15.6%**	**13.7%**	2.0%	2.8%
Canadian equity	**13.5**	**7.4**	30.4	32.0
United States equity	**(4.1)**	**(5.5)**	12.7	14.1
Non–North American equity	**(8.5)**	**(13.5)**	27.7	21.6
Inflation-sensitive investments	**19.9**	**18.0**	12.0	9.8
Total Plan	**9.3%**	**5.3%**	17.4%	17.6%

Investment returns have been calculated in accordance with the acceptable methods set forth by the Association for Investment Management and Research and the Pension Investment Association of Canada.

The Plan identifies benchmarks to evaluate the performance of the investment management process. The performance of each asset class is measured against a benchmark that simulates the results of the markets in which the managers invest, except that the inflation-sensitive investments composite benchmark includes real estate which is measured against an inflation-related benchmark.

The total return of the Plan is measured against a Canadian dollar denominated composite benchmark produced by aggregating Canadian dollar equivalent returns from each of the policy asset class benchmarks, using the Plan's asset mix policy weights. The total return incorporates the Plan's tactical asset allocation decisions.

9. FUNDING POLICY

Statutory actuarial valuations are prepared periodically in accordance with the *Teachers' Pension Act* to determine the funding requirements of the Plan. Active members are currently required to contribute 7.3 percent of the portion of their salaries covered by the Canada Pension Plan and 8.9 percent of salaries above this level. Aggregate member contributions are matched by the Province and other employers.

The actuarial assumptions and methods used to determine statutory pension liabilities are different than those used to calculate the amounts disclosed in these financial statements. The statutory valuations use a more conservative approach than the valuations used in these financial statements (note 5) and also take into account benefits to be earned and contributions to be made after the valuation date.

The initial statutory valuation of the Plan, prepared by William M. Mercer Limited as at January 1, 1990 disclosed an unfunded liability of $7.8 billion which was the amount by which the Plan's liabilities exceeded its assets. This liability was the responsibility of the Province and was to be paid off with interest by a series of special payments over a 40 year period, which began January 1, 1990. Subsequent statutory valuations have treated the present value of the remaining special payments as an asset.

The statutory valuation as at January 1, 1998 disclosed the present value of special payments to be $8.45 billion, with an actuarial gain of $6.78 billion. Pursuant to the *Partners' Agreement* between the Ontario Teachers' Federation (OTF) and the Province, the Partners entered into negotiations to decide how to utilize the gain. Pursuant to the agreement reached on April 18, 1998, the Partners agreed to share the 1998 actuarial gain of $6.78 billion and future gains in the following sequence:

(i) $2.24 billion would be spent on improving benefits;
(ii) special payments on the pre-1990 unfunded liability would be eliminated at an estimated cost of $8.45 billion; and
(iii) a further $8.45 billion less the $2.24 billion would be spent on improved benefits or member contribution rate reductions, subject to the Province's consent prior to April 1, 2001; or held in a contingency reserve as determined by the OTF.

As a result, $2.24 billion of the gain was used to improve benefits under the Plan, and the remaining $4.54 billion of the gain was used to eliminate the obligation of the Province to make special payments after November 30, 2008. These changes consumed the actuarial gain. The present value of the remaining special payments after application of gains was $3.91 billion as at January 1, 1998.

The statutory valuation as at January 1, 1999 disclosed the present value of the remaining special payments to be $3.65 billion with an actuarial gain of $3.52 billion. Pursuant to the 1998 agreement noted above, all of this gain was used to eliminate the obligation of the Province to make special payments after April 1999.

The statutory valuation as at January 1, 2001 disclosed an actuarial gain of $6.78 billion (2000 – $4.54 billion).

(c) Executive compensation

The compensation table represents full disclosure of base salary, annual bonus, long-term incentives and other compensation earned in 1998, 1999 and 2000 by the Chief Executive Officer and the four other most highly compensated executives.

Name and Principal Position	Year	Base Salary	Annual Bonus[1]	Long-term Incentive Plan[3]	Group Term Life Insurance	Other Compensation
Claude Lamoureux	2000	$389,169	$504,500	$790,100	$1,119	$9,600[4]
President & CEO	1999	357,637	196,100	131,900	1,033	9,600
	1998	349,077	177,600	0	964	9,600
Robert Bertram	2000	$302,800	$404,000	$627,000	$ 870	$13,962[5]
Executive V.P. Investments	1999	276,309	102,600	101,800	798	13,343
	1998	269,053	63,200	0	777	13,209
Neil Petroff	2000	$196,130	$338,500	$451,900	$ 561	$ 0
Sr. V.P. International Equity Indexes, Fixed Income & Foreign Exchange	1999	175,444	202,800	51,400	507	0
	1998	170,606	124,700	0	490	0
Morgan McCague	2000	$186,384	$323,800	$460,000	$ 533	$ 0[6]
Sr. V.P. Quantitative Investments	1999	164,863	188,000	53,200	476	3,218
	1998	155,037	162,900	0	448	3,009
Allan Reesor	2000	$237,976	$319,200[2]	$280,100	$ 682	$ 4,808[6]
Executive V.P., Member Services and C.I.O.	1999	195,619	100,900	40,797	564	3,792
	1998	188,736	94,400	59,600	545	3,654

[1] Bonuses for investment professionals are based on a combination of total fund, asset class, and individual performance, measured in dollars of value added. Performance versus benchmark is measured over four annual performance periods.

Bonuses for other executive staff are based on achievement of annual corporate and divisional objectives.

[2] Includes deferred annual incentive for 1999.

[3] The investment long-term incentive program was restructured in 1999 following a review of competitive market practices. The new program continues to be based on four-year performance periods. Initial grants are adjusted by the four-year total fund rate of return and by a performance modifier, based on total fund dollar value-added over a composite benchmark.

[4] Automobile allowance.

[5] Includes an automobile allowance of $8,000 per annum plus unused vacation cashout.

[6] Unused vacation cashout.

13. RETIREMENT COMPENSATION ARRANGEMENT

The Retirement Compensation Arrangement (RCA) is established pursuant to an agreement between the Province of Ontario and the Ontario Teachers' Federation (the Partners), to provide to the members of the Plan certain benefits that would have been provided under the Registered Pension Plan, but for amendments made to the *Income Tax Act (Canada)* and its Regulations that restrict benefits that may be provided under a registered plan for periods of service after 1991 and for certain periods before 1992 that are credited after 1991.

The RCA is administered under a trust separate from the assets of the Registered Pension Plan. The Board has been appointed by the Partners to act as the trustee of the RCA.

Because the RCA is a separate trust, the net assets available for benefits and the value of accrued benefits and deficiency, referred to below, have not been included in the accompanying financial statements of the Registered Pension Plan on pages 26 to 28.

The RCA is funded on a pay-as-you-go basis from a portion of the contributions made to the Board by teachers, the Province of Ontario and designated private schools and organizations. The portion is based on a rate determined periodically by the Board's independent actuary in a manner that is expected to be sufficient to pay the benefits over the next 12 months. Due to the funding policy adopted by the Partners, the assets will continue to be substantially less than the liabilities.

In addition, since it is difficult to predict the benefits expected to be paid over the next 12 months, it is possible that the assets may be insufficient to pay the benefits. In such a case, the payment of benefits will be temporarily suspended and the contributions raised in order to fund the payments that are due under the RCA.

A summary of the balance sheet for the RCA as at December 31 is as follows:

($ Thousands)	**2000**	1999
Net assets available for benefits		
Assets	**$2,200**	$1,799
Liabilities	**(408)**	(655)
	$1,792	$1,144
Accrued benefits and deficiency		
Accrued benefits	**$305,900**	$238,768
Deficiency	**(304,108)**	(237,624)
	$1,792	$1,144

The actuarial assumptions used in determining the value of accrued benefits are consistent with the assumptions used in the Plan except that the assumed discount rate has been adjusted to reflect the impact of the 50 percent refundable tax under the RCA.

The estimate of the value of accrued benefits is highly sensitive to salary increases, both actual and assumed. Any changes to the salary assumptions will have a significant impact on the liabilities for future benefits. In addition, significant uncertainty exists in projecting the liabilities of the RCA due to changes in the number of future participants as well as changes to the income tax regulations relating to pensions.

14. COMMITMENTS

The Plan has committed to enter into investment transactions, which will be funded over the next several years in accordance with the terms and conditions agreed to. As at December 31, 2000, these commitments totalled $2,824 million (1999 – $1,634 million).

Public Service Shared Risk Plan Trust (PSSRP)	IFRS	Does not state	31-Dec-14		No pension obligation
Average for 4 plans				6.24%	

Summary (overview) to pwc sept 16.pdf

Statement of Facts and Assumptions

The Province of Ontario (Province) is a joint sponsor of the Ontario Teacher's Pension Plan (OTPP or the plan) and accounts for the Province's share of the plan (50%) as a defined benefit plan under PS 3250 when preparing the financial statements of the Province.

The Plan is a contributory defined benefit pension plan co-sponsored by the Province and Plan members, represented by Ontario Teachers' Federation (OTF) (the co-sponsors) and is governed by the Teacher's Pension Act – Ontario (TPA). The Plan is administered and the investments are managed by the Ontario Teachers' Pension Plan Board (the Board). Under the TPA, the Board is constituted as a corporation without share capital to which the *Corporations Act (Ontario)* does not apply. The TPA provides that the governing documents for the Plan are the pension plan established under Schedule 1 to the TPA, along with such other governing documents as may be created or adopted under the TPA or the text of the pension plan.

Section 5 of the TPA provides that the contributions of Ontario and contributing employers, on one hand, and active Plan members on the other hand, are to be approximately equal.

Section 10 of the TPA provides that the Minister of Education and the executive of The Ontario Teachers' Federation (OTF) may enter into an agreement that provides for, among other things, the joint management of the Plan and the sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund.

Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Partners) have entered into an agreement for the management of the Plan (Partners Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the agreement.[1] The FMP provides for the funding of the Plan and how deficits and surpluses will be addressed.

The following is a summary of the components of the plan

(all figures in $B)	Total plan	50% Share of the plan
Market related value of assets	157.0	78.5
Value of obligation	116.4	58.2
Surplus (deficit)	40.6	20.3
Unamortized (gains) losses	(18.0)	(9.0)
Adjustment for March 31, 2016	(1.8)	(0.9)
Asset (liability) position	20.8	10.4
Specific Government adjustment		(0.3)
Final asset (liability) position on balance sheet		10.1

In recording the $10B asset, the Province has considered whether a valuation allowance should be factored into the analysis in order to ensure that the asset recorded reflects the expected future benefit from the plan that the Province can realize. Under Public Sector Accounting standards, the expected future benefit would be determined by examining the withdrawable surplus the Province can realize or through the reduction in future contributions (PS 3250.55).

In conducting its analysis, the Province has not considered any ability of the Province to withdraw surplus from the plan and has therefore focused on its ability to realize the recorded asset through a reduction of future contributions.

The FMP expressly anticipates the possibility of contribution holidays in two scenarios:

[1] Partners Agreement, section 110.

- Article IV (Temporary Improvements) of the FMP provides for temporary actions that can be taken by the partners when Plan assets are greater than current liabilities (subject to the restorations required in section 3.06 of the FMP having already been provided). Section 4.05 of the FMP provides that in such a scenario, the parties may reduce current contributions, provide temporary surplus distributions or provide a temporary benefit improvement.

- Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities plus the 10% margin noted previously. Such actions can include changes to current benefits, current contributions, or both.

Types of government contractual arrangements	Appendix A

PURPOSE AND SCOPE

.01 This Section defines a government partnership and establishes standards on how to account for and report a government's interest in government partnerships in government financial

statements, [1] regardless of the structures and forms under which the government partnership activities take place. This Section does not deal with accounting by the government partnership itself.

.02 The standards are intended to apply to governments.

.03 This Section applies in situations where economic activities meet the definitions and criteria outlined in paragraph PS 3060.06 and paragraphs PS 3060.11-.28, even though such activities may not be referred to as government partnerships. However, this Section does not apply in situations where economic activities do not meet the definitions and criteria set out in those paragraphs even though they may sometimes be referred to as government partnerships. Accounting for such activities should be governed by their substance.

.04 For the purposes of this Section, an economic activity is not restricted to activities that generate a financial return, but extends to activities for the production and delivery of non-market goods and services that provide benefits to the community, such as law and order. That is, the partners may be motivated by factors other than the generation of financial return, such as the improvement of the welfare of their citizens.

.05 This Section does not apply to arrangements that are in and of themselves:

(a) Executory contracts such as leases and sale-leaseback transactions.

(b) Purchase / sale transactions such as outsourcing of services, management contracts and privatization. For guidance on how to account for revenues and expenses related to purchase / sale transactions, refer to FINANCIAL STATEMENT PRESENTATION, Section PS 1201.

(c) Transfers such as shared-cost arrangements and government programs. For guidance on how to account for government transfers, refer to GOVERNMENT TRANSFERS, Section PS 3410.

(d) Loans. For guidance on how to account for loans, refer to LOANS RECEIVABLE, Section PS 3050.

(e) Loan guarantees. For guidance on how to account for loan guarantees, refer to LOAN GUARANTEES, Section PS 3310.

DEFINITIONS

.06 The following definitions have been adopted for the purposes of this Section:

A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:

(a) the partners co-operate toward achieving significant clearly defined common goals; ?

(b) the partners make a financial investment in the government partnership; OTF ? Yes

(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and Yes

(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership. Yes.

The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]

.07 A **government business partnership** is a government partnership that has all of the following characteristics:

(a) it is a separate legal entity with the power to contract in its own name and that can sue and be sued;

(b) it has been delegated the financial and operational authority to carry on a business;

(c) it sells goods and services to individuals and organizations other than the partners as its principal activity; and

(d) it can, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources other than the partners.

.08 A **partner** is a party to a government partnership.

.09 **Proportionate consolidation** [4] is a basis of accounting for a government's interest in government partnerships, other than government business partnerships, whereby a government's pro rata share of each of the assets, liabilities, revenues and expenses that are subject to shared control, is combined on a line-by-line basis with similar items in the government's financial statements. ADDITIONAL AREAS OF CONSOLIDATION, paragraph PS 2510.06, provides details for applying the proportionate consolidation method.

.10 **Modified equity** is a basis of accounting for a government's interest in government business partnerships whereby the equity method of accounting is modified only to the extent that the government business partnership's accounting principles are not adjusted to conform with those of the government.

ELEMENTS THAT DEFINE A GOVERNMENT PARTNERSHIP

Contractual arrangement

.11 A distinctive characteristic common to all government partnerships is that two or more partners are bound by a contractual arrangement which establishes that the partners have shared control over the government partnership. This characteristic of shared control distinguishes a government's interest in a government partnership from investments in other activities in which the government may exercise control (see GOVERNMENT REPORTING ENTITY, Section PS 1300, BASIC PRINCIPLES OF CONSOLIDATION, Section PS 2500, ADDITIONAL AREAS OF CONSOLIDATION, Section PS 2510, and PORTFOLIO INVESTMENTS, Section PS 3041).

.12 Activities conducted with no formal contractual arrangement, but which meet the definition of a government partnership set out in paragraph PS 3060.06, are in substance government partnerships for the purposes of this Section.

.13 The contractual arrangement establishes shared control over the government partnership. Such a requirement ensures that no single partner is in a position to control the activities of the government partnership unilaterally. The arrangement identifies those decisions in areas essential to the goals of the government partnership that require the consent of all the partners and those decisions which may require the consent of a specified majority of partners.

.14 The contractual arrangement may be evidenced in a number of ways, for example, by a contract between the partners or minutes of discussions between the partners. In some cases, the arrangement is incorporated in the enabling legislation, articles or other by-laws of the government partnership. Whatever its form, the contractual arrangement is usually in writing and deals with such matters as:

(a) the activity, duration and reporting obligations of the government partnership;

(b) the appointment of the board of directors or equivalent governing body of the government partnership and the voting rights of the partners;

(c) the financial investments by the partners; and

(d) the sharing by the partners of the output, revenues, expenses or surpluses or deficits of the government partnership.

.15 In some cases, the contractual arrangement may designate a partner, or an outside party or parties, as the manager or operator of the government partnership. The manager does not control the government partnership, nor does the manager exercise shared control with the partners solely by virtue of his or her management role. Rather, the manager acts within the financial and operating policies that the partners have prescribed.

.16 A government may incorporate regulations in any contractual arrangement it enters into (e.g., level of service, level of maintenance of an asset that may be returned to it at the end of a set term). Governments regulate a variety of activities with which they have no ongoing operational involvement. As such, regulations in and of themselves do not constitute shared control.

Significant clearly defined common goals

.17 Common goals are those that all partners share. For example, a number of communities may join together to build and operate a landfill site or a recreational facility. The significant common goals of the communities involve service provision and sharing the costs and revenues associated with the operations of the facility, and so, the arrangement would qualify as a government partnership.

.18 On the other hand, a community may hire an individual or organization to operate a recreational facility for a fee. The significant goals of the government are to provide a service and cost savings, while the significant goal of the management organization is to earn revenues from the contract to manage the facility. While the significant goals of each party are mutually beneficial, they are not common to both parties to the contract, and so, the arrangement does not qualify as a government partnership.

Financial investment

.19 A financial investment may be in the form of assets and/or assuming responsibility for ongoing operating costs. The investment of financial assets and tangible capital assets in the government partnership would be accounted for in accordance with paragraphs PS 3060.41-.54. The value assigned to the responsibility for ongoing operating costs would be that determined in the contractual arrangement for the government partnership.

Shared control

.20 Shared control of a government partnership means that the partners make decisions related to the financial and operating activities of the government partnership on an ongoing basis based on the terms of the contractual arrangement; none of the partners is in a position to exercise unilateral control over the government partnership. When there is shared control, partners have an active ongoing interest or relationship in the arrangement other than as passive investors or as parties to a purchase / sale transaction. Shared control would exist, for example, when a joint board is established to oversee the provision of police or fire protection services for a number of local governments.

Shared risks and benefits

.21 In a government partnership, each partner is exposed to a share of the combined risks and shares in the benefits related to the common goals of the government partnership. In a government partnership, there must be an equitable sharing among the partners of the significant risks and benefits. For example, the government partners may operate a landfill site to provide a service to their constituents on a shared cost basis. The partners would generally share the operating and environmental risks, as well as the revenues associated with operating the landfill site.

.22 Risks and benefits would not be considered to be equitably shared in an arrangement where the government retains the full risk of owning an asset while allowing another party to receive the benefit of earning revenue from user fees derived from that asset. Risks and benefits would not be equitably shared when, for example, a government owned a highway that it allowed a private sector organization to operate and earn revenues from, based on the agreement and any necessary legislation.

FORMS AND STRUCTURES OF GOVERNMENT PARTNERSHIPS

Operations under shared control

.23 The operations of some government partnerships may involve the use of the assets and other resources of the partners, rather than the establishment of an organization or a financial structure that is separate from the partners themselves. In these circumstances, each partner may use its own assets for the purposes of the activities of the government partnership. The assets remain under the ownership and control of each partner. Each partner also incurs its own expenses and liabilities and raises its own financing, which represent its own obligations. The arrangement may provide a means by which the revenue from the sale of goods or services by the government partnership and any expenses incurred in common are shared among the partners.

.24 An example of operations under shared control is when two or more partners combine their resources and expertise for use in the operation of a landfill site. One partner may provide the land, others the equipment and others cash.

.25 In other cases, the activities of the government partnership may be carried out by the employees of one of the partners alongside the partner's similar activities. For example, provision of social services through a government partnership may involve one of the government partners being responsible for the staffing and administration of the program while all partners contribute ongoing funding.

Assets under shared control

.26 Some government partnerships involve the shared control, and often the shared ownership, by the partners of one or more assets invested in, or acquired for and dedicated to the purposes of, the government partnership. Assets under shared control are used to obtain benefits for the partners. Such a government partnership does not involve the establishment of a corporation or other organization, or a financial entity that is separate from the partners themselves. For example, several local governments may form a government partnership to acquire fire protection equipment to provide service to their constituents.

Organizations under shared control

.27 An organization under shared control is a type of government partnership which involves the establishment of a separate organization (e.g., a corporation) in which each partner has an interest. The organization operates similarly to other organizations, except that a contractual arrangement between the partners establishes shared control over the economic activities of the organization.

.28 In an organization under shared control, each partner usually contributes cash or other resources to the government partnership. The organization owns the assets of the government partnership and incurs liabilities and expenses. It may enter into contracts in its own name and raise financing for the purposes of the activities of the government partnership. For example, several local governments may operate a transit organization to provide transit services to their constituents.

ACCOUNTING FOR THE GOVERNMENT'S INTEREST

Government partnerships other than government business partnerships

.29 *Government financial statements should recognize the government's interest in government partnerships, except for government business partnerships, using the proportionate consolidation method.* [OCT. 1999]

.30 Governments may enter into government partnerships that are similar to governmental units [5] except for the extent of government control — the government shares control of the government partnership with its partners, while it controls the governmental unit. Governmental units are government organizations that carry out government activities that are integral to a government's operations in directly performing its executive function and are consolidated in the government's financial statements under GOVERNMENT REPORTING ENTITY, Section PS 1300. Government partnerships that carry out similar activities to governmental units would be accounted for using proportionate consolidation.

.31 Proportionate consolidation of such government partnerships provides financial statement users with the same sort of information about the financial position and results of operations of the government as would be available if the government managed the resources and operations through a governmental unit. Proportionate consolidation also reflects the level of activities (e.g., costs and revenues) on the government's statement of operations, the financial resources available, and the risks to which the government is exposed for such activities.

Government business partnerships

.32 *Government business partnerships should be accounted for by the modified equity method applied using the government's share of the government business partnership.* [OCT. 1999]

.33 Governments may enter into government business partnerships that are similar to government business enterprises [6] except for the extent of government control. Such government partnerships may also carry out similar activities to government business enterprises. A government business partnership differs from other government partnerships in its relationship to the government, and its objectives and operations. A government business partnership represents a financial asset of the government and given its autonomy, business-oriented objectives, and financial self-sufficiency, [7] equity accounting is appropriate. Consistent with

GOVERNMENT REPORTING ENTITY, Section PS 1300, for government business enterprises, the modified equity method is the most suitable form of equity accounting for government business partnerships.

.34 Accounting for government business partnerships by the modified equity method avoids commingling the budget and actual results of government business partnerships on a line-by-line basis with those of government activities having different objectives. It also avoids including the government's share of the gross debt of government business partnerships with the gross debt of other government organizations, as the government business partnerships are expected to repay that debt from their own revenues.

.35 The modified equity method supplemented with disclosure of condensed financial information gives financial statement users an informative accounting of the full nature and extent of the financial affairs and resources of those government business partnerships. It provides a measure of the impact that government business partnerships may have on a government's ability to discharge its liabilities or to provide financial resources for future operations.

Change in circumstances

.36 A change in circumstances over the life of a government partnership could affect either the valuation of the government's interest in the government partnership or in some cases, whether the arrangement would continue to be treated as a government partnership.

.37 In some cases, impairments in value of an asset invested in a government partnership or recognition of a contingent liability would require a write-down in the value of the government's reported interest in the government partnership.

.38 In other cases, the sharing of control, risks and benefits may change to such an extent as to cause an arrangement to no longer meet the definition of a government partnership. In such cases, the government's interest would be accounted for in accordance with GOVERNMENT REPORTING ENTITY, Section PS 1300, or other relevant Public Sector Accounting Standards or Guidelines. [8]

.39 The circumstances affecting a government business partnership may also change so that it no longer meets the definition of a government business partnership. Failure to meet any of the four elements of the government business partnership definition in paragraph PS 3060.07, would require such a change in status of the government business partnership.

.40 The alteration of an accounting treatment necessitated by events or transactions that reflect a difference in substance from those previously occurring is not considered to be a change in accounting policy or change in classification as described in ACCOUNTING CHANGES, Section PS 2120. Therefore, the change in accounting treatment would not be applied retroactively. Nevertheless, the change in accounting treatment, the underlying reasons for the change and the financial effect of the change would be disclosed.

ACCOUNTING FOR INVESTMENTS OF ASSETS

.41 *When a government invests assets in a government partnership and receives in exchange an interest in the government partnership, any loss* [9] *that occurs should be recognized at the time of the initial investment in the statement of operations.* [OCT. 1999]

.42 The existence of such a loss would usually provide evidence of a decline that is other than temporary, in the carrying value of the relevant assets retained by the government. It is also necessary for the government investing the assets to recognize the decline in value of the portion of the assets retained.

.43 *When a government invests assets in a government partnership and receives in exchange an interest in the government partnership, any gain* [10] *that occurs should be reported in the financial statements of the government as a deferred gain at the time of the initial investment only to the extent of the interests of the other non-related partners.* [OCT. 1999]

.44 The amount of the deferred gain is equal to the other partners' proportionate share of the difference between the fair value and net carrying amount of the asset.

.45 *When a government partnership other than a government business partnership is dissolved, any deferred gain related to the assets invested by the government should be recognized as revenue.* [OCT. 1999]

.46 For government partnerships other than government business partnerships, the deferred gain would not be amortized. It would only be realized at the time the government partnership is dissolved and the assets are distributed to the partners.

.47 *For government business partnerships, any deferred gain related to the assets invested by the government should be amortized to net operating results in a rational and systematic manner over the life of the invested assets. If the invested assets are non-depreciable, the deferred gain should be amortized to net operating results on a basis appropriate to the expected revenue or service to be obtained from their use by the government business partnership. When the invested assets are disposed of by the government business partnership to an independent third party, any unamortized portion of the deferred gain should be recognized as revenue.* [OCT. 1999]

.48 When the government invests assets in a government business partnership, the deferred gain would be amortized. As an asset is consumed over time by a government business partnership using it to generate cash inflows, deferred gains arising from the government's investment of assets in the government business partnership would become realized. Realization would occur because, by definition, government business partnerships are self-sustaining from revenues received from outside of the government business partnership. Deferred gains related to government business partnerships would also become realized when a government business partnership sells an asset invested by the government to an independent third party or when the government business partnership is dissolved.

Reporting tangible capital assets

.49 *When tangible capital assets are invested in a government partnership other than a government business partnership, the government should report those assets as follows:*

(a) the other non-related partners' share of assets invested by the government would be treated as disposals by the government; and

(b) the government's share of assets invested by the other non-related partners would be treated as purchases by the government in accordance with the relevant standards in FINANCIAL STATEMENT PRESENTATION, Section PS 1201*, and TANGIBLE CAPITAL ASSETS, Section* PS 3150. [OCT. 1999 •]

.50 Under FINANCIAL STATEMENT PRESENTATION, Section PS 1201, a government reports tangible capital assets as assets on the statement of financial position. TANGIBLE CAPITAL ASSETS, Section PS 3150, describes the accounting for the tangible capital assets of a government.

.51 The tangible capital assets of a government business partnership would be reflected in the government's financial statements in its one-line investment account (the "equity pickup"). The financial statements of a government business partnership would be prepared on the same basis as a private sector business. Under the modified equity method, the accounting policies of the government business partnership are not modified before determining the amount of the government's interest in the government business partnership. As a result, the government would not report the tangible capital assets of a government business partnership as described in paragraph PS 3060.49 and paragraphs PS 3060.53-.54.

(paragraph PS 3060.52 deleted)

Investments of tangible capital assets by the reporting government

.53 When a government invests an asset in a government partnership other than a government business partnership, the government would report the other non-related partners' proportionate share of an asset invested by the government as a disposal. In particular:

(a) Governments would account for the other partners' share of the net carrying amount of the asset as a disposal.

(b) Governments would recognize the net carrying amount in the statement of financial position, and would calculate deferred gains and losses based on the fair value less the net carrying amount of the assets.

Investments of tangible capital assets by the other partners

.54 When a non-related partner invests a tangible capital asset in a government partnership other than a government business partnership, the government would report its proportionate share

of that tangible capital asset as a purchase. In particular, governments would treat that amount as an increase in the tangible capital assets reported in the statement of financial position.

PRESENTATION AND DISCLOSURE

.55 *Government financial statements should disclose, in notes or schedules:*

(a) a description of the nature and purpose of government partnerships;

(b) a listing of government partnerships, including the government's share, separately identifying those that are accounted for using the proportionate consolidation method and those that are accounted for by the modified equity method; and

(c) condensed supplementary financial information relative to government partnerships. Such financial information should be provided separately for those government partnerships accounted for using proportionate consolidation and those accounted for using modified equity, on:

(i) the financial position and results of operations, including:

- *total assets and liabilities segregated by main classification;*
- *net assets or liabilities, separately displaying accumulated other comprehensive income;*
- *total revenues and expenses; and*
- *net operating results for the period, separately displaying other comprehensive income;*

(ii) the nature and amount of any adjustments to net assets or net operating results, as shown in the financial statements of the government partnerships, to arrive at the amount included in the government's statement of financial position or statement of operations; and

(iii) transactions and balances with organizations included in the government reporting entity. [OCT. 2006]

.56 *The government should disclose its share of any contingencies and contractual obligations of government partnerships and those contingencies that exist when the government is contingently liable for the liabilities of other parties to those government partnerships.* [OCT. 1999 •]

.57 *Deferred gains arising from the government's investment of assets in the government partnership should be reported with liabilities in the government's statement of financial position.* [OCT. 1999]

.58 Users of government financial statements need an appreciation of the magnitude of financial activities conducted by government partnerships and the effect of their operations on the government. This information would usually be presented on a combined basis.

.59 Separate disclosure of the government's share of any contingencies and contractual obligations of government partnerships would include, as appropriate:

(a) the government's share of any contingencies and contractual obligations of the government partnership; and

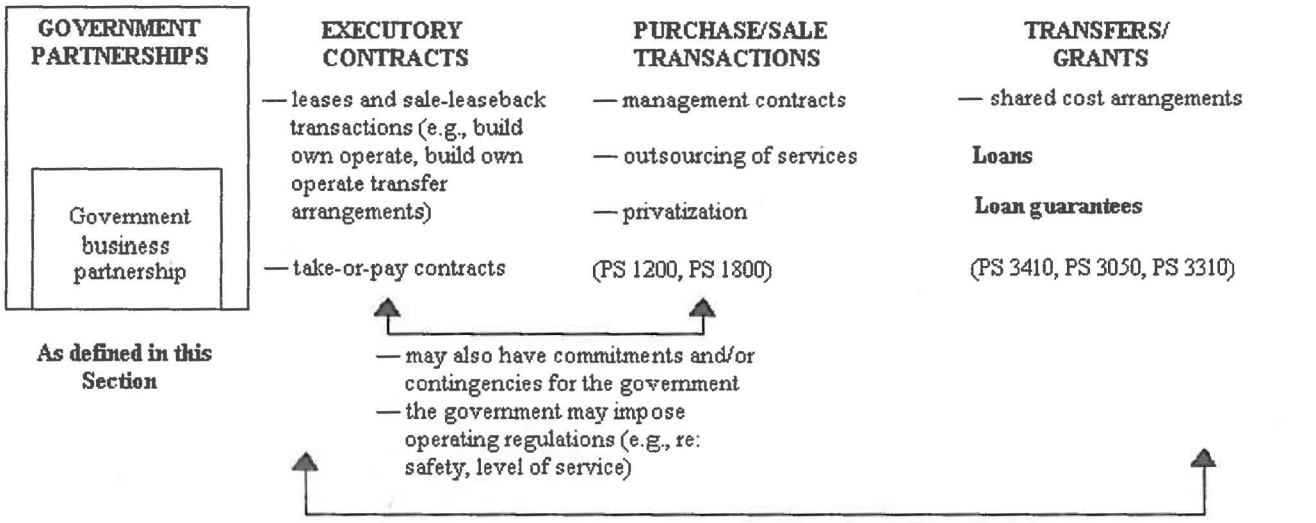
(b) the government's responsibility, if any, for the other partners' share of the contingencies of the government partnership.

If the government guarantees more than its proportionate share of a government partnership's liabilities, such a guarantee would be disclosed.

.60 The level of detail disclosed by governments should reflect the highly aggregated nature of financial statements. In deciding the level of detail to disclose, governments should consider the usefulness of the information to the reader in assessing the nature of, and the costs associated with, government partnerships.

APPENDIX A

TYPES OF GOVERNMENT CONTRACTUAL ARRANGEMENTS



These types of contractual arrangements are not government partnerships as defined in paragraph PS 3060.06.

Footnotes

1. The term "financial statements" refers to the summary financial statements published by a government that report on the financial position and changes in financial position of the government reporting entity.

2. A chart showing the various types of government contractual arrangements, including government partnerships, is included as Appendix A.

3. In arrangements where government employees jointly manage an employee benefit program (e.g., a pension plan) with the government, the employees are not considered to be parties outside of the financial reporting entity for the purposes of applying the definition of a government partnership.

4. Detailed guidance on the application of proportionate consolidation is set out in ADDITIONAL AREAS OF CONSOLIDATION, Section PS 2510.

5. Governmental units are defined in BASIC PRINCIPLES OF CONSOLIDATION, Section PS 2500.

6. GOVERNMENT REPORTING ENTITY, paragraph PS 1300.28, defines a government business enterprise.

7. GOVERNMENT REPORTING ENTITY, paragraph PS 1300.31, identifies factors for determining the financial self-sufficiency of a government business enterprise. Those factors would be considered when assessing the financial self-sufficiency of a government business partnership.

8. BASIC PRINCIPLES OF CONSOLIDATION, Section PS 2500, ADDITIONAL AREAS OF CONSOLIDATION, Section PS 2510, PORTFOLIO INVESTMENTS, Section PS 3041, and FINANCIAL INSTRUMENTS, Section PS 3450, may also provide relevant guidance in some cases where the arrangement no longer meets the definition of a government partnership.

9. A loss occurs when the fair value of the asset invested is less than its net carrying amount in the government's financial statements.

10. A gain occurs when the fair value of the asset invested is greater than its net carrying amount in the government's financial statements.

* Editorial change — January 2003, February 2007 and June 2011.

* Editorial change — September 2004.

Attachment 1: FMP_Temporary Plan Improvement Zone Discussion Deck.pdf

---

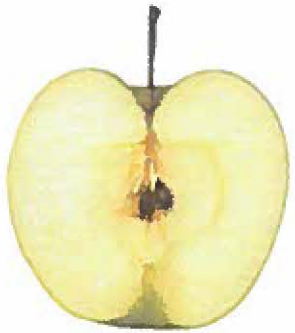
Hi Lucy.

Just forwarding a deck (we just became aware of) that demonstrates, based on scenario analysis, that the Province can expect to be in the temporary zone 30% of the time.

Talk to you later.

N

FMP_Temporary Plan Improvement Zone Discussion Deck.pdf



TEMPORARY PLAN IMPROVEMENTS

Draft for Discussion

March 19, 2014 (Sponsor's Task Force Meeting)

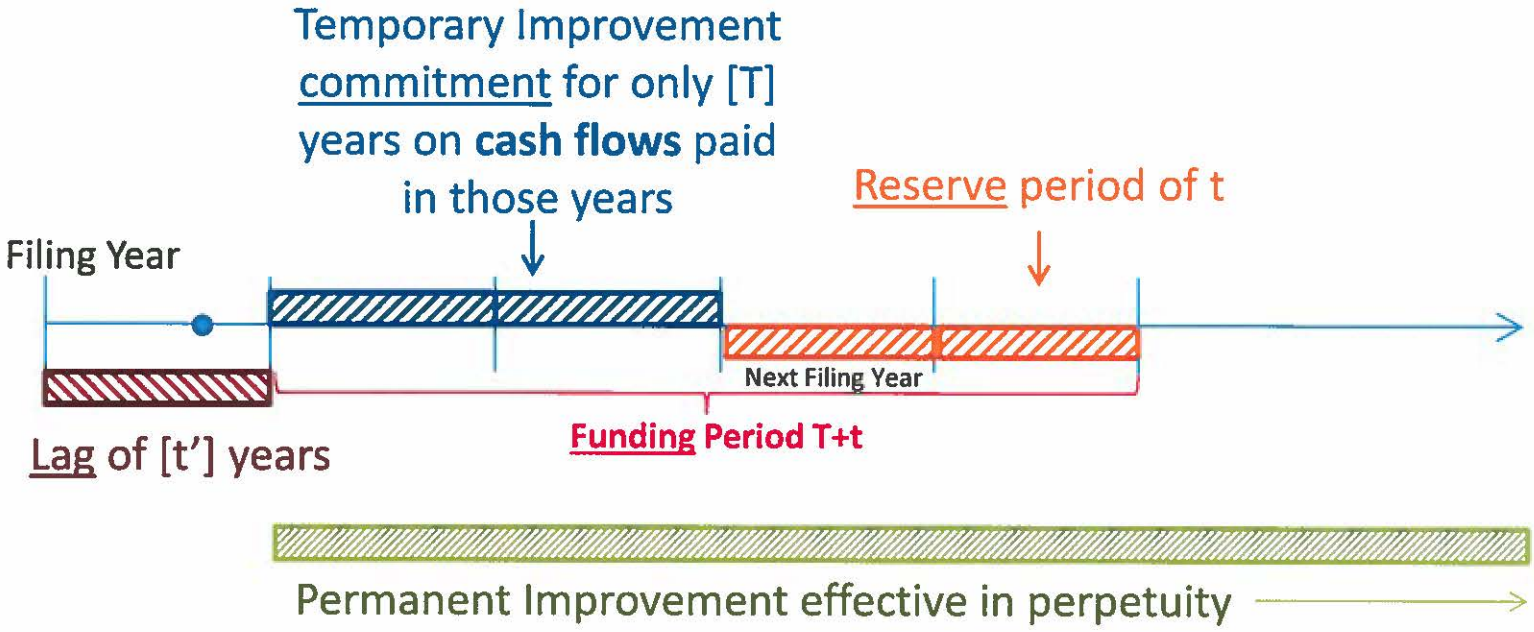
Funding Management Policy - Framework Description

TEMPORARY PLAN IMPROVEMENTS INCLUDE:

- Decrease to cash contribution paid
- Increase to benefits paid to pensioners in pay
- a combination of both

Temporary plan improvements are determined in a filed funding valuation. They are effective with a **lag** of [t'] years with a **commitment** of [T] years, **reserve** over t years and **funded** over a period of T+t. They impact only affected cash flows paid in years [t'] through [T].

Filing in temporary zone occurs if new temporary benefits schedule better than the current temporary benefits schedule.



Funding Management Policy - Framework Description

Valuation Basis

Assets = 110% of Liabilities valued at interest rates + 0.5%

Zone:	**Permanent Plan Improvements**
Mechanism:	Improve benefits as negotiated
Funding Risk:	Plan is essentially fully funded at Government of Canada long bond rates. Funding security is desired to ensure the Plan can support these benefits continually in the future. The impact of new teachers is important as they will create losses.

That is, Assets ~ 133% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1%

Zone:	**Temporary Plan Improvements**
Mechanism:	Improve benefits or lower contributions as negotiated[1]
Funding Risk:	Plan is well funded and can afford changes that temporarily provide a benefit enhancement (as long as it does not create a long term cost) and/or lower the contributions being paid into the plan.

[1] A funding reserve will be created to help support the temporary benefits

That is, Assets ~ 116% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1.55%

Zone:	**Fully Funded**
Mechanism:	Maintain Base Benefits and Contributions
Funding Risk:	Plan is adequately funded to provide base benefits supported by the base contributions. Given the volatility of market factors and the numerous assumptions in the funding valuation, "fully funded" is considered a range.

Zone:	**Additional Support Required From Current FMP Levers**
Mechanism:	Raise Contribution Rates and/or Invoke Conditional Inflation Protection as negotiated
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions. An increase to the contribution rate (within FMP maximum) and/or a decrease to the level of indexing being provided are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

Zone:	**Additional Support Required From New/Additional Changes**
Mechanism:	Negotiate other plan changes
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions and CIP is fully invoked and contribution rates are increased to maximum outlined in FMP. Plan changes are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

Next step is to review simulation results

TEMPORARY IMPROVEMENTS – Baseline FMP for Simulations

	Distribution Surplus	Surplus/Deficit split
Step 1:	Benefit Improvement (unlimited)	100%

	Distribution Deficit	Surplus/Deficit split
Step 1:	Raise Regular contribution up to 11%	100%

	Temporary Surplus	Surplus/Deficit split
Step 1:	Temporary Regular Contribution Reduction (regular CR no lower than 0%)	100%

Lag: 1 year, Commitment: 3 years, Reserve: 7 years, Funding Period: 10 years, Spread: 1.00%

	Restoration Surplus	Surplus/Deficit split
Step 1:	Lower Special to **1%**	100%
Step 2:	Restore Future Indexation Level to 100%	100%
Step 3:	Catch Up to 50% (both Post 2009-Pre 2014 and Post 2013 at 50%)	100%
Step 4:	Catch Up to 100% (both Post 2009-Pre 2014 and Post 2013 at 100%)	100%
Step 5:	Lower Special to 0%	100%

	Restoration Deficit	Surplus/Deficit split
Step 1:	Raise Special to **1%**	100%
Step 2:	Reduce Indexation Level (Post 2009-Pre 2014: 50%, Post 2013: 0%)	100%
Step 3:	Raise Special no threshold	100%

Note: FMP CR = 12%, Usable Surplus in Temporary zone is based on smooth assets and smooth liabilities

Brief Explanation of Metrics for Analysis

TEMPORARY PLAN IMPROVEMENTS METRICS for ANALYSIS:

- Probability in FMP Zone: Probability that OTPP will be in a particular FMP zone in the future
- Probability Temporary Benefits in pay: Probability that temporary benefits will be paid in the future and in which FMP Zone that will occur
- Probability Temporary Benefits in pay while in FMP Zone: What is the percentage of times a temporary benefits is in pay while in a particular FMP Zone

TEMPORARY IMPROVEMENT ZONE – POTENTIAL METRICS

# observations in each zone	Restoration Zone (Sp CR +CIP+add'l Sp CR)	Restoration Zone (Special CR)	Do Nothing Zone	Temporary Improvement Zone	Distribution Zone, usable surplus
Current (Starting FR 100%)	30%	2%	38%	0%	30%
Metrics					
Probability in FMP Zone (rounded)					
Baseline	32%	2%	27%	33%	6%
Probability in Temporary Benefits in pay (rounded)					
Baseline	0%	0%	9%	21%	3%
Probability Temporary Benefits in pay while in FMP Zone (rounded)					
Baseline	0%	0%	34%	63%	56%

Note: Starting FR= 100%

Hi Christina and Shayan.

Thanks for sharing the draft analysis on OTPP. I was hoping you might be available for a 15 minute call later today or tomorrow to discuss my comments (attached) and next steps.

Shyrose can help to set up a time to chat.

Thanks.

Nadine
