2011 Funding Decision.rtf

From: Colley, Matthew (CA - Toronto) [mcolley@deloitte.ca]
To: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]
Subject: 2011 Funding Decision
Date: Monday, September 19, 2016 09:38:37
Attachment 1: Picture (Device Independent Bitmap) 1.jpg

A preliminary $17.2 billion shortfall was resolved with a 1.1% contribution rate increase (phased in over three years), slightly smaller annual cost-of-living increases for teachers who retired after 2009, and recognition of current contribution rate as the permanent base rate

Was this contribution rate increase shared by the teachers?

Attachment 1: PSSRP - valuation allowance v2.docx
Attachment 2: Valuation Allowances for DB Pension Plans v2.pptx

---

Hi Lucy.

Just forwarding a couple of docs regarding the NB situation. Having a bit of difficulty following the last slide of the second attachment and how the calculation aligns with my understanding of how the adjusted benefit asset should be computed. (you'll note that the calc begins with a liability vs. asset).

Also, wondering if we can chat regarding the nature of a 7600 Report, just to confirm whether the work being undertaken by the Panel could ever be categorized as such. I don't think so, but would appreciate a chat.

I saw that you called earlier. Talk to you soon.

Nadine

PSSRP - valuation allowance v2.pdf

Public Service Shared Risk Pension Plan – Accounting for Net Pension Assets

Issue

To determine if the Province can record a pension asset for the Public Service Shared Risk Pension Plan.

Relevant PSAS

.050 *An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.*

.056 A government determines its expected future benefit as the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Assessment

Regulation 2012-75 under the *Pension Benefits Act* establishes maximum allowable contribution increases and decreases for shared risk plans. Further, the plan's funding policy has established maximum allowable decreases for this plan, in accordance with the Act, as follows:

Employees currently contribute approximately 8.25% of payroll, which may be reduced by a maximum of 0.50% of payroll in accordance with the plans' funding policy. The Province currently contributes 12.5% of payroll (including temporary contributions), which may be reduced by a maximum of 4.75% (1.25% from elimination of temporary contributions and 3.5% reduction in initial contribution rate). Current period benefit cost (including future indexing) as a percentage of payroll is 14.0% as per the latest actuarial valuation for accounting purposes. Therefore, the minimum employer contribution (7.75%) exceeds the portion of current period benefit cost that is not covered by employees (6.25%).

Illustrated in approximate dollar terms (millions):

Current period benefit cost:	$158.2
Minimum permitted employee contribution:	87.6
Amount not covered by employees:	$ 70.6
Minimum permitted employer contribution:	$ 87.6

Article 3.4 (d) of The Agreement and Declaration of Trust of the PSSRP:

(d) Subject to the *Pension Benefits Act* and the *Income Tax Act*, the following limitations shall apply to the rights to, interests in, or use of, the Fund:

i. No Trustee shall, except when acting as a Trustee and in concert with other Trustees as permitted hereunder, receive or otherwise have control over any of the monies or property which at any time form part of the Fund, except for as described in Section 3.4(b).

ii. Neither the Province, Unions, Employer, Members, nor any other person, association or corporation shall have any right, title or interest in or to the Fund.

iii. Except as otherwise expressly provided herein, no part of the corpus or income of the Fund shall be used for or diverted to purposes other than the exclusive benefit of Members and their beneficiaries.

(note: the reference to section 3.4(b) in paragraph i. refers to administrative and investment management related expenses which are paid by the pension funds)

Conclusion

In accordance with the Plan's funding policy, the Province will always contribute an amount that when added to the minimum employee contribution will sufficiently cover the current period benefit cost. Also, provisions of the Plan's governing documents indicate that the Province can not withdraw excess funds from the Plan. As such, the Province must record a valuation allowance against a net pension asset since no future economic benefit, as contemplated under PS 3250.056, exists.

Valuation Allowances for DB Pension Plans v2.pdf

Valuation Allowances for DB Pension Plans

Analysis of the NB Public Service Shared Risk Pension Plan

PS 3250

.050 *An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the* ***expected future benefit****.....*

What is a future economic benefit?

In summary, identified under PS 3250.056 as:

(a) ability to contribute less than employer portion of current period benefit cost, and or

(b) ability to withdraw excess funds.

Contribution reductions

(1) Current period benefit cost = 14% of payroll
(2) Min. employee contribution = 7.75%*
(3) Min. employer contribution = 7.75%*

(3) > [(1)-(2)]

Plan surplus can not be eliminated by contribution decreases alone, therefore, no future economic benefit.

* As specified by the Plan's funding policy (approved by the parties)

Contribution reductions

Illustrated in approximate dollar terms (millions):

Current period benefit cost:	$158.2
Minimum permitted employee contribution:	87.6
Amount not covered by employees:	$ 70.6
Minimum permitted employer contribution:	$ 87.6

Withdrawal of surplus

- Not permitted as per governing documents

- Excerpt from the Agreement and Declaration of Trust :

iii. Except as otherwise expressly provided herein, no part of the corpus or income of the Fund shall be used for or diverted to purposes other than the exclusive benefit of Members and their beneficiaries.

Conclusion

- No future economic benefit under PS 3250.056 (a) or (b)
- The Province recorded a valuation allowance
  - Actuarial Benefit Liability: $ 248.3
  - Unamortized Losses: $(451.0)
  - Net Pension Liability (Asset): $(202.7)
  - Valuation Adjustment: $ 202.7
  - Liability (Asset) recorded: $ ---

Mr. Uros Karadzic
c/o Nelson Tam
Treasury Board Secretariat,
7 Queen's Park Crescent
Toronto, ON M7A 1Y7

Dear Mr. Karadzic

Access to Deloitte report on the application of accounting principles under section 7600 of the CPA Canada Handbook, dated October 2, 2016

The Treasury Board Secretariat of the Province of Ontario (the "Province") has informed Mr. Uros Karadzic, (the "Recipient"), that Deloitte LLP ("Deloitte") has provided a report on the application of accounting principles under section 7600 of the CPA Canada Handbook dated October 2, 2016 as well as Analysis of Pension Asset Ceiling Accounting Considerations for the Office of the Provincial Controller Division re: Ontario Teachers' Pension Plan (OTPP) dated August 19, 2016 (the "Reports"). The Province has requested that the Recipient obtain from Deloitte access to the Reports that was prepared for the Province. This letter sets out the terms on which we are prepared to provide the Recipient with access to the Reports. The August 19 report was prepared to assist management in developing their own analysis; Deloitte was not engaged to and did not provide an opinion in that report.

Recipient acknowledges and agree to the following:

1. The Reports were prepared for the Province in assessing its accounting treatment for the OTPP. Accordingly, Deloitte may not have addressed matters which may be of specific interest or relevance to the Recipient. Deloitte does not warrant or represent that the Report is sufficient or appropriate for the Recipient's purposes.

2. The Reports are subject to the assumptions, qualifications, limitations, and restrictions set out in the Report. The Reports do not address all matters that Deloitte is or may become aware of whether or not such matters might be considered material by the Recipient. Deloitte has no responsibility to advise the Recipient of any additional matters.

3. Deloitte is not responsible to the Recipient, or any other party, if you rely on the Reports. The Recipient is responsible for making its own enquiries and performing its own procedures in connection with the Recipient's work.

4. The Recipient will not acquire any rights in connection with access to the Reports and we have no duty of care to the Recipient for the work we have performed or for the contents of the Reports or any issues referred to in the Reports.

5. The Recipient agrees to release Deloitte and our respective personnel against all actions, claims, suits, demands, claim for cost or expenses or any another proceedings arising in connection with access to the Reports or arising out of a breach of any of the Recipient's obligations hereunder

6. The Reports are confidential information and must be treated as such by the Recipient. The Recipient must not disclose the Reports in whole or in part, to any other person, reproduce the Reports, in whole or in part, for any purpose, or make reference to the Reports in any report or document.

7. The Recipient must not publicly refer to our services in connection with the Reports or name us in any report or document which will be publicly available or lodged or filed with any regulator without our prior written consent, such consent will be granted at our absolute discretion and may be subject to conditions.

8. The Recipient acknowledges that damages may not be a sufficient remedy for any breach of this Agreement and Deloitte may be entitled to specific performance or injunctive relief (as appropriate) as a remedy for any breach or threatened breach by the Recipient, in addition to any other remedies available to Deloitte at law or in equity.

9. This letter shall be governed and construed in accordance with the laws of the Province of Ontario. Each party submits to the courts of this jurisdiction and waives any defence of inconvenient forum to the maintenance of such action or proceeding.

If you have any questions regarding the above, please do not hesitate to contact Kerry Danyluk via e-mail at kdanyluk@deloitte.ca. Please acknowledge that you accept these terms by signing dating and returning the enclosed copy of this letter to us care of Nelson Tam.

Yours very truly

Deloitte LLP.

Ms. Karen Hughes
Associate Deputy Minister
Treasury Board Secretariat
7 Queen's Park Crescent
Toronto, ON M7A 1Y7

Dear Ms. Hughes

Access to Deloitte report on the application of accounting principles under section 7600 of the CPA Canada Handbook, dated October 2, 2016

We were engaged of behalf of Treasury Board Secretariat of the Province of Ontario (the "Province"). In connection with that engagement, Deloitte provided a report on the application of accounting principles under section 7600 of the CPA Canada Handbook date October 2, 2016 (the "Report"). Specifically, the Report deals with the application of certain aspects of Canadian public sector accounting standards to the recognition of the accrued benefit asset related to the Ontario Teachers' Pension Plan (OTPP or the Plan) in connection with the March 31, 2016 public accounts. You have requested that we give access to the Report to members of Pension Asset Expert Advisory Panel for information purposes (the "Recipients").

You acknowledge and agree that we shall have no responsibility to you if any of the Recipients misuse any confidential information obtained from their review of the Report.

In consideration of our agreeing to provide such access to the Recipients, you agree not to bring any actions, proceedings or claims against us in any way arising out of or in connection with the grant of access to the Report to the Recipients.

Our agreement to the Report being made available to the Recipients is subject to the prior condition that we obtain from each of the Recipients an agreement that each Recipient acquires no rights against Deloitte as a result of such access and an acknowledgement that they each recognise the basis on which access is provided.

Please confirm your understanding and agreement with the foregoing by signing, dating and returning to us the enclosed copy of this letter.

Yours very truly

Deloitte LLP

Mr. Murray Gold
c/o Nelson Tam
Treasury Board Secretariat,
7 Queen's Park Crescent
Toronto, ON M7A 1Y7

Dear Mr. Gold

Access to Deloitte report on the application of accounting principles under section 7600 of the CPA Canada Handbook, dated October 2, 2016

The Treasury Board Secretariat of the Province of Ontario (the "Province") has informed Mr. Murray Gold, (the "Recipient"), that Deloitte LLP ("Deloitte") has provided a report on the application of accounting principles under section 7600 of the CPA Canada Handbook dated October 2, 2016 as well as Analysis of Pension Asset Ceiling Accounting Considerations for the Office of the Provincial Controller Division re: Ontario Teachers' Pension Plan (OTPP) dated August 19, 2016 (the "Reports"). The Province has requested that the Recipient obtain from Deloitte access to the Reports that was prepared for the Province. This letter sets out the terms on which we are prepared to provide the Recipient with access to the Reports. The August 19 report was prepared to assist management in developing their own analysis; Deloitte was not engaged to and did not provide an opinion in that report.

Recipient acknowledges and agree to the following:

1. The Reports were prepared for the Province in assessing its accounting treatment for the OTPP. Accordingly, Deloitte may not have addressed matters which may be of specific interest or relevance to the Recipient. Deloitte does not warrant or represent that the Report is sufficient or appropriate for the Recipient's purposes.

2. The Reports are subject to the assumptions, qualifications, limitations, and restrictions set out in the Report. The Reports do not address all matters that Deloitte is or may become aware of whether or not such matters might be considered material by the Recipient. Deloitte has no responsibility to advise the Recipient of any additional matters.

3. Deloitte is not responsible to the Recipient, or any other party, if you rely on the Reports. The Recipient is responsible for making its own enquiries and performing its own procedures in connection with the Recipient's work.

4. The Recipient will not acquire any rights in connection with access to the Reports and we have no duty of care to the Recipient for the work we have performed or for the contents of the Reports or any issues referred to in the Reports.

5. The Recipient agrees to release Deloitte and our respective personnel against all actions, claims, suits, demands, claim for cost or expenses or any another proceedings arising in connection with access to the Reports or arising out of a breach of any of the Recipient's obligations hereunder

6. The Reports are confidential information and must be treated as such by the Recipient. The Recipient must not disclose the Reports in whole or in part, to any other person, reproduce the Reports, in whole or in part, for any purpose, or make reference to the Reports in any report or document.

7. The Recipient must not publicly refer to our services in connection with the Reports or name us in any report or document which will be publicly available or lodged or filed with any regulator without our prior written consent, such consent will be granted at our absolute discretion and may be subject to conditions.

8. The Recipient acknowledges that damages may not be a sufficient remedy for any breach of this Agreement and Deloitte may be entitled to specific performance or injunctive relief (as appropriate) as a remedy for any breach or threatened breach by the Recipient, in addition to any other remedies available to Deloitte at law or in equity.

9. This letter shall be governed and construed in accordance with the laws of the Province of Ontario. Each party submits to the courts of this jurisdiction and waives any defence of inconvenient forum to the maintenance of such action or proceeding.

If you have any questions regarding the above, please do not hesitate to contact Kerry Danyluk via e-mail at kdanyluk@deloitte.ca. Please acknowledge that you accept these terms by signing dating and returning the enclosed copy of this letter to us care of Nelson Tam.

Yours very truly

Mr. Paul Martin
c/o Nelson Tam
Treasury Board Secretariat,
7 Queen's Park Crescent
Toronto, ON M7A 1Y7

Dear Mr. Martin

Access to Deloitte report on the application of accounting principles under section 7600 of the CPA Canada Handbook, dated October 2, 2016

The Treasury Board Secretariat of the Province of Ontario (the "Province") has informed Mr. Paul Martin, (the "Recipient"), that Deloitte LLP ("Deloitte") has provided a report on the application of accounting principles under section 7600 of the CPA Canada Handbook dated October 2, 2016 as well as Analysis of Pension Asset Ceiling Accounting Considerations for the Office of the Provincial Controller Division re: Ontario Teachers' Pension Plan (OTPP) dated August 19, 2016 (the "Reports"). The Province has requested that the Recipient obtain from Deloitte access to the Reports that was prepared for the Province. This letter sets out the terms on which we are prepared to provide the Recipient with access to the Reports. The August 19 report was prepared to assist management in developing their own analysis; Deloitte was not engaged to and did not provide an opinion in that report.

Recipient acknowledges and agree to the following:

1. The Reports were prepared for the Province in assessing its accounting treatment for the OTPP. Accordingly, Deloitte may not have addressed matters which may be of specific interest or relevance to the Recipient. Deloitte does not warrant or represent that the Report is sufficient or appropriate for the Recipient's purposes.

2. The Reports are subject to the assumptions, qualifications, limitations, and restrictions set out in the Report. The Reports do not address all matters that Deloitte is or may become aware of whether or not such matters might be considered material by the Recipient. Deloitte has no responsibility to advise the Recipient of any additional matters.

3. Deloitte is not responsible to the Recipient, or any other party, if you rely on the Reports. The Recipient is responsible for making its own enquiries and performing its own procedures in connection with the Recipient's work.

4. The Recipient will not acquire any rights in connection with access to the Reports and we have no duty of care to the Recipient for the work we have performed or for the contents of the Reports or any issues referred to in the Reports.

5. The Recipient agrees to release Deloitte and our respective personnel against all actions, claims, suits, demands, claim for cost or expenses or any another proceedings arising in connection with access to the Reports or arising out of a breach of any of the Recipient's obligations hereunder

6. The Reports are confidential information and must be treated as such by the Recipient. The Recipient must not disclose the Reports in whole or in part, to any other person, reproduce the Reports, in whole or in part, for any purpose, or make reference to the Reports in any report or document.

7. The Recipient must not publicly refer to our services in connection with the Reports or name us in any report or document which will be publicly available or lodged or filed with any regulator without our prior written consent, such consent will be granted at our absolute discretion and may be subject to conditions.

8. The Recipient acknowledges that damages may not be a sufficient remedy for any breach of this Agreement and Deloitte may be entitled to specific performance or injunctive relief (as appropriate) as a remedy for any breach or threatened breach by the Recipient, in addition to any other remedies available to Deloitte at law or in equity.

9. This letter shall be governed and construed in accordance with the laws of the Province of Ontario. Each party submits to the courts of this jurisdiction and waives any defence of inconvenient forum to the maintenance of such action or proceeding.

If you have any questions regarding the above, please do not hesitate to contact Kerry Danyluk via e-mail at kdanyluk@deloitte.ca. Please acknowledge that you accept these terms by signing dating and returning the enclosed copy of this letter to us care of Nelson Tam.

Yours very truly

Dear Ms. O'Malley

Access to Deloitte report on the application of accounting principles under section 7600 of the CPA Canada Handbook, dated October 2, 2016

The Treasury Board Secretariat of the Province of Ontario (the "Province") has informed Ms. Tricia O'Malley, (the "Recipient"), that Deloitte LLP ("Deloitte") has provided a report on the application of accounting principles under section 7600 of the CPA Canada Handbook dated October 2, 2016 as well as Analysis of Pension Asset Ceiling Accounting Considerations for the Office of the Provincial Controller Division re: Ontario Teachers' Pension Plan (OTPP) dated August 19, 2016 (the "Reports"). The Province has requested that the Recipient obtain from Deloitte access to the Reports that was prepared for the Province. This letter sets out the terms on which we are prepared to provide the Recipient with access to the Reports. The August 19 report was prepared to assist management in developing their own analysis; Deloitte was not engaged to and did not provide an opinion in that report.

Recipient acknowledges and agree to the following:

1. The Reports were prepared for the Province in assessing its accounting treatment for the OTPP. Accordingly, Deloitte may not have addressed matters which may be of specific interest or relevance to the Recipient. Deloitte does not warrant or represent that the Report is sufficient or appropriate for the Recipient's purposes.

2. The Reports are subject to the assumptions, qualifications, limitations, and restrictions set out in the Report. The Reports do not address all matters that Deloitte is or may become aware of whether or not such matters might be considered material by the Recipient. Deloitte has no responsibility to advise the Recipient of any additional matters.

3. Deloitte is not responsible to the Recipient, or any other party, if you rely on the Reports. The Recipient is responsible for making its own enquiries and performing its own procedures in connection with the Recipient's work.

4. The Recipient will not acquire any rights in connection with access to the Reports and we have no duty of care to the Recipient for the work we have performed or for the contents of the Reports or any issues referred to in the Reports.

5. The Recipient agrees to release Deloitte and our respective personnel against all actions, claims, suits, demands, claim for cost or expenses or any another proceedings arising in connection with access to the Reports or arising out of a breach of any of the Recipient's obligations hereunder

6. The Reports are confidential information and must be treated as such by the Recipient. The Recipient must not disclose the Reports in whole or in part, to any other person, reproduce the Reports, in whole or in part, for any purpose, or make reference to the Reports in any report or document.

7. The Recipient must not publicly refer to our services in connection with the Reports or name us in any report or document which will be publicly available or lodged or filed with any regulator without our prior written consent, such consent will be granted at our absolute discretion and may be subject to conditions.

8. The Recipient acknowledges that damages may not be a sufficient remedy for any breach of this Agreement and Deloitte may be entitled to specific performance or injunctive relief (as appropriate) as a remedy for any breach or threatened breach by the Recipient, in addition to any other remedies available to Deloitte at law or in equity.

9. This letter shall be governed and construed in accordance with the laws of the Province of Ontario. Each party submits to the courts of this jurisdiction and waives any defence of inconvenient forum to the maintenance of such action or proceeding.

If you have any questions regarding the above, please do not hesitate to contact Kerry Danyluk via e-mail at kdanyluk@deloitte.ca. Please acknowledge that you accept these terms by signing dating and returning the enclosed copy of this letter to us care of Nelson Tam.

Meeting to review proposed Cap and Trade accounting.rtf

From: david.c.greenall@pwc.com [david.c.greenall@pwc.com]
To: Virani, Shyrose (TBS) [/o=GOVON/ou=Ontario Public Sector - iSERV EMS/cn=Recipients/cn=viranish03733350]; david.c.greenall@pwc.com [david.c.greenall@pwc.com]
Subject: Meeting to review proposed Cap and Trade accounting
Date:

Myra/Doris

Pls extend the invite to appropriate staff.

Upon arrival, please call Shyrose Virani at 416 325 1448 to gain entry into our building.

Thanks
Shyrose

As per recent discussion, this meeting will be to review the proposed accounting treatment for Ontario's Cap and Trade program. Subject to any changes in the proposed approach, OPCD will initiate a discussion with the Auditor General's office to review the planned accounting treatment.

Pre-reading materials will be provided in advance of the meeting.

Hi Nadine,

It's good to hear from you. We can definitely arrange a call for tomorrow. I have good availability after 11:30- let me know what time works for you.
I may have to do some digging re: TTC so may not have all the answers on that tomorrow, but we can set up a call anyway on cap and trade and I'll see what I can find out on the pensions prior.

Hi Lucy.

I hope that this note finds you well. I was hoping that you might have some insights on a couple of items, or alternatively that you might be able to direct me in the right direction on a couple of items:

1. We were wondering if you might have some info on how companies are accounting for cap & trade when they are the buyer of the EAs. Specifically, if a company chooses not to purchases anything at the auction, are they recognizing an expense and an accrual? If they buy the EA, how are they accounting for it – e.g. setting it up as a prepaid and expensing it when they pay the amount or amortizing it?

2. Secondly, we understand that the TTC is taking a valuation allowance on its net pension assets but we haven't been able to locate details on the rational for the allowance in the notes to the TTC's f/s. We noticed that PwC is the organization's auditor, and we wondered if you might be able to provide some additional context.

If you have some availability tomorrow, perhaps we can touch base.

Take care,

Nadine

Toronto, Ontario
M7A 1Y7

Dear Alex:

Re: Ontario Teachers' Pension Plan (Plan) Financial Statement Results

As requested - and further to our correspondence dated September 15, 2016 - we are providing information related to the financial statement valuation results as at December 31, 2015 published in our 2015 Annual Report.

The Plan is subject to several valuations which serve different purposes and produce results that vary due to actuarial cost methods and the underlying actuarial assumptions. First, the Plan's funding valuation assesses the long-term financial health of the Plan to facilitate determinations of future contribution rates and benefit levels. Second, the Plan's financial statement valuation is a mark-to-market, current snap shot view of the financial position of the plan at a point in time where assumptions and methodology are outlined by the Chartered Professional Accountants (CPA) Handbook. Lastly, on annual basis, we receive a request from the Ontario Ministry of Finance to produce results, based on their assumptions, used to prepare the Ontario Budget as outlined in the Chartered Professional Accountants of Canada Public Sector Accounting Board Handbook.

Financial Statement Reporting

The CPA Handbook allows two approaches for multi-employer pension plans in the creation of their financial statement reporting. They may use their funding valuation or valuation results prepared in accordance with Section 4600 of the CPA Handbook. Teachers' has chosen the latter approach for the following two reasons:

- An important feature of the Plan is Conditional Inflation Protection (CIP). To properly reflect the nature of CIP, the cost method used for funding purposes is the aggregate method which allows the Plan to address surpluses and deficits through future benefit changes. This cost method differs from that required by the accounting standards (i.e. the projected benefit cost method, prorated on services). So the funding valuation would not be appropriate for financial statement reporting.

- The funding valuation of the Plan employs an asset smoothing method to mitigate volatility in the market value of assets. Asset smoothing is no longer permitted under Section 4600 of the CPA Handbook.

Discount Rates

A key assumption in actuarial valuations is the discount rate. The methodology for determining the discount rate is different for each valuation. For the funding valuation, the rate is based on the expected return on assets with margins. The actuary must confirm that the assumptions used within a funding valuation are independently reasonable and are appropriate in aggregate in accordance with the Canadian Institute of Actuaries Standards of Practice. For the financial statement valuation, the rate is based on current market rates in accordance with the CPA Handbook. For the Ontario Budget, the best estimates are used in accordance with the Public Sector Accounting Board standards. In particular:

- The annual valuation performed for funding purposes determines the discount rate by reference to what the Plan's assets can reasonably be expected to earn over the long run less expenses and less provisions for adverse deviation (PFAD). For the January 1, 2016 funding valuation (which will be filed with the regulatory authorities by September 30th), the nominal discount rate is 4.8% with an underlying real return of 2.75%. This real return takes into account PFADs of approximately 1.5%.

- As described in Note 4. of the 2015 Annual Report, the discount rate used to determine liabilities on a financial statement valuation basis (3.25% nominal, 1.70% real) is based on market rates, as at the valuation date, of bonds issued by the Province of Ontario, which have characteristics similar to the Plan's liabilities. The discount rate was determined by applying a weighted average discount rate that reflects the estimated timing and amount of benefit payments. Please see further detail below on Section 4600 of the CPA Canada Handbook requirements related to discount rate determination.

- As noted in the December 11, 2015 correspondence from the Ontario Ministry of Finance, the Province uses best estimate assumptions as required by the Public Sector Accounting Standards (i.e. without PFADs). The December letter provided the specific assumptions to be used in the valuation (to be performed by the external Plan actuary – Mercer) including return on investment, inflation, real rate of return and anticipated salary growth. Public Sector Accounting Standards provide for determination of discount rates by reference to the expected return on the pension plan's assets.

Please do not hesitate to call if you have any questions or require further information.

Sincerely,

Barbara Zvan, FSA, FCIA, CERA

Appendix A

Discount Rate Determination under Section 4600 of the CPA Canada Handbook

Section 4600 of the CPA Canada Handbook specifies that defined benefit obligation guidance can be found in the Employee Future Benefits Section 3462 (Part II of the CPA Canada Handbook) and in IAS 19 Employee Benefits (Part I of the Handbook).

- Section 3462 indicates that the discount rate should be determined with reference to market interest rates on high-quality debt instruments.
- Both Section 3462 and IAS 19 provide that when rates on high-quality corporate bonds are available, they are used to determine the discount rate and that when the market for corporate bonds is not deep or they do not extend far enough into the future to match the cash flows inherent in the defined benefit obligation, the rates on government bonds may be used to determine the discount rate.
- Both Section 3462 and IAS 19 provide that the rates used should reflect the estimated timing of benefit payments.

AMENDMENT
To Add an Additional Resource to a Project

Agreement Number and Description of Project:	OPCD-PWC-01 Accounting Advisory Services
Original SOW Date:	September 16, 2016
Name of Vendor:	PricewaterhouseCoopers LLP
Date of Amendment:	October 18, 2016
Amendment Number:	001

1) Amendment Details:

1.1 This amendment hereby exercises the Ministry's right to add an additional resource to support this project. The additional resource is:

Names, Roles and Per Diem Rates:

Individual's Legal Name	Individual's Role (& level)	Per Diem Rate
Mario Chassé	General Consultant (Actuarial), Level 2 Service Category 2	The per diem rate shall be equal to the per diem rates stipulated in the SOW for each deliverable (ie Accounting Advisory and Accounting Opinion).

1.2 The additional resource does not change the scope, deliverables, or ceiling value of the project.

1.3 This amendment is subject to the terms and conditions of the Master Agreement.

1.4 All other terms and conditions of the Statement of Work OPCD-PWC-01 between PricewaterhouseCoopers LLP and the Ministry are unchanged.

2007 Teachers Survey Apendix.pdf

Appendix A: Study interview schedule

POLLARA

Interview Schedule

A. Introduction

Good morning/afternoon/evening. May I please speak with (MEMBER NAME)?

IF AVAILABLE- CONTINUE
IF NOT AVAILABLE - SCHEDULE APPOINTMENT TO CALL BACK (IF NECESSARY, READ FIRST 2 SENTENCES OF PREAMBLE BELOW AND SCHEDULE CALL-BACK)

(WHEN MEMBER IS ON LINE) Good morning/afternoon/evening. My name is ( ) and I am calling on behalf of the Ontario Teachers' Pension Plan, the Ontario Teachers' Federation and the Ontario Government, from POLLARA, a national research firm. We are conducting a survey of pension plan members, which will provide these groups with information about members' preferences. Would you mind if I asked you some questions? All of your responses will be kept completely confidential. (IF ASKED: On average, the survey takes about 10 minutes to complete.)

(IF YES) Thank you (PROCEED TO QUESTION 1)
(IF NO) When is a better time for me to call back? (SCHEDULE APPOINTMENT UP TO AND INCLUDING May 2; MONDAY-FRIDAY 5pm-9pm; SATURDAY 9am-5pm; NO SUNDAY CALLS.)

B. Objective 1: To determine the level of awareness and understanding among Plan members about the current level of benefits and contributions.

To start, I'd like to read you a list of some of the provisions of your pension plan. Please tell me whether or not you were aware of each provision prior to my call. How about: (RANDOMIZE ORDER OF BENEFITS)

1. Members can retire with unreduced monthly pension payments when their age plus the length of their teaching career equals eighty-five, or when they reach the age of 65. (IF NECESSARY: Were you aware or unaware of this?)

   Aware ..... (95%)
   Unaware ..... (4%)
   Don't know ..... (<1%)
   Refused ..... (<1%)

2. The monthly pension amount paid to a retiree is based on a formula that multiplies two percent by the years of service by the average of their best five annual salaries. (IF NECESSARY: Were you aware or unaware of this?)

   Aware ..... (87%)
   Unaware ..... (12%)
   Don't know ..... (1%)
   Refused ..... (<1%)

3. The monthly pension payments made to retirees are protected against inflation. In other words, a guaranteed cost-of-living adjustment is made. (IF NECESSARY: Were you aware or unaware of this?)

Aware	(74%)
Unaware	(25%)
Don't know	(1%)
Refused	(<1%)

(END RANDOMIZATION OF STATEMENTS)

Now I'd like to ask you about some other pension issues.

4. Prior to my call, were you aware or unaware that the pension plan does not provide dental and other health benefit coverage to retirees?

Aware	(68%)
Unaware	(31%)
Don't know	(1%)
Refused	(<1%)

5. And were you aware or unaware that the Ontario government matches members' contributions to the pension plan?

Aware	(63%)
Unaware	(36%)
Don't know	(1%)
Refused	(<1%)

6. And prior to my call, were you aware or unaware that the money you contribute to your pension plan is tax deductible? (IF REQUIRED: Similar to an RRSP, you can deduct your total pension contributions from your net income on page 3 of your tax return.)

Aware	(66%)
Unaware	(32%)
Don't know	(1%)
Refused	(<1%)

7. The value of the average teacher's pension at retirement, in today's dollars, is $750,000. Is this amount higher, lower or about the same amount that you expected?

Higher	(23%)
Lower	(10%)
About the same amount	(38%)
Don't know	(29%)
Refused	(<1%)

8. To the best of your knowledge, approximately what percentage of your before-tax salary do you currently contribute to your pension plan? (READ LIST - STOP AFTER ANSWER IS GIVEN)

Less than 5%	(5%)
5% to less than 7%	(10%)
7% to less than 9%	(17%)
9% to less than 12%	(24%)
12% to less than 15%	(4%)
15% or more	(5%)
Don't know (DO NOT READ)	(35%)
Refused (DO NOT READ)	(<1%)

9. To the best of your knowledge, is the amount you currently contribute to your pension plan scheduled to go up, down, or stay the same in the next two years?

Up	(77%)
Down	(1%)
Stay the same	(13%)
Don't know	(9%)
Refused	(<1%)

C. Objective 2: To measure plan members' preferences in terms of increased contributions vs. decreased benefits, if a future valuation shows an increased shortfall.

Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate. These increases are required to keep pension provisions for future service at current levels. By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.

10. (IF EXPECTING INCREASE) Are these increases higher, lower, or about the same amount that you had expected?

Higher	(27%)
Lower	(3%)
Same	(64%)
Don't know	(6%)
Refused	(<1%)

11. (IF EXPECTING DECREASE/STAY THE SAME/DON'T KNOW/REFUSED) Do you recall seeing or hearing anything about these increases?

Yes	(47%)
No	(49%)
Don't know	(4%)
Refused	(<1%)

Although all members are guaranteed pensions, the Ontario Teachers' Pension Plan, like many other pension plans, is facing funding challenges. Decisions may need to be made about whether to further increase members' contributions beyond the increases we have just discussed. The alternative to increasing contributions is reducing the level of pension provisions that will be earned from the time the change is made until members retire.

(IF RESPONDENT ASKS: By law, such changes could not affect the pensions provided to those who have already retired. Likewise, pension provisions that have already been earned by working members could not be reduced. Such changes could only be applied into the future.)

12. First, thinking into the future, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%. (INTERVIEWER PROBE IF "Don't know": "Please provide your best estimate.") (IF RESPONDENT GIVES A RANGE: "Please provide the maximum total percentage you would be willing to contribute, rather than a range.")

Less than 10.0%	(5%)
10.0%	(15%)
10.1%-11.0%	(7%)
11.1%-12.0%	(20%)
12.1%-13.0%	(8%)
13.1%-14.0%	(2%)
14.1%-15.0%	(27%)
Greater than 15.0%	(3%)
Don't know	(12%)
Refused	(1%)
Mean (%):	12.34
Median (%):	12.0
Mode (%):	15.0

13. (ASK ONLY TO THOSE WHO RESPONDED 8.1% OR MORE TO Q12. EXCLUDE IF Q12 = "Don't know" or "Refused") If a commitment was made to reduce members' contributions to eight percent if the pension plan shows a surplus in the future, would you be in favour or not in favour of increasing pension plan contributions to more than (INSERT RESPONSE FROM Q12) of your salary in order to keep all pension provisions at current levels?

(IF ASKED: Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate. These changes are required to keep the pension provisions for future service at their current levels. By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.)

In favour	(36%)
Not in favour	(53%)
Don't know	(10%)
Refused	(<1%)

Please imagine that your contributions are at the maximum amount you would be willing to contribute in order to keep all pension provisions at current levels. I'd like to read you a list of changes that could be made to future pension provisions in order to keep contributions from rising beyond this level. Please tell me whether you would be in favour or not in favour of each of the following changes. How about: (READ - RANDOMIZE ORDER OF PROVISIONS)

(IF REQUIRED, READ: Please keep in mind that by law, these changes could not affect the pensions provided to those who have already retired. Likewise, current pension provisions that have already been earned by working members could not be reduced.)

14. Increasing the eighty-five factor to ninety, meaning that in the future members would work an extra two and a half years to qualify for an unreduced monthly pension in order to retire before age 65? If this situation were to arise, there would be some type of grand fathering. If you have already reached your eighty-five factor, you would not lose it. (IF ASKED: Members can currently retire with unreduced monthly pension payments when their age plus years of service equals eighty-five, or when they reach the age of 65.) (IF ASKED: Discussions would take place between the OTF and the government to decide on a transition period.)

In favour	(41%)
Not in favour	(57%)
Don't know	(2%)
Refused	(<1%)

15. Reducing your monthly pension for future service by about ten percent? By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.

In favour	(32%)
Not in favour	(57%)
Don't know	(11%)
Refused	(<1%)

16. Making cost-of-living increases to future retirees' pension flexible when the pension plan is under-funded, with the understanding that the full cost-of-living adjustment would be restored when possible?

In favour	(51%)
Not in favour	(43%)
Don't know	(5%)
Refused	(<1%)

(END OF QUESTION RANDOMIZATION)

17. We've just discussed three changes that could be made to pension provisions in the future, depending on the future financial situation of the pension plan. I'd like to read you descriptions of all three of these potential changes. When I'm done, please tell me which one of these changes you would be most willing to have made to your pension plan. (RANDOMIZE ORDER OF CHANGES)

(IF REQUIRED: By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.)

Decreasing your monthly pension for future service by 10%	(11%)
Increasing the eighty-five factor to a ninety factor	(37%)
Providing flexibility for the cost-of-living adjustment	(44%)
Don't know (DO NOT READ OR RANDOMIZE)	(3%)
Refused (DO NOT READ OR RANDOMIZE)	(4%)

(IF REQUIRED: READ FULL WORDING FROM Q14 TO Q16 AGAIN)

18. Which potential change are you least willing to have made? (REPEAT REMAINING CHANGES AS REQUIRED)

(IF REQUIRED: By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act)

Decreasing your monthly pension for future service by 10%	(37%)
Increasing the eighty-five factor to a ninety factor	(41%)
Providing flexibility to the cost-of-living adjustment	(16%)
Don't know (DO NOT READ OR RANDOMIZE)	(3%)
Refused (DO NOT READ OR RANDOMIZE)	(2%)

Appendix B: LTIP interview schedule

LTIP interview schedule

- Some individuals contained in member records were receiving long-term income protection (LTIP) through their employer. A total of 21 individuals on LTIP completed this survey. These results have been excluded from the findings presented in other sections of this report because the mandate of the study was to understand contribution and benefit issues among active, *contributing* pension plan members.
- A total of 21 individuals on LTIP completed the survey, the results of which are presented in the following interview schedule. Due to the extremely small sample size, results should not be generalized to all individuals on LTIP.

POLLARA

Interview Schedule

A. Introduction

Good morning/afternoon/evening. May I please speak with (MEMBER NAME)?

IF AVAILABLE- CONTINUE
IF NOT AVAILABLE - SCHEDULE APPOINTMENT TO CALL BACK (IF NECESSARY, READ FIRST 2 SENTENCES OF PREAMBLE BELOW AND SCHEDULE CALL-BACK)

(WHEN MEMBER IS ON LINE) Good morning/afternoon/evening. My name is ( ) and I am calling on behalf of the Ontario Teachers' Pension Plan, the Ontario Teachers' Federation and the Ontario Government, from POLLARA, a national research firm. We are conducting a survey of pension plan members, which will provide these groups with information about members' preferences. Would you mind if I asked you some questions? All of your responses will be kept completely confidential. (IF ASKED: On average, the survey takes about 10 minutes to complete.)

(IF YES) Thank you (PROCEED TO QUESTION 1)
(IF NO) When is a better time for me to call back? (SCHEDULE APPOINTMENT UP TO AND INCLUDING May 2; MONDAY-FRIDAY 5pm-9pm; SATURDAY 9am-5pm; NO SUNDAY CALLS.)

LTIP Plan
(n=21)

B. Objective 1: To determine the level of awareness and understanding among Plan members about the current level of benefits and contributions.

To start, I'd like to read you a list of some of the provisions of your pension plan. Please tell me whether or not you were aware of each provision prior to my call. How about: (RANDOMIZE ORDER OF BENEFITS)

1. Members can retire with unreduced monthly pension payments when their age plus the length of their teaching career equals eighty-five, or when they reach the age of 65. (IF NECESSARY: Were you aware or unaware of this?)

   Aware ..... (100%)

2. The monthly pension amount paid to a retiree is based on a formula that multiplies two percent by the years of service by the average of their best five annual salaries. (IF NECESSARY: Were you aware or unaware of this?)

   Aware ..... (86%)
   Unaware ..... (10%)
   Don't know ..... (5%)

	LTIP Plan (n=21)
3. The monthly pension payments made to retirees are protected against inflation. In other words, a guaranteed cost-of-living adjustment is made. (IF NECESSARY: Were you aware or unaware of this?)	
Aware	(76%)
Unaware	(24%)

(END RANDOMIZATION OF STATEMENTS)

Now I'd like to ask you about some other pension issues.

4. Prior to my call, were you aware or unaware that the pension plan does not provide dental and other health benefit coverage to retirees?	
Aware	(71%)
Unaware	(24%)
Don't know	(5%)
5. And were you aware or unaware that the Ontario government matches members' contributions to the pension plan?	
Aware	(48%)
Unaware	(38%)
Don't know	(14%)
6. And prior to my call, were you aware or unaware that the money you contribute to your pension plan is tax deductible? (IF REQUIRED: Similar to an RRSP, you can deduct your total pension contributions from your net income on page 3 of your tax return.)	
Aware	(67%)
Unaware	(29%)
Don't know	(5%)
7. The value of the average teacher's pension at retirement, in today's dollars, is $750,000. Is this amount higher, lower or about the same amount that you expected?	
Higher	(29%)
Lower	(5%)
About the same amount	(24%)
Don't know	(43%)

	LTIP Plan (n=21)

8. To the best of your knowledge, approximately what percentage of your before-tax salary do you currently contribute to your pension plan? (READ LIST - STOP AFTER ANSWER IS GIVEN)

Less than 5%	(5%)
5% to less than 7%	(<1%)
7% to less than 9%	(14%)
9% to less than 12%	(24%)
12% to less than 15%	(<1%)
15% or more	(<1%)
Don't know (DO NOT READ)	(52%)
Refused (DO NOT READ)	(5%)

9. To the best of your knowledge, is the amount you currently contribute to your pension plan scheduled to go up, down, or stay the same in the next two years?

Up	(43%)
Down	(10%)
Stay the same	(24%)
Don't know	(24%)

C. Objective 2: To measure plan members' preferences in terms of increased contributions vs. decreased benefits, if a future valuation shows an increased shortfall.

Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate. These increases are required to keep pension provisions for future service at current levels. By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.

10. (IF EXPECTING INCREASE) Are these increases higher, lower, or about the same amount that you had expected?

Higher	(22%)
Lower	(11%)
Same	(56%)
Don't know	(11%)

	LTIP Plan (n=21)

11. (IF EXPECTING DECREASE/STAY THE SAME/DON'T KNOW/REFUSED) Do you recall seeing or hearing anything about these increases?

Yes	(42%)
No	(42%)
Don't know	(17%)

Although all members are guaranteed pensions, the Ontario Teachers' Pension Plan, like many other pension plans, is facing funding challenges. Decisions may need to be made about whether to further increase members' contributions beyond the increases we have just discussed. The alternative to increasing contributions is reducing the level of pension provisions that will be earned from the time the change is made until members retire.

(IF RESPONDENT ASKS: By law, such changes could not affect the pensions provided to those who have already retired. Likewise, pension provisions that have already been earned by working members could not be reduced. Such changes could only be applied into the future.)

12. First, thinking into the future, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%. (INTERVIEWER PROBE IF "Don't Know": "Please provide your best estimate.") (IF RESPONDENT GIVES A RANGE: "Please provide the maximum total percentage you would be willing to contribute, rather than a range.")

Less than 10.0%	(14%)
10.0%	(14%)
10.1%-11.0%	(10%)
11.1%-12.0%	(10%)
12.1%-13.0%	(10%)
13.1%-14.0%	(<1%)
14.1%-15.0%	(14%)
Greater than 15.0%	(5%)
Don't know	(14%)
Refused	(10%)
Mean (%):	11.03
Median (%):	11.50
Mode (%):	10.00

	LTIP Plan (n=21)

13. (ASK ONLY TO THOSE WHO RESPONDED 8.1% OR MORE TO Q12. EXCLUDE IF Q12 = "Don't know" or "Refused") If a commitment was made to reduce members' contributions to eight percent if the pension plan shows a surplus in the future, would you be in favour or not in favour of increasing pension plan contributions to more than (INSERT RESPONSE FROM Q12) of your salary in order to keep all pension provisions at current levels?

(IF ASKED: Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate. These changes are required to keep the pension provisions for future service at their current levels. By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.)

In favour	(62%)
Not in favour	(31%)
Don't know	(8%)

Please imagine that your contributions are at the maximum amount you would be willing to contribute in order to keep all pension provisions at current levels. I'd like to read you a list of changes that could be made to future pension provisions in order to keep contributions from rising beyond this level. Please tell me whether you would be in favour or not in favour of each of the following changes. How about: (READ - RANDOMIZE ORDER OF PROVISIONS)

(IF REQUIRED, READ: Please keep in mind that by law, these changes could not affect the pensions provided to those who have already retired. Likewise, current pension provisions that have already been earned by working members could not be reduced.)

14. Increasing the eighty-five factor to ninety, meaning that in the future members would work an extra two and a half years to qualify for an unreduced monthly pension in order to retire before age 65? If this situation were to arise, there would be some type of grand fathering. If you have already reached your eighty-five factor, you would not lose it. (IF ASKED: Members can currently retire with unreduced monthly pension payments when their age plus years of service equals eighty-five, or when they reach the age of 65.) (IF ASKED: Discussions would take place between the OTF and the government to decide on a transition period.)

POLLARA

I. Objectives

- The goals of this survey of active, contributing members of the Ontario Teachers' Pension Plan are:
  - → To determine the level of awareness and understanding among plan members about the current level of benefits and contributions.
  - → To measure plan members' preferences in terms of increased contributions and decreased benefits, if a future valuation shows an increased shortfall.
  - → To identify the views of sub-groups of members who may have a different perspective based on their circumstances (i.e., years from retirement).
- In order to achieve these objectives, the study required a sound research methodology that would accurately measure member preferences. This methodology is detailed in the following pages.

II. Methodology

- A total of 2,820 telephone interviews were conducted with OTPP members between April 11th and May 2nd, 2007.

A. Questionnaire development

- The survey questionnaire and methodology were developed by POLLARA in conjunction with the Ontario Teachers' Pension Plan (OTPP), the Ontario Teachers' Federation (OTF), and the Ontario Government, through a series of meetings held between September 11th and December 11th, 2006.

- In addition, six focus groups, four English (Brampton & Toronto) and two French (Ottawa), were conducted in October 2006 with early, mid, and late career members to facilitate the overall design of the questionnaire. An important goal of the focus groups was to identify pension terminology and explanations that members do or do not understand to determine the appropriate level of communication for the questionnaire. A draft copy of *Let's talk about the future of your pension*, a primer created by the OTPP, OTF, and Ontario Government, was also assessed during these sessions, and member feedback was used to refine the document in a way that would make it most easily understood.

II. Methodology, continued

A. Questionnaire development, continued

- As well, using a draft questionnaire, POLLARA conducted 17 pre-test interviews with OTPP members in November, 2006. After further questionnaire refinement, a second pre-test of 46 English and French members was conducted in March, 2007. A stratified sample was used for both pre-tests, to ensure a good mix of members. The questionnaire tested well in both cases and after each pre-test modifications were made to facilitate respondent comprehension of survey topics.

B. Member communications

- *Let's talk about the future of your pension*, a primer created by the OTPP, OTF, and Ontario Government was mailed to all pension plan members the week of March 19th, 2007. The primer informed members that they may be called to participate in a survey and encouraged them to familiarize themselves with the document and to keep it available for reference in case they were contacted. The resource was also included on OTPP's website.

- In addition to the primer, in December, 2006, the Ontario Teachers' Federation released, *What About My Teachers' Pension?*, a multi-media educational resource that was sent to local presidents for distribution to schools. The resource was also included on OTF's website, and was included as a link on OTPP's website.

II. Methodology, continued

B. Member communications, continued

- Members were also informed about the survey through OTPP's 2006 Annual Report, its 2006 Report to Members, its 2007 Annual Meeting, detailed Q&As on its website, and its Pensionwise newsletter.

C. Interviewing

- Pension plan members were telephoned by POLLARA weekdays between 5 p.m. and 9 p.m. and on Saturday between 9 a.m. and 5 p.m. If the time of the initial call was deemed inconvenient or if members wanted additional time to review reference material on the survey topics, the researcher offered to schedule an appointment to call back.
- Of the 3,636 eligible members POLLARA spoke with, 78% completed the survey and 22% declined to participate. The survey response rate, calculated according to the Marketing Research and Intelligence Association (MRIA) formula, was 40%.
- All interviewers were briefed on the project's background and questionnaire. 100% of interviews were supervised, and 10% were monitored, as per MRIA guidelines.

II. Methodology, continued

D. Sampling and data weighting

- The source of the survey sample was OTPP current member records.
- Additional interviews were conducted among member sub-groups in order to accurately understand the views of these segments. Specific groups to be oversampled were selected in consultation with POLLARA, by OTPP, OTF, and the Ontario Government.
- The overall results of the survey were weighted to reflect the actual distribution of members within these sub-groups.

POLLARA

II. Methodology, continued

D. Sampling and data weighting, continued

- The following table shows the distribution of interviews and the corresponding margins of error. Overall results are accurate to within ±1.8%, nineteen times out of twenty. Sub-sample results have a larger margin of error.

		Actual # of interviews	Weighted # of interviews	Margin of error (%)
Career groupings	Newer members (0 – 4.9 years credit)	481	255	±4.4
	Newer members (5 – 9.9 years credit)	398	259	±4.9
	Mid-career members (10 – 14.9 years credit)	361	120	±5.1
	Mid-career members (15 – 21.9 years credit)	353	65	±5.1
	Older members (within 10 years of an unreduced pension)	431	137	±4.7
	Older members (within 5 years of an unreduced pension)	392	117	±4..9
	Older members (eligible for unreduced pension)	404	47	±4.7
Gender	Female	2077	736	±2.1
	Male	743	264	±3.6
Employment type	Full-time	2082	829	±2.1
	Part-time	354	73	±5.1
	Occasional	384	98	±4.9
Employer type	District school board – English	2345	938	±2.0
	District school board – French	429	48	±4.6
	Other	46	14	±14.3
TOTAL		**2,820***	**1,000***	**±1.8**

POLLARA

*Sub-group interviews do not add up to the total due to overlap.

III. Key findings

Key findings

In summary, the study indicates that members would be willing to contribute an average maximum of 12.3% in order to preserve their current level of benefits. This amount is 1.3 percentage points above the increase scheduled to take effect in 2009 that will bring contributions to an average of 11%. Six-in-ten members say they would be willing to contribute *more* than 11% of their before-tax income to preserve their current level of benefits, while 27% would be willing to contribute *up to* 11%. If members were contributing their maximum, the benefit change they would be most willing to support is making cost-of-living increases to future retirees' pensions flexible (supported by 51%). They would be least supportive of reducing monthly pension for future service by about 10% (supported by 32%).

A. Awareness of current level of benefits and contributions

- Overall, the majority of pension plan members have a high level of aided awareness of all pension plan provisions and issues tested in this study. Almost all are aware of the 85 factor and that their monthly pension amount is based on a formula. Another three-quarters are aware of the inflation protection provision. Of the other pension plan issues tested, the majority of members are aware of the lack of dental and health coverage, tax deductibility of contributions, and government matching of pension plan contributions.
  - → Awareness is widespread among all career groupings. Understandably, newer members are less aware of all provisions/issues than those approaching retirement.

Key findings, continued

- Almost two-fifths of members say that the $750,000 value of the average teacher's pension at retirement, in today's dollars, is about the same as they expected. Almost one-quarter say that this amount is more than they expected, and one-in-ten report that they thought the value was higher than $750,000. Three-in-ten are unsure.
  - → Almost two-fifths of members in all career groupings report that this amount is about what they expected.
- Members' awareness of the amount they currently contribute to their pension plan is not very widespread. Specifically, only one-quarter of members correctly name 9% to 11.9% as the amount of their before-tax salary they contribute to the pension plan. In addition, more than one-third of all members say they do not know how much they contribute.
  - → Interestingly, members who are already eligible for retirement are as likely as newer members to say they don't know how much they contribute to their pension plan.
- Awareness of scheduled contribution increases is widespread, with over three-quarters of members understanding that their contributions will increase over the next two years.
  - → Newer members are least likely to be aware of these increases, whereas members already eligible for unreduced pension are most likely to be aware.
- When scheduled contribution increases are outlined for members who expect an increase, almost two-thirds see the amounts as in line with their expectations, whereas, about a quarter feel they are higher than expected. Only 3% say that the increases are less than expected.

POLLARA

Key findings, continued

- When prompted, half of those who had *not* expected a contribution increase recall hearing or seeing information about the change.

B. Preferences in terms of increased contributions and decreased benefits

Increased contributions

- If a future valuation shows an increased shortfall, pension plan members would be willing to contribute a maximum of 12.3% in order to maintain current pension provisions. Six-in-ten members are willing to have contributions *exceed* 11%, while 27% are willing to contribute *up to* 11%.
  - → Average maximum pension plan contributions are very consistent across career groupings, ranging from 11.9% to 12.8%.
  - → Part-time workers (13.0%) are willing to contribute the most in order to maintain their current pension provisions, whereas French school board members are willing to contribute slightly less (10.7%) than average.

Key findings, continued

- Members whose maximum contribution is 8.1% or higher were asked if they would be willing to contribute more than their maximum if a commitment was made to reduce contributions to eight percent if the pension plan shows a surplus in future. More than half do not support such a move. However, over one-third of members would increase their maximum contribution under this circumstance.
- After three potential benefit changes are reviewed with members, the average maximum contribution increases by 0.3 (to total 12.6%) and the proportion of members willing to contribute more than 11% increases by seven percentage points (to total 67%). Average maximum pension plan contributions are again very consistent across career groupings (12.1% to 13.0%).

Decreased benefits

- Respondents were asked to imagine that their contributions are at the maximum amount they would be willing to contribute in order to keep all pension provisions at current levels. They were then read a list of changes that could be made to future pension provisions in order to keep contributions from rising beyond this level.

Key findings, continued

- The most popular option is making cost-of-living adjustments flexible, which is supported by more than one-half of pension plan members.
  - → Newer members are more likely than older members to be in favour of this choice. Occasional workers and French school board members are also more likely to favour this option.
- Two-fifths of all members are in favour of increasing the 85 factor to 90.
  - → Unlike the cost-of-living option, those already eligible for an unreduced pension are more likely to be in favour of this plan than newer members.
- One-third of plan members are in favour of reducing monthly pension for future service by about 10%.
  - → Newer members are more likely to be in favour of this option than older members, as are occasional workers, and French school board members.
- When asked to identify the one potential benefit change they prefer, the most popular response (provided by more than two-fifths) is making cost-of-living adjustment flexible.
  - → This is the preferred option for five of seven career groupings and rural residents.
- The second most preferred benefit change is increasing the 85 factor to 90, chosen by almost four-in-ten members.
  - → Only members within five years of unreduced pension and those already eligible for unreduced pension name this change as their top option.

Key findings, continued

- Reducing monthly pension for future service by 10% is preferred by just over one-in-ten members, ranking this option third.
  - → Preference for this option is consistently low among all career groupings, with no more than 13% naming this change as their preferred option.
- When members are asked for their least preferred option amongst all three, increasing the 85 factor to 90 comes out on top, with two-fifths saying is it the least desirable option.
  - → This option is the least favourite choice for five of the seven career groupings.
  - → Reducing monthly pension for future service by 10% ranks as the second least preferred option overall (chosen by 37%). This is the number one least preferred option among members within five years of unreduced pension and those already eligible to retire.
  - → Less than one-fifth of members rank flexible cost-of-living adjustments as their third least preferred option. Only those already eligible for unreduced pension rank this option as their second least preferred option.

All of the findings in this summary are analyzed in greater detail within the remaining sections of this report.

IV. Level of awareness and understanding among plan members about the current level of benefits and contributions

Awareness and understanding of pension plan benefits and contributions

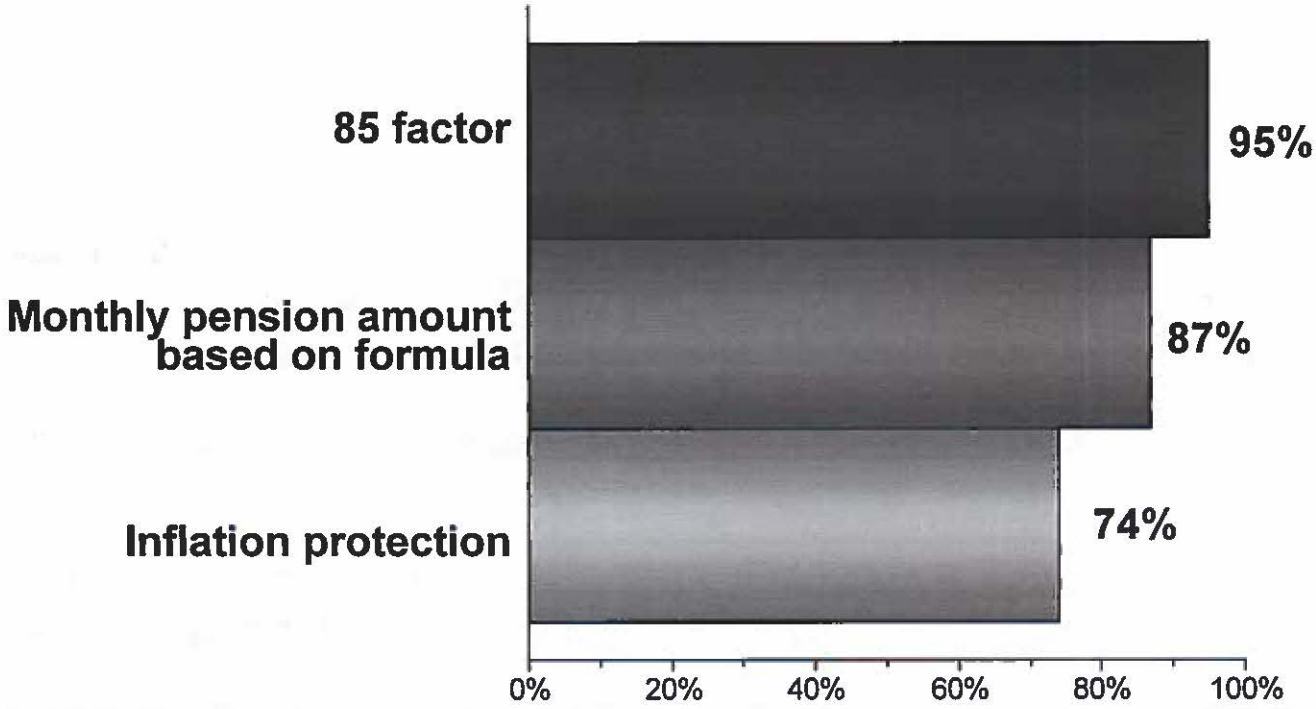
- Prior to delving into pension plan members' preferences in terms of contributions and benefits, a number of questions were asked of members at the onset of the questionnaire, the goals of which were:

  → To understand members' aided awareness of their pension provisions.

  → To ensure that survey respondents were aware of current provisions before they answered more detailed questions concerning their benefit and contribution preferences.

Majority of pension plan members aware of each current pension plan provision tested

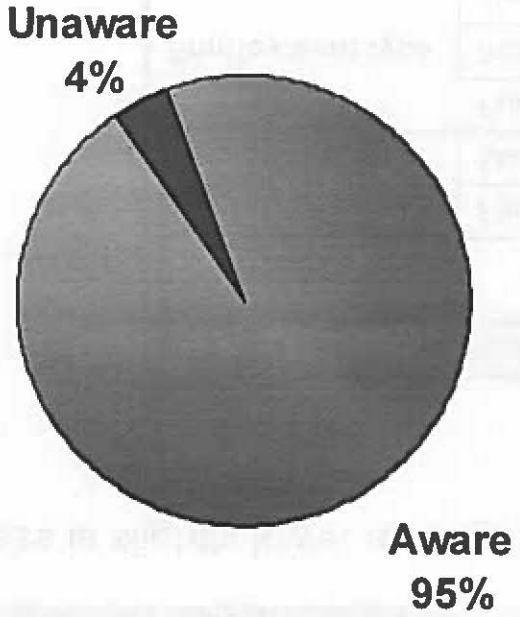
- Of the three pension plan provisions tested, members are most likely to be aware of the 85 factor, followed by the use of a formula to determine the amount of their pension, and inflation protection.



Qs 1-3. To start, I'd like to read you a list of some of the provisions of your pension plan. Please tell me whether or not you were aware of each provision prior to my call. How about: (RANDOMIZE ORDER OF PROVISIONS)

Almost all pension plan members aware of 85 factor

- Almost all pension plan members (95%) are aware that they can retire with unreduced monthly pension payments when their age plus number of teaching years equals 85, or when they reach the age of 65.
- Awareness is slightly lower among newer members (90%) and close to unanimous among older members, those within 10 years of unreduced pension eligibility, and those already eligible for unreduced pension.



Career groupings	Aware (%)
Newer members (0 – 4.9)	90%
Newer members (5 – 9.9)	95%
Mid-career members (10 – 14.9)	98%
Mid-career members (15 – 21.9)	99%
Older members (within 10 yrs unreduced pension)	98%
Older members (within 5 yrs unreduced pension)	99%
Older members (eligible for unreduced pension)	99%

Q1. Please tell me whether or not you were aware of each provision prior to my call. How about: members can retire with unreduced monthly pension payments when their age plus the length of their teaching career equals eighty-five, or when they reach the age of 65.

POLLARA

Large majorities of all member segments aware of 85 factor

- Awareness is slightly lower among occasionally employed pension plan members (85%).

Member segment		Aware (%)
OVERALL		95%
Gender	Female	96%
	Male	95%
Employment type	Full-time	97%
	Part-time	95%
	Occasional	85%
Employer type	District school board – English	96%
	District school board – French	92%
Place of work	Elementary	95%
	Secondary	96%
Urban/Rural	Urban	95%
	Rural	97%

Less likely

POLLARA

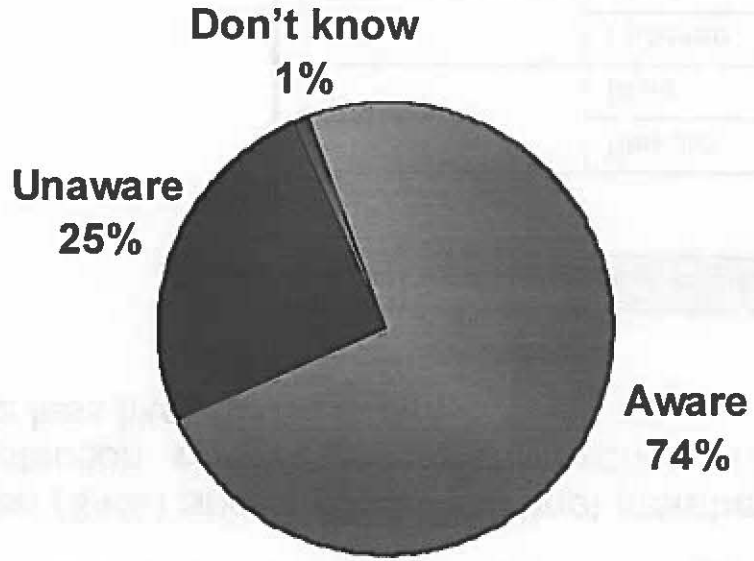
Almost three-quarters of pension plan members aware that monthly payments are protected against inflation

- Almost three-quarters of pension plan members (74%) are aware that monthly pension payments are protected against inflation.
- Again, awareness is higher among members approaching retirement. Just over half (52%) of newer members (0-4.9 years of credit) are aware of inflation protection, compared to 85% of mid-career members (15-21.9 years). Unreduced pension eligible members are almost unanimously aware that a guaranteed cost-of-living adjustment is made (97%).



Career groupings	Aware (%)
Newer members (0 – 4.9)	52%
Newer members (5 – 9.9)	68%
Mid-career members (10 – 14.9)	80%
Mid-career members (15 – 21.9)	85%
Older members (within 10yrs unreduced pension)	92%
Older members (within 5 yrs unreduced pension)	93%
Older members (eligible for unreduced pension)	97%

POLLARA

Q3. Please tell me whether or not you were aware of each provision prior to my call. How about: The monthly pension payments made to retirees are protected against inflation. In other words, a guaranteed cost-of-living adjustment is made.

Inflation protection awareness widespread among most member segments

- Men (84%) and secondary school members (81%) are more likely to be aware of inflation protection, whereas occasional workers (55%) and French school board members (61%) are less likely to be aware.

Member segment		Aware (%)
OVERALL		74%
Gender	Female	70%
	Male	84%
Employment type	Full-time	76%
	Part-time	71%
	Occasional	55%
Employer type	District school board – English	75%
	District school board – French	61%
Place of work	Elementary	70%
	Secondary	81%
Urban/Rural	Urban	73%
	Rural	78%

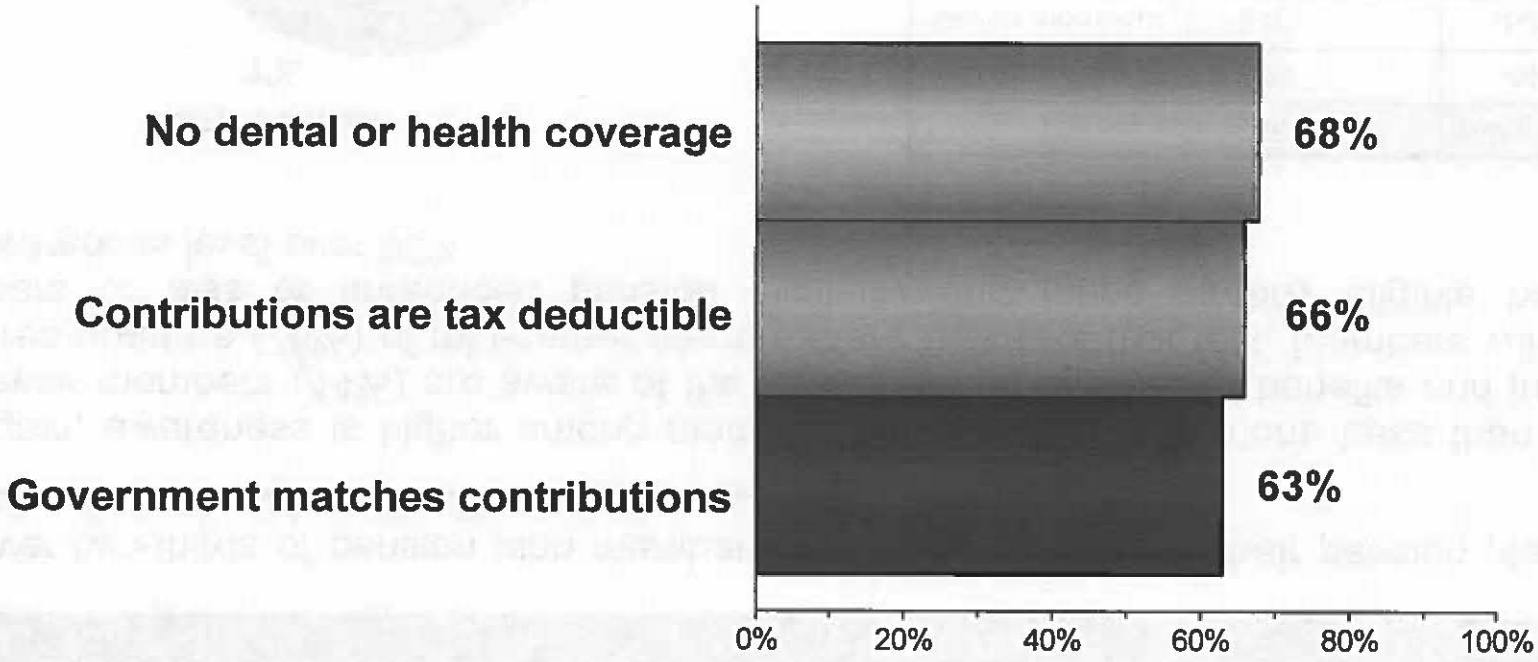
More likely

Less likely

POLLARA

Majority of pension plan members are aware of other aspects of their pension plan

- In addition to testing awareness of plan provisions, members' aided awareness of three other aspects of their plan were explored.
- More than six-in-ten members are aware of the lack of dental and health coverage in the plan, followed by the tax deductibility of their contributions, and contribution matching by the Ontario government.

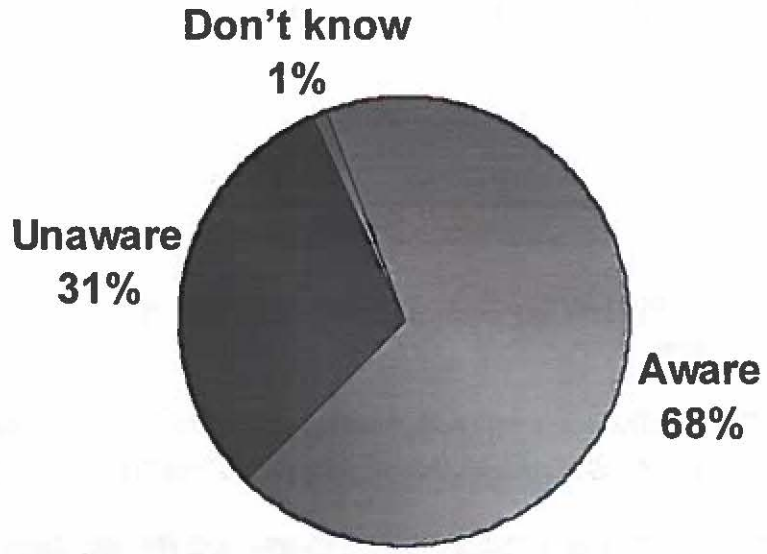


POLLARA

Qs 4-6. Now I'd like to ask you about some other pension issues. Prior to my call, were you aware or unaware…

More than two-thirds of members aware that pension plan does not provide dental and health benefit coverage

- Over two-thirds of pension plan members (68%) are aware that their pension plan does not include dental and health benefit coverage.
- Again, awareness is higher among members approaching retirement. Less than half of newer members (44%) are aware of the lack of dental and health benefits and just over three-quarters (76%) of mid-career members are aware of that fact. Members within five years or less of unreduced pension eligibility and those already eligible have an awareness level over 90%.



Career groupings	Aware (%)
Newer members (0 – 4.9)	44%
Newer members (5 – 9.9)	62%
Mid-career members (10 – 14.9)	75%
Mid-career members (15 – 21.9)	76%
Older members (within 10 yrs unreduced pension)	82%
Older members (within 5 yrs unreduced pension)	92%
Older members (eligible for unreduced pension)	98%

Q4. Prior to my call, were you aware or unaware that the pension plan <u>does not</u> provide dental and other health benefit coverage to retirees?

POLLARA

Majority of all member segments aware of lack of dental and health benefits

- Occasional workers (52%), French school board members (56%), and part-time workers (60%) are less likely to be aware that their pension plan lacks dental and health coverage.

Member segment		Aware (%)
OVERALL		68%
Gender	Female	68%
	Male	69%
Employment type	Full-time	71%
	Part-time	60%

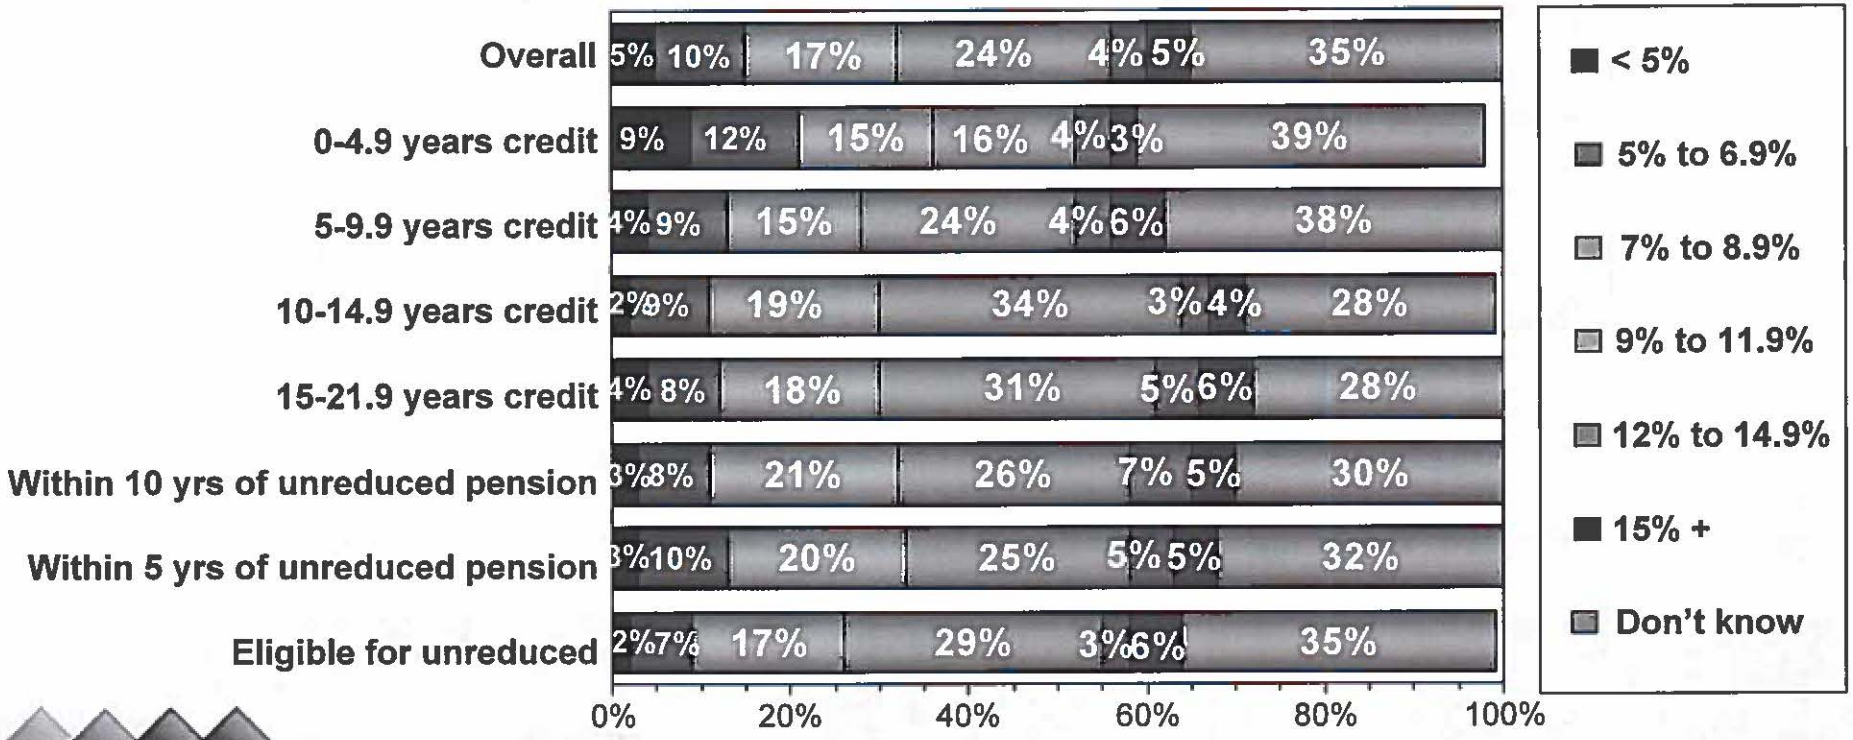
Almost one-quarter of members believe they contribute 9% to less than 12% of their before-tax salary to their pension plan

- Almost one-quarter (24%) of members correctly believe that they contribute 9% to less than 12% of their before-tax salary to their pension plan. Over one-third (35%) do not know how much they are contributing.
- Interestingly, members who are already eligible for an unreduced pension (35%) are almost as likely to say they don't know how much they contribute to their pension plan as newer members (39%). However, newer members are less likely to have chosen the correct percentage range (16% vs. 29%) than their older counterparts.



Q8. To the best of your knowledge, approximately what percentage of your before-tax salary do you currently contribute to your pension plan?

Men more likely then women to know their contribution amounts

- Men (32%) are more likely than women (21%) to be aware of current contribution levels. An additional 40% of women say they do not know how much they contribute, while occasional workers (43%) are most likely to provide this response.

POLLARA

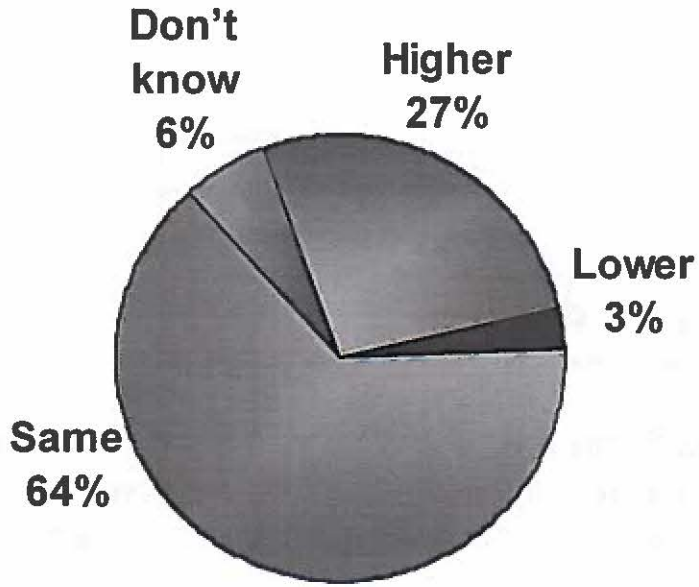
Scheduled contribution increases are in line with expectations of the majority of members who are expecting an increase

- Among the 77% of members who expect an increase, almost two-thirds (64%) say the amount of future increases is what they expected. A further 27% feel that the future increases are higher than expected and only 3% expected smaller increases in the next two years.
- In most cases about two-thirds of members in each career grouping feel that the future increases are as they expected.



Career groupings	Higher (%)	Lower (%)	Same (%)	DK (%)
Newer members (0 – 4.9)	26%	3%	64%	8%
Newer members (5 – 9.9)	29%	4%	59%	8%
Mid-career members (10 – 14.9)	29%	1%	66%	4%
Mid-career members (15 – 21.9)	24%	3%	70%	4%
Older members (within 10 yrs unreduced pension)	23%	4%	67%	5%
Older members (within 5 yrs unreduced pension)	27%	3%	62%	7%
Older members (eligible for unreduced pension)	26%	3%	67%	4%

Q10. Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate… (IF EXPECTING INCREASE) Are these increases higher, lower, or about the same amount that you had expected?

POLLARA

Majority of all member segments say amount of scheduled increases is same as expected

- Rural residents (70%) are most likely to report that the proposed increases are as expected.

Member segment		Higher (%)	Lower (%)	Same (%)
OVERALL		27%	3%	64%

POLLARA

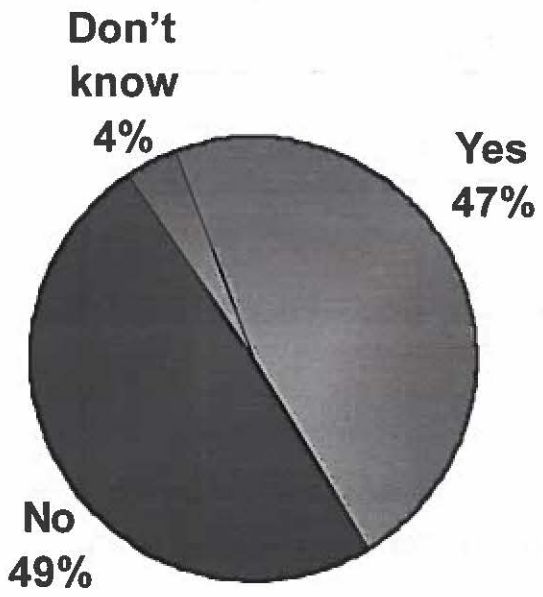
Of those who do not expect contributions to increase, almost half recall seeing or hearing about increases when prompted

- Among the 23% of members who believe that contributions are going down (1%), staying the same (13%), or who are unsure (9%), almost one-half (47%) remember hearing or seeing about contribution increases, when prompted.
- Less than two-in-five newer members (38%) recall seeing or hearing such information, whereas, two-thirds (67%) of those approaching unreduced pension eligibility or those already eligible (67%) recall hearing or seeing about contribution increases.



Career groupings	Yes (%)
Newer members (0 – 4.9)	38%
Newer members (5 – 9.9)	38%
Mid-career members (10 – 14.9)	53%
Mid-career members (15 – 21.9)	57%
Older members (within 10 yrs unreduced pension)	58%
Older members (within 5 yrs unreduced pension)	67%
Older members (eligible for unreduced pension)	67%

Q11. Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate… (IF EXPECTING DECREASE/STAY THE SAME/DON'T KNOW/REFUSED) Do you recall seeing or hearing anything about these increases?

POLLARA

French school board members and men are more likely to recall seeing or hearing about increases

- Of those who do not expect contributions to increase, French school board members (58%), men (52%), and rural members (52%) are all more likely to recall hearing or seeing information about contribution increases, when prompted. Occasional workers (35%) are less likely.

V. Pension plan members' preferences in terms of increased contributions and decreased benefits, if a future valuation shows an increased shortfall

Members willing to contribute average maximum of 12.3% to maintain current pension provisions

- Prior to reviewing potential benefit changes, members were asked to identify the maximum contribution they would be willing to make in order to maintain current pension provisions.
  - → Members are willing to contribute an average (mean) maximum of 12.3% in order to maintain current pension provisions. Six-in-ten (60%) members are willing to have contributions exceed 11%, while more than one-quarter (27%) are willing to contribute up to 11%. The median for this result is 12%.
  - → Interestingly, maximum contribution rates are similar across career groupings (mean of 11.9%-12.8%), as detailed on the next page.
  - → Members were asked the same question after reviewing potential benefit changes and their mean response was 0.3 points higher (12.6%). This result is discussed in greater detail on page 58.

Contribution	Members (%)
Less than 10.0%	5%
10.0%	15%
10.1%-11.0%	7%
11.1%-12.0%	20%
12.1%-13.0%	8%
13.1%-14.0%	2%
14.1%-15.0%	27%
Greater than 15.0%	3%
Don't know	12%

POLLARA

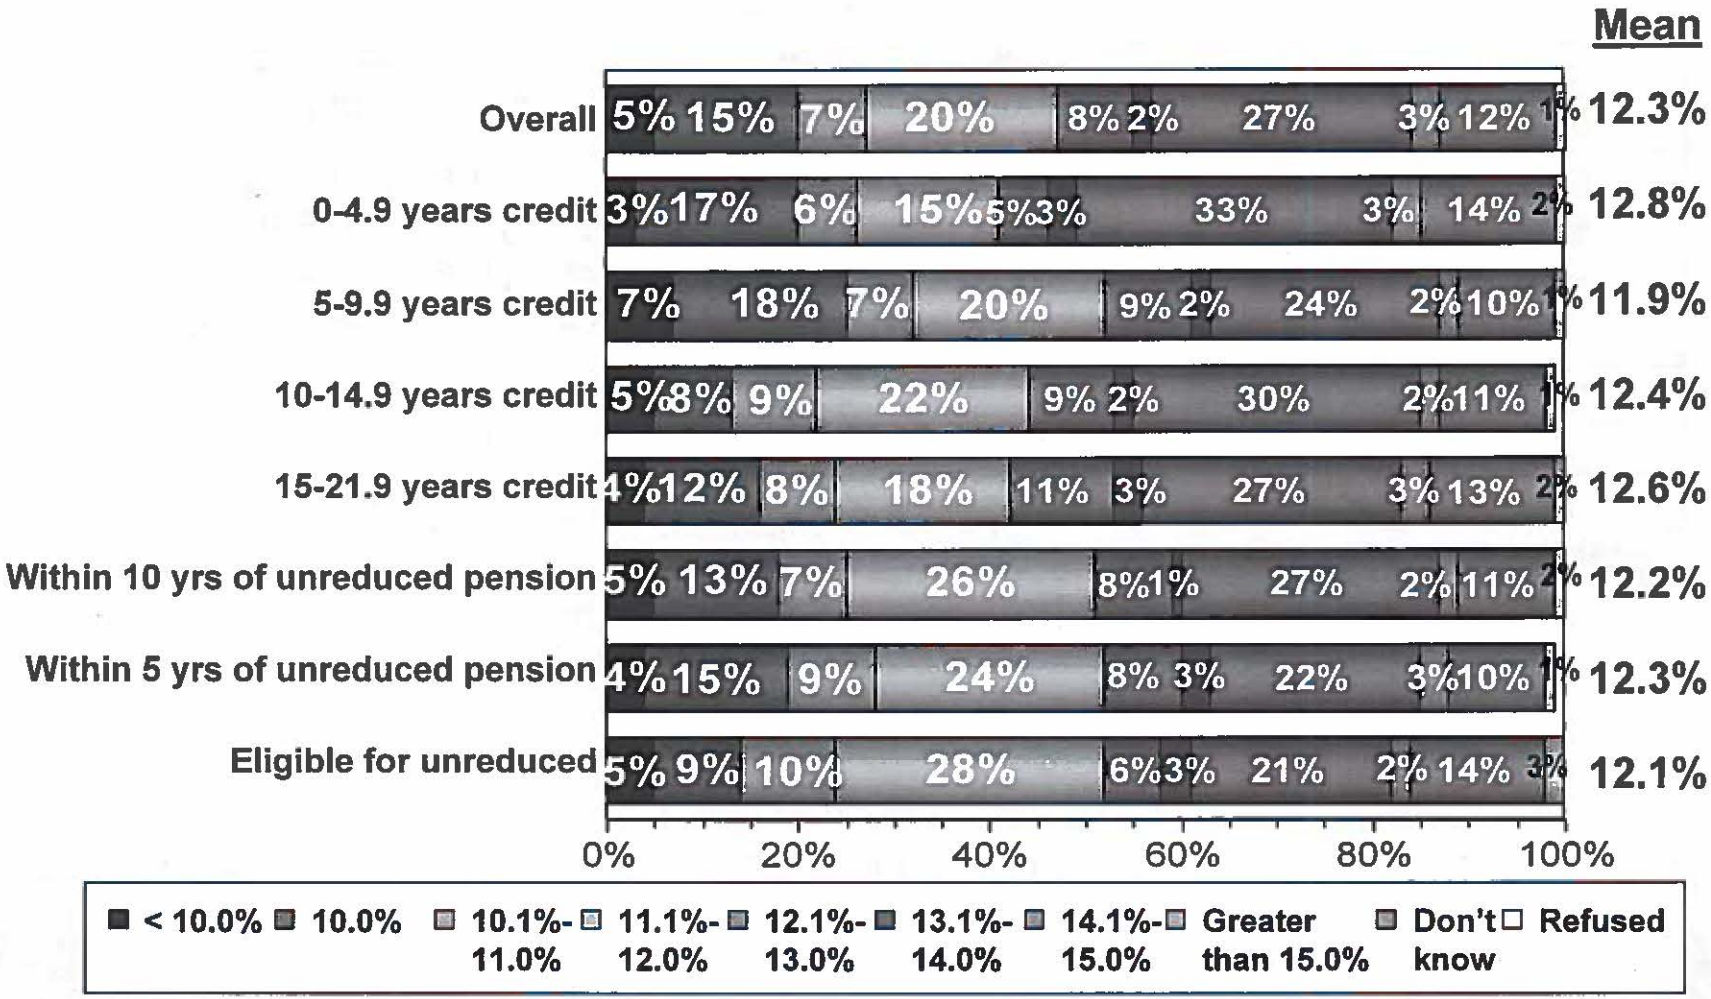
Average maximum contribution, in order to maintain current pension provisions, is remarkably similar across career groupings



Q12. First, thinking into the future, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%.

Maximum contributions fairly consistent among all member segments

- Part-time workers (13%) have a slightly higher average maximum contribution rate, whereas French school board members are willing to contribute slightly less than average (10.7%).

Member segment		Mean
OVERALL		12.3%
Gender	Female	12.4%
	Male	12.2%
Employment type	Full-time	12.3%
	Part-time	13.0%
	Occasional	12.6%
Employer type	District school board – English	12.4%
	District school board – French	10.7%
Place of work	Elementary	12.4%
	Secondary	12.2%
Urban/Rural	Urban	12.3%
	Rural	12.6%

POLLARA

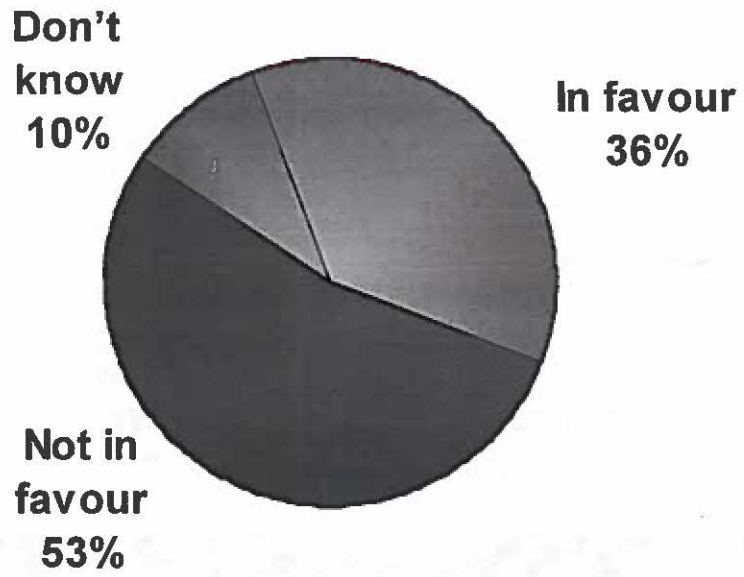
More than one-third would increase their maximum contribution if reduced to 8% with future surplus; 53% opposed

- Members whose maximum contribution was 8.1% or higher (79% of members) were asked if they would be willing to contribute more if a commitment was made to reduce contributions to eight percent if the pension plan shows a surplus in future. Over one-third of members (36%) would increase their maximum contribution under this circumstance, including 45% of those already eligible for unreduced pension. More than half (53%) do not support such a move.
- There is a greater willingness to exceed one's maximum contribution among those approaching retirement.



Career groupings	In favour (%)	Not In favour (%)
Newer members (0 – 4.9)	32%	53%
Newer members (5 – 9.9)	38%	54%
Mid-career members (10 – 14.9)	36%	56%
Mid-career members (15 – 21.9)	36%	51%
Older members (within 10 yrs unreduced pension)	38%	55%
Older members (within 5 yrs unreduced pension)	39%	52%
Older members (eligible for unreduced pension)	45%	46%

Q13. (ASK ONLY TO THOSE WHO RESPONDED 8.1% OR MORE TO Q12.) If a commitment was made to reduce members' contributions to eight percent if the pension plan shows a surplus in the future, would you be in favour or not in favour of increasing pension plan contributions to more than [RESPONSE FROM Q12] of your salary in order to keep all pension provisions at current levels?

POLLARA

Support and opposition to increasing maximum contribution for future reduction is fairly consistent across member segments

- Rural members (30%) are slightly less likely to be in favour of increasing their maximum contribution with a reduction to eight percent in the event of a surplus.

Member segment		In favour (%)	Not in favour (%)
OVERALL		36%	53%

POLLARA

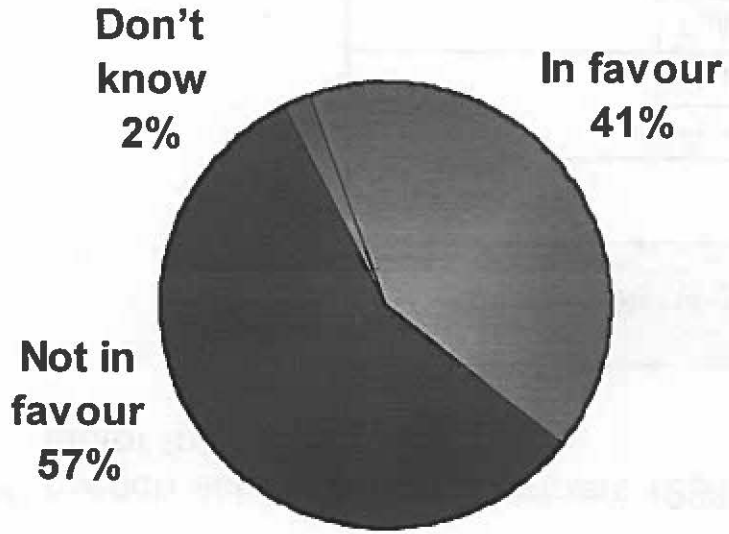
Two-fifths of members support increasing 85 factor to 90 to keep contributions from rising beyond their maximum; more than half disagree

- Over two-fifths (41%) of pension plan members are in favour of increasing the 85 factor to 90, meaning that in the future members would work an extra two and a half years to quality for unreduced pension in order to retire before age 65.
- Members who are already eligible for unreduced pension are significantly more likely to be in favour of switching to a 90 factor (74%). Newer members are second most likely to be in favour (44%), followed by older members within 5 years of unreduced pension (42%). No more than 38% of members are in favour of switching to a 90 factor among the other groupings.



Career groupings	In favour (%)	Not In favour (%)
Newer members (0 – 4.9)	44%	52%
Newer members (5 – 9.9)	38%	59%
Mid-career members (10 – 14.9)	36%	64%
Mid-career members (15 – 21.9)	34%	63%
Older members (within 10 yrs unreduced pension)	36%	62%
Older members (within 5 yrs unreduced pension)	42%	56%
Older members (eligible for unreduced pension)	74%	22%

Q14. Please imagine that your contributions are at the maximum amount you would be willing to contribute in order to keep all pension provisions at current levels. I'd like to read you a list of changes that could be made to future pension provisions in order to keep contributions from rising above this level. Please tell me whether you would be in favour or not it favour of each of the following changes. How about increasing the eighty-five factor to ninety, meaning that in the future members would work an extra two and a half years to qualify for an unreduced monthly pension in order to retire before age 65? If this situation were to arise, there would be some type of grand fathering. If you have already reached your eighty-five factor, you would not lose it.

POLLARA

More than half of every member segment not in favour of changing 85 factor to 90

- French school board members (29%) are least likely to be in favour of increasing the 85 factor to 90.

Member segment		In favour (%)	Not in favour (%)

POLLARA

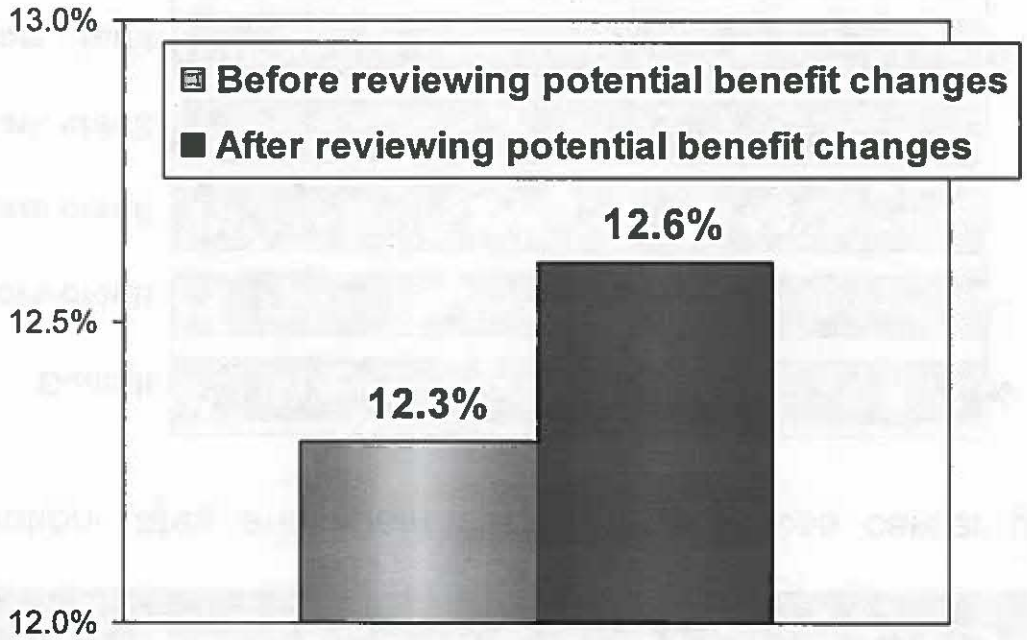
After reviewing potential benefit changes, members increase their maximum contribution from 12.3% to 12.6%

- After reviewing potential changes to their pension provisions, members were asked to identify the maximum contribution they would be willing to make in order to maintain their current provisions.
- Members' maximum contribution increased to an average maximum of 12.6% (up 0.3 points). A quarter (25%, down 2 percentage points) of members became willing to contribute up to 11%. More than two-thirds (67%, up 7 points) of members became willing to have contributions exceed 11%.



Q19. Now that you are more familiar with the types of changes that could be made to the pension plan, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%.

POLLARA

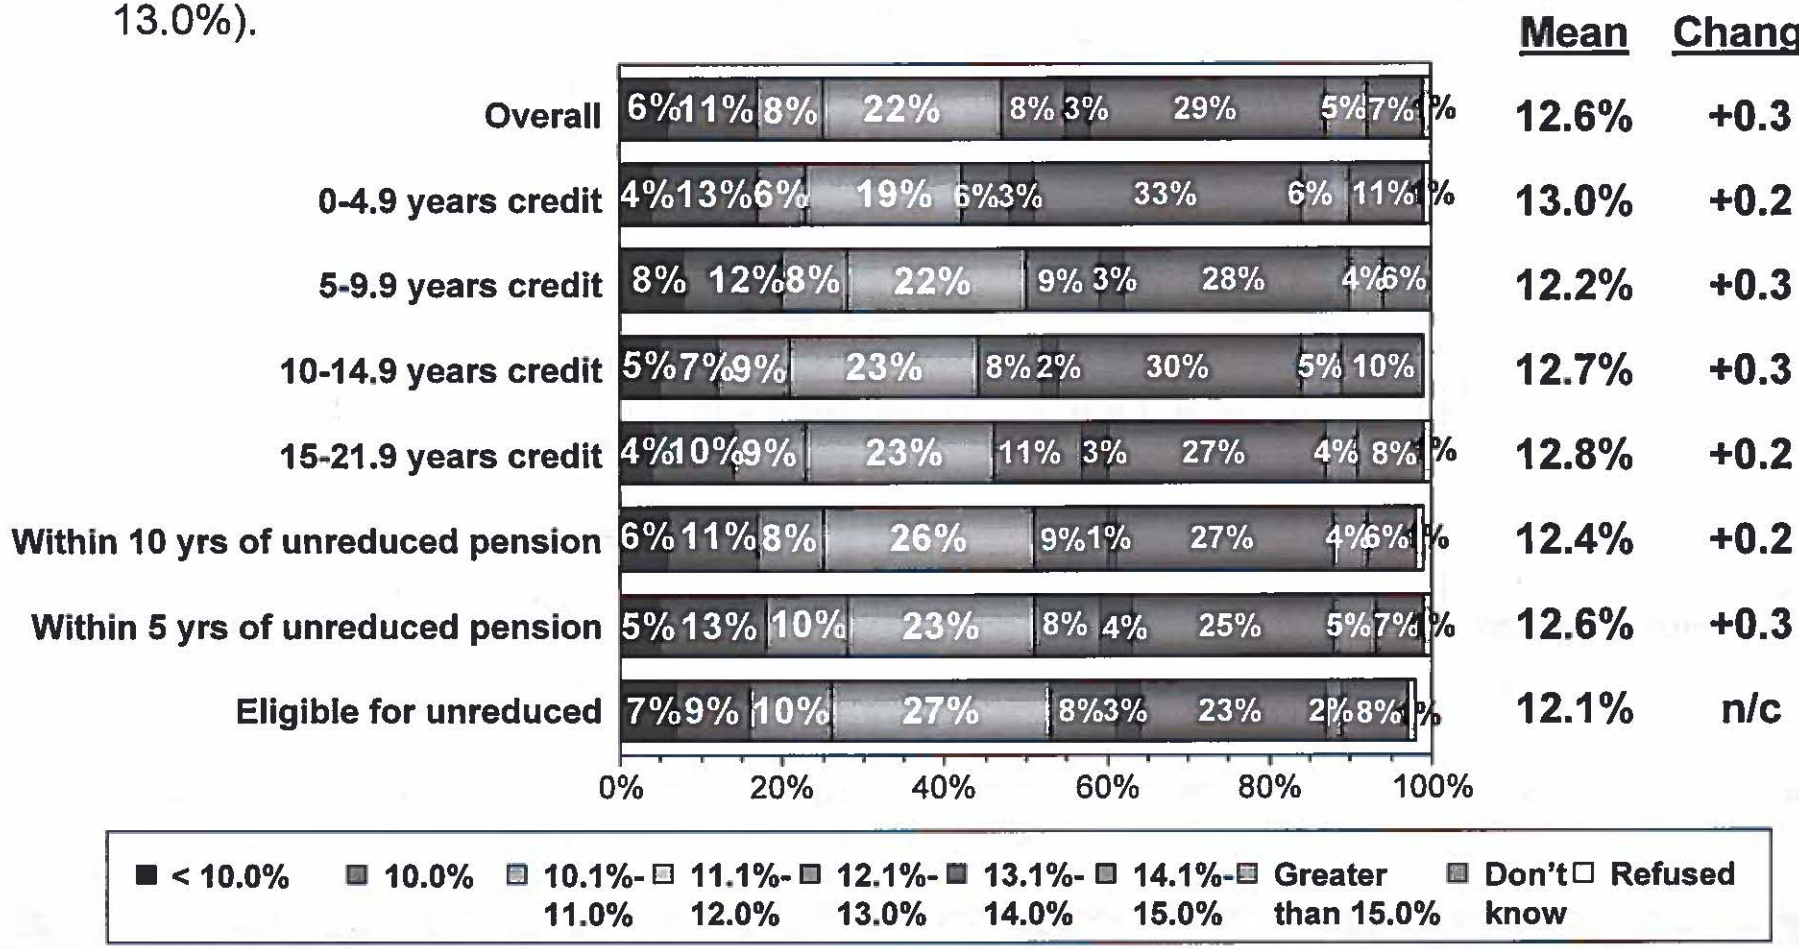
Maximum pension contributions fairly consistent among different career groupings

- Maximum contribution rates are again very similar across career groupings (12.1%-13.0%).



Q19. Now that you are more familiar with the types of changes that could be made to the pension plan, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%.

POLLARA

Maximum contributions fairly consistent among different member segments

- Part-time workers (13%) once again are willing to contribute slightly more, whereas French school board members are willing to contribute the least (10.7%).

Member segment		Mean	Change
OVERALL		12.6%	+0.3
Gender	Female	12.6%	+0.2
	Male	12.3%	+0.1
Employment type	Full-time	12.5%	+0.2
	Part-time	13.0%	n/c
	Occasional	12.7%	+0.1

The property and/or services ordered/purchased hereby are purchased for the use of the Crown in right of Ontario, and are subject to the Harmonized Sales Tax (HST) at the stated rate for each line. Prices quoted above do not include tax.
The quoted HST rate is a guideline only as the appropriate tax is to be determined, by the supplier, at the time of billing.

PURCHASE ORDER (PO) TERMS AND CONDITIONS

Interpretation

1. A reference to the Ontario Government ("Ontario") will hereinafter mean a reference to Her Majesty the Queen in right of Ontario.
2. This PO is to be construed according to the laws of the Province of Ontario.

Entire Agreement

3. The goods and services described in the Purchase Order (the "PO") are provided by Supplier subject to the following terms and conditions. Supplier agrees to be bound by and to comply with all such conditions. Unless expressly accepted by Ontario, in writing, or as otherwise set out herein, no other terms shall be binding on Ontario. All exhibits, attachments, technical specifications, drawings, notes, instructions, or information referenced in the PO are incorporated herein by reference.
4. Where terms and conditions are not otherwise expressly provided for in a previously signed agreement related to the goods or services referenced by this PO, this PO, upon acceptance by the Supplier or his duly authorized Agent, serve as a written memorandum of the complete contract between the Supplier and Ontario and, upon acceptance by the Supplier, the Supplier shall be deemed to covenant to comply with the conditions herein. Where there is a previously signed agreement and a conflict arises between the provisions of the PO and the agreement, the terms and conditions of the previously signed agreement shall govern.

Time

5. Time shall be of the essence.

Force Majeure

6. Supplier shall not be liable for default or delay due to causes beyond Supplier's reasonable control and without fault or negligence on the part of Supplier. The Supplier gives Ontario prompt notice in writing when any such cause appears likely to delay delivering and /or performing of services and takes appropriate action to avoid or minimize such delay. If any such default or delay threatens to impair Supplier's ability to meet delivery requirements for its material, supplies and services, Ontario shall have the right, without any liability to Supplier, to cancel the portion or portions of this PO so affected. Ontario shall not be liable for default or delay in the performance of its obligations due to cause beyond its reasonable control.

Waiver

7. The failure of Ontario to insist in any instance upon the strict performance of any provision of this PO, or to exercise any right or privilege granted to Ontario hereunder shall not constitute or be construed as a waiver of any such provision or right and the same shall continue in force.

Sale of Goods Act

8. Subject to the provisions herein, The Sale of Goods Act of the Province of Ontario applies to this contract insofar as any part of this contract relates to goods.

Supplier's Warranties

9. In addition to any other express or implied warranties, the Supplier warrants that the Goods or Services furnished pursuant to this PO will be: (a) free from defects in title, workmanship and material; (b) free from defects in design except to the extent that such items comply with detailed designs provided by Ontario; (c) of merchantable quality and suitable for the purposes intended, specifications and free from liens or encumbrances on title. All services are performed in accordance with current, sound and generally accepted industry practices by qualified personnel trained and experienced in the appropriate fields.
10. In addition to the warranties and conditions implied by The Sale of Goods Act of the Province of Ontario, the Supplier warrants that there are no patents, trademarks or other rights restricting the use, repair or replacement of the goods furnished or any part thereof.
11. All products supplied against this PO must comply with WHIMIS regulations.

Indemnity and Insurance

12. The Supplier agrees to defend, indemnify and hold harmless Ontario from and against all claims, demands, losses, costs, damages, actions, suits or other proceedings by whomever made, filed, or prosecuted in any manner arising from the provision of the goods or services under this PO.
13. Supplier and any Subcontractor used by Supplier in connection with this PO shall carry Comprehensive General Liability and adequate Comprehensive Automobile Liability Insurance. At Ontario's request, Supplier shall provide to Ontario certificates from Supplier's insurers showing that such coverage is in effect and agreeing to give Ontario thirty (30) days' prior notice of cancellation of the coverage. Ontario may require minimum liability coverage depending on circumstances.

Freedom of Information and Protection of Privacy Act

14. Suppliers are advised that this PO is governed by the Freedom of Information and Protection of Privacy Act and that all information submitted pursuant to this PO is subject to that Act.

Confidentiality

15. The supplier shall treat as confidential and shall safeguard all knowledge or information acquired by it under this contract.

Assignment

16. The Supplier shall not assign this contract in whole or in part or any monies due under it without obtaining the prior written consent of Ontario.

Changes and Amendments

17. Ontario shall have the right at any time, by written notice, in the form of a Change Order, to the Supplier, to make any changes it deems necessary, including, but not limited to, changes in specifications, design, delivery, testing methods, packing or destination. If any such required changes cause an increase or decrease in the cost of or the time required for performance, an equitable adjustment shall be made in the contract price or delivery schedule, or both. Any claim by the Supplier for adjustment under this clause shall be deemed waived unless asserted in writing within ten (10) days from receipt by the Supplier of notice of change. Price increases, extensions of time for delivery and change in quantity shall not be binding on Ontario unless evidenced by a form of Change Order issued and signed by Ontario.

The Goods

18. Any goods that are not in accordance with this PO will be returned at the Supplier's expense.
19. Substitutions are not permitted without the written approval of Ontario.
20. Subject to the provisions of the section, property and risk in the goods passes upon examination and acceptance by Ontario. In the event that any apparent defects are discovered in any goods under this PO within six (6) months after acceptance, such goods will be rejected and the Supplier shall promptly replace the defective goods at his expense.

Delivery

21. All goods ordered in quantities specified shall be delivered to the specified destination in the Province of Ontario, in good order and free from any extra expense to Ontario.
22. Unless otherwise specified, all deliveries shall be made on a normal working day.
23. The Supplier shall ensure strict adherence to any specified delivery schedule.
24. If the Supplier fails to deliver the goods on the date specified, Ontario may terminate this PO upon seven (7) days notice to the Supplier.
25. Any request for extension or lead times due to circumstances beyond the control of the Supplier must be made to Ontario which will then inform the Supplier if the requested extension is acceptable.
26. In the event that unauthorized deliveries are made in advance of date(s) specified, Ontario has the option to return any such items or goods delivered at the cost of the supplier.
27. Where goods are shipped F.O.B., Supplier's dock via a common carrier, the Supplier must make a reasonable contract with the carrier and must give immediate notice of shipment to Ontario.
28. If the Supplier fails or refuses to make deliveries on the dates herein specified (as such dates may be extended by any cause of excusable delay), Ontario may at its option terminate this contract as to any goods not then delivered hereunder and recover any amounts therefore paid on account thereof and may purchase other goods of a similar description, charging the Supplier with any excess cost incurred by Ontario by reason of such purchase.
29. The Supplier must communicate immediately upon receipt of the PO from the Purchasing Officer for further instruction if he is unable to supply/deliver the order as specified.
30. Ontario will accept neither responsibility nor charges for quantities or goods delivered/supplied by the Supplier in excess of the quantities shown on the PO without prior written authorization of Ontario by amendment to the PO. In the event that additional quantities are agreed to by Ontario they will be subject to renegotiations of the contract price which negotiations shall take into consideration possible volume discounts resulting from the total quantity of goods received.
31. A detailed packing slip must accompany each shipment. The PO number and requisition number must be shown on all packages, bills of lading, invoices and relevant documents.
32. It is the Supplier's responsibility, at its cost, to provide the necessary facilities and manpower to accomplish unloading from whatever means of transport is employed.

Payment and Invoicing

33. Payment shall be made within thirty (30) days of the invoice date upon receipt and approval of a fully valid/complete invoice or through terms established otherwise in a related contract.
34. All prices quoted shall be in CAD or USD as indicated on the PO.
35. Invoices must be typed or printed in ink.
36. All invoices must show:
    - (i) full particulars, description of goods, quantity, rate and charge for each item;
    - (ii) the name and postal address of the person or firm (Supplier) to whom the account is payable;
    - (iii) any applicable taxes and import duty separate from the basic cost of goods and services, including Federal Sales Tax credits, Goods and Services Tax, Provincial Sales Tax and Harmonized Sales Tax charges;
    - (iv) when transportation charges have been prepaid on orders shipped F.O.B. Supplier's dock, the original freight, cartage or express receipt must accompany the invoice and the freight charge must be shown as a separate item on the invoice. Invoice for labour and materials must give details of quantities and prices of materials and the number of hours worked with the rates per hour;
    - (v) where equipment has been rented, the commencement date of rental, the duration of rental and the rental rates; and
    - (vi) all applicable transportation charges, shown separately.
37. For all invoices, Ontario reserves the right to seek further details as necessary.
38. Ontario shall have right at any time to set-off any amounts due to the Supplier, (or any of its associated or affiliated companies) against any amounts owed by Ontario with respect to this PO or any subsequent PO or any other contractual agreement between the parties hereto.

Termination

39. Ontario reserves the right to terminate this contract:
    - (i) immediately upon giving written notice in the event of the Supplier being adjudged a bankrupt or making a general assignment for the benefit of creditors or a receiver being appointed on account of the Supplier's insolvency; and
    - (ii) without cause or liability upon giving the Supplier thirty (30) days prior written notice.
40. Ontario will not, by virtue of any of the above instances of termination, waive any rights or remedies it may have in this PO or otherwise at law. Ontario shall only be responsible for the payment for goods or services received in connection with this PO up to and including the effective date of any such termination. Termination shall not relieve the Supplier from the supplier's warranties and other responsibilities relating to the goods or services provided or money paid, or both, up to and including the date of termination.

Hi Lucy.

Further to our discussion, below is an outline of the work we discussed. The work relates to the jointly sponsored pension plans (OTPP and OPSEUPP) as reported in the Province's consolidated financial statements.

I'll look forward to hearing back from you.

Best regards,

Nadine

416 562 9509

The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following

· Taking into account public sector accounting principles, advice and guidance on complex accounting and reporting matters related to accounting for pensions on the Province's consolidated financial statements.

· The Vendor will participate in meetings as necessary to support the engagement objectives:

· Working with management of OPCD's Accounting Policy and Financial Reporting Branch (APFR), the provider of complex accounting services related to the following possible areas:

· Develop discussion and analysis material

· Develop draft input/briefing materials/option papers

· Provide accounting advice and guidance related to the accounting for pensions on the Province's financial statements

· Participate in discussions with internal and external stakeholders, as required

As part of this engagement, the consultant(s) would be expected to provide professional accounting expertise in assessing actuarial assessments for specified plans in relation to applying the ceiling test to the accrued pension benefit assets in accordance with PS3250 (3250.050 to PS3250.059).

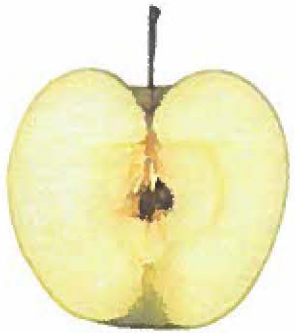
FMP_Temporary Plan Improvement Zone Discussion Deck.pdf



TEMPORARY PLAN IMPROVEMENTS

Draft for Discussion

March 19, 2014 (Sponsor's Task Force Meeting)

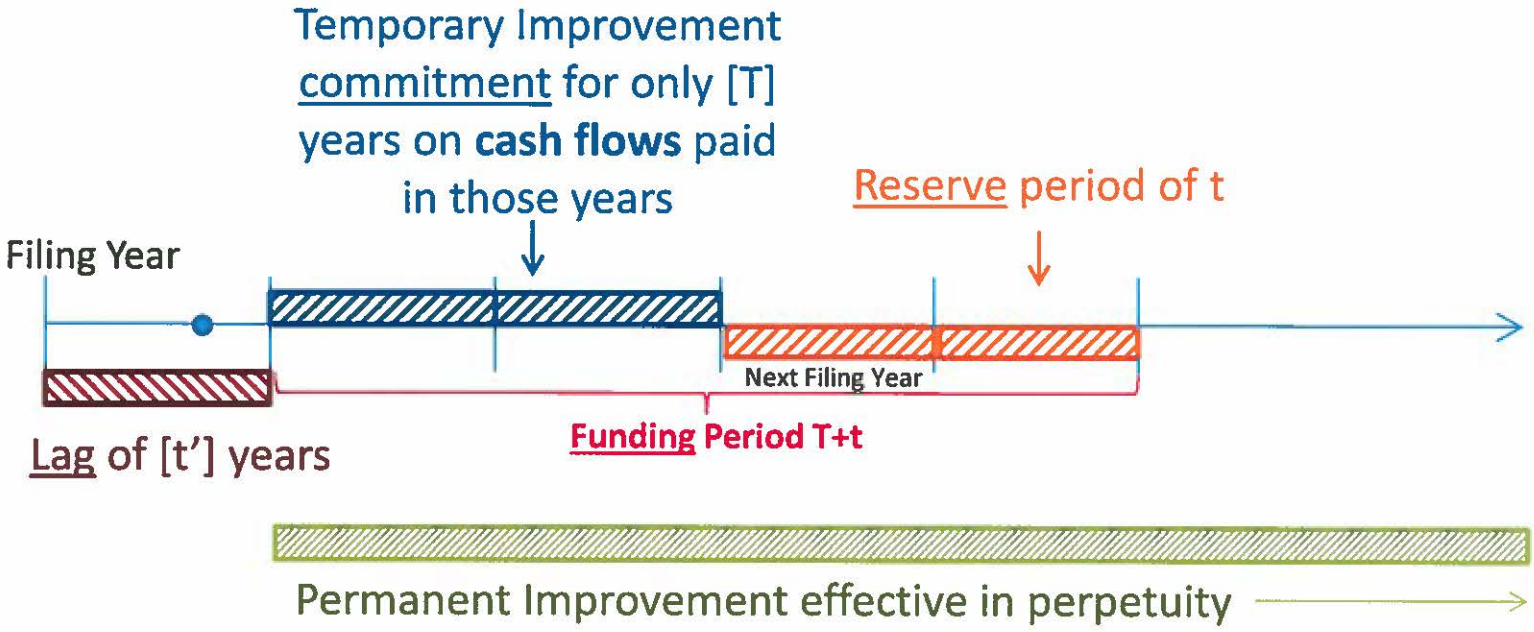
Funding Management Policy - Framework Description

TEMPORARY PLAN IMPROVEMENTS INCLUDE:

- Decrease to cash contribution paid
- Increase to benefits paid to pensioners in pay
- a combination of both

Temporary plan improvements are determined in a filed funding valuation. They are effective with a **lag** of [t'] years with a **commitment** of [T] years, **reserve** over t years and **funded** over a period of T+t. They impact only affected cash flows paid in years [t'] through [T].

Filing in temporary zone occurs if new temporary benefits schedule better than the current temporary benefits schedule.



Funding Management Policy - Framework Description

Valuation Basis

Assets = 110% of Liabilities valued at interest rates + 0.5%

Zone:	**Permanent Plan Improvements**
Mechanism:	Improve benefits as negotiated
Funding Risk:	Plan is essentially fully funded at Government of Canada long bond rates. Funding security is desired to ensure the Plan can support these benefits continually in the future. The impact of new teachers is important as they will create losses.

That is, Assets ~ 133% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1%

Zone:	**Temporary Plan Improvements**
Mechanism:	Improve benefits or lower contributions as negotiated[1]
Funding Risk:	Plan is well funded and can afford changes that temporarily provide a benefit enhancement (as long as it does not create a long term cost) and/or lower the contributions being paid into the plan.

[1] A funding reserve will be created to help support the temporary benefits

That is, Assets ~ 116% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1.55%

Zone:	**Fully Funded**
Mechanism:	Maintain Base Benefits and Contributions
Funding Risk:	Plan is adequately funded to provide base benefits supported by the base contributions. Given the volatility of market factors and the numerous assumptions in the funding valuation, "fully funded" is considered a range.

Zone:	**Additional Support Required From Current FMP Levers**
Mechanism:	Raise Contribution Rates and/or Invoke Conditional Inflation Protection as negotiated
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions. An increase to the contribution rate (within FMP maximum) and/or a decrease to the level of indexing being provided are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

Zone:	**Additional Support Required From New/Additional Changes**
Mechanism:	Negotiate other plan changes
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions and CIP is fully invoked and contribution rates are increased to maximum outlined in FMP. Plan changes are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

Next step is to review simulation results

TEMPORARY IMPROVEMENTS – Baseline FMP for Simulations

	Distribution Surplus	Surplus/Deficit split
Step 1:	Benefit Improvement (unlimited)	100%

	Distribution Deficit	Surplus/Deficit split
Step 1:	Raise Regular contribution up to 11%	100%

	Temporary Surplus	Surplus/Deficit split
Step 1:	Temporary Regular Contribution Reduction (regular CR no lower than 0%)	100%

Lag: 1 year, Commitment: 3 years, Reserve: 7 years, Funding Period: 10 years, Spread: 1.00%

	Restoration Surplus	Surplus/Deficit split
Step 1:	Lower Special to **1%**	100%
Step 2:	Restore Future Indexation Level to 100%	100%
Step 3:	Catch Up to 50% (both Post 2009-Pre 2014 and Post 2013 at 50%)	100%
Step 4:	Catch Up to 100% (both Post 2009-Pre 2014 and Post 2013 at 100%)	100%
Step 5:	Lower Special to 0%	100%

	Restoration Deficit	Surplus/Deficit split
Step 1:	Raise Special to **1%**	100%
Step 2:	Reduce Indexation Level (Post 2009-Pre 2014: 50%, Post 2013: 0%)	100%
Step 3:	Raise Special no threshold	100%

Note: FMP CR = 12%, Usable Surplus in Temporary zone is based on smooth assets and smooth liabilities

Brief Explanation of Metrics for Analysis

TEMPORARY PLAN IMPROVEMENTS METRICS for ANALYSIS:

- Probability in FMP Zone: Probability that OTPP will be in a particular FMP zone in the future
- Probability Temporary Benefits in pay: Probability that temporary benefits will be paid in the future and in which FMP Zone that will occur
- Probability Temporary Benefits in pay while in FMP Zone: What is the percentage of times a temporary benefits is in pay while in a particular FMP Zone

TEMPORARY IMPROVEMENT ZONE – POTENTIAL METRICS

# observations in each zone	Restoration Zone (Sp CR +CIP+add'l Sp CR)	Restoration Zone (Special CR)	Do Nothing Zone	Temporary Improvement Zone	Distribution Zone, usable surplus
Current (Starting FR 100%)	30%	2%	38%	0%	30%
Metrics					
Probability in FMP Zone (rounded)					
Baseline	32%	2%	27%	33%	6%
Probability in Temporary Benefits in pay (rounded)					
Baseline	0%	0%	9%	21%	3%
Probability Temporary Benefits in pay while in FMP Zone (rounded)					
Baseline	0%	0%	34%	63%	56%

Note: Starting FR= 100%

Shayan,

Cindy would like to share the results of the Asset Ceiling analysis with the OAG prior to completion of the work related to pension adjustments. We would like to include appropriate language/caveat regarding pending adjs and plan to update once complete.

Can you please insert the appropriate caveat in the draft report and resend.

Thanks in advance.

Nadine

Attachment 1: Report on Funding.pdf

Report on Funding.pdf

Teachers' Pension Plan Board

Ontario

REPORT ON FUNDING

April 2002

This is a report on the financial health of the Teachers' pension plan and on the progress of the development of a funding management policy.

The responsibility to ensure a defined benefit pension plan is fully funded lies with the sponsor of the plan, usually the employer. In the case of the Teachers' pension plan, however, there are two sponsors: the Ontario government and the Ontario Teachers' Federation, representing the plan members.

The co-sponsors negotiate the use of surplus and, when there is a deficiency, they both make additional contributions to ensure the plan is fully funded within a specified time period.

To assess the financial health of the plan, we hire an independent actuary to conduct a valuation at least once every three years. This valuation determines if the plan has a funding surplus or deficit.

Funding Valuation Results

On January 1, 2002, the Teachers' pension plan had a funding surplus of $1.9 billion, including a $3-billion smoothing adjustment. Without smoothing, the plan had a $1.1-billion deficit.

($ billions) (at January 1)	**02**	01	00	99	98	96	93**
Net assets	**$ 69.5**	73.1	68.3	59.1	54.5	40.1	29.4
Smoothing	**3.0**	(4.3)	(7.3)	(5.1)	(6.0)	(1.8)	---
Value of assets	**72.5**	68.8	61.0	54.0	48.5	38.3	29.4
Future contributions	**13.7**	14.4	13.4	12.0	12.6	14.5	14.3
Special payments*	---	---	---	3.7	8.5	8.4	8.4
Actuarial assets	**86.2**	83.2	74.4	69.7	69.6	61.2	52.1
Future accrued benefits	**84.3**	76.4	69.8	66.2	62.8	60.5	50.6
Surplus (deficit)	**$ 1.9**	6.8	4.6	3.5	6.8	0.7	1.5

* Payments committed by the government toward the pre-1990 unfunded liability

** Valuation dates determined by co-sponsors

Assumptions

Valuations use many estimates, or assumptions. Among them are: how long will a teacher teach? What will inflation be in the future? What salary increases are teachers likely to receive? How long will the average teacher live?

These assumptions are used to estimate the value of the future benefits owed to teachers. In addition, an assumption of the long-term rate of return is used to determine if today's assets plus future contributions will be sufficient to pay promised pensions.

Valuation Assumptions

(percent)	2002	2001
Discount rate	6.30	6.25
Salary escalation rate	2.90	3.20
Inflation rate	1.90	2.20

The discount rate is the long-term market rate of return used to determine the present value of all future pension benefits and assets.

The assumptions are intended to be accurate over a long horizon. While actual experience mirrors some assumptions closely, annual equity returns fluctuate greatly compared to our assumption (6% plus inflation).

It would be impractical to adjust contribution rates frequently because of investment swings. So, to reduce short-term fluctuations in the funding surplus, equity returns compared to our long-term assumptions are 'smoothed.'

WHAT'S INSIDE...

- Understanding Smoothing pg 2
- Funding Management Policy pg 2
- Use of Surplus pg 4

Questions? www.otpp.com or 1-800-668-0105

Understanding Smoothing

Gains and losses from equities are smoothed over five years, a practice accepted by the actuarial profession and pension regulators.

Smoothing defers gains when actual equity returns exceed the 6% plus inflation assumption. On the other hand, when returns are below the assumption, smoothing defers losses (as is the case this year). This practice is simply used to soften the impact of annual volatility in equity markets.

How Smoothing is Calculated

($ billions)

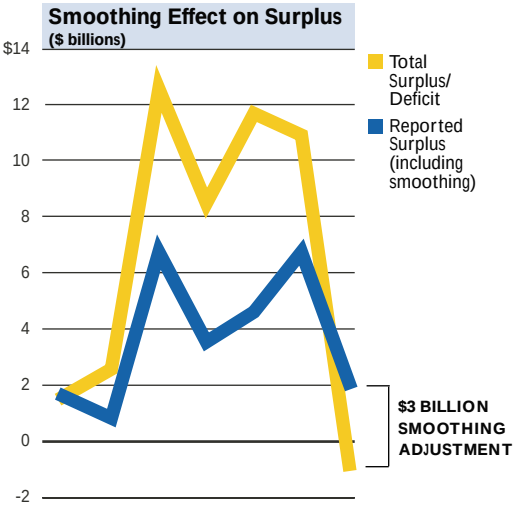
Year	Gain/ (loss)	to be recognized in 2006	2005	2004	2003	Held back in 2002
1997	$3.5					
1998	$1.3				0.3	**0.3**
1999	$6.7			1.34	1.34	**2.7**
2000	($1.2)		(0.24)	(0.24)	(0.24)	**(0.7)**
2001	($6.6)	(1.32)	(1.32)	(1.32)	(1.32)	**(5.3)**
Smoothing						**(3.0)**

Each year, we recognize 20% of equity gains or losses. Smoothing consists of the remaining portions that will be recognized in the future. For the last two years, equity returns have fallen short of our assumption, causing losses held back by smoothing.

At its peak, smoothing held $7.3 billion in reserve. In 2002, smoothing increased actuarial assets by $3 billion to show a $1.9 billion surplus, instead of a $1.1 billion deficit.

However, smoothing is only capable of absorbing short-term fluctuations in returns and will not sustain a funding surplus in a long period of poor market performance.

The funding surplus is the more important number for plan members. It is used to determine benefit improvements or changes to the contribution rate.



Without the $3-billion smoothing adjustment, the plan would have had a funding deficiency of $1.1-billion this year. We are concerned about the downward trend.

Comparing Valuations

We also report a financial valuation in our annual report. The two surpluses are different because the funding surplus includes two projections: future contributions and future benefits for all current teachers.

Comparing the valuations shows a $5.1-billion difference. In other words, there is a $5.1-billion cost to provide future benefits for plan members that are not funded by the current contribution rate. We expect this gap to grow as new teachers enter the plan.

($ billions)	**Financial** (at Dec. 31/01)	**Funding** (at Jan. 1/02)
Net assets	$ 69.5	$ 69.5
Smoothing adjustment	3.0	3.0
Future contributions	---	13.7
Actuarial assets	72.5	86.2
Accrued benefits	65.5	65.5
Future benefits	---	18.8
Surplus	**$ 7.0**	**$ 1.9**

The Role of a Funding Management Policy

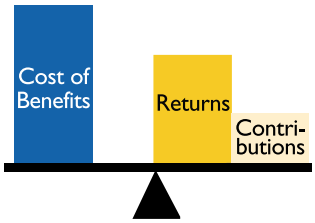
Within certain legislated limits, the co-sponsors negotiate benefit and contribution levels. For 2002, the co-sponsors have decided not to make any changes to contributions or benefits and to concentrate on developing the funding management policy. The pension board fully supports their decision and efforts.

In light of our outlook for equity markets, new benefit costs present a challenge to us and a cautionary note to plan members and the co-sponsors. Over the next decade, we expect modest real rates of return from stock and bond markets compared with the past 10 years.

Despite what the 1990s suggested, 2000 and 2001 have proven that markets are not one-way streets. In fact, historically they have only produced returns equal to the plan's 4.5% long-term funding requirement about 60% of the time.

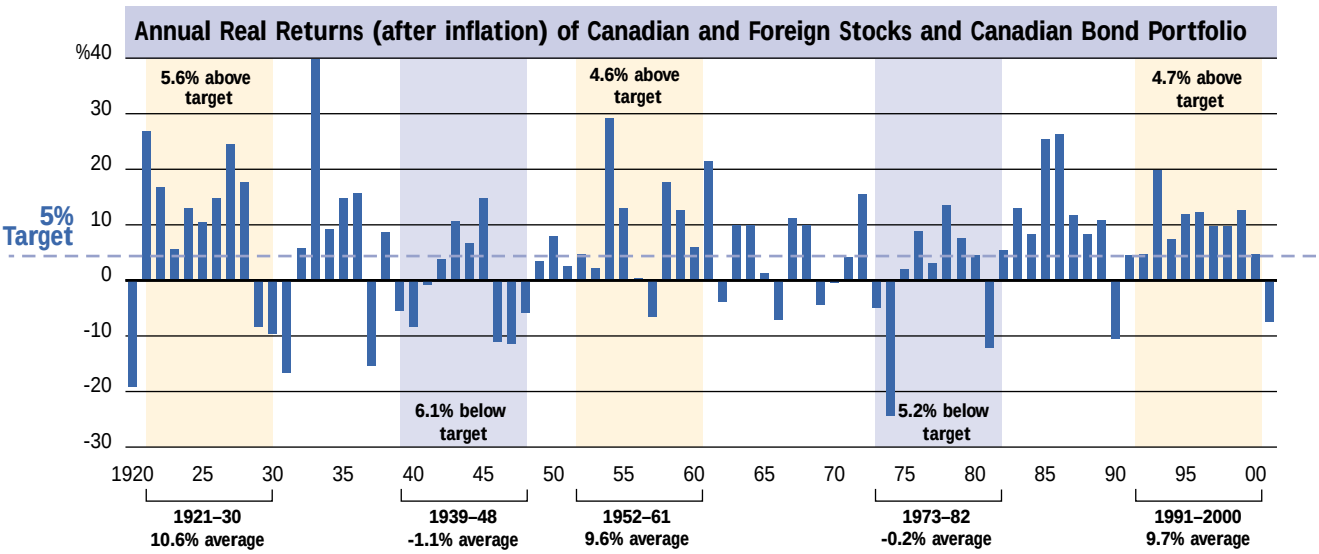
To sustain improved benefit levels for young and future teachers, without the need for contribution increases, we will need to generate a minimum real rate of return of 5% over the long term. That may be very difficult over the next decade.

Over the long term, benefits must balance with contributions plus investment returns or there will be a deficit. If the fund has a deficit when the funding valuation is filed, the law will automatically trigger a contribution rate increase. The only alternative for the co-sponsors would be to reduce future benefits.



The objective of a funding management policy is to provide a framework for improved long-term governance of the fund by determining when it is prudent to increase benefits, change contributions, or conserve assets. This policy will guide the co-sponsors in making these complex decisions, and help address the risks of poor market performance borne by both working teachers and the government. It is also important from an investment perspective, as it will change the risk profile of the fund and affect the pension board's investment policies.

Teachers have told us in focus groups that they would prefer contribution rates to remain stable. A funding management policy will help to ensure this occurs. Development of a workable policy will put the plan's co-sponsors at the forefront of exercising solid pension plan governance that balances the interests of all plan members – working or retired teachers – and the government.



This graph shows how a hypothetical portfolio, based on a similar asset mix as our own, would have performed over the last 80 years. One of the best decades in history was the 1990s. The portfolio includes two-thirds stocks (28% Canadian, 17% U.S., 22% foreign), and one-third Canadian bonds. The plan will need to earn a minimum of 5% over the long term to fund benefits at current levels.

Use of Surplus

In 1990, the plan had a $7.8 billion unfunded liability. The Ontario government agreed to pay the initial unfunded liability through a series of special payments over 40 years.

The pension plan has enjoyed a series of funding surpluses, primarily due to above-average investment growth brought on by strong equity markets throughout the 1990s and lower than expected increases in wages and inflation.

Since 1993, $18.6 billion in surplus was used by co-sponsors to improve benefits and eliminate special payments.

Valuation date	Surplus/ (Deficit)	OTF	Ontario government	Surplus remaining
1990	($7.8) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7	$0.6 for benefit improvements and RCA contributions[2]		$0.1
1998[3]	$6.8	$2.2 for benefit improvements[4]	$4.6 to reduce the value of remaining special payments	$0
1999	$3.5		$3.5 to reduce the value of remaining special payments[5]	$0
2001	$6.8	$6.2 for benefit improvements[6]		$0.6
2002	$1.9	Co-sponsors agreed not to make any changes to benefits or contributions		$1.9
Total		$9.3 billion	$9.3 billion	

[1] Savings offset cuts that would have been made in the education sector as part of the government's overall cost-cutting program.

[2] Benefit improvements: reduced early retirement penalty to 2.5% from 5% for each point short of 90 factor, making it easier to retire early; lower CPP reduction after age 65 (to 6.8% from 0.7%).

[3] In 1998, the co-sponsors agreed future surplus would first be used to eliminate the remaining special payments, and the next $6.2 billion would be available exclusively to the OTF.

[4] Benefit improvements: 85-factor window from 1998 to 2002; lower CPP reduction after age 65 (to 0.6%)

[5] The government paid off its remaining special payments by the end of 1999.

[6] Benefit improvements: permanent 85 factor; 10-year pension guarantee; reduced pension as early as age 50; lower CPP reduction (to 0.45%); 5-year average YMPE to calculate CPP reduction; pension recalculation based on approximate best-5 salary for older pensioners; and top-up waived for LTIP contributions.

AMENDMENT
To Add an Additional Resource to a Project

Agreement Number and Description of Project:	OPCD-PWC-01 Accounting Advisory Services
Original SOW Date:	September 16, 2016
Name of Vendor:	PricewaterhouseCoopers LLP
Date of Amendment:	October 18, 2016
Amendment Number:	001

1) Amendment Details:

1.1 This amendment hereby exercises the Ministry's right to add an additional resource to support this project. The additional resource is:

Names, Roles and Per Diem Rates:

Individual's Legal Name	Individual's Role (& level)	Per Diem Rate
Mario Chassé	General Consultant (Actuarial), Level 2 Service Category 2	The per diem rate shall be equal to the per diem rates stipulated in the SOW for each deliverable (ie Accounting Advisory and Accounting Opinion).

1.2 The additional resource does not change the scope, deliverables, or ceiling value of the project.

1.3 This amendment is subject to the terms and conditions of the Master Agreement.

1.4 All other terms and conditions of the Statement of Work OPCD-PWC-01 between PricewaterhouseCoopers LLP and the Ministry are unchanged.

HER MAJESTY THE QUEEN in right of Ontario
as represented by the Minister of the Treasury Board
Secretariat

Attachment 2: 2007 Teachers Survey.pdf

Matt/Kerry,

Sharing some additional background relevant to informing assumptions w.r.t. teachers wanting to see contribution reductions at some point.

N

We have been able to locate the member's survey that was conducted in 2007. I would think that is relatively old, with the plan having experienced a lot of changes since then.

The scanned survey and its appendix is attached. The key finding that members would support contribution rates of 12.3% is on page 10 of the PDF.

2007 Teachers Survey Apendix.pdf

Appendix A: Study interview schedule

POLLARA

Interview Schedule

A. Introduction

Good morning/afternoon/evening. May I please speak with (MEMBER NAME)?

IF AVAILABLE- CONTINUE
IF NOT AVAILABLE - SCHEDULE APPOINTMENT TO CALL BACK (IF NECESSARY, READ FIRST 2 SENTENCES OF PREAMBLE BELOW AND SCHEDULE CALL-BACK)

(WHEN MEMBER IS ON LINE) Good morning/afternoon/evening. My name is ( ) and I am calling on behalf of the Ontario Teachers' Pension Plan, the Ontario Teachers' Federation and the Ontario Government, from POLLARA, a national research firm. We are conducting a survey of pension plan members, which will provide these groups with information about members' preferences. Would you mind if I asked you some questions? All of your responses will be kept completely confidential. (IF ASKED: On average, the survey takes about 10 minutes to complete.)

(IF YES) Thank you (PROCEED TO QUESTION 1)
(IF NO) When is a better time for me to call back? (SCHEDULE APPOINTMENT UP TO AND INCLUDING May 2; MONDAY-FRIDAY 5pm-9pm; SATURDAY 9am-5pm; NO SUNDAY CALLS.)

B. Objective 1: To determine the level of awareness and understanding among Plan members about the current level of benefits and contributions.

To start, I'd like to read you a list of some of the provisions of your pension plan. Please tell me whether or not you were aware of each provision prior to my call. How about: (RANDOMIZE ORDER OF BENEFITS)

1. Members can retire with unreduced monthly pension payments when their age plus the length of their teaching career equals eighty-five, or when they reach the age of 65. (IF NECESSARY: Were you aware or unaware of this?)

   Aware ..... (95%)
   Unaware ..... (4%)
   Don't know ..... (<1%)
   Refused ..... (<1%)

2. The monthly pension amount paid to a retiree is based on a formula that multiplies two percent by the years of service by the average of their best five annual salaries. (IF NECESSARY: Were you aware or unaware of this?)

   Aware ..... (87%)
   Unaware ..... (12%)
   Don't know ..... (1%)
   Refused ..... (<1%)

3. The monthly pension payments made to retirees are protected against inflation. In other words, a guaranteed cost-of-living adjustment is made. (IF NECESSARY: Were you aware or unaware of this?)

Aware	(74%)
Unaware	(25%)
Don't know	(1%)
Refused	(<1%)

(END RANDOMIZATION OF STATEMENTS)

Now I'd like to ask you about some other pension issues.

4. Prior to my call, were you aware or unaware that the pension plan does not provide dental and other health benefit coverage to retirees?

Aware	(68%)
Unaware	(31%)
Don't know	(1%)
Refused	(<1%)

5. And were you aware or unaware that the Ontario government matches members' contributions to the pension plan?

Aware	(63%)
Unaware	(36%)
Don't know	(1%)
Refused	(<1%)

6. And prior to my call, were you aware or unaware that the money you contribute to your pension plan is tax deductible? (IF REQUIRED: Similar to an RRSP, you can deduct your total pension contributions from your net income on page 3 of your tax return.)

Aware	(66%)
Unaware	(32%)
Don't know	(1%)
Refused	(<1%)

7. The value of the average teacher's pension at retirement, in today's dollars, is $750,000. Is this amount higher, lower or about the same amount that you expected?

Higher	(23%)
Lower	(10%)
About the same amount	(38%)
Don't know	(29%)
Refused	(<1%)

8. To the best of your knowledge, approximately what percentage of your before-tax salary do you currently contribute to your pension plan? (READ LIST - STOP AFTER ANSWER IS GIVEN)

Less than 5%	(5%)
5% to less than 7%	(10%)
7% to less than 9%	(17%)
9% to less than 12%	(24%)
12% to less than 15%	(4%)
15% or more	(5%)
Don't know (DO NOT READ)	(35%)
Refused (DO NOT READ)	(<1%)

9. To the best of your knowledge, is the amount you currently contribute to your pension plan scheduled to go up, down, or stay the same in the next two years?

Up	(77%)
Down	(1%)
Stay the same	(13%)
Don't know	(9%)
Refused	(<1%)

C. Objective 2: To measure plan members' preferences in terms of increased contributions vs. decreased benefits, if a future valuation shows an increased shortfall.

Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate. These increases are required to keep pension provisions for future service at current levels. By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.

10. (IF EXPECTING INCREASE) Are these increases higher, lower, or about the same amount that you had expected?

Higher	(27%)
Lower	(3%)
Same	(64%)
Don't know	(6%)
Refused	(<1%)

11. (IF EXPECTING DECREASE/STAY THE SAME/DON'T KNOW/REFUSED) Do you recall seeing or hearing anything about these increases?

Yes	(47%)
No	(49%)
Don't know	(4%)
Refused	(<1%)

Although all members are guaranteed pensions, the Ontario Teachers' Pension Plan, like many other pension plans, is facing funding challenges. Decisions may need to be made about whether to further increase members' contributions beyond the increases we have just discussed. The alternative to increasing contributions is reducing the level of pension provisions that will be earned from the time the change is made until members retire.

(IF RESPONDENT ASKS: By law, such changes could not affect the pensions provided to those who have already retired. Likewise, pension provisions that have already been earned by working members could not be reduced. Such changes could only be applied into the future.)

12. First, thinking into the future, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%. (INTERVIEWER PROBE IF "Don't know": "Please provide your best estimate.") (IF RESPONDENT GIVES A RANGE: "Please provide the maximum total percentage you would be willing to contribute, rather than a range.")

Less than 10.0%	(5%)
10.0%	(15%)
10.1%-11.0%	(7%)
11.1%-12.0%	(20%)
12.1%-13.0%	(8%)
13.1%-14.0%	(2%)
14.1%-15.0%	(27%)
Greater than 15.0%	(3%)
Don't know	(12%)
Refused	(1%)
Mean (%):	12.34
Median (%):	12.0
Mode (%):	15.0

13. (ASK ONLY TO THOSE WHO RESPONDED 8.1% OR MORE TO Q12. EXCLUDE IF Q12 = "Don't know" or "Refused") If a commitment was made to reduce members' contributions to eight percent if the pension plan shows a surplus in the future, would you be in favour or not in favour of increasing pension plan contributions to more than (INSERT RESPONSE FROM Q12) of your salary in order to keep all pension provisions at current levels?

(IF ASKED: Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate. These changes are required to keep the pension provisions for future service at their current levels. By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.)

In favour	(36%)
Not in favour	(53%)
Don't know	(10%)
Refused	(<1%)

Please imagine that your contributions are at the maximum amount you would be willing to contribute in order to keep all pension provisions at current levels. I'd like to read you a list of changes that could be made to future pension provisions in order to keep contributions from rising beyond this level. Please tell me whether you would be in favour or not in favour of each of the following changes. How about: (READ - RANDOMIZE ORDER OF PROVISIONS)

(IF REQUIRED, READ: Please keep in mind that by law, these changes could not affect the pensions provided to those who have already retired. Likewise, current pension provisions that have already been earned by working members could not be reduced.)

14. Increasing the eighty-five factor to ninety, meaning that in the future members would work an extra two and a half years to qualify for an unreduced monthly pension in order to retire before age 65? If this situation were to arise, there would be some type of grand fathering. If you have already reached your eighty-five factor, you would not lose it. (IF ASKED: Members can currently retire with unreduced monthly pension payments when their age plus years of service equals eighty-five, or when they reach the age of 65.) (IF ASKED: Discussions would take place between the OTF and the government to decide on a transition period.)

In favour	(41%)
Not in favour	(57%)
Don't know	(2%)
Refused	(<1%)

15. Reducing your monthly pension for future service by about ten percent? By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.

In favour	(32%)
Not in favour	(57%)
Don't know	(11%)
Refused	(<1%)

16. Making cost-of-living increases to future retirees' pension flexible when the pension plan is under-funded, with the understanding that the full cost-of-living adjustment would be restored when possible?

In favour	(51%)
Not in favour	(43%)
Don't know	(5%)
Refused	(<1%)

(END OF QUESTION RANDOMIZATION)

17. We've just discussed three changes that could be made to pension provisions in the future, depending on the future financial situation of the pension plan. I'd like to read you descriptions of all three of these potential changes. When I'm done, please tell me which one of these changes you would be most willing to have made to your pension plan. (RANDOMIZE ORDER OF CHANGES)

(IF REQUIRED: By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.)

Decreasing your monthly pension for future service by 10%	(11%)
Increasing the eighty-five factor to a ninety factor	(37%)
Providing flexibility for the cost-of-living adjustment	(44%)
Don't know (DO NOT READ OR RANDOMIZE)	(3%)
Refused (DO NOT READ OR RANDOMIZE)	(4%)

(IF REQUIRED: READ FULL WORDING FROM Q14 TO Q16 AGAIN)

18. Which potential change are you least willing to have made? (REPEAT REMAINING CHANGES AS REQUIRED)

(IF REQUIRED: By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act)

Decreasing your monthly pension for future service by 10%	(37%)
Increasing the eighty-five factor to a ninety factor	(41%)
Providing flexibility to the cost-of-living adjustment	(16%)
Don't know (DO NOT READ OR RANDOMIZE)	(3%)
Refused (DO NOT READ OR RANDOMIZE)	(2%)

(IF REQUIRED: READ FULL WORDING FROM Q14 TO Q16 AGAIN)

19. Now that you are more familiar with the types of changes that could be made to the pension plan, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%. (INTERVIEWER PROBE IF "Don't know": "Please provide your best estimate.") (IF RESPONDENT GIVES A RANGE: "Please provide the maximum total percentage you would be willing to contribute, rather than a range.")

Less than 10.0%	(6%)
10.0%	(11%)
10.1%-11.0%	(8%)
11.1%-12.0%	(22%)
12.1%-13.0%	(8%)
13.1%-14.0%	(3%)
14.1%-15.0%	(29%)
Greater than 15.0%	(5%)
Don't know	(8%)
Refused	(1%)
Mean (%):	12.55
Median (%):	12.0
Mode (%):	15.0

D. Objective 3: To identify the views of sub-groups of members who may have different perspectives based on their circumstances.

20. (ASK IF AGE + YEARS OF CREDIT = >74) Which one of the following three statements best represents your own viewpoint: (RANDOMIZE ORDER OF STATEMENTS - REPEAT AS REQUIRED)

    If pension contributions increase to more than about eleven percent of your salary, you will consider retiring earlier than planned, even if your pension provisions remain the same ..... (13%)

    If the pension provisions you will earn in future years are reduced you will consider retiring earlier than planned, even if your contribution rates remain the same ..... (19%)

    You are unlikely to consider retiring earlier than planned as a result of changes to your future pension provisions and contribution rates. .. (55%)

    Don't know (DO NOT READ OR RANDOMIZE) ..... (10%)
    Refused (DO NOT READ OR RANDOMIZE) ..... (4%)

21. Do you work at an elementary school, a secondary school, or at another organization?

    Elementary ..... (63%)
    Secondary ..... (33%)
    Other ..... (4%)
    Refused ..... (<1%)

We have come to the end of our survey. Thank you very much for your time, we appreciate your participation. (IF RESPONDENT WANTS TO LEARN MORE ABOUT THE ISSUES DISCUSSED IN THE SURVEY: Would you like me to give you some web site addresses that provide further detail on the pension plan issues discussed in this survey? (IF YES): www.otpp.com; www.otffeo.on.ca)

22. Gender (INTERVIEWER-RECORDED)

    Male ..... (26%)
    Female ..... (74%)

23. Employment type (SAMPLE)

    Full-time ..... (83%)
    Part-time ..... (7%)
    Occasional ..... (10%)

24. Employer type (SAMPLE)

English School Board	(94%)
French School Board	(5%)
Other	(1%)

25. Years of credit (SAMPLE)

0-4.9	(26%)
5-9.9	(28%)
10-14.9	(15%)
15-19.9	(14%)
20-24.9	(8%)
25 And Over	(9%)

26. Career Status Grouping (SAMPLE)

Newer members (0-4.9 years)	(26%)
Newer members (5-9.9 years)	(26%)
Mid-career members (10-14.9 years)	(12%)
Mid-career members (15-21.9 years)	(7%)
Older members (within 10 years of an unreduced pension)	(14%)
Older members (within 5 years of an unreduced pension)	(12%)
Older members (eligible for unreduced pension)	(5%)

27. Other years of credit collapse (SAMPLE)

0-6.9 years of actual credit	(36%)
7-14.9 years of actual credit	(27%)
15-21.9 years of actual credit	(7%)
Within 10 years or less of an unreduced pension	(14%)
Within 5 years of unreduced pension	(12%)
Already eligible unreduced pension	(5%)

29. Age (SAMPLE)

Under 35 Yrs	(24%)
35-44	(32%)
45-54	(31%)
55-64	(13%)
65 And Over	(<1%)

30. Urban/Rural (SAMPLE)

Urban	(86%)
Rural	(14%)

31. Administration (SAMPLE)

Administration	(6%)
Non-Administration	(94%)

Appendix B: LTIP interview schedule

LTIP interview schedule

- Some individuals contained in member records were receiving long-term income protection (LTIP) through their employer. A total of 21 individuals on LTIP completed this survey. These results have been excluded from the findings presented in other sections of this report because the mandate of the study was to understand contribution and benefit issues among active, *contributing* pension plan members.
- A total of 21 individuals on LTIP completed the survey, the results of which are presented in the following interview schedule. Due to the extremely small sample size, results should not be generalized to all individuals on LTIP.

POLLARA

Interview Schedule

A. Introduction

Good morning/afternoon/evening. May I please speak with (MEMBER NAME)?

IF AVAILABLE- CONTINUE
IF NOT AVAILABLE - SCHEDULE APPOINTMENT TO CALL BACK (IF NECESSARY, READ FIRST 2 SENTENCES OF PREAMBLE BELOW AND SCHEDULE CALL-BACK)

(WHEN MEMBER IS ON LINE) Good morning/afternoon/evening. My name is ( ) and I am calling on behalf of the Ontario Teachers' Pension Plan, the Ontario Teachers' Federation and the Ontario Government, from POLLARA, a national research firm. We are conducting a survey of pension plan members, which will provide these groups with information about members' preferences. Would you mind if I asked you some questions? All of your responses will be kept completely confidential. (IF ASKED: On average, the survey takes about 10 minutes to complete.)

(IF YES) Thank you (PROCEED TO QUESTION 1)
(IF NO) When is a better time for me to call back? (SCHEDULE APPOINTMENT UP TO AND INCLUDING May 2; MONDAY-FRIDAY 5pm-9pm; SATURDAY 9am-5pm; NO SUNDAY CALLS.)

LTIP Plan
(n=21)

B. Objective 1: To determine the level of awareness and understanding among Plan members about the current level of benefits and contributions.

To start, I'd like to read you a list of some of the provisions of your pension plan. Please tell me whether or not you were aware of each provision prior to my call. How about: (RANDOMIZE ORDER OF BENEFITS)

1. Members can retire with unreduced monthly pension payments when their age plus the length of their teaching career equals eighty-five, or when they reach the age of 65. (IF NECESSARY: Were you aware or unaware of this?)

   Aware ..... (100%)

2. The monthly pension amount paid to a retiree is based on a formula that multiplies two percent by the years of service by the average of their best five annual salaries. (IF NECESSARY: Were you aware or unaware of this?)

   Aware ..... (86%)
   Unaware ..... (10%)
   Don't know ..... (5%)

	LTIP Plan (n=21)
3. The monthly pension payments made to retirees are protected against inflation. In other words, a guaranteed cost-of-living adjustment is made. (IF NECESSARY: Were you aware or unaware of this?)	
Aware	(76%)
Unaware	(24%)

(END RANDOMIZATION OF STATEMENTS)

Now I'd like to ask you about some other pension issues.

4. Prior to my call, were you aware or unaware that the pension plan does not provide dental and other health benefit coverage to retirees?	
Aware	(71%)
Unaware	(24%)
Don't know	(5%)
5. And were you aware or unaware that the Ontario government matches members' contributions to the pension plan?	
Aware	(48%)
Unaware	(38%)
Don't know	(14%)
6. And prior to my call, were you aware or unaware that the money you contribute to your pension plan is tax deductible? (IF REQUIRED: Similar to an RRSP, you can deduct your total pension contributions from your net income on page 3 of your tax return.)	
Aware	(67%)
Unaware	(29%)
Don't know	(5%)
7. The value of the average teacher's pension at retirement, in today's dollars, is $750,000. Is this amount higher, lower or about the same amount that you expected?	
Higher	(29%)
Lower	(5%)
About the same amount	(24%)
Don't know	(43%)

	LTIP Plan (n=21)

8. To the best of your knowledge, approximately what percentage of your before-tax salary do you currently contribute to your pension plan? (READ LIST - STOP AFTER ANSWER IS GIVEN)

Less than 5%	(5%)
5% to less than 7%	(<1%)
7% to less than 9%	(14%)
9% to less than 12%	(24%)
12% to less than 15%	(<1%)
15% or more	(<1%)
Don't know (DO NOT READ)	(52%)
Refused (DO NOT READ)	(5%)

9. To the best of your knowledge, is the amount you currently contribute to your pension plan scheduled to go up, down, or stay the same in the next two years?

Up	(43%)
Down	(10%)
Stay the same	(24%)
Don't know	(24%)

C. Objective 2: To measure plan members' preferences in terms of increased contributions vs. decreased benefits, if a future valuation shows an increased shortfall.

Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate. These increases are required to keep pension provisions for future service at current levels. By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.

10. (IF EXPECTING INCREASE) Are these increases higher, lower, or about the same amount that you had expected?

Higher	(22%)
Lower	(11%)
Same	(56%)
Don't know	(11%)

	LTIP Plan (n=21)

11. (IF EXPECTING DECREASE/STAY THE SAME/DON'T KNOW/REFUSED) Do you recall seeing or hearing anything about these increases?

Yes	(42%)
No	(42%)
Don't know	(17%)

Although all members are guaranteed pensions, the Ontario Teachers' Pension Plan, like many other pension plans, is facing funding challenges. Decisions may need to be made about whether to further increase members' contributions beyond the increases we have just discussed. The alternative to increasing contributions is reducing the level of pension provisions that will be earned from the time the change is made until members retire.

(IF RESPONDENT ASKS: By law, such changes could not affect the pensions provided to those who have already retired. Likewise, pension provisions that have already been earned by working members could not be reduced. Such changes could only be applied into the future.)

12. First, thinking into the future, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%. (INTERVIEWER PROBE IF "Don't Know": "Please provide your best estimate.") (IF RESPONDENT GIVES A RANGE: "Please provide the maximum total percentage you would be willing to contribute, rather than a range.")

13. (ASK ONLY TO THOSE WHO RESPONDED 8.1% OR MORE TO Q12. EXCLUDE IF Q12 = "Don't know" or "Refused") If a commitment was made to reduce members' contributions to eight percent if the pension plan shows a surplus in the future, would you be in favour or not in favour of increasing pension plan contributions to more than (INSERT RESPONSE FROM Q12) of your salary in order to keep all pension provisions at current levels?

(IF ASKED: Currently, members contribute an average of ten percent of their before-tax salary to the pension plan. This will rise to an average of ten point three percent in 2008. There is a further scheduled increase in 2009 that will bring members' contributions to about eleven percent. A financial review next year may change this rate. These changes are required to keep the pension provisions for future service at their current levels. By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.)

In favour	(62%)
Not in favour	(31%)

Please imagine that your contributions are at the maximum amount you would be willing to contribute in order to keep all pension provisions at current levels. I'd like to read you a list of changes that could be made to future pension provisions in order to keep contributions from rising beyond this level. Please tell me whether you would be in favour or not in favour of each of the following changes. How about: (READ - RANDOMIZE ORDER OF PROVISIONS)

(IF REQUIRED, READ: Please keep in mind that by law, these changes could not affect the pensions provided to those who have already retired. Likewise, current pension provisions that have already been earned by working members could not be reduced.)

14. Increasing the eighty-five factor to ninety, meaning that in the future members would work an extra two and a half years to qualify for an unreduced monthly pension in order to retire before age 65? If this situation were to arise, there would be some type of grand fathering. If you have already reached your eighty-five factor, you would not lose it. (IF ASKED: Members can currently retire with unreduced monthly pension payments when their age plus years of service equals eighty-five, or when they reach the age of 65.) (IF ASKED: Discussions would take place between the OTF and the government to decide on a transition period.)

POLLARA

I. Objectives

- The goals of this survey of active, contributing members of the Ontario Teachers' Pension Plan are:
  - → To determine the level of awareness and understanding among plan members about the current level of benefits and contributions.
  - → To measure plan members' preferences in terms of increased contributions and decreased benefits, if a future valuation shows an increased shortfall.
  - → To identify the views of sub-groups of members who may have a different perspective based on their circumstances (i.e., years from retirement).
- In order to achieve these objectives, the study required a sound research methodology that would accurately measure member preferences. This methodology is detailed in the following pages.

II. Methodology

- A total of 2,820 telephone interviews were conducted with OTPP members between April 11th and May 2nd, 2007.

A. Questionnaire development

- The survey questionnaire and methodology were developed by POLLARA in conjunction with the Ontario Teachers' Pension Plan (OTPP), the Ontario Teachers' Federation (OTF), and the Ontario Government, through a series of meetings held between September 11th and December 11th, 2006.

- In addition, six focus groups, four English (Brampton & Toronto) and two French (Ottawa), were conducted in October 2006 with early, mid, and late career members to facilitate the overall design of the questionnaire. An important goal of the focus groups was to identify pension terminology and explanations that members do or do not understand to determine the appropriate level of communication for the questionnaire. A draft copy of *Let's talk about the future of your pension*, a primer created by the OTPP, OTF, and Ontario Government, was also assessed during these sessions, and member feedback was used to refine the document in a way that would make it most easily understood.

II. Methodology, continued

A. Questionnaire development, continued

- As well, using a draft questionnaire, POLLARA conducted 17 pre-test interviews with OTPP members in November, 2006. After further questionnaire refinement, a second pre-test of 46 English and French members was conducted in March, 2007. A stratified sample was used for both pre-tests, to ensure a good mix of members. The questionnaire tested well in both cases and after each pre-test modifications were made to facilitate respondent comprehension of survey topics.

B. Member communications

- *Let's talk about the future of your pension*, a primer created by the OTPP, OTF, and Ontario Government was mailed to all pension plan members the week of March 19th, 2007. The primer informed members that they may be called to participate in a survey and encouraged them to familiarize themselves with the document and to keep it available for reference in case they were contacted. The resource was also included on OTPP's website.

- In addition to the primer, in December, 2006, the Ontario Teachers' Federation released, *What About My Teachers' Pension?*, a multi-media educational resource that was sent to local presidents for distribution to schools. The resource was also included on OTF's website, and was included as a link on OTPP's website.

II. Methodology, continued

B. Member communications, continued

- Members were also informed about the survey through OTPP's 2006 Annual Report, its 2006 Report to Members, its 2007 Annual Meeting, detailed Q&As on its website, and its Pensionwise newsletter.

C. Interviewing

- Pension plan members were telephoned by POLLARA weekdays between 5 p.m. and 9 p.m. and on Saturday between 9 a.m. and 5 p.m. If the time of the initial call was deemed inconvenient or if members wanted additional time to review reference material on the survey topics, the researcher offered to schedule an appointment to call back.
- Of the 3,636 eligible members POLLARA spoke with, 78% completed the survey and 22% declined to participate. The survey response rate, calculated according to the Marketing Research and Intelligence Association (MRIA) formula, was 40%.
- All interviewers were briefed on the project's background and questionnaire. 100% of interviews were supervised, and 10% were monitored, as per MRIA guidelines.

II. Methodology, continued

D. Sampling and data weighting

- The source of the survey sample was OTPP current member records.
- Additional interviews were conducted among member sub-groups in order to accurately understand the views of these segments. Specific groups to be oversampled were selected in consultation with POLLARA, by OTPP, OTF, and the Ontario Government.
- The overall results of the survey were weighted to reflect the actual distribution of members within these sub-groups.

POLLARA

II. Methodology, continued

D. Sampling and data weighting, continued

- The following table shows the distribution of interviews and the corresponding margins of error. Overall results are accurate to within ±1.8%, nineteen times out of twenty. Sub-sample results have a larger margin of error.

		Actual # of interviews	Weighted # of interviews	Margin of error (%)
Career groupings	Newer members (0 – 4.9 years credit)	481	255	±4.4
	Newer members (5 – 9.9 years credit)	398	259	±4.9
	Mid-career members (10 – 14.9 years credit)	361	120	±5.1
	Mid-career members (15 – 21.9 years credit)	353	65	±5.1
	Older members (within 10 years of an unreduced pension)	431	137	±4.7
	Older members (within 5 years of an unreduced pension)	392	117	±4..9
	Older members (eligible for unreduced pension)	404	47	±4.7

	Male	743	264	±3.6
Employment type	Full-time	2082	829	±2.1
	Part-time	354	73	±5.1
	Occasional	384	98	±4.9
Employer type	District school board – English	2345	938	±2.0
	District school board – French	429	48	±4.6
	Other	46	14	±14.3
TOTAL		**2,820***	**1,000***	**±1.8**

POLLARA

*Sub-group interviews do not add up to the total due to overlap.

III. Key findings

Key findings

In summary, the study indicates that members would be willing to contribute an average maximum of 12.3% in order to preserve their current level of benefits. This amount is 1.3 percentage points above the increase scheduled to take effect in 2009 that will bring contributions to an average of 11%. Six-in-ten members say they would be willing to contribute *more* than 11% of their before-tax income to preserve their current level of benefits, while 27% would be willing to contribute *up to* 11%. If members were contributing their maximum, the benefit change they would be most willing to support is making cost-of-living increases to future retirees' pensions flexible (supported by 51%). They would be least supportive of reducing monthly pension for future service by about 10% (supported by 32%).

A. Awareness of current level of benefits and contributions

- Overall, the majority of pension plan members have a high level of aided awareness of all pension plan provisions and issues tested in this study. Almost all are aware of the 85 factor and that their monthly pension amount is based on a formula. Another three-quarters are aware of the inflation protection provision. Of the other pension plan issues tested, the majority of members are aware of the lack of dental and health coverage, tax deductibility of contributions, and government matching of pension plan contributions.
  - → Awareness is widespread among all career groupings. Understandably, newer members are less aware of all provisions/issues than those approaching retirement.

Key findings, continued

- Almost two-fifths of members say that the $750,000 value of the average teacher's pension at retirement, in today's dollars, is about the same as they expected. Almost one-quarter say that this amount is more than they expected, and one-in-ten report that they thought the value was higher than $750,000. Three-in-ten are unsure.
  - → Almost two-fifths of members in all career groupings report that this amount is about what they expected.
- Members' awareness of the amount they currently contribute to their pension plan is not very widespread. Specifically, only one-quarter of members correctly name 9% to 11.9% as the amount of their before-tax salary they contribute to the pension plan. In addition, more than one-third of all members say they do not know how much they contribute.
  - → Interestingly, members who are already eligible for retirement are as likely as newer members to say they don't know how much they contribute to their pension plan.
- Awareness of scheduled contribution increases is widespread, with over three-quarters of members understanding that their contributions will increase over the next two years.
  - → Newer members are least likely to be aware of these increases, whereas members already eligible for unreduced pension are most likely to be aware.
- When scheduled contribution increases are outlined for members who expect an increase, almost two-thirds see the amounts as in line with their expectations, whereas, about a quarter feel they are higher than expected. Only 3% say that the increases are less than expected.

POLLARA

Key findings, continued

- When prompted, half of those who had *not* expected a contribution increase recall hearing or seeing information about the change.

B. Preferences in terms of increased contributions and decreased benefits

Increased contributions

- If a future valuation shows an increased shortfall, pension plan members would be willing to contribute a maximum of 12.3% in order to maintain current pension provisions. Six-in-ten members are willing to have contributions *exceed* 11%, while 27% are willing to contribute *up to* 11%.
  - → Average maximum pension plan contributions are very consistent across career groupings, ranging from 11.9% to 12.8%.
  - → Part-time workers (13.0%) are willing to contribute the most in order to maintain their current pension provisions, whereas French school board members are willing to contribute slightly less (10.7%) than average.

Key findings, continued

- Members whose maximum contribution is 8.1% or higher were asked if they would be willing to contribute more than their maximum if a commitment was made to reduce contributions to eight percent if the pension plan shows a surplus in future. More than half do not support such a move. However, over one-third of members would increase their maximum contribution under this circumstance.
- After three potential benefit changes are reviewed with members, the average maximum contribution increases by 0.3 (to total 12.6%) and the proportion of members willing to contribute more than 11% increases by seven percentage points (to total 67%). Average maximum pension plan contributions are again very consistent across career groupings (12.1% to 13.0%).

Decreased benefits

- Respondents were asked to imagine that their contributions are at the maximum amount they would be willing to contribute in order to keep all pension provisions at current levels. They were then read a list of changes that could be made to future pension provisions in order to keep contributions from rising beyond this level.

Key findings, continued

- The most popular option is making cost-of-living adjustments flexible, which is supported by more than one-half of pension plan members.
  - → Newer members are more likely than older members to be in favour of this choice. Occasional workers and French school board members are also more likely to favour this option.
- Two-fifths of all members are in favour of increasing the 85 factor to 90.
  - → Unlike the cost-of-living option, those already eligible for an unreduced pension are more likely to be in favour of this plan than newer members.
- One-third of plan members are in favour of reducing monthly pension for future service by about 10%.
  - → Newer members are more likely to be in favour of this option than older members, as are occasional workers, and French school board members.
- When asked to identify the one potential benefit change they prefer, the most popular response (provided by more than two-fifths) is making cost-of-living adjustment flexible.
  - → This is the preferred option for five of seven career groupings and rural residents.
- The second most preferred benefit change is increasing the 85 factor to 90, chosen by almost four-in-ten members.
  - → Only members within five years of unreduced pension and those already eligible for unreduced pension name this change as their top option.

Key findings, continued

- Reducing monthly pension for future service by 10% is preferred by just over one-in-ten members, ranking this option third.
  - → Preference for this option is consistently low among all career groupings, with no more than 13% naming this change as their preferred option.
- When members are asked for their least preferred option amongst all three, increasing the 85 factor to 90 comes out on top, with two-fifths saying is it the least desirable option.
  - → This option is the least favourite choice for five of the seven career groupings.
  - → Reducing monthly pension for future service by 10% ranks as the second least preferred option overall (chosen by 37%). This is the number one least preferred option among members within five years of unreduced pension and those already eligible to retire.
  - → Less than one-fifth of members rank flexible cost-of-living adjustments as their third least preferred option. Only those already eligible for unreduced pension rank this option as their second least preferred option.

All of the findings in this summary are analyzed in greater detail within the remaining sections of this report.

IV. Level of awareness and understanding among plan members about the current level of benefits and contributions

Awareness and understanding of pension plan benefits and contributions

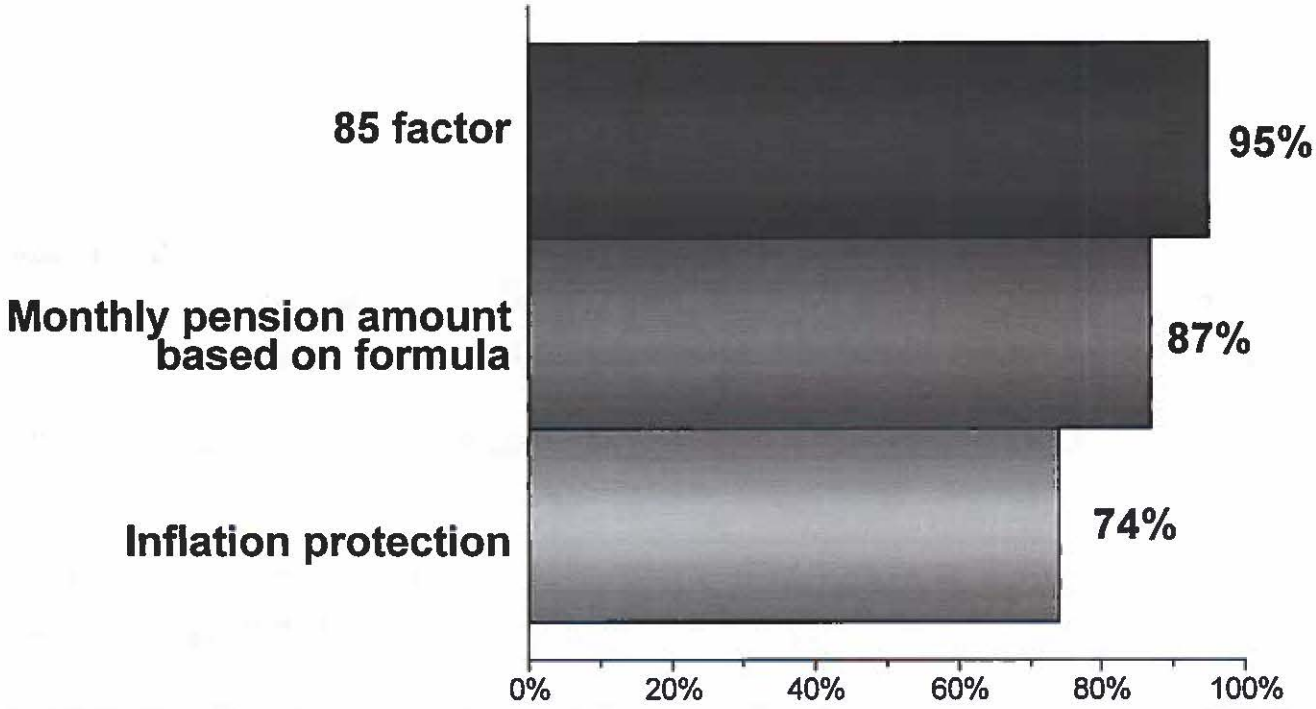
- Prior to delving into pension plan members' preferences in terms of contributions and benefits, a number of questions were asked of members at the onset of the questionnaire, the goals of which were:

  → To understand members' aided awareness of their pension provisions.

  → To ensure that survey respondents were aware of current provisions before they answered more detailed questions concerning their benefit and contribution preferences.

Majority of pension plan members aware of each current pension plan provision tested

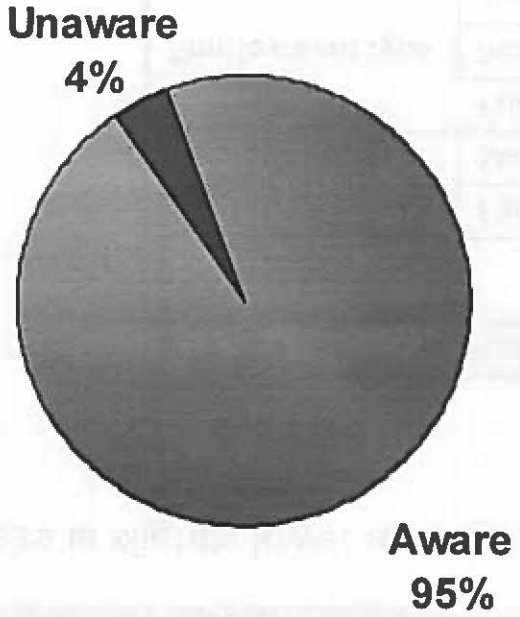
- Of the three pension plan provisions tested, members are most likely to be aware of the 85 factor, followed by the use of a formula to determine the amount of their pension, and inflation protection.



Qs 1-3. To start, I'd like to read you a list of some of the provisions of your pension plan. Please tell me whether or not you were aware of each provision prior to my call. How about: (RANDOMIZE ORDER OF PROVISIONS)

Almost all pension plan members aware of 85 factor

- Almost all pension plan members (95%) are aware that they can retire with unreduced monthly pension payments when their age plus number of teaching years equals 85, or when they reach the age of 65.
- Awareness is slightly lower among newer members (90%) and close to unanimous among older members, those within 10 years of unreduced pension eligibility, and those already eligible for unreduced pension.



Career groupings	Aware (%)
Newer members (0 – 4.9)	90%
Newer members (5 – 9.9)	95%
Mid-career members (10 – 14.9)	98%
Mid-career members (15 – 21.9)	99%
Older members (within 10 yrs unreduced pension)	98%
Older members (within 5 yrs unreduced pension)	99%
Older members (eligible for unreduced pension)	99%

Q1. Please tell me whether or not you were aware of each provision prior to my call. How about: members can retire with unreduced monthly pension payments when their age plus the length of their teaching career equals eighty-five, or when they reach the age of 65.

POLLARA

Large majorities of all member segments aware of 85 factor

- Awareness is slightly lower among occasionally employed pension plan members (85%).

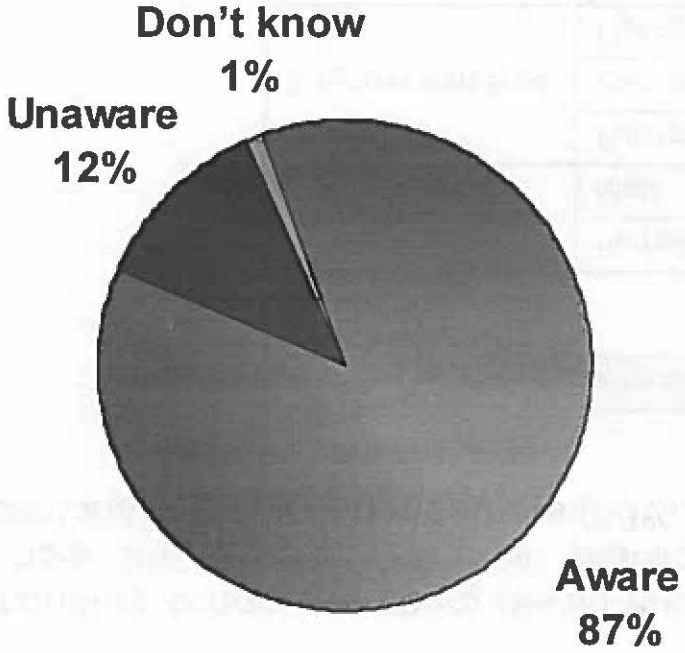
Member segment		Aware (%)
OVERALL		95%
Gender	Female	96%
	Male	95%
Employment type	Full-time	97%
	Part-time	95%
	Occasional	85%
Employer type	District school board – English	96%
	District school board – French	92%
Place of work	Elementary	95%
	Secondary	96%
Urban/Rural	Urban	95%
	Rural	97%

Less likely

POLLARA

Large majority of pension plan members aware of how their monthly pension is determined

- Almost nine-in-ten pension plan members (87%) are aware that their basic annual pension is determined through a formula.
- Awareness increases as members approach retirement, with almost three-quarters (71%) of newer members (0-4.9 years) to almost all (99%) unreduced pension eligible members being aware.



Career groupings	Aware (%)
Newer members (0 – 4.9)	71%
Newer members (5 – 9.9)	89%
Mid-career members (10 – 14.9)	93%
Mid-career members (15 – 21.9)	94%
Older members (within 10 yrs unreduced pension)	96%
Older members (within 5 yrs unreduced pension)	95%
Older members (eligible for unreduced pension)	99%

POLLARA

Q2. Please tell me whether or not you were aware of each provision prior to my call. How about: the monthly pension amount paid to a retiree is based on a formula that multiplies two percent by the years of service by the average of their best five annual salaries.

Awareness that pension amount based on formula widespread among all member segments

- Secondary school members (94%) and men (93%) are slightly more aware than average of how the amount of their pension is determined. Awareness is lowest among occasionally employed members (66%).

Member segment		Aware (%)
OVERALL		87%
Gender	Female	85%
	Male	93%
Employment type	Full-time	90%
	Part-time	84%
	Occasional	66%
Employer type	District school board – English	87%
	District school board – French	83%
Place of work	Elementary	84%
	Secondary	94%
Urban/Rural	Urban	87%
	Rural	91%

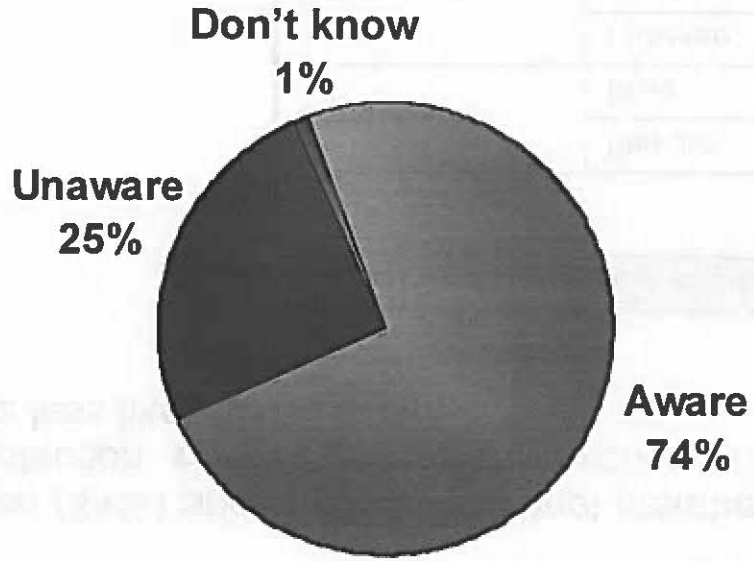
More likely

Less likely

POLLARA

Almost three-quarters of pension plan members aware that monthly payments are protected against inflation

- Almost three-quarters of pension plan members (74%) are aware that monthly pension payments are protected against inflation.
- Again, awareness is higher among members approaching retirement. Just over half (52%) of newer members (0-4.9 years of credit) are aware of inflation protection, compared to 85% of mid-career members (15-21.9 years). Unreduced pension eligible members are almost unanimously aware that a guaranteed cost-of-living adjustment is made (97%).



Career groupings	Aware (%)
Newer members (0 – 4.9)	52%
Newer members (5 – 9.9)	68%
Mid-career members (10 – 14.9)	80%
Mid-career members (15 – 21.9)	85%
Older members (within 10yrs unreduced pension)	92%
Older members (within 5 yrs unreduced pension)	93%
Older members (eligible for unreduced pension)	97%

POLLARA

Q3. Please tell me whether or not you were aware of each provision prior to my call. How about: The monthly pension payments made to retirees are protected against inflation. In other words, a guaranteed cost-of-living adjustment is made.

Inflation protection awareness widespread among most member segments

- Men (84%) and secondary school members (81%) are more likely to be aware of inflation protection, whereas occasional workers (55%) and French school board members (61%) are less likely to be aware.

Member segment		Aware (%)
OVERALL		74%
Gender	Female	70%
	Male	84%
Employment type	Full-time	76%
	Part-time	71%
	Occasional	55%

	Rural	78%

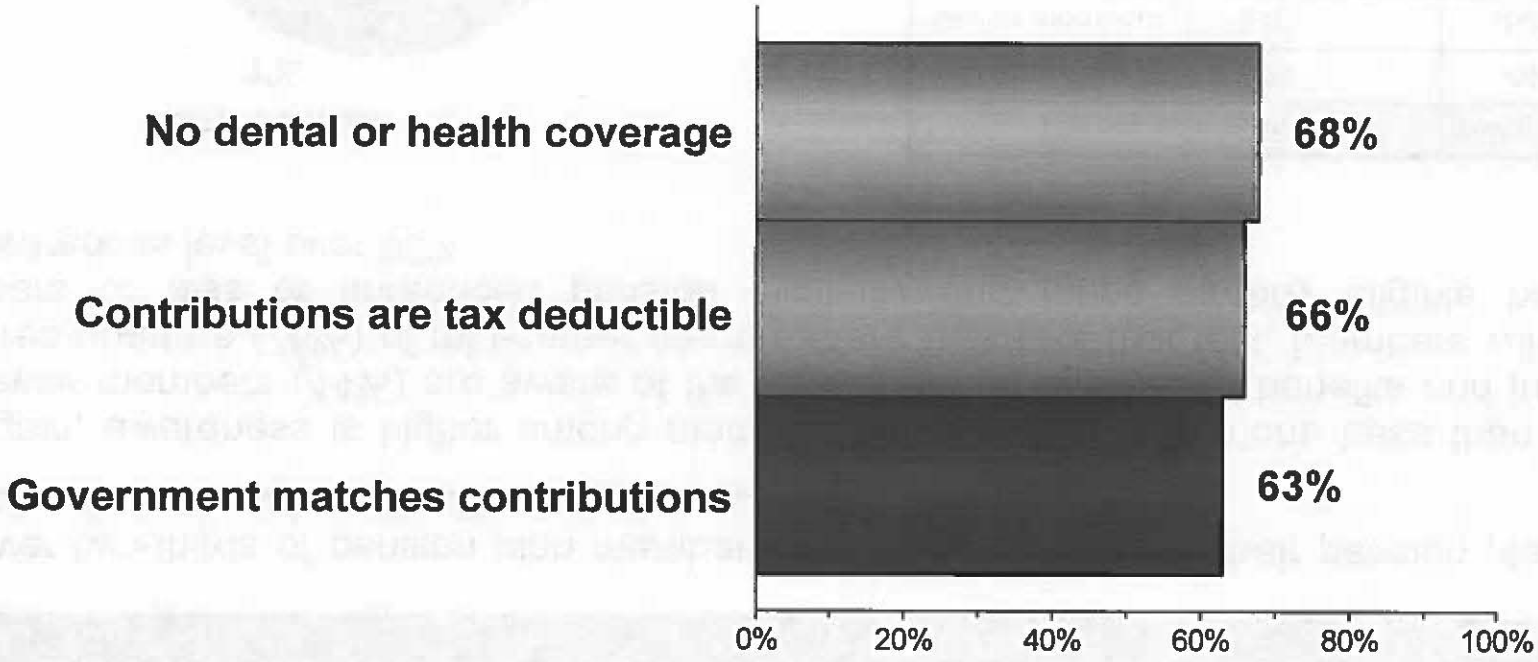
More likely

Less likely

POLLARA

Majority of pension plan members are aware of other aspects of their pension plan

- In addition to testing awareness of plan provisions, members' aided awareness of three other aspects of their plan were explored.
- More than six-in-ten members are aware of the lack of dental and health coverage in the plan, followed by the tax deductibility of their contributions, and contribution matching by the Ontario government.

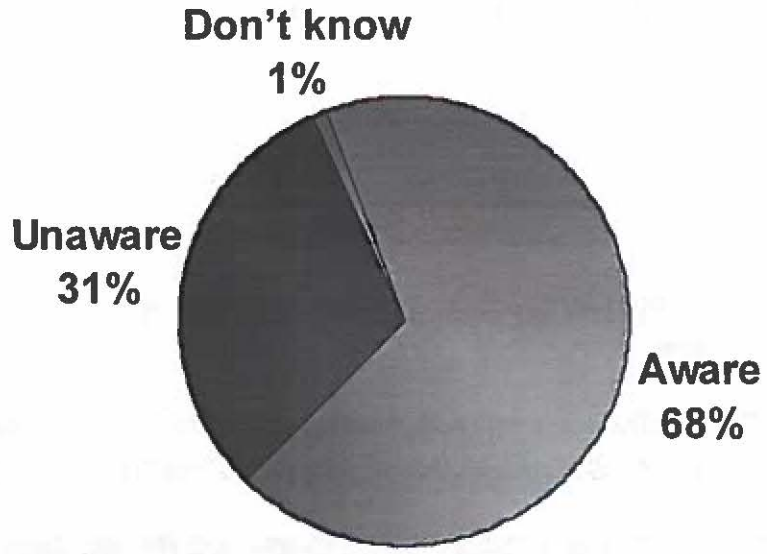


POLLARA

Qs 4-6. Now I'd like to ask you about some other pension issues. Prior to my call, were you aware or unaware…

More than two-thirds of members aware that pension plan does not provide dental and health benefit coverage

- Over two-thirds of pension plan members (68%) are aware that their pension plan does not include dental and health benefit coverage.
- Again, awareness is higher among members approaching retirement. Less than half of newer members (44%) are aware of the lack of dental and health benefits and just over three-quarters (76%) of mid-career members are aware of that fact. Members within five years or less of unreduced pension eligibility and those already eligible have an awareness level over 90%.



Career groupings	Aware (%)
Newer members (0 – 4.9)	44%
Newer members (5 – 9.9)	62%
Mid-career members (10 – 14.9)	75%
Mid-career members (15 – 21.9)	76%
Older members (within 10 yrs unreduced pension)	82%
Older members (within 5 yrs unreduced pension)	92%
Older members (eligible for unreduced pension)	98%

Q4. Prior to my call, were you aware or unaware that the pension plan <u>does not</u> provide dental and other health benefit coverage to retirees?

POLLARA

Majority of all member segments aware of lack of dental and health benefits

- Occasional workers (52%), French school board members (56%), and part-time workers (60%) are less likely to be aware that their pension plan lacks dental and health coverage.

Member segment		Aware (%)

POLLARA

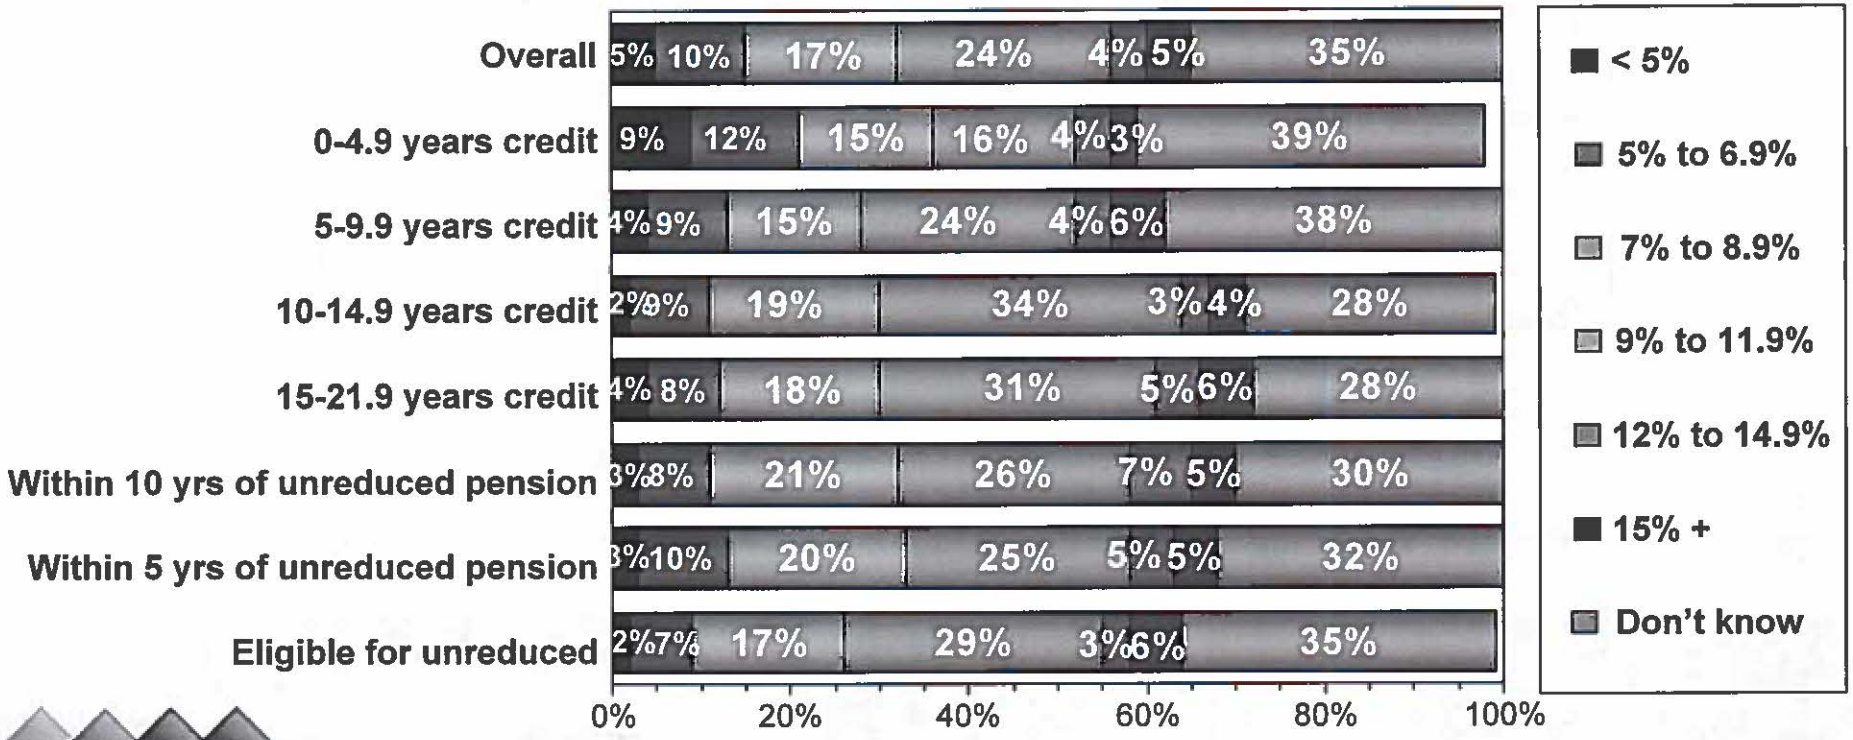
Almost one-quarter of members believe they contribute 9% to less than 12% of their before-tax salary to their pension plan

- Almost one-quarter (24%) of members correctly believe that they contribute 9% to less than 12% of their before-tax salary to their pension plan. Over one-third (35%) do not know how much they are contributing.
- Interestingly, members who are already eligible for an unreduced pension (35%) are almost as likely to say they don't know how much they contribute to their pension plan as newer members (39%). However, newer members are less likely to have chosen the correct percentage range (16% vs. 29%) than their older counterparts.



Q8. To the best of your knowledge, approximately what percentage of your before-tax salary do you currently contribute to your pension plan?

Men more likely then women to know their contribution amounts

- Men (32%) are more likely than women (21%) to be aware of current contribution levels. An additional 40% of women say they do not know how much they contribute, while occasional workers (43%) are most likely to provide this response.

Mid-career members (15 – 21.9)	24%	62%
Older members (within 10 yrs unreduced pension)	26%	65%
Older members (within 5 yrs unreduced pension)	27%	64%
Older members (eligible for unreduced pension)	24%	63%

Q15. Please imagine that your contributions are at the maximum amount you would be willing to contribute in order to keep all pension provisions at current levels. I'd like to read you a list of changes that could be made to future pension provisions in order to keep contributions from rising above this level. Please tell me whether you would be in favour or not it favour of each of the following changes. How about reducing your monthly pension for future service by about ten percent? By future service, I mean any benefits you would earn from a specified date in the future until the date you retire. Any benefits you earned in the past are guaranteed under Ontario's Pension Benefits Act.

POLLARA

Reduction to monthly pension by about 10% opposed by more than half of most member segments

- Occasional workers (45%) and French school board members (45%) are more likely to be in favour of reducing monthly pension for future service by 10%.

Member segment		In favour (%)	Not in favour (%)
OVERALL		32%	57%
Gender	Female	32%	57%
	Male	34%	57%
Employment type	Full-time	31%	59%
	Part-time	33%	53%
	Occasional	45%	44%
Employer type	District school board – English	32%	57%
	District school board – French	45%	41%
Place of work	Elementary	34%	55%
	Secondary	28%	61%
Urban/Rural	Urban	32%	58%
	Rural	35%	52%

More likely

Less likely

POLLARA

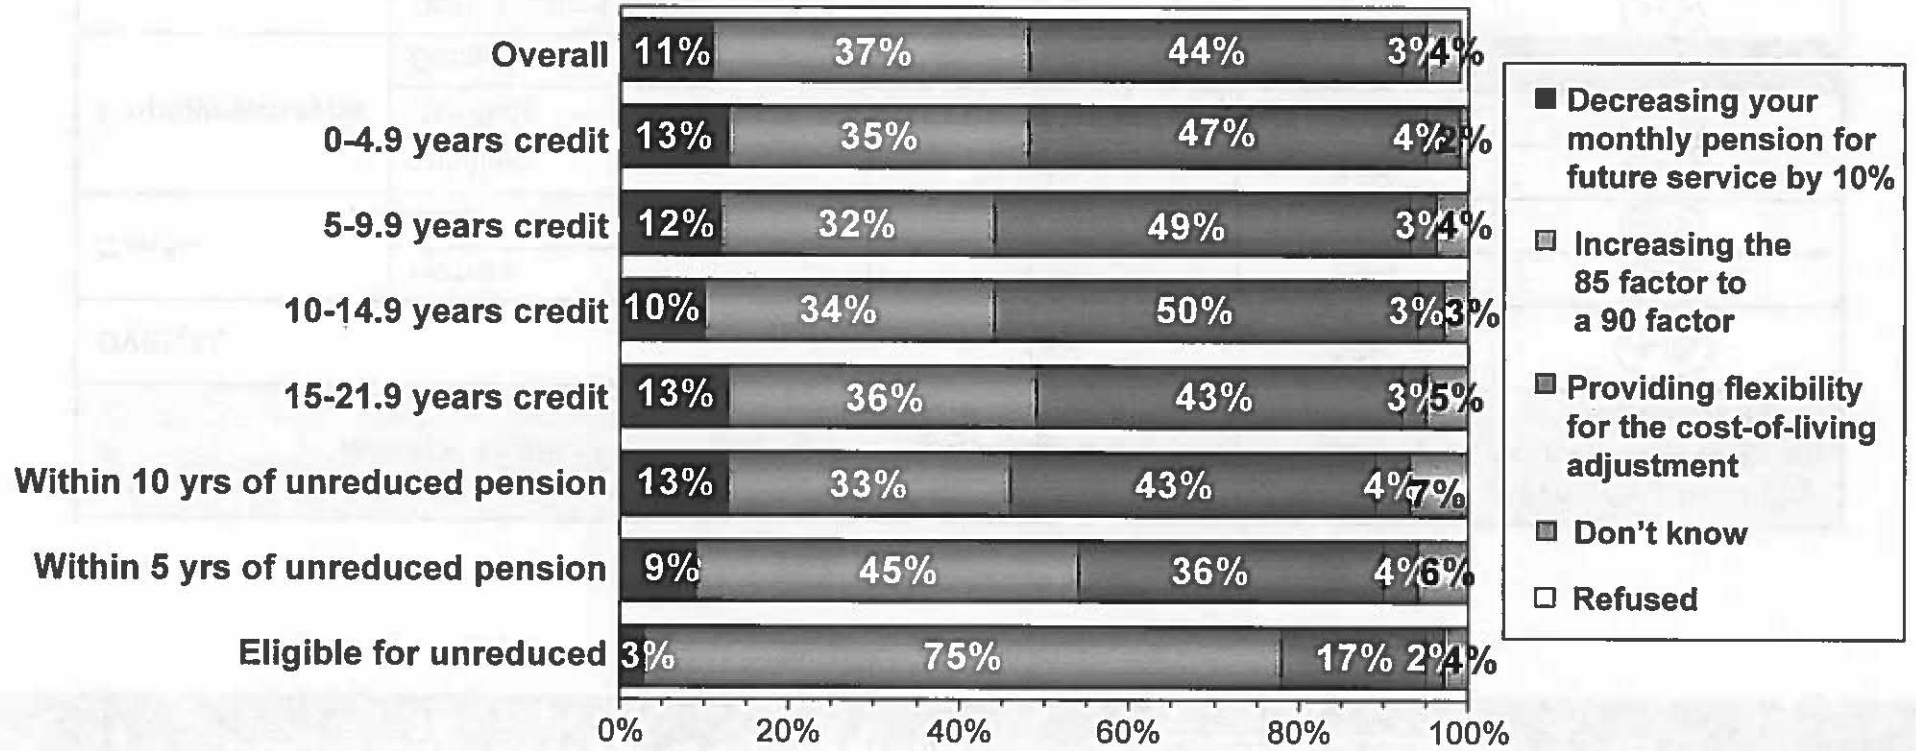
Providing flexibility for the cost-of-living adjustment is the preferred potential change to members' pension plan

- When asked which of the three potential plan changes they preferred, 44% of pension plan members opt for the flexible cost-of-living adjustment.
- This change is the top choice for five of the seven career groupings. Only members within five years of unreduced pension and those already eligible for unreduced pension prefer increasing the 85 factor to 90.



Q17. We've discussed three changes that could be made to pension provisions in the future, depending on the future financial situation of the pension plan. I'd like to read you descriptions of all three of these potential changes. when' I'm done, please tell me which one of these changes you would be most willing to have made to your pension plan.

Plurality of all member segments name flexible cost-of-living adjustment as preferred change

Member segment		Decreasing your monthly pension for future service by 10%	Increasing the 85 factor to a 90 factor	Providing flexibility for the cost-of-living adjustment
OVERALL		11%	37%	44%
Gender	Female	11%	36%	45%
	Male	11%	38%	43%
Employment type	Full-time	11%	37%	44%
	Part-time	12%	38%	42%
	Occasional	13%	31%	52%
Employer type	District school board – English	11%	37%	44%
	District school board – French	25%	20%	46%
Place of work	Elementary	12%	36%	45%
	Secondary	10%	38%	44%
Urban/Rural	Urban	12%	37%	43%
	Rural	8%	35%	50%

More likely Less likely

POLLARA

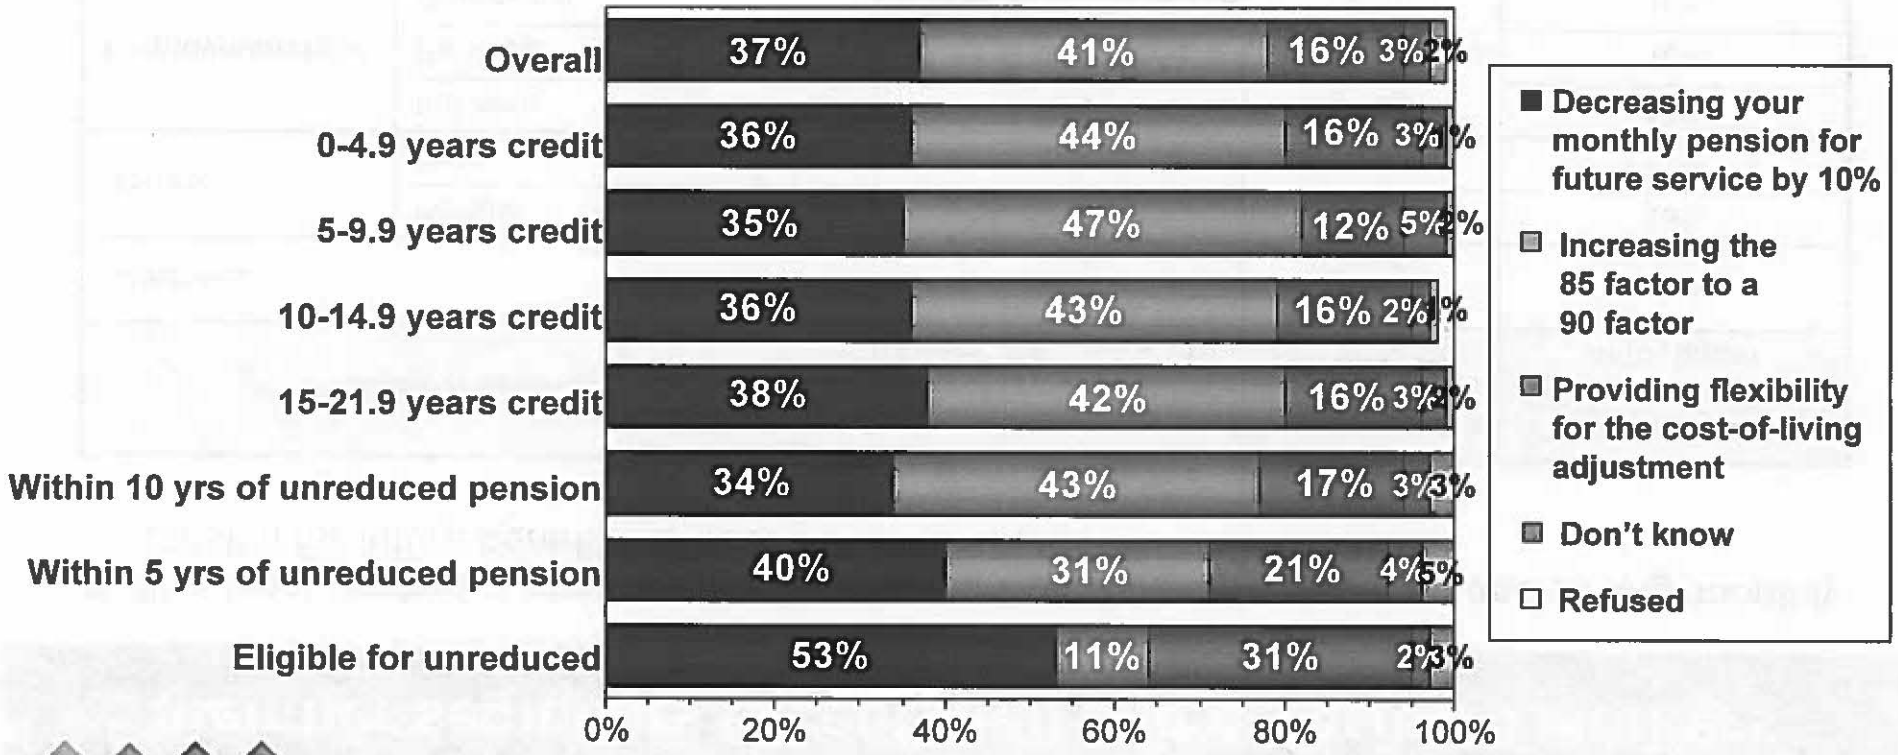
Increasing 85 factor to 90 is the least preferred potential change to the pension plan

- When asked which of the three potential plan changes they are least willing to have made, a plurality (41%) name increasing the 85 factor to a 90 factor.
- This option is the least favourite choice for five of the seven career groupings. Again, only members within five years of unreduced pension and those already eligible for unreduced pension have different least favourite options.



Q18. Which potential change are you least willing to have made?

Increasing 85 factor to 90 is the least preferred change for all member segments except men and occasional workers

- The least preferred change among men and occasional workers is decreasing monthly pension for future benefits by 10%.

Member segment		Decreasing your monthly pension for future service by 10%	Increasing the 85 factor to a 90 factor	Providing flexibility for the cost-of-living adjustment
OVERALL		37%	(41%)	16%
Gender	Female	36%	(42%)	16%
	Male	40%	38%	17%
Employment type	Full-time	36%	(41%)	17%
	Part-time	38%	(42%)	15%
	Occasional	(42%)	40%	15%
Employer type	District school board – English	38%	(40%)	16%
	District school board – French	23%	(58%)	15%
Place of work	Elementary	38%	(42%)	15%
	Secondary	35%	(39%)	19%
Urban/Rural	Urban	37%	(41%)	17%
	Rural	38%	(42%)	13%

More likely **Less likely**

POLLARA

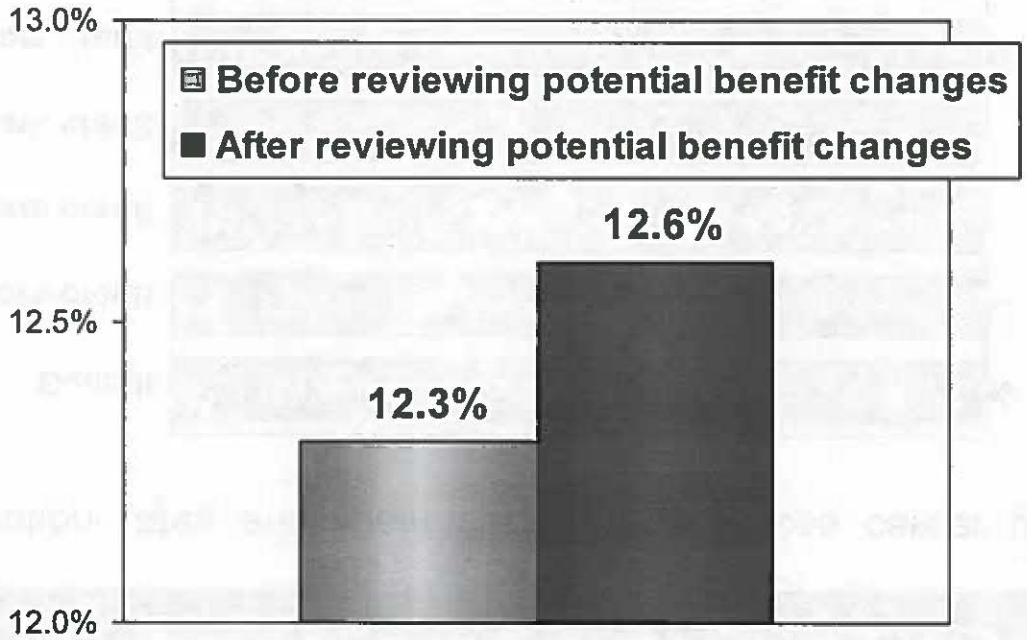
After reviewing potential benefit changes, members increase their maximum contribution from 12.3% to 12.6%

- After reviewing potential changes to their pension provisions, members were asked to identify the maximum contribution they would be willing to make in order to maintain their current provisions.
- Members' maximum contribution increased to an average maximum of 12.6% (up 0.3 points). A quarter (25%, down 2 percentage points) of members became willing to contribute up to 11%. More than two-thirds (67%, up 7 points) of members became willing to have contributions exceed 11%.



Q19. Now that you are more familiar with the types of changes that could be made to the pension plan, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%.

POLLARA

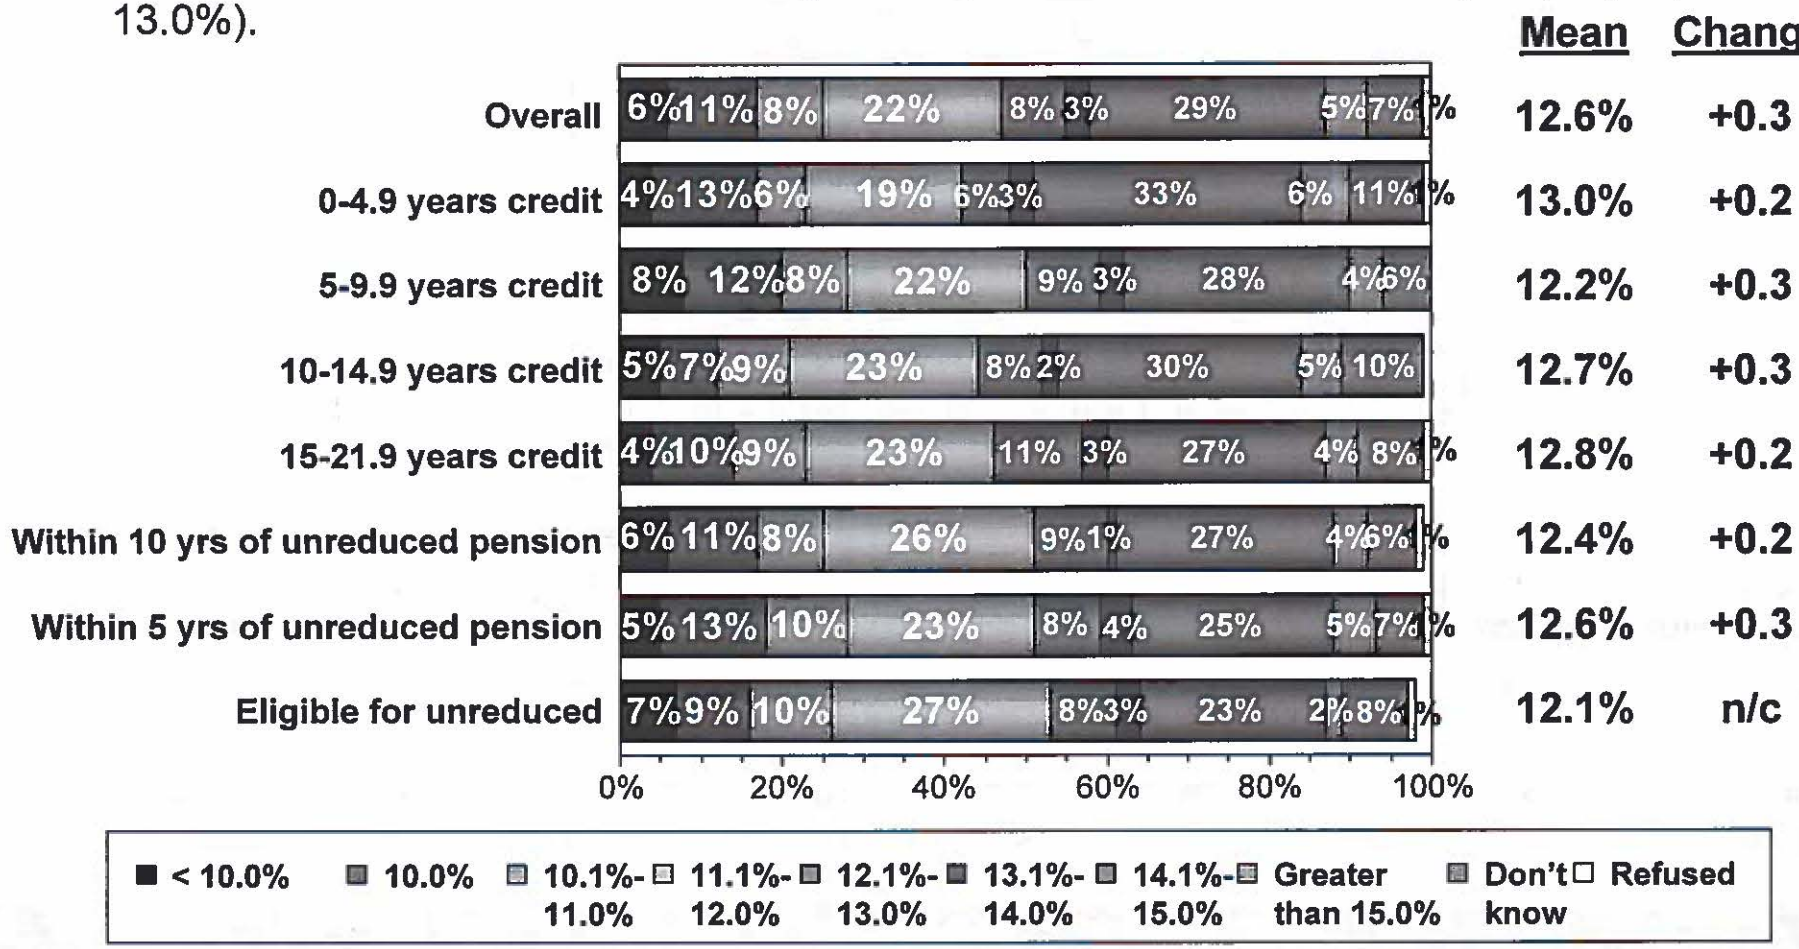
Maximum pension contributions fairly consistent among different career groupings

- Maximum contribution rates are again very similar across career groupings (12.1%-13.0%).



Q19. Now that you are more familiar with the types of changes that could be made to the pension plan, what is the maximum total percentage of your before tax salary that you would be willing to contribute in order to keep pension provisions at current levels? Please keep in mind you are currently contributing 10%.

POLLARA

Maximum contributions fairly consistent among different member segments

- Part-time workers (13%) once again are willing to contribute slightly more, whereas French school board members are willing to contribute the least (10.7%).

Member segment		Mean	Change
OVERALL		12.6%	+0.3
Gender	Female	12.6%	+0.2
	Male	12.3%	+0.1
Employment type	Full-time	12.5%	+0.2
	Part-time	13.0%	n/c
	Occasional	12.7%	+0.1
Employer type	District school board – English	12.6%	+0.2
	District school board – French	10.7%	n/c
Place of work	Elementary	12.6%	+0.2
	Secondary	12.4%	+0.2
Urban/Rural	Urban	12.5%	+0.2
	Rural	12.8%	+0.2

More likely

Less likely

POLLARA

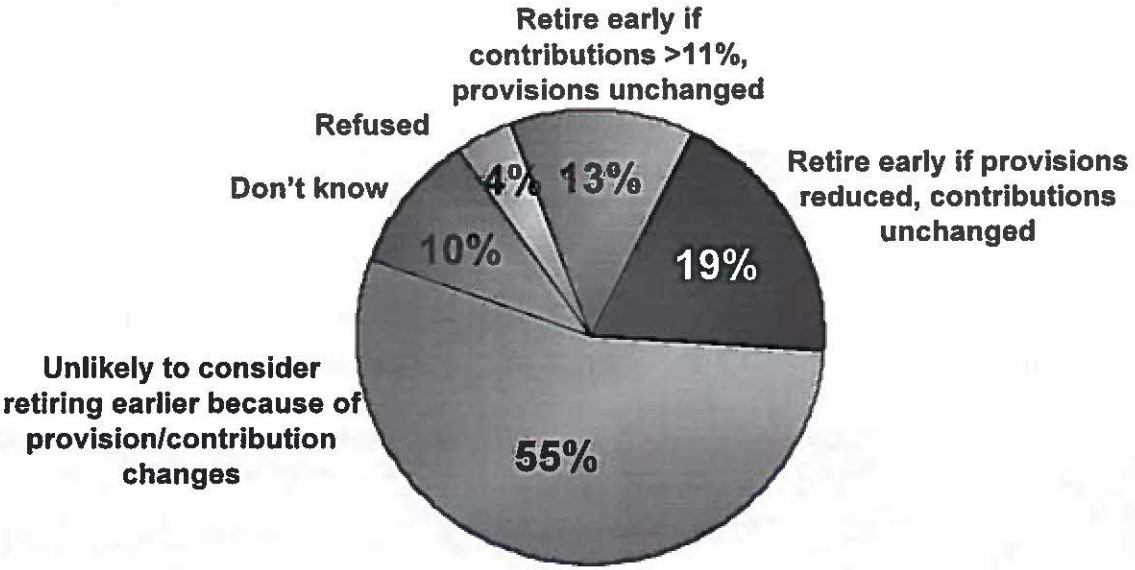
Early retirement slightly more likely if provisions reduced rather than contributions increased; more than half say intentions unchanged

- More than half (55%) of members approaching retirement (age plus years of credit ≥ 74) say they are unlikely to consider retiring earlier than planned as a result of changes to their future pension provisions and contribution rates.
- A further 19% would consider retiring earlier than planned if the pension provisions they will earn in future years are reduced, even if their contributions rates remain the same. If contributions increase to more than about 11% of their salary, 13% would consider retiring earlier than planned, even if their provisions are unchanged.
- Overall results are mirrored by members within five years of unreduced pension and those who are already eligible. Men (17%) are slightly more likely than women (10%) to retire if contributions increase to more than 11%.



Q20. (ASK IF AGE + YEARS OF CREDIT ≥ 74) Which ONE of the following three statements best represents you own viewpoint: (RANDOMIZE ORDER OF STATEMENTS)

Briefing on Draft Report.rtf

From: Petsche, Nadine (TBS) []
To: Colley, Matthew (CA - Toronto) (mcolley@deloitte.ca) [mcolley@deloitte.ca]; kdanyluk@deloitte.ca [kdanyluk@deloitte.ca]
CC: Veinot, Cindy (TBS) [Cindy.Veinot@ontario.ca]
Subject: Briefing on Draft Report
Date: Thursday, September 22, 2016 11:39:02

Matt/Kerry,

We have been asked to invite you to attend a short briefing of senior officials on the results in your draft report this afternoon (around 5:30 pm). As we are hoping to receive the draft report by 4 pm, hopefully that timing would work for you. The location of the meeting would be in the Whitney Block (close to the legislature, just north of our offices).

Please confirm your availability to provide an overview of your results this afternoon.

Thanks.

Nadine

Hi Nadine,

I can't make the 1:30 invitation you sent. I am travelling this afternoon and will be tackling airport security around then!

I can do a call later in the day, say between 5:30 and 7pm.
Or I can do a call earlier this morning before 12pm.

Tomorrow I am at a conference, but I could step out in the morning for a call.

Let me know what works best for you.

Lucy

Hello

We are in the process of preparing our budget and would like to know when your next billing on the above will arrive. So far you have billed us for $9129.27. I would really appreciate if you could provide me with the breakdown on how much you are planning to work on the above project for this fiscal which is ending on March 2017 and the next fiscal which starts from April 1, 2017 till your contract ends which would be in September 2017.

Your assistance would be greatly appreciate.

Thanks

Shyrose Virani

Hi Nadine and Ian

Do you know if there are other examples in the Province's public accounts where "quotas" are sold to other entities pursuant to regulations. An example would be fishing quotas (designed to limit the amount of fishing by certain participants), but I suspect this is not something Ontario is into - but are there other schemes with similar quotas. As I was updating the memo to articulate "what" the EAs are the similarities between them and other quotas made me think it was worth asking if there are any precedents, because this could be critical in forming/supporting a view over revenue recognition if there were.

Thanks,
Lucy

Hi Matt.

In sending you this note, I am providing you with contact info for Lucy Durocher, the lead contact from PwC who is the lead on an engagement to review the Province's pension accounting as related to OTPP, specifically as related to the reported pension asset balance on the Province's books.

Lucy understands that she is able to connect with you and that you are able to share information regarding the pension matter under assessment. Likewise, please feel free to connect with Lucy on this file.

Nadine

Attachment 1: Deck outline (JK) - OTPP Pension Asset Oct 27np.docx

---

Hi Lucy.

Jim has drafted an outline for a preliminary briefing deck, based on the previous version of the position paper. Attached are my suggested edits which I have not yet shared with him.

I was thinking that it might be worthwhile to also get your comments so that he could revise the content more efficiently (once transferred to a pp format, track changes will be more challenging).

Hoping that you have some time to reflect and provide feedback on the outline.

Would like to provide him feedback by tomorrow, if possible.

Thanks in advance.

Nadine

Deck outline (JK) - OTPP Pension Asset Oct 27np.pdf

Accounting by the Province of Ontario for the Ontario Teachers' Pension Plan

Preamble

Analysis is specific to OTPP

Constating documents are different than for other pension plans in Ontario and in other provinces

Issue being considered

The Province followed the same accounting for OTPP for the prior 14 years during which the pension accounting standard (Section PS 3250) was the same

In relation to the 2015-16 public accounts for the Province of Ontario, the OAG disagreed with the Province's accounting for OTPP and OPSEUPP

The OAG disagrees that the surplus in OTPP is a reportable~~n~~ asset to the Province on the basis that:

- ~~as~~ there is no~~t~~ a legally enforceable right to the assets
- ~~and~~ no agreement is in place at March 31, 2016 with the Ontario Teachers' Federation (OTF) to reduce future contributions

Reporting in the 2015-16 Public Accounts

The Province disagrees with the AG's interpretation of PSAB standards.

The Province intended to benefit from the reported pension assets through reduced contributions and has performed the requested pension asset ceiling test to confirm that the Province's estimated asset value is not impaired.

For purposes of the 2015/16 Public Accounts, the Province regulated the accounting treatment for pension assets for the jointly sponsored pension plans (OTPP and OPSEUPP) to reflect the Auditor General's interpretation of PSAB. The regulation was necessary to achieve the AG's accounting treatment and to allow management to sign off on the Statement of Responsibility (since Management does not agree with the AG's interpretation of PSAB as related to the jointly sponsored pension plans).

~~Regulated accounting for the 2015-16 public accounts does not reflect the Province's view of pension accounting under PSAS~~

Overview of OTPP

A jointly sponsored pension plan as defined in the Pension Benefits Act

The sponsors are the Province of Ontario and the OTF

The sponsors are jointly responsible for decision making, share in making contributions, and collectively address any plan surplus/deficit (at least every 3 years)

Formatted: List Paragraph, Bulleted + Level: 1 + Aligned at: 0.63 cm + Indent at: 1.27 cm

Formatted: Font: Bold

The plan administrator is an independent board of directors and follows the direction of the co-sponsors (not able to make any decisions w.r.t. contribution rates, uses of surpluses, etc.)

(INSERT SLIDE EXPLAINING PSAB STANDARDS AND COMPUTATION OF NET PENSION ASSET?)

PSAB options for recognition of pension asset were benefits to be realized through surplus withdrawal/contribution reductions…

Prior accounting for OTPP by the Province

Since 2001-2002, the Province has recorded its portion (50%) of the pension asset of OTPP in accordance with Section PS 3250

With regards to expected future benefit of the surplus, the Province would not expect to withdraw any surplus, but through reduced future contributions

-→ review history of use of surpluses for OTPP

~~Section PS 3250 is a primary source of GAAP which specifically addresses recognition and measurement of pension plans in government financial statements; compliance with PSAS requires following Section PS 3250 where applicable~~

Formatted: Strikethrough

Section PS 3250 was issued in 2001; there have not been consequential changes to the standard since its introduction

Question 1 – Recognition of a pension asset

First we address why the surplus of OTPP is an asset to the Province

Applicability of Section PS 3250 to OTPP

What is a JDBP?

~~Section PS 3250 specifically addresses the accounting for pension plans in government financial statements~~ Primary source of gaap

Shared control

~~Section PS 3250 defines different types of pension plans; OTPP qualifies as a joint defined benefit plan (JDBP) as the sponsors share control over the plan (share in decisions relating to administration, levels of benefits and contributions)~~

Formatted: Strikethrough

Definition of JDBP

XX

Concept of shared control and asset recognition

Section PS 3250 requires the government to account for its portion (as there is shared control) of a JDBP following the accounting requirements for a defined benefit plan within PS 3250; no distinction is made as to whether the plan is in a surplus or deficit position

"Shared control" is not addressed in the definition of an asset in the conceptual framework of PSAS; the definition requires "control" over an economic resource

~~Section PS 3250 was not revised when the existing conceptual framework was developed~~

Formatted: Strikethrough

The concept of shared control is included in other standards in PSAS for example relating to government partnerships (Section PS 3060) which existed prior to PS 3250

Conclusion on recognition

Section PS 3250 on its own is sufficient to assess ~~addresses~~ the accounting for OTPP by the Province

OTPP is appropriately classified as a JDBP under Section PS 3250

Section PS 3250 requires recognition by the Province of 50% of the plan assets of OTPP

Unilateral c~~C~~ontrol is not necessary for asset recognition (e.g. government partnerships), shared control is appropriate for a JDBP

Uncertainty relating to OTPP's pension surplus relates to measurement, not uncertainty regarding expected future benefits for the Province

Question 2 – Measurement of a pension asset

Second we address how to measure the pension asset of OTPP in the Province's financial statements

Yes- slide above would explain measurement

Reference to valuations of pension asset ceiling having been done and results (different assumptions w.r.t. 50% benefits from contribution reductions vs. benefits, etc)

Guidance in Section PS 3250 on measurement

Only the portion of the pension surplus for which expected future benefits are to be realized by the government is to be recognized as an asset

A valuation allowance is to be recorded for any excess of adjusted benefit assets over the expected future benefit (referred to as the asset ceiling test)

A government may benefit from the pension surplus by either withdrawing the surplus from the plan or by taking a contribution holiday

Guidance on measurement as applicable to OTPP

The Province expects future benefits from OTPP's plan surplus to be realized through reduced future contributions, not withdrawals

Expectations of benefitting from the surplus are based on:

1. The Teachers' Pension Act requires equal contributions from the Province and from plan members of OTPP;
2. The history of surplus utilization for OTPP demonstrates sharing of the financial benefit between sponsors;
3. No sponsor of OTPP can unilaterally utilize the plan's surplus; and
4. If the sponsors of OTPP cannot agree on how to utilize the pension surplus, the matter can be submitted to arbitration.

The Province considers that the uncertainties around how and when to utilize the surplus do not result in an inability or lack of entitlement to utilize the surplus

Calculating the limit on the carrying amount of an accrued benefit asset (asset ceiling test)

Section PS 3250 indicates the expected future benefit to be recorded by the government is the sum of:

a. The present value of its expected future accrual for service for the current number of active employees less the present value of minimum contributions the government is required to make regardless of any surplus; plus
b. The amount of the plan surplus that can be withdrawn in accordance with the existing plan and any laws and regulations.

The next slides will consider this calculation relative to the Province's 50% share of OTPP

Through withdrawal of the surplus (Part b of the asset ceiling test)

Section PS 3250 requires that the expected future benefit include amounts to which a government has a legally enforceable right of withdrawal; the concept of legal enforceability is included in PS 3250 but relative only to the withdrawal of a surplus

Commented [np1]: This wording is not right. Need to position properly.

In accordance with the Funding Management Policy for OTPP, the parties must negotiate ~~a side agreement must be reached by the sponsors~~ in order for a withdrawal of the surplus to happen.

Commented [np2]: Insert reference to FSCO?

As the Province does not have a signed~~de~~ agreement with OTF regarding the withdrawal of the surplus, there is no legally enforceable right of withdrawal, and there is no expected future benefit for the

Province ~~under part b~~with reference to a withdrawal of surplus; however, as stated above, the Province expects to benefit through future contribution reductions, not surplus withdrawals.

Through reducing future contributions (Part a of the asset ceiling test)

The present value of its expected future accrual for service is typically calculated based on the Province's share (50% for OTPP) of the current service cost reported in the most recent actuarial valuation taken into perpetuity

There is no guidance in PSAS on determining the present value of minimum contributions the government is required to make; professional judgement is required. The Province engaged consultants to calculate this value for OTPP considering different assumptions on future minimum contributions.

Commented [np3]: Need to insert reference to the 3 year mandated negotiation timeline and/or when plan is in funding surplus position.

For purposes of OTPP in the 2015-16 public accounts, 11 years was used by the Province reflecting management's best estimate of the number of future years for which current minimum contributions are to be made until the Income Tax Act limits are reached

Based on the Province's best estimate calculation of the expected future benefit, no valuation allowance was ~~recorded~~ deemed necessary in relation to the pension asset of OTPP at March 31, 2016

Other guidance in PSAS on measurement

Section PS 2130 provides guidance on dealing with measurement uncertainty

Measurement uncertainty in pension plan accounting exists for example in the estimation of the valuation allowance and in the determination of the discount rate (which is often management's best estimate of the rate of return on plan assets)

Historical rates of return on plan assets have supported the past discount rates used by the Province in relation to OTPP

Comparability of Ontario's accounting for JDBPs to other Provinces

Provinces such as British Columbia and New Brunswick do not report assets for their provincial joint sponsored pension plans or alternatively provide a valuation allowance to reduce the pension asset balance to nil

The difference in accounting versus the Province of Ontario (for OTPP) results from these other provinces not having any right to the pension surpluses unlike in Ontario

Conclusion on measurement

The Province's position is that the attributes of the JDBP arrangements for OTPP entitle the Province to access its portion of the plan surplus through the right to negotiate its use of the Province's benefit through future reduced contributions

Significant professional judgement and estimation is involved in determining the valuation allowance under Section PS 3250; the Province has applied reasonable estimates

Based on the result of modelling performed in relation to the asset ceiling test, the Province concluded that no valuation allowance was ~~concluded to be appropriate by the Province~~necessary to the pension asset that would have otherwise be reported on the Province's books as at March 31, 2016.

Determining shared control (002).pdf

Determining Shared Control for Government Partnerships

Background:

Paragraph PS 3060.06 defines a government partnership as follows:

> A government partnership is not a government organization but is a contractual arrangement between the government and a party or parties outside of the government reporting entity that has all of the following characteristics:
>
> a) the partners co-operate toward achieving significant clearly defined common goals;
> b) the partners make a financial investment in the government partnership;
> c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and
> d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.
>
> The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control.

Determining whether the definition of a government partnership is met for a certain situation can be difficult. Much of this difficulty arises when trying to determine whether the criteria in subparagraph PS 3060.06(c) is met. Section PS 3060 does not provide a significant amount of guidance on how to determine shared control. However paragraphs .13 and .20 state the following [emphasis added]:

> .13 **The contractual arrangement establishes shared control** over the government partnership. Such a requirement **ensures that no single partner is in a position to control the activities of the government partnership unilaterally**. The arrangement **identifies those decisions in areas essential to the goals** of the government partnership **that require the consent of all the partners** and **those decisions which may require the consent of a specified majority of partners**.
>
> ...
>
> .20 Shared control of a government partnership means that the partners make **decisions related to the financial and operating activities** of the government partnership **on an ongoing basis based on the terms of the contractual arrangement**; **none of the partners is in a position to exercise unilateral control over the government partnership**. When there is shared control, partners have an **active ongoing interest or relationship** in the arrangement other than as passive investors or as parties to a purchase / sale transaction. Shared control would exist, for example, when a joint board is established to oversee the provision of police or fire protection services for a number of local governments.

Question 1: For the criteria on shared control in subparagraph PS 3060.06(c) to be met, what are the essential decisions that would be required to be made by unanimous consent of the board members?

Paragraph PS 3060.13 states that the contractual arrangement establishes shared control over the government partnership…The arrangement identifies **those decisions in areas essential to the goals of the government partnership that require the consent of all the partners** and those decisions which may require the consent of a specified majority of partners.

Additionally, paragraph PS 3060.20 states shared control of a government partnership means that the partners **make decisions related to the financial and operating activities of the government partnership** on an ongoing basis based on the terms of the contractual arrangement…

Based on what is in paragraphs PS 3060.13 and .20, it is clear that the decisions which require the consent of all the partners are those that are essential to the goals of the government partnership, which would include decisions related to the financial and operating activities of the government partnership. Section PS 3060 does not provide specific guidance on how to determine what these essential decisions would be. As a result, a municipality, for example, that is trying to determine whether it has shared control of an entity, would apply one of the following views:

View A – Determination of what the essential decisions of the entity are would be considered in the context of the indictors of control in Section PS 1300, Government Reporting Entity.

Since there is no specific guidance in Section PS 3060 that assists in determining what these essential decisions would be, it would be appropriate for a municipality to consider the indicators of control in paragraphs PS 1300.18-.19 in determining what the essential decisions of the entity are in the above situation.

View B – Determination of what the essential decisions of the entity are would be considered by also looking to guidance outside of the PSA Handbook.

The indicators of control in paragraphs PS 1300.18-.19 are a good starting point for determining the essential decisions of the entity. However, these paragraphs do not specifically consider which decisions most affect the "activities and goals" of the partnership. These "activities and goals" may be considered equivalent to the "relevant activities" of an entity as described in IFRS 10, *Consolidated Financial Statements.* Therefore, it may be helpful to look outside the PSA Handbook and to the guidance in IFRS when determining the essential decision of the entity.~~Since there is no specific guidance in the PSA Handbook on determining what the essential decisions would be that would result in shared control, a municipality could decide to look outside of the PSA Handbook and could look to IFRS for guidance.~~ IFRS 10, Consolidated Financial Statements, and IFRS 11, Joint Arrangements, provide guidance on what is considered in determining control and joint control[1]. Under this view, in determining the essential decisions of the entity the guidance in IFRS 10 on relevant activities and substantive vs. protective rights would also be applied.

View C – Determination of what the essential decisions of the entity are would be made by using professional judgment.

[1] The determination of control in IPSAS 35, *Consolidated Financial Statements,* is based on the same principles as IFRS 10.

Since there is no specific guidance in the PSA Handbook on determining what the essential decisions of the entity are that would result in shared control and because a government would not be required to look outside of the PSA Handbook for guidance in making this determination, each government would use its own professional judgment and consider the facts and circumstances of the situation to determine whether the decisions that require unanimous consent are essential decisions of the entity and confer on the government shared control.

Let's examine this issue and each of the views by looking at the scenario in Appendix A.

Question 2: If it is determined there is not shared control in the scenario in Appendix A, the entity would not be a government partnership. Since the entity is not controlled by a single government, it would not be any type of government organization. The entity is also not a government itself nor is it a government component since it is a separate legal entity. As a result, the entity that was created by and is owned by a group of governments would not be with the scope of the PSA Handbook. Does this highlight an issue with the scope of the PSA Handbook?

Appendix A:

Scenario:

A contractual arrangement was entered into by 10 municipalities. In accordance with the terms of the contractual arrangement, a separate entity has been incorporated.

The contractual arrangement was entered into and the entity was formed in order to provide specific municipal services to the residents of the 10 municipalities and to share the costs and revenues associated with providing those services (paragraph PS 3060.06(a) is met).

Each municipality made an initial financial investment in the entity and took back a 10% interest in the incorporated entity. This initial financial investment was used to construct the infrastructure required to provide the services to the 10 municipalities (paragraph PS 3060.06(b) is met).

The entity's annual operations are funded by users fees charged to each participating municipality based on the usage of the services provided by the entity.

The entity is run by a board of 10 directors. Each of the 10 municipalities appoints one director who serves for a three year term. Each director has one vote. The board operates in accordance with the terms of the contractual arrangement and holds meetings on a regular basis. The following decisions must be made my unanimous consent:

- Approval of any significant financial investment required by the municipalities;
- Approval of any borrowing arrangements the entity wants to enter into;
- Approval of any additional municipality that wants to participate in the contractual arrangement in the future;
- Approval of a change to the contractual arrangement; and
- Approval to terminate the contractual arrangement.

All other decisions are required to be made by majority vote of the board members.

The 10 municipalities share on an equitable basis the significant risks and benefits associated with the operations of the entity (paragraph PS 3060.06(d) is met).

Based on the above information ~~above~~ it is clear that the criteria in sub paragraphs PS 3060.06 (a, b, and d) of the definition of a government partnership have been met. Please consider your response to the following views in terms of whether or not the criteria in subparagraph (c) on shared control has been met.

View A – Determination of what the essential decisions of the entity are would be considered in the context of the indictors of control in Section PS 1300, Government Reporting Entity

Since there is no specific guidance in Section PS 3060 that assists in determining what these essential decisions would be, it would be appropriate for a municipality to consider the indicators of control in paragraphs PS 1300.18-.19 in determining what the essential decisions of the entity are in the above situation.

Indicators of control
.18 There are certain indicators that provide more persuasive evidence of control:

a) government has the power to unilaterally appoint or remove a majority of the members of the governing body of the organization;	N/A
b) government has ongoing access to the assets of the organization, has the ability to direct the ongoing use of those assets, or has ongoing responsibility for losses;	This indicator may be considered to be met in the context of shared control since approval of any significant financial investment by the municipalities requires unanimous consent; and the municipalities share on an equitable basis the significant risks and benefits associated with the operations of the entity.
c) government holds the majority of the voting shares or a "golden share" that confers the power to govern the financial and operating policies of the organization; and	N/A
d) government has the unilateral power to dissolve the organization and thereby access its assets and become responsible for its obligations.	This indicator would be met in the context of shared control since the contractual agreement between the municipalities that governs the entity can only be terminated by unanimous consent.
.19 Other indicators that may provide evidence of control exist when the government has the power to:	
a) provide significant input into the appointment of members of the governing body of the organization by appointing a majority of those members from a list of nominees provided by others or being otherwise involved in the appointment or removal of a significant number of members;	N/A
b) appoint or remove the CEO or other key personnel;	This indicator would not be met in the context of shared control since this is not a decision that would require unanimous consent, but instead would be made by majority vote.
c) establish or amend the mission or mandate of the organization;	This indicator would be met in the context of shared control since the mission and mandate of the entity would be laid out in the contractual arrangement and any changes to the contractual arrangement must be made by unanimous consent.
d) approve the business plans or budgets for the organization and require amendments, either on a net or line-by-line basis;	This indicator would not be met in the context of shared control since decisions about the entity's business plan or annual budget are~~would~~ not required to be made by unanimous consent, but instead would be made by majority vote.
e) establish borrowing or investment limits or restrict the organization's investments	This indicator for shared control would be met in the context of the borrowing criteria -since approval of any borrowing arrangements the

	entity wants to enter into must be made by unanimous consent. However, this indicator would not be met for shared control in terms of the investments since ~~-~~any decisions regarding what the entity can invest any excess cash do not require unanimous consent, but instead ~~in~~ would be made by majority vote.
f) restrict the revenue-generating capacity of the organization, notably the sources of revenue; and	This indicator would not be met in the context of shared control since a change in the user fees charged by the entity~~,~~ (which is its primary source of revenue~~,~~) is not a decision that ~~would~~ requires unanimous consent, but instead would be made by majority vote.
g) establish or amend the policies that the organization uses to manage, such as those relating to accounting, personnel, compensation, collective bargaining or deployment of resources.	This indicator would not be met in the context of shared control since this is not a decision that ~~would~~ requires unanimous consent, but instead would be made by majority vote.

In considering the indicators outlined in paragraphs PS 1300.18-.19 above in relation to this scenario each municipality may determine that it has shared control in this situation. This is because, the guidance in paragraph PS 1300.18 are considered to be more persuasive indicators of control and the indicator in .18(b) may be considered to be met and the criteria in .18(d) is met, while the remaining criteria in .18(a) and (c) are not considered applicable in this situation. This is further supported by the fact that the criteria in paragraph PS 1300.19(c) and (e) also appear to be met. Therefore, it could be argued that each municipality has shared control of the entity in this situation since the decisions which require unanimous~~the~~ consent of all the partners (i.e. approval of any significant financial investment required by the municipalities, approval of any borrowing arrangements the entity wants to enter into, approval of any additional municipality joining the contractual arrangement in the future, approval of any changes to the contractual arrangement and termination of the contractual arrangement) are those~~e~~ decisions that are "essential" to the goals of the entity.

View B – Determination of what the essential decisions of the entity are would be considered by also looking to guidance outside of the PSA Handbook

The indicators of control in paragraphs PS 1300.18-.19 are a good starting point for determining the essential decisions of the entity. However, these paragraphs do not specifically consider which decisions most affect the "activities and goals" of the partnership. These "activities and goals" may be considered equivalent to the "relevant activities" of an entity as described in IFRS 10, *Consolidated Financial Statements*. Therefore, it may be helpful to look outside the PSA Handbook and to the guidance in IFRS 10 when determining the essential decision of the entity. ~~If we look at the guidance in~~ Under IFRS 10~~, *Consolidated Financial Statements,* regarding~~ when assessing~~determining~~ control[2], the~~is~~ standard requires a determination of the entity's relevant activities and how decisions about those

[2] Note determining joint control under IFRS 11 is based on the same control principles contained in IFRS 10. Additionally, the determination~~ing~~ of control in IPSAS 35, *Consolidated Financial Statements,* is also based on the same principles as IFRS 10.

relevant activities are made. Paragraphs IFRS 10.B11-12 provide the following examples of relevant activities:

> B11 For many investees, a range of operating and financing activities significantly affect their returns. Examples of activities that, depending on the circumstances, can be relevant activities include, but are not limited to:
>
> a) selling and purchasing of goods or services;
> b) managing financial assets during their life (including upon default);
> c) selecting, acquiring or disposing of assets;
> d) researching and developing new products or processes; and
> e) determining a funding structure or obtaining funding.
>
> B12 Examples of decisions about relevant activities include but are not limited to:
>
> a) establishing operating and capital decisions of the investee, including budgets; and
> b) appointing and remunerating an investee's key management personnel or service providers and terminating their services or employment.

In the scenario being considered, relevant activities would be the municipal services provided by the entity. Decisions about those relevant activities would be those that determine the level and types of services provided, the user fees charged for the services, and decisions made to approve the entity's operating and capital budgets. According to the scenario facts all of these types of decisions are made by majority vote of the participating municipalities, they are not decisions that are required to be made by unanimous consent.

Under IFRS 10, when an investor is assessing whether it has control over an investee, it only considers substantive rights that it holds. It does not consider "protective rights". Protective rights relate to fundamental changes to the activities of an investee or apply in exceptional circumstances, and do not give a party power over an entity to which the rights relate. IFRS 10 also provides guidance on identifying protective rights and paragraph B28 provides the following examples:

> B28 Examples of protective rights include but are not limited to:
>
> a) a lender's right to restrict a borrower from undertaking activities that could significantly change the credit risk of the borrower to the detriment of the lender.
> b) the right of a party holding a non-controlling interest in an investee to approve capital expenditure greater than that required in the ordinary course of business, or to approve the issue of equity or debt instruments.
> c) the right of a lender to seize the assets of a borrower if the borrower fails to meet specified loan repayment conditions.

For a right to be substantive, the holder must have the practical ability to exercise that right (IFRS 10.B22). Determining whether rights are substantive requires judgement and paragraph B23 provides a list of factors to consider in making this determination (refer to full text of paragraph B23 included in Appendix B).

Based on the guidance in IFRS 10, when a municipality is determining whether it has shared control of the entity in this situation, it would consider those substantive rights that it has related to the entity's relevant activities and it would not consider protective rights in making this determination. The rights related to approvals of any significant financial investment required by the municipalities, approval of borrowing arrangements the entity wants to enter into, approval of an additional municipality joining the contractual arrangement in the future and termination of the contractual arrangement would likely be considered protective rights in that they relate to fundamental changes to the business and not to directing the primary activities.

Therefore, based on the above analysis the municipalities in this scenario would not have shared control over the entity since the decisions that require unanimous consent are not substantive decisions about the entity's relevant activities.

View C – Determination of what the essential decisions of the entity are would be made by using professional judgment

Under this view each municipality would use its own professional judgment and consider the facts and circumstances of the situation to determine whether the decisions that require unanimous consent are in fact essential decisions of the entity and therefore provide the municipality with shared control. Under this view it is possible for there to be diversity in practice as each of the municipalities involved could differ in what they believe the essential decisions of the entity are and as a result some municipalities could determine they have shared control while others may determine they do not have shared control.

Are there any other views?

Appendix B:

Excerpts from Section *PS 3060, Government Partnerships*

.06 The following definitions have been adopted for the purposes of this Section:
A government partnership is not a government organization but is a contractual arrangement between the government and a party or parties outside of the government reporting entity that has all of the following characteristics:

e) the partners co-operate toward achieving significant clearly defined common goals;
f) the partners make a financial investment in the government partnership;
g) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and
h) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.

The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]

...

ELEMENTS THAT DEFINE A GOVERNMENT PARTNERSHIP

Contractual arrangement

.11 A distinctive characteristic common to all government partnerships is that two or more partners are bound by a contractual arrangement which establishes that the partners have shared control over the government partnership. This characteristic of shared control distinguishes a government's interest in a government partnership from investments in other activities in which the government may exercise control (see GOVERNMENT REPORTING ENTITY, Section PS 1300, BASIC PRINCIPLES OF CONSOLIDATION, Section PS 2500, ADDITIONAL AREAS OF CONSOLIDATION, Section PS 2510, and PORTFOLIO INVESTMENTS, Section PS 3041).

.12 Activities conducted with no formal contractual arrangement, but which meet the definition of a government partnership set out in paragraph PS 3060.06, are in substance government partnerships for the purposes of this Section.

.13 The contractual arrangement establishes shared control over the government partnership. Such a requirement ensures that no single partner is in a position to control the activities of the government partnership unilaterally. The arrangement identifies those decisions in areas essential to the goals of the government partnership that require the consent of all the partners and those decisions which may require the consent of a specified majority of partners.

.14 The contractual arrangement may be evidenced in a number of ways, for example, by a contract between the partners or minutes of discussions between the partners. In some cases, the arrangement is incorporated in the enabling legislation, articles or other by-laws of the government partnership. Whatever its form, the contractual arrangement is usually in writing and deals with such matters as:

(a) the activity, duration and reporting obligations of the government partnership;
(b) the appointment of the board of directors or equivalent governing body of the government partnership and the voting rights of the partners;
(c) the financial investments by the partners; and
(d) the sharing by the partners of the output, revenues, expenses or surpluses or deficits of the government partnership.

.15 In some cases, the contractual arrangement may designate a partner, or an outside party or parties, as the manager or operator of the government partnership. The manager does not control the government partnership, nor does the manager exercise shared control with the partners solely by virtue of his or her management role. Rather, the manager acts within the financial and operating policies that the partners have prescribed.

.16 A government may incorporate regulations in any contractual arrangement it enters into (e.g., level of service, level of maintenance of an asset that may be returned to it at the end of a set term). Governments regulate a variety of activities with which they have no ongoing operational involvement. As such, regulations in and of themselves do not constitute shared control.

Significant clearly defined common goals

.17 Common goals are those that all partners share. For example, a number of communities may join together to build and operate a landfill site or a recreational facility. The significant common goals of the communities involve service provision and sharing the costs and revenues associated with the operations of the facility, and so, the arrangement would qualify as a government partnership.

.18 On the other hand, a community may hire an individual or organization to operate a recreational facility for a fee. The significant goals of the government are to provide a service and cost savings, while the significant goal of the management organization is to earn revenues from the contract to manage the facility. While the significant goals of each party are mutually beneficial, they are not common to both parties to the contract, and so, the arrangement does not qualify as a government partnership.

Financial investment

.19 A financial investment may be in the form of assets and/or assuming responsibility for ongoing operating costs. The investment of financial assets and tangible capital assets in the government partnership would be accounted for in accordance with paragraphs PS 3060.41-.54. The value assigned to the responsibility for ongoing operating costs would be that determined in the contractual arrangement for the government partnership.

Shared control

.20 Shared control of a government partnership means that the partners make decisions related to the financial and operating activities of the government partnership on an ongoing basis based on the terms of the contractual arrangement; none of the partners is in a position to exercise

unilateral control over the government partnership. When there is shared control, partners have an active ongoing interest or relationship in the arrangement other than as passive investors or as parties to a purchase / sale transaction. Shared control would exist, for example, when a joint board is established to oversee the provision of police or fire protection services for a number of local governments.

Shared risks and benefits

.21 In a government partnership, each partner is exposed to a share of the combined risks and shares in the benefits related to the common goals of the government partnership. In a government partnership, there must be an equitable sharing among the partners of the significant risks and benefits. For example, the government partners may operate a landfill site to provide a service to their constituents on a shared cost basis. The partners would generally share the operating and environmental risks, as well as the revenues associated with operating the landfill site.

.22 Risks and benefits would not be considered to be equitably shared in an arrangement where the government retains the full risk of owning an asset while allowing another party to receive the benefit of earning revenue from user fees derived from that asset. Risks and benefits would not be equitably shared when, for example, a government owned a highway that it allowed a private sector organization to operate and earn revenues from, based on the agreement and any necessary legislation.

FORMS AND STRUCTURES OF GOVERNMENT PARTNERSHIPS

...

Organizations under shared control

.27 An organization under shared control is a type of government partnership which involves the establishment of a separate organization (e.g., a corporation) in which each partner has an interest. The organization operates similarly to other organizations, except that a contractual arrangement between the partners establishes shared control over the economic activities of the organization.

.28 In an organization under shared control, each partner usually contributes cash or other resources to the government partnership. The organization owns the assets of the government partnership and incurs liabilities and expenses. It may enter into contracts in its own name and raise financing for the purposes of the activities of the government partnership. For example, several local governments may operate a transit organization to provide transit services to their constituents.

Excerpts from IFRS 10*, Consolidated Financial Statements*

Relevant activities and direction of relevant activities

B11 For many investees, a range of operating and financing activities significantly affect their returns. Examples of activities that, depending on the circumstances, can be relevant activities include, but are not limited to:

f) selling and purchasing of goods or services;
g) managing financial assets during their life (including upon default);
h) selecting, acquiring or disposing of assets;

i) researching and developing new products or processes; and
j) determining a funding structure or obtaining funding.

B12 Examples of decisions about relevant activities include but are not limited to:
c) establishing operating and capital decisions of the investee, including budgets; and
d) appointing and remunerating an investee's key management personnel or service providers and terminating their services or employment.

B13 In some situations, activities both before and after a particular set of circumstances arises or event occurs may be relevant activities. When two or more investors have the current ability to direct relevant activities and those activities occur at different times, the investors shall determine which investor is able to direct the activities that most significantly affect those returns consistently with the treatment of concurrent decision-making rights (see paragraph 13). The investors shall reconsider this assessment over time if relevant facts or circumstances change.
…

Rights that give an investor power over an investee
…
Substantive rights
B22 An investor, in assessing whether it has power, considers only substantive rights relating to an investee (held by the investor and others). For a right to be substantive, the holder must have the practical ability to exercise that right.

B23 Determining whether rights are substantive requires judgement, taking into account all facts and circumstances. Factors to consider in making that determination include but are not limited to:
a) Whether there are any barriers (economic or otherwise) that prevent the holder (or holders) from exercising the rights. Examples of such barriers include but are not limited to:
    i. financial penalties and incentives that would prevent (or deter) the holder from exercising its rights.
    ii. an exercise or conversion price that creates a financial barrier that would prevent (or deter) the holder from exercising its rights.
    iii. terms and conditions that make it unlikely that the rights would be exercised, for example, conditions that narrowly limit the timing of their exercise.
    iv. the absence of an explicit, reasonable mechanism in the founding documents of an investee or in applicable laws or regulations that would allow the holder to exercise its rights.
    v. the inability of the holder of the rights to obtain the information necessary to exercise its rights.
    vi. operational barriers or incentives that would prevent (or deter) the holder from exercising its rights (eg the absence of other managers willing or able to provide specialised services or provide the services and take on other interests held by the incumbent manager).
    vii. legal or regulatory requirements that prevent the holder from exercising its rights (eg where a foreign investor is prohibited from exercising its rights).
b) When the exercise of rights requires the agreement of more than one party, or when the rights are held by more than one party, whether a mechanism is in place that provides those parties with the practical ability to exercise their rights collectively if they choose to do so. The lack of such a mechanism is an indicator that the rights may not be substantive. The more parties

that are required to agree to exercise the rights, the less likely it is that those rights are substantive. However, a board of directors whose members are independent of the decision maker may serve as a mechanism for numerous investors to act collectively in exercising their rights. Therefore, removal rights exercisable by an independent board of directors are more likely to be substantive than if the same rights were exercisable individually by a large number of investors.

c) Whether the party or parties that hold the rights would benefit from the exercise of those rights. For example, the holder of potential voting rights in an investee (see paragraphs B47–B50) shall consider the exercise or conversion price of the instrument. The terms and conditions of potential voting rights are more likely to be substantive when the instrument is in the money or the investor would benefit for other reasons (eg by realising synergies between the investor and the investee) from the exercise or conversion of the instrument.

B24 To be substantive, rights also need to be exercisable when decisions about the direction of the relevant activities need to be made. Usually, to be substantive, the rights need to be currently exercisable. However, sometimes rights can be substantive, even though the rights are not currently exercisable.

…

B25 Substantive rights exercisable by other parties can prevent an investor from controlling the investee to which those rights relate. Such substantive rights do not require the holders to have the ability to initiate decisions. As long as the rights are not merely protective (see paragraphs B26–B28), substantive rights held by other parties may prevent the investor from controlling the investee even if the rights give the holders only the current ability to approve or block decisions that relate to the relevant activities.

Protective rights

B26 In evaluating whether rights give an investor power over an investee, the investor shall assess whether its rights, and rights held by others, are protective rights. Protective rights relate to fundamental changes to the activities of an investee or apply in exceptional circumstances. However, not all rights that apply in exceptional circumstances or are contingent on events are protective (see paragraphs B13 and B53).

B27 Because protective rights are designed to protect the interests of their holder without giving that party power over the investee to which those rights relate, an investor that holds only protective rights cannot have power or prevent another party from having power over an investee (see paragraph 14).

B28 Examples of protective rights include but are not limited to:

d) a lender's right to restrict a borrower from undertaking activities that could significantly change the credit risk of the borrower to the detriment of the lender.
e) the right of a party holding a non-controlling interest in an investee to approve capital expenditure greater than that required in the ordinary course of business, or to approve the issue of equity or debt instruments.
f) the right of a lender to seize the assets of a borrower if the borrower fails to meet specified loan repayment conditions.

Draft Memo For Your Review - Assessment of HOOPP Letter (dated April 28th).rtf

Attachment 1: HOOPP Letter (Apr 28) Assessment_For EY review.docx
Attachment 2: image003.jpg

Hi Christina/Shayan,

As you may recall that HOOPP provided a letter (dated April 28th) to the Province indicating a change in indexation change for expected terminated members. Please see Appendix 1 for the original HOOPP letter.

We did an analysis based on your initial feedback and some consultation with our Pension Policy group. Please see attached a draft memo for your review.

Please provide comments.

We can have a brief discussion on this topic tomorrow if you wish.

Thanks,

Alicia

HOOPP Letter (Apr 28) Assessment_For EY review.pdf

Issue

HOOPP made a change in an actuarial assumption by reflecting an allowance for future inflation protection for terminated members who choose to take a lump-sum payout. How would this change impact the Province's 2016-17 Public Accounts and future years?

Background

In December each year, the Province sends a request letter to the HOOPP board requesting the actuarial valuations of the HOOPP obligation for the Province's budget and Public Accounts reporting purposes. The response from HOOPP for the purposes of the fiscal 2016-17 interim forecast and Public Accounts was received on January 26th, 2017.

For update purposes, since the original plan estimates in the January letter are based on information as at December 31st, for purposes of the Public Accounts, the Province also requests HOOPP to communicate any events between December 31st and March 31st of the following year which would affect the valuation results of the January response letter in a material way. HOOPP responded to this request on April 28th, 2017 (see Appendix 1) indicating that subsequent to the actuarial valuation provided to the Province on January 26th, 2017, they made an assumption change which increased the year end plan obligation. The assumption change was to include 100% future inflation protection for post-2005 service for anticipated terminated members who choose to take a lump-sum payout which is referred to as a commuted value.

HOOPP indicated that the assumption change was made as a result of discussions with the provincial regulator, Financial Services Commission of Ontario (FSCO). The impact of this change was an increase to HOOPP's obligation of $1 billion which was reported and disclosed in HOOPP's annual report for the year ending December 31st, 2016.

Analysis

In determining the estimated pension assets/liabilities, and pension expense related to HOOPP, management's best estimates are made for the following factors:

- Rate of return/Discount rate,
- Salary growth rate, and
- Inflation indexation.

Currently, the Province uses the same assumptions that HOOPP is using for its valuation with the exception of the above key assumptions (see Appendix 2 for the differences in assumptions used by the Province and HOOPP).

With regards to inflation indexation, while the Province has used 75% inflation indexation assumption for all future years, HOOPP only includes board approved ad hoc inflation protection in the obligation for their valuation purposes. A history of CPI indexation of the plan is summarized in Appendix 3.

Upon receipt of the HOOPP letter dated April 28th, 2017, the Province requested HOOPP to provide an estimate of the impact to the plan obligation used in the Province's December 31, 2016 valuation. HOOPP estimated that the impact would be approximately a $350 million increase to the obligation for Public Accounts purposes. This translates into a $166 million impact to the Province's HOOPP obligation (85% of 56% of $350 million) for the hospitals' portion. The increase of $166 million represents a 0.6% increase to the obligation currently used in the Province's 2016-17 valuation of HOOPP ($26,449 million).

The change is due to a change in actuarial assumption, therefore in accordance with PS 3250 which states:

.060 The periodic actuarial valuation of a government's obligation for retirement benefits will usually determine that adjustments are required due to experience different from that assumed or to changes in actuarial assumptions. Adjustments are needed when the actual experience of the benefit plan is different than that expected. Adjustments due to changes in actuarial assumptions are needed when a government believes revised assumptions are necessary to reflect a relatively permanent change in expected experience or to reflect new information. Adjustments are inevitable because the actuarial valuation requires ongoing forecasts of uncertain future events.

.061 Actuarial gains and losses would be amortized over a reasonable future period because of their tentative nature and because further adjustments will likely be required in the future. A reasonable future period is the expected average remaining service life of the related employee group. Amortization may commence in the period following the determination of the adjustment. Actuarial gains and losses would be determined on a market value basis or a basis adjusted to market value, consistent with paragraph PS 3250.035.

For the 2016-17 Public Accounts, the Province would recognize an increase to HOOPP obligation for benefits, and an actuarial loss which offsets the increase to the obligation (See Appendix 4) as a result of the change in actuarial assumption. The actuarial loss will be amortized over the expected average remaining service life (EARSL) of the plan starting in the following year, 2017-18. There would be no fiscal impact to the Province in the year of change, which is 2016-17.

The expected impact to future years is estimated to be approximately an annual increase of $22 million to the HOOPP expense starting in 2017-18 ($166 million, being amortized over 13 years, plus approximately $9 million for additional interest expense due to the increase in obligation). The total expense for HOOPP is forecasted at $554 million for 2017-18 ($452 million in pension expense, and $102 million valuation allowance to write-off the net pension assets). The HOOPP is forecasted to be in an asset position starting from 2017-18 and is projected to remain in an asset position even with the increase of $166 million in obligation. Therefore, any increase in pension expense starting from 2017-18 will be offset by a lower valuation allowance and consequently, the fiscal impact due to this indexation assumption change will be nil in future years.

Subsequent Event Analysis

According to PS 2400 subsequent events:

.01 This Section establishes standards on how to account for and disclose events occurring between the financial statement date and the date of their completion. Financial statements are prepared to reflect a government's financial position at a particular date and changes in financial position for a period ended on that date. However, events occurring after the financial statement date may indicate a need to adjust items or to make specific disclosures in those statements. Therefore, in preparing financial statements, the implications and financial effects of subsequent events would be considered.

.02 The period during which subsequent events are considered will depend on the government's managerial structure and procedures followed in completing the financial statements. The appropriate cut-off point for subsequent events is a matter of judgment taking into account the particular circumstances and reporting requirements.

.03 In general, there are two types of subsequent events:

(a) those which provide further evidence of conditions which existed at the financial statement date, and

(b) those which are indicative of conditions which arose subsequent to the financial statement date.

Since the Province received the letter on April 28, 2017, this is considered a subsequent event for the 2016-17 Public Accounts. In addition, it provides further evidence of conditions which existed at the financial statement date. According to PSAS, the financial statements should be adjusted for conditions that existed at the date of the financial statements:

.08 Subsequent events may provide additional information relating to items included in the financial statements and may reveal conditions existing at the financial statement date that affect the estimates involved in the preparation of financial

statements. All such information that becomes available prior to completion of the financial statements would be used in evaluating the estimates made and the financial statements would be adjusted where necessary. For example, the restructuring of the terms of the loans receivable in a significant government lending program, subsequent to the date of the financial statements, may be indicative of the underlying financial situation of the program and its debtors at the date of the financial statements. If the provision for those loans were inadequate, adjustment of the financial statements would be required.

.09 *Financial statements should be adjusted when events occurring between the date of the financial statements and the date of their completion provide sufficient, additional evidence relating to conditions that existed at the date of the financial statements.* [MARCH 1997]

Based on the HOOPP's estimate of the impact to the Province's 2016 interim valuation, the adjustment would be an increase to the Province's HOOPP obligation of $166 million and an offsetting actuarial loss. The net liability position for HOOPP as reported on the financial statements will remain unchanged. However, the increase in pension obligation and decrease in actuarial gain will be disclosed in the details of the pension liability in Note 6 (Appendix 4). There will be no impact to the 2016-17 statement of operations.

Recommendation

HOOPP made a change effective December 31st, 2016 to its actuarial assumptions reflecting an allowance for future inflation protection for terminated members who choose to take a lump-sum payout. The change was communicated to the Province on April 28th, 2017 (subsequent to year end but before the financial statement completion date).

Based on the above analysis and opinions obtained from external consultants and IPPD, receipt of the letter from HOOPP is a subsequent event which provides further evidence of conditions which existed at the financial statement date (i.e. March 31, 2017). The Public Accounts of the Province for the year ended March 31st, 2017 should therefore be adjusted accordingly.

The change in actuarial assumption does not impact the financial statements. The net pension liability position reported on the statement of financial positon remain unchanged because the increase to the obligation for benefits is offset by the corresponding increase to the actuarial loss, in which both components comprise the net pension liability at the year-end. The increase to the actuarial loss will be amortized into pension expense starting from 2017-18; therefore, there is no impact to the 2016-17 statement of operations. Due to the valuation allowance for HOOPP, there will also be no impact to the total expense for the future years.

However, the change will impact the pension disclosure included in Note 6 to the Public Accounts. Note 6 will be adjusted to reflect the change in actuarial assumption.

No additional disclosure is recommended for the change in assumption to HOOPP's valuation and the impact of the Province's valuation for future years for materiality reasons.

Dear Ms. Veinot and Mr. Killoch:

Subject: INFORMATION REQUIREMENT FROM HOOPP

In the letter sent to HOOPP by Leah Myers on December 15, 2016 requesting actuarial and financial information as at December 31, 2016 for preparation of the Province's 2017 Budget and 2016-17 financial statements, it was also requested that by April 28, 2017, HOOPP communicate whether to the best of our knowledge, there were any events between December 31, 2016 and March 31, 2017, which would affect the valuation results in a material way.

Subsequent to providing you with our response letter of January 26, 2017, HOOPP entered into discussions with the provincial regulator (Financial Services Commission of Ontario) which led to HOOPP making an assumption change within its year-end 2016 financial results. Specifically, the assumption change reflects an allowance to include future inflation protection for post-2005 service for members who are assumed will terminate from HOOPP and choose a lump sum (commuted value) option. The impact of this change using HOOPP's going concern actuarial basis as of December 31, 2016 was an increase to the liabilities of $1 billion. Further disclosure of this can be found in HOOPP's annual report, which is posted on HOOPP's website.

One further note relates to your request that HOOPP present two different sets of year-end financial results. One is based on HOOPP's contractual indexing provision (i.e., with no future inflation protection for post-2005 service). A second set of results is prepared assuming future inflation protection at 75% of CPI is provided for post-2005 service.

The liability impact of this assumption change would have a similar impact to the results we provided based on the contractual indexing provision (item #1 from our January 26 letter).

Although it's not clear to us why the second set of results is needed at all by the Province, nor exactly how these two different sets of results would be used in the Province's annual reporting, given the additional inclusion of future inflation protection for post-2005 service, the impact to this set of results would be much smaller.

Please do not hesitate to contact me if you have any questions or require any further information about this.

Sincerely,

HEALTHCARE OF ONTARIO PENSION PLAN

Appendix 2: Key Assumptions Used in the Province's and HOOPP's Valuation

Assumption	Province's 2016-17 Valuation	HOOPP 2016 Valuation
Rate of Return/Discount Rate	5.75%	5.45%
Salary growth rate	4.00%	3.50%
Inflation indexation	75% of CPI on post-2005 contributory service	100% of CPI on commuted values for all service

Appendix 3

The history of CPI indexation of the plan is summarized in the following table:

Year of Change	Years of Service Credited	% Indexation
N/A	inception- 2005	75% of the prior year's increase in CPI (guaranteed)
2006	2006-2013	75% of the prior year's increase in CPI (ad hoc)
2014	2014-2016	100% of the prior year's increase in CPI (ad hoc)
2015	2002-2013	Catch up from 75% to 100% of prior year's increase in CPI for retired and deferred members (ad hoc)

Appendix 4

The below is an extract of Note 6 of 2015-16 Public Accounts for illustrative purposes. For 2016-17, the Obligations for benefits will increase by $166 million and the Unamortized actuarial gains will decrease by $166 million resulting in nil impact to the total pensions liability of the Province for the change in assumption for HOOPP.

6. Pensions and Other Employee Future Benefits

Pensions and Other Employee Future Benefits Liability (Asset)

As at March 31 ($ Millions)	2016 Pensions	2016 Other Employee Future Benefits	2016 Total	2015 Total
Obligation for benefits	$117,542	$10,999	**$128,541**	$124,726
Less: plan fund assets	(141,749)	(562)	**(142,311)**	(129,880)
Unamortized actuarial gains	12,649	305	**12,954**	6,084
Adjustments[1]	2,246	9	**2,255**	2,221
Accrued liability (asset)	(9,312)	10,751	**1,439**	3,151
Valuation Allowance[2]	10,668	–	**10,668**	–
Total	**$1,356**	**$10,751**	**$12,107**	$3,151

[1] Adjustments for pensions consist of:
i) differences for amounts reported by the pension plans at December 31, instead of the Province's year-end of March 31;
ii) unamortized difference between employer and employee contributions for jointly sponsored pension plans; and
iii) amounts payable by the Province that are reflected as contributions in the pension plan assets.

[2] Valuation allowances are related to the pension assets for the Ontario Teachers' Pension Plan and for the OPSEU Pension Plan (Note 18).

Appendix 5: Other Considerations

Consultations

OPCD consulted with external consultants on the issue. Their opinion was that the Province is not required to revise their assumptions due to a change in the HOOPP's assumptions but may choose to do so noting that the requirements under a funding valuation and accounting valuation according to PSAS can be different and as such, an adjustment may not be necessary for the Province's financial reporting purposes.

OPCD also consulted with IPPD at MOF who noted the pattern for HOOPP to provide ad hoc inflation indexation at 100% of CPI increase (for all active members). According to PSAS:

> *In other retirement plans, regular benefit increases for inflation protection may be provided even when such protection is not promised in a contractual agreement or in legislation. For those plans, careful analysis and professional judgement are needed to determine the substance of a government's obligation. If a regular pattern of benefit increases can be established over a reasonable period, it may be appropriate to incorporate the cost of such inflation protection in the cost of retirement benefits earned to the financial statement date and reported as an accrued benefit obligation. (PS 3250.032)*

Therefore, the Province may consider an assumption change to provide for inflation protection at 100% of CPI increase (for all active members) for future valuations if the pattern of providing ad hoc inflation protection of 100% of CPI increase persists.

Hi Nadine,

I have some suggested edits made to the attached and have also added responses into the comments where I thought my input was appropriate to explain the edits or explain no edits in some cases.

I also want to take a "clean" read of this later to make sure it flows.

In respect to the footnote 3 in 3060, it might be better to have a quick call to discuss how best to approach this.

Regards,
Lucy

Hi Nadine,

The paper is coming together, but it is taking a bit longer then I expected. I'd like to work on it a bit more this evening, so "end of day" today seems a bit ambitious. Would you rather than I send you what I have at end of day (5pm) for you to circulate for initial comments from Cindy or send it later, say tomorrow morning.

Let me know.

Lucy

PWC SOW Pensions Accounting Opinion 20160915.pdf

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective [insert date].

PricewaterhouseCoopers LLP (the "Vendor") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of June 16, 2014 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$xx0,000.00, excluding HST.

4. *Project Start Date:* September 15, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide an accounting opinion regarding the appropriateness of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pensions on the consolidated financial statements of the Province under Public Sector Accounting Standards.

   Vendor may be required to participate in meetings with the Client and other stakeholders, and to support the Client with respect to the Vendor's accounting opinion, including discussions with the Office of the Auditor General.

   Vendor agrees that the accounting opinion or a summary of it may be disclosed by Ontario to the public, including publication of the opinion in documentation that may be accessible to or intended for the public.

   [insert other services/deliverables required, and any terms and conditions in respect of the accounting opinion.]

7. *Ownership and Licences* - **Attachment E** of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* - The structure of Vendor's working relationship with OPCD is vital to the success of their engagement. Vendor's main point of contact will be [insert name], who is the [insert title].

9. *Work Location* - All meetings will be within the Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive. If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. [*Charges On Per Diem Rate Basis*– The Vendor and the Client agree that Work performed under this Statement of Work will be charged on a Per Diem Rate basis.] [TBD]

13. *Billing and Payment Process* – The Vendor shall invoice the Client in accordance with the requirements of the Master Agreement. Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Individual's Legal Name	**Individual's Role and Experience Level**	**Service Category**	**Per Diem Rate** [TBD]
[insert name]	General Consultant, Level 2	Service Category 2	$
[insert name]	General Consultant, Level 2	Service Category 2	$
[insert name]	General Consultant, Level 2	Service Category 2	$

[Note to Draft: Confirm role and experience level and service category.]

14. **Invoices** - Invoices for payment of any charges under this Statement of Work shall be sent to:

Client:	Treasury Board Secretariat, Office of the Provincial Controller Division
Branch:	Accounting Policy and Financial Reporting
Representative:	Nadine Petsche
Title:	Director, Accounting Policy and Financial Reporting
Phone number:	416-325-8027
Email:	Nadine.petsche@ontario.ca

15. *Knowledge Transfer:* The Vendor will work closely with the Client to ensure knowledge transfer to the Clients designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* - The Vendor shall destroy all Confidential information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	**Treasury Board Secretariat**
Client Representative:	**Nadine Petsche**
Telephone number:	**416-325-8027**
E-mail:	**Nadine.petsche@ontario.ca**

18. *Vendor Representative and Receipt of Notices*

Vendor's address for receipt of notices:	**[insert address]**
Vendor Representative:	**[insert name and title]**
Telephone number:	**[insert telephone number]**
E-mail:	**[insert email address]**
Backup Vendor Representative:	**[insert name]**
Telephone number:	**[insert telephone number]**
E-mail:	**[insert email address]**

IN WITNESS WHEREOF the parties hereto have executed this Statement of Work as of the date first above written.

HER MAJESTY THE QUEEN IN RIGHT OF ONTARIO, as represented by The President of the Treasury Board

Attention: Mr. Martin Raymond

To Whom It May Concern:

RE: Proposed change to Statement of Work No. MOF-OPCD-17 dated July 21, 2016, ("the Statement of Work") made between Her Majesty the Queen in right of Ontario as represented by the President of Treasury Board and Deloitte LLP.

As you know, an accounting opinion on the complex pension-related accounting matter was not anticipated by the parties. As a result, additional support will be required from Deloitte LLP in addition to the original work reflected in the SOW.

We understand that a separate engagement letter will apply to this engagement. The purpose of this letter is to document our agreement to increase the Ceiling Price under the Statement of Work by $XX,000.00 for the additional work required to undertake and deliver the work required for an accounting opinion.

This letter is sent to you in duplicate. Please indicate your receipt of this letter and your agreement to the change in Ceiling Price by signing where indicated on both copies, and returning the duplicate copy within five days of receipt of this letter.

This letter, when signed by both parties, will constitute a Change Order to the Statement of Work. The parties confirm that, except for the change referred to above, including a separate engagement letter for the envisioned accounting treatment, the Statement of Work will remain unchanged and unmodified.

Thank you for your continued cooperation and support.

Sincerely,

Nadine Petsche
Director, Accounting Policy and Financial Reporting Branch
Office of the Provincial Controller Division

The undersigned hereby acknowledges receipt of this letter and agrees to the above on behalf of Deloitte LLP as of the date indicated above.

Hi Lucy.

Sharing the draft 'background' section for the position paper for your review and consideration. If you have any ideas on how to integrate this with your section, we would welcome your thoughts.

Thanks.

Nadine

Outline of position paper to JK PF tab2 v5.pdf

Preamble

This document addresses the accounting for pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.

Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP.

As described in PSAS, a pension asset arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the asset balance (or plan surplus for accounting purposes) in OTPP and OPSEUPP are an asset to the province and it is suitable to reflect them in the financial results.

The OAG disagrees with this position. The OAG has indicated that because the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and in the absence of that right, because the Province does not have an agreement in place with the Ontario Teachers' Federation (OTF) with respect to how the surplus would be utilized such that it would provide a benefit to the Province, a pension asset in the Public Accounts is not appropriate.

Ontario had followed the same pension accounting treatment for all of the past 14 years. This had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals. There has been no change to the relevant PSAS (i.e. RETIREMENT BENEFIT, Section PS 3250) over the past 14 years.

A regulation was made to allow the public service to sign-off on the impact of the OAG's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province filed a time-limited regulation, which legislates the accounting for pension assets of its two jointly-sponsored

pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's accounting, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to write off the pension assets. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt.

What is being asked of the Expert Advisory Panel

The Expert Advisory Panel is being asked to review and deliver advice and recommendations to the government as to the application of PSAS to Ontario's pension assets. The future accounting by the Government of its pension assets will be guided by the report of the Expert Advisory Panel.

The Expert Advisory Panel 's advice and recommendations to the government will address:

- The requirement regarding control (or shared control) with respect to recognizing a pension asset for a defined benefit plan, as it relates to the pension plans reported by the Province of Ontario, including OTPP, OPSEUPP, HOOPP, and CAAT.
- Appropriate valuation techniques to measure a pension asset that take into consideration future decision making authority by plan sponsors.
- Recommendations to the Employee Future Benefits Task Force of the Public Sector Accounting Board (PSAB) regarding issues that should be considered in their review of the retirement and post-employment benefits standards.

Background

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1.

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
1. It provides defined benefits.
2. The defined benefits are contributory benefits.

The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the Ontario Teachers' Federation represented by its Executive (the ”OTF") (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. The OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for the OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended;
e) A Funding Management Policy, attached as Appendix A to the Partners Agreement (FMP);
f) The Ontario Teachers' Pension Plan; and
g) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

---

3. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
4. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to the OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5] The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Currently, the Sponsors are also required to mutually agree upon how any plan deficits are to be addressed. [8] While not binding upon the Sponsors, the FMP indicates that deficits may be addressed through increases to the contribution rates, lowering the amount of indexation and/or other decreases in benefits.

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the FMP requires the Sponsors to negotiate and agree upon decisions relating to surplus utilization. Accordingly, the Sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional exerts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the Sponsors are included in appendix E.

Accounting for OTPP by the Province

[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).
[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/101791209401-l5e47lc2b-23f1-44e6-b5cld22e3e50dbc3lHow+ Contribution+Rates*HaverEvolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20lo versus l0.4yo/l2Vo, respectively). It js our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.
[8] See, for example, Section 3.09 and 3.11 of the FMP.

Since fiscal year 2001-2002, the Province has recorded a pension asset for OTPP on the Statement of Financial Position. A pension asset has arisen because the government's share (50%) of the total contributions to OTPP plus the actual investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense. The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

The different objectives of funding and accounting for a pension plan are addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*
>
> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.*

Paragraph PS 3250.051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: "Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…"

OTPP's most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website. The OTPP's public financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015.

The pension plan surplus for OTPP for Public Account purposes differs from the surplus reported on OTPP's standalone financial statements. OTPP's financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook, which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the funding surplus or deficit. Different assumptions are used in the respective

calculations. For example the discount rate used by OTPP in their financial statements is different than the rate used by the Province of Ontario. OTPP uses a discount rate based on the market rate of bonds issued by the Province of Ontario in accordance with IFRS (IAS 19). The Province of Ontario calculates pension obligations for OTPP based on the assumed rate of return on plan assets in accordance with Section PS 3250. A review was performed of the discount rates used by other Provincial pension plans. It was determined that OTPP is an exception in using a discount rate based on the cost of borrowing. Refer to Appendix G for a comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. Unqualified audit reports have been received for each of the years from the OAG on the Public Accounts.

RETIREMENT BENEFIT, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. The Province has followed this standard over the prior 14 years. Over this period of time, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years.

The prior pension accounting for OTPP had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals during this period of time.

Over the prior 14 years, the Province has classified OTPP as a joint defined benefit plan as per Section PS 3250 (this classification will be discussed more in this document). Over this period of time, the pension expense and pension liability (asset) for OTPP reported by the Province is reflected in Appendix F.

History regarding the PSA standards

As mentioned, the financial statements for the Province have been prepared over the prior 14 years in accordance with the PSA Handbook.

Standards in the PSA Handbook relevant to the accounting for pension assets (including the dates the standards were introduced into the Handbook) are as follows:

- FINANCIAL STATEMENT CONCEPT, Section PS 1000 (a foundational section issued in January 2003)
- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015; this new standard provides additional guidance on the various components of the asset definition, it does not change the existing definition)
- RETIREMENT BENEFIT, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, Section PS 3250 which was based on Accounting Statement No. 5)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception of ASSETS, PS 3210 which is effective in for periods beginning on or after April 1, 2017. As indicated

above, Section PS 3210 provides additional guidance on the various components of the existing asset definition; it does not change the definition.

GOVERNMENT PARTNERSHIPS, Section PS 3060 addresses the accounting of a contractual arrangement between the government and party or parties where there is shared control. This paper will consider the relation between government partnerships and joint defined benefit plans and the corresponding accounting.

FINANCIAL STATEMENT CONCEPTS, Section PS 1000 includes general concepts and principles reflected throughout the PSA Handbook. For example, the definitions of different types of elements (including an asset) are included in Section PS 1000. General recognition and measurement criteria are also included in Section PS 1000.

The focus of the following analysis is on the accounting requirements in RETIREMENT BENEFIT, Section PS 3250 as this standard specifically addresses the accounting for pension assets. Users of the PSA Handbook when determining the accounting for pension assets would apply the specific guidance in Section PS 3250 and refer to standards such as FINANCIAL STATEMENT CONCEPT, Section PS 1000 and GOVERNMENT PARTNERSHIPS, Section PS 3060 (with respect to shared control) to better understand the concepts and principles included in Section PS 3250.

Accounting Analysis

Question 1 – Recognition of a pension asset

The analysis below addresses whether the pension surplus in OTPP represents an asset to the Province of Ontario for purposes of preparation of the Public Accounts.

Standards in the PSA Handbook

As mentioned standards in the PSA Handbook relevant to the accounting for pension assets are:

- FINANCIAL STATEMENT CONCEPTS, Section PS 1000 (this section comprises part of the Conceptual Framework in the PSA Handbook)
- GOVERNMENT PARTNERSHIPS, Section PS 3060
- ASSETS, Section 3210 (this new standard provides additional guidance on the various components of the asset definition such as economic resources, future economic benefits and control)
- RETIREMENT BENEFIT, Section PS 3250

Included in appendix A is the definition of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and newly issued guidance on the definition included in ASSETS, Section 3210. While Section PS 3210 is only effective for periods beginning on or after April 1, 2017, this guidance will be considered as it is meant to clarify the existing asset definition.

RETIREMENT BENEFIT, Section PS 3250 – Purpose and Scope

A government applying the PSA Handbook will first refer to RETIREMENT BENEFITS, Section PS 3250 in reporting their sponsored pension plans. The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250, paragraph .003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

RETIREMENT BENEFIT, Section PS 3250 – Types of pension plans

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*
>
> *(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;*

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

A joint defined benefit plan (JDBP) is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. The OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees (addressed in paragraph 8 of the Partners' Agreement for example);

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example).

Concept of Shared Control

Included in the definition of a JDBP is the concept of shared control. Points (c) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of shared control is also included in the PSA Handbook in GOVERNMENT PARTNERSHIPS, Section PS 3060.

The similarity between the definitions of a JDBP and a government partnership are demonstrated in Appendix B to this paper. As indicated previously, RETIREMENT BENEFITS, Sections PS 3250 and GOVERNMENT PARTNERSHIPS, Section PS 3060 are standards in the PSA Handbook that were introduced into the PSA Handbook in 2001 and 1999 respectively and have not changed consequentially since.

The concept of shared control is not however addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Guidance on control is included in these sections but not shared control.

Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. On the introduction into the PSA Handbook of Section PS 1000, the concept of shared control was not removed from Sections PS 3060 and PS 3250. PSAB did not consider Sections PS 3250 (and Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

For your information, included in Appendix C is the legal opinion prepared by lawyers, Koskie Minsky, comparing access to the pension surplus of OTPP relative to pension plans in British Columbia. The Province of British Columbia does not include a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

Similarly, the accounting for pension plans by the Province of New Brunswick is different than the Province of Ontario's accounting for OTPP. In New Brunswick, the Board of Trustees for each pension plan (of which 50% of the members are appointed by the Province) is responsible for the plan assets. The Province has no access to the assets, cannot control their use, and is not responsible for any losses. As a result the Province of New Brunswick does not include a pension asset in their financial statements.

RETIREMENT BENEFIT, Section PS 3250 – Accounting for a JDBP

As OTPP meets the definition of a JDBP, the Province should account for the plan in accordance with the requirements in paragraphs .079 to .082 of RETIREMENT BENEFITS, Section PS 3250 which are as follows:

> ***Joint defined benefit plans***
>
> *.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.*

.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]

.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

The OTPP has the characteristics outlined in paragraph .079 and .080 of RETIREMENT BENEFITS, Section PS 3250 including:

- the Government shares the risks and rewards with the other sponsors of the plan (i.e. the OTF);
- there is a formal agreement where the sponsors share control;
- the sponsors appoint a governing board of directors with equal representation; and
- funding contributions are shared mutually between the Government and the plan members.

The classification of OTPP as a JDBP has been consistent since 2001 and has been accepted by the OAG.

We would note that paragraph .081 of RETIREMENT BENEFITS, Section PS 3250 clearly states that a government should account for its portion of the plan in accordance with the standards for defined benefit plans. As a result, the Province of Ontario accounts for its proportionate share of OTPP (50% of the plan). Similar to GOVERNMENT PARTNERSHIPS, Section PS 3060, the requirement to account for its portion of the plan under Section PS 3250 is equally applicable if the pension plan is in a surplus or deficit position.

The concepts of recognizing your portion of an asset or liability as previously discussed is consistent with GOVERNMENT PARTNERSHIPS, Section PS 3060.

RETIREMENT BENEFITS, Section PS 3250, paragraph .081 directs the JDBP to account for its pension assets and liabilities consistent with the accounting under a defined benefit plan. Therefore, other requirements in Section PS 3250 are to be followed for OTPP including the following:

Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)

.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset . The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit . When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

While many of the above paragraphs relate to measurement rather than recognition of an asset (and will be discussed in the following section of this paper), paragraph 3250.050 indicates "An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit…" In the glossary to Section PS 3250, expected future benefit is defined "… as a calculated amount representing the benefit a government expects to realize from a plan surplus." Paragraph .052 states "A government may benefit from an accrued benefit asset either by withdrawing surplus assets or

by taking a contribution holiday or receiving a refund of contributions." PS 3250.059 as provided above indicates "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

Paragraph .052 is more general regarding the ways a government can benefit from a surplus (either through a withdrawal of the surplus or a reduction in future contributions) while paragraph .059 addresses specifically "a" key factor, the ability to withdraw the surplus. Paragraph .059 is not indicating the only way a government can benefit from a surplus in a pension plan is through the ability to withdrawal the surplus.

In paragraph PS 1000.36, the first characteristic of an asset is "they embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows." The ability to benefit from the surplus through a reduction in future cash flows is consistent with the general definition of an asset.

The government's position has been that access to the expected benefit of the surplus is through reduced future contributions and not through withdrawals of the surplus. The following analysis considers the Government's ability to benefit from the surplus in OTPP through either a withdrawal of the surplus or through a reduction in future contributions.

Through withdrawal of the surplus

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, paragraph 3250.059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

The TPA for OTPP does not provide for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution, the Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

The OAG's position is that the government should not recognize a pension asset based on its ability to benefit from the surplus in OTPP through withdrawal of the surplus as the government does not have a legally enforceable right to the surplus.

Through reducing future contributions

As mentioned previously, PS 3250.059 indicates "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal." PS 3250.59 is clear that expected future benefit can only be asserted where the government has a current legally enforceable right to withdraw assets from the Plan. PS 3250.59 introduces the concept of a legally enforceable right, however it does so solely in the context of a government's future withdrawal of a Plan surplus, and not in the context of a government's reduction of future contributions. Had PSAB intended legal enforceability to be the test, they would have included that notion throughout the guidance, instead of only raising it in the context of a withdrawal of surplus.

The concept of "legally enforceable" is not widely used throughout the PSA Handbook – the term is used once in two other standards Section PS 3450, FINANCIAL INSTRUMENTS (with respect to the right to offset) and PS 3260, LIABILITY FOR CONTAMINATED SITES (with respect to environmental standards to be complied with). The concept of legally enforceable is not included in the definition of an asset in

Section PS 1000 and in the guidance of an asset in Section PS 3210. Concepts in the PSA Handbook are generally principle based rather than rules based

As mentioned previous, paragraph .052 states “A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. Paragraph .052 notes that an accrued benefit asset may be impaired if a government "is not entitled to benefit fully" for example there may be uncertainties relating to a government's legal rights to use a plan's surplus. As such, the Province's present legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability. Specifically, the amount of Pension Asset that gets recorded needs to be subject to considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a Pension Asset.

Similar to the discussion regarding the withdrawal of the surplus, use of the surplus through reducing future contributions must be examined considering the constating documents of OTPP. A review of the constating documents indicate:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, under the FMP the Sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the Sponsors to agree upon the manner in which surplus is to be utilized, neither Sponsor has a legally enforceable right to unilaterally utilize surplus in the OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What the Province does have, however, is a right to negotiate with the OTF the use of surplus that may arise under the plan, at least in the context of an actuarial valuation that discloses surplus and that is to be filed with the regulators.

4. Notwithstanding the foregoing, the Plan Documentation and applicable legislation give rise to the following considerations which may shape the Sponsors' expectation as to the basis upon which surplus will be utilized (and potentially lead to an expectation of equal sharing of the benefit of any surplus, at least over time):

a. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) to exceed the amount of contributions paid by or on behalf of active members in respect of credited service for the year (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.

b. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix G for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the Sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.

c. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right), and the requirement to negotiate and agree (or in the absence of agreement, arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.

d. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan.

5. In the event that the Sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, the matter can be submitted to an arbitration board of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

While not having a legally enforceable right to reduce its future minimum contributions Section PS 3250 requires that management take into consideration "uncertainties as to a government's legal right to use a plan's accounting surplus" (3250.52). The standard does not require that there be no uncertainty in order to recognize an asset. This interpretation would not be consistent with the balance of the framework developed to account for defined benefit pension plans. As previously mentioned, the definition of an asset in Section PS 1000.35 includes the phrase ".. future economic benefits are expected to be obtained."

Pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to

the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". Expected does not equate to certainty.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (3250.42) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (3250.41). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. 3250.57 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province of Ontario has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on Plan Assets, which is one of the acceptable references suggested on PS 3250.44.

The OAG and the Government differ regarding whether it needs to be "expected" that the Government will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in paragraph .059. The Government considers that it needs to be expected that future economic benefits are to be obtained as reflected in the definition of an asset in Section PS 1000 and as reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to use a plan surplus.

CONTINGENT ASSETS, Section PS 3320, paragraph .07 indicates "The mere fact that an estimate of an amount is involved (measurement uncertainty) does not, in and of itself, constitute the type of uncertainty that characterizes a contingent asset. For example, even though there may be measurement uncertainty related to income tax receivable, there is nothing uncertain about the fact that this asset exists. Any uncertainty is related solely to the amount thereof." Based on past history of surplus utilization for OTPP and based on the constating documents, expected future benefits for the Government are present. The uncertainty as with many types of assets relates to measurement uncertainty which will discussed further below.

Conclusion re: recognition [To be completed]

Section PS 3250 applies

OTPP meets the definition of a JDBP

OTPP's pension surplus meets the definition of an asset as it is expected that the Province will benefit from the surplus through reduced future contributions based on the constating documents and past history of surplus utilization - it is the form that the benefit will take which is uncertain not the benefit - uncertainty relates to measurement uncertainty not existence uncertainty

The Province has shared control over the surplus of OTPP (50%)- The Province is to recognize its portion of the pension asset of OTPP as reflected in PS 3250 and PS 3060

Question 2 – Measurement of a pension asset

Several of the paragraphs PS 3250.050 to .059 in RETIREMENT BENEFITS, Section PS 3250 address measurement of a pension asset.

Paragraph PS 3250.050 indicates "An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit..."

Paragraph .056 provides guidance on calculating the expected future benefit indicating "*A* government determines its expected future benefit as the sum of: a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Paragraph PS 3250.055 indicates "The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Note that PS 3250.052 requires one to consider "uncertainties as to a government's legal right to use a plan's accounting surplus."

After determining whether the Province has a pension asset, the next decision is whether the pension asset meets the recognition criteria in the PSA Handbook.

Other guidance in the PSA Handbook on recognition and measurement

Recognition and measurement is also addressed in the guidance in Section PS 1000 along with the recognition criteria for an asset or liability.

The recognition criteria in paragraph PS 1000.55 indicate"... the item has an appropriate basis of measurement, and a reasonable estimate can be made of the amount involved .."

Furthermore MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe

would be a useful addition to the current year financial statements. PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by experience of similar transactions and, in some cases, reports from independent experts. Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.*
>
> *.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.*

For an asset to be recognized it must be measurable.

PS 3250.53 to .58 lay out a mathematical calculation that determines the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in PS3250.055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where realization includes a reduction in future contributions. A valuation allowance is recorded against the Pension Asset to limit the asset value, if necessary, based on this analysis.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. This calculation is further described in PS 3250.56(a), which sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per PS 3250.81 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the Pension Asset value to be recorded in the accounts. For example, if the Pension Asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the Pension Asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in the determination of future minimum contributions required to be made by the government regardless of any surplus. There is no further guidance in S 3250 as to how this calculation should be performed and what restrictions or parameters should be factored into this calculation.

Determining the number of years of contributions to include should involve consideration of legal uncertainty as set out in PS 3250.52. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the following (due to the magnitude of the OTPP asset, most of these considerations focus on that plan):

- The contractual agreements between the Sponsors that provide for the sharing of risks and benefits.
- There is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'.
- The specific framework within the Funding Management Plan for OTPP that contemplates specific funding zones and when contribution reductions will be discussed by the sponsors.
- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.98 for the 2015 change, and $1.68 for the 2014 change).
- Other regulatory requirements, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan.

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (PS 2130.03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of

action. As noted in PS 2130.13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

Actuarial reports were completed to assess the requirement for a valuation allowance. The results of those reports are summarized here:

Plan	**Asset recorded by Province (in billions)**	**Asset ceiling computed (in billions) and assumption re: years of contributions**	**Number of years contributions could be made without resulting in a valuation allowance**
OTPP	$ 10.1	$29.3 (based on 11 years of contributions noted in the funding report as the period additional contributions are required)	33

The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (3250.56(a)). There is no guidance on the meaning of minimum contributions for purposes of this calculation in PS 3250. For purposes of the OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

An important consideration in performing these asset ceiling calculations is how long contributions will be required to be made. Under the Partners' Agreement, the parties are mandated to negotiate benefits and contributions every three years as a minimum and if agreement is not reached, it is reasonable to expect that a change in contributions might occur rather than the 'status quo' being retained. In addition to the above calculations, we have considered the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that no valuation allowance is required.

We would be happy to share this analysis with you, in addition to the actuarial reports we have already provided.

We acknowledge that the estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is permissible under PSAB and consistent with rates followed by other senior Canadian governments. Historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets on the Province's books.

For information purposes, refer to Appendix D for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting compared with following the Province's interpretation of the PSAS.

Conclusion re: measurement [To be completed]

OTPP pension assets should continue to be recorded on the books of the Province

We recognize that the estimation and judgement used in the assessment of whether a valuation allowance is required is significant

Reasonable estimates of when the surplus will result in contribution reductions were used

Discount rate is in accordance with PSAS

Based on the results of those models to date, no valuation allowance appears to be required

DRAFT

Appendix A – Guidance in the PSA Handbook - FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210

Guidance in FINANCIAL STATEMENT CONCEPTS, Section PS 1000

.35 **Assets** are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

.36 Assets have three essential characteristics:

(a) they embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows;

(b) the public sector entity can control the economic resource and access to the future economic benefits; and

(c) the transaction or event giving rise to the public sector entity's control has already occurred. [Former paragraph PS 1000.36 retained in Archived Pronouncements.]

.37 An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph. Thus, for example, an item does not qualify as an asset of a government if the item involves:

(a) no future economic benefit;

(b) future economic benefit, but the government cannot obtain it; or

(c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred.

(paragraph PS 1000.38 deleted) [Former paragraph PS 1000.38 retained in Archived Pronouncements.]

.39 **Financial assets** are assets that could be used to discharge existing liabilities or finance future operations and are not for consumption in the normal course of operations.

.40 A financial asset is any asset that is:

(a) cash;

(b) a realizable asset that is convertible to cash;

(c) a contractual right to receive cash or another financial asset from another party;

(d) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;

(e) an equity instrument of another entity;

(f) an investment in a government business enterprise or government business partnership;

(g) a financial claim on an outside organization or individual; or

(h) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph PS 1201.055. [Former paragraph PS 1000.40 retained in Archived Pronouncements.]

.41 Non-financial assets include tangible capital assets, and other assets such as prepaid expenses and

DRAFT

inventories of supplies.

.42 **Non-financial assets** are acquired, constructed or developed assets that do not normally provide resources to discharge existing liabilities, but instead:

(a) are normally employed to deliver government services;

(b) may be consumed in the normal course of operations; and

(c) are not for sale in the normal course of operations.

RECOGNITION

.52 Recognition is the process of including an item in the financial statements of an entity. Recognition consists of the addition of the amount involved into item totals on a financial statement together with a narrative description of the item (for example, receivables, user fees, grants) in a statement. Similar items may be grouped together in the financial statements for the purpose of presentation.

.53 Recognition means inclusion of an item within one or more individual statements and does not mean disclosure in the notes to the financial statements. Notes either provide further details about items recognized in the financial statements, or provide information about items that do not meet the criteria for recognition and thus are not recognized in the financial statements.

.54 The recognition criteria below provide general guidance on when an item is recognized in the financial statements. Whether a particular item is recognized or not will require the application of professional judgment in considering whether the specific circumstances meet the recognition criteria.

.55 The recognition criteria are as follows:

(a) the item has an appropriate basis of measurement, and a reasonable estimate can be made of the amount involved; and

(b) for an item that involves obtaining or giving up future economic benefits, it is expected that such benefits will be obtained or given up.

.56 It is possible that an item will meet the definition of an element but still not be recognized in the financial statements because it is not expected that future economic benefits will be obtained or given up or because a reasonable estimate cannot be made of the amount involved. It may be appropriate to provide information about items that do not meet the recognition criteria in notes to the financial statements. "Expected" is used with its usual general meaning and refers to that which can reasonably be anticipated, contemplated or believed on the basis of available evidence or logic but is neither certain nor proved. The use of the word in the recognition criteria is intended to acknowledge that economic activities occur in an environment characterized by uncertainty. It is not intended to accommodate the recognition of items that do not meet the definition of one of the elements of financial statements. By implication, recognition would, therefore, not be appropriate without the occurrence of a past transaction or economic event that gives rise to an asset, liability, revenue or expense as defined in this Section.

.57 Purchased natural resources and Crown lands are recognized in government financial statements. However, when natural resources and Crown lands have been inherited by the government in right of the Crown and have not been purchased, they are not given accounting recognition as assets in

government financial statements. These items are not recognized as assets because the costs, benefits and economic value of such items cannot be reasonably and verifiably quantified using existing methods. Similarly, art and historic treasures are also not recognized as assets.

.58 In the absence of appropriate public sector recognition and measurement criteria for intangibles, all intangibles, including those that have been purchased, developed, constructed or inherited in right of the Crown, are not recognized as assets in government financial statements. The intangible often called "human capital" that embodies the talent or intellectual capital of government employees is not recognized as an asset under existing accounting principles.

.59 Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting. The accrual basis of accounting recognizes the effect of transactions and events in the period in which the transactions and events occur, regardless of whether there has been a receipt or payment of cash or its equivalent. Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied. Accrual accounting recognizes an asset until the future economic benefit underlying the asset is partly or wholly used or lost.

MEASUREMENT

.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

.61 Present value is the discounted amount of future cash flows expected to be received from an asset or required to settle a liability. Present value is not a basis of measurement, but a valuation technique that may be used within historical cost-based or current-value models. This technique is used in the government reporting model, for example, to estimate the cost of retirement benefits, when determining the estimated total expenditure for closure and post-closure care of a solid waste landfill site, and when determining the "grant portion" of concessionary loans and portfolio investments.

.62 Government financial statements are prepared on the basis that recognized economic resources used up are measured in financial terms with no adjustments made for the effect of a change in the general purchasing power of the currency during the period. Although a government's performance in the management of its service potential 2 is generally a focus more appropriate to the nature and objectives of government, it cannot entirely be measured in financial terms.

2. Service potential embodies both the quality of service provided and the efficiency with which it is provided.

.63 Financial statements are prepared on the assumption that the government is a going concern, meaning it will continue in operation, and will be able to realize assets and discharge liabilities and meet its statutory obligations in the normal course of operations for the foreseeable future.

Guidance in ASSETS, Section PS 3210

Economic resources

.06 Economic resources embody value because they enable an entity to meet its objectives, such as the provision of public goods and services, redistribution of wealth, generation of cash inflows or reduction of cash outflows.

.07 To embody value as an economic resource, there must also be some restriction on its availability. For example, the air we breathe generally cannot be an economic resource unless access to it is restricted.

.08 Economic resources can arise from, but are not limited to, the following:

(a) contracts or agreements (for example, accounts receivable and leases);

(b) another government's legislation (for example, transfers receivable);

(c) government's own legislation (for example, taxes, fines and penalties);

(d) voluntary contributions (for example, donations); or

(e) construction and development (for example, roads).

.09 Economic resources can be:

(a) financial in nature (for example, cash, accounts receivable and investments); or

(b) non-financial in nature (for example, tangible capital property, prepaid items and inventories of supplies).

.10 Without an economic resource, future economic benefits cannot be obtained. For example, a fire truck (the economic resource) needs to exist before it can provide fire suppression services (the future economic benefits).

Future economic benefits

.11 The essence of assets are their future economic benefits. Assets embody future economic benefits that allow public sector entities to achieve their objectives. The future economic benefits embodied in assets involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows or to reduce cash outflows.

.12 Often the public is the beneficiary of the goods and services provided by a public sector entity. For example, assets such as fire trucks are used to provide fire suppression services to the public. Hospital buildings and medical equipment are used to provide health care services. Parks, schools and libraries provide recreational, educational and research opportunities to the public. Water treatment plants provide goods, such as potable water. Such assets benefit public sector entities as they assist in achieving the entity's primary objective of providing public goods and services. This benefit is different from the benefit that the public receives.

.13 The future economic benefits embodied in an asset may also be in the form of generating future cash inflows. Cash inflows benefit the public sector entity because cash can be used to purchase or to provide goods and services, redistribute wealth or settle liabilities. Benefits in the form of cash inflows relate to resources, such as loans receivable, inventory for resale and portfolio investments. Also, some

DRAFT

public sector resources generate cash inflows because they have user fees associated with them.

.14 The future economic benefits may also take the form of a capacity to reduce cash outflows. For example, this may be the case when betterment of a tangible capital asset reduces the cost of providing goods and services.

.15 There is a close association between incurring a cost and the generation of an asset. However, not all costs result in a future economic benefit. For example, costs incurred to maintain the current service capacity of an asset do not provide a future economic benefit. Also, a public sector entity may obtain an asset without incurring costs. For example, items that have been donated to the public sector entity may provide that entity with future economic benefits and, hence, satisfy the definition of assets.

Control

.16 A public sector entity controls the economic resource and access to the future economic benefits when it:

(a) can benefit from the economic resource through its capacity to provide goods and services, to provide future cash inflows or to reduce cash outflows;

(b) can deny or regulate access to those benefits by others; and

(c) is exposed to the risks associated with the economic resource.

.17 An entity that controls an economic resource has the ability to benefit from the economic resource. For example, a recipient of a transfer benefits from the transfer as it can use the transfer to provide goods or services.

.18 An entity that controls an economic resource has the ability to deny or regulate access to the future economic benefits associated with the economic resource by others. For example, an entity controlling a bus has the ability to deny or regulate access to the related transportation services.

.19 An entity that controls an economic resource is exposed to the risks associated with the economic resource. For example, the entity may hold an investment, the value of which may decline and result in a loss.

.20 Some economic resources are subject to certain external restrictions that specify the purpose(s) for which resources are to be used. For example, there may be external restrictions imposed on the public sector entity's own assets, as is the case with some sinking fund investments. Such restrictions on the use of an economic resource do not negate the public sector entity's control of the economic resource.

.21 Although control may be seen as applying to an asset as a whole, the concept can also be applied to individual rights related to the asset. For example, a single leased asset embodies different economic benefits. It may give the lessee the right to use the property and the lessor the right to receive rents and any residual value. Thus, both parties may have assets corresponding to their respective rights.

.22 Control of an economic resource and of access to the future economic benefits are essential characteristics of an asset, whereas possession or ownership is not. For example, a public sector entity may control the economic resource and access to the future economic benefits through a capital lease arrangement yet not own the economic resource.

.23 A public sector entity's ability to regulate an economic resource does not, in and of itself, constitute control of an asset. A public sector entity may establish the regulatory environment in an

industry or sector within which organizations operate and impose conditions or sanctions on their operations. For example, a pollution control authority may have the ability to close down the operations of entities that are not complying with environmental regulations. However, this power does not constitute control because the pollution control authority's interest extends only to the regulatory use of the economic resources and does not include the ability to control access to the future economic benefits.

.24 A public sector entity may act as trustee when it administers trusts on behalf of the beneficiaries specified in the agreement or statute. As trustee, the public sector entity merely administers the assets, following the terms and conditions set out in the agreement. It does not control the asset because it does not have access to the future economic benefits. Those benefits flow to the beneficiaries.

DRAFT

Appendix B - Definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, paragraph PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the	Consistent in concept with the definition of a GP focusing on investments in the partnership and the

		non-government sponsor;	definition of a JDBP focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

In addition to consistent wording, the concepts in the definitions of a government partnership and a joint defined pension plan are similar.

While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

DRAFT

Appendix C – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners'

Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan (''PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[9] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect to ongoing PSPP surpluses

[9] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the same way as the other BC Plans.

DRAFT

The Partners have the authority (s.14(2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use

ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

We trust that these comments have been of assistance to you. Should you have any questions in regard to them, please do not hesitate to contact the undersigned.

Appendix E – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act, and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the Pension Benefits Act, appointing the OTTP Board, and defining the role of the Board. By contrast, section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the Sponsors to the OTPP have the authority to utilize ongoing surpluses. The process governing the use of ongoing surpluses by the Sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every

three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the Sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the Sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the Sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the Sponsors on his or her views on the positions of the partners and provide a recommendation to the Sponsors. If the Sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

We note that the mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the Sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the Sponsors do not agree to file the valuation, then the Sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the Sponsors' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Funding Management Policy (FMP)

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and

how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.
The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:
i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).
ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).
iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Sponsors are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both Sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the Sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the Sponsors mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Appendix G - Comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP [Tables are to be updated]

Review of Discount Rates Across Jurisdictions

- In the inter-jurisdictional review of all funded provincial sponsored or joint sponsored plans which also have stand-alone plan financial statements:
  - the Ontario Teachers' Pension Plan (OTPP) is the only plan were the discount rate used in the plan's financial statements is more than 50 basis points below the discount rate used by the province.
  - OTPP stand-alone financial statements use the market rate of Provincial bonds.

- All other plans' financial statements (i.e. 23 plans across jurisdictions) use the long-term rate of return as the discount. The discount rate used by the plans' are lower than 50 basis points or less than the provinces' discount rate or at times higher than the provincial rate.

1

Plan's discount rate is lower than the provincial rate by more than 50 bps

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate
Ontario				
Ontario Teachers' Pension Plan (OTPP)	6.25%	LT return on plan assets	3.25%	Market rate of Provincial Bonds

2

Plan's discount rate is lower by 50 bps or less (or higher than the provincial rate)

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate
Ontario				
Ontario Public Service Employees Union Pension Plan (OPSEUPP)	6.25%	LT return on plan assets	5.75%	LT return on plan assets
Healthcare of Ontario Pension Plan (HOOPP)	5.75%	LT return on plan assets	5.65%	LT return on plan assets plus margin

DRAFT

Appendix G – History of Surplus Utilization for OTPP

The history of OTPP surplus utilization from the time the OTPP became a jointly sponsored pension plans to the date that the FMP was established (in March 2003) demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to reduce the value of remaining	$0

DRAFT

			special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion		

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the Sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

EY Pension services_ to-date and outstanding.rtf

From: Christina Chan [Christina.Chan@ca.ey.com]
To: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]
CC: Sun, Alicia (TBS) [Alicia.Sun@ontario.ca]; Ma, Patricia (TBS) [Patricia.Ma2@ontario.ca]; Fong, Pauline (TBS) [Pauline.Fong@ontario.ca]; Li, Wendy (TBS) [Wendy.Li@ontario.ca]; Shayan Jafrani [Shayan.Jafrani@ca.ey.com]; Uros Karadzic [uros.karadzic@ca.ey.com]
Subject: EY Pension services: to-date and outstanding
Date: Thursday, August 03, 2017 12:09:05
Attachment 1: image003.jpg

Hi Nadine,

As requested, please find below a list of services provided to-date, as well as the outstanding items to the end of September:

Services provided to-date related to year-end reporting and projections for the pension plans:

1. Accrued benefit asset recognition ("asset ceiling test")

a. Reviewed and provided documentation related to accrued benefit asset recognition for OTPP and OPSEUPP (most up-to-date version reflects all proposed changes)

2. Existing OPCD models review

a. Reviewed and provided recommendations on the existing models for year-end reporting and projections, for all Plans (OTPP, OPSEUPP, PSPP, CAATPP, HOOPP, and SRPs)

b. Provided an "audit checklist" for the existing models

c. Reviewed and provided recommendations on MRVA calculations, for all Plans

d. Reviewed and provided recommendations related to year-end adjustments

3. Adjustments

a. Considered and provided recommendations on the approach in determining the portion of the Plan the Province should include for consolidated reporting, all Plans

b. Provided two sets of comparative figures: proposed adjustments reflected as at (i) 1 March 2015 and (ii) 1 March 2016

c. Provided documentation on estimated impacts and narrative for each proposed adjustment

4. Remodeling

a. Updated existing model to reflect the proposed adjustments as at 1 March 2016 for OTPP, PSPP, and OPSEUPP.

b. Updated existing model to reflect the proposed adjustments as at 1 March 2017 for HOOPP and CAATPP.

c. All models were also updated to be more user friendly and improved for projection purposes. Walkthrough with OPCD staff on each of the remodelled workbooks

Other services provided to-date:

1. Other public plans research

a. Provided summary on other public plans in other Provinces (BC, Alberta) and identify ones which are comparable to the Province's

b. Provided a specific criteria checklist and plans for other provinces for further research considerations

2. ELHT (Employee Life and Health Trusts)

a. Provided support related to AG's questions

b. Provided analysis and documentation on the accounting treatment for ELHT, including comparison against shared risk pension plans

Outstanding:

1. Further support and/or changes to the remodelled worksheets upon OPCD/AG review, if any.

2. Preparation and delivery of training to staff (anticipating 3 half days, over the 2nd week of September: Pension accounting 101, PSAB, using the financial reporting and projection models for new hire)

It’s been a pleasure working with you. Wish you the best and maybe our paths will cross again in the near future!

Regards,

Christina

---

Hi Nadine,

As requested, we have prepared the attached document discussing the following topics:

1) Accounting treatment related to the provisions of the ELHTs under PSAB 3250/3255 (and the associated risks to the school boards)

2) Comparison of the ELHTs with Shared Risk Pension Plans

Both Shayan and I will be at Queen's Park tomorrow. Let us know if you have any comments. We are available if you would like to discuss prior to our meeting on Wednesday.

Regards,

Christina

ELHTs Accounting Treatment (EY 27 March 2017).pdf

Toronto, Ontario M5K 1J7

27 March 2017

Accounting Treatment - Employee Life and Health Trusts

OPCD has asked EY to comment on the accounting treatment related to the provisions of benefits from the Employee Life and Health Trusts ("ELHTs") under the Public Sector Accounting Standards.

Background

Historically, health, life and dental benefits were provided to employees in Ontario's educator sector through a multitude of individual plans administered separately by the Ontario school boards. To improve the cost-efficiency and delivery of benefits, all individual benefit plans are consolidated into six Employee Life and Health Trusts[1], each covering a certain group of employees. Each ELHT is established to meet the definition of an ELHT under the Income Tax Act Sc. 144.1. Benefits are provided through a joint governance structure between the bargaining/employee groups, school board trustees associations and the Government of Ontario under the ELHTs.

The ELHTs are intended to provide benefits to employees during their employment years. There are also separate retiree provisions intended to provide access to benefits for retirees.

Member groups

In order to determine the necessary accounting treatment, it is important to identify the different member groups and their respective benefit entitlements. Three groups of members with different benefit entitlements under the ELHTs are:

- "Active": approximately 211,000 members
- "Pre-August 2013 Retirees"[2]: approximately 5,700 members
- "Post-August 2013 Retirees"[3]: approximately: 1,400+ members

For current Active employees, the contributions by the boards to the ELHTs are fixed and negotiated during bargaining. Annual contribution amounts required from the boards per full-time employee are pre-determined for the period covered by collective bargaining agreements. Upon retirement, active members may be eligible for retiree benefits at full cost and they are not eligible for any cost subsidization (i.e. provisions for Post-August 2013 Retirees).

Certain members who retired prior to August 31, 2013 are eligible for a partial or full subsidization of benefit costs from the board, based on prior arrangements with their employer. The members are eligible to participate in the ELHTs until age 65 (with the exception of a small group who are eligible for lifetime coverage).

All members retiring after 31 August 2013 are eligible to participate in the ELHT through a Voluntary Plan and Separate Account. However, they are responsible for the entire cost of benefits. They are not eligible for any cost subsidization.

[1] OECTA, ETFO, AEFO, OSSTF Trust Agreements have been formally signed; CUPE and PVP/Non-union are to be finalized.
[2] Members retiring prior to 31 August 2013
[3] Members retiring after 31 August 2013

According to the ELHT Trust Agreements Article 6, "*the Trustees may establish any number of Separate Accounts within the Fund. The assets in each Separate Account shall be held as segregated funds and used for the provision of Benefits, in accordance with the terms of a Plan, to a discrete and identifiable group of Participating Employees*". Based on the benefit entitlements described above, presumably, a Separate Account is established for the Active members and a Separate Account is established for the Pre-August 2013 Retirees. Therefore, there is no cross-subsidy. For example, retiree costs are not cross-subsidized by premiums paid in respect of Active employees.

The Trust agreement state that any surpluses in a Separate Account may be used to increase Claims Fluctuations Reserve ("CFR"), enhance benefits, or reduce employee contributions. Conversely, any deficiencies in the trust may require the use of the CFR, amendment to benefit (reduction), or an increase to employee contribution levels.

For the Pre-August 2013 Retirees group, it is our understanding that if there is a funding deficiencies in the Separate Account for this group, the school board will be required to contribute and reimburse the Trust to make up the funding shortfall ("chargeback").

Accounting treatment

Paragraphs 011 – 012 of PSAB 3250 (see Appendix) discuss the classification of benefit plans as Defined Benefit ("DB") or Defined Contribution ("DC"). Further, in accordance with 3250.014, a government would determine its obligation for the defined benefit component of the plan as a defined benefit plan and the defined contribution component of the plan as a defined contribution plan.

Considering the different provisions applicable to member groups and PSAB 3250.011 – 3250.012, the benefits provided through the ELHTs include DB provisions in respect of retiree groups, whereas Active member benefits do not fall in the scope of PSA 3250/3255. Specifically:

- *Active:* Benefits/costs relating to current active members does not fall under the scope of PS 3250 (Retirement Benefits) or PS 3255 Retirement Benefits (Post-employment benefits, compensated absences and termination benefits). The scope of these sections cover benefits payable in retirement, after employment but before retirement, or compensated absences or termination benefits. Costs relating to providing benefits to active members during employment would be expensed annually in amounts equal to the fixed contribution. Further, as current active members are not eligible for subsidized benefits upon retirement (i.e. they pay for the entire cost of the post-retirement coverage without any cost to the employer), there is also no post-retirement obligation. To the extent that members on long-term disability are also eligible to receive benefits from the ELHT, a defined benefit obligation may need to be recognized under PS3255 in respect of expected future contributions over the anticipated period of long-term disability in respect of disabled employees.

- *"Pre-August 2013 Retirees:* The provisions relating to certain members who retired prior to 31 August 2013 would be classified as DB provisions as the boards are at risk with respect to the amount of benefits these employees will receive. These risks include the possibility of higher/lower than expected claims, or greater/less than expected longevity. We understand that the school boards have historically reported defined benefit obligations in respect of the ongoing commitment to subsidize retiree benefits for members in this group and will continue to do so subsequent to the transition to the ELHTs. This is appropriate as the ELHTs would be reimbursed by the boards for any contribution requirement to make up for the deficit in providing the coverage for these members.

- *"Post-August 2013 Retirees:* By contrast, there is no cost to the school boards relating to members retiring after 31 August 2013. The entire cost is borne by retirees and the school boards are not required to make any additional contributions in the future in the event of any shortfall. School board contributions are not

subject to any actuarial risk. Rather, all risks are borne by the retirees. In the event that funds are insufficient to pay for benefits, the trust agreements outline measures to address those deficiencies. The measures include the application of reserves, increases to member contributions and a reduction in benefits. None of the measures require any additional contributions from the school boards.

Therefore, we understand there to be a defined benefit obligation only in relation to the benefit entitlement for the subsidies provided to certain members retired prior to 31 August 2013. In addition, there may be a defined benefit obligation in respect of members on long-term disability to the extent that the ELHT covers such members.

Comparison with Shared Risk Pension Plans

In recent years, a number of Canadian provinces have adopted "Shared Risk Pension Plan" legislation. Shared Risk Pension Plans (SRPPs) provide benefits under a defined benefit formula, while putting cost constraints on employer contributions. Employer and employee contributions are often restricted within a band and benefits may be subject to reductions depending on the funded level.

In general, Shared Risk Pension Plans have been viewed as defined benefit plans. Risks are shared by the employer and employees, with the employer usually being subject to some level of actuarial and market risks. There may, however, be instances where DC accounting could be possible. This would be the case when no risk is retained by the employer, i.e. contributions are fixed in all scenarios. As there are many variations of Shared Risk Pension Plans, careful judgment is required to determine the appropriate accounting treatment in each case.

At the request of OPCD, we have compared the key characteristics of the ELHTs established by the Ontario school boards to those of Shared Risk Pension Plans. We have not considered the provisions relating to Pre-August 2013 Retirees, as these are clearly DB provisions under PS 3250/3255.

When comparing the benefits for the Active members under the ELHT with the SRPPS, there are a number of important differences to be considered but the following two are most significant:

- As SRPPs provide post-retirement benefits, they are within the scope of PS3250; however, as demonstrated in the previous section, the benefits provided for the Active members under ELHTs do not fall under the scope of PS3250.
- For SRPPs, the employer is subject to some level of actuarial risks and market risk as future contributions may be increased to pay for past deficiencies. Under ELHTs, the school boards are not subject to any risks: (a) contributions are fixed (as required by a Central Collective Agreement or any applicable Participation Agreement); (b) no additional contributions will be required for the related past service regardless of future actuarial or market experience; (c) the contributions required by the school boards are not dependent on the funding position of the Separate Account. Rather, employee's contributions (or benefits paid) may increase or decrease based on the surpluses/deficiencies of the Separate Accounts.

Further, there is no cost (and therefore, no post-retirement benefits) for members retiring after 31 August 2013 under the ELHTs. For these reasons, we would not expect the same accounting treatment to be applied for the SRPPs and ELHTs.

Appendix – Public Sector Accounting Board ("PSAB") 3250 Retirement Benefits (applicable excerpts)

.011 Two types of benefit plans are addressed in this Section — defined benefit plans and defined contribution plans. A defined benefit plan is one that specifies either the benefits to be received by employees after retirement or the method for determining those benefits. Generally, the amount and value of the benefits to be paid depend on a number of factors and events. These include how long the employee and any survivors live, how many years of service the employee renders, and the employee's compensation and retirement age. When a government provides benefits under a defined benefit plan, it is at risk with respect to the amount of the benefit that each employee will receive (actuarial risk) and with respect to the investment returns on any assets set aside to pay for the cost of these benefits (investment risk).

.012 When a government provides benefits under a defined contribution plan, it does not assume the actuarial and investment risks inherent in a defined benefit plan. A defined contribution plan (or money purchase plan) is one in which a government's contributions in respect of services rendered by employees are specified. The government is required by the plan to make a specific fixed contribution each period. If that contribution is made, no additional government contributions are required now or in the future for the related service. The employees are at risk. This is generally because the amount of the benefit that will be payable to an employee is dependent upon the funds accumulated for each employee's account and the investment earnings on the accumulated funds.

.013 Because benefit plans are often complex, careful analysis and professional judgment are needed to determine whether the substance of a particular plan makes it a defined benefit or a defined contribution plan.

. 014 In some circumstances, a benefit plan may include both defined benefit and defined contribution promises. The plan, for example, may guarantee a basic defined retirement benefit and state that additional benefits, such as inflation protection, will be provided on a defined contribution basis. In such circumstances, a government would determine its obligation for the defined benefit component of the plan as a defined benefit plan and the defined contribution component of the plan as a defined contribution plan. Once the type(s) of promise is identified, the accounting and reporting principles in this Section would be followed accordingly.

Appendix – Public Sector Accounting Board ("PSAB") 3255 Post-Employment Benefits (applicable excerpts)

Purpose and scope

.01 This Section establishes standards on how to account for and report obligations for post-employment benefits, compensated absences and termination benefits in government financial statements.

.02 This Section applies to post-employment benefits, compensated absences and termination benefits earned by employees and expected to be provided to them when they are no longer providing active service either on a temporary or permanent basis. For the purposes of this Section:

- *(a) Post-employment benefits are expected to be provided after employment but before retirement to employees and their beneficiaries. These benefits include long- and short-term disability income benefits (including workers' compensation), severance benefits, salary continuation, supplemental unemployment benefits, job training and counselling, and continuation of benefits such as health care benefits and life insurance.*
- *(b) Compensated absences are benefits for employee absences for which employees will be paid. These benefits include parental leaves, accumulated sick days, and sabbaticals that provide compensated, unrestricted time off for past service.*
- *(c) Termination benefits include the following:*
  - *a. Contractual termination benefits are benefits required to be provided to employees under the existing terms of a benefit arrangement when a specific event occurs that results in the downsizing and termination of a group of employees.*
  - *b. Special termination benefits are benefits that are not contractual termination benefits and that are offered to employees for a short period of time, normally not exceeding twelve months, in exchange for employees' voluntary or involuntary termination of employment.*

.03 The glossary in RETIREMENT BENEFITS, Section PS 3250, provides definitions for other relevant terms.

.04 This Section does not apply to short-term employee benefits, which would be accounted for under the general provisions for accruing liabilities. This accounting is generally straightforward because no actuarial assumptions are required and the liabilities are measured on an undiscounted basis.

.05 Examples of such short-term employee benefits are:

- *(a) Salaries, wages, bonuses, fringe benefits and similar items a government provides in the current reporting period or within twelve months thereafter, in exchange for services rendered by employees in the current reporting period; and*
- *(b) Occasional sick days and vacation days that do not vest or accumulate beyond twelve months after the current reporting period.*

Post-employment benefits, compensated absences and termination benefits are liabilities of a government. Accounting for all benefit plans is important because many governments have accumulated significant related liabilities. The fundamental accounting task is to determine the amount of the liability for these benefits and to what periods to attribute the costs.

.07 These standards are consistent with those established in RETIREMENT BENEFITS, Section PS 3250. The standards set out in that Section are appropriate for accounting for and disclosing post-employment benefits, compensated absences and termination benefits of a government. For example, a government providing these types of benefits through a defined contribution plan, multiemployer plan or joint defined benefit plan would refer to the guidance set out in Section PS 3250. This Section sets out those areas where the accounting and reporting are different from Section PS 3250.

Hi Nadine,

I've just submitted my timesheet to Nelson for the Expert Panel work. I believe we are now done, although my understanding is that the official mandate only ends on 31st.

I'm in all-day PSAB Taskforce meetings until Thursday, but following that please let me know if you're now comfortable with me joining Shayan and Christina.

Hi Lucy

One more question on the above

Contract ceiling = $65,000
Billed to date = $19,200 (excluding HST) Estimate to year end (March 31/2017) Will funds be required for 2017/18?

Thanks
Shyrose

Hi Murray,

As we move towards finalization of panel members, there are some information requirements we will need from you re: conflict of interest and security screening.

Nelson Tam, the Project Manager for the Panel, will be in touch re: the forms and completion instructions. Please complete these as soon as possible.

Also, I wanted to let you know that we are in the process of finalizing the per diem amounts. These amounts are public information (filed as an Order-in-Council). If you have any concerns with that, please let me know.

Thanks,

Cindy

Hi Mr. Gold,

Scott Thompson passed along the message that you would be interested in assisting with the expert panel the Province is setting up to review the accounting for pension assets. We are now in the process of identifying candidates for the panel.

We have drafted the terms of reference for the panel, which I've attached.

Would you please review these, let me know whether you have any questions and confirm back that you continue to be interested. We can then set up a time for a conversation (assuming you are still interested!)

Regards,

Cindy Veinot

Independent Pension Asset Expert Panel _Final_Oct 5 2016.pdf

Independent Pension Asset Expert Panel

Terms of Reference

Background

In connection with the preparation and audit of the 2015-16 Public Accounts, the Auditor General and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors – Ontario Teachers' Pension Plan and Ontario Public Service Employees' Union Pension Plan. The government passed a time-limited regulation to require the accounting for these pension assets align with the interpretation of the Auditor General. This time-limited regulation enabled the professional accounting staff to take responsibility for the preparation of the Public Accounts in accordance with legislation and PSAS.

The government released an annual report and unaudited financial statements on October 3, 2016, and concurrently announced that an expert panel would be formed to review the application of PSAS to these pension assets.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to write off the pension assets.

Governance

An Expert Panel is established as a short-term advisory body appointed by the President of the Treasury Board to review the application of the PSAS to accounting for pension assets and provide advice to government. The final report will be submitted to the President of the Treasury Board and provided to the Auditor General of Ontario, and made public thereafter. The future accounting for the pension assets in the preparation of the Province's financial statements will be guided by the report of the panel.[1]

Mandate

The Expert Panel's mandate is to deliver advice and recommendations to the government on the application of PSAS to the recognition and measurement of pension assets. The Expert Panel's advice and recommendations to the government will consider:

- The requirement regarding control with respect to recognizing a pension asset for a joint defined benefit plan.

[1] The Public Sector Accounting Board established a task force to review the standards on pension plans. Should their review results in changes to the standards, these new standards would be applied by the Province.

- The requirement regarding control with respect to recognizing a pension asset for other pension plans.
- Appropriate valuation techniques to measure a pension asset that take into consideration future decision making authority by plan sponsors.
- Recommendations to the Employee Future Benefits Task Force of the Public Sector Accounting Board regarding issues that should be considered in their review of the retirement and post-employment benefits standards.

Timelines

A report to the President of the Treasury Board and the Auditor General of Ontario is due by the end of 2016.

Membership

The membership of the Panel will comprise experts in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and Public Sector Accounting Standards. All members will be appointed by the President of the Treasury Board.

The identified members should attend/participate in the meetings; no substitutes or alternates should attend in place of a member.

Support

The Province will identify individuals to support the Panel and work collaboratively to provide information related to the pension plans sponsored by the Province of Ontario.

Funding

The Province will be responsible for the costs of the appointed members to attend the meetings. The costs of any individuals supporting the work of the Panel will also be borne by the Province.

Ms. Karen Hughes
Associate Deputy Minister,
Treasury Board Secretariat,
7 Queen's Park Crescent
Toronto ON M7A 1Y7

Dear Ms. Hughes:

We have been engaged to report on the appropriate application of certain aspects of Canadian public sector accounting standards to the recognition of the accrued benefit asset (also referred to in this report as the Pension Asset or the Asset) related to the Ontario Teachers' Pension Plan (OTPP the Plan) in the Province of Ontario's (also referred to as the Province or the Government of Ontario in this report) accounts as at March 31, 2016. This report is being issued to the Associate Deputy Minister of the Treasury Board Secretariat of the Government of Ontario. Our engagement has been conducted in accordance with Canadian generally accepted standards for such engagements**.**

It should be noted that the responsibility for the proper accounting treatment rests with the preparers of the financial statements, who should consult with their incumbent auditor. Our judgment on the appropriate application of Canadian public sector accounting standards for the specific issue being discussed is based on the facts, circumstances and assumptions provided to us. Should the facts, circumstances or assumptions differ, our conclusion may change.

Statement of facts and assumptions
It should be noted that the following background and facts represent a high level summary of the situation and represent those facts that we considered important in reaching our opinion. They do not purport to be a complete representation of all of the terms of the OTPP or the agreements between the government and the Ontario Teachers' Federation (OTF). Management has acknowledged their agreement with this summary. If these facts are incomplete or incorrect, then our conclusions may change.

"The (Ontario Teachers') pension plan is jointly sponsored by the Ontario government, through the Minister of Education, and the executive of the Ontario Teachers' Federation (OTF). The OTF represents teachers, while the government represents employers.

OTF and the government are equally responsible for ensuring the pension plan has enough money to meet its long-term pension obligations. In addition, they appoint experienced, professional experts to the pension plan's Board.

Statement of facts and assumptions (continued)
Through a six-member Partners' Committee, the sponsors jointly:

- Set benefit levels
- Establish the contribution rate paid by working teachers (which is matched by the Ontario government and other designated employers)
- Decide how to address funding shortfalls or use surplus funds when they arise"

(Source: https://www.otpp.com/corporate/plan-governance)

The governing and other documents that are relevant to the accounting analysis are as follows:

- Teachers' Pension Act (TPA), including Schedule 1
- Partners' Agreement
- Funding Management Policy (FMP)
- Osler's letter dated September 20, 2016; we have not summarized this letter as it should be read in its entirety.

The assets of the pension plan are held by Ontario Teachers' in trust for the beneficiaries of the plan – teachers. The Government does not have unilateral access to the assets of the trust (including changing contribution amounts, taking contribution holidays, or withdrawals). Actions of this nature require negotiation and agreement between the two sponsors.

The following facts and assumptions have been accepted without further analysis or verification:

- As a jointly sponsored plan, the Plan meets the definition of a joint benefit plan under S. 3250 of the Public Sector Handbook.
- The actuarial and other assumptions that factored into the valuation used for accounting purposes, before considering the appropriateness of the recognition of an asset or the need for a valuation allowance related to any asset, are appropriate and meet the requirements of PS 3250.
- The Plan's most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website. The OTPP's public financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015. These financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook, which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the funding surplus or deficit.
- As at March 31, 2016, there were no written agreements in place to access the Plan surplus to reduce future minimum contributions or withdraw any amounts from the Plan.
- The OTPP is regulated by the Financial Services Commission of Ontario. Valuation reports must be filed with this regulator to monitor that assets of the fund are reasonably sufficient to meet the liabilities of the pension plan on a continuing basis. Per 78(1) of the Pension Benefits Act: No money that is surplus may be paid out of a pension fund to the employer without the prior consent of the Superintendent.

Statement of facts and assumptions (continued)

- Management has received legal commentary about the role of the Superintendent. From this advice, management has concluded that despite this regulation the Province could utilize a surplus through contribution reductions as "Neither the PBA nor the regulations to the PBA (the "Regulations") require the Superintendent's consent for surplus to be *utilized* for a contribution holiday or to amend the contribution formula under the OTPP." Further, although changes to the OTPP text would be required to be registered with the Superintendent, "The authority of the Superintendent to refuse to register an amendment under the PBA (in whole or in part) is limited to circumstances where the amendment is void or if the pension plan with the amendment would cease to comply with the PBA and the Regulations." (Source: Osler memo dated September 26, 2016).
- The Auditor General's Office provided a letter dated September 26, 2016 setting out their views. We have read and considered the contents of that letter.

Relevant Extracts from the TPA

Section 5 (1.1) of the TPA states that the total amount of contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year. There can be instances where contributions would not be equal between the sponsors, such as the government's payments in connection with forgone inflation adjustments.

Section 10 of the TPA provides that the Minister of Education and the executive of OTF may enter into an agreement that provides for, among other things, the joint management of the Plan and the sharing of entitlement to gains or surplus under the Plan and of liability for deficiencies in the pension fund.

Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Partners) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement.[1] The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.

Relevant extracts from the Partners' Agreement

The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the *Pension Benefits Act,* appointing the OTTP Board, and defining the role of the Board.

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Partners to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

[1] Partners' Agreement, section 110.

Relevant extracts from the Partners' Agreement (continued)

If the partners cannot agree on the changes required to the Plan, a mediator is appointed to assist the Partners in coming up with an agreement. The mediator is responsible for submitting a report to the partners on his or her views on the positions of the partners and provide a recommendation to the Partners. If the partners do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the Partners' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Relevant extracts from the FMP

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.

The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:

i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).
ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).
iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Partners are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

Relevant extracts from the FMP (continued)
It is our understanding that the Plan is currently in the Restoration Zone. We understand that contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both partners, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the partners (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Application of accounting principles
Specifically, our report addresses the following questions:

1. Is it necessary for a government to have a legally enforceable right to reduce future contributions in order to recognize a Pension Asset under PS 3250?

2. What is the role of legal uncertainty in assessing the government's expectation of future benefit from a Pension Asset?

Our views in this report are confined to these two questions and do not extend to any earlier reports provided by Deloitte or to any other analysis that may have been presented in draft or in any other manner.

Authoritative literature
In our analysis, we considered the pronouncements and guidance in Section 3250 of the CPA Public Sector Accounting Standards Handbook. What we considered to be the most relevant passages from PS 3250 are reproduced below:

> **The objectives of funding and accounting**
>
> .008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.
>
> .009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. Accordingly, it is necessary to develop accounting estimates of liabilities for retirement benefits and expenses using an actuarial cost method and actuarial assumptions that ensure essential information required for fair presentation of financial condition and results of operations can be reported in government financial statements.

Authoritative literature (continued)

.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.

Actuarial assumptions

.042 Actuarial assumptions should be based on the government's best estimates of expected long-term experience and short-term forecasts. [SEPT. 2001]

Joint defined benefit plans

.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.081 *When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans*. [SEPT. 2001]

.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Disclosure

.083 The notes and schedules integral to the financial statements would disclose the methods and judgments applied in accounting for accrued benefit obligations and expenses. Full disclosure is particularly important for retirement obligations because the measurements depend heavily upon judgments rather than objective evidence.

Limit on the carrying amount of an accrued benefit asset

.050 *An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.* [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset . The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit . When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Limit on the carrying amount of an accrued benefit asset (continued)

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

We also considered the following definitions as set out in the glossary of PS 3250:

- An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).
- The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:
  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and
  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Limit on the carrying amount of an accrued benefit asset (continued)

- A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:
  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;
  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;
  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and
  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

CONSIDERATION OF QUESTION 1

Application of PS 3250 to Joint Defined Benefit Plans

A joint defined benefit plan is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. We would note that paragraph .081 of PS 3250 clearly states that a government should account for its portion of the plan in accordance with the standards for defined benefit plans. As a result, the Province of Ontario accounts for its proportionate share of OTPP and has historically recorded its share as 50% of the plan.

The Province of Ontario's Public Accounts have included a Pension Asset related to OTPP since fiscal 2001/2002. We have been informed that this situation has arisen because, to this point in time, the government's share of the total contributions to the Plan plus the actual investment returns on the Plan's assets have exceeded the government's share of the accumulated retirement benefit expense. The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by S 3250. S 3250.51 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: "Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons."

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (3250.42) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (3250.41). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. 3250.57 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province of Ontario has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on Plan Assets, which is one of the acceptable references suggested on PS 3250.44. We express no view on the actual rates that were chosen.

Application of the limit on the carrying amount of an accrued benefit asset

PS 3250.50 requires that an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. This comparison between the adjusted benefit asset and the expected future benefit informs whether a valuation allowance is required and if so, how much of a valuation allowance should be recorded. (It should be noted that "accrued benefit asset" and "adjusted benefit asset" are defined terms used in S. 3250. As at March 31, 2016, in this particular case, management has represented to us that these two amounts are the same.)

PS 3250.52 contemplates that there are two ways in which a government can benefit from an accrued benefit asset. A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. As such, an expected future benefit would include the ability to either withdraw plan assets from the plan or reduce future contributions.

PS3250.52 also goes on to consider that an accrued benefit asset may become impaired when there is a plan surplus that the government is not entitled to benefit from fully. The paragraphs in the standard that follow determine how a government would go about considering the extent of any impairment, which would give rise to a valuation allowance. In order to make this determination, the government is required to consider the "expected future benefit", which would effectively create a ceiling for the asset. Here the guidance diverges between benefit expected to be realized through future reductions in contributions and those to be realized through withdrawal of surplus.

Specifically with respect to withdrawal of surplus, PS 3250.59 is very clear that expected future benefit can only be asserted where the government has a current legally enforceable right to withdraw assets from the Plan. We considered whether this guidance should be applied to cases where the expected future benefit related to the Pension Asset is expected to be realized through reduced contributions and concluded that the guidance does not apply in this situation; while PS 3250.59 does introduce the concept of a legally enforceable right, it does so solely in the context of a government's future withdrawal of a Plan surplus, and not in the context of a government's reduction of future contributions. We believe it reasonable to conclude that if the standard setters had intended legal enforceability to be the test, they would have included that notion throughout the guidance, instead of only raising it in the context of a withdrawal of surplus. In the situation at hand, the Province is not asserting an expected future benefit based on surplus withdrawal. Instead the Province's position is that the future benefit is expected to be realized through future contribution reductions. Therefore, we do not believe that 3250.59 applies in this case.

Additionally, in forming our view on the application of PS 3250 to Joint Defined Benefit Plans, we noted that there is specific guidance (PS 3250.81) that requires the Government to account for a portion of the Plan in accordance with the standards for defined benefit plans.

For the reasons stated above, we are of the view for Question 1, that legal enforceability of a government's right to access a pension plan surplus through future contribution reductions is not necessary to justify recognition of a Pension Asset. We believe that the guidance in PS 3250 is the primary source of GAAP on this topic and, since it is clear, there is no need to look at any other potential sources of GAAP.

CONSIDERATION OF QUESTION 2

Since we have concluded that legal enforceability is not a necessary requirement to support a government's right to access a pension plan surplus through future contribution reductions, we further considered what role legal considerations should play in the measurement of the Pension Asset. We note that PS 3250.52 requires one to consider "uncertainties as to a government's legal right to use a plan's accounting surplus." Our interpretation of this guidance is that it presents a lower threshold than legal enforceability. Specifically, the amount of Pension Asset that gets recorded needs to be subject to considerations around any legal uncertainties. This consideration will involve significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a Pension Asset.

PS 3250.53 to .58 lay out a mathematical calculation that determines the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in PS3250.055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where realization includes a reduction in future contributions. A valuation allowance is recorded against the Pension Asset to limit the asset value, if necessary, based on this analysis.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. This calculation is further described in PS 3250.56(a), which sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per PS 3250.81 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the Pension Asset value to be recorded in the accounts. For example, if the Pension Asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the Pension Asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in the determination of future minimum contributions required to be made by the government regardless of any surplus. There is no further guidance in S 3250 as to how this calculation should be performed and what restrictions or parameters should be factored into this calculation.

Determining the number of years of contributions to include should involve consideration of legal uncertainty as set out in PS 3250.52. With respect to this uncertainty, we would observe that there are a number of considerations that may be relevant. As part of this analysis, we reviewed Osler's legal letter of September 20, 2016. That letter makes a number of observations about the Plan agreements and governing documents that we will not reiterate here. Osler's do note that legal enforceability does not exist. However, as noted above we do not believe that legal enforceability is required in this case.

Future reductions in contributions will need to be negotiated and agreed between both sponsors, who are required under the Plan governing documents to bargain in good faith. There are a number of factors to consider and it is possible for reasonable professionals to arrive at different conclusions, even when confronted with the same set of facts and circumstances. These considerations will be highly judgmental.

With respect to these judgments, we offer the following observations. We express no opinion on the completeness of this list of observations or the relative importance of each of these points.

- Plan documents and design contemplates the shared nature of the Plan.
- Section 10 of the Partners agreement require that the partners meet every 3 years to discuss changes to the Plan.
- As described to us by management, there was a long history of sharing surpluses through various mechanisms during the 1990's when funding surpluses were more common. The FMP also contemplates a sharing of surpluses.
- As described to us by management, in addition to the history of surplus utilization noted in the facts and assumptions, it is worth noting that the actions taken around inflation indexation and subsequent restoration of those benefits are a recent example of the sharing philosophy governing operation of the OTPP. Starting in 2011 in response to a deficit situation, it was determined that indexation would be reduced for teachers retiring after 2009. Consistent with the 50/50 approach inherent in the Plan operation, the government agreed to make payments (often referred to as "share the pain" payments) into the Plan that would effectively match the value of benefits foregone by teachers. In 2014, 2015 and 2016, surpluses were used to restore some of the lost indexation. This decision results in a decrease in the Province's "share the pain" payments.
- The FMP explicitly considers the possibility of contribution reductions at different funding levels, although both sponsors need to agree. The OTPP's investment performance has consistently outperformed expectations. If this situation continues the funding surplus can be expected to continue to grow. Modelling could be performed to help estimate when the different funding zones will be reached and probability of contribution reductions may be increased.
- We also note that Canada Revenue Agency establishes limits for pension surpluses. When these limits are breached, steps need to be taken to reduce the surplus. In such a situation, contribution reductions would be one way to reduce the surplus that would need to be negotiated by the parties within their overall framework for negotiation. Again, modelling could be done to develop expectations as to when these CRA limits could be expected to be reached.
- Contributions are generally borne equally by the Province and the teachers. It may be reasonable to presume that teachers will also want to see contribution reductions at some point. Admittedly, increases in benefits could also use any surplus; however, it may be reasonable to expect that the interests of taxpayers and teachers will need to be weighed in the "good faith" bargaining process such that unequal weighting towards increases in benefits may be unlikely.

- In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (PS 2130.03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in PS 2130.13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

However, application and weighting of these and other considerations is a highly judgmental exercise and it is possible that there is a range of reasonable conclusions that may result in a range of reasonable estimates for the valuation allowance to be taken against the Pension Asset. We are unable to opine on whether a valuation allowance is needed, and if so, what a reasonable range of estimates would be.

Given the complexities and degree of judgment involved in these matters, appropriate disclosure is a matter of significance as is recognized in 3250.83 which states, in part, *"Full disclosure is particularly important for retirement obligations because the measurements depend heavily upon judgments rather than objective evidence"*. This importance is also highlighted in the context of joint benefit plans in 3250.93 which requires that the unique nature and terms of any joint plans be disclosed.

We would also note that Deloitte prepared a report dated August 18, 2016 entitled "Asset Ceiling Calculations for the Ontario Teacher's Pension Plan" in conjunction with management that was used by management as part of their analysis to determine that no valuation allowance was required against their Pension Asset as at March 31, 2016. That report was prepared solely to assist management in preparing their own analysis. We were not engaged to and did not express an opinion on the amount of or need for any valuation allowance, nor do we express an opinion on this analysis at this point. Reference to the August 18, 2016 report in this report should in no way be construed to be an opinion on that earlier report.

The ultimate responsibility for the decision on the appropriate application of Canadian Public Sector Accounting Standards for the specific transaction described above rests with management as preparers of the financial statements, who should consult with the Auditor General of Ontario. Our judgment on the appropriate application of Canadian Public Sector Accounting Standards for the specific situation described above is based on the facts, circumstances and assumptions provided to us. Should the facts, circumstances or assumptions differ, our conclusion may change.

This report is intended solely for the information and use of Ms. Karen Hughes and management of the Government of Ontario and is not intended to be and should not be used by anyone other than the above party and the Auditor General of Ontario or for any other purpose. For further clarity, this report should not be distributed to anyone outside those named in the previous sentence, nor should it be quoted from outside this group for any purpose. Please contact Kerry Danyluk, National Director of Accounting Services, regarding any questions about the content of this report (416 775-7183 or kdanyluk@deloitte.ca).

Yours truly,

Deloitte LLP.

confidential form and tax form.rtf

From: []
To: maraymond@deloitte.ca [maraymond@deloitte.ca]
Subject: confidential form and tax form
Date:
Attachment 1: confidentiality agreement.doc
Attachment 2: tax declaration form.docx

Hi Raymond

Can you please fill out these two forms and send back to me asap. Please backdate it to the date that you actually started to work.

Thanks
Shyrose

confidentiality agreement.pdf

CONFIDENTIALITY AGREEMENT

Confidentiality Agreement

During and following the term of the Agreement between **Deloitte Inc.** (the "Vendor") and Her Majesty the Queen in right of Ontario as represented by the **Treasury Board Secretariat** and during and following the term of each Statement of Work entered into by the Vendor and pursuant to the Agreement (collectively, the "Agreements"), the undersigned agrees with the Vendor to keep confidential and secure all Confidential Information to which the undersigned may have access to in the course of the performance of services pursuant to any of the Agreements (including requests for services) or otherwise in connection with any of the Agreements (including requests for services). "Confidential Information" means all information of the Ontario Public Service and of the Client's subcontractors at any tier of subcontracting that is confidential by its nature or in the circumstances in which it is received, including all confidential information in the custody or control of the Ontario Public Service, regardless of whether it is identified as confidential or not, and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge, possession or control of the Vendor in connection with any of the Agreements. "Ontario Public Service" means the ministries and other administrative units of Her Majesty the Queen in right of Ontario ("Ontario") over which ministers of Ontario preside, and for the purposes of this Confidentiality Agreement, includes Ontario and Ontario's agencies, boards, commissions and Crown corporations, offices of an officer of the Legislative Assembly or of the Ontario Legislature and Listed Entities, and "**OPS**" has the same meaning.

The undersigned acknowledges that the Client is bound to maintain custody of or control over information, material and records, however recorded, within the meaning of the *Freedom of Information and Protection of Privacy Act* ("FIPPA"). The undersigned agrees to comply with the privacy provisions of the Agreements in the course of providing services pursuant to the Agreements.

The undersigned shall not directly or indirectly disclose, destroy, exploit or use any Confidential Information except for the purpose of performing services pursuant to the Agreements. The undersigned shall not copy any Confidential Information, in whole or in part, unless copying is essential for the performance of services pursuant to the Agreements. On each copy, the undersigned must reproduce all notices that appear on the original.

The undersigned acknowledges that the Vendor is obliged to implement and maintain measures to ensure the security and integrity of Confidential Information and to protect it against loss, alteration and destruction and against access by unauthorized persons, and to select, implement, use and maintain the most appropriate products, tools, measures and procedures to do so. The undersigned covenants and agrees to adhere to all of the measures instituted by the Vendor.

The undersigned agrees to return all Confidential Information, including all copies and portions thereof, to the Vendor or to the Client with no copy kept by the undersigned as soon as the need to possess them ends, at the request of the Client, and in any event, prior to concluding the performance of services pursuant to the applicable Agreements.

tax declaration form.pdf

Appendix D – Tax Compliance Declaration Form

The Ontario Government expects all suppliers to meet their Ontario tax obligations on a timely basis. In this regard, proponents are advised that their Ontario tax obligations, if any, must be in good standing in order to be considered for a contract award (see Section 3.2.3 of the RFP). In order to be considered for a contract award, the proponent must submit the following tax compliance status statement and the following consent to disclosure:

Declaration

I/WE hereby certify that **Deloitte Inc**. (the "Proponent") at the time of submitting its proposal, is in full compliance with all applicable Ontario tax statutes, whether administered by the Treasury Board Secretariat or by the Canada Revenue Agency, and that, in particular, all returns required to be filed have been filed and all taxes due and payable under those statutes have been paid or satisfactory arrangements for their payment have been made and maintained; or the Proponent will take all necessary steps prior to being considered for contract award in order to be in full compliance with all applicable Ontario tax statutes.

(Please check applicable box)

The Proponent ❑ is / ❑ is not a corporation subject to Ontario corporate tax under the *Taxation Act, 2007* (Ontario).

(Please insert Proponent's Business Number) _____

Consent to Disclosure

The Proponent consents to the Ministry of Finance releasing the taxpayer information to the Ministry of Finance as necessary for the purpose of verifying the Proponent's compliance with Ontario tax statutes.

The Proponent consents to the Ministry of Finance releasing taxpayer information to the Requesting Ministry as necessary for the purpose of verifying the Proponent's compliance with Ontario tax statutes.

Dated at _____ this _____ day of _____ 20 _____

_____

(Authorized signing officer)

_____

(Print Name) **(Title)**

I have authority to bind the Proponent.

data request re_ OTPP_OPSEUPP asset ceiling.rtf

Date: Wednesday, March 15, 2017 12:15:11
Attachment 1: image003.jpg

Hi Shyrose, Bharat,

We will require the following documents for each of the Plans to proceed:

1) Actuarial funding valuation reports for each plan – Bharat, would you provide? Would you mind also provide us with a printed copy for each as we do not have access to the printer?

2) Funding policy statement - I believe Shyrose has a reference binder with background materials on these plans that contain this information.

Thank you very much!

Christina

---

Shyrose and Nadine

As discussed with Trevor, Shyrose if you can print the documents it would be appreciated (just finalized it)
Nadine – note that the 3rd document (extr case) is to show until what time the contribution requirement would be needed to get to EFB equal to adjusted benefit asset. This is 2048 and 2050 respectively. This is just to show how far this needs to get compared to the current practice we see for the most restrictive test. I will let you judge if you wish to provide or just keep as a back up.

See you shortly

OTPP and OPSEU PP asset ceiling discussion

Separate analysis documents have been prepared to support the OTPP and OPSEU PP asset situation presented on the Province Financial statements. Following the review of the documents, the Ontario AG has submitted 2 questions. The purpose of this document is to provide answers to the questions.

Before moving into the supporting explanation, it is important to highlight the main conclusions of the Province analysis presented in the initial reports and the rationale behind it.

For the OTPP, the main conclusion, based on the facts and circumstances is that the Government is entitled to have access to the surplus related to the share of the plan that it is responsible for. Here are some elements of facts and circumstances that support the Government analysis:

- The plan is a joint sponsored pension plan under the pension legislation
- The contribution requirement of the plan is based on matching employer contributions, hence a 50 / 50 sharing
- There is an agreement that has been reached between employees and Government that defines how surpluses and deficits are to be treated. The document is called the Funding Management Policy (FMP)
- The FMP identifies that the Government can benefit from a surplus position through contribution reduction but also with possible surplus withdrawal. Sections 4.05, 4.06 and 5.05 of the FMP are particularly referring to this
- The idea of the plan is that when good or bad news occur and the employees benefit or are negatively affected by this, the Government also gets a similar impact. In particular, in surplus position, the employees could benefit from improvement to the plan provisions while the Government could benefit from reduction in contribution
- The conclusion of the analysis is therefore that any surplus position to the Government, based on best estimate assumptions as per the accounting standards would represent an economic benefit in the future as per the FMP sharing notion that has been agreed by the parties
- The Partners at OTPP do need to review and confirm on the uses of surplus, but this does not raise the question of the access of the Government that is based on the agreed FMP.

For the OPSEU PP, the main conclusion, based on the facts and circumstances is also that the Government is entitled to have access to the surplus related to the share of the plan that it is responsible for. Here are some elements of facts and circumstances that support the Government analysis:

- The plan is a joint sponsored pension plan under the pension legislation
- The contribution requirement of the plan is based on matching employer contributions, hence a 50 / 50 sharing
- There is an agreement that has been reached between employees and Government that defines how surpluses and deficits are to be treated. The document is called the Funding Policy (FP)
- The FP identifies that the Government can benefit from a surplus position through contribution reduction.
- There is a rate stabilization reserve that is set up for each sponsor, the employees and the Government. This reserve represents the value of unspent past surpluses. The Government does have its own reserve for its share of the plan from which it can

draw to reduce contribution requirements. Gains and losses are affecting the reserve amount. As an illustration, the Government has about $104M of reserve as at December 31, 2014 valuation report (page 4 of the report).

- The FP under 3.3 indicates that the reserve accounts are controlled by the sponsors as per their allocated amounts.
- The idea of the plan is that when good or bad news occur and the employees benefit or are negatively affected by this, the Government also gets a similar impact. In particular, in surplus position, the employees could benefit from improvement to the plan provisions while the Government could benefit from reduction in contribution
- The conclusion of the analysis is therefore that any surplus position to the Government, based on best estimate assumptions as per the accounting standard would represent an economic benefit in the future as per the FP sharing notion that has been agreed by the parties
- Under 5.1 of the FP, it is indicated that the OPTrust recognizes that the decisions on the use of surplus are reserved to the Sponsors (employees and Government). OPTrust has provided principles to help decisions on the use of surplus, but it is still a decision of the employees and the Government on how to use their reserve account
- Under the FP, section 5.1 refers to some options of using surplus. The item 5 of Section 5.1 indicates that it is suggested to consider temporary reduction of contribution as the most predictable way of reducing the surplus. Reduction of contribution is identified as the most predictable way, but likely not the only possible way. Since the idea of the plan is to share 50 / 50 the gains and specifically through reserves identified separately for each sponsor, surplus withdrawals may be expected as one other way of dealing with surplus.

So based on all the facts above, the Province concluded that the accounting surplus measured as the best estimate of the plan situation represents an economic benefit through future contribution reduction or surplus withdrawal. The answers provided to the Ontario AG questions would therefore normally follow be limited to these explanations above. In order to still support the discussion on expected future benefit (especially for the question 2 raised on calculations), we did look at how calculations might be prepared under PS3250 by entities sponsoring plans where the employer would not have such a clear access to surplus, which is not the current situation.

The key elements of the Ontario AG queries are:

1. Could the plan sponsor access a surplus for the purposes of withdrawing some amount of asset in line with PS 3250.059?
2. Provide illustrations of the expected future benefit (EFB) to determine if the adjusted benefit asset should be impaired by a valuation allowance?

The EFB calculation is a sum of 2 parts. One is based on future current service reduction and the other is based on surplus withdrawal. We note that in the calculations for question 2, we have only considered the part of current service reduction and not assumed any value for surplus withdrawal. Although we have indicated that the Government would have some access to it through the policies agreed with the employees, we have excluded the calculation of it since the part of EFB coming from current service cost reduction is sufficient to support the asset position as is illustrated by the calculations.

For the calculation of the EFB of an adjusted benefit asset under PS 3250.050, we have identified 4 levels of calculation to determine the EFB (one additional to the 3 Views of initial report prepared):

- Level 1: A more Liberal/Historical calculation based on a perpetuity of service cost – basically no employer minimum required contribution regardless of any surplus (View 1 in the initial report);
- Level 2: A recent approach seen in some situations used for calculation – employer minimum contribution based on the current funding report period ex 1 to 3 years (View 2 in the initial report);
- Level 3 (a new approach): Another recent approach which we are seeing used – employer minimum contribution based on the current funding report but for the period of contribution requirement (usually more around 10-15 years) and not just the period of the current funding report;
- Level 4: A highly complex approach for calculating EFB which requires stochastic projections of plan situation over significant number of years and large number of generated scenarios (the previous View 3 of the initial report).

The Ontario AG as indicated in question 2 that some calculations along the lines of view 3 (now Level 4) was expected. As indicated in the initial document, we have never seen stochastic approaches used to prepare PS3250 asset ceiling. This would be highly time-consuming and require large number of assumption inputs that are not needed in usual accounting for pension plans. This would require a full stochastic projection which includes identifying the funding policy triggers each year for multiple plan situations. This would require a powerful model and would likely come at a very large cost to the plan which would need to be approved by employees or subsidized by the Government. It also includes significant uncertainty as to how you do project so many valuation results for so many years. The further you get into projections, which is the case in this sort of stochastic modelling, the more the long term results may be questionable. In our situation, the asset ceiling test presumes the plan is maintained permanently, hence a perpetuity calculation. As such, we do not see the real value of this and this is not seen in practice. However, in order to illustrate what the calculations may look like for an approach “along the line” of View 3 questioned by the Ontario AG we have prepared results based on the Level 3 defined above. This would represent what is seen in practice under PS3250 that is the closest to the View 3 spirit for an entity that would not have such a clear access to surplus in an agreement like we have here.

We have therefore performed a calculation in line with Level 3 using the future contributions as per the funding report. For OTPP, we have used the period to 2026 (11 year horizon) referred to on page 15 of the funding report for the special contribution requirement. For the OPSEU PP, we have used a period of 16 years indicated on page 8 of the funding report. We believe this to be a comprehensive calculation to determine the EFB.

Based on the introduction we made on the facts and circumstances linked to the conclusion found in the initial reports, we believe that this calculation is what may represent the very minimum EFB calculation. There are other elements that would generate other EFB such as surplus withdrawal and also the consideration of the excess return coming from the accounting best estimate (6.25%) compared to the funding valuation basis (for instance 4.85% under the OTPP). This would likely have an incidence in reducing the number of years of required employer contribution (11 years and 16 years used in our calculation).

Please find below our responses to the Ontario AG questions.

---

1. The report makes reference to the earlier section of paragraph 59 of PS 3250 but it's not clear to us how the section highlighted in PS 3250.059 has been addressed in the analysis. Were any amounts excluded that were subject to the restrictions identified? Have the approvals been obtained if they were not excluded?

   .059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

OTPP

In our quantitative analysis in section 3 of the report (and the more detailed one provided below to question 2), the EFB from future service accrual is enough to cover the entire plan asset position and thus no amount for surplus withdrawal was considered in the EFB due to the nil impact it would have in regards to the asset ceiling test. However, we note in section 4 of the report the elements that would go into considering a temporary surplus distribution. A few key points is that the plan would need to enter 1 of the top 2 funding zones and also considering Funding management policy (FMP) provisions that refer to access to surplus. This is based on the FMP and the actual event would be triggered by the agreement amongst the partner group (which consists of the Ministry of Education and OTF). The FMP does have protective rights for the Government to ensure access to the surplus and not just to the employees. This supports that surplus distribution has a realistic economic value to the employer and could also be a part of the EFB if needed to support the asset ceiling calculation. We do see an entitlement to the government through the documents that the parties have set up (and agreed) and therefore we identify that the government has a right to surplus as a possible benefit.

OPSEU PP

In our quantitative analysis in section 3 of the report (and the more detailed one provided below to question 2), the EFB from future service accrual is enough to cover the entire plan asset position and thus no amount for surplus withdrawal was considered in the EFB due to the nil impact it would have in regards to the asset ceiling test. However, we note in section 4 of the report the elements that would go into considering a temporary surplus distribution. The Regulations and the Funding Policy (FP) focus on the Sponsors ability to access unused surplus (held in the reserve) to address minimum funding contributions including normal cost. Under the FP, section 5.1 refers to some options of using surplus. The item 5 of Section 5.1 indicates that it is suggested to consider temporary reduction of contribution as the most predictable way of reducing the surplus. Reduction of contribution is identified as the most predictable way, but likely not the only possible way. Since the idea of the plan is to share 50 / 50 the gains and specifically through reserves identified separately for each sponsor, surplus withdrawals may be expected as one other way of dealing with surplus. The idea is that when gains occur, they are shared and used by each sponsor. The contribution reduction is identified as one "predictable way" of using the surplus. Similar to the OTPP, the calculations for OPSEU PP assume no surplus withdrawal value under EFB as non required to support the asset position.

2. We are requesting an EFB calculation that would be along the lines of "View 3" as part of the analysis. We were expecting this type of calculation given the magnitude and complexity of these pension plans. Could you let us know please when we can expect this by as we would like to review the results of this calculation.

We have performed the following calculations in line with the Level 3 described previously.

It does include reference to the plans respective funding valuations. For both plans, the funding reports identify horizon for contributions (11 for OTPP and 16 for OPSEU PP) that we have used in calculation. For service accruals, based on the landscape of the plan being assumed to continue indefinitely, we have taken service cost amounts in perpetuity. This is what we see in practice for an open plan that still accepts new employees. As noted, no distinct surplus withdrawal amount is defined as it is non necessary to support the asset position. Also, we note, that based on the best estimate assumption for asset return, there is also a significant improvement expected in the plan situation for funding that may further reduce the horizon for required contributions, again no specific amount included in the EFB but this would only increase it (just as an illustration, based on the difference between accounting expected return on asset and the funding discount rate used in the determination of the contribution amounts, we obtain about $1.2B annual excess return for OTPP and $37M annual excess return for OPSEU PP).

The various inputs to the calculations are detailed and the source of information identified.

The conclusion for both plans is that even without any surplus withdrawal factored in the EFB or effect of excess return, there is plenty of room to support the asset position. It reflects practice observed recently for few cases along the lines of View 3 shown in the initial report. This is therefore what we believe to be a minimal EFB approach under PS3250 for an entity that would not have such clear access to use the surplus. Other sources of EFB may be supported by the plans facts and circumstances of the OTPP and OPSEU PP, but they are not needed as the conclusion would be unaffected.

Subject: 2011 Funding Decision

A preliminary $17.2 billion shortfall was resolved with a 1.1% contribution rate increase (phased in over three years), slightly smaller annual cost-of-living increases for teachers who retired after 2009, and recognition of current contribution rate as the permanent base rate

Was this contribution rate increase shared by the teachers?

Subject: Analysis of how surplus could reduce future contributions

Hi Cindy and Nadine,

Have you performed an analysis that shows how, through the mechanics of the FMP and with regard to the position of the entity at the year end, how the Province could realize the surplus through reducing its contributions?

Based on the key funding decisions from 1990 onwards it appears that there was a contribution reduction in 1993, 1996, 1998 but then nothing since then (although this appears to be due to the fact that we were in a funding shortfall position until 2012). So why is there an expectation that this asset will be recovered through future contribution reductions and what roadblocks stand in the way of this?

This might warrant a discussion rather than a response, and apologies for the tone, but we are asking the questions to strengthen the communication of the analysis that has been given to date.
Thanks

Matt

Hi Lucy.
Further to our discussion, below is an outline of the work we discussed. The work relates to the jointly sponsored pension plans (OTPP and OPSEUPP) as reported in the Province's consolidated financial statements.

I’ll look forward to hearing back from you.
Best regards,
Nadine

The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following

· Taking into account public sector accounting principles, advice and guidance on complex accounting and reporting matters related to accounting for pensions on the Province’s consolidated financial statements.
· The Vendor will participate in meetings as necessary to support the engagement objectives:

· Working with management of OPCD’s Accounting Policy and Financial Reporting Branch (APFR), the provider of complex accounting services related to the following possible areas:
· Develop discussion and analysis material
· Develop draft input/briefing materials/option papers
· Provide accounting advice and guidance related to the accounting for pensions on the Province’s financial statements
· Participate in discussions with internal and external stakeholders, as required

As part of this engagement, the consultant(s) would be expected to provide professional accounting expertise in assessing actuarial assessments for specified plans in relation to applying the ceiling test to the accrued pension benefit assets in accordance with PS3250 (3250.050 to PS3250.059).

Hi Nadine,

I've discussed this internally and we should be able to do something for you. I think it would be helpful for me to give you a call to discuss in more detail and to discuss next steps. I am about to go into a meeting, but I should be able to give you a call around 12pm (or later, if that works better for you). Will I be able to reach you this number - 416 562 9509?

Thanks Nadine,

Thinking back to yesterday's conversation with the AG, part of the concern was around the audit evidence that has been provided to support that the asset will be recovered. It seemed at one point during the meeting that she might have been able to get to how approximately $8B will be recovered. Maybe you could think about how you could articulate to them how the evidence you have provided or summarize to them how the evidence you provided supports the asset. I am just thinking if there are ways that it could be framed to help get them more comfortable about the audit evidence they have.

Regarding the statement of facts, we did send a communication last night to the AG thanking her for her time yesterday and asking if she could confirm whether they believe them to be accurate and complete, and more formally notifying her that we are engaged to provide an accounting opinion. For the time being we have removed the facts around the impact of restoring inflation indexation, but we have indicated that this assertion made by management will likely be factored into our opinion.

Thanks

Matt

Draft deck as per my earlier email. n

Deck outline (JK) - OTPP Pension Asset Oct 28.pdf

Accounting by the Province of Ontario for the Ontario Teachers' Pension Plan

Preamble

Analysis is specific to OTPP

Constating documents are different than for other pension plans in Ontario and in other provinces

Issue being considered

The Province followed the same accounting for OTPP for the prior 14 years during which the pension accounting standard (Section PS 3250) was the same.

In relation to the 2015-16 public accounts for the Province of Ontario, the OAG disagreed with the Province's accounting for OTPP and OPSEUPP

The OAG disagrees that the surplus in OTPP is a reportable asset to the Province on the basis that:

- there is no legally enforceable right to the asset
- no agreement is in place at March 31, 2016 with the Ontario Teachers' Federation (OTF) to reduce future contributions

Reporting in the 2015-16 Public Accounts

The Province disagrees with the AG's interpretation of PSAB standards.

The Province believes their share of the plan accounting surplus should be recognized as an asset. The Province expects to benefit from the reported pension assets through reduced contributions and has performed the requested pension asset ceiling test to confirm that the Province's estimated asset value is not impaired.

For purposes of the 2015/16 Public Accounts, the Province regulated the accounting treatment for pension assets for the jointly sponsored pension plans (OTPP and OPSEUPP) to reflect the Auditor General's interpretation of PSAB. Since Management does not agree with the AG's interpretation of PSAB as related to the jointly sponsored pension plans, the regulation was necessary to achieve the AG's accounting treatment and to allow management to sign off on the Statement of Responsibility.

Overview of OTPP

A jointly sponsored pension plan (JSPP) as defined in the Pension Benefits Act. The OTPP meets this definition. The sponsors are the Province of Ontario and the OTF.

The sponsors are jointly responsible for decision making, share in contributions, and collectively address any plan funding surplus/deficit (at least every 3 years)

The plan administrator is an independent board of directors and follows the direction of the co-sponsors on all key decisions, which includes plan structure, level of plan benefits, contribution rates, funding levels and contingency reserves and changes to the plan documents.

Prior accounting for OTPP by the Province

Since 2001-2002, the Province has recorded its portion (50%) of the pension asset of OTPP in accordance with Section PS 3250

With regards to expected future benefit of the surplus, the Province would not expect to withdraw any surplus, but through reduced future contributions

The Province and OTF have a history of equally sharing the benefits of surplus utilization as demonstrated from the time OTPP became a JSPP to the date the Funding Management Policy in 2003 was established (include in appendix only)

Question 1 – Recognition of a pension asset

First we address why the surplus of OTPP is an asset to the Province

Applicability of Section PS 3250 to OTPP

The purpose and scope of Section PS 3250 is included in paragraph .001 which states "This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements".

Obligations for retirement benefits result from a promise by a government to provide these benefits to employees because of retirement in return for their services (paragraph .03).

Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

Definition of JDBP

A joint defined benefit plan (JDBP) is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan (glossary to Section PS 3250).

Primary sources of GAAP

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity.

PS 3250 provides clear guidance that a JDBP is accounted for using PS 3250 and therefore is the primary source of GAAP that must be applied.

Other standards in PSAS including the Financial Statements Concepts should be referred to if PS 3250 does not provide specific guidance for a circumstance.

Concept of shared control and asset recognition

Section PS 3250 requires the government to account for its portion (as there is shared control) of a JDBP following the accounting requirements for a defined benefit plan within PS 3250; no distinction is made as to whether the plan is in a surplus or deficit position. In a JDBP the risks and rewards of a plan are equitably shared, so the Province's portion of the plan includes its share of any asset as well as its share of any liability

The Financial Statement Concepts definition of an asset includes "control" over an economic resource. Despite the conceptual framework not directly addressing "Shared control" it is included in other standards in PSAS, for example relating to government partnerships (Section PS 3060) which existed prior to PS 3250

Conclusion on recognition

Section PS 3250 on its own is sufficient to assess the accounting for OTPP by the Province

OTPP is appropriately classified as a JDBP under Section PS 3250

Section PS 3250 requires recognition by the Province of 50% of the plan assets of OTPP

Unilateral control is not necessary for asset recognition (as also seen with government partnerships); shared control is appropriate for a JDBP

Uncertainty relating to OTPP's pension surplus relates to measurement, not uncertainty regarding expected future benefits for the Province

Question 2 – Measurement of a pension asset

Second we address how to measure the pension asset of OTPP in the Province's financial statements

Guidance in Section PS 3250 on measurement

An overview of the pension accounting for a defined benefit plan (and therefore a JDBP) in Section PS 3250 includes:

An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance for any excess of the adjusted benefit asset over the expected future benefit (paragraph .050)

An accrued benefit asset is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance) (Glossary).

A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions (paragraph .052).

To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset which is the accrued benefit asset less net unamortized actuarial losses (paragraph .053).

The adjusted benefit asset is then compared to the expected future benefit. The objective is to limit a government's accrued benefit asset to the amount it can realize in the future (paragraphs .054 and .055).

A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations (referred to as the asset ceiling test - paragraph .056).

Guidance on measurement as applicable to OTPP

The Province expects future benefits from OTPP's plan surplus to be realized through reduced future contributions, not withdrawals. There is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'.

Expectations of benefitting from the surplus are based on:

1. The Teachers' Pension Act requires equal contributions from the Province and from plan members of OTPP;

2. The history of surplus utilization for OTPP demonstrates sharing of the financial benefit between sponsors;
3. No sponsor of OTPP can unilaterally utilize the plan's surplus; and
4. If the sponsors of OTPP cannot agree on how to utilize the pension surplus, the matter can be submitted to arbitration.

The Province considers that the uncertainties around how and when to utilize the surplus do not result in an inability or lack of entitlement to utilize the surplus

Calculating the limit on the carrying amount of an accrued benefit asset (asset ceiling test)

Calculation of the asset ceiling test involves professional judgement. As a reminder Section PS 3250 indicates the expected future benefit to be recorded by the government is the sum of:

a. The present value of its expected future accrual for service for the current number of active employees less the present value of minimum contributions the government is required to make regardless of any surplus; plus
b. The amount of the plan surplus that can be withdrawn in accordance with the existing plan and any laws and regulations.

The next slides will consider this calculation relative to the Province's 50% share of OTPP

Through withdrawal of the surplus (Part b of the asset ceiling test)

The Province does not consider there to be expected future benefit available through withdrawal of any plan surplus.

Section PS 3250 specifies that an amount for withdrawal of surplus is only included when a government has a legally enforceable right of withdrawal.

In accordance with the Funding Management Policy for OTPP, the parties must negotiate in order for a withdrawal of the surplus to happen, therefore the Province does not have a signed agreement with OTF regarding the withdrawal of the surplus.

Through reducing future contributions (Part a of the asset ceiling test)

While Section PS 3250 states that legal enforceability is required to include an amount for a withdrawal of the plan surplus it does not include a similar requirement in respect of the ability to benefit through future contribution reductions. The Province has an expectation that they will benefit fully from the asset by exercising their current rights under the plan arrangements to negotiate the use of surpluses in the form of contribution holidays.

The present value of its expected future accrual for service is typically calculated based on the Province's share (50% for OTPP) of the current service cost reported in the most recent actuarial valuation taken into perpetuity

There is very limited guidance in PSAS on determining the present value of minimum contributions the government is required to make regardless of any surplus; professional judgement is required. The Province engaged consultants to calculate this value for OTPP considering different assumptions on future minimum contributions. Considered was the contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. The key scenarios considered include

- TBD.(Pauline)

For purposes of OTPP in the 2015-16 public accounts, 11 years was used by the Province reflecting management's best estimate of the number of future years for which current minimum contributions are to be made until the Income Tax Act limits are reached

Based on the Province's best estimate calculation of the expected future benefit, no valuation allowance was deemed necessary in relation to the pension asset of OTPP at March 31, 2016

Other guidance in PSAS on measurement

Section PS 2130 provides guidance on dealing with measurement uncertainty

Measurement uncertainty in pension plan accounting exists for example in the estimation of the valuation allowance and in the determination of the discount rate (which is often management's best estimate of the rate of return on plan assets)

Historical rates of return on plan assets have supported the past discount rates used by the Province in relation to OTPP

Comparability of Ontario's accounting for JDBPs to other Provinces

Provinces such as British Columbia and New Brunswick do not report assets for their provincial joint sponsored pension plans or alternatively provide a valuation allowance to reduce the pension asset balance to nil

The difference in accounting versus the Province of Ontario (for OTPP) results from these other provinces not having any access to the pension surpluses unlike in Ontario

Conclusion on measurement

The Province's position is that the attributes of the JDBP arrangements for OTPP entitle the Province to access its portion of the plan surplus through the right to negotiate its use of the Province's benefit through future reduced contributions

Significant professional judgement and estimation is involved in determining the valuation allowance under Section PS 3250; the Province has applied reasonable estimates

Based on the result of modelling performed in relation to the asset ceiling test, the Province concluded that no valuation allowance was necessary to the pension asset that would have otherwise be reported on the Province's books as at March 31, 2016.

Cindy,

Please see attached documentation from EY on ELHT. I've advised Christina and Shayan that we can plan to discuss on our call on Wednesday.

Subject: Employee Life and Health Trusts (ELHTs) - accounting treatment

Hi Nadine,

As requested, we have prepared the attached document discussing the following topics:

1) Accounting treatment related to the provisions of the ELHTs under PSAB 3250/3255 (and the associated risks to the school boards)

2) Comparison of the ELHTs with Shared Risk Pension Plans

Both Shayan and I will be at Queen's Park tomorrow. Let us know if you have any comments. We are available if you would like to discuss prior to our meeting on Wednesday.

Regards,

Christina

Accounting Treatment - Employee Life and Health Trusts

OPCD has asked EY to comment on the accounting treatment related to the provisions of benefits from the Employee Life and Health Trusts ("ELHTs") under the Public Sector Accounting Standards.

Background

Historically, health, life and dental benefits were provided to employees in Ontario's educator sector through a multitude of individual plans administered separately by the Ontario school boards. To improve the cost-efficiency and delivery of benefits, all individual benefit plans are consolidated into six Employee Life and Health Trusts[1], each covering a certain group of employees. Each ELHT is established to meet the definition of an ELHT under the Income Tax Act Sc. 144.1. Benefits are provided through a joint governance structure between the bargaining/employee groups, school board trustees associations and the Government of Ontario under the ELHTs.

The ELHTs are intended to provide benefits to employees during their employment years. There are also separate retiree provisions intended to provide access to benefits for retirees.

Member groups

In order to determine the necessary accounting treatment, it is important to identify the different member groups and their respective benefit entitlements. Three groups of members with different benefit entitlements under the ELHTs are:

- "Active": approximately 211,000 members
- "Pre-August 2013 Retirees"[2]: approximately 5,700 members
- "Post-August 2013 Retirees"[3]: approximately: 1,400+ members

For current Active employees, the contributions by the boards to the ELHTs are fixed and negotiated during bargaining. Annual contribution amounts required from the boards per full-time employee are pre-determined for the period covered by collective bargaining agreements. Upon retirement, active members may be eligible for retiree benefits at full cost and they are not eligible for any cost subsidization (i.e. provisions for Post-August 2013 Retirees).

Certain members who retired prior to August 31, 2013 are eligible for a partial or full subsidization of benefit costs from the board, based on prior arrangements with their employer. The members are eligible to participate in the ELHTs until age 65 (with the exception of a small group who are eligible for lifetime coverage).

All members retiring after 31 August 2013 are eligible to participate in the ELHT through a Voluntary Plan and Separate Account. However, they are responsible for the entire cost of benefits. They are not eligible for any cost subsidization.

[1] OECTA, ETFO, AEFO, OSSTF Trust Agreements have been formally signed; CUPE and PVP/Non-union are to be finalized.
[2] Members retiring prior to 31 August 2013
[3] Members retiring after 31 August 2013

According to the ELHT Trust Agreements Article 6, "*the Trustees may establish any number of Separate Accounts within the Fund. The assets in each Separate Account shall be held as segregated funds and used for the provision of Benefits, in accordance with the terms of a Plan, to a discrete and identifiable group of Participating Employees*". Based on the benefit entitlements described above, presumably, a Separate Account is established for the Active members and a Separate Account is established for the Pre-August 2013 Retirees. Therefore, there is no cross-subsidy. For example, retiree costs are not cross-subsidized by premiums paid in respect of Active employees.

The Trust agreement state that any surpluses in a Separate Account may be used to increase Claims Fluctuations Reserve ("CFR"), enhance benefits, or reduce employee contributions. Conversely, any deficiencies in the trust may require the use of the CFR, amendment to benefit (reduction), or an increase to employee contribution levels.

For the Pre-August 2013 Retirees group, it is our understanding that if there is a funding deficiencies in the Separate Account for this group, the school board will be required to contribute and reimburse the Trust to make up the funding shortfall ("chargeback").

Accounting treatment

Paragraphs 011 – 012 of PSAB 3250 (see Appendix) discuss the classification of benefit plans as Defined Benefit ("DB") or Defined Contribution ("DC"). Further, in accordance with 3250.014, a government would determine its obligation for the defined benefit component of the plan as a defined benefit plan and the defined contribution component of the plan as a defined contribution plan.

Considering the different provisions applicable to member groups and PSAB 3250.011 – 3250.012, the benefits provided through the ELHTs include DB provisions in respect of retiree groups, whereas Active member benefits do not fall in the scope of PSA 3250/3255. Specifically:

- *Active:* Benefits/costs relating to current active members does not fall under the scope of PS 3250 (Retirement Benefits) or PS 3255 Retirement Benefits (Post-employment benefits, compensated absences and termination benefits). The scope of these sections cover benefits payable in retirement, after employment but before retirement, or compensated absences or termination benefits. Costs relating to providing benefits to active members during employment would be expensed annually in amounts equal to the fixed contribution. Further, as current active members are not eligible for subsidized benefits upon retirement (i.e. they pay for the entire cost of the post-retirement coverage without any cost to the employer), there is also no post-retirement obligation. To the extent that members on long-term disability are also eligible to receive benefits from the ELHT, a defined benefit obligation may need to be recognized under PS3255 in respect of expected future contributions over the anticipated period of long-term disability in respect of disabled employees.

- *"Pre-August 2013 Retirees:* The provisions relating to certain members who retired prior to 31 August 2013 would be classified as DB provisions as the boards are at risk with respect to the amount of benefits these employees will receive. These risks include the possibility of higher/lower than expected claims, or greater/less than expected longevity. We understand that the school boards have historically reported defined benefit obligations in respect of the ongoing commitment to subsidize retiree benefits for members in this group and will continue to do so subsequent to the transition to the ELHTs. This is appropriate as the ELHTs would be reimbursed by the boards for any contribution requirement to make up for the deficit in providing the coverage for these members.

- *"Post-August 2013 Retirees:* By contrast, there is no cost to the school boards relating to members retiring after 31 August 2013. The entire cost is borne by retirees and the school boards are not required to make any additional contributions in the future in the event of any shortfall. School board contributions are not

subject to any actuarial risk. Rather, all risks are borne by the retirees. In the event that funds are insufficient to pay for benefits, the trust agreements outline measures to address those deficiencies. The measures include the application of reserves, increases to member contributions and a reduction in benefits. None of the measures require any additional contributions from the school boards.

Therefore, we understand there to be a defined benefit obligation only in relation to the benefit entitlement for the subsidies provided to certain members retired prior to 31 August 2013. In addition, there may be a defined benefit obligation in respect of members on long-term disability to the extent that the ELHT covers such members.

Comparison with Shared Risk Pension Plans

In recent years, a number of Canadian provinces have adopted "Shared Risk Pension Plan" legislation. Shared Risk Pension Plans (SRPPs) provide benefits under a defined benefit formula, while putting cost constraints on employer contributions. Employer and employee contributions are often restricted within a band and benefits may be subject to reductions depending on the funded level.

In general, Shared Risk Pension Plans have been viewed as defined benefit plans. Risks are shared by the employer and employees, with the employer usually being subject to some level of actuarial and market risks. There may, however, be instances where DC accounting could be possible. This would be the case when no risk is retained by the employer, i.e. contributions are fixed in all scenarios. As there are many variations of Shared Risk Pension Plans, careful judgment is required to determine the appropriate accounting treatment in each case.

At the request of OPCD, we have compared the key characteristics of the ELHTs established by the Ontario school boards to those of Shared Risk Pension Plans. We have not considered the provisions relating to Pre-August 2013 Retirees, as these are clearly DB provisions under PS 3250/3255.

When comparing the benefits for the Active members under the ELHT with the SRPPS, there are a number of important differences to be considered but the following two are most significant:

- As SRPPs provide post-retirement benefits, they are within the scope of PS3250; however, as demonstrated in the previous section, the benefits provided for the Active members under ELHTs do not fall under the scope of PS3250.
- For SRPPs, the employer is subject to some level of actuarial risks and market risk as future contributions may be increased to pay for past deficiencies. Under ELHTs, the school boards are not subject to any risks: (a) contributions are fixed (as required by a Central Collective Agreement or any applicable Participation Agreement); (b) no additional contributions will be required for the related past service regardless of future actuarial or market experience; (c) the contributions required by the school boards are not dependent on the funding position of the Separate Account. Rather, employee's contributions (or benefits paid) may increase or decrease based on the surpluses/deficiencies of the Separate Accounts.

Further, there is no cost (and therefore, no post-retirement benefits) for members retiring after 31 August 2013 under the ELHTs. For these reasons, we would not expect the same accounting treatment to be applied for the SRPPs and ELHTs.

Appendix – Public Sector Accounting Board ("PSAB") 3250 Retirement Benefits (applicable excerpts)

.011 Two types of benefit plans are addressed in this Section — defined benefit plans and defined contribution plans. A defined benefit plan is one that specifies either the benefits to be received by employees after retirement or the method for determining those benefits. Generally, the amount and value of the benefits to be paid depend on a number of factors and events. These include how long the employee and any survivors live, how many years of service the employee renders, and the employee's compensation and retirement age. When a government provides benefits under a defined benefit plan, it is at risk with respect to the amount of the benefit that each employee will receive (actuarial risk) and with respect to the investment returns on any assets set aside to pay for the cost of these benefits (investment risk).

.012 When a government provides benefits under a defined contribution plan, it does not assume the actuarial and investment risks inherent in a defined benefit plan. A defined contribution plan (or money purchase plan) is one in which a government's contributions in respect of services rendered by employees are specified. The government is required by the plan to make a specific fixed contribution each period. If that contribution is made, no additional government contributions are required now or in the future for the related service. The employees are at risk. This is generally because the amount of the benefit that will be payable to an employee is dependent upon the funds accumulated for each employee's account and the investment earnings on the accumulated funds.

.013 Because benefit plans are often complex, careful analysis and professional judgment are needed to determine whether the substance of a particular plan makes it a defined benefit or a defined contribution plan.

. 014 In some circumstances, a benefit plan may include both defined benefit and defined contribution promises. The plan, for example, may guarantee a basic defined retirement benefit and state that additional benefits, such as inflation protection, will be provided on a defined contribution basis. In such circumstances, a government would determine its obligation for the defined benefit component of the plan as a defined benefit plan and the defined contribution component of the plan as a defined contribution plan. Once the type(s) of promise is identified, the accounting and reporting principles in this Section would be followed accordingly.

Appendix – Public Sector Accounting Board ("PSAB") 3255 Post-Employment Benefits (applicable excerpts)

Purpose and scope

.01 This Section establishes standards on how to account for and report obligations for post-employment benefits, compensated absences and termination benefits in government financial statements.

.02 This Section applies to post-employment benefits, compensated absences and termination benefits earned by employees and expected to be provided to them when they are no longer providing active service either on a temporary or permanent basis. For the purposes of this Section:

- *(a) Post-employment benefits are expected to be provided after employment but before retirement to employees and their beneficiaries. These benefits include long- and short-term disability income benefits (including workers' compensation), severance benefits, salary continuation, supplemental unemployment benefits, job training and counselling, and continuation of benefits such as health care benefits and life insurance.*
- *(b) Compensated absences are benefits for employee absences for which employees will be paid. These benefits include parental leaves, accumulated sick days, and sabbaticals that provide compensated, unrestricted time off for past service.*
- *(c) Termination benefits include the following:*
  - *a. Contractual termination benefits are benefits required to be provided to employees under the existing terms of a benefit arrangement when a specific event occurs that results in the downsizing and termination of a group of employees.*
  - *b. Special termination benefits are benefits that are not contractual termination benefits and that are offered to employees for a short period of time, normally not exceeding twelve months, in exchange for employees' voluntary or involuntary termination of employment.*

.03 The glossary in RETIREMENT BENEFITS, Section PS 3250, provides definitions for other relevant terms.

.04 This Section does not apply to short-term employee benefits, which would be accounted for under the general provisions for accruing liabilities. This accounting is generally straightforward because no actuarial assumptions are required and the liabilities are measured on an undiscounted basis.

.05 Examples of such short-term employee benefits are:

- *(a) Salaries, wages, bonuses, fringe benefits and similar items a government provides in the current reporting period or within twelve months thereafter, in exchange for services rendered by employees in the current reporting period; and*
- *(b) Occasional sick days and vacation days that do not vest or accumulate beyond twelve months after the current reporting period.*

Post-employment benefits, compensated absences and termination benefits are liabilities of a government. Accounting for all benefit plans is important because many governments have accumulated significant related liabilities. The fundamental accounting task is to determine the amount of the liability for these benefits and to what periods to attribute the costs.

.07 These standards are consistent with those established in RETIREMENT BENEFITS, Section PS 3250. The standards set out in that Section are appropriate for accounting for and disclosing post-employment benefits, compensated absences and termination benefits of a government. For example, a government providing these types of benefits through a defined contribution plan, multiemployer plan or joint defined benefit plan would refer to the guidance set out in Section PS 3250. This Section sets out those areas where the accounting and reporting are different from Section PS 3250.

Hi, Nadine. I think you knew that Matt is away this week on vacation? However, I believe that he has organized someone on his team to get in touch with you about the other pension analysis. Maybe she has already done so?

Regarding the question of permission for the opinion, I am still working through that question and what caveats we might want to put on it.

Please let me know if you wish to discuss.

Kerry

Hi Kerry.
I'm just following up on a couple of items that I talked to Matt about last week...
1) permission to share the accounting opinion with the Pension Asset Expert Advisory Panel -. Please confirm if such permission is granted and advise of any related considerations with regards to such sharing.
2). Extended pension analysis for OPSEUPP, HOOPP, CAATPP. As discussed with Matt, we are expediting acctg analysis for the remaining 3 plans wrt accounting for plan assets on the Province's books. Matt had indicated that staff would be assigned, and we assume that work is underway or to be started shortly. Completed analysis is considered important as input to the Panel. We would like to touch base on status and next steps (note; we have not yet received any requests for infoirmation).
Please let me know when you might be a available to discuss.

Thanks.
Nadine

Hi Nadine,

Further to your discussion with Shayan, here is the invoice for $65k. As you know, our work is on-going. We are also mailing a hard copy of this invoice today, but I thought you'd appreciate receiving a soft copy too.

If it is at all possible to process the payment before the end of the month (our year-end) that would be greatly appreciated.

Many thanks,

Uros

Date: Friday, June 09, 2017 12:40:06

Hi Shayan/Christina,

Ministry of Education (School Boards, ELHT related) would like to schedule a call with the school board auditors (Deloitte and KPMG in this case) to have a further discussion on the liability for employees on LTD.

EDU would like your counterpart from the accounting side to join the call and lead the discussion with the school boards auditors.

Please let me know whether you can reach out to your colleagues and let me know a time that will work for them.

Thanks,

Alicia

---

Hi Lucy.

Just heard from Cindy. She won't be able to look at the memo until tomorrow due to a family emergency. Thanks again for all of your help. N

Subject: NPP comments on draft position paper

Hi Lucy.
Thanks again for your efforts to create the draft paper for review this weekend. You'll find my suggested edits and comments attached. I also shared your original draft with Cindy, but I'm not sure of the status of her review. As we await her comments, I thought it would be best to share my feedback with you directly, and to cc her on my note so that she might add any additional comments to this version if she has not already started her review.
You will see that there is one section in particular, related to the minimum contribution period that I think would benefit from some review and edit. As this is the Province's position paper, I think we can convey a stronger message that downplays any suggestion that there are mandatory minimum payments required into perpetuity.
Thanks again.
Nadine
p.s. the second attachment reflects my edits in your original track changes version, and the first attachment reflects them against your clean version. Draft Pension Asset Position Paper Oct 22 np to ld with responses np2.pdf

Position paper for Ontario Teachers' Pension Plan

Preamble

This document addresses the accounting for pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.

Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP.

As described in PSAS, a pension asset arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the asset balance (or plan surplus for accounting purposes) in OTPP and OPSEUPP are an asset to the province and it is suitable to reflect them in the financial results.

The OAG disagrees with this position. The OAG has indicated that because the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and in the absence of that right, because the Province does not have an agreement in place with the Ontario Teachers' Federation (OTF) with respect to how the surplus would be utilized such that it would provide a benefit to the Province, a pension asset in the Public Accounts is not appropriate.

Ontario had followed the same pension accounting treatment for all of the past 14 years. This had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals. There has been no change to the relevant PSAS (i.e. RETIREMENT BENEFIT, Section PS 3250) over the past 14 years.

A regulation was made to allow the public service to sign-off on the impact of the OAG's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province filed a time-limited regulation, which legislates the accounting for pension assets of its two jointly-sponsored

pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's accounting, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to write off the pension assets. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt.

What is being asked of the Expert Advisory Panel

The Expert Advisory Panel is being asked to review and deliver advice and recommendations to the government as to the application of PSAS to Ontario's pension assets. The future accounting by the Government of its pension assets will be guided by the report of the Expert Advisory Panel.

The Expert Advisory Panel 's advice and recommendations to the government will address:

- The requirement regarding control (or shared control) with respect to recognizing a pension asset for a defined benefit plan, as it relates to the pension plans reported by the Province of Ontario, including OTPP, OPSEUPP, HOOPP, and CAAT.
- Appropriate valuation techniques to measure a pension asset that take into consideration future decision making authority by plan sponsors.
- Recommendations to the Employment Benefits Task Force of the Public Sector Accounting Board (PSAB) regarding issues that should be considered in their review of the retirement and post-employment benefits standards.

Background

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1.

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
1. It provides defined benefits.
2. The defined benefits are contributory benefits.

DRAFT

Position paper for Ontario Teachers' Pension Plan

The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the Ontario Teachers' Federation represented by its Executive (the ”OTF") (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. The OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for the OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners Agreement (FMP);
f) The Ontario Teachers' Pension Plan; and
g) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

3. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
4. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to the OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5] The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Currently, the Sponsors are also required to mutually agree upon how any plan deficits are to be addressed. [8] While not binding upon the Sponsors, the FMP indicates that deficits may be addressed through increases to the contribution rates, lowering the amount of indexation and/or other decreases in benefits.

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the FMP requires the Sponsors to negotiate and agree upon decisions relating to surplus utilization. Accordingly, the Sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

DRAFT

[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).
[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/101791209401-l5e47lc2b-23f1-44e6-b5cld22e3e50dbc3lHow+ Contribution+Rates*HaverEvolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20lo versus l0.4yo/l2Vo, respectively). It ~~is~~is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.
[8] See, for example, Section 3.09 and 3.11 of the FMP.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the Sponsors are included in appendix E. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, under the FMP the Sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the Sponsors to agree upon the manner in which surplus is to be utilized, neither Sponsor has a legally enforceable right to unilaterally utilize surplus in the OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What

the Province does have, however, is a right to negotiate with the OTF the use of funding surpluses that may arise under the plan.

4. When negotiations occur as laid out in the Partners' Agreement. The Partner's Agreement requires that any actuarial funding valuation submitted to the pension regulators must be "actuarially balanced" (Section 57 of the Partners' Agreement). This must occur at least once every three years, but can occur every year if the partners agree. If a preliminary funding valuation shows a funding surplus or deficit then the joint sponsors must negotiate how this surplus or deficit is resolved prior to filing the funding valuation.

Commented [NP1]: Last part not entirely clear

LD response – suggested changes. Npp - thx

Commented [NP2]: Should the relevant context be discussed…no mandatory minimum contributions (in perpetuity)

LD response – This is background information so I had kept it relatively facts based, rather than interpretive to the standard, which is included later in the paper. More of the interpretation could be brought forward if management feel that it helps the paper. Npp – ok.

Accounting for OTPP by the Province

Since fiscal year 2001-2002, the Province has recorded a pension asset for OTPP on the Statement of Financial Position. A pension asset has arisen because the government's share (50%) of the total contributions to OTPP plus the actual investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense. The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

With regards to any comparisons between asset amounts reported in the Province's financial statements verses the OTPP's financial statements or funding reports, it is important to acknowledge the different objectives of funding and accounting for a pension plan which are also explicitly addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*
>
> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit*

Commented [NP3]: Note: An implicit assumption exists that at the time that the new pension standard was implemented, the Controller's office and the OAG would have reviewed the appropriateness of reflecting an asset based on the constating agreements which have not substantially changed over time. Similarly, the requirement to perform an asset ceiling test would have presumably been considered as part of the initial discussions when implementing the standard. At no time prior to the 2015/16 Public Accounts audit did the OAG raise any concerns regarding the appropriateness of the interpretation of PSAB standards in relation to the jointly sponsored plans, nor the lack of asset ceiling tests. That said, OPCD does acknowledge that an asset ceiling test to validate if the assets are impaired, is prudent and in accordance with PSAB. The results of the test conducted as part of the 2015/16 Public Accounts concluded that no impairment existed and therefore no valuation adjustment was required.

In addition to raising issues with regards to the interpretation and application of PSAB standards to the joint benefit plans, the AG has referenced comparative surplus/deficit results reported by OTPP both for financial reporting and funding purposes.

LD response – Noted – I see the additional paragraph added in this section to reflect the above points.

DRAFT

expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.

Paragraph PS 3250.051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: "Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…"

OTPP's most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website. The Province's relative portion of this surplus would be $6.6 billion. The OTPP's public financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015, for which the Province's portion would be a deficit of $900 million. The following background helps to clarify the reasons for these different results. OTPP's financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook ("Part IV"), which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the net surplus or deficit for funding purposes. Accounting for employee future benefits requires the use of assumptions and methodologies to calculate both the obligation incurred to date and the value of the assets already set aside to meet those obligations. Accounting frameworks differ in standards that must be applied in determining appropriate assumptions and methodologies. Further, the assumptions and methodologies used in developing a "funding valuation" on a going concern basis may also differ from those required by accounting standards. These differences result in a number of different valuations for the same plan, depending on the purpose of the valuation and can be affected by certain choices made between acceptable options within each framework. A summary of the main differences between the methodologies used to calculate a going concern funding valuation, OTPP's accounting valuation and the Province's accounting valuation is shown in Appendix H.

Specifically, the discount rate has a significant impact on the overall position of the plan. A lower discount rate results in a higher liability and a higher discount rate results in a lower liability, all else being equal. Put another way, a higher estimate of the time-value of money makes the promises made today that will be paid out in the future cheaper. Both the PSAS accepted discount rate based on the expected asset return and the IFRS required discount rate of corporate/government bonds are "best estimate" rates. They must both be based on management's best estimate of the applicable discount rate. In both cases the estimates must be supportable. The difference results not from one being more "right" or "wrong" relative to the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.

The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds. Typically the funding discount rate falls between

Commented [NP4]: In fact, experience on OTPP demonstrates that returns have on average continued to exceed management's long term estimates reflected in the discount rate.

Wonder if it would be worthwhile to include the historical results for background. (attached summary of performance to response email)

LD response – Continued experience of returns exceeding the discount rate would indicate that the expected asset returns (and therefore the discount rate) are not actually high enough. These increased returns would come through as actuarial gains, eventually amortized to the income statement. Perhaps I am missing what the point would be of including the historical results? How does it help the arguments?

Npp – comment is with reference to the AG's suggestion that the discount rate used by the Province should actually be lower (match OTPP's used for f/s purposes)…the discount rate used by the province as management's best estimate of return might be argued to be conservative when compared to actual return experience. Not sure if there might be a relevant place to include this observation or not.

the bond discount rate and the expected asset return, but it differs in that it does not purport to be the "best estimate" of the discount rate, but is designed to indicate the contributions that are required to fund the promised benefits, with an additional conservative margin for adverse deviations. Note that over the long term the difference between funding valuations and accounting valuations would diminish as the impact of the discount rate unwinds and the asset valuation methods converge.

In practice, the discount rates used in the financial statements of government sponsored and joint defined benefit pension plans prepared under Part IV of the CPA Canada Handbook (Section 4600) use diverse methodologies. For example, in Alberta 7 plans prepare their financial statements under Part IV with reference to IFRS (same framework as OTPP). Of these none use a government bond discount rate and all use a discount rate calculated with some reference to a rate of return on invested assets, which may include factors for expenses, diversification and rebalancing. The analysis of a number of government sponsored plans is included as Appendix [**G**]. The analysis demonstrates that a significant number of government sponsored plans use a discount rate aligned to an asset investment return rather than a bond discount rate. OTPP is in the minority of plans that choose to use the rate required by IFRS, resulting in a lower discount rate and higher liability.

The above analysis discusses the impact of different discount rates on the net surplus/deficit reported on OTPP's financial statements, OTPP funding reports and the Province's financial statements. The fact that OTPP reports a deficit on its financial statements, or that the net surplus reported by OTPP for funding purposes is lower than the surplus reported on the government's financial statements under PSAB standards is of no consequence or relevance to this analysis.

To further clarify, that that that there is a deficit reported in the OTPP financial statements while the Province of Ontario calculates a surplus under PSAS requirements does not mean that there is no accounting surplus and therefore no reportable asset for the Province. In fact, if the OTPP would have accepted a rate more consistent with its counterparts in other jurisdictions (see Appendix G) that would also be acceptable under the Part IV framework as an accounting policy choice (e.g. a discount rate based on an asset return which would be closer to that used by the Province), it would eliminate much of the existing differences between the reported net surplus/deficit amounts between the OTPP statements and the Province's share of OTPP reported for accounting purposes in the Public Accounts.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. Unqualified audit reports have been received for each of the years from the OAG on the Public Accounts.

RETIREMENT BENEFIT, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. The Province has followed this standard over the prior 14 years. Over this period of time, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the prior 14 years is reflected in Appendix F.

Although OPCD has not been able to substantiate decisions made at the time that the Province implemented PS 3250 in 2001, it is assumed that the Controller's Office and the Office of the Auditor General would have engaged in more specific and detailed discussions related to the interpretation and application of the standard with regards to the joint sponsored pension plan at the time. The presumed outcome of those discussions would have supported the Province's share of the surplus being reported on the Province's books based on the shared control over the plan as evidence by the constating documents. It is uncertain whether the need to perform asset ceiling tests on a regular, on-going basis was discussed at the time and there is no evidence of any having been performed previously. The pension accounting adopted by the Province for OTPP since 2001 had been implicitly accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

History regarding the PSA standards

As mentioned, the financial statements for the Province have been prepared over the prior 14 years in accordance with the PSA Handbook, reflecting decisions made by the Provincial Controller at the time that PS 3250 was implemented and which were accepted by the Office of the Auditor since that time.

Completeness of PS 3250 in assessing appropriate accounting for pension assets

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES, Section PS 1150 prescribes that, in developing and applying accounting policies, all primary sources of GAAP should be applied. Primary sources of GAAP are Sections PS 1200-PS 3510, Public Sector Guidelines and appendices and illustrative material to those pronouncements. Only when there are no primary sources of GAAP that relate to the transactions or events under consideration, or more specific guidance is needed, does an entity consider other primary sources of GAAP dealing with similar issues and also the concepts described in FINANCIAL STATEMENT CONCEPTS, Section PS 1000. Section PS 1000 is not, however, a "primary source of GAAP" under the PSA Handbook.

The primary sources of GAAP specific to the accounting for pension assets is RETIREMENT BENEFITS, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, Section PS 3250 which was based on Accounting Statement No. 5).

Other primary sources of GAAP that deal with similar issues might also be considered where additional interpretation or guidance may be required. For the issues dealt with in this paper - recognition and measurement of a joint defined benefit plan - this could include standards that relate to joint control, as OTPP is a joint defined benefit plan, standards that relate to the definition of an asset and standards that relate to measurement uncertainty:

- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015, effective from April 1, 2017)
- MEASUREMENT UNCERTAINTY, Section PS 2130 (issued in April 2005)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception of ASSETS, PS 3210 which is more recent and will be effective in for periods beginning on or after April 1, 2017. Section PS 3210 provides additional guidance on the various components of the existing asset definition found in Section PS 1000; it does not change the definition.

Accounting Analysis

Question 1 – Recognition of a pension asset

The analysis below addresses whether the Province's share of the pension surplus in OTPP, calculated in accordance with PSA standards under PS 3250, represents a reportable asset to the Province of Ontario in the Public Accounts.

Standards in the PSA Handbook

The focus of the following analysis is on the accounting requirements in RETIREMENT BENEFIT, Section PS 3250 as this standard is a primary source of GAAP which specifically addresses the accounting for pension assets. The following highlights some key concepts and guidance contained in this standard.

RETIREMENT BENEFIT, Section PS 3250 – Purpose and Scope

The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250, paragraph .003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

RETIREMENT BENEFIT, Section PS 3250 – Types of pension plans

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*
>
> *(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;*
>
> *(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;*
>
> *(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and*
>
> *(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.*
>
> *The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.*

Additional guidance on identifying Joint Defined Benefit Plans (JDBPs) is in PS 3250 paragraphs .79 to .80 which similarly highlight the importance of both shared control and shared risks and rewards in a JDBP:

> *.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.*

DRAFT

> *.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.*

A JDBP is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. The OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees (addressed in paragraph 8 of the Partners' Agreement for example);

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example).

There is no uncertainty regarding the joint control of OTPP shared by the Province of Ontario and the Ontario Teachers Federation. The TPA, the Partners' Agreement and the plan text collectively set out this shared control and that the Province of Ontario has an equitable sharing of the risks and rewards (surpluses and deficits) of the plan based on the definition of a joint defined benefit plan.

As noted above, the classification of OTPP as a JDBP by the Office of the Provincial Controller has been consistent since 2001 and had been consistently and without question accepted by the Office of the Auditor General prior to the 2015/16 Public Accounts.

RETIREMENT BENEFIT, Section PS 3250 – Accounting for a JDBP

RETIREMENT BENEFITS, Section PS 3250 paragraphs .081 to .082 provide guidance on the accounting for a JDBP in the financial statements of the government sponsor. As OTPP meets the definition of a JDBP for the reasons noted above, the relevant guidance for the Province for purposes of reporting retirement benefits in the Public Accounts includes:

> *.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]*
>
> *.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.*

Section PS 3250.81 clearly states that "The government should account for its portion of the plan in accordance with the standards for defined benefit plans". It is clear from this that only the government's portion of the plan is included in the government's financial statements consistent with the requirements of Section PS 3250 (recognition) and the measurement of that portion is based on the requirements of Section PS 3250 (measurement). It is also then clear that the requirements of the standard for recognition and measurement, including the Limit of the Carrying Amount of an Accrued Benefit Asset guidance, are designed to be applied to a joint control situation and not only to situations where there is unilateral control. If it was intended that no pension asset could be recognized because the asset was subject to joint control and not unilateral control paragraph .081 would have made this clear. This paper discusses the two elements of recognition and measurement separately.

Commented [NP5]: Should we point out that the standard does not require unilateral control?

LD response – have added in a sentence to reflect this. Npp - thx

The balance sheet recognition guidance for retirement benefits is stated in Section PS 3250.016 to .017:

> *.016 The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date. [SEPT. 2001]*
>
> *.017 The components of the retirement benefit liability are:*
>
> > *(a) accrued benefit obligation including the effects of plan amendments, settlements and curtailments;*
> >
> > *(b) plan assets, if any; and*
> >
> > *(c) unamortized actuarial gains and losses.*

As the OTPP is a funded plan there are plan assets that are recognized as part of the retirement benefit liability. When plan assets and the impact of unamortized actuarial gains and losses exceed the accrued benefit obligation then there is an "Accrued benefit asset" (ABA). An ABA is defined in Section PS 3250 as follows:

> GLOSSARY - *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

Accordingly, the portion of the government's plan to be recognized includes their share of the accrued benefit obligation and also their share of the plan assets. In the case of the Province's portion of OTPP there is no uncertainty regarding the *existence* of an ABA for the government's portion of the plan, based on the best estimate assumptions used in measuring the accrued benefit obligation and plan assets, measured in accordance with Section PS 3250 guidance for these items. As noted above an ABA is defined as the government's sum of the accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance). For a jointly sponsored plan this is the government's accumulated cash contributions less the sum of the government's share of the current and prior years' benefit expenses that are attributable to the government under the joint defined benefit plan. The Province's portion of OTPP resulted in an ABA of $10.1 billion as at March 31, 2016. There is no uncertainty regarding the occurrence of the cash contributions made (including interest earned thereon) measured in accordance with Section PS 3250 and the existence of the government's obligation. As Paragraph 3250.80 *requires* a government to account for its portion of the plan in accordance with the standards for defined benefit plans, this would include the recognition of any asset that meets the definition of an ABA under the standard.

Further, Section PS 3250 paragraph 3250.50 refers to the presentation of the ABA; this amount is presented in the financial statements, net of any valuation allowance. This indicates that an ABA should be recognized in the financial statements, but measured in reference to the limit on the carrying amount of the asset - essentially a measurement requirement rather than a recognition requirement, as an ABA could be measured at anything from $nil to its full amount. Note that the *measurement* of any net asset is subject to guidance in Section PS 3250 paragraphs .50-.59 and is discussed later in this paper.

To recognize only their share of the liability and not their share of the plan assets, or to recognize only a net liability (accrued benefit obligation exceeds plan assets) but never a net asset (when plan assets exceeds the accrued benefit obligation, subject to the valuation allowance guidance discussed in the Measurement section below), would indicate that the ~~government~~ Province does not share equitably in the risks and rewards of the ~~plan~~ OTPP because they bear only the risk of increased liabilities without being able to bear any ~~the~~ rewards of investment returns on the plan assets and under this interpretation the plan would not therefore be a joint defined benefit plan.

Commented [NP6]: Might be a good place to make reference to relevance of specific terms and conditions of the OTPP arrangement, and lack of comparability with plans in other jurisdictions which may have different terms & conditions.

LD response – I wasn't sure where to put the comparison to other province's section. I am open to it being here or where it is (at the end). If you think it flows better here, then it would be a good place. Npp - some suggested wording edits.

Concept of Shared Control and Asset Recognition

Included in the definition of a JDBP is the concept of shared control. Points (c) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of Shared Control resulting in a recognition of an asset could on the surface appear to conflict with the definition of an asset under FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210, as part of the definition of an asset under PS 1000 would suggest that the government must control the economic resource and access to the future economic benefits. Since joint control does not equate to control, there is a need to consider whether the recognition of any asset under PS 3250 is appropriate where there is only shared control.

The Province's position is that PSAS does not preclude asset recognition for assets under joint control and specifically for plan assets of joint defined benefit plans for the following reasons:

- As discussed above GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity. Section PS 3250 is a primary source of GAAP for dealing specifically with joint defined benefit plans and, as noted above, requires the government to account for their portion of the plan – both the accrued benefit obligation and plan assets in accordance with Section PS 3250. As such, reference to Section PS 3250 is sufficient to indicate that the recognition criteria are met for joint defined benefit plan assets, no further source of PSAS guidance need be considered.

- Similarly, if other primary sources of GAAP are considered then it is relevant to consider GOVERNMENT PARTNERSHIPS, Section PS 3060 which also includes the concept of shared control. Under Section PS 3060, joint control is sufficient for asset recognition.

- The concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. On the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that PSAB did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

Commented [NP7]: Necessary? Perhaps move up to earlier discussion of PS 1000?

LD response – I see your point. I had seen this as being more of a "conclusion" on the share control point as to why it was not inconsistent with the framework, but I think it also works as a bullet point here to emphasize that reference to 3210 and 1000 is difficult to a shared control concept.

Npp – ok.

- The Province's reporting of a pension asset for the JDBP is therefore consistent with these primary sources of GAAP, subject to measurement guidance including impairment considerations.

The similarities between the definitions of a JDBP and a government partnership under PSAS are demonstrated in Appendix B to this paper, and further support PS 3060 as being a relevant primary source of GAAP dealing with similar circumstances, should it be considered necessary to go outside of the requirements of Section PS 3250 to look for further clarification and guidance on recognition.

Under Section PS 3060 a critical condition for a Government partnership is shared control. Section PS 3060 explicitly acknowledges that under shared control "none of the partners is in a position to exercise unilateral control over the government partnership" (PS 3060.20), yet the accounting model required by Section PS 3060 for non- GBPs[9] is that of proportionate consolidation which is the picking up of a pro rata share of assets, liabilities, revenues and expenses of the partnership. Joint defined benefit plans are excluded from the scope of Section PS 3060 on the basis that control is shared with employees rather than with a party outside of the reporting entity (3060.06 footnote 3). This reason indicates that such plans are excluded because of a closer relationship between the government and the other party than normally exists for government partnerships. Even when an independent third party shares control, Section PS 3060 still requires the recognition of a share in an asset subject to joint control, indicating that the PSAS framework does not require unilateral control in order to support asset recognition when there is joint control. It would not be appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3060 for proportionate consolidation, and similarly it is not appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3250 to account for the government's portion of a joint defined benefit plan.

Conclusion on recognition

Therefore the Province has concluded that PSAS permits the conceptual recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets must be subject to unilateral control. The Province's share of OTPP's pension surplus meets the definition of an Accrued Benefit Asset under Section PS 3250. The measurement of that accrued benefit asset is determined by reference to the guidance in PS 3250 regarding the Limit on the Carrying Amount of an Accrued Benefit Asset, which is discussed in Question 2 of this position paper.

[9] Government business partnerships (GBPs) are accounted for under the modified equity method rather than proportionate consolidation.

Question 2 – Measurement of a pension asset

For an asset to be recognized it must be reliably measureable. Section PS paragraphs 3250.050 to .059 address how to measure a pension asset. "When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit." Paragraphs .052 to .059 go on to explain what the standard means by expected future benefit and how a government may benefit from the ABA. Section PS 3250.50-.59 are included here for completeness and ease of reference:

Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)

.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated

DRAFT

amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Note that for purposes of Section PS 3250.053 the Province has determined that no pension valuation adjustment is necessary and as such that the accrued benefit asset equals the adjustment benefit asset (due to unamortized actuarial gains exceeding unamortized actuarial losses).

DRAFT

Paragraph .052 states that a government may benefit from an ABA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions. It is an explanatory paragraph on how a government may benefit from an accrued benefit asset and why a valuation allowance may be needed, rather than detailing the test to be applied. Part of this justification is to note that that an ABA may be impaired when "the government is not entitled to benefit from [the ABA] fully". Examples of when a government may not be entitled to benefit from the ABA fully are given, such as a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

The Province's expected future benefits to the surplus is intended to be through reduced future contributions, and not through withdrawal of pension surplus. As such, PS 3250.059 is not considered relevant to the analysis when performing the asset ceiling test. When considering the ability to realize expected future benefits, the Province's legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability which is not explicitly required by the standard to support recognition and measurement of JDBP pension assets. Specifically, the amount of pension asset that gets recorded needs to take into account considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a pension asset in the Public Accounts.

It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to joint control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays or withdraw surplus. Under the Plan and Partners' Agreement, if funding surpluses occur the partners are required to negotiate the use of the funding surplus (at least once every three years) and the Province is entitled to negotiate a reduction in contributions in respect of its share of the surplus. Under the Partners' Agreement any funding surplus must be dealt with so that the funding valuation becomes actuarially balanced. *In other words when there is a funding surplus over a certain range the "status quo" cannot be maintained, the surplus must be reduced by a combination of reductions in contributions, increases in benefits or withdrawals of surplus*. While the Province might choose to accept an increase in member benefits rather than to reduce funding, any such decision is at the Province's discretion since the OTF cannot force the Province to increase benefits instead of reducing contributions. In other words it is at the Province's discretion whether to address the actuarial balancing requirements by allowing its portion of the surplus to be utilized through increased benefits. Therefore, the Province is entitled to negotiate their share of the JDBP and take contribution holidays in future negotiations and can effectively use their power in negotiations to benefit from the ABA. Note that while the negotiations are based on funding surplus amounts rather than accounting surplus amounts any differences would be captured in the mechanics of the calculation of the expected future benefit rather than precluding an ability to benefit from any of

the accounting surplus. ~~, and the measurement of the pension asset reported on the Province's books would not be impacted.~~

Further, paragraph PS 3250.055 indicates "The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Many generally accepted accounting frameworks use "expected" in a number of principles and is typically used in the probabilistic sense – something is expected when it is probable at some level, it does not equate to certainty. ~~nor does it require legal enforceability to be in place at year end.~~ The Province has an expectation that they will benefit fully from the ABA by exercising their current rights under the plan arrangements to negotiate the use of current and future surpluses in the form of contribution holidays. This position is supported by the review of the constating documents and past history of negotiations that indicate:

1. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) to exceed the amount of contributions paid by or on behalf of active members in respect of credited service for the year (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.
2. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix G for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the Sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.
3. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right), and the requirement to negotiate and agree (or in the absence of agreement, arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.
4. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan. Under the plan contributions are generally borne equally by the Province and the employees. Employees benefit economically from both an increase in benefits and from a reduction of contributions. The Province benefits economically directly from a reduction in contributions. This makes it reasonable that at least some contribution reductions would be agreed to by the joint sponsors as a highly unequal weighting towards increases in benefits would not balance the interests of taxpayers and

Commented [NP8]: Lucy – please check

LD response – I'm not sure what you mean. Contribution holidays under the plan are predicated on there being funding surpluses – without a funding surplus it seems unlikely that the Province would be able to negotiate a reduction in contributions. Therefore I could not say whether the measurement of the pension asset reported on the Province's books would not be impacted because it really depends on how you are calculating your minimum contributions and what assumptions you are using. Npp - removed

Commented [NP9]: Lucy – check please

LD response – I've always thought of legal enforceability as relating more to the control or past transaction elements of the definition of an asset rather than the "expected future benefits" part, so while I can't say the additional comment is wrong it seems a bit incongruous to me as the two concepts just don't seem to belong together in my view. Npp - removed

Commented [NP10]: Also supported by positive working history of negotiations on use of surplus in the past, and the 'zones' which also refer to future benefits of reduced contributions on a temporary or permanent basis

LD response – added that both documents and past history support the position.
Npp – ok.

DRAFT

therefore may be unlikely to be a reasonable outcome of "good faith" negotiations between the Province and the OTF.

This is further supported by the historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed in respect of conditional indexing, a decrease in benefits by the employees were offset by an increase in payments by the Province. Similarly as the sponsors agreed to restore indexation, this increase in benefits resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.98 for the 2015 change, and $1.68 for the 2014 change). This demonstrates that historically and over the long term an equitable sharing of the deficits and surpluses has resulted in changes in the Province's contributions, even when there are decreases or increases to benefits for employees.

5. In the event that the Sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, the matter can be submitted to an arbitration board of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

   As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Commented [NP11]: Thought that mediation was the first step, then arbitration?

LD response – this was Jim's wording, so he may be better to ask regarding what he intended to convey.

Npp – Jim is not at all familiar with the agreements. Do you think it would be useful to insert reference to the mediation aspects as an interim measure before arbitration? We could get legal to review wording and edit.

Further to the discussion in Section PS 3250.052 regarding entitlement to benefits, PS 3250.059 provides further guidance where such benefits are expected to be realized through an entitlement to withdraw surplus. "A key factor in determining a government's expected future benefit from a defined

DRAFT

benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal." PS 3250.59 is clear that expected future benefit available from surplus withdrawal can only be asserted where the government has a current legally enforceable right to withdraw assets from the Plan. Section PS 3250.59 introduces the concept of a legally enforceable right, however it does so solely in the context of a government's future withdrawal of a Plan surplus, and not in the context of a government's reduction of future contributions. Had PSAB intended legal enforceability to be the test, they would have included that notion throughout the guidance (for example in paragraph .052), instead of only raising it in the context of a withdrawal of surplus.

The Province would not envision realizing any expected benefits through a withdrawal of surplus, but rather through contribution reductions or holidays. As such, from the Province's perspective, PS 3250.059 which deals with the situation of surplus withdrawals is not considered pertinent to the pension asset recognition or measurement analysis.

Based on the above analysis, the Province believes that the uncertainties around how and when to utilize a surplus in the OTPP do not result in an inability or lack of entitlement to utilize the surplus in accordance with Section PS 3250.52.

Calculating the limit on the carrying amount of an accrued benefit asset

PS 3250.53 to .58 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in PS3250.055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where actual realization of the benefit would be reflected in a reduction in future contributions. A valuation allowance is recorded against the Pension Asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test under PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as that expected future benefit is defined in paragraph .56.

Therefore in accordance with PS 3250.56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

DRAFT

Each of these is discussed separately.

Through withdrawal of the surplus (Section PS 3250.056 (b)

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, paragraph 3250.059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

The TPA for OTPP does not provide for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution, the Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

DRAFT

The Province's position is that there is no amount of expected future benefit included in respect of withdrawable plan surplus as government does not have any intention to realize future benefits through surplus withdrawals..

Through reducing future contributions (Section PS 3250.056 (a))

PS 3250.56(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per PS 3250.81 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the Pension Asset value to be recorded in the accounts. For example, if the Pension Asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the Pension Asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. It is therefore relatively straightforward and is typically calculated based on the Province's share of the current service cost reported in the actuarial valuation taken into perpetuity unless there is evidence to indicate the workforce will significant diminish over time (for example a closed plan).

The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in the determination of future minimum contributions required to be made by the government regardless of any surplus. Note that consistent with the calculation of the expected future accruals for service no amounts are considered for employee contributions as these relate to the OTF's portion of the plan. There is no further guidance in S 3250 as to how this calculation should be performed and what restrictions or parameters should be factored into this calculation.

Commented [NP12]: Include any reference to above statement that only the gov's ½ of the obligation and contributions factor into the calc?

LD response – Stated in the first paragraph of this section, but have added a sentence again to reinforce.

Npp-thx.

Determining the number of years of contributions to include should involve an assessment of the facts and circumstances of the plan and should consider uncertainty. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the contractual agreements between the Sponsors that provide for the sharing of risks

and benefits and specifically in respect of assessing the minimum contributions required by the plan agreements the following:

- One view of minimum contributions might be that the agreed upon level of contributions are the minimum contributions until they are altered in the plan text. As this can only happen with agreement from OTF it cannot be assumed that changes will be made and therefore that the contribution formula as stated in the current agreements will continue in perpetuity. This view provides the most conservative view of minimum payments. However as the current contribution amounts are greater than the government's share of the annual current service cost for the existing workforce this indicates that continued contributions at this rate will result in ever increasing surpluses. Extrapolating the surpluses, at a certain point other requirements that are currently incorporated into the plan text, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan will apply to reduce the contributions. The effect of these caps on contributions would have to be estimated but cannot be ignored as they form part of the current contribution arrangements. Modelling could be performed to develop expectations as to when these CRA limited could be expected to be reached assuming no changes in the contribution levels. As is the most conservative view (highest minimum contributions) the impact of this has been considered, as discussed below.
- An alternative view of the minimum contributions required by the plan is that there is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'. On this basis it could be argued that any agreed upon contribution levels are mandatory for only a three year period, after which the contributions must be renegotiated to stay the same, increase or decrease, such that the stated contribution level in the plan text constitute minimum payments for only three years. It should be noted that the plan text requires an actuarially balanced funding valuation, so to the extent that a funding deficit currently existed a contribution holiday (contributions lower than the annual cost of the plan) could not be negotiated. However because there funding situation at the time of future negotiations is not known it could be argued that no amount is a fixed "minimum contribution" in this context, because all of the contribution amount is subject to future changes in funding and negotiation by the joint sponsors.
- Other views of what the minimum contributions are would fall between these two views, such as that the current funding level is set to ensure that there is no funding deficit over a 11 year period and after that changes in contributions would be negotiated. This view has been used in calculating the actuarial calculation of the asset ceiling as noted in the table below.
- Another consideration might be the specific framework within the Funding Management Plan for OTPP which contemplates specified funding zones and expectations ~~regarding possible~~regarding possible contribution reductions by the sponsors. Informed stochastic modelling would be necessary to estimate when the different funding zones will be reached and probability of contribution reductions may be increased.

Formatted: Not Highlight

Commented [NP13]: I don't think we agree with this. There is a requirement that they negotiate every 3 years…not likely that status quo would remain.

LD response – We could remove this, but I added it in because reference was made to the calculations of the Income Tax caps that kick in when you use this basis, so it seemed relevant to support why those calculations were being referred to. I thought the point of those calculations was to show that even if this view was taken there would still be recognition of a benefit. I think if you are going to refer to these calculations you need to acknowledge this possible interpretation, even while noting that this is not a realistic scenario.
Strategically it's a matter of whether acknowledging this view and then noting why an asset can still be supported is more effective than putting one strong argument for the position over minimum contributions. I think both are valid strategies – Management should decide which way they want to go.

Npp – thx. Agree that it should be included, but was just sensitive to the wording. Will await CV comments.

Commented [NP14]: Where there is a surplus, the parties are also mandated to negotiate. To avoid confusion for the Panel, suggest that this section should be restated.
If some element of this very conservative view is to be included, perhaps as the last item but then dismissed.

Commented [NP15]: When we say that the status quo would not remain, I think that the key point is that there would not be a mandated minimum amount that must be paid. The wording in this section will be very important and would benefit from rephrasing/repositioning. Key here is that we want to make a case for 'no perpetual' stream of minimum contributions.

LD response – good point, have added an extra sentence on this.
Npp – thx.

n

DRAFT

- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to use some of the funding surplus to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change, $1.98 for the 2015 change, and $1.68 for the 2014 change).

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (PS 2130.03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in PS 2130.13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

Commented [NP16]: Consideration in gauging reasonability that the Province would ever expect to benefit from reduced contributions.

LD response – I am not sure what this comment means?

Npp – please ignore.

As part of the 2015/16 Public Accounts audit, the Office of the Provincial Controller engaged external experts to conduct asset ceiling tests to assess the requirement for a valuation allowance. The results of those reports are summarized here:

Plan	Asset recorded by Province (in billions)	Asset ceiling computed (in billions) and assumption re: years of contributions	Number of years contributions could be made without resulting in a valuation allowance
OTPP	$ 10.1	$29.3 (based on 11 years of contributions noted in the funding report as the period additional contributions are required)	33

The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (3250.56(a)). There is no guidance on the meaning of minimum contributions for purposes of this calculation in PS 3250.

Commented [NP17]: Moved this comment after the next section.

Under the Partners' Agreement, the parties are mandated to negotiate benefits and contributions every three years as a minimum and if agreement is not reached, it is reasonable to expect that a change in contributions might occur rather than the 'status quo' being retained.

For purposes of the OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

in addition to the above calculations, the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan should also be considered. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that no valuation allowance is required.

Commented [LD18]: This is the bit where it is assumed that contributions are unchanged and therefore minimum contributions are maintained to perpetuity.
This bit would have to be re-worked if the perpetual minimum contributions section was re-worked.

The determination of the ~~the~~ minimum contribution levels required as input to ~~the calculation~~the calculation ~~of the~~of the expected future benefit involves significant judgements, estimation and assumptions about future funding surplus levels. These judgements, estimates and ~~assumptions should~~assumptions should be made on a consistent basis with best estimates used in developing the accrued benefit obligations and plan asset amounts. Regardless of the need to apply judgements, estimates and assumptions for the calculation, this does ~~not imply~~not imply that no asset can be recognized or that it cannot be reliably measured. In fact, pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "~~expected future~~expected future benefit". From the Province's perspective, 'expected' does not equate to 'certainty'.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (3250.42) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (3250.41). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. 3250.57 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that

used to determine the accrued benefit obligation itself. The Province has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on Plan Assets, which is one of the acceptable references suggested on PS 3250.44.

The OAG and the Government differ regarding whether it needs to be "expected" that the Government will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in paragraph .059. The Government considers that it needs to be expected that future economic benefits are to be obtained as reflected in the definition of an asset in Section PS 1000 and as reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to use a plan surplus.

Other guidance in the PSA Handbook on measurement

Furthermore MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe would be a useful addition to the current year financial statements. PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by experience of similar transactions and, in some cases, reports from independent experts. Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.*
>
> *.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.*

We acknowledge that the estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans

Commented [NP19]: Insert reference to past history where actual returns have exceeded this rate?

LD response – see earlier comment.
Npp – if not helpful to insert, no need.

Commented [NP20]: Delete? Already addressed earlier in the paper

LD response – could do. I thought this was acting as a bit of a summary of the positions, but I agree it is repetitive and could be removed.

Npp – if summaries (as above) are to be included, then consistency is impt and ok with leaving.

Commented [NP21]: Addressed anywhere?

LD response – not sure what the concern is?
Npp – please ignore

involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is permissible under PSAB and consistent with rates followed by other senior Canadian governments. Historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets on the Province's books.

Impact of valuation allowance

The current AG's view challenges previous interpretations of the Provincial Controller and former Auditor Generals regarding the interpretation and application of PS 3250 to those JDBPs where the government is a joint sponsor. The impact of the OAG's view is that no pension accounting surplus could ever be recognized in the Province's Public Accounts for JDBPs until the joint sponsor agrees to a change in the plan text for the Province to provide for unilateral authority to access surplus or reduce future contributions to enters into an agreement by year-end enabling the government to take a contribution holiday. Any ABA would therefore be fully provided for through a valuation allowance, impacting each ~~year's statement~~year's statement of operations by the amount by which the asset would otherwise increase in value. These results are counterintuitive with pension expense being higher in years in ~~which funding~~which funding requirements are higher and assets are therefore increasing or when greater investments returns are recorded. In contrast, under the AG's view, the Province's annual surplus/deficit would ~~reflect a~~reflect a gain (income) in years when there are less than expected investment returns. **NTD – statements to be supplement by the visual aid requested by the Minister]**

For information purposes, refer to Appendix D for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting compared with following the Province's interpretation of the PSAS. Of particular note is the impact in 2008 when the deficit would have be lower by $3 billion in a year when pension asset values fell significantly because of the financial crisis.

Comparability of Ontario accounting for JDBPs to other Provinces

For your information, included in Appendix C is the legal opinion prepared by lawyers, Koskie Minsky, comparing access to the pension surplus of OTPP relative to JDBPs in British Columbia. The Province of British Columbia does not report a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the

Commented [NP22]: Suggest moving some of this discussion earlier in the document – reference to Appendix G above identifies OTPP discount rate as an outlier.

LD response – do the results corroborate the discount rates or exceed the discount rates?

Sorry- forgot to include the attachment. Will include it with the next response for your review and consideration of relevance as a reference in the doc.

Commented [NP23]: Consider referencing the appendix here and specific mention of the 2008 result which would have lowered the deficit by $3B.

LD response – Appendix D is referenced in the following paragraph. Have added a sentence here to highlight 2008.

independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

Insert New Brunswick?

Any info on SK or QC? (seem to recall mention of these at some point as well)

Conclusion on measurement

As discussed, there is significant professional judgement and ~~estimation in~~estimation in determining how to measure the valuation allowance under Section PS 3250, including the determination of the minimum contributions required by the current plan arrangements. It is the Province's position that the attributes of the joint defined benefit plan arrangements for the OTPP entitle the Province to access to its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surplus through reduced contributions.

The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of those models to date no valuation allowance appears to be required and the OTPP pension assets should continue to be recorded on the books of the Province.

Commented [NP24]: Can this be clarified? This likely refers to the 33 years noted in the above table. Can we tie it in to clarify.

LD response – This is a summary of the above arguments. I'm not sure what estimates management actually applied in coming up with the support for the valuation allowance (33 years vs 11 years and all the underlying projections), so I'm not sure how best to tie this in.

Npp Management's decision should be documented in this position paper. CV to advise.

DRAFT

Appendix A – Guidance in the PSA Handbook - FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210

Guidance in FINANCIAL STATEMENT CONCEPTS, Section PS 1000
.35 **Assets** are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.
.36 Assets have three essential characteristics:
(a) they embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows;
(b) the public sector entity can control the economic resource and access to the future economic benefits; and
(c) the transaction or event giving rise to the public sector entity's control has already occurred. [Former paragraph PS 1000.36 retained in Archived Pronouncements.]
.37 An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph. Thus, for example, an item does not qualify as an asset of a government if the item involves:
(a) no future economic benefit;
(b) future economic benefit, but the government cannot obtain it; or
(c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred.
(paragraph PS 1000.38 deleted) [Former paragraph PS 1000.38 retained in Archived Pronouncements.]
.39 **Financial assets** are assets that could be used to discharge existing liabilities or finance future operations and are not for consumption in the normal course of operations.
.40 A financial asset is any asset that is:
(a) cash;
(b) a realizable asset that is convertible to cash;
(c) a contractual right to receive cash or another financial asset from another party;
(d) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;
(e) an equity instrument of another entity;
(f) an investment in a government business enterprise or government business partnership;
(g) a financial claim on an outside organization or individual; or
(h) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph PS 1201.055. [Former paragraph PS 1000.40 retained in Archived Pronouncements.]
.41 Non-financial assets include tangible capital assets, and other assets such as prepaid expenses and

DRAFT

inventories of supplies.

.42 **Non-financial assets** are acquired, constructed or developed assets that do not normally provide resources to discharge existing liabilities, but instead:

(a) are normally employed to deliver government services;

(b) may be consumed in the normal course of operations; and

(c) are not for sale in the normal course of operations.

RECOGNITION

.52 Recognition is the process of including an item in the financial statements of an entity. Recognition consists of the addition of the amount involved into item totals on a financial statement together with a narrative description of the item (for example, receivables, user fees, grants) in a statement. Similar items may be grouped together in the financial statements for the purpose of presentation.

.53 Recognition means inclusion of an item within one or more individual statements and does not mean disclosure in the notes to the financial statements. Notes either provide further details about items recognized in the financial statements, or provide information about items that do not meet the criteria for recognition and thus are not recognized in the financial statements.

.54 The recognition criteria below provide general guidance on when an item is recognized in the financial statements. Whether a particular item is recognized or not will require the application of professional judgment in considering whether the specific circumstances meet the recognition criteria.

.55 The recognition criteria are as follows:

(a) the item has an appropriate basis of measurement, and a reasonable estimate can be made of the amount involved; and

(b) for an item that involves obtaining or giving up future economic benefits, it is expected that such benefits will be obtained or given up.

.56 It is possible that an item will meet the definition of an element but still not be recognized in the financial statements because it is not expected that future economic benefits will be obtained or given up or because a reasonable estimate cannot be made of the amount involved. It may be appropriate to provide information about items that do not meet the recognition criteria in notes to the financial statements. "Expected" is used with its usual general meaning and refers to that which can reasonably be anticipated, contemplated or believed on the basis of available evidence or logic but is neither certain nor proved. The use of the word in the recognition criteria is intended to acknowledge that economic activities occur in an environment characterized by uncertainty. It is not intended to accommodate the recognition of items that do not meet the definition of one of the elements of financial statements. By implication, recognition would, therefore, not be appropriate without the occurrence of a past transaction or economic event that gives rise to an asset, liability, revenue or expense as defined in this Section.

.57 Purchased natural resources and Crown lands are recognized in government financial statements. However, when natural resources and Crown lands have been inherited by the government in right of the Crown and have not been purchased, they are not given accounting recognition as assets in

government financial statements. These items are not recognized as assets because the costs, benefits and economic value of such items cannot be reasonably and verifiably quantified using existing methods. Similarly, art and historic treasures are also not recognized as assets.

.58 In the absence of appropriate public sector recognition and measurement criteria for intangibles, all intangibles, including those that have been purchased, developed, constructed or inherited in right of the Crown, are not recognized as assets in government financial statements. The intangible often called "human capital" that embodies the talent or intellectual capital of government employees is not recognized as an asset under existing accounting principles.

.59 Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting. The accrual basis of accounting recognizes the effect of transactions and events in the period in which the transactions and events occur, regardless of whether there has been a receipt or payment of cash or its equivalent. Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied. Accrual accounting recognizes an asset until the future economic benefit underlying the asset is partly or wholly used or lost.

MEASUREMENT

.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

.61 Present value is the discounted amount of future cash flows expected to be received from an asset or required to settle a liability. Present value is not a basis of measurement, but a valuation technique that may be used within historical cost-based or current-value models. This technique is used in the government reporting model, for example, to estimate the cost of retirement benefits, when determining the estimated total expenditure for closure and post-closure care of a solid waste landfill site, and when determining the "grant portion" of concessionary loans and portfolio investments.

.62 Government financial statements are prepared on the basis that recognized economic resources used up are measured in financial terms with no adjustments made for the effect of a change in the general purchasing power of the currency during the period. Although a government's performance in the management of its service potential 2 is generally a focus more appropriate to the nature and objectives of government, it cannot entirely be measured in financial terms.

2. Service potential embodies both the quality of service provided and the efficiency with which it is provided.

DRAFT

.63 Financial statements are prepared on the assumption that the government is a going concern, meaning it will continue in operation, and will be able to realize assets and discharge liabilities and meet its statutory obligations in the normal course of operations for the foreseeable future.

Guidance in ASSETS, Section PS 3210

Economic resources

.06 Economic resources embody value because they enable an entity to meet its objectives, such as the provision of public goods and services, redistribution of wealth, generation of cash inflows or reduction of cash outflows.

.07 To embody value as an economic resource, there must also be some restriction on its availability. For example, the air we breathe generally cannot be an economic resource unless access to it is restricted.

.08 Economic resources can arise from, but are not limited to, the following:

(a) contracts or agreements (for example, accounts receivable and leases);

(b) another government's legislation (for example, transfers receivable);

(c) government's own legislation (for example, taxes, fines and penalties);

(d) voluntary contributions (for example, donations); or

(e) construction and development (for example, roads).

.09 Economic resources can be:

(a) financial in nature (for example, cash, accounts receivable and investments); or

(b) non-financial in nature (for example, tangible capital property, prepaid items and inventories of supplies).

.10 Without an economic resource, future economic benefits cannot be obtained. For example, a fire truck (the economic resource) needs to exist before it can provide fire suppression services (the future economic benefits).

Future economic benefits

.11 The essence of assets are their future economic benefits. Assets embody future economic benefits that allow public sector entities to achieve their objectives. The future economic benefits embodied in assets involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows or to reduce cash outflows.

.12 Often the public is the beneficiary of the goods and services provided by a public sector entity. For example, assets such as fire trucks are used to provide fire suppression services to the public. Hospital buildings and medical equipment are used to provide health care services. Parks, schools and libraries provide recreational, educational and research opportunities to the public. Water treatment plants provide goods, such as potable water. Such assets benefit public sector entities as they assist in achieving the entity's primary objective of providing public goods and services. This benefit is different from the benefit that the public receives.

.13 The future economic benefits embodied in an asset may also be in the form of generating future cash inflows. Cash inflows benefit the public sector entity because cash can be used to purchase or to provide goods and services, redistribute wealth or settle liabilities. Benefits in the form of cash inflows relate to resources, such as loans receivable, inventory for resale and portfolio investments. Also, some

public sector resources generate cash inflows because they have user fees associated with them.

.14 The future economic benefits may also take the form of a capacity to reduce cash outflows. For example, this may be the case when betterment of a tangible capital asset reduces the cost of providing goods and services.

.15 There is a close association between incurring a cost and the generation of an asset. However, not all costs result in a future economic benefit. For example, costs incurred to maintain the current service capacity of an asset do not provide a future economic benefit. Also, a public sector entity may obtain an asset without incurring costs. For example, items that have been donated to the public sector entity may provide that entity with future economic benefits and, hence, satisfy the definition of assets.

Control

.16 A public sector entity controls the economic resource and access to the future economic benefits when it:

(a) can benefit from the economic resource through its capacity to provide goods and services, to provide future cash inflows or to reduce cash outflows;

(b) can deny or regulate access to those benefits by others; and

(c) is exposed to the risks associated with the economic resource.

.17 An entity that controls an economic resource has the ability to benefit from the economic resource. For example, a recipient of a transfer benefits from the transfer as it can use the transfer to provide goods or services.

.18 An entity that controls an economic resource has the ability to deny or regulate access to the future economic benefits associated with the economic resource by others. For example, an entity controlling a bus has the ability to deny or regulate access to the related transportation services.

.19 An entity that controls an economic resource is exposed to the risks associated with the economic resource. For example, the entity may hold an investment, the value of which may decline and result in a loss.

.20 Some economic resources are subject to certain external restrictions that specify the purpose(s) for which resources are to be used. For example, there may be external restrictions imposed on the public sector entity's own assets, as is the case with some sinking fund investments. Such restrictions on the use of an economic resource do not negate the public sector entity's control of the economic resource.

.21 Although control may be seen as applying to an asset as a whole, the concept can also be applied to individual rights related to the asset. For example, a single leased asset embodies different economic benefits. It may give the lessee the right to use the property and the lessor the right to receive rents and any residual value. Thus, both parties may have assets corresponding to their respective rights.

.22 Control of an economic resource and of access to the future economic benefits are essential characteristics of an asset, whereas possession or ownership is not. For example, a public sector entity may control the economic resource and access to the future economic benefits through a capital lease arrangement yet not own the economic resource.

.23 A public sector entity's ability to regulate an economic resource does not, in and of itself, constitute control of an asset. A public sector entity may establish the regulatory environment in an

DRAFT

industry or sector within which organizations operate and impose conditions or sanctions on their operations. For example, a pollution control authority may have the ability to close down the operations of entities that are not complying with environmental regulations. However, this power does not constitute control because the pollution control authority's interest extends only to the regulatory use of the economic resources and does not include the ability to control access to the future economic benefits.

.24 A public sector entity may act as trustee when it administers trusts on behalf of the beneficiaries specified in the agreement or statute. As trustee, the public sector entity merely administers the assets, following the terms and conditions set out in the agreement. It does not control the asset because it does not have access to the future economic benefits. Those benefits flow to the beneficiaries.

Appendix B - Definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, paragraph PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the	Consistent in concept with the definition of a GP focusing on investments in the partnership and the

		non-government sponsor;	definition of a JDBP focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

In addition to consistent wording, the concepts in the definitions of a government partnership and a joint defined pension plan are similar.

While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

DRAFT

Appendix C – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners'

Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan ("PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

DRAFT

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[10] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[10] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

DRAFT

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

We trust that these comments have been of assistance to you. Should you have any questions in regard to them, please do not hesitate to contact the undersigned.

Appendix E – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the Pension Benefits Act, appointing the OTTP Board, and defining the role of the Board. By contrast, section 19 of the Partners Agreement sets out the ~~responsibilities of~~responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ~~ongoing surpluses~~ongoing ~~either~~surpluses either to ~~improve benefits~~improve benefits or ~~reduce contributions~~reduce contributions. Only the Sponsors to the OTPP have the authority to utilize ongoing surpluses. The process governing the use of ongoing surpluses by the Sponsors is set out in the Partners'

Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the Sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the Sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the Sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the Sponsors on his or her views on the positions of the partners and provide a recommendation to the Sponsors. If the Sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

We note that the mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the Sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the Sponsors do not agree to file the valuation, then the Sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the Sponsors' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Funding Management Policy (FMP)

DRAFT

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.
The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:
i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).
ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).
iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Sponsors are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both Sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the Sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the Sponsors mutually agree to the contrary, they shall follow the procedures

described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Appendix G - Comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP [Tables are to be updated]

Review of Discount Rates Across Jurisdictions

- In the inter-jurisdictional review of all funded provincial sponsored or joint sponsored plans which also have stand-alone plan financial statements:
  - the Ontario Teachers' Pension Plan (OTPP) is the only plan were the discount rate used in the plan's financial statements is more than 50 basis points below the discount rate used by the province.
  - OTPP stand-alone financial statements use the market rate of Provincial bonds.

- All other plans' financial statements (i.e. 23 plans across jurisdictions) use the long-term rate of return as the discount. The discount rate used by the plans' are lower than 50 basis points or less than the provinces' discount rate or at times higher than the provincial rate.

1

Plan's discount rate is lower than the provincial rate by more than 50 bps

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate
Ontario				
Ontario Teachers' Pension Plan (OTPP)	6.25%	LT return on plan assets	3.25%	Market rate of Provincial Bonds

2

Plan's discount rate is lower by 50 bps or less (or higher than the provincial rate)

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate
Ontario				
Ontario Public Service Employees Union Pension Plan (OPSEUPP)	6.25%	LT return on plan assets	5.75%	LT return on plan assets
Healthcare of Ontario Pension Plan (HOOPP)	5.75%	LT return on plan assets	5.65%	LT return on plan assets plus margin
Colleges of Applied Arts and Technology Pension Plan (CAATPP)	6.00%	LT return on plan assets	5.70%	LT return on plan assets
Ontario Public Service Pension Plan (PSPP)	6.00%	LT return on plan assets	5.95%	LT return on plan assets
Alberta				
Teachers' Post-1992 Pension Plan	7.00%	LT return on plan assets	7.25%	LT return on plan assets
Universities Academic Pension Plan	6.10%	LT return on plan assets	6.25%	LT return on plan assets

3

Plan's discount rate is higher than the provincial rate (or lower by 50 bps or less) (cont'd)

Civil Service Superannuation Plan	6.00%	LT return on plan assets	6.00%	LT return on plan assets plus inflation
Teachers Pension Plan	6.50%	LT return on plan assets	6.25%	LT return on plan assets

DRAFT

Appendix G – History of Surplus Utilization for OTPP

The history of OTPP surplus utilization from the time the OTPP became a jointly sponsored pension plans to the date that the FMP was established (in March 2003) demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to reduce the value of remaining	$0

DRAFT

			special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion		

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the Sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

DRAFT

Appendix H – Summary of different valuation methodologies for pension valuations

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits and pension obligations.	Measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered.
Actuarial cost method	*[To confirm – not clear from the valuation report]*	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values [To confirm the approach taken in OTPP funding valuation]	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	Market -related values, which are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied consistently. The Province uses adjusted market values for some classes of assets in certain plans.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate.	In measuring a pension obligation amount, the defined benefit obligation amount determined by the	Not specified. However two methods are specifically acknowledged – a)

	For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR Reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work To confirm the approach taken in OTPP funding valuation]	plan's sponsor may be (but is not required to be) used. Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. Part I (IAS 19) requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario.	discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing.[11] The Province of Ontario uses a discount rate for OTPP determined by reference to plan asset earnings.
Underlying population data	All valuation methodologies should use consistent underlying data of the population covered by the plan		
Inflation rate	All valuation methodologies should treat inflation in a consistent manner and use a consistent inflation assumption (best estimate). [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Demographic assumptions	All valuation methodologies should use a consistent demographic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Other economic assumptions	All valuation methodologies should use a consistent other economic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		

[11] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

Martin,

We are on a call with Matt and he is describing your most recent model run for the OTPP. Can you please share that with Allan Shapira and cc. Alex Killoch and Rob Pomykacz as soon as possible.

Thanks.

Nadine

h - max (0 ; d) as per PS3250.053

Minimum EFB basis calculation illustrated (k - l + m)
r)
s), assuming contribution based on use of 50% of the excess surplus as per the Income Tax Act
As per the plan funding policy, the employer may have some access to surplus withdrawal. For simplicity, we have used 0 in the test.

No valuation allowance required, no adjustment to the balance sheet asset position, PS3250.050 and PS3250.054

From AON Memorandum (August 2, 2016) and OTPP Jan 26, 2016 documentation

From AON Memorandum (August 2, 2016) and OTPP Jan 26, 2016 documentation

*n * o / (p - q), present value of all future service cost to the employer (the 50% share)*

Sum of the present value of future required contributions (table below), using the funding report, projections and assuming the Government uses 50% of the surplus above Income Tax Act excess surplus threshold for contribution holiday and the employees use the other 50%

r - s, Perpetuity of employer service cost minus the minimum funding requirement as at March 31, 2016

	% assumpt	$B return
Accounting return on asset	*6.25%*	*5.4*
Funding return on asset	*4.85%*	*4.2*
Excess return each year using best estimate		*1.2*

[1] Estimated contributions from funding report (p.16), increased based on salary increase accounting assumption
[2] Remaining contributions used as at March 31,2016 (9 months for 2016)

Market-related value calculation
expected return for the year at 4.85% = (p) / (a) * (b)
actual return for the year = (p)
gain (loss) on asset return = (bb) - (aa)
spread over 3 years = (cc) / 3
3-year adjustment to get market related value = (dd) + (dd) previous year

Going-concern surplus in excess of 125% from the Income Tax Act = (t) - 125% x (q)
Reduction required in Government contribution assuming uses 50% of excess surplus = min (50% x (ff) ; (j -1) form
Asuming employees get the other 50% of excess surplus through cont reduction

% reduction in the Government contribution

Subject: Re: New Model Output

It would definitely be in the temporary zone and may even be in the permanent zone. I would have to take some time today to figure that out if that is important.

It seems like the AG is hung up on the fact that the government needs agreement of another party, the other joint sponsor to use surplus. That is the essence of a joint plan and it plays out in both increasing contributions when necessary and reducing then when there is an opportunity to do so. I should remind everyone that the temporary zone was introduced in response to the concerns of the member sponsor that with what they view as conservative funding the surplus would grow very large with only a permanent zone and they would not get access to it early enough. Clearly that reflects their desire to use the surplus and they can only do so if the government gets its 50% share.

One question on #3 – does the math work such that the plan would be in permanent zone when it is estimated to hit the ITA limit? In other words, based on one of the scenarios provided by Martin Raymond, does this mean that based on continued expected returns, one model suggests that the plan would be in the permanent zone in 15 years?

Subject: Re: New Model Output

I talked to Allan last night.

The answer to number 1 is that the rule applies to joint plans.

Number 2 is that the rule applies to the employer only. But under the terms of the plan it would be both parties that need to determine how to to reduce surplus.

There is no rule other than the FMP for dealing with surplus. And Raymond is correct that the plan would never get to the ITA maximum. The otf would never allow it to get through the temp and permanent zones, (and I doubt gov't would either)

Alex

Alex/Rob,

Just wondering what the plan is w.r.t. the questions posed below? Thx. n

Subject: RE: New Model Output

After a discussion with Matthew, find enclosed the following questions that might be needed to review with the use of Income Tax Act excess surplus for contribution reduction.

1- Is the Income Tax Act excess surplus still applicable to a joint plan? I believe it does since the idea is to avoid excess use of pension plans as tax free deferral vehicles and therefore should apply to all types of employer provided pension plans

2- Is the Income Tax Act only requiring the employer to reduce contribution even in a joint plan ? if so, our estimate of using 50% of the excess surplus would move to 100%. However, we have used 50% of the excess surplus as a benefit to the employer knowing that under the plan, the sharing principle would lead to employees and employer reducing both their contributions to meet the requirement of the Income Tax Act

3- Finally, is there a plan provision (I did not see if one applies) that would force the employer to modify the plan benefits and therefore prevent of taking a contribution reduction that is otherwise applicable as per the Income Tax Act. I did not see one, and this is likely to be logic that the plan does not need one since the idea would generally be to deal with surplus through the Temporary and Permanent zones in the sharing of surplus and therefore not getting into the excess surplus position. However, for our illustration we assume that no surplus is used through the Temporary and Permanent zones, considering no agreement and therefore we end up dealing with the excess surplus situation.

Cc: allan.shapira@aonhewitt.com; Veinot, Cindy (TBS)
Subject: Re: New Model Output

I talked to Allan last night.

The answer to number 1 is that the rule applies to joint plans.

Number 2 is that the rule applies to the employer only. But under the terms of the plan it would be both parties that need to determine how to to reduce surplus.

There is no rule other than the FMP for dealing with surplus. And Raymond is correct that the plan would never get to the ITA maximum. The otf would never allow it to get through the temp and permanent zones, (and I doubt gov't would either)

Alex

It would definitely be in the temporary zone and may even be in the permanent zone. I would have to take some time today to figure that out if that is important.

It seems like the AG is hung up on the fact that the government needs agreement of another party, the other joint sponsor to use surplus. That is the essence of a joint plan and it plays out in both increasing contributions when necessary and reducing then when there is an opportunity to do so. I should remind everyone that the temporary zone was introduced in response to the concerns of the member sponsor that with what they view as conservative funding the surplus would grow very large with only a permanent zone and they would not get access to it early enough. Clearly that reflects their desire to use the surplus and they can only do so if the government gets its 50% share.

Thanks everyone for looking at this so quickly.

One question on #3 – does the math work such that the plan would be in permanent zone when it is estimated to hit the ITA limit? In other words, based on one of the scenarios provided by Martin Raymond, does this mean that based on continued expected returns, one model suggests that the plan would be in the permanent zone in 15 years?

Subject: Re: New Model Output

I talked to Allan last night.

The answer to number 1 is that the rule applies to joint plans.

Number 2 is that the rule applies to the employer only. But under the terms of the plan it would be both parties that need to determine how to to reduce surplus.

There is no rule other than the FMP for dealing with surplus. And Raymond is correct that the plan would never get to the ITA maximum. The otf would never allow it to get through the temp and permanent zones, (and I doubt gov't would either)

Subject: RE: New Model Output

After a discussion with Matthew, find enclosed the following questions that might be needed to review with the use of Income Tax Act excess surplus for contribution reduction.

1- Is the Income Tax Act excess surplus still applicable to a joint plan? I believe it

does since the idea is to avoid excess use of pension plans as tax free deferral vehicles and therefore should apply to all types of employer provided pension plans

2- Is the Income Tax Act only requiring the employer to reduce contribution even in a joint plan ? if so, our estimate of using 50% of the excess surplus would move to 100%. However, we have used 50% of the excess surplus as a benefit to the employer knowing that under the plan, the sharing principle would lead to employees and employer reducing both their contributions to meet the requirement of the Income Tax Act

3- Finally, is there a plan provision (I did not see if one applies) that would force the employer to modify the plan benefits and therefore prevent of taking a contribution reduction that is otherwise applicable as per the Income Tax Act. I did not see one, and this is likely to be logic that the plan does not need one since the idea would generally be to deal with surplus through the Temporary and Permanent zones in the sharing of surplus and therefore not getting into the excess surplus position. However, for our illustration we assume that no surplus is used through the Temporary and Permanent zones, considering no agreement and therefore we end up dealing with the excess surplus situation.

Hi Paula.

At the same time as I was sending my note, Pina was sending the attached to me. I'll plan to touch base with her regarding the pension work.

With regards to release of the accounting opinion, when I spoke with Matt he mentioned that the request was being reviewed internally. As the Panel is expected to be announced shortly, it would be good to know if we will be able to share the opinion.

Thanks in advance.

Hi Nadine,

I hope that you are doing well. It has been a while since we have worked together!

Matt Colley has asked me to reach out to you regarding support on the pension work. He is on vacation this week.

Can we have a short call today to discuss the scope of this work and your expectations

on the deliverable from Deloitte?

I am available anytime today except from 10:30 to 11:45. Let me know if I should call your or if you want to contact me directly. My direct line is **416 601 5838**

Thanks,

Pina

Subject: RE: OTPP FMP questions

Hi all

Please find attached. BZ

FMP history – this is the document we use for board orientation

FMP Coles Notes – we created this summary in 2015 with a group from the Sponsors and their consulting actuaries and plan actuary

OTPP JSPP agreement – this was the term sheet sent to us. You can see only a small

component was added to the FMP. In fact, we spent a lot of time speaking about this, how to incorporate. Given the term nature and low likelihood other benefit reductions would have to be put in place other than CIP, we only insert the small section in 3.08.

Report of Funding – this was a publication in 2002 sent to all plan members, the back page outlines the funds spent in during the "surplus" time of the late 1990s and early 2000s. You can see it was spent evenly so much so that a remaining amount of $76M (need to 2x check that, but of that order) which is relatively small amount was documented in the Partners' Agreement to be spent by the OTF at a future date. The $76M was the amount remaining after round to 0.45% for the CPP offset (vs using something with 6 decimal points). This was "spent" when contributions were later increased viaspecials, the Teachers had a slightly lower contribution rate for 1st (maybe 2) to offset for this $76M.

ONTARIO TEACHERS' PENSION PLAN

The Plan Sponsors'

Funding Management Policy

Structure and Historical Context

Strategy & Risk

HISTORICAL CONTEXT

OTPP is jointly sponsored by the Ontario government, through the Minister of Education, and the Ontario Teachers' Federation (OTF). The Sponsors are jointly-responsible for two key decisions: a) what pension benefits the Plan will provide, and b) the contribution rate needed to ensure the Plan's benefits are fully funded over the long term. In doing so, the Sponsors negotiate the use of surplus funds and, when there is a funding shortfall, both share responsibility for eliminating it.

In March 2003, the Sponsors adopted a Funding Management Policy (FMP) as a supplement to the Partners' Agreement, with the objective to provide a guidance framework for decision making when there is a funding surplus or shortfall. A key component in the creation of the FMP was the concept of 'funding zones', each defined by a range. The funding zones provide a point of reference for whether action is required by the Sponsors, and if so, guidance is provided on how to use any surplus funds or resolve any shortfall – specifically, answering the question of when is it prudent to increase or decrease benefits[1], raise or lower contribution rates, or simply conserve assets for an uncertain time. While the FMP outlines preferred mechanisms associated with its various funding zones, it is ultimately the Sponsors' responsibility to decide what actions to take.

The FMP has important implications from an investment perspective, as the decisions guided by the FMP impact our strategic asset allocation decisions through the Plan's ability to absorb risk. The OTPP Board cannot change benefits or contribution rates; however, they (along with Plan management) work closely with the Sponsors to ensure they have a strong and timely understanding of the financial position of the Plan and current economic and market realities via analytical expertise, and provide information and perspective as they deliberate on plan amendments[2].

The platform for ongoing dialogue between OTPP and the Sponsors is the Partners' Consultative Committee (established in 2008). Examples of important changes since 2003 were the inclusion of a maximum contribution rate in 2006 and the inclusion of Conditional Inflation Protection as an additional funding lever in 2008.

Before creation of the FMP, the Plan was considered "fully funded" if the ratio of assets to the cost of future pensions was 1:1, or 100%. That meant that if the Plan's funding status was below 100% when a valuation was filed, it would trigger an immediate contribution rate increase (by law) unless the Plan Sponsors decided to implement a reduction of future benefits. Conversely, when the funding status was above 100%, even by a small margin, there was opportunity to improve benefits on a permanent basis, even if the Plan's economic and market outlook did not support the added cost.

This practice had very practical pitfalls. The most obvious is that it provided false comfort that even a marginal surplus of assets over the cost of future benefits was enough cause to increase benefits. In the absence of a guidance plan, the opportunity to spend surplus was used. From 1998-2001, the Sponsors spent a total of $18.7 billion in surplus created in the late 1990s/early 2000s (~22% of the Jan 1, 2001 net liability) to eliminate special payments by the Province[3] and permanently improve pension benefits. However, the economic and funding conditions that drove the level of surpluses during this period were not sustainable, and because of how the funds were spent, what followed in the mid/late 2000s (and beyond) was a persistent and growing funding shortfall driven by pension benefits that were too expensive to be supported by our demographically maturing plan[4], in the midst of a historically challenging financial environment.

[1] The value of accrued pension benefits is protected under the Ontario Pension Benefits Act. Accordingly, the FMP contemplates changes to future benefits only.

[2] An important example of these deliberations was the introduction of Conditional Inflation Protection, which provided a systematic approach to reducing future benefits that could be restored in "good" times.

[3] To amortize the pre-1990 unfunded liability.

[4] For further detail into the demographic challenges faced by our mature plan, see *Plan Design Demographics and Investment Implications.*

CURRENT FMP STRUCTURE

Funding Zones

Under the FMP, the Plan is considered "Fully Funded" when its projected assets are within a range of the projected cost of the net liability[5] (depicted in yellow in Figure 1). The lower end of the funding range is defined as projected assets being equal to the projected cost of the net liability, employing a discount rate referred to as the "Restoration Basis". The upper end of the range is defined as projected assets equal to 110% of the projected cost of the net liability, employing a discount rate referred to as the "Distribution Basis". The Distribution Basis is a more conservative (lower) spread[6] than the Restoration Basis, and thus implies a higher projected cost for the net liability. The two bases are described further below.

When the funding position is within the fully funded range, FMP guidance is that the Plan is adequately funded to provide base benefits (including full inflation indexation) supported by the base contribution rate (average base contribution rate is 11% per Plan Sponsor). Given the volatility of market factors and the assumptions embedded in the funding valuation, no action toward benefit improvements or lower contributions is recommended. In other words, the guidance is to conserve the assets to protect against any uncertain times.

When the Plan is in a strong financial position, FMP guidance is for the Distribution Basis spread of 0.5% to be applied. Using the more conservative spread helps ensure that the Plan can afford the use of any surplus over the long term. When assets exceed the projected cost of future benefits (valued under the distribution basis) by more than 10%, the Plan is considered to be in the "Usable Surplus" zone (see blue zone in Figure 1) and the surplus can be used to lower contribution rates, permanently improve future benefits, or a combination of the two. The additional 10% threshold and lower basis are intended to create a buffer in 'good times' to cushion the Plan when economic conditions are less favourable. The higher standard for what constitutes a usable surplus aims to help the Plan avoid benefit improvements or unrealistic contribution reductions that could jeopardize the long-term health of the Plan.

In March 2015, a zone for Temporary Plan Improvements (depicted in green in Figure 1) was added to the FMP, to allow for temporary contribution decreases, surplus distribution and/or benefit improvements (so long as they do not increase the long-term cost of the Plan) when assets exceed the projected cost of future benefits when valued using the Temporary Basis. The basis for the Temporary Plan Improvements zone is the Reference Rate plus a spread of 1.25%, employing the lesser of the smoothed[7] or market value of the funding position. Temporary plan changes are implemented on a one-year lag, and are committed to for at least three years (until the next required filing). Uses of surplus in this zone are paced, amortized over a period between three and 10 years, with an annual spending limit applied to amortization terms shorter than 10 years. The zone includes a provision that temporary improvements cease if a significant market event occurs.

When the Plan has a funding shortfall[8], the Restoration Basis spread of 1.55% is applied according to the FMP (orange and red zones in Figure 1). Funding valuations that show a shortfall prepared on this basis require the Plan Sponsors to rebalance the Fund before filing with the regulators by raising contribution rates (the FMP dictates a maximum contribution rate of 14% (although formally documented as 15% of salary above YMPE), lowering future inflation indexing for service accrued after 2009, lowering other future benefits, or a combination of these options. The higher 1.55% spread helps absorb short-term market volatility, allowing the Plan to avoid the need for frequent changes to contribution or benefit levels to keep Plan assets and costs in balance.

See Appendix I for a summary of the FMP document, including the provisions associated with each defined funding zone.

[5] The projected cost of the net liability refers to the projected value of benefits already accrued plus the projected benefits to be earned by today's members less their future contributions.

[6] Spread over the Reference Rate (the rate chosen by the Board to represent Government of Canada nominal and real return bond yields).

[7] Any losses held back by smoothing are not available for temporary improvements.

[8] The cost of future benefits exceeds the Plan's net assets.

Real Discount Rate Guidance

The FMP guidance for the real discount rate assumption used in the annual funding valuation is documented as the Reference Rate plus a spread of either the Distribution (0.5%), Temporary (1.25%) or Restoration (1.55%) Basis. Which basis is used depends on the Plan's financial health. The Board has chosen its interest rate to be the 36-month average Government of Canada 30-year real-return bonds (intended to reflect the risk-free real returns being provided by the market). If the Board were to diverge from the FMP guidance in determining its interest rate, they would have a dialogue with the Partners prior to implementation.

While the FMP provides guidance, OTPP's Board is accountable for setting the real discount rate assumption. The FMP-guided rate essentially defines the starting point, upon which the Board overlays a thorough 'building block' analysis to assess future real returns less expenses and less provisions for risk, to assess whether the FMP-guided rate is acceptable for the purposes of the valuation in question, or whether it requires modification[9]. If the Board chooses to use a real discount rate above what is prescribed by the FMP (which, historically, it has) there is generally no concern from the Sponsors. However, if the Board uses a discount rate different from that outlined in the FMP and this discount rate is more conservative (that is, produces a larger deficit or a smaller surplus), the FMP becomes void in 12 months unless both Partners notify the Board otherwise.

Given the importance and impact of the real discount rate assumption in a funding valuation, the Sponsors, under certain conditions, can request an independent review by a Hearing Officer of the real discount rate proposed by the Board for a filing. This process, referred to at OTPP as the 'Discount Rate Review', can be invoked if a preliminary valuation shows a shortfall based on a real discount rate lower than 3.575%. The conditions for the review, as well as the process for selecting a Hearing Officer and timelines, are defined in the annual consultative process between OTPP and the Plan Sponsors.

Partners' Strategic Guidance Statement

In planning its investment strategy and making other long-term arrangements, OTPP management has made a series of assumptions about the Partners' tolerance for risk, and consequently their willingness to make adjustments in CIP, contributions or other aspects of the Plan. In 2014, a tripartite Sponsor's Task Force (facilitated by Dr. Harry Arthurs) created the *Partners' Strategic Guidance Statement,* which outlines the Partners' objectives, including intergenerational equity and desired risk tolerance in terms of contribution, indexing and other benefit changes.

This document is an important resource in our working relationship with the Partners, particularly in guiding discussion on funding issues over time. The *Partners' Strategic Guidance Statement* provides a disciplined framework for discussion, particularly with respect to addressing key principles such as plan sustainability and intergenerational equity. Recognizing the continuous evolution of the Plan's characteristics over time, the statement serves as a 'living' document, where its principles reflect our current state but can also be revisited in the future. The Partners' Committee is committed to its periodic review (at a minimum of every five years) to ensure it remains relevant and reflective of the Plan, while maintaining a formal and collective understanding of the important underlying principles. See Appendix II for the *Partners' Strategic Guidance Statement* and a pictographic depiction of the tolerance levels within the Partners' Strategic Guidance Statement with respect to the current FMP levers.

[9] The review process undertaken by the Board in setting the real discount rate is discussed in detail in the document *Discount Rate for OTPP's Funding Valuation*.

FMP Coles Notes.pdf

FIGURE 1. FUNDING MANAGEMENT POLICY (FMP) FRAMEWORK DESCRIPTION

Valuation Basis

Assets = 110% of Liabilities valued at interest rates + 0.5%

Zone:	**Permanent Plan Improvements (Usable Surplus)**
Mechanism:	**Improve benefits as negotiated**
Funding Risk:	Plan is essentially fully funded at Government of Canada long bond rates. Funding security is desired to ensure the Plan can support these benefits continually in the future. The impact of new teachers is important as they will create losses.

That is, Assets ~ 133% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1.25%

Zone:	**Temporary Plan Improvements**
Mechanism:	**Improve benefits or lower contributions as negotiated[1]**
Funding Risk:	Plan is well funded and can afford changes that temporarily provide a benefit enhancement (as long as it does not create a long term cost) and/or lower the contributions being paid into the Plan.

[1] Amortization period used to determine temporary benefit

That is, Assets ~ 107% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1.55%

Zone:	**Fully Funded (Do Nothing)**
Mechanism:	**Maintain Base Benefits and Contributions**
Funding Risk:	Plan is adequately funded to provide base benefits supported by the base contributions. Given the volatility of market factors and the numerous assumptions in the funding valuation, "fully funded" is considered a range.

Zone:	**Additional Support Required From Current FMP Levers**
Mechanism:	**Raise Contribution Rates and/or Invoke Conditional Inflation Protection as negotiated**
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions. An increase to the contribution rate (within FMP maximum) and/or a decrease to the level of indexing being provided are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

Zone:	**Additional Support Required From New/Additional Changes**
Mechanism:	**Negotiate other plan changes**
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions and CIP is fully invoked and contribution rates are increased to maximum outlined in FMP. Plan changes are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
Application (Article I):	**Section 1.01 and 1.02** ▪ Requires the Board to use Board's "best estimates assumptions," including a margin for adverse deviation in the case of the discount rate. ▪ Sets out what best estimates economic assumptions may be based on. ▪ Requires the Board to maintain indices to record inflation adjustments for post-2009 service. **Sections 1.03 and 1.04** ▪ If the Board uses a discount rate different from that outlined in the FMP and this discount rate is more conservative (that is, produces a larger deficit or a smaller surplus), the FMP becomes void in 12 months unless both Partners notify the Board otherwise. These sections serve as an "exit" provision for the Partners. **Section 1.05** sets out under what circumstances each section of the FMP applies. **Section 1.06** limits surplus distributions or contribution decreases to those permitted by law. **Section 1.07** makes temporary improvements conditional on not having a restoration basis deficit.
Definitions (Article II):	**Section 2.01** Defines key terms, including: ▪ Basic contributions (contributions as per Sch.1 on January 1, 2012), which is used throughout the FMP as the target contribution rate (10.4% on earnings up to the YMPE/12% above the YMPE). ▪ Run-rate benefits (benefits as per Sch.1 on January 1, 2009), which include 100% inflation protection and assume basic contributions. ▪ Reference Rate (rate chosen by the Board representing Government of Canada nominal and real return bonds, which may be based on market or smoothed data; has recently been 36 month smoothed nominal and real return bonds). ▪ Remaining amortization value (difference between the temporary improvement value and the commitment value). ▪ Temporary improvement value (present value of a temporary improvement amortized over 3-10 years; if amortized over fewer than 10 years, improvement for a year is limited to the amount of basic contributions paid during a year).
Restore basic contributions and benefits (Article III):	**Section 3.01** ▪ Restoration basis is used (*reference rate* + 1.55%). ▪ Defines assets (refers to PBA Regulations) and current and revised liabilities. **Section 3.02** ▪ Sets out that current and revised liabilities are calculated using the restoration basis, plus an adjustment. The phrase "plus an adjustment" is used throughout the FMP and reflects the fact that the Board often files using a basis that is higher than required under the FMP. **Section 3.03** ▪ Outlines how indexing is accounted for in the valuation (that is, level of indexing provided in current filing zone continues).
Restoration Basis: ***Surplus***	*Sections 3.04 to 3.08 apply when surplus exists using the restoration basis and current contributions are higher than target, partial indexing (for previous years or go forward) exists or other benefits have been reduced.* **Section 3.04** Sets conditions under which sections 3.05-3.08 apply: ▪ If Assets > Liabilities (surplus reported); and ▪ Current contributions > Basic contributions (i.e., contributions are above long-term target level); or ▪ Current Benefits < Run-Rate Benefits (i.e. contributions are above long-term target level or benefits are below the long-term target level). **Section 3.06** Sets out the order of how to restore past benefit reductions or contribution increases: ▪ Actions can consist of increasing benefits to run-rate (long-term target) including prospective restoration or lowering contributions to basic (target) or a combination. ▪ First, increase go-forward indexing to 50% for post-2013 service period, then to 100% on all post-2009 service periods. Second, restore current pension amounts to run rate level, as much as possible, starting with the years where indexing was less than 50% until all years of partial indexation are restored to the same level and then restore to 100% for all service periods. ▪ Partners reserve the right to reconsider order in the future.
(Article III continued)	**Section 3.07** A number of conditions apply after a decision: ▪ Assets equal to or greater than revised liabilities (i.e. no deficit created); ▪ Inflation indexing restored to no more than if 100% of inflation was provided;

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
	▪ Inflation indexing restored to no less than current level (i.e. can't lower prior inflation indexing given); ▪ The value of revised benefits needs to be between current and run-rate benefits (similarly, contributions must be between current and target). **Section 3.08** (Expires December 30, 2017) Sets out the limits from the 2013 Term Sheet (commonly known as the JSPP Agreement) with respect to escalated adjustments and benefit improvements: ▪ Escalated adjustments if assets are greater than 100% of the current liabilities (and not below 100% after). ▪ Benefit improvement or restoration if net assets available for benefits are greater than 105% of the current (unsmoothed) liabilities (and not below 105% after).
Restoration Basis: *Deficit*	*Sections 3.09 to 3.14 apply when the liabilities are greater than the assets using the restoration basis; thus the Partners must raise contribution rates, lower the amount of indexing and/or decrease other benefits.* **Section 3.09** Sets conditions under which Sections 3.10 to 3.14 apply: ▪ If Current liabilities > Assets (i.e., deficit reported). **Section 3.11** Sets out that deficit can be eliminated by changing contributions or benefits provided that: ▪ Assets are equal to or greater than revised liabilities; and ▪ Revised member contributions are no more than 15% (above YMPE).
(Article III continued)	**Section 3.12** The Partners can agree to change benefits or contribution level as long as: ▪ Partners have entered into a written agreement governing the manner in which contributions by the Minister and the Employers will be adjusted to offset any reduction in benefits; and ▪ No indexing granted gets taken away. **Section 3.13** Outlines the current intention that member contributions will be increased up to 15% (above YMPE) before benefits are reduced or less than full indexing is provided. **Section 3.14** Sets out the limits with respect to the 2013 Term Sheet regarding employer contribution increases.
Funding Zone: Temporary (Article IV):	**Section 4.01** ▪ Temporary basis is used (*reference rate* + 1.25%). ▪ Defines: - Assets (either market value of net assets or assets defined in PBA Regulations; that is, if smoothing creates surplus that otherwise would not exist, it cannot be spent). - Current liabilities (liabilities including the greater of current and run-rate benefits and any remaining amortization value from a previous temporary commitment). - Revised liabilities (liabilities including the greater of revised and run-rate benefits and any remaining amortization value from a previous temporary commitment). - Reference rate (ensures that smoothed data is not used to get a surplus if there otherwise would not be surplus). **Section 4.02** Sets out that the liabilities are calculated using the temporary basis, plus an adjustment. *Sections 4.03 to 4.06 apply when the plan has a surplus using the temporary basis; that is, there is surplus available for improving benefits, decreasing contributions or distributing surplus, all on a temporary basis. The surplus spend is amortized over a period of three to ten years, at the partners' choice. If amortization period is less than ten years, the annual spend limit is the amount of basic contributions for a year.* **Section 4.03** Sets out conditions under which Sections 4.04 and 4.05 apply: - If assets > liabilities; and - Current Contributions ≤ Basic Contributions (current contributions are equal to or lower than long-term target); and - Current Benefits ≥ Run-Rate Benefits (current benefits are equal to or higher than long-term target); and - Full inflation indexing has been provided. **Section 4.04**

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
	The Board reports the commitment value (the amount of surplus that can be used to provide a temporary improvement). **Section 4.05** The Partners can agree to temporary improvements so long as after the change, assets over revised liabilities are equal to or greater than zero. **Section 4.06** provides a requirement for a side agreement setting out how Minister contributions may be adjusted if there is a surplus distribution or temporary improvement of benefits.
"Do Nothing" Zone (Article IV continued):	*Sections 4.07 to 4.09 apply if assets are equal to or less than current liabilities using the temporary basis; that is, if there is a deficit using the temporary basis.* **Section 4.09** States that the Partners will not provide new improvements if there is a temporary basis deficit. That is, the Partners will do nothing, and Article III (restoration basis) will apply. However, no actions result from move to restoration because contributions and indexing are already at run-rate in order to be in temporary zone. The Partners could, however, have to file a valuation (using the restoration basis) if the filing schedule required a filing.
Funding Zone: Distributions (Article V):	**Section 5.01** ▪ Distribution basis is used (*reference rate* + 0.5%). ▪ Defines: - Assets (either market value of net assets or assets defined in PBA Regulations; that is, if smoothing creates surplus that otherwise would not exist, it cannot be spent) - Liabilities (includes remaining amortization value) - Current targeted funding amount - Revised targeted funding amount - Reference rate (ensures that smoothed data is not used to get a surplus if there otherwise would not be surplus) **Section 5.02** Sets out that the liabilities are calculated using the distribution basis, plus an adjustment. *Sections 5.03 to 5.05 apply when the plan has a surplus using the distribution basis; that is, there is usable surplus for improving benefits above run-rate permanently or decreasing contributions below target level permanently.* **Section 5.03** Sets out conditions under which Sections 5.04 and 5.05 apply: - If Assets **>** 110% of Liabilities; and - Current Contributions ≤ Basic Contributions (current contributions are equal to or lower than long-term target); and - Current Benefits ≥ Run-Rate Benefits (current benefits are equal to or higher than long-term target); and - Full inflation indexing has been provided prospectively and benefits are fully restored. **Section 5.05** The Partners can agree to change benefits or contributions so long as after the change assets remain greater than 110% of the liabilities and a side agreement has been entered into to set out how Minister contributions may be adjusted if there is a surplus distribution or temporary improvement of benefits. *Sections 5.06 to 5.08 apply when the plan has a funding ratio that is at least 100% but less than 110% and valued using contribution rates at the basic or target level, full indexing provided prospectively and benefits fully restored.* **Section 5.06** Sets out the conditions under which Sections 5.07 and 5.08 apply: ▪ If Assets ≤ 110% of Liabilities; and ▪ Current Contributions ≤ Basic Contributions (current contributions are equal to or lower than long-term target); and ▪ Current Benefits ≥ Run-Rate Benefits (current benefits are equal to or higher than long-term target); and ▪ Full inflation indexing has been provided prospectively and benefits are fully restored. **Section 5.08** If the conditions in Section 5.06 are satisfied, there is not sufficient surplus to provide a permanent improvement; therefore, Article IV will apply to determine whether there is surplus using the temporary basis.

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
Post-December 30, 2017 Valuations (Article VI):	*This section articulates at a high level the use of the surplus credits (earned pre-January 1, 2018) after December 30, 2017. OTF earns surplus credit for any unmatched forgone inflation (i.e., inflation indexing less than 50%) prior to January 1, 2018 or via other benefit reductions made before January 1, 2018. See the JSPP Agreement for more detail.* **Section 6.01** ▪ Restoration basis is used (*reference rate* + 1.55%). ▪ Defines: - Assets (PBA regulations) - Current Liabilities - Revised Liabilities **Section 6.02** Provides overriding provision for post-December 30, 2017: for valuations where assets are greater than current liabilities, Section 6.03 applies (with reference to the 2013 Term Sheet). **Section 6.03** Sets out the use of surplus credits: ▪ OTF has first call on surplus up to a limit; ▪ Surplus credits include foregone pension payment amounts.
Valuation frequency and filing (Article VII):	*This section reinforces an earlier section of the Partners' Agreement that specifies that it is the Partners' joint decision whether to file (other than in a required filing year).* ▪ Partners' decision when to file. ▪ Partners will notify the Board within 7 months of valuation date.
Arbitration (Article VIII):	Refers to Arbitration already in prior section of the Partners' Agreement.
Limitations (Article IX):	FMP does not apply for changes required by law or for changes that increase the liabilities by less than 0.5% or for changes that use the $76m in section 60 *(Note $76m was utilized with January 1, 2008 filing).*

OTPP JSPP Afreement final March 2013.pdf

OTPP Term Sheet – March 13, 2013

CONFIDENTIAL

This Term Sheet (the "Agreement") sets out the key terms of the agreement between the Plan Sponsors, which is effective during the "Freeze Period" (as defined below). The Government will provide a letter to the Plan Sponsors which will explain: the background of the 2012 Ontario Budget measures about jointly sponsored pension plans; the Government's plan to introduce legislation to carry out those measures, including pooling of broader public sector pension fund assets; the fact that discussions lead to this Agreement instead; and will confirm the Government Commitments which are based on those discussions and this Agreement.

A. General Principles

1. The Freeze Period runs from December 31, 2012 to December 30, 2017.

2. During the Freeze Period there will be no employer contribution increases except as provided for below. An employer contribution increase is defined as any increase in the employer contribution rate beyond the highest contribution rate provided for in the last valuation filed by the Plan prior to the Freeze Period. Employer contribution increases already scheduled to occur during the Freeze Period as a result of valuations filed with an effective valuation date before December 31, 2012 will occur.

3. During the Freeze Period, except as may be required by the Pension Benefits Act or as a result of a judicial or quasi-judicial decision that is binding upon the Sponsors or the Plan, there will be no benefit improvements unless the Plan's going concern funded status, based on the most recently filed valuation report, on a non-smoothed basis, as of the date that the benefit improvement amendments come into effect meets or exceeds 105%, and the benefit improvement will not bring the going concern funded status below 105% as of the effective date of the amendment.

4. During the Freeze Period, except as may be required by the Pension Benefits Act or as a result of a judicial or quasi-judicial decision that is binding upon the Sponsors or the Plan, there will be no restoration of benefits reduced as a result of application of these principles unless the Plan's going concern funded status, based on the most recently filed valuation report, on a non-smoothed basis, as of the date that the benefit restoration amendments come into effect meets or exceeds 105% and the restoration will not bring the going concern funded status below 105% as of the effective date of the amendment.

5. Ad hoc/conditional indexation is not considered to be a benefit improvement or restoration and Plan amendments to provide or restore ad hoc or conditional cost of living increases to pensioners can be made provided the Plan's going concern funded status on the date that the cost of living increase is agreed upon (based on the most recently prepared valuation report with a valuation date that is no more than twelve months earlier and that uses the same valuation methodology and assumptions that would apply to a filed valuation) exceeds 100% and the cost of living increase will not

bring the going concern funded status below 100% as of the effective date of the amendment.

B. Valuations and Consequential Actions During the Freeze Period

6. Should any draft valuation prepared for filing during the Freeze Period disclose a funding circumstance in which employer contribution increases would normally be implemented (i.e., a funding shortfall) the funding circumstance must be addressed within the following Parameters. Any valuation filed during the Freeze Period will conform to the General Principles above and the Parameters as follows:

a. During the Freeze Period there will be no employer contribution increases except as provided for below. A contribution increase is defined as any increase in the contribution rate beyond the highest contribution rate provided for in the last valuation filed by the Plan prior to the Freeze Period.

b. Any future benefit reductions determined to be required in order to meet the General Principles and these Parameters during the Freeze Period will not exceed twenty percent (20%) of the aggregate value of future benefits determined based on the Plan provisions in effect on December 31, 2011 ("the Benefit Reduction Limit"), which aggregate value the Sponsors agree is $42.590 billion. Benefit reductions implemented pursuant to the valuation as at January 1, 2012 shall be taken into account for purposes of achieving the 20% Benefit Reduction Limit. For clarity, twenty percent (20%) is measured on an cumulative basis in the Freeze Period.

c. In respect of the benefit reductions provided for under the January 1, 2012 valuation, the Sponsors agree that the reduction in the aggregate value of future benefits is $4.094 billion (9.6%). This reduction in the aggregate value of future benefits was calculated to include:

(i) the reduction in the funding shortfall from the impact of the decrease in the present value of future benefits and contributions stemming from the increase in the discount rate which resulted from the Plan amendment to remove and replace the remaining 50% guaranteed indexing with full conditional inflation protection ("CIP") for post-2013 service;

(ii) the reduction in present value of benefits from invoking an additional 10% of CIP (inflation protection from 60% to 50%) for post-2009 service effective January 1, 2014 along with the associated increase in the present value of the "share the pain payments" (matching contributions made by the Government/employers) plus the reduction in present value of benefits from invoking a further 5% of CIP (inflation protection from 50% to 45%) for post-2013 service effective January 1, 2015.

Appendix A attached hereto provides further details regarding this benefit reduction calculation.

d. Any future benefit reductions under a post-January 1, 2012 valuation, if necessary, will be implemented with an effective date that is no later than the earlier of:

i. two years following the valuation date of the filed actuarial valuation, or

ii. December 30, 2017.

e. In no case will future benefit reductions implemented as a result of the General Principles and/or Parameters affect or reduce pension benefits or ancillary benefits accrued prior to the implementation date of the benefit reduction(s). Ancillary benefits will be considered to have accrued, if, as of the implementation date of the benefit reduction, the person will have met all of the eligibility requirements to exercise the right to receive the ancillary benefits.

f. Sponsors' agreement on future benefit reductions would be effected by a Plan amendment to be prepared and filed within 60 days of agreement or outcome of the dispute resolution process.

g. Once the Benefit Reduction Limit has been reached (i.e., if the second or subsequent valuation(s) filed during the Freeze Period reduce benefits by $4.424 billion (10.4%)), the Sponsors will return to their usual process and make use of their usual tools (e.g., employer and member contribution rate increases and/or benefit reductions beyond the benefit reduction limit) to determine the steps necessary to avoid:

i. any remaining shortfall identified in the draft valuation; or

ii. a future new funding shortfall identified in a subsequent draft valuation during the Freeze Period.

After 2013, any valuation filed during the Freeze Period must be filed on or before September 30 of the year of filing.

C. Dispute Resolution

7. Any dispute with respect to the interpretation or application of this Agreement may be referred by either Sponsor to final and binding arbitration. Either of the parties may notify the other in writing of its desire to submit a difference or dispute to arbitration and the notice shall contain the names of the first party's appointment to an Arbitration Board. The recipient of the notice shall within five (5) days inform the other party of the name of its appointee to the Arbitration Board. The two (2) appointees so selected shall, within five (5) days of the appointment of the second of them, appoint a third person who shall be the Chairperson. If the recipient of a notice fails to appoint an appointee, or the two appointees fail to agree upon a Chairperson within the time limit, either party may request that the appointment shall be made by the Chief Justice for Ontario.

8. In the event that a dispute arises with respect to the interpretation or application of paragraph 6 in particular, all steps to appoint an Arbitration Board as set out in paragraph 7 will be taken on or before 60 days before September 30. The decision of the Arbitration Board shall be issued at least 20 days before September 30.

9. In the event that a dispute arises with respect to the interpretation or application of paragraph 6, in particular, including whether the Benefit Reduction Limit has been reached, the Arbitration Board's mandate will be restricted to determining the means by which the obligations in this Agreement will be carried out and will be subject to the same restrictions applicable to the Sponsors regarding the available options and for greater certainty will exclude an increase in employer contributions during the Freeze Period. The Sponsors, utilizing their usual processes may increase employer contributions once the Benefit Reduction Limit is reached.

D. End of the Freeze Period

10. At the end of the Freeze Period, this Agreement expires and any obligations to conform to this Agreement, and any measures taken in accordance with it, end with the exception of the provisions in paragraph 11.

11. After the end of the Freeze Period, if the Plan's going concern funded status (based on the most recently filed valuation report with a valuation date after December 30, 2017) exceeds 100%, the union/federation sponsors have "first call" on 100% of the surplus disclosed under a valuation report with a valuation date after December 30, 2017, up to a cumulative total of the value of either: the benefit reductions that are made during the Freeze Period; or the Benefit Reduction Limit, whichever is lower. The "first call" on surplus (to take the form of "surplus credits") would be subject to the following conditions:

(a) Surplus credits would only take into account the value of benefit reductions made during the Freeze Period, including the value of benefit reductions made in the January 1, 2012 valuation, but excluding: (i) the value of benefit reductions for which matching contributions are made by the Government/employer ("share the pain payments"), and (ii) the value of benefit reductions relating to the removal and replacement of the remaining 50% guaranteed indexing with full CIP for post-2013 service and the resulting change to the discount rate (as described in paragraph 6(c)(i) above).

(b) Subject to (c) below, the surplus credits could be used as the union/federation sponsors wish (i.e., credits would not be required to be used to restore the same benefits that were reduced during the Freeze Period).

(c) The union/federation sponsors are permitted to spend the surplus credits so long as the going concern funded status of the Plan does not fall below 100% after the surplus credits are spent.

(d) This is a one-time arrangement intended to compensate Plan members for absorbing 100% (rather than 50%) of funding shortfalls arising in the government initiated Freeze Period and is without prejudice or precedent for any future situation.

(e) If inflation protection is invoked below 50% during the Freeze Period, subject to paragraph 11(a), surplus credits will include an amount equal to the actual foregone pension payments during and after the Freeze Period that arise from the reduction in indexing invoked during the Freeze Period until such time as that inflation protection is restored at 50% or more during or after the Freeze Period.

Appendix B attached hereto provides further details regarding the surplus credit calculation.

E. Other Matters

12. The Sponsors will ensure that the cooperation of the Administrator is secured in relation to all aspects of this Agreement, including but not limited to the preparation of the draft valuation, the filed valuation, and applying for any necessary extension of the timelines for filing actuarial valuations and/or Plan amendments as may be necessary to give effect to this Agreement.

13. In order for the terms of this agreement to be effective, the Ontario Government will, subject to Cabinet approval, on or before May 1, 2013, amend Regulation 909 under the Pension Benefits Act to allow for a single four-year valuation cycle for a valuation filing that would otherwise be required to be made during the Freeze Period subject to the following conditions:

a. at least one valuation is filed during the Freeze Period;

b. there are no more than four years between the valuation dates of filed valuations; and

c. any benefit reductions arising from valuations filed during the Freeze Period are implemented in accordance with the General Principles and Parameters herein.

Failing amendment of the said Regulation, this Agreement is of no force or effect.

14. The terms of this Agreement supersede all other agreements (written and oral) between the Sponsors, including the Partners' Agreement. The Sponsors shall amend the Plan, the Partners Agreement or any other documents as necessary to give effect to this Agreement.

15. This Agreement may be executed in one or more counterparts and delivered by facsimile or other means of electronic transmission, each of which shall be deemed an original, but all of which taken together shall constitute one and the same agreement.

Appendix A to Term Sheet Between Government and OTF

As of January 1, 2012 (all amounts in millions)

Calculation of Benefit Reduction Limit

Present Value of Future Benefits Based on Plan Provisions as of December 31, 2011 But Including Legislated Vesting Change		$ 48,899
Less:	Reduction in Present Value of Future Benefits to Reflect Indexation for Post-2009 Service at 60% of CPI	6,309
Equals:	Present Value of Future Benefits For Purposes of Calculating Benefit Reduction Limit	$ 42,590

Benefit Reduction Limit = 20% x $42,590 = $8,518

Calculation of Portion of Benefit Reduction Limit Utilized By Changes to Plan Incorporated into January 1, 2012 Actuarial Valuation

Increase in Reduction of Present Value of Future Benefits From Change in Indexation From 60% to 50% of CPI for Post-2009 Service	$1,367
Plus	
Increase in Government Matching Contributions From Change in Indexation From 60% to 50% of CPI for Post-2009 Service	1,367
Plus	
Reduction in Present Value of Future Benefits Resulting From Change in Discount Rate Associated With Plan Changes (15.0 basis points)	1,390
Plus	
Reduction in Present Value of Future Contributions Resulting From Change in Discount Rate Associated With Plan Changes (15.0 basis points)	(497)
Plus	
Increase in Reduction of Present Value of Future Benefits From Change in Indexation From 50% to 45% of CPI for Post-2013 Service	467
Equals	
Portion of Benefit Reduction Limit Utilized	
$ Amount	$ 4,094
% Amount from 20%	9.6%

Remaining Benefit Reduction Limit for Plan Changes in Freeze Period

Benefit Reduction Limit		$ 8,518
Less:	Portion of Benefit Reduction Limit Utilized By Changes to Plan Incorporated into January 1, 2012 Actuarial Valuation	4,094
Equals:	Remaining Benefit Reduction Limit For Plan Changes in Freeze Period	$ 4,424
	% Amount from 20%	10.4%

Appendix B to Term Sheet Between Government and OTF

The following are examples only. For purposes of paragraph 11(e) of the Term Sheet, the actual foregone indexing below 50% will be determined by the Plan Administrator based on the actual pension payments affected.

Subject to the above paragraph, the following example shows how the foregone pension payments in respect of which surplus credits are to be awarded (paragraph 11(e)) would be calculated in connection with invoking CIP below 50%. The example is based on:

- Inflation rate of 2.00% per year
- Retirements as of July 1st of each year
- New pensioner payments each year under the additional 50% CIP provisions for post-2013 service of $3 million times number of years of service from January 1, 2014 to mid-year retirement date
- 10-year period with no mortality reflected
- Indexation at 45% of CPI for the entire period

Calendar Year	Pension Payments With 50% of CPI (000's)	Pension Payments With 45% of CPI (000's)	Foregone Pension Payments (000's)
2014	$ 1,500	$ 1,500	$ 0
2015	$ 7,515	$ 7,514	1
2016	$ 19,592	$ 19,582	10
2017	$ 37,786	$ 37,759	27
2018	$ 62,164	$ 62,099	65
2019	$ 92,786	$ 92,658	128
2020	$ 129,714	$ 129,492	222
2021	$ 173,011	$ 172,658	353
2022	$ 222,741	$ 222,212	529
2023	$ 278,968	$ 278,212	756
			$ 2,091

The following example modifies the above example to show the impact of moving from 45% of CPI to 0% of CPI (for post-2013 service) effective January 1, 2017:

Calendar Year	Pension Payments With 50% of CPI (000's)	Pension Payments With 45% of CPI / 0% of CPI (000's)	Foregone Pension Payments (000's)
2014	$ 1,500	$ 1,500	$ 0
2015	$ 7,515	$ 7,514	1
2016	$ 19,592	$ 19,582	10
2017	$ 37,786	$ 37,582	204
2018	$ 62,164	$ 61,582	582
2019	$ 92,786	$ 91,582	1,204
2020	$ 129,714	$ 127,582	2,132
2021	$ 173,011	$ 169,582	3,429
2022	$ 222,741	$ 217,582	5,159
2023	$ 278,968	$ 271,582	7,386
			$ 20,107

Report on Funding.pdf

Teachers' Pension Plan Board

Ontario

REPORT ON FUNDING

April 2002

This is a report on the financial health of the Teachers' pension plan and on the progress of the development of a funding management policy.

The responsibility to ensure a defined benefit pension plan is fully funded lies with the sponsor of the plan, usually the employer. In the case of the Teachers' pension plan, however, there are two sponsors: the Ontario government and the Ontario Teachers' Federation, representing the plan members.

The co-sponsors negotiate the use of surplus and, when there is a deficiency, they both make additional contributions to ensure the plan is fully funded within a specified time period.

To assess the financial health of the plan, we hire an independent actuary to conduct a valuation at least once every three years. This valuation determines if the plan has a funding surplus or deficit.

Funding Valuation Results

On January 1, 2002, the Teachers' pension plan had a funding surplus of $1.9 billion, including a $3-billion smoothing adjustment. Without smoothing, the plan had a $1.1-billion deficit.

($ billions) (at January 1)	**02**	01	00	99	98	96	93**
Net assets	**$ 69.5**	73.1	68.3	59.1	54.5	40.1	29.4
Smoothing	**3.0**	(4.3)	(7.3)	(5.1)	(6.0)	(1.8)	---
Value of assets	**72.5**	68.8	61.0	54.0	48.5	38.3	29.4
Future contributions	**13.7**	14.4	13.4	12.0	12.6	14.5	14.3
Special payments*	---	---	---	3.7	8.5	8.4	8.4
Actuarial assets	**86.2**	83.2	74.4	69.7	69.6	61.2	52.1
Future accrued benefits	**84.3**	76.4	69.8	66.2	62.8	60.5	50.6
Surplus (deficit)	**$ 1.9**	6.8	4.6	3.5	6.8	0.7	1.5

* Payments committed by the government toward the pre-1990 unfunded liability

** Valuation dates determined by co-sponsors

Assumptions

Valuations use many estimates, or assumptions. Among them are: how long will a teacher teach? What will inflation be in the future? What salary increases are teachers likely to receive? How long will the average teacher live?

These assumptions are used to estimate the value of the future benefits owed to teachers. In addition, an assumption of the long-term rate of return is used to determine if today's assets plus future contributions will be sufficient to pay promised pensions.

Valuation Assumptions

(percent)	2002	2001
Discount rate	6.30	6.25
Salary escalation rate	2.90	3.20
Inflation rate	1.90	2.20

The discount rate is the long-term market rate of return used to determine the present value of all future pension benefits and assets.

The assumptions are intended to be accurate over a long horizon. While actual experience mirrors some assumptions closely, annual equity returns fluctuate greatly compared to our assumption (6% plus inflation).

It would be impractical to adjust contribution rates frequently because of investment swings. So, to reduce short-term fluctuations in the funding surplus, equity returns compared to our long-term assumptions are 'smoothed.'

WHAT'S INSIDE...

- Understanding Smoothing pg 2
- Funding Management Policy pg 2
- Use of Surplus pg 4

Questions? www.otpp.com or 1-800-668-0105

Understanding Smoothing

Gains and losses from equities are smoothed over five years, a practice accepted by the actuarial profession and pension regulators.

Smoothing defers gains when actual equity returns exceed the 6% plus inflation assumption. On the other hand, when returns are below the assumption, smoothing defers losses (as is the case this year). This practice is simply used to soften the impact of annual volatility in equity markets.

How Smoothing is Calculated

($ billions)

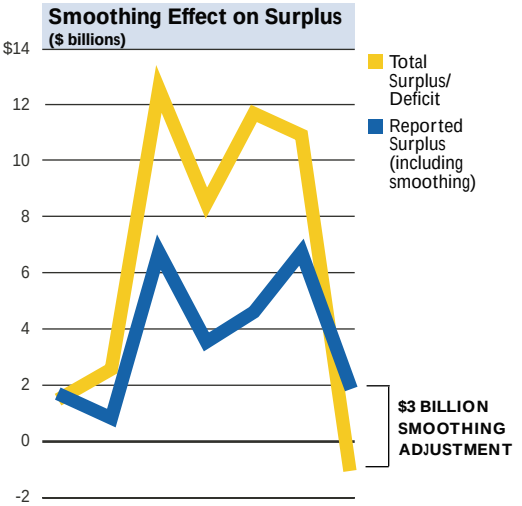
Year	Gain/ (loss)	to be recognized in 2006	2005	2004	2003	Held back in 2002
1997	$3.5					
1998	$1.3				0.3	**0.3**
1999	$6.7			1.34	1.34	**2.7**
2000	($1.2)		(0.24)	(0.24)	(0.24)	**(0.7)**
2001	($6.6)	(1.32)	(1.32)	(1.32)	(1.32)	**(5.3)**
Smoothing						**(3.0)**

Each year, we recognize 20% of equity gains or losses. Smoothing consists of the remaining portions that will be recognized in the future. For the last two years, equity returns have fallen short of our assumption, causing losses held back by smoothing.

At its peak, smoothing held $7.3 billion in reserve. In 2002, smoothing increased actuarial assets by $3 billion to show a $1.9 billion surplus, instead of a $1.1 billion deficit.

However, smoothing is only capable of absorbing short-term fluctuations in returns and will not sustain a funding surplus in a long period of poor market performance.

The funding surplus is the more important number for plan members. It is used to determine benefit improvements or changes to the contribution rate.



Without the $3-billion smoothing adjustment, the plan would have had a funding deficiency of $1.1-billion this year. We are concerned about the downward trend.

Comparing Valuations

We also report a financial valuation in our annual report. The two surpluses are different because the funding surplus includes two projections: future contributions and future benefits for all current teachers.

Comparing the valuations shows a $5.1-billion difference. In other words, there is a $5.1-billion cost to provide future benefits for plan members that are not funded by the current contribution rate. We expect this gap to grow as new teachers enter the plan.

($ billions)	**Financial** (at Dec. 31/01)	**Funding** (at Jan. 1/02)
Net assets	$ 69.5	$ 69.5
Smoothing adjustment	3.0	3.0
Future contributions	---	13.7
Actuarial assets	72.5	86.2
Accrued benefits	65.5	65.5
Future benefits	---	18.8
Surplus	**$ 7.0**	**$ 1.9**

The Role of a Funding Management Policy

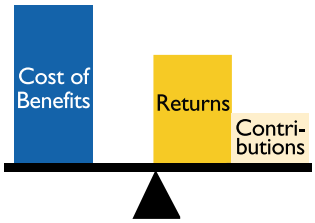
Within certain legislated limits, the co-sponsors negotiate benefit and contribution levels. For 2002, the co-sponsors have decided not to make any changes to contributions or benefits and to concentrate on developing the funding management policy. The pension board fully supports their decision and efforts.

In light of our outlook for equity markets, new benefit costs present a challenge to us and a cautionary note to plan members and the co-sponsors. Over the next decade, we expect modest real rates of return from stock and bond markets compared with the past 10 years.

Despite what the 1990s suggested, 2000 and 2001 have proven that markets are not one-way streets. In fact, historically they have only produced returns equal to the plan's 4.5% long-term funding requirement about 60% of the time.

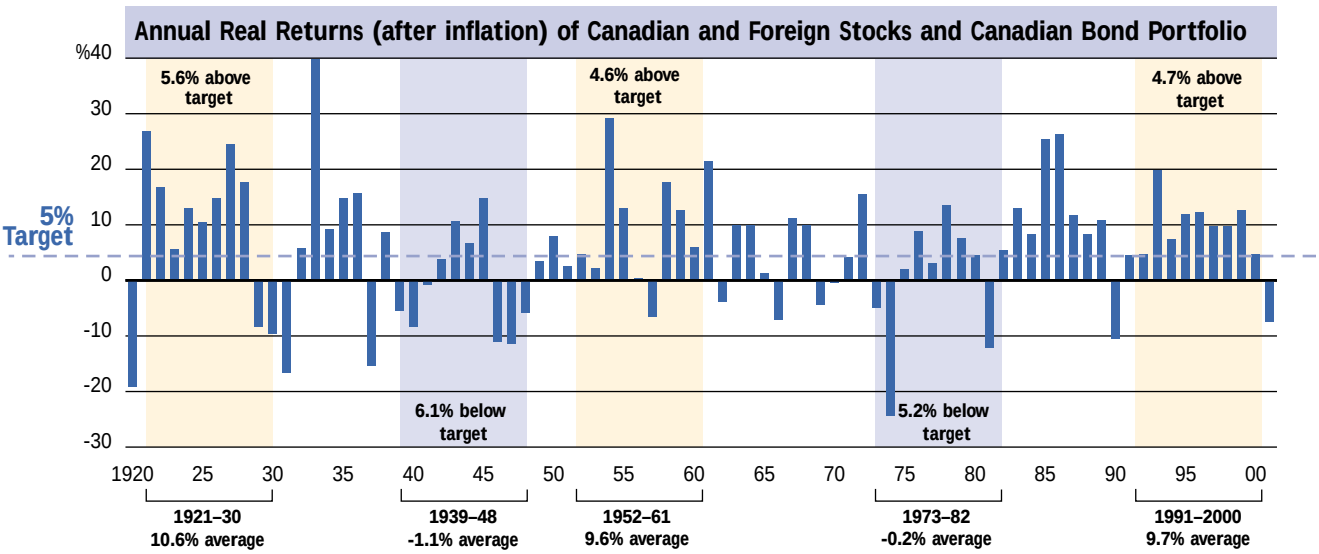
To sustain improved benefit levels for young and future teachers, without the need for contribution increases, we will need to generate a minimum real rate of return of 5% over the long term. That may be very difficult over the next decade.

Over the long term, benefits must balance with contributions plus investment returns or there will be a deficit. If the fund has a deficit when the funding valuation is filed, the law will automatically trigger a contribution rate increase. The only alternative for the co-sponsors would be to reduce future benefits.



The objective of a funding management policy is to provide a framework for improved long-term governance of the fund by determining when it is prudent to increase benefits, change contributions, or conserve assets. This policy will guide the co-sponsors in making these complex decisions, and help address the risks of poor market performance borne by both working teachers and the government. It is also important from an investment perspective, as it will change the risk profile of the fund and affect the pension board's investment policies.

Teachers have told us in focus groups that they would prefer contribution rates to remain stable. A funding management policy will help to ensure this occurs. Development of a workable policy will put the plan's co-sponsors at the forefront of exercising solid pension plan governance that balances the interests of all plan members – working or retired teachers – and the government.



This graph shows how a hypothetical portfolio, based on a similar asset mix as our own, would have performed over the last 80 years. One of the best decades in history was the 1990s. The portfolio includes two-thirds stocks (28% Canadian, 17% U.S., 22% foreign), and one-third Canadian bonds. The plan will need to earn a minimum of 5% over the long term to fund benefits at current levels.

Use of Surplus

In 1990, the plan had a $7.8 billion unfunded liability. The Ontario government agreed to pay the initial unfunded liability through a series of special payments over 40 years.

The pension plan has enjoyed a series of funding surpluses, primarily due to above-average investment growth brought on by strong equity markets throughout the 1990s and lower than expected increases in wages and inflation.

Since 1993, $18.6 billion in surplus was used by co-sponsors to improve benefits and eliminate special payments.

Valuation date	Surplus/ (Deficit)	OTF	Ontario government	Surplus remaining
1990	($7.8) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7	$0.6 for benefit improvements and RCA contributions[2]		$0.1
1998[3]	$6.8	$2.2 for benefit improvements[4]	$4.6 to reduce the value of remaining special payments	$0
1999	$3.5		$3.5 to reduce the value of remaining special payments[5]	$0
2001	$6.8	$6.2 for benefit improvements[6]		$0.6
2002	$1.9	Co-sponsors agreed not to make any changes to benefits or contributions		$1.9
Total		$9.3 billion	$9.3 billion	

[1] Savings offset cuts that would have been made in the education sector as part of the government's overall cost-cutting program.

[2] Benefit improvements: reduced early retirement penalty to 2.5% from 5% for each point short of 90 factor, making it easier to retire early; lower CPP reduction after age 65 (to 6.8% from 0.7%).

[3] In 1998, the co-sponsors agreed future surplus would first be used to eliminate the remaining special payments, and the next $6.2 billion would be available exclusively to the OTF.

[4] Benefit improvements: 85-factor window from 1998 to 2002; lower CPP reduction after age 65 (to 0.6%)

[5] The government paid off its remaining special payments by the end of 1999.

[6] Benefit improvements: permanent 85 factor; 10-year pension guarantee; reduced pension as early as age 50; lower CPP reduction (to 0.45%); 5-year average YMPE to calculate CPP reduction; pension recalculation based on approximate best-5 salary for older pensioners; and top-up waived for LTIP contributions.

Lucy,

These docs should all be in the materials provided earlier, but I'm just going through a duplicate binder and I fear that the Partnership Agreement may have been accidentally excluded. It is the 5th attachment. My apologies for any inconvenience.

Nadine

Schedule 1 - 20140721.pdf

ONTARIO TEACHERS' PENSION PLAN

SCHEDULE 1 to the *TEACHERS' PENSION ACT*

PART I
INTERPRETATION

Definitions

1. (1) In this Schedule,

“active member” means a person employed in education who is making contributions under the plan and includes a person receiving payments under a long term income protection agreement and by whom or on whose behalf contributions are being made in accordance with subsection 21 (1); (Last amended August 4, 2011 – Effective September 1, 2011)

"active member on LTIP" means an active member as described in section 6;

"administrator" means the Ontario Teachers' Pension Plan Board; (Last amended June 28, 1990 - Effective June 28, 1990)

"average salary", of a member, means the average salary determined in accordance with section 15;

“benefit” means an amount payable under the pension plan, including a pension, a commuted value or a lump-sum payment; (Last amended May 5, 2010 – Effective September 1, 2002)

"board of education" has the same meaning as "board" in subsection 1 (1) of the *Education Act*;

"child" has the same meaning as in subsection 1 (1) of the *Family Law Act*;

"date of disability", of an active member on LTIP, means the date on which the member ceases to be employed in education as a result of the disability;

"dependent child" means a child of a deceased member who was dependent on the member for support at the time of the member’s death, and who,

(a) is less than eighteen years of age, or

(b) is eighteen or more years of age but less than twenty-five years of age and is in full-time attendance at a school or university, having been in such attendance substantially without interruption since the child reached eighteen years of age or since the member died, whichever occurred later, or

(c) is disabled, having been disabled without interruption since the member died;

(Last amended May 5, 2010 – Effective January 1, 1992)

"designated organization" means an organization designated under subsection 119 (2);

"designated private school" means a school designated under subsection 119 (1);

"employed in education" means employed as described in section 2, 6, 7, 8 or 9; (Last amended October 10, 1995 - Effective January 1, 1990)

“employer-approved leave” means a leave of absence, with or without pay, to which the member’s employer consents; (Last amended July 21, 2014 – Effective September 1, 2014)

“long term income protection agreement” means an agreement to provide long term income protection in the event of a member’s long term disability that is entered into by an insurer within the meaning of section 1 of the *Insurance Act* and,

(a) the Minister of Education;

(b) a board of education;

(c) the Ontario Teachers’ Federation established under the *Teaching Profession Act*;

(d) an affiliated body described in the *Teaching Profession Act*; or

(e) an authority approved by the administrator.

(Last amended August 4, 2011 – Effective September 1, 2011)

"member" means a person who, as a result of his or her employment in education, is entitled to benefits or to a refund of contributions under the pension plan;

"re-employed pensioner" means a member who, after

(a) ceasing to be employed in education before, on or after September 1, 2012, and

(b) the beginning of the month in which the member’s retirement pension under the plan begins,

is employed by or otherwise engaged, directly or indirectly, to provide services for compensation for an employer who participates in the pension plan; (Last amended June 20, 2012 – Effective September 1, 2012)

“school day” has the same meaning as “school day” in subsection 1 (1) of the *Education Act* as amended from time to time; (Last amended July 21, 2014 – Effective September 1, 2014)

"school year" means the twelve-month period that normally begins on the 1st day of September, however, for a member whose school year commences prior to September 1st, the administrator may determine the days that the member is required to work prior to September 1st to be in the subsequent school year; (Last amended September 8, 2006 – Effective September 1, 2006)

“short absence” means an employer-approved leave of five or fewer consecutive school days; (Last amended July 21, 2014 – Effective September 1, 2014)

"spouse" means either of two persons who,

(a) are married to each other, or

(b) are not married to each other and are living together in a conjugal relationship,

(i) continuously for a period of not less than three years, or

(ii) in a relationship of some permanence, if they are the natural or adoptive parents of a child, both as defined in the *Family Law Act;*

(Last amended September 8, 2006 – Effective June 10, 2003)

"standard interest rate" means the interest rate determined under section 89;

"statutory leave" means any leave of absence within the meaning of the *Employment Standards Act, 2000* as amended from time to time; (Last amended September 8, 2006 – Effective September 4, 2001)

"Year's Maximum Pensionable Earnings", in relation to a year, means the Year's Maximum Pensionable Earnings prescribed under the *Canada Pension Plan.*

Qualification as a teacher

(2) A person is considered to be qualified as a teacher for the purposes of membership in the pension plan,

(a) if the person has obtained teacher certification from one of the Ministry of Education or the Ontario College of Teachers; or

(b) if a board of education holds a letter of permission granted by the Minister of Education in respect of the person.

(Last amended November 27, 2000 – Effective May 20, 1997)

Employment

(3) A person is considered to be employed,

(a) full-time, if the person is required to work throughout each work day of a year or of a session; and

(b) part-time, if the person is required to work on a regular but not full-time basis.

Idem

(4) A person is considered to be employed on an occasional basis as a teacher and not part-time if the person is an occasional teacher within the meaning of section 1 of the *Education Act*.

PART II
PARTICIPATION

A. Membership in the Plan

Eligibility for membership

2. (1) Every person is eligible to be an active member of the pension plan who is qualified as a teacher and is employed,

(a) as a teacher, as determined by the administrator, in a school within the meaning of subsection 1 (1) of the *Education Act*;

(b) as a teacher in a school outside Ontario under an approved teacher exchange system;

(c) as a teacher by the minister of a ministry of the Government of Ontario;

(d) as a teacher in a school or a class operated by the Toronto and Region Conservation Authority; or

(e) by a board of education.

(Last amended June 20, 2012 – Effective January 1, 2012)

Idem

(2) Every person is eligible to be an active member of the pension plan who is qualified as a teacher and is employed in a designated private school or a designated organization. (Last amended December 21, 2007 – Effective September 1, 2008)

Idem

(2a) Every person is eligible to be an active member of the pension plan who is qualified as a teacher and has taken a statutory leave from employment in education which leave began prior to the 1st day of September, 2010. (Last amended December 30, 2009 - Effective September 1, 2010)

Idem

(2b) Every person is eligible to be an active member of the pension plan who is qualified as a teacher and is receiving payments for loss of earnings in respect of employment in education under the *Workplace Safety and Insurance Act*. (Last amended September 8, 2006 – Effective September 1, 2006)

Exception

(3) No person is eligible to be an active member of the pension plan,

(a) if the person is regularly employed outside Ontario and is performing services in Ontario under an approved teacher exchange system; or

(b) beyond November 30th of the calendar year in which the person attains seventy-one years of age, or beyond such other time as is permitted under the *Income Tax Act* (Canada).

(Last amended June 20, 2012 – Effective January 1, 2012)

Commencement of membership

3. (1) Every person employed as described in subsection 2 (1) full-time or part-time becomes an active member of the plan on the later of,

(a) the 1st day of January, 1990;

(b) the date the employment contract begins; or

(c) the date on which the person becomes qualified as a teacher.

(Last amended June 20, 2012 – Effective January 1, 2012)

Idem

(2) Subject to subsection 5 (1), every person employed as described in subsection 2 (2) full-time or part-time becomes an active member of the plan on the day that is the latest of,

(a) the 1st day of January, 1990;

(b) the date the employment contract begins; or

(c) the date the designation of the private school or the organization is effective.

Idem

(3) Every person employed in education on an occasional basis becomes an active member of the plan on the person's first day of employment in a school year. (Last amended February 20, 1997 - Effective January 1, 1997)

(3a) Revoked. (Last amended February 20, 1997 - Effective January 1, 1997)

Commencement of membership, re-employed pensioner

(4) Revoked. (Last amended October 23, 2008 – Effective January 1, 2009)

Idem

(4a) Revoked. (Last amended October 23, 2008 – Effective January 1, 2009)

Idem

(5) Revoked. (Last amended October 23, 2008 – Effective January 1, 2009)

Idem

(6) Revoked. (Last amended October 23, 2008 – Effective January 1, 2009)

Election re occasional employee

4. (1) Revoked. (Last amended February 20, 1997 - Effective January 1, 1997)

Obligations

(2) Revoked. (Last amended October 10, 1995 - Effective September 1, 1996)

Election re designated private schools, etc.

5. (1) A person employed at a designated private school or a designated organization on the date the designation becomes effective may elect not to become an active member of the plan.

Time for election

(2) An election under this section is not effective unless delivered in writing to the governing body of the designated private school or designated organization and to the administrator,

(a) not later than three months after the effective date of designation for the private school or organization, if the person is qualified as a teacher when the designation takes effect; or

(b) not later than three months after the date the person becomes qualified as a teacher, if the person is not so qualified on the effective date of designation for the private school or organization.

Not applicable

(3) This section does not apply to a person who is an active member of the plan or to a person who is receiving a pension under the plan on the date the designation becomes effective. (Last amended September 8, 2006 – Effective September 1, 2002)

Further election

(4) This section applies with necessary modifications to a person employed at a designated private school or a designated organization on September 1, 2008, who becomes eligible for active plan membership on that date in accordance with subsection 2 (2). The required election must be delivered by December 1, 2008. (Last amended December 21, 2007 – Effective September 1, 2008)

Active member on LTIP

6. (1) An active member who begins to receive payments under a long term income protection agreement continues as an active member of the plan until the earlier of:

(a) the date the member ceases to receive payments under the long term income protection agreement;

(b) the date the member begins receiving a benefit under the pension plan; or

(c) the end of the calendar year in which the member attains seventy-one years of age, or such other time as is permitted under the *Income Tax Act* (Canada).

(Last amended August 4, 2011 – Effective September 1, 2011)

Idem

(1a) For the purposes of subsection (1), an active member who has been approved for payments under a long term income protection agreement but is not receiving payments by reason of the application of offset or all-source maximum provisions of the long term income protection agreement shall be deemed to receive payments under a long term income protection agreement. (Last amended August 4, 2011 – Effective September 1, 2001)

Idem

(1b) For the purposes of subsection (1) and subject to the limits set forth therein, an active member who receives payment in the form of a lump sum under a long term income protection agreement shall be deemed to receive payments under a long term income protection agreement for the period determined by the administrator. (Last amended August 4, 2011 – Effective September 1, 2011)

Evidence of medical condition

(1c) The administrator may at any time require a member described in subsection (1b) to furnish evidence, in such form as the administrator directs, that the member is disabled as defined under Regulation 8500 (1) of the *Income Tax Act* (Canada) throughout the period of active membership on LTIP. The period of active membership on LTIP of a member described in subsection (1b) shall terminate at the end of the month in which the administrator notifies the member that the administrator is not satisfied that the member is disabled. (Last amended August 4, 2011 – Effective September 1, 2011)

Return to employment

(1d) If a member described in subsection (1b) becomes employed in education, other than as an active member on LTIP, and the percentage of full-time basis of that employment is equal to or greater than the percentage of full-time basis upon which the member was employed immediately prior to becoming disabled, the member shall be deemed to have ceased to receive payments under a long term income protection agreement on the date that the member commences that period of employment in education. (Last amended August 4, 2011 – Effective September 1, 2011)

Eligibility

(2) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(3) Revoked. (Last amended April 2, 2001- Effective September 1, 2001)

Definition

(4) Revoked. (Last amended August 4, 2011 – Effective September 1, 2011)

Active membership, university faculty

7. (1) A member who, during an employer-approved leave, becomes employed on the staff of a faculty of education of an Ontario university on or after the 1st day of January, 1990 is an active member of the plan. (Last amended July 21, 2014 – Effective September 1, 2014)

Limitation

(2) A person is eligible for active membership under this section for a maximum of five school years.

Not applicable

(3) This section does not apply to a person who is employed on the staff of a faculty of education of an Ontario university that is designated under section 119. (Last amended September 8, 2006 – Effective September 1, 2002)

Transitional re universities

8. (1) A person who, on the 1st day of January, 1990, is qualified as a teacher and is employed full-time on the staff of a faculty of education of an Ontario university is an active member of the plan as long as the person continues in full-time or part-time employment at such a faculty.

Idem, part-time employee

(2) A person who, on the 1st day of January, 1990, is qualified as a teacher and is employed part-time on the staff of a faculty of education of an Ontario university is an active member of the plan as long as the person continues either part-time or full-time employment at such a faculty.

Not applicable

(3) This section does not apply to a person who is employed on the staff of a faculty of education of an Ontario university that is designated under section 119. (Last amended September 8, 2006 – Effective September 1, 2002)

Transitional re Ryerson, CAATs

9. (1) This section applies with respect to a person who,

(a) is qualified as a teacher and is employed by Ryerson University; or

(b) was deemed, under a predecessor of this Act, to be employed in education by a college of applied arts and technology. (Last amended May 5, 2010 – Effective July 1, 2002)

Idem, full-time employee

(2) A person who, on the 1st day of January, 1990, has been employed full-time by Ryerson University or a college of applied arts and technology continuously since the 1st day of September, 1984 is an active member of the pension plan as long as the person continues in full-time employment either at Ryerson or at such a college. (Last amended May 5, 2010 – Effective July 1, 2002)

Idem, part-time employee

(3) A person who, on the 1st day of January, 1990, has been employed part-time by Ryerson University or a college of applied arts and technology continuously since the 1st day of September, 1984 is an active member of the pension plan as long as the person continues in part-time or full-time employment either at Ryerson or at such a college. (Last amended May 5, 2010 – Effective July 1, 2002)

B. Credit for Service

Credited service

10. (1) An active member receives one year of credited service for working a full-time school year. (Last amended June 28, 1990 - Effective June 28, 1990)

(1a) For the purpose of determining credited service of an active member under this section, for the period to August 31, 2001, the administrator may use one or more standard calendars. (Last amended April 15, 1998 - Effective January 1, 1990)

Idem, partial year

(2) An active member receives credited service for part of a year in the proportion that the number of hours or days worked by the member during the school year bears to the number of hours or days in a full-time school year. (Last amended June 28, 1990 - Effective June 28, 1990)

Credited service during statutory leave

(2a) Despite subsections (1) and (2) an active member who makes contributions during a statutory leave which began prior to the 1st day of September, 2010 receives credited service for the number of days which the member would have worked during that leave to earn the amount of pensionable salary attributed to the member in calculating the member's contributions during the leave. (Last amended December 30, 2009 - Effective September 1, 2010)

Credited service during LTIP

(2b) (a) Despite subsections (1) and (2), an active member who is receiving payments under a long term income protection agreement and in respect of whom required contributions are being made in accordance with subsection 21 (1) shall receive credited service for the period that the member's employer reports the member would have worked if the member had worked throughout the school year. (Last amended August 4, 2011 – Effective September 1, 2011)

(b) Despite subsections (1) and (2), an active member who receives payment in the form of a lump sum under a long term income protection agreement and in respect of whom required contributions are being made in accordance with subsection 21 (1) shall receive credited service for the period to which the lump sum payment relates, as determined by the administrator in accordance with subsection 6 (1b). (Last amended August 4, 2011 – Effective September 1, 2011)

Credited service during WSIB

(2c) Despite subsections (1) and (2), an active member who is receiving payments for loss of earnings under the *Workplace Safety and Insurance Act* and in respect of whom required contributions are being made, shall receive credited service for the period that the member's employer reports the member would have worked if the member had worked throughout the school year. (Last amended September 8, 2006 – Effective September 1, 2006)

Idem

(2d) Despite subsection (2b), for the period of September 1, 2001 to August 31, 2006, where the credited service of an active member as described in subsection 6 (1a) is subject to the certification of a Past Service Pension Adjustment under the *Income Tax Act* (Canada), an active member shall receive credited service only once the administrator has obtained a certificate from the Minister of National Revenue. (Last amended August 4, 2011 – Effective September 1, 2011)

Credited service during sick leave

(2e) Despite subsections (1) and (2), an active member who is receiving sick leave payments, and in respect of whom required contributions are being made, shall receive credited service for the period that the member's employer reports the member would have worked if not for the sick leave. (Last amended December 19, 2012 – Effective September 1, 2012)

Credited service during unpaid professional activity days

(2f) Despite subsections (1) and (2), an active member who is subject to unpaid professional activity days, and in respect of whom required contributions are being made, shall receive credited service for the period that the member's employer reports the member would have worked if not for the unpaid professional activity days. (Last amended April 2, 2013 – Effective September 1, 2012)

Credited service during a short absence

(2g) Despite subsections (1) and (2), an active member who is on a short absence, and in respect of whom required contributions are being made, shall receive credited service for the period that the member's employer reports the member would have worked if not for the short absence. (Last amended July 21, 2014 – Effective September 1, 2014)

Idem, more than full-time school year

(3) Where an active member works more than a full-time school year he or she is not entitled to credited service for hours or days worked which are in excess of a full-time school year if he or she is entitled to a refund of contributions under s. 28, whether or not the refund is paid. (Last amended June 28, 1990 - Effective June 28, 1990)

Limitation

(4) Except for periods of lockout or legal strike a person shall not receive credited service for employment unless contributions in respect of the employment are made by or on behalf of that person. (Last amended June 29, 1994 - Effective January 1, 1990)

Idem

(5) No person is entitled to receive more than one year of credited service in respect of the person's employment during one school year.

Idem

(6) Subject to subsection (7), no person is entitled to accumulate more than thirty-five years of credited service under the plan in respect of a period prior to the 1st day of January, 1992. (Last amended February 28, 1992 - Effective January 1, 1992)

Exception

(7) A member who accumulates thirty-five years of credited service may continue to accumulate credited service until the month in which he or she reaches the age which, when added to the member's credited service equals ninety. (Last amended February 28, 1992 - Effective January 1, 1992)

Idem

(8) Despite subsection (7) a member may accumulate credited service greater than the limit set out therein with respect to a period after the 31st day of December, 1991. (Last amended June 1, 1995 - Effective June 1, 1995)

Partial year

11. (1) The length of a member's qualifying service determined under this section applies for the purpose of determining the member's entitlement to a benefit but does not apply for the purpose of calculating the amount of the benefit. (Last amended October 10, 1995 - Effective September 1, 1995)

Idem

(2) If a member accumulates more than ten days but less than or equal to one year of credited service as determined under sections 10, 96, 97 or 97a during one school year, the member's qualifying service shall be considered to equal one year. (Last amended May 5, 2010 - Effective September 1, 2001)

Idem

(2a) If the administrator is unable to determine in which of two successive school years the credited service of a member described in subsection (2) took place, it shall be deemed to have taken place in the earlier year. (Last amended October 10, 1995 - Effective September 1, 1995)

Idem

(3) If a member described in subsection (2), or a survivor of a member, receives a pension during the school year, the member shall receive qualifying service only for those months which the member, or survivor of the member, as the case may be, does not receive a pension. (Last amended October 10, 1995 - Effective September 1, 1995)

Idem

(4) If a member described in subsection (2) becomes employed in education for the first time on or after the 1st day of January, 1990, the member shall receive qualifying service only for that portion of the school year during which the member is an active member. (Last amended October 10, 1995 - Effective September 1, 1995)

Idem

(5) Revoked. (Last amended October 10, 1995 - Effective September 1, 1995)

Purchases of credit

(6) Subsection (2) shall include credited service accumulated by a member for a school year under section 94 or 95 in respect of periods on or after the 1st day of September, 2010, provided that the member has completed a purchase of the entire eligible absence period in respect of that school year. (Last amended August 4, 2011 – Effective September 1, 2010)

Partial purchases of credit

(7) If a member referred to in subsection (6) does not complete a purchase of the entire eligible absence period for a school year, the member shall only receive qualifying service in respect of the purchase equal to the member's credited service in respect of the absence. (Last amended December 30, 2009 - Effective September 1, 2010)

Limitation

(8) A member is not entitled to accumulate more than one year of qualifying service under this section in respect of a school year. (Last amended December 30, 2009 - Effective September 1, 2010)

Idem

(9) If a member accumulates ten days or less of credited service in respect of a school year, the member shall receive qualifying service for that school year equal to the member's credited service for that school year. (Last amended December 30, 2009 - Effective September 1, 2010)

C. Calculation of Pensionable Salary

Pensionable salary

12. (1) A member's pensionable salary for a school year is the remuneration paid to the member respecting employment in education and excludes,

(a) remuneration for services other than for employment in education;

(b) perquisites related to employment;

(c) payments related to accumulated sick leave or other employment benefit credits;

(d) payments related to retirement or termination of employment;

(e) payments to reimburse the member for expenses incurred during the course of employment;

(f) payments related to employment or for loss of earnings under the *Workplace Safety and Insurance Act* during a period in which the member is already an active member under section 6; (Last amended May 5, 2010 – Effective September 1, 2006)

(g) payments related to employment during a period in which the member is already an active member by virtue of receiving payments for loss of earnings under the *Workplace Safety and Insurance Act*; and (Last amended September 8, 2006 – Effective September 1, 2006)

(h) any remuneration paid to the member respecting employment in education that exceeds an annual rate of pay of six times the Year's Maximum Pensionable Earnings in effect each year. (Last amended December 21, 2006 – Effective January 1, 2007)

Idem

(2) Pensionable salary excludes the amounts described in clauses (1) (a) to (h) whether paid under a contract or gratuitously by an employer. (Last amended December 21, 2006 – Effective January 1, 2007)

Idem

(3) The pensionable salary of a member who receives board or lodging related to employment in education shall be deemed to be such amount, having regard for the value of the board or lodging, as is determined by the administrator.

Idem

(4) The pensionable salary of a member who is entitled to a refund under s. 28 (overpayment) shall be reduced by the amount of remuneration for which the contributions could have been refunded, whether or not the refund is paid. (Last amended June 28, 1990 - Effective June 28, 1990)

Pensionable salary during statutory leave

(5) The pensionable salary of an active member who makes contributions for a statutory leave which began prior to the 1st day of September, 2010 is the remuneration that the member's employer reports that the member would have earned if the member had not taken a statutory leave. (Last amended December 30, 2009 - Effective September 1, 2010)

Pensionable salary during WSIB

(5a) The pensionable salary of an active member who is receiving payments for loss of earnings under the *Workplace Safety and Insurance Act* is the remuneration that the member's employer reports that the member would have earned if the member had not been receiving such payments under the *Workplace Safety and Insurance Act*. (Last amended September 8, 2006 – Effective September 1, 2006)

Pensionable salary during sick leave

(5b) For the purposes of subsection 10 (2e), the pensionable salary of an active member who is receiving sick leave payments is the remuneration that the member's employer reports that the member would have earned if not for the sick leave. (Last amended December 19, 2012 – Effective September 1, 2012)

Pensionable salary during unpaid professional activity days

(5c) For the purposes of subsection 10 (2f), the pensionable salary of an active member who is subject to unpaid professional activity days is the remuneration that the member's employer reports that the member would have earned if not for the unpaid professional activity days. (Last amended April 2, 2013 – Effective September 1, 2012)

Pensionable salary during a short absence

(5d) For the purposes of subsection 10 (2g), the pensionable salary of an active member who is on a short absence is the remuneration that the member's employer reports that the member would have earned if not for the short absence. (Last amended July 21, 2014 – Effective September 1, 2014)

Pensionable salary

(6) Revoked. (Last amended June 29, 1994 - Effective January 1, 1992)

Deferred salary leave plans

12a. (1) This section applies to a member who participates in a deferred salary leave plan entered into in writing between the member and his or her employer. (Last amended April 2, 2001- Effective September 1, 2001)

Deemed pensionable salary

(2) Despite subsection 12 (1) the pensionable salary of a member referred to in subsection (1) is the amount that the member's employer advises the administrator would have been paid to the member but for the member's participation in a deferred salary leave plan. (Last amended June 29, 1994 - Effective January 1, 1992)

Coming into force

(3) Revoked. (Last amended April 2, 2001- Effective September 1, 2001)

Pensionable salary re active member on LTIP

13. (1) The pensionable salary of an active member on LTIP is the remuneration that the member's employer reports the member would have earned if the member had worked throughout the school year in which the member began receiving LTIP benefits. (Last amended April 2, 2001- Effective September 1, 2001)

Idem

(2) Revoked. (Last amended April 2, 2001- Effective September 1, 2001)

Idem

(3) Despite subsection (1), for the period of September 1, 2001 to August 31, 2011, the pensionable salary of an active member as described in subsection 6 (1a) shall be the greater of:

(a) the pensionable salary determined in accordance with subsection (1) and increased in accordance with subsections 15 (4) to (4c); and

(b) the pensionable salary determined in accordance with subsection 12 (5a).

(Last amended August 4, 2011 – Effective September 1, 2011)

Pensionable salary re purchases of credit prior to September 1, 2010

14. (1) The pensionable salary of a member who purchases credited service under section 94, 95 or 96 for an absence is the amount of remuneration that, in the opinion of the member's employer, the member would have earned had he or she not taken the absence. (Last amended April 2, 2001 - Effective September 1, 2001)

Idem re pensionable salary for purchases on or after September 1, 2010

(1a) Despite subsection (1), the pensionable salary for a purchase of credited service under section 94, 95 or 96, where the member has not completed payment prior to the 1st day of September, 2010 for the entire eligible absence period, is an amount based upon the annual pensionable salary that, in the opinion of the administrator, the member earned prior to the start of the absence as adjusted in accordance with this section. (Last amended October 19, 2012 – Effective September 1, 2010)

Adjusted pensionable salary

(1b) For the purposes of subsection (1a), a member’s pensionable salary for an absence is adjusted after the school year in which the member began the absence by multiplying the pensionable salary for that year by the accumulated adjustment ratio determined in the manner set out in subsection (1d). (Last amended June 20, 2012 – Effective September 1, 2010)

Exception

(1c) Despite subsection (1b), where an absence begins on the first day of the member’s school year, the pensionable salary is adjusted in the manner set out in subsection (1b) beginning with the school year in which the member began the absence. (Last amended December 30, 2009 - Effective September 1, 2010)

Accumulated adjustment ratio

(1d) A member's accumulated adjustment ratio for purposes of subsection (1b) is the product of the basic ratio for each school year beginning with the school year following the school year in which the member began the absence and ending with the school year for which the accumulated adjustment ratio is being determined. (Last amended December 30, 2009 - Effective September 1, 2010)

Exception

(1e) Despite subsection (1d), where an absence begins on the first day of the member’s school year, the member's accumulated adjustment ratio for purposes of subsection (1b) is the product of the basic ratio for each school year beginning with the school year in which the member began the absence and ending with the school year for which the accumulated adjustment ratio is being determined. (Last amended December 30, 2009 - Effective September 1, 2010)

Basic ratio

(1f) The basic ratio for a school year referred to in subsections (1d) and (1e) is a factor provided by the Minister. (Last amended December 30, 2009 - Effective September 1, 2010)

Alternative basic ratio

(1g) In the event that the basic ratio described in subsection (1f) is not provided by the Minister before the date that the cost for the purchase of credited service is calculated, the basic ratio for a school year referred to in subsections (1d) and (1e) is the ratio expressed to three decimal places that the average for the consumer price index over the last twelve months of the twenty-four month period ending with the 31st day of July in the preceding school year bears to the average for the consumer price index over the first twelve months of that period. (Last amended December 30, 2009 - Effective September 1, 2010)

Idem

(1h) For the purposes of subsection (1g), "consumer price index" means the Consumer Price Index for Canada as published by Statistics Canada under the authority of the *Statistics Act* (Canada). (Last amended December 30, 2009 - Effective September 1, 2010)

Transition

(1i) Revoked. (Last amended October 19, 2012 - Effective September 1, 2010)

Grandfathering the portion of an absence previously considered complete

(1j) Despite subsection (1a), where, in the opinion of the administrator, payment was considered to be complete as of the 1st day of September, 2010 for a portion of the entire eligible absence period, the pensionable salary for that portion of the absence is determined in accordance with subsection 14(1). (Last amended October 19, 2012 - Effective September 1, 2010)

Idem re pensionable salary for the remaining portion of an employer approved leave

(1k) Despite subsection (1a), where, in the opinion of the administrator, payment was considered to be complete as of the 1st day of September, 2010 for a portion of the entire eligible absence period, the pensionable salary for any remaining subsequent portion of the entire eligible absence period that is an employer-approved leave is determined in accordance with subsection (1j), and adjusted, with necessary modifications, in accordance with subsections (1b) to (1h). (Last amended October 19, 2012 - Effective September 1, 2010)

Idem

(2) The pensionable salary of a member who purchases credited service under section 103 is the amount of the member's remuneration for employment during the applicable period.

(3) The pensionable salary described in subsection 14(2) shall not be used in the calculation of the average salary of the member. (Last amended June 29, 1994-Effective January 1, 1992)

Average salary

15. (1) The average salary of a member,

(a) with more than five years' qualifying service is the average of the member's annual pensionable salary for the five school years during which it was highest; and

(b) with five years' or less qualifying service is the average of the member's annual pensionable salary. (Last amended October 10, 1995 - Effective September 1, 1995)

Part-time or occasional employee

(2) For the purpose of determining the average salary of a member employed more than ten days but less than a full-time school year or an active member on LTIP whose LTIP payments are based upon a less than full-time salary, the annual pensionable salary of the member is calculated using the formula,

$$(A/B) \times C$$

in which,

"A" is the amount of the member's pensionable salary for the school year,

"B" is the lesser of,

(a) the number of days of credited service accumulated by the member during the school year, and

(b) the number of days in a full-time school year, and

"C" is the number of days in a full-time school year except,

(a) in the first year of the member's employment in education when it is the number of days between the first day worked by the member and the end of the school year, or

(b) in the final year of active membership when it is the number of days in a full-time school year between the beginning of the school year and the date the member's pension or the pension of a survivor of the member begins. (Last amended February 20, 1997 - Effective January 1, 1997)

Employee working less than full final year

(2a) For the purpose of determining the average salary of a member employed more than ten days but less than a full-time school year during his or her final year of active membership, the pensionable salary of the member as determined under subsection (2) for that final year shall be increased by an amount calculated using the formula,

$$A \times B/C$$

in which,

"A" is the member's pensionable salary for the school year in which it was sixth highest,

"B" is the number of days in a full-time school year between the date the member's pension or the pension of a survivor of the member begins and the end of the school year, and

"C" is the number of days in a full-time school year. (Last amended February 20, 1997 - Effective January 1, 1997)

Purchases of credit

(2b) Subsections (2) and (2a) shall apply, with necessary modifications, to credited service accumulated by a member for a school year under section 94 or 95 in respect of periods on or after the 1st day of September, 2010, provided that the member has completed a purchase of the entire eligible absence period in respect of that school year. (Last amended August 4, 2011 – Effective September 1, 2010)

Restriction

(3) Revoked.

(a) Revoked.

(b) Revoked. (Last amended October 10, 1995 - Effective September 1, 1995)

Inflation adjusted pensionable salary

(4) For the purposes of this section, the pensionable salary for an active member on LTIP is increased after the school year in which the member began receiving LTIP benefits by multiplying the pensionable salary for that year, as determined under section 13, by the accumulated adjustment ratio determined in the manner set out in subsection (4a). (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(4a) A member's accumulated adjustment ratio for purposes of subsection (4) is the product by multiplication of the basic ratio for each school year beginning with the school year following the school year in which the member began receiving LTIP benefits and ending with the school year for which the accumulated adjustment ratio is being determined. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(4b) The basic ratio for a school year referred to in subsection (4a) is the ratio expressed to three decimal places that the average for the consumer price index over the last twelve months of the twenty-four month period ending with the 30th day of September in that school year bears to the average for the consumer price index over the first twelve months of that period. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(4c) For the purposes of subsection (4b), "consumer price index" means the Consumer Price Index for Canada as published by Statistics Canada under the authority of the *Statistics Act* (Canada). (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(4d) Subsections (4) to (4c) do not apply for the period of September 1, 2001 to August 31, 2011 in respect of a member who is an active member as described in subsection 6 (1a) and whose pensionable salary is determined in accordance with subsection 12 (5a). (Last amended August 4, 2011 – Effective September 1, 2011)

D. Transitional

Transitional re membership

16. (1) Every person who has credit in the Teachers' Superannuation Fund on the 31st day of December, 1989 and who is not entitled to an allowance under a predecessor of this Act becomes an active member of the pension plan upon completing one day of employment in education on or after the 1st day of January, 1990.

Idem, active member on LTIP

(2) Every person who was making contributions or on whose behalf contributions were being made on the 31st day of December, 1989 under an agreement referred to in section 4 of the *Teachers' Superannuation Act, 1983* or under a predecessor of that section is considered to be an active member on LTIP.

Transitional re credited service

17. Every active member shall be considered to have accumulated credited or qualifying service under the pension plan in an amount equal to the credited or qualifying service that he or she had accumulated under a predecessor of this Act. (Last amended October 10, 1995 - Effective September 1, 1995)

Re-employed pensioners

18. A re-employed pensioner making contributions under the pension plan or a predecessor of this Act on or after the 1st day of September, 1989 up to the 1st day of January, 1990 is entitled to a refund of contributions, if any, made in respect of the first ninety-five days or less of employment during that period.

PART III
CONTRIBUTIONS

A. Member Contributions

Amount of member's contributions

19. (1) Every active member who is required to contribute to the *Canada Pension Plan* or to the *Quebec Pension Plan* shall contribute for a year, for salary paid after 2011,

(a) 10.4 per cent of that portion of the member's pensionable salary up to and including the amount of the Year's Maximum Pensionable Earnings as prescribed under the *Canada Pension Plan*; and

(b) 12 per cent of that portion of the member's pensionable salary that exceeds the amount of the Year's Maximum Pensionable Earnings. (Last amended August 4, 2011 – Effective January 1, 2012)

Idem

(2) Every active member who is not required to contribute to the *Canada Pension Plan* or to the *Quebec Pension Plan* shall contribute 12 per cent of the member's pensionable salary for the year, for salary paid after 2011. (Last amended August 4, 2011 – Effective January 1, 2012)

Maximum amount of contributions, R.S.C. 1952, C. 148

(2a) If a member's contributions calculated under this section for a period after the 31st day of December, 1991 exceeds the lesser of the maximum contribution permitted under the *Income Tax Act* (Canada) and the maximum contribution determined by the actuary, it shall be reduced to an amount equal to the lesser maximum. (Last amended December 21, 2006 – Effective January 1, 2007)

Deemed required to contribute to CPP

(2b) An active member who at any time after the end of the month in which he or she attains the age of 65 years and before the end of the month in which he or she attains the age of 70 years receives a Canada Pension Plan retirement pension shall contribute for salary paid after 2011 the contributions set out in paragraphs (1) (a) and (b) if an election under paragraph 12 (1) (c) of the *Canada Pension Plan* is not in effect at the time of the salary payment. (Last amended June 20, 2012 – Effective January 1, 2012)

Pensionable salary

(3) Revoked. (Last amended October 23, 1991 - Effective October 23, 1991)

Additional contributions

(4) In addition to the contributions required under subsection (1) or (2), every active member shall contribute 2.0 per cent of the member’s pensionable salary for the year, for salary paid during the year 2007. (Last amended December 21, 2006 – Effective January 1, 2007)

Idem

(5) In addition to the contributions required under subsection (1) or (2), every active member shall contribute 2.3 per cent of the member's pensionable salary for the year, for salary paid during the year 2008. (Last amended December 21, 2006 – Effective January 1, 2007)

Idem

(6) In addition to the contributions required under subsection (1) or (2), every active member shall contribute 2.1 per cent of the member's pensionable salary for the year, for salary paid after 2008 but before 2012. (Last amended August 4, 2011 – Effective January 1, 2012)

Idem

(7) In addition to the contributions required under subsection (1), (2) or (2b), every active member shall contribute 0.4 per cent of the member's pensionable salary for the year, for salary paid during the year 2012. (Last amended June 20, 2012 – Effective January 1, 2012)

Idem

(8) In addition to the contributions required under subsection (1), (2) or (2b), every active member shall contribute 0.75 per cent of the member's pensionable salary for the year, for salary paid during the year 2013. (Last amended June 20, 2012 – Effective January 1, 2012)

Idem

(9) In addition to the contributions required under subsection (1), (2) or (2b), every active member shall contribute 1.1 per cent of the member's pensionable salary for the year, for salary paid after 2013 but before 2027. (Last amended June 20, 2012 – Effective January 1, 2012)

Contributions by members working more than full-time

19a. An active member who is employed on a full-time basis to work a full-time school year is not required to make a contribution for any employment during that school year in excess of a full-time school year. (Last amended June 28, 1990 - Effective June 28, 1990)

Member contributions during statutory leaves

19b. An active member shall, during a statutory leave which began prior to the 1st day of September, 2010, contribute the applicable amount set out in section 19 unless the member has notified the employer in writing that she or he elects not to participate in the pension plan during the statutory leave. (Last amended December 30, 2009 - Effective September 1, 2010)

Member contributions during statutory leaves on or after September 1, 2010

19c. A member shall, during a statutory leave which begins on or after the 1st day of September, 2010, contribute the applicable amount set out in section 94 unless the member has notified the employer in writing that she or he elects not to participate in the pension plan during the statutory leave. (Last amended December 30, 2009 - Effective September 1, 2010)

Collection of member contributions

20. (1) The employer of an active member shall deduct the amount the member is required to contribute under section 19 from the salary paid to the member.

Transfer of amount deducted

(2) An employer shall deliver to the administrator or deposit to the account of the pension fund on or before the last day of each month in which a member's salary is paid the amount deducted for the member's contribution.

Interest payable

(3) An employer shall pay interest on amounts in arrears from the date the payment is due to the day before it is made, calculated at the standard interest rate. (Last amended September 8, 2006 - Effective January 1, 2003)

Idem

(3a) An employer shall pay additional interest at the rate of 4 per cent compounded annually on amounts in arrears after the last day of the month following the month in which the employer billing occurs. (Last amended September 8, 2006 – Effective January 1, 2003)

Report to administrator

(4) An employer shall make such reports to the administrator as the administrator requires in respect of member contributions.

Member contributions not to be collected

(5) An employer shall not deduct from the salary paid to an active member employed on a full-time basis for a full-time school year an amount greater than the contributions payable under section 19 by an employee who works a full-time school year unless the member directs the employer to do so. (Last amended June 28, 1990 - Effective June 28, 1990)

Idem

(6) An employer who is provided with evidence that an active member is employed on a full-time basis for a full-time school year by another employer shall not make any deduction from the salary paid to that member for contributions under section 19 unless the member directs the employer to do so. (Last amended June 28, 1990 - Effective June 28, 1990)

Status of contributions

(7) A contribution which an active member directs his or her employer to deduct under subsection (5) or (6) is considered to be a required contribution for the purpose of sections 25 and 26. (Last amended June 28, 1990 - Effective June 28, 1990)

Underpayment of contributions

20a. (1) A member who has for any year contributed an amount less than that calculated under section 19 shall, upon being notified of the amount of the undercontribution, pay as a lump sum an amount equal to the undercontribution. (Last amended February 28, 1992 - Effective January 1, 1992)

Interest

(2) A member referred to in subsection (1) shall pay interest calculated at the standard rate on the amount of the undercontribution from the day the member is notified to the day before the undercontribution is paid. (Last amended February 28, 1992 - Effective January 1, 1992)

Contributions re active members on LTIP

21. (1) The amount of the required contribution for an active member on LTIP is,

(a) 6.9 per cent of the pensionable salary of a member who becomes disabled before the 1st day of January, 1991, and

(b) 8.9 per cent of the pensionable salary of a member who becomes disabled after the 31st day of December, 1990,

except that payment of the required contribution is waived for a member who becomes disabled after the 31st day of August, 2001. (Last amended April 2, 2001 – Effective September 1, 2001)

Inflation adjusted pensionable salary

(2) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(2a) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(2b) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem S.C. 1970 - 1971 - 1972 c. 15

(2c) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

(2d) If a member's contribution calculated under subsection (1) for a period after the 31st day of December, 1991 exceeds the lesser of the maximum contribution to a registered pension plan permitted under the *Income Tax Act* (Canada) and the maximum contribution determined by the actuary, it shall be reduced to an amount equal to the lesser maximum. (Last amended June 1, 1995 - Effective June 1, 1995)

Restriction re election

(3) Revoked. (Last amended October 23, 1991 - Effective October 23, 1991)

Notice of status

(4) An active member on LTIP shall give notice on the first day of each school year to his or her employer or former employer that the member continues to be an active member on LTIP.

Minister's payments re active member on LTIP

22. The contributions required under subsection 21 (1) from an active member on LTIP who is receiving benefits under a long term income protection plan established under the *Public Service Act* shall be paid on behalf of the member by the Minister.

Collection re active member on LTIP

23. (1) The required contribution for an active member on LTIP shall be paid to the person who was his or her employer on the date of disability.

Idem

(2) Payments under subsection (1) must be made on or before the fifteenth day of the month following the month in which each payment under the long term income protection agreement is made to the member.

Increased contributions

(3) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Transfer of contribution

(4) An employer to whom a payment in respect of an active member on LTIP is to be made under this section shall, whether or not the payment is made, deliver to the administrator on or before the last day of each month in which the member's LTIP payment is required the amount of the member's required contribution. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(5) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Interest payable

(6) Interest is payable on payments in arrears made to the employer or by the employer from the date the payment is due to the day before it is made, calculated at the standard interest rate plus 4 per cent. (Last amended February 28, 1992 - Effective January 1, 1992)

Cause of action

(7) An employer may maintain an action for the recovery of an amount paid to the administrator under subsection (4) if the employer has not received the corresponding payment of required contributions for an active member on LTIP.

Collection re member on statutory leave

23a. (1) An active member who has taken a statutory leave which began prior to the 1st day of September, 2010 and has not notified his or her employer in writing that she or he elects not to participate in the pension plan during the leave, shall pay the member's contribution to the member's employer on or before the normal pay day of the employer. (Last amended December 30, 2009 - Effective September 1, 2010)

(2) An employer to whom a payment in respect of an active member referred to in subsection (1) is to be made shall, whether or not the payment is made, deliver to the administrator on or before the last day of each month of the member's statutory leave the amount of the member's required contribution. (Last amended October 23, 1991 - Effective October 23, 1991)

(3) Interest is payable on payments due from the employer which are in arrears from the date the payment is due to the day before it is made, calculated at the standard interest rate. (Last amended May 5, 2010 – Effective January 1, 2003)

(3a) An employer shall pay additional interest at the rate of 4 per cent compounded annually on amounts in arrears after the last day of the month following the month in which the employer billing occurs. (Last amended May 5, 2010 – Effective January 1, 2003)

(4) An employer may maintain an action for the recovery of an amount paid to the administrator together with interest thereon at the standard interest rate under this section if the employer has not received the corresponding payment of required contributions from the active member who has taken a statutory leave. (Last amended October 23, 1991 - Effective October 23, 1991)

B. Employer Contributions

Liability for contributions

24. (1) Employer contributions in respect of an active member employed as described in subsection 2 (1) shall be paid by the Minister.

Idem

(2) Subsection (1) does not apply with respect to any contribution in relation to which the member is required under this pension plan to make the contribution that would otherwise be made by the Minister.

Idem

(3) Employer contributions in respect of an active member employed as described in subsection 2 (2) or section 7, 8 or 9 shall be paid by the employer of the member.

Idem

(4) Employer contributions in respect of an active member on LTIP shall be paid by the person making the employer contributions in respect of the member immediately before the date of disability.

(5) No employer contribution, other than an eligible contribution under the *Income Tax Act* (Canada), shall be made to the plan. (Last amended June 29, 1994 - Effective January 1, 1992)

Contributions by the Minister

25. (1) The Minister shall contribute in each year an amount equal to the required contributions made during the year before the preceding year by or on behalf of those members for whom the Minister is required to make employer contributions.

Idem, active members on LTIP

(2) In addition to the amount required under subsection (1), the Minister shall contribute in each year, in respect of the year before the preceding year, 4 per cent of the pensionable salaries of active members on LTIP who become disabled before the 1st day of January, 1991. (Last amended June 3, 2009 – Effective January 1, 2010)

Idem

(2a) In addition to the amounts required under subsections (1) and (2), the Minister shall contribute in each year, in respect of the year before the preceding year:

(a) an amount equal to the required contributions that would have been made by or on behalf of active members on LTIP who became disabled after the 31st day of August, 2001, but for the waiver in subsection 21(1); and

(b) an amount equal to the required contributions that would have been made by or on behalf of active members on LTIP to increase the member's pensionable salary under section 15, if contributions were required on such increase in pensionable salary. (Last amended June 3, 2009 – Effective January 1, 2010)

Additional contributions

(2b) In respect of the year 2008, the Minister shall contribute, in addition to the amounts required under this section, an amount equal to 0.8 per cent of the pensionable salaries of active members in respect of whom required contributions were made during that year in accordance with section 19 and for whom the Minister is required to make employer contributions. (Last amended December 21, 2006 – Effective January 1, 2007)

Idem

(2c) In respect of the year 2008, the Minister shall contribute, in addition to the amounts required under this section, an amount equal to 0.8 per cent of the pensionable salaries of members who purchase credit under the pension plan in respect of that year and for whom the Minister is required to make employer contributions. (Last amended December 21, 2007 – Effective January 1, 2007)

Idem

(2d) In addition to the amounts required under this section, the Minister shall contribute in each year a proportional amount of the difference, as calculated by the administrator, between the inflation adjustments that were included in pensions, commuted values and lump sum payments (other than reciprocal transfers) that were paid in the year before the preceding year and the inflation adjustments that would have been included in such benefits but for the combined application of subsections 80(3a) and (3b). The Minister's proportional amount shall be based on the pensionable salaries of active members for whom the Minister is required to make employer contributions, in respect of the year before the preceding year, as a percentage of the pensionable salaries of all active members for that year. (Last amended September 17, 2013 - Effective January 1, 2014)

Idem

(2e) For greater certainty, if inflation adjustments have ever been made in accordance with subsection 80(3d), the Minister's contributions pursuant to subsection 25(2d) shall be determined as if inflation adjustments had never been made in accordance with subsection 80(3d). (Last amended September 17, 2013 - Effective January 1, 2014)

Due date

(3) The Minister's contribution is due on the first business day following the 1st day of January in each year and not as required under the *Pension Benefits Act*. (Last amended June 28, 1990 - Effective June 28, 1990)

Interest payable

(4) Interest on the Minister's contribution is payable for the period beginning on the 1st day of June of the year that was two years before the date on which a payment is due and ending on the day before the payment is made, calculated at the standard interest rate in effect on that 1st day of June.

(4a) Despite subsections (3) and (4), $500,000,000 of the Minister's contribution due on January 4, 1993 shall be made on April 1, 1993 with interest at the rate of 11.25% per annum applied from January 4, 1993 to March 31, 1993. (Last amended May 29, 1992 - Effective May 29, 1992)

Idem, transitional

(5) Interest payable in respect of a period before the 1st day of January, 1990 shall be calculated,

(a) up to that date, in accordance with the *Teachers' Superannuation Act, 1983;*

(b) on and after that date, at the standard interest rate in effect on the 1st day of January, 1990.

Delivery

(6) The Minister shall deliver contributions to the administrator or deposit them to the account of the pension fund.

Order of Lieutenant Governor in Council

(7) To reduce the time between the date of payment mentioned in subsection (3) and the payment of contributions by or on behalf of those members for whom the Minister is required to make employer contributions, the Lieutenant Governor in Council may, despite subsections (1) and (4), by order require the Minister to make payments for such number of months in the preceding year as are specified in the order in respect of contributions in those months by or on behalf of those members for whom the Minister is required to make employer contributions.

Idem

(8) An order made under subsection (7) shall revise the period of time mentioned in subsection (1) in respect of which contributions by the Minister are computed so that it reflects the additional contributions required to be made by the Minister.

Idem

(9) An order under subsection (7) shall adjust the date from which interest is to be calculated under subsection (4) to reflect the reduced time between the last month in which contributions are made by or on behalf of those members for whom the Minister is required to make employer contributions and the month when the Minister pays an amount equal to those contributions.

Contributions by employers

26. (1) An employer shall contribute in each month an amount equal to the required contributions made during the month by or on behalf of those members for whom the employer is required to make employer contributions.

Idem, active members on LTIP

(1a) In addition to the amount required under subsection (1), an employer shall contribute:

(a) an amount equal to the required contributions that would have been made by or on behalf of active members on LTIP who became disabled after the 31st day of August, 2001, but for the waiver in subsection 21(1); and

(b) an amount equal to the required contributions that would have been made by or on behalf of active members on LTIP to increase the member's pensionable salary under section 15, if contributions were required on such increase in pensionable salary. (Last amended April 2, 2001 – Effective September 1, 2001)

Additional contributions

(1b) In respect of the year 2008, an employer shall contribute, in addition to the amounts required under this section, an amount equal to 0.8 per cent of the pensionable salaries of active members in respect of whom required contributions are made during that year in accordance with section 19 and for whom the employer is required to make employer contributions. (Last amended December 21, 2006 – Effective January 1, 2007)

Idem

(1c) In respect of the year 2008, an employer shall contribute, in addition to the amounts required under this section, an amount equal to 0.8 per cent of the pensionable salaries of members who purchase credit under the pension plan in respect of that year and for whom the employer is required to make employer contributions. (Last amended December 21, 2007 – Effective January 1, 2007)

Idem

(1d) In addition to the amounts required under this section, an employer shall contribute in each year a proportional amount of the difference, as calculated by the administrator, between the inflation adjustments that were included in pensions, commuted values and lump sum payments (other than reciprocal transfers) that were paid in the year before the preceding year and the inflation adjustments that would have been included in such benefits but for the combined application of subsections 80(3a) and (3b). The employer's proportional amount shall be based on the pensionable salaries of active members for whom the employer was required to make employer contributions, in respect of the year before the preceding year, as a percentage of the pensionable salaries of all active members for that year. (Last amended September 17, 2013 – Effective January 1, 2014)

Idem

(1e) For greater certainty, if inflation adjustments have ever been made in accordance with subsection 80(3d), an employer's contributions pursuant to subsection 26(1d) shall be determined as if inflation adjustments had never been made in accordance with subsection 80(3d). (Last amended September 17, 2013 - Effective January 1, 2014)

Due date

(2) An employer's contribution is due on the last day of the month.

Idem

(2a) Notwithstanding subsection (2), an employer's contribution under subsection (1d) is due on the first business day following the 1st day of January in each year. (Last amended June 3, 2009 – Effective January 1, 2010)

Interest payable

(3) Interest on an employer's contribution is payable from the date the payment is due to the day before it is made, calculated at the standard interest rate. (Last amended September 8, 2006 - Effective January 1, 2003)

Idem

(3a) An employer shall pay additional interest at the rate of 4 per cent compounded annually on amounts in arrears after the last day of the month following the month in which the employer billing occurs. (Last amended September 8, 2006 – Effective January 1, 2003)

Idem

(3b) Notwithstanding subsection (3), interest on an employer's contribution under subsection (1d) is payable from June 1st of the year before the preceding year to the day before the payment is made, calculated at the standard interest rate in effect on that June 1st. (Last amended June 3, 2009 - Effective January 1, 2010)

Delivery

(4) An employer shall deliver contributions to the administrator or deposit them to the account of the pension fund.

C. Refund of Overpayments

Refund error

27. The administrator shall refund contributions or other payments made in error or not permitted under the pension plan, together with interest, if the administrator received the contributions or other payments.

Overpayment of contributions

28. (1) This section applies to an active member who,

(a) (i) works more than a full-time school year during the school year, or

(ii) was employed on an occasional basis in addition to an absence purchased on a contributions plus interest basis in accordance with section 94; and (Last amended April 2, 2001 – Effective September 1, 2001)

(b) has made contributions greater than those required under s. 19 of a member working a full-time school year. (Last amended June 28, 1990 - Effective June 28, 1990)

Idem

(2) An active member described in subsection (1) is entitled to a refund of contributions calculated in accordance with subsection (4). (Last amended June 28, 1990 - Effective June 28, 1990)

Refund to employer

(3) Despite section 78 of the *Pension Benefits Act*, a person who has made employer contributions in respect of a member described in subsection (1) is entitled to a refund of employer contributions equal to the amount of the refund to which the member is entitled. (Last amended June 28, 1990 - Effective June 28, 1990)

Amount of refund

(4) The refund of contributions is calculated using the formula,

$$\mathbf{(A + B + C \ldots) \times N}$$

in which, "A", "B", "C" … is the series in which each variable is the amount of salary paid to the member at each different rate of salary earned by the member during the school year and/or the amount of salary attributable to the credit purchase in accordance with section 94, beginning with the lowest rate of salary and ending with the highest provided that the number of days for which salary is accumulated by the addition of variables does not exceed the number of days in excess of a full-time school year for which the member makes contributions, and

"N" is the per cent referred to in clause 19 (1) (b), plus any additional per cent of salary that was paid by the member in accordance with section 19 in respect of the salary being refunded, expressed as a decimal fraction. (Last amended December 21, 2006 – Effective January 1, 2007)

(4a) For the purposes of subsection (4), credit purchased on an actuarial cost basis, or transferred into the plan in accordance with section 104, will be deemed to be the highest rate of salary. (Last amended December 20, 1999 - Effective September 1, 1998)

Interest payable

(5) Interest is payable on a refund of contributions from the last day of the school year until the day before it is paid. (Last amended February 28, 1992 - Effective January 1, 1992)

Lump sum

(6) A refund of contributions shall be paid as a lump sum. (Last amended June 28, 1990 - Effective June 28, 1990)

Refund, re-employed pensioners

29. Despite subsection 63 (4) of the *Pension Benefits Act*, a person described in subsection 46 (3) of the *Teachers' Superannuation Act, 1983* who became re-employed in education for less than twenty days between the 1st day of September, 1986 and the 31st day of August, 1989 is entitled to the refund described in that section.

PART IV
PAYMENTS UPON TERMINATION OF MEMBERSHIP

A. Vesting

Vesting of benefits

30. (1) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Idem

(2) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Payment of deferred pension

(3) A member who terminates membership in the pension plan on or after July 1, 2012 is entitled to a deferred pension calculated and paid in accordance with Part V. (Last amended June 19, 2012 – Effective July 1, 2012)

Payment of benefits upon death of member

(3a) Benefits payable in respect of a member who terminates membership in the pension plan as a result of the member's death on or after July 1, 2012, and before the commencement of payment of the deferred pension to which the member was entitled on the date of death, shall be calculated and paid in accordance with Part VII. (Last amended December 13, 2012 – Effective July 1, 2012)

Limit

(4) No person is entitled to more than one deferred pension in respect of the same period of employment.

Entitlement on termination of membership

31. (1) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Idem

(2) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Limitation

(3) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Idem, transitional

(4) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Rights of former members

32. Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

B. Refunds and Transfers

Refund re post-1986 contributions

33. Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Refund re pre-1987 contributions

34. (1) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Refund at or after sixty-five years of age

(2) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Refund re pre-1987 deferred pension

35. (1) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Before reaching forty-five years of age

(2) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

On or after forty-five years of age

(3) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Reduction in deferred pension

(4) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

50 per cent rule

36. (1) A member entitled to a deferred pension relating to employment after the 31st day of December, 1986 is entitled to a refund, paid in a lump sum, upon ceasing to be employed in education, of the amount by which the member's required contributions plus interest for the period after that date exceeds one half of the commuted value of the deferred pension for that period. (Last amended June 19, 2012 – Effective July 1, 2012)

Exclusion

(2) Subsection (1) does not apply with respect to a member's contributions and credited service for which no corresponding employer contribution is required under section 25 or 26. (Last amended June 1, 1995 - Effective June 1, 1995)

(3) A member who receives a refund under subsection (1), who elects to receive a deferred pension and who subsequently becomes re-employed in education or completes a purchase of credited service, must repay the refund together with interest thereon before the pension commences. (Last amended September 8, 2006 - Effective September 1, 2001)

(4) Revoked. (Last amended September 8, 2006 - Effective September 1, 2002)

(5) Revoked. (Last amended September 8, 2006 - Effective September 1, 2002)

(6) Revoked. (Last amended September 8, 2006 - Effective September 1, 2002)

(7) The member or survivor benefit, as the case may be, shall be actuarially reduced to reflect the unpaid portion of the repayment not completed under subsection (3) with interest thereon to the commencement date of the benefit. The actuarial reduction will be offset by any lump sum payment that would otherwise be payable to the member. (Last amended September 8, 2006 – Effective September 1, 2002)

Transfer re deferred pension

37. (1) A member entitled to a deferred pension who ceases to be employed in education is entitled to a transfer of the commuted value of the deferred pension, paid in a lump sum, to another retirement savings arrangement in accordance with section 42 of the *Pension Benefits Act* and to a refund or transfer of excess contributions, calculated under section 36, subject to the limitations of the *Income Tax Act* (Canada). (Last amended June 19, 2012 – Effective July 1, 2012)

(2) A member who is entitled to an immediate payment of a pension benefit is not entitled to a refund or transfer under this section. (Last amended September 8, 2006 – Effective June 1, 1995)

(3) A member who is entitled to a transfer under this section shall deliver a completed termination options application, including all supporting documentation, to the administrator within six months of the member’s termination of membership in the plan. (Last amended September 8, 2006 – Effective January 1, 1995)

(4) A termination options application completed after the deadline specified in subsection (3) shall be considered a new notification of intention to terminate membership in the plan and the member's entitlement to a transfer under this section shall be determined as of the new termination of membership date. (Last amended September 8, 2006 – Effective January 1, 1995)

Application for refund, etc.

38. (1) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Payment of refund

(2) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

PART V
RETIREMENT PENSIONS

A. Entitlement to Pension

One pension only

39. (1) No member is entitled to more than one retirement pension under the pension plan in respect of the same period of credited service.

Idem

(2) A member receiving a disability pension under the pension plan is not eligible to receive a retirement pension.

Retirement

(3) No member is entitled to begin to receive a retirement pension or a disability pension while the member is employed in education until the end of the calendar year in which the member attains seventy-one years of age, or until such other time as is required under the *Income Tax Act* (Canada). (Last amended June 20, 2012 – Effective January 1, 2012)

Normal retirement date

40. The normal retirement date of a member is the first day of the month following the date on which the member reaches sixty-five years of age.

Entitlement to pension (2 year rule)

41. (1) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Commencement

(2) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Amount of pension (2 year rule)

(3) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Maximum pension payable, R.S.C. 1952, c. 148

(3a) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Payment, pre-1987 service

(4) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Limitation on pensions less than $2,400

(5) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Entitlement to pension (10 year rule), transitional

42. (1) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Commencement

(2) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Amount of pension (10 year rule)

(3) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Maximum pension payable, R.S.C. 1952, c. 148

(3a) Revoked. (Last amended June 19, 2012 – Effective July 1, 2012)

Entitlement to pension (immediate vesting)

42a. (1) A member who terminates membership in the pension plan on or after July 1, 2012 is entitled to receive a retirement pension for the member's lifetime calculated under subsection (3). (Last amended June 19, 2012 – Effective July 1, 2012)

Commencement

(2) A retirement pension under this section begins as of the member's normal retirement date. (Last amended June 19, 2012 – Effective July 1, 2012)

Amount of pension

(3) Subject to subsection (4), the amount of the retirement pension, before adjustment for inflation, is calculated using the formula,

$$\mathbf{(A \times B) - C}$$

in which,

"A" is 2 per cent of the member's average salary,

"B" is the number of years of the member's credited service, and

"C" is the amount, if any, calculated under section 81 (CPP reduction). (Last amended June 19, 2012 – Effective July 1, 2012)

Payment of pensions, predecessor Acts

(4) The retirement pension of a member who ceased to be employed in education prior to January 1, 1990 shall be calculated, with necessary modifications, in accordance with the terms of the *Teachers' Superannuation Act, 1983*, or a predecessor Act, and shall be paid out of the pension fund in accordance with the Act under which the member ceased to be employed in education. (Last amended June 19, 2012 – Effective July 1, 2012)

Maximum pension payable, R.S.C. 1952, c. 148

(5) If the amount of the retirement pension calculated under subsection (3) in respect of a period after the 31st day of December, 1991 is greater than the maximum pension payable by a registered pension plan under the *Income Tax Act* (Canada), it shall be reduced to an amount equal to the maximum. (Last amended June 19, 2012 – Effective July 1, 2012)

Limitation on pensions less than $2,400

(6) Subject to section 84, where the annual amount of the retirement pension calculated under subsection (3) or (4) is less than $2,400 the member is entitled to a pension in that lesser amount and not to a pension in the amount of $2,400 as provided for by Order in Council 1453/74. (Last amended June 19, 2012 – Effective July 1, 2012)

Exception

(7) Subsection (6) shall not apply to a member who has at least ten years of credited service in whole or in part before the 1st day of January, 1987 on the date he or she ceased to be employed in education. (Last amended June 19, 2012 – Effective July 1, 2012)

Limitation

(8) For greater certainty, subsection 76 (2) of the *Teachers' Superannuation Act, 1983* shall not apply to the retirement pension of a member who did not have at least ten years of credited service on the date he or she ceased to be employed in education. (Last amended June 19, 2012 – Effective July 1, 2012)

Entitlement to pension (special early retirement)

43. (1) A member who has accumulated at least that number of years of qualifying service that, when added to the member's age upon termination of employment in education, totals ninety years is entitled to a retirement pension for the member's lifetime calculated under subsection (4). (Last amended October 10, 1995 - Effective September 1, 1995)

(1a) A member who ceases to be employed in education on or after June 1, 1998, and who has accumulated at least that number of years of qualifying service that, when added to the member's age upon termination of employment in education, totals eighty-five years is entitled to a retirement pension for the member's lifetime calculated under subsection (4). (Last amended April 2, 2001 – Effective April 1, 2001)

Idem (35 year rule)

(2) A member who ceases to be employed in education after the 31st day of May, 1987 and before the 1st day of September, 1990 and who has thirty-five years of qualifying service is entitled to a retirement pension for the member's lifetime calculated under subsection (4). (Last amended October 10, 1995 - Effective September 1, 1995)

(2a) A member who has accumulated thirty-five or more years of credited service is entitled to a retirement pension for the member's lifetime calculated under subsection (4). (Last amended February 20, 1997 - Effective January 1, 1997)

Commencement

(3) A retirement pension under this section begins as of the beginning of the month following the date the member ceases to be employed in education or, at the election of the member, of any month thereafter that is not later than:

(a) the end of the calendar year in which the member attains seventy-one years of age, or

(b) such other time as is required under the *Income Tax Act* (Canada).

(Last amended June 20, 2012 – Effective January 1, 2012)

Amount of pension

(4) The amount of the retirement pension, before adjustment for inflation, is calculated using the formula,

$$(A \times B) - C$$

in which,

"A" is 2 per cent of the member's average salary,

"B" is the number of years of the member's credited service, and

"C" is the amount, if any, calculated under section 81 (CPP reduction).

Maximum pension payable, R.S.C. 1952, c. 148

(4a) If the amount of the retirement pension calculated under subsection (4) in respect of a period after the 31st day of December, 1991 is greater than the maximum pension payable by a registered pension plan under the *Income Tax Act* (Canada), it shall be reduced to an amount equal to the maximum. (Last amended February 28, 1992 - Effective January 1, 1992)

Early retirement option

44. (1) A member entitled to a deferred pension under section 42a may elect to begin to receive a retirement pension on the first day of any month that is ten years before the member's normal retirement date. (Last amended June 19, 2012 – Effective July 1, 2012)

Idem

(1a) A member who ceases to be employed in education on or after June 30, 2001 and who is entitled to a deferred pension under section 42a may elect to begin to receive a retirement pension on the first day of any month that is within fifteen years of the member's normal retirement date. (Last amended June 19, 2012 – Effective July 1, 2012)

Amount of early retirement pension

(2) The amount of the annual retirement pension, before adjustment for inflation, of a member who elects early retirement under subsection (1) and who elects to begin to receive the pension on the first day of the month following the later of: the cessation of employment in education; or the last day of credited service in the plan, shall be calculated using the formula,

$$[A \times B \times (1 - C)] - D$$

in which,

"A" is 2 per cent of the member's average salary,

"B" is the number of years of the member's credited service,

"C" is an amount equal to the lesser of,

(a) 0.05 times the number of years by which the member's age is less than sixty-five on the date the pension is to begin, and

(b) 0.025 times the difference between ninety and the sum of,

(i) the number of years of the member's qualifying service determined under section 11, and

(ii) the member's age on the date the pension is to begin, and

"D" is the amount, if any, calculated under section 81 (CPP reduction).

"C" in the above formula shall not be less than the minimum reduction on early retirement applicable to registered pension plans under the *Income Tax Act* (Canada). (Last amended June 19, 2012 – Effective July 1, 2012)

Maximum pension payable, R.S.C. 1952, c. 148

(2a) Revoked. (Last amended February 20, 1997 - Effective January 1, 1997)

(2b) The amount of the annual retirement pension, before adjustment for inflation, for a member who ceases to be employed in education on or after June 1, 1998, where the member elects early retirement under subsection (1) or (1a) and elects to begin to receive the pension on the first day of the month following the later of: the cessation of employment in education; or the last day of credited service in the plan, shall be calculated using the formula set out in subsection (2) except that:

"C" is an amount equal to the lesser of,

(a) 0.05 times the number of years by which the member's age is less than sixty-five on the date the pension is to begin, and

(b) 0.025 times the difference between eighty-five and the sum of,

(i) the number of years of the member's qualifying service determined under section 11, and

(ii) the member's age on the date the pension is to begin,

however, "C" shall not be less than the minimum reduction on early retirement applicable to registered pension plans under the *Income Tax Act* (Canada). (Last amended April 2, 2001 – Effective April 1, 2001)

(3) The amount of the annual retirement pension, before adjustment for inflation, of a member who elects early retirement under subsection (1) on a deferred pension shall be calculated using the formula,

$$[A \times B \times (1 - C)] - D$$

in which,

"A" is 2 per cent of the member's average salary,

"B" is the number of years of the member's credited service,

"C" is an amount equal to the lesser of,

(a) 0.05 times the number of years by which the member's age is less than sixty-five on the date the pension is to begin, and

(b) 0.05 times the difference between ninety and the sum of,

(i) the number of years of the member's qualifying service determined under section 11, and

(ii) the member's age on the date the pension is to begin, and

"D" is the amount, if any, calculated under section 81 (CPP reduction).

"C" in the above formula shall not be less than the minimum reduction on early retirement applicable to registered pension plans under the *Income Tax Act* (Canada). (Last amended June 19, 2012 – Effective July 1, 2012)

(3a) The amount of the annual retirement pension, before adjustment for inflation, for a member who ceases to be employed in education on or after June 1, 1998, where the member elects early retirement under subsection (1) or (1a) on a deferred pension shall be calculated using the formula set out in subsection (3) except that:

"C" is an amount equal to the lesser of,

(a) 0.05 times the number of years by which the member's age is less than sixty-five on the date the pension is to begin, and

(b) 0.05 times the difference between eighty-five and the sum of,

(i) the number of years of the member's qualifying service determined under section 11, and

(ii) the member's age on the date the pension is to begin,

however, "C" shall not be less than the minimum reduction on early retirement applicable to registered pension plans under the *Income Tax Act* (Canada). (Last amended April 2, 2001 – Effective April 1, 2001)

Maximum pension payable, R.S.C. 1952, c. 148

(4) If the amount of the retirement pension determined under subsection (2), (2b), (3), (3a) or (5), in respect of a period after the 31st day of December, 1991 is greater than the maximum pension payable by a registered pension plan under the *Income Tax Act* (Canada) after taking into account the reduction (if any) on early retirement applicable to registered pension plans under the *Income Tax Act* (Canada) it shall be reduced to an amount equal to such maximum. (Last amended May 27, 1998 - Effective June 1, 1998)

Commuted value

(5) Despite subsections (3) and (3a), the commuted value of the retirement pension received on early retirement shall be not less than the commuted value of the retirement pension to which the member would be entitled on the normal retirement date based upon the member's credited service up to the early retirement date. (Last amended May 27, 1998 - Effective June 1, 1998)

Postponed pension option

45. (1) A member may elect to begin to receive his or her retirement pension in any month after the member's normal retirement date, but not later than:

(a) the end of the calendar year in which the member attains seventy-one years of age, or

(b) such other time as is required under the *Income Tax Act* (Canada).

(Last amended June 20, 2012 – Effective January 1, 2012)

Amount of late retirement pension

(2) The amount of the annual retirement pension, before adjustment for inflation, of a member who elects late retirement as described in subsection (1) is calculated using the formula,

$$\mathbf{(A \times B) - C}$$

in which,

"A" is 2 per cent of the member's average salary,

"B" is the number of years of the member's credited service, and

"C" is the amount, if any, calculated under section 81 (CPP reduction).

(2a) If the amount of the retirement pension calculated under subsection (2) in respect of a period after the 31st day of December, 1991 is greater than the maximum pension payable by a registered pension plan under the *Income Tax Act* (Canada), it shall be reduced to an amount equal to the maximum. (Last amended June 29, 1994 - Effective January 1, 1992)

Re-employed pensioner election

46. (1) Prior to commencing re-employment for the first time after commencement of pension, a pensioner may elect to become an active member for the purpose of a pension recalculation in accordance with subsection (2), in which case the pension is suspended immediately upon the re-employment. (Last amended October 23, 2008 – Effective January 1, 2009)

Recalculation of pension

(2) If a re-employed pensioner accumulates one year or more of credited service after becoming an active member, other than by means of a purchase of credited service or by the annualization of a partial year of credited service under section 11, and, if the re-employed pensioner makes an application to the administrator, the amount of the pensioner's retirement pension shall be recalculated in accordance with the terms of the pension plan in force on the date of the application.

(2a) A re-employed pensioner making application under subsection (2) shall repay any refund previously made under section 36 together with interest thereon before the pension commences. (Last amended April 15, 1998 - Effective June 1, 1995)

(2b) Revoked. (Last amended September 8, 2006 – Effective September 1, 2002)

(2c) Revoked. (Last amended September 8, 2006 – Effective September 1, 2002)

(2d) Revoked. (Last amended September 8, 2006 – Effective September 1, 2002)

(2e) The member or survivor benefit, as the case may be, shall be actuarially reduced to reflect the unpaid portion of the repayment not completed under subsection (2a) with interest thereon to the commencement date of the benefit. The actuarial reduction will be offset by any lump sum payment that would otherwise be payable to the member. (Last amended September 8, 2006 – Effective September 1, 2002)

Exception

(3) A re-employed pensioner who does not accumulate one year of credited service after becoming an active member is entitled when the re-employment ceases,

(a) to the resumption of the retirement pension to which the pensioner was entitled immediately before becoming re-employed; and

(b) to the refund of the member's required contributions, together with interest thereon, made during the re-employment.

Pension suspension

(3a) Except for a pensioner whose pension is suspended immediately under subsection (1), no retirement pension is payable to a re-employed pensioner as of the month following the member's fifty-first day of re-employment in a school year. (Last amended May 6, 2010 – Effective September 1, 2012)

Pension resumption

(3b) A re-employed pensioner whose pension is suspended in accordance with subsection (3a) is entitled, when the re-employment ceases, to the resumption of the retirement pension to which the pensioner was entitled immediately before becoming re-employed. (Last amended October 23, 2008 – Effective January 1, 2009)

Notice of re-employment

(3c) A re-employed pensioner shall notify the administrator promptly upon exceeding the limits under subsection (3a). (Last amended October 23, 2008 – Effective January 1, 2009)

Reporting of re-employment

(3d) An employer shall report to the administrator any service provided to the employer by a re-employed pensioner. (Last amended May 6, 2010 – Effective September 1, 2012)

Idem

(3e) At the request of the administrator, a re-employed pensioner shall report to the administrator the number of days, if any, that the member provides services to an employer as a re-employed pensioner. If the member does not report within a reasonable time after the request, the administrator shall cease to pay the pension until the report is given. (Last amended May 6, 2010 – Effective September 1, 2012)

Repayment

(4) A re-employed pensioner who receives pension payments to which the pensioner is not entitled shall repay the amount so received, together with interest thereon, before becoming entitled to further payments under the pension plan.

"Re-employed pensioner" not applicable

(5) The term "re-employed pensioner" shall not include a member who provides services, other than as a teacher, to a ministry of the Government of Ontario other than the Ministry of Education. (Last amended May 6, 2010 – Effective September 1, 2010)

Idem

(6) The term "re-employed pensioner" shall not include a member who has been providing services, other than as a teacher, under contract to the Ministry of Education since before September 1, 2010, until the earlier of:

(a) the renewal of such contract, if applicable, or

(b) September 1, 2015.

(Last amended May 6, 2010 – Effective September 1, 2010)

B. Payment of Retirement Pensions

Application for retirement pension

47. (1) A member who wishes to begin receiving a retirement pension shall apply to the administrator.

Deemed application

(2) A member who does not apply to begin receiving a retirement pension shall be deemed to do so on November 30th of the calendar year in which the member attains seventy-one years of age, or at such other time as is required under the *Income Tax Act* (Canada). (Last amended June 20, 2012 – Effective January 1, 2012)

Payment of pension

48. (1) The administrator shall begin payment of a member's retirement pension not later than the later of,

(a) the month following the month in which the member ceases to be employed in education; or

(b) the month following the month in which application for the pension is complete.

Monthly instalments

(2) The administrator shall pay a retirement pension in monthly instalments on the last day of the month.

Interest payable

(3) The administrator shall pay interest on late payments, from the first day of the month following the month in which the member's pension begins. (Last amended June 20, 2012 – Effective January 1, 2012)

Notice of re-employment

49. (1) Revoked. (Last amended October 23, 2008 – Effective January 1, 2009)

Failure to give notice

(2) Revoked. (Last amended October 23, 2008 – Effective January 1, 2009)

Repayment of pension

(3) Revoked. (Last amended October 23, 2008 – Effective January 1, 2009)

PART VI
DISABILITY PENSIONS

A. Entitlement to Disability Pension

Entitlement to disability pension

50. (1) This section applies to a member with at least ten years of qualifying service who becomes disabled while employed in education and who, as a result of the disability, ceases before the normal retirement date to be employed in education. (Last amended October 10, 1995 - Effective September 1, 1995)

Full disability pension

(2) If the administrator finds that a member described in subsection (1) is incapable of further employment, the member is entitled to a full disability pension for the member's lifetime.

Partial disability pension

(3) If the administrator finds that a member described in subsection (1) is incapable of further employment in education, the member is entitled to a partial disability pension for the member's lifetime.

Eligibility

(4) A member who has previously terminated his or her membership and who returns to membership and purchases credited service for previous employment in education is not eligible to receive a disability pension until the member accumulates two additional years of credited service.

Idem

(5) Subsection 11 (2) (partial year) does not apply for the purpose of determining a member's accumulation of the two additional years of credited service under subsection (4).

Effect of re-employment

51. (1) A member receiving a full disability pension who becomes employed ceases to be entitled to a full disability pension.

Idem

(2) A member receiving a disability pension who becomes employed in education ceases to be entitled to a disability pension. (Last amended June 1, 1995 - Effective June 1, 1995)

Reduced partial disability pension

(3) Revoked. (Last amended February 28, 1992 - Effective January 1, 1992)

Application

(4) This section applies with respect to a member who is receiving a disability pension on or after the 1st day of January, 1990.

Amount of full disability pension

52. (1) The amount of the annual full disability pension, before adjustment for inflation, for a member is calculated using the formula,

$$\mathbf{(A \times B) - C}$$

in which,

"A" is 2 per cent of the member's average salary,

"B" is the number of years of the member's credited service under the plan, and

"C" is the amount, if any, calculated under section 81 (CPP reduction).

Amount of partial disability pension

(2) The amount of a partial disability pension, before adjustment for inflation, for a member is calculated using the formula,

$$\mathbf{[(A \times B)\ (1 - C)] - D}$$

in which,

"A" and "B" have the same meaning as in the formula for calculating the amount of a full disability pension,

"C" is an amount equal to 0.025 times the lesser of,

(a) the number of years by which the member's age on the date the pension begins is less than 65, and

(b) ninety minus the sum of,

(i) the number of years of the member's qualifying service determined under section 11, and

(ii) the member's age on the date the pension begins, and

"D" is the amount, if any, calculated under section 81 (CPP reduction).

"C" in the above formula shall not be less than the minimum reduction on early retirement applicable to registered pension plans under the *Income Tax Act* (Canada). (Last amended April 15, 1998 - Effective January 1, 1992)

(2a) The amount of a partial disability pension, before adjustment for inflation, for a member who ceases to be employed in education on or after June 1, 1998, is calculated using the formula set out in subsection (2), except that:

"C" is an amount equal to 0.025 times the lesser of,

(a) the number of years by which the member's age on the date the pension begins is less than sixty-five, and

(b) eighty-five minus the sum of,

(i) the number of years of the member's qualifying service determined under section 11, and

(ii) the member's age on the date the pension begins,

however, "C" shall not be less than the minimum reduction on early retirement applicable to registered pension plans under the *Income Tax Act* (Canada). (Last amended April 2, 2001 – Effective April 1, 2001)

Maximum pension payable, R.S.C. 1952, c. 148

(2b) If the amount of the full or partial disability pension determined under either subsection (1), (2), or (2a), as applicable, in respect of a period after the 31st day of December, 1991 is greater than the maximum pension payable by a registered pension plan under the *Income Tax Act* (Canada) after taking into account the reduction (if any) on early retirement applicable to registered pension plans under the *Income Tax Act* (Canada), it shall be reduced to an amount equal to such maximum. (Last amended May 27, 1998 - Effective June 1, 1998)

Limitation

(3) Revoked. (Last amended February 28, 1992 - Effective January 1, 1992)

Amount of reduced partial disability pension

(4) Revoked. (Last amended February 28, 1992 - Effective January 1, 1992)

Resumption of disability pension

53. (1) Subject to subsection (2), if a member becomes re-employed in education and ceases to receive a disability pension under the pension plan or a predecessor Act, the member is entitled upon ceasing the re-employment to the resumption of the original disability pension without adjustment of the amount of the pension and to a refund of the member's contributions made during the period of re-employment, together with interest thereon. (Last amended June 1, 1995 - Effective June 1, 1995)

Idem

(2) A member described in subsection (1) who completes the equivalent of two years of full-time employment in education after becoming re-employed and then ceases to be so employed shall make a fresh application for a pension, and the terms of the pension plan on the date the application is made shall apply with respect to the member's entitlement to a pension.

(3) A member making application under subsection (2) shall repay any refund previously made under section 36 together with interest thereon before the pension commences. (Last amended September 8, 2006 – Effective September 1, 2006)

(4) The member or survivor benefit, as the case may be, shall be actuarially reduced to reflect the unpaid portion of the repayment not completed under subsection (3) with interest thereon to the commencement date of the benefit. The actuarial reduction will be offset by any lump sum payment that would otherwise be payable to the member. (Last amended September 8, 2006 – Effective September 1, 2006)

Change of disability status re survivor pension

54. (1) This section applies if a member receiving a partial disability pension dies while the administrator is considering whether the member is entitled to a full disability pension based upon fresh medical evidence concerning the member's disability. (Last amended February 28, 1992 - Effective January 1, 1992)

Determination by the administrator

(2) Having regard to the facts established at the date of the member's death, the administrator shall determine whether the member would have been entitled, immediately before the date of death, to a full disability pension.

Deemed receipt

(3) For the purpose of calculating the amount of a survivor pension, child's pension or beneficiary's pension, if the administrator determines that the member would have been entitled to a full disability pension, the member shall be deemed to have been receiving it on the date of death.

(4) Despite subsection 3, where the benefit otherwise payable to a survivor exceeds the maximum payable under the regulations of the *Income Tax Act* (Canada), the amount in excess shall not be paid. (Last amended June 29, 1994 - Effective January 1, 1992)

B. Payment of Disability Pension

Application for disability pension

55. (1) A member shall apply for a disability pension within two years after the date when the member ceases, as a result of the disability, to be employed in education.

Idem

(2) The administrator shall accept an application for a disability pension that is made after the time described in subsection (1) if the administrator is satisfied,

(a) that the delay in making the application resulted from a delay in diagnosing the disability; or

(b) that the member was unable, because of the effects of the disability, to make the application within the time described in subsection (1).

Proof of disability

(3) No application for a disability pension shall be considered by the administrator until the administrator has received,

(a) the certificate of a medical doctor licensed in Ontario designated by the administrator, certifying that the applicant became mentally or physically disabled while employed in education and indicating the nature and degree of the disability; and

(b) a report of the medical referee of the administrator containing such recommendations as the medical referee considers proper with regard to the granting of a disability pension to the applicant. (Last amended April 15, 1998 - Effective January 1, 1992)

Disability pension, predecessor Acts

56. (1) This section applies with respect to a person who ceased to be employed in education before the 1st day of January, 1990 as a result of a mental or physical incapacity and who did not apply for a disability allowance under a predecessor of this Act.

Application

(2) Section 55 applies with necessary modifications to an application by a person described in subsection (1).

Entitlement

(3) The person is entitled to a disability allowance determined in accordance with the *Teachers' Superannuation Act, 1983.*

Idem

(4) Clause 17 (1) (d) or 18 (1) (d) of the *Teachers' Superannuation Act, 1983* does not apply if the administrator accepts an application under subsection 55 (2).

Commencement of disability pension

57. (1) Subject to subsection (2), a member's disability pension shall begin as of the first day of the month following the month in which the member ceases to be employed in education.

Idem

(2) No disability pension shall begin as of a date earlier than one year before the date the administrator receives the completed application for the pension.

Reduced partial disability pension

(3) Revoked. (Last amended February 28, 1992 - Effective January 1, 1992)

Monthly instalments

(4) The administrator shall pay a disability pension in monthly instalments.

Due date

(5) Disability pension payments are due on the last day of the month.

Interest payable

(6) Interest shall be paid on overdue pension payments if the administrator does not begin paying a pension by the end of the month in which the member becomes entitled to receive it.

Interest payable

(7) Interest on each overdue monthly pension payment, calculated at the standard rate, shall be paid from the date the payment was due to the day before it was made. (Last amended February 28, 1992 - Effective January 1, 1992)

Evidence of medical condition

58. (1) The administrator may at any time require a member who is receiving a disability pension to furnish evidence, in such form as the administrator directs, of the member's mental or physical condition.

Failure to furnish evidence

(2) If the member fails to furnish evidence within a reasonable time that his or her condition continues to be of a nature that entitles the member to receive the disability pension, the administrator shall terminate payment of the pension.

Review by administrator

(3) If the administrator terminates payment of a full disability pension, the member may request the administrator to review the decision to terminate payment.

Idem

(4) If the administrator is satisfied upon reviewing a decision to terminate payment that the member is entitled to a disability pension under section 50 or 51, the administrator shall pay the disability pension.

Application

(5) This section does not apply with respect to a member who has reached normal retirement age.

Notice of re-employment

59. (1) A member receiving a disability pension shall notify the administrator in writing promptly upon becoming employed or changing employment.

Failure to give notice

(2) A member who fails to comply with subsection (1) is not entitled to receive a disability pension payment during a period when notice should have been given under that subsection.

Repayment of pension

(3) A member who receives pension payments to which the member is not entitled shall repay the amount so received, together with interest thereon, before becoming entitled to further payments under the pension plan.

PART VII
BENEFITS UPON DEATH

A. Upon the Death of a Member not Entitled to a Pension

Refund of contributions

60. Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Refund of post-1986 contributions

60a. (1) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Application

(2) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Refund of pre-1987 contributions

60b. (1) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Application

(2) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

B. Upon the Death of a Member Entitled to a Deferred Pension

Pre-retirement (spousal) death benefit

61. (1) If a member who is entitled to a deferred pension dies before commencement of payment of the deferred pension, the person who is the spouse of the member on the date of death is entitled to receive,

(a) the benefit described in section 62, in respect of the member's employment, if any, before the 1st day of January, 1987; and

(b) the benefit described in section 63, in respect of the member's employment, if any, on or after the 1st day of January, 1987.

(Last amended May 5, 2010 – Effective June 1, 1995)

Application

(2) Subsection (1) does not apply if the member and the spouse are living separate and apart on the date of death of the member.

Further application

(3) Revoked. (Last amended August 4, 2011 – Effective March 1, 2007)

Idem

(4) Revoked. (Last amended August 4, 2011 – Effective March 1, 2007)

Idem

(5) Revoked. (Last amended August 4, 2011 – Effective March 1, 2007)

Idem

(6) Revoked. (Last amended August 4, 2011 – Effective March 1, 2007)

Pre-1987 (spousal) death benefit

62. (1) This section applies with respect to that portion of the death benefit that relates to a member's employment before the 1st day of January, 1987.

Survivor pension

(2) The spouse of a member with ten years or more qualifying service is entitled to the survivor pension described in subsection (3) for the lifetime of the spouse. (Last amended October 10, 1995 - Effective September 1, 1995)

Pre-1987 survivor pension

(3) The amount of the survivor pension, before adjustment for inflation, shall be based upon the member's credited service for employment before the 1st day of January, 1987 and shall be one half of the amount of the pension, before adjustment for inflation,

(a) that would have been paid to the member at the date of death, if the member was at least sixty-five years of age on the date of death; or

(b) that would have been paid to the member as of the first day of the month following the month in which he or she would have reached sixty-five years of age, if the member was less than sixty-five years of age on the date of death.

Commutation of pension

(3a) If the spouse of a member elects to receive payment of the benefit described under clause 63 (4) (a), then the spouse of the member shall receive a lump sum payment equal to the commuted value of the survivor pension calculated in accordance with subsection (3), and not the survivor pension calculated in accordance with subsection (3). (Last amended December 13, 2012 - Effective July 1, 2012)

Refund of contributions (10 year rule)

(3b) If the commuted value of the survivor pension calculated in accordance with subsection (3) is less than the amount of the member's contributions for employment before the 1st day of January, 1987 together with interest thereon, then the spouse of the member is entitled to a refund, paid in a lump sum, of the member's contributions for employment before the 1st day of January, 1987 together with interest thereon, and not to the benefit described in either subsection (3) or (3a). (Last amended December 13, 2012 - Effective July 1, 2012)

Refund of contributions

(4) The spouse of a member who dies with less than ten years of qualifying service is entitled to a refund of the member's contributions for employment before the 1st day of January, 1987 together with interest thereon. (Last amended June 19, 2012 - Effective July 1, 2012)

Post-1986 (spousal) death benefit

63. (1) This section applies with respect to that portion of the death benefit that relates to a member's employment on or after the 1st day of January, 1987.

Benefit

(2) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Refund of contributions

(3) Revoked. (Last amended September 8, 2006 - Effective September 1, 1995)

Idem

(4) The spouse of a member is entitled to receive,

(a) a lump sum payment equal to the commuted value of the deferred pension to which the member was entitled for credited service for employment on or after the 1st day of January, 1987; or

(b) a survivor pension for the lifetime of the spouse, the commuted value of which is at least equal to the commuted value of a pension for credited service for the member's employment on or after the 1st day of January, 1987, calculated as if the member had become entitled to a retirement pension on the date of death.

(Last amended June 19, 2012 - Effective July 1, 2012)

Election

(5) The spouse may elect the form of benefit to be paid under subsection (4) and a spouse who does not do so within twelve months after the death of the member shall be deemed to have elected to receive a survivor pension. (Last amended May 5, 2010 – Effective January 1, 2008)

Deemed election

(5a) The spouse of a member who dies within twelve months after the death of the member without electing the form of benefit to be paid under subsection (4) shall be deemed to have elected to receive payment of the benefit described under clause (4) (a). (Last amended December 13, 2012 - Effective July 1, 2012)

Survivor pension

(6) A spouse who elects to receive a survivor pension may elect to begin to receive the pension at any time up to the end of the calendar year in which the spouse attains seventy-one years of age, or up to such other time as is required under the *Income Tax Act* (Canada), provided that the pension shall not begin before the month following the month in which the administrator has received all supporting documentation required to pay the pension. (Last amended June 20, 2012 – Effective January 1, 2012)

Pre-retirement child's pension

64. (1) This section applies with respect to the dependent children of a member entitled to a deferred pension who died before commencement of payment of the deferred pension and,

(a) who had a spouse who became entitled to a survivor pension who subsequently died; or

(b) who did not have a spouse entitled to a survivor pension.

(Last amended May 5, 2010 – Effective June 1, 1995)

Entitlement to child's pension

(2) Subject to subsections (3), (3a) and (3b), each dependent child of a member is entitled upon the death of the spouse or the member, as the case may be, to receive a child's pension calculated under subsections (4a) and (4b) while the child remains a dependent child. (Last amended December 13, 2012 - Effective July 1, 2012)

Exception re: post-1986 spousal death benefit

(3) No child's pension is payable in respect of the credited service of a deceased member for which the spouse of the member received the lump sum payment described in clause 63 (4) (a).

Exception re: post-1986 benefit to spouse's estate

(3a) No child's pension is payable in respect of the credited service of a deceased member for which the spouse's estate is entitled to payment of the benefit described under clause 63 (4) (a). (Last amended December 13, 2012 - Effective July 1, 2012)

Exception re: pre-1987 spousal death benefit

(3b) No child's pension is payable in respect of the credited service of a deceased member for which the spouse of the member is entitled to payment of the benefit described under either subsection 62 (3), 62 (3a) or 62 (3b). (Last amended December 13, 2012 - Effective July 1, 2012)

Amount of child's pension

(4) Revoked. (Last amended June 19, 2012 - Effective July 1, 2012)

Pre-1987 (child) death benefit

(4a) (a) This subsection applies with respect to that portion of the death benefit that relates to a member's employment before the 1st day of January, 1987. (Last amended June 19, 2012 - Effective July 1, 2012)

Survivor pension

(b) The dependent child of a member with ten years or more qualifying service is entitled to the child's pension described in subsection (4a) (c) while the child remains a dependent child. (Last amended June 19, 2012 – Effective July 1, 2012)

Pre-1987 child's pension

(c) The amount of the child's pension, before adjustment for inflation, shall be based upon the member's credited service for employment before the 1st day of January, 1987 and shall be one half of the amount of the pension, before adjustment for inflation,

(i) that would have been paid to the member at the date of death, if the member was at least sixty-five years of age on that date; or

(ii) that would have been paid to the member as of the first day of the month following the month in which he or she would have reached sixty-five years of age, if the member was less than sixty-five years of age on the date of death.

(Last amended June 19, 2012 - Effective July 1, 2012)

Post-1986 (child) death benefit

(4b) (a) This subsection applies with respect to that portion of the death benefit that relates to a member's employment on or after the 1st day of January, 1987. (Last amended June 19, 2012 - Effective July 1, 2012)

Benefit

(b) The amount of the child's pension, before adjustment for inflation, shall be based upon the member's credited service for employment on or after the 1st day of January, 1987 and shall be one half of the amount of the pension, before adjustment for inflation,

(i) that would have been paid to the member at the date of death, if the member was at least sixty-five years of age on that date; or

(ii) that would have been paid to the member as of the first day of the month following the month in which he or she would have reached sixty-five years of age, if the member was less than sixty-five years of age on the date of death.

(Last amended June 19, 2012 - Effective July 1, 2012)

Idem

(5) The child's pension shall be shared equally among the member's dependent children.

Share accrues to others

(6) The share of the child's pension of each of the children who ceases to be a dependent child accrues to the remaining dependent children, if any.

Benefit to beneficiary

65. (1) A beneficiary designated by a member entitled to a deferred pension is entitled to the benefit described in subsection (2),

(a) if the member dies before commencement of payment of the deferred pension; and

(b) if, on the date of death, the member does not have a spouse entitled to a benefit payable on his or her death.

(Last amended December 13, 2012 - Effective July 1, 2012)

Amount of benefit

(2) Subject to subsection (3), a beneficiary designated by a member is entitled to receive,

(a) a refund of the member's contributions for employment before the 1st day of January, 1987 together with interest thereon; and

(b) a lump sum payment equal to the commuted value of the deferred pension to which the member was entitled for credited service for employment on or after the 1st day of January, 1987.

(Last amended December 13, 2012 - Effective July 1, 2012)

Residual entitlement

(3) If a person is entitled to a child's pension under section 64 on the death of the member, the beneficiary is entitled to a refund of the amount by which the amount calculated under clause (2) (a) exceeds the commuted value of the amount payable under subsection 64 (4a), together with interest thereon, and a refund of the amount by which the amount calculated under clause (2) (b) exceeds the commuted value of the amount payable under subsection 64 (4b), together with interest thereon. (Last amended December 13, 2012 - Effective July 1, 2012)

Benefit to member's estate

66. (1) The estate of a member entitled to a deferred pension who dies before commencement of payment of the deferred pension is entitled to the payments described in this section. (Last amended May 5, 2010 – Effective June 1, 1995)

Idem, no others entitled

(2) Subject to subsection (3), if no spouse or designated beneficiary is entitled to a benefit on the death of the member, the estate is entitled to,

(a) a refund of the member's contributions for employment before the 1st day of January, 1987 together with interest thereon; and

(b) a lump sum payment equal to the commuted value of the deferred pension to which the member was entitled for credited service for employment on or after the 1st day of January, 1987.

(Last amended December 13, 2012 - Effective July 1, 2012)

Residual entitlement

(3) If a person is entitled to a child's pension under section 64 on the death of the member, the estate is entitled to a refund of the amount by which the amount calculated under clause (2) (a) exceeds the commuted value of the amount payable under subsection 64 (4a), together with interest thereon, and a refund of the amount by which the amount calculated under clause (2) (b) exceeds the commuted value of the amount payable under subsection 64 (4b), together with interest thereon. (Last amended December 13, 2012 - Effective July 1, 2012)

(4) Revoked. (Last amended December 13, 2012 - Effective July 1, 2012)

(5) Revoked. (Last amended December 13, 2012 - Effective July 1, 2012)

Benefit to spouse's estate

66a. (1) Where the member had a spouse who elected to receive the benefit described under clause 63 (4) (b), and who subsequently dies after the payments described under clause 63 (4) (b) have commenced, the spouse's estate is entitled to a refund of the amount by which the member's contributions made in respect of credited service on or after January 1, 1987, together with interest thereon, minus any payments made under section 36, together with interest thereon, and minus the commuted value of the amount payable under subsection 64 (4b), together with interest thereon, exceed the amount paid to the spouse under clause 63 (4) (b), together with interest thereon. (Last amended December 13, 2012 - Effective July 1, 2012)

(2) Where the member had a spouse who elected to receive the benefit described under clause 63 (4) (b), and who subsequently dies before the payments described under clause 63 (4) (b) have commenced, the spouse's estate is entitled to the amount determined under clause 63 (4) (a), together with interest thereon. (Last amended December 13, 2012 - Effective July 1, 2012)

(3) Where the member had a spouse who died after becoming entitled to a survivor pension under subsection 62 (3), the spouse's estate is entitled to a refund of the amount by which the member's contributions for employment before the 1st day of January, 1987, together with interest thereon, exceed the amount paid to the spouse under subsection 62 (3), together with interest thereon. (Last amended December 13, 2012 - Effective July 1, 2012)

Payment of benefits, predecessor Acts

66b. (1) Benefits paid upon the death of a member who ceased to be employed in education prior to January 1, 1990 and who is entitled to a deferred pension on the date of death shall be calculated, with necessary modifications, in accordance with the terms of the *Teachers' Superannuation Act, 1983*, or a predecessor Act, and shall be paid out of the pension fund in accordance with the Act under which the member ceased to be employed in education. (Last amended December 13, 2012 - Effective July 1, 2012)

Limitation on survivor pensions less than $1,200

(2) Subject to section 84, where the annual amount of the survivor pension calculated under sections 62 and 63 is less than $1,200 the spouse of a member is entitled to a pension in that lesser amount and not to a pension in the amount of $1,200 as provided for by Order in Council 1453/74. (Last amended December 13, 2012 - Effective July 1, 2012)

Exception

(3) Subsection (2) shall not apply to the spouse of a member who has at least ten years of credited service in whole or in part before the 1st day of January, 1987 on the date he or she ceased to be employed in education. (Last amended December 13, 2012 - Effective July 1, 2012)

Limitation

(4) For greater certainty, subsection 76 (2) of the *Teachers' Superannuation Act, 1983* shall not apply to any survivor pension payable in respect of a member who did not have at least ten years of credited service on the date he or she ceased to be employed in education. (Last amended December 13, 2012 - Effective July 1, 2012)

C. Upon the Death of a Pensioner

Survivor pension, spouse

67. (1) If a member dies on or after commencement of payment of a pension, the person who was the spouse on the date that the payment of the first instalment of the pension was due is entitled to the survivor pension described in subsection (3) for the spouse's lifetime. (Last amended May 5, 2010 – Effective June 1, 1995)

Application

(2) Subsection (1) does not apply if the member and the spouse were living separate and apart on the date that the payment of the first instalment of the member's pension was due. (Last amended May 5, 2010 – Effective June 1, 1995)

Amount of survivor pension

(3) Subject to sections 68, 69, and 84a, the amount of the annual survivor pension, before adjustment for inflation, payable to the surviving spouse shall be not less than 50 per cent of the pension, before adjustment for inflation,

(a) that was being paid to the member at the date of death, if the member was at least sixty-five years of age on that date; or

(b) that would have been paid to the member as of the first day of the month next following the month in which he or she would have reached sixty-five years of age, if the member was less than sixty-five years of age on the date of death.

(Last amended June 20, 2012 – Effective March 3, 2000)

Exception for low pensions

(4) Despite subsection (3) the survivor of a person who died while receiving an annual pension that had been adjusted under Order in Council 1453/74, is entitled to a pension that is 50 per cent of the pension being paid to the person at the date of death, or such greater percentage as the deceased person had elected prior to death. (Last amended October 23, 1991 - Effective October 23, 1991)

Spousal election re survivor pension

68. (1) In the absence of a joint waiver by a member and the member's spouse of the spouse's entitlement under subsection 44 (3) of the *Pension Benefits Act* (amount of survivor benefit), the amount of the survivor pension payable on the death of the member shall be 60 per cent of the amount of the member's pension that would be payable if the amount of the pension were calculated without regard to this section. (Last amended October 23, 1991 - Effective October 23, 1991)

Waiver void

(2) A waiver referred to in subsection (1) is void if it is dated, signed, or delivered to the administrator more than twelve months before the commencement of payment of the member’s pension or after the commencement of payment of the member’s pension. (Last amended August 4, 2011 – Effective May 18, 2010)

Adjustment of member's pension

(3) In the absence of a waiver referred to in subsection (1), the amount of the pension payable to the member shall be actuarially reduced before limits imposed by the *Income Tax Act* (Canada) to allow for payment of the increased survivor pension in accordance with subsection (1). (Last amended October 10, 1995 - Effective January 1, 1992)

(3a) Prior to calculating the payment described in subsection (1), the pension the member was receiving shall be reduced immediately upon the member’s death to reflect any reduction described in section 81 that was not applicable immediately prior to the member’s death. (Last amended June 20, 2012 – Effective January 1, 1990)

Application

(4) This section does not apply with respect to a member who, before the 1st day of January, 1988, began to receive a pension under a predecessor Act.

Idem

(5) This section does not apply with respect to a member who dies before commencement of payment of the member’s pension. (Last amended May 5, 2010 – Effective June 1, 1995)

Increase of survivor pension

69. (1) A member may direct the administrator to increase the amount of a survivor pension that may become payable under section 67 in respect of the member to an amount equal to 55, 65, 70 or 75 per cent of the member's pension that would be payable if the amount of the pension were calculated without regard to this section.

Time limit

(2) A direction must be given in writing and must be delivered to the administrator at least two years before the earlier of,

(a) the member's normal retirement date; or

(b) the beginning of the month in which the member's pension begins.

Idem

(3) The administrator shall act on a direction delivered after the deadline specified in subsection (2) and before the member applies for a retirement pension if the administrator is satisfied that the member is in good health having regard to the member's age.

Adjustment of member's pension

(4) The amount of the pension payable to the member shall be actuarially reduced before limits imposed by the *Income Tax Act* (Canada) to allow for payment of the increased survivor pension in accordance with the direction. (Last amended October 10, 1995 - Effective January 1, 1992)

(4a) Prior to calculating the payment described in subsection (1), the pension the member was receiving shall be reduced immediately upon the member's death to reflect any reduction described in section 81 that was not applicable immediately prior to the member's death. (Last amended June 20, 2012 – Effective January 1, 1990)

Commuted value

(5) The commuted value of pension paid to the member including the commuted value of the increased survivor benefit shall not be less than the commuted value of the pension, including survivor benefit, that would otherwise be payable.

Revocation of direction

(6) A member may revoke a direction given under this section by a written revocation delivered to the administrator before the member begins receiving a pension.

Direction void

(7) A direction given under this section by a member is void if the member dies before beginning to receive a pension.

Restriction

(8) A person whose pension would be reduced from an amount greater than $2,400 to an amount less than $2,400 upon making an election under this section is not entitled to an increase in his or her pension under Order in Council 1453/74. (Last amended October 23, 1991 - Effective October 23, 1991)

Survivor pension, new spouse

70. (1) In this section and section 84a, "new spouse", in relation to a member, means a person who becomes the spouse of the member after the commencement of payment of the member's retirement or disability pension. (Last amended June 20, 2012 – Effective March 3, 2000)

Idem

(2) A member who does not have a spouse eligible to receive a survivor pension under section 67 may, after the commencement of payment of the member's retirement or disability pension, direct the administrator to provide a survivor pension to a new spouse. (Last amended May 5, 2010 – Effective June 1, 1995)

Time limit

(3) A direction must be given in writing and must be delivered to the administrator on or before the later of,

(a) ninety days after the date on which the member becomes the spouse of the new spouse; or

(b) if immediately before the member becomes the spouse of the new spouse there is a child who would be entitled upon the death of the member to receive a child's pension under section 73, ninety days after the date on which the child ceases to be eligible to receive the child's pension.

Idem

(4) The administrator shall act on a direction delivered after the deadline specified in subsection (3) if the administrator is satisfied that the member is in good health having regard to the member's age.

(4a) A direction given under this section is not effective until six months following the date of delivery of the direction to the administrator. (Last amended June 1, 1995 - Effective June 1, 1995)

(4b) A direction made under this section is null and void if the death of the member occurs before the effective date of the direction. (Last amended June 1, 1995 - Effective June 1, 1995)

(4c) A member may revoke a direction given under this section by a written revocation delivered to the administrator before the direction becomes effective in accordance with subsection (4a). (Last amended September 8, 2006 – Effective June 1, 1995)

Amount of survivor pension

(5) Subject to section 84a, a member described in subsection (2) shall direct the administrator to pay a survivor pension in the amount of 50, 55, 60, 65, 70 or 75 per cent of the pension that would otherwise be payable on the first day of the month next following the month in which the member becomes the spouse of the new spouse. (Last amended June 20, 2012 – Effective March 3, 2000)

Adjustment of member's pension

(6) The amount of a retirement or disability pension payable to the member shall be actuarially reduced before limits imposed by the *Income Tax Act* (Canada) to allow for payment of the survivor pension in accordance with the direction. (Last amended October 10, 1995 - Effective January 1, 1992)

Idem

(7) The actuarial reduction required by subsection (6) shall be based upon the ages of the member and of the spouse on the last day of the month in which the direction is delivered to the administrator.

(7a) Prior to calculating the payment described in subsection (5), the pension the member was receiving shall be reduced immediately upon the member’s death to reflect any reduction described in section 81 that was not applicable immediately prior to the member’s death. (Last amended June 20, 2012 – Effective January 1, 1990)

Payment of survivor pension

(8) The administrator shall pay the survivor pension in accordance with the direction but not while there is a person who is eligible to receive a child's pension in respect of the member.

Eligibility

70a. (1) This section applies to a member or former member who, as of April 23, 1998, was:

(a) receiving a pension in respect of which there was no person eligible, as of April 22, 1998, to receive a survivor pension, and

(b) living with a person who would have qualified under the relevant provisions of the pension plan as the member's same-sex partner for purposes of eligibility for a survivor pension, other than a survivor pension provided by sections 70, 71, 72, or any predecessor thereof, if the definition of "same-sex partner" as set out in the pension plan had been in effect prior to April 23, 1998. (Last amended July 10, 2000 – Effective April 23, 1998)

Direction

(2) Subject to subsections (3) and (4), a member described in subsection (1) may direct the administrator to pay a survivor pension to the person described in subsection (1) for the person's lifetime commencing the month following the member's date of death. (Last amended July 10, 2000 – Effective April 23, 1998)

Idem

(3) Where the member dies prior to providing the direction referred to in subsection (2), such direction may be provided by the person described in subsection (1). (Last amended July 10, 2000 – Effective April 23, 1998)

Deadline

(4) The direction provided in accordance with subsection (2) or (3) shall be provided to the administrator. (Last amended September 8, 2006 - Effective April 23, 1998)

Entitlement

(5) Subject to subsection (6), the amount of the annual survivor pension, before adjustment for inflation, payable under this section shall be 50 per cent of the pension, before adjustment for inflation,

(a) that was being paid to the member at the date of death, if the member was at least sixty-five years of age on that date, or

(b) that would have been paid to the member as of the first day of the month next following the month in which he or she would have reached sixty-five years of age, if the member was less than sixty-five years of age on the date of death. (Last amended July 10, 2000 - Effective April 23, 1998)

Offset

(6) The survivor pension described in subsection (5) shall be actuarially reduced by any amounts paid to any person, including the member's estate, as a result of the member's death. (Last amended July 10, 2000 - Effective April 23, 1998)

(7) No survivor pension is payable under this section if the person described in subsection (1) dies prior to providing the direction in accordance with subsections (3) and (4). (Last amended July 19, 2007 – Effective April 23, 1998)

(8) Revoked. (Last amended August 4, 2011 – Effective March 1, 2007).

Survivor pension, predecessor Acts

71. (1) This section applies with respect to a member who, before the 1st day of September, 1984, ceased to be employed in education within the meaning of a predecessor of this Act and who became the spouse of a person after ceasing that employment.

Direction re survivor pension

(2) A member described in subsection (1) may direct the administrator to provide a survivor benefit for the member's spouse and section 70 applies with respect to the direction with necessary modifications.

Time limit

(3) A direction under this section shall be delivered to the administrator on or before the latest of,

(a) the 31st day of March, 1990;

(b) ninety days after the date on which the member becomes a spouse; or

(c) if on the 1st day of January, 1990 there is a child who would be entitled upon the death of the member to receive a survivor allowance under a predecessor of this Act, ninety days after the date on which the child ceases to be eligible to receive the survivor allowance.

Idem

(4) The administrator shall act on a direction delivered after the deadline specified in subsection (3) if the administrator is satisfied that the member is in good health having regard to the member's age.

Deemed direction

(5) A member described in subsection (1) who dies on or before the 31st day of March, 1990 without having given a direction under this section shall be deemed to have given it on that date and shall be deemed to have directed the administrator to pay a 50 per cent survivor pension.

Survivor pension (prior inquiry)

72. (1) This section applies with respect to a person who became the spouse of a member described in subsection 71 (1) after the member ceased to be employed in education within the meaning of a predecessor of this Act.

Idem

(2) This section does not apply unless the member has ceased to be a member before the 1st day of January, 1990 because he or she has died.

Survivor pension

(3) A spouse described in subsection (1) is entitled to a survivor pension calculated from the date of a written inquiry respecting a survivor pension,

(a) made to the Teachers' Superannuation Commission before the 1st day of January, 1990; or

(b) made to the administrator on or after the 1st day of January, 1990.

Amount of pension

(4) The amount of the survivor pension is 50 per cent of the amount of the member's retirement pension on the date of the member's death adjusted for inflation as if it were a pension for the period from the date of the member's death to the date the spouse becomes entitled to the survivor pension.

(5) Prior to calculating the payment described in subsection (4), the pension the member was receiving shall be reduced immediately upon the member’s death to reflect any reduction described in section 81 that was not applicable immediately prior to the member’s death. (Last amended June 20, 2012 – Effective January 1, 1990)

Child's pension

73. (1) This section applies with respect to the dependent children of a member who died while receiving a retirement or disability pension and,

(a) who had a spouse who died after becoming entitled to a survivor pension; or

(b) who did not have a spouse entitled to a survivor pension.

Entitlement to child's pension

(2) Each dependent child of a member, upon the death of the spouse or the member, as the case may be, is entitled to a child's pension while remaining a dependent child.

Amount of child's pension

(3) The amount of the annual child's pension is the amount of the survivor pension to which a spouse of the member was or would have been entitled after the death of the member, shared equally among the dependent children.

Share accrues to others

(4) The share of the child's pension of each of the children who ceases to be a dependent child accrues to the remaining dependent children, if any.

Beneficiary's pension, R.S.C. 1952, c. 148

74. (1) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

Time limit

(2) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

Idem

(3) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

Amount of beneficiary's pension

(4) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

Adjustment of member's pension

(5) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

Revocation of direction

(6) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

Direction void

(7) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

Benefit to estate

75. The estate of a member who was receiving a pension on the date of death is entitled to a refund of the amount by which the member's contributions together with interest thereon exceeds the sum of the amount paid to the member and the amount, if any, paid to every other person who was entitled to a benefit on the member's death, together with interest thereon.

10 year guarantee

75a. (1) Notwithstanding any other provision of the plan, but subject to this section, where a member dies while receiving a retirement pension or a disability pension, but prior to receiving the equivalent of 120 monthly pension payments, the remaining balance of such pension payments shall be paid:

(a) as a pension to the person who remains otherwise eligible for benefits under the plan as a result of the member’s death, or

(b) to the member’s estate, if there is no person eligible as described in (a), in a lump sum equal to the present value of the remaining payments. (Last amended April 2, 2001 – Effective April 1, 2001)

Direction

(2) If a member has a spouse eligible for a survivor pension at the commencement of payment of the member’s pension, subsection (1) shall only apply if the member has delivered a written direction to the administrator prior to the commencement of payment of the member’s pension. (Last amended April 2, 2001 – Effective April 1, 2001)

Idem

(3) A direction provided in accordance with subsection (2) may be revoked by the member provided that a written revocation is delivered to the administrator prior to the commencement of payment of the member’s pension. (Last amended April 2, 2001 – Effective April 1, 2001)

Idem

(4) A direction provided in accordance with subsection (2) is void if the member dies prior to the commencement of payment of the member’s pension. (Last amended April 2, 2001 – Effective April 1, 2001)

Adjustment of member's pension

(5) The pension of a member who provides a direction in accordance with subsection (2) shall be reduced to allow for payment of the benefits in accordance with subsection (1). (Last amended April 2, 2001 – Effective April 1, 2001)

Offset

(6) Subject to subsection (11), the payments made in accordance with subsection (1) shall be paid in lieu of any other amounts otherwise payable under the plan as a result of the member's death. (Last amended April 2, 2001 – Effective April 1, 2001)

CPP Reduction

(7) The payments made in accordance with subsection (1) shall be reduced immediately upon the member's death to reflect any reduction described in section 81 that was not applicable immediately prior to the member's death. (Last amended April 2, 2001 – Effective April 1, 2001)

More than one beneficiary

(8) Where there is more than one person eligible as described in clause (1)(a), then the pension payable in accordance with that provision shall be shared equally among such persons. (Last amended April 2, 2001 – Effective April 1, 2001)

Upon death of beneficiary

(9) Where any person eligible as described in clause (1)(a) dies prior to completion of the pension payments under that provision, the remaining payments shall be shared equally among any remaining eligible persons or, if none, shall be paid to the person's estate in a lump sum equal to the present value of the remaining payments. (Last amended April 2, 2001 – Effective April 1, 2001)

Upon ineligibility of beneficiary

(10) Where any person eligible as described in clause (1)(a) ceases to be a person eligible as described in clause (1)(a) prior to completion of the pension payments under that provision, the remaining payments shall be shared equally among any remaining eligible persons or, if none, shall be paid to the member's estate in a lump sum equal to the present value of the remaining payments. (Last amended April 2, 2001 – Effective April 1, 2001)

Completion of 10 year guarantee

(11) Upon completion of the pension payments in accordance with clause (1)(a), the person or persons described in that provision shall be entitled to receive, on a prospective basis only, the pension that they would otherwise be receiving as a result of the member's death but for this section, except that any reduction that was applied pursuant to subsection (5) shall continue to apply. (Last amended April 2, 2001 – Effective April 1, 2001)

Application to existing pensions

(12) This section shall apply, with necessary modifications, to a member who is receiving a pension as of April 1, 2001 except that, for the purposes of subsection (2) only, spousal eligibility for a survivor pension shall be determined as of April 1, 2001 and the direction required in accordance with (2) must be delivered to the administrator by May 1, 2001. (Last amended April 2, 2001 – Effective April 1, 2001)

Application to deferred pensions

(12a) This section shall apply, with necessary modifications, to a member who ceased employment in education on or after January 1, 1990 but prior to April 1, 2001 and who is entitled to a deferred pension. (Last amended June 19, 2012 – Effective April 1, 2001)

Application to suspended pensions

(13) For the purposes of this section, references to a member who is receiving a pension shall include a member whose pension is suspended. (Last amended April 2, 2001 – Effective April 1, 2001)

Application to TSA pensions

(14) This section shall apply, with necessary modifications, to a member who ceased employment in education prior to January 1, 1990 and who is either entitled to a deferred pension or receiving a pension as of April 1, 2001. (Last amended May 5, 2010 – Effective April 1, 2001)

Application to deferred pensions post-June 30, 2012

(15) This section shall apply, with necessary modifications, to a member who ceased employment in education prior to July 1, 2012 and who was not entitled to a deferred pension under section 30 as it read on June 30, 2012. (Last amended June 19, 2012 – Effective July 1, 2012)

D. Payment of Death Benefits

Commencement of pension

76. (1) A pension that is payable immediately on the death of a member who was not receiving a retirement or disability pension on the date of death shall begin as of the day after the day the member dies.

Idem

(2) A pension that is payable on the death of a member who was receiving a retirement or disability pension on the date of death shall begin as of the first day of the month after the month in which the member dies.

Interest payable

(3) Interest shall be paid on pension payments due under a pension mentioned in this section if the administrator does not begin paying the pension by the end of the month in which the beneficiary becomes entitled to receive it. (Last amended June 28, 1990 - Effective June 28, 1990)

Interest Payable

(4) Interest on each overdue monthly pension payment, calculated at the standard rate, shall be paid from the date the payment was due to the day before it was made. (Last amended February 28, 1992 - Effective January 1, 1992)

Payments to estate

77. (1) If the administrator is unable to locate a personal representative of the estate of a deceased member, the administrator may pay into court any payments that under the pension plan are required to be made to the estate.

Missing beneficiary

(2) If the administrator is unable, after making reasonable inquiries, to locate an individual who is entitled to a death benefit under the pension plan or a beneficiary designated by the deceased member under the *Pension Benefits Act*, the administrator shall pay to the estate of the deceased member one year after the date of death the amount to which the estate is otherwise entitled when no other person is entitled to a benefit on the death of the member.

Missing beneficiary found

(3) If an individual entitled to a death benefit under the pension plan or a beneficiary designated by the deceased member under the *Pension Benefits Act* applies for the benefit after the administrator makes a payment under subsection (2), the administrator shall pay the individual the amount of the benefit to which the individual is entitled less the amount paid to the estate by the administrator.

Transitional

(4) This section applies with respect to a person with credited service under a predecessor of this Act who dies before the 1st day of January, 1990, as if that person were a deceased member of the pension plan.

Discharge

(5) The administrator is discharged on making a payment in accordance with this section.

Interpleader, more than one applicant

78. (1) Revoked. (Last amended September 8, 2006 – Effective September 1, 2006)

Court may order

(2) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

Application to court

(3) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

Application of R.S.O. 1980, c. 488, s. 62

(4) Revoked. (Last amended September 8, 2006 - Effective September 1, 2006)

PART VIII
BENEFITS AND PAYMENTS - GENERAL

A. Adjustments for Inflation

Inflation adjustment, pensions

79. (1) Every retirement pension, disability pension, survivor pension, child's pension and beneficiary's pension shall be adjusted for inflation in accordance with section 80.

Idem, deferred pensions

(2) Every deferred pension payable under the pension plan shall be adjusted for inflation in accordance with section 80 for the period beginning at the end of the last month for which the member has credit under the plan and ending when the pension begins.

Limitation

(3) No pension or deferred pension shall be adjusted under this section for inflation in respect of a period before the 1st day of January, 1990.

Adjustment of pensions for cessations prior to May 31, 1982

79a. (1) For pension instalments payable for periods on or after June 1, 2001, the annual pension of a member, or of the survivor of a member, who ceased to be employed for purposes of the plan prior to May 31, 1982, shall be adjusted in accordance with salary adjustments determined by the actuary with reference to the year in which the member ceased to be employed for purposes of the plan. (Last amended April 2, 2001 – Effective April 1, 2001)

Idem

(2) Subsection (1) shall also apply to the pension payable to the survivor of a member where the member:

(a) ceased to be employed for purposes of the plan on or after May 31, 1982 but prior to September 1, 1984, and

(b) died prior to receiving a pension calculated on the basis of the average of the member's annual pensionable salary for the five school years during which it was highest,

but only to the extent that the survivor is not already receiving a survivor pension equivalent to that calculated on the basis described in (b). (Last amended April 2, 2001 – Effective April 1, 2001)

Applicability

(3) This section shall not apply to the retirement pension or benefits upon death of a member who did not have at least ten years of credited service on the date he or she ceased to be employed in education. (Last amended December 13, 2012 – Effective July 1, 2012)

Calculation of inflation adjustments

80. (1) In the formulas in this section,

"A" is the carry forward determined for the immediately preceding year,

"B" is the basic ratio for the year,

"C" is the adjustment ratio for the year,

"D" is the basic ratio for the year after the last year for which the member has credit in the pension plan, and shall be calculated to a maximum of 1.080 or to a minimum of 1.000, and (Last amended October 9, 2008 – Effective January 1, 2009)

"E" is the number of full months in the year that are after the month in the last year for which the member has credit in the pension plan. (Last amended October 9, 2008 – Effective January 1, 2009)

Definitions

(2) In this section,

"accumulated adjustment ratio", for a person's pension, means the product of the multiplication of all adjustment ratios for the years in the period commencing with the last year for which the member has credit in the pension plan and ending with the year for which the accumulated adjustment ratio is being determined; (Last amended October 9, 2008 – Effective January 1, 2009)

"adjustment ratio", for a person's pension, means,

(a) for any year before the year 1976 and for the last year for which the member has credit in the pension plan, 1.000,

(b) if the member for whose credit in the plan the pension is payable ceased to be employed in education in or after the year 1975, for the year after the last year for which the member has credit in the pension plan, the ratio determined by the formula "[(D - 1.000) × E / 12] + 1.000", and

(c) for the later of the year 1976 and the second year after the last year for which the member has credit in the pension plan and for any subsequent year, the ratio determined by the formula "A + B" calculated to a maximum of 1.080 or to a minimum of 1.000; (Last amended October 9, 2008 – Effective January 1, 2009)

"basic ratio", for a year, means the ratio expressed to three decimal places that the average for the Consumer Price Index over the last twelve months of the twenty-four-month period ending with the 30th day of September in the immediately preceding year bears to the average for the Consumer Price Index over the first twelve months of that period;

"carry forward", with respect to the pension of a person, means,

(a) for any year before the year 1976, for the last year for which the member has credit in the pension plan and for the year after that year, nil, and

(b) for the later of the year 1976 and the second year following the last year for which the member has credit in the pension plan and for any subsequent year, the positive or negative number determined by the formula "A + B - C"; (Last amended October 9, 2008 – Effective January 1, 2009)

"Consumer Price Index" means the Consumer Price Index for Canada as published by Statistics Canada under the authority of the *Statistics Act* (Canada);

"member" means the person in respect of whose credit in the pension plan the pension, to which the formula is applied under this section, is payable, and includes a contributor within the meaning of the *Teachers' Superannuation Act*, *1983* or a predecessor Act; (Last amended October 9, 2008 – Effective January 1, 2009)

"pension" means a pension to which a person is entitled from the plan other than the adjustment for inflation provided by this section, and an allowance, annuity, deferred annuity or other periodic payments to which a person has become entitled under the *Teachers' Superannuation Act*, *1983* or a predecessor Act;

"plan" includes the pension plan established under the *Teachers' Superannuation Act*, *1983* and any predecessor Act.

Payment of inflation adjustment

(3) The annual amount of pension payable to a person from the pension fund shall, commencing with the year when payment of the pension is to commence and in each subsequent year that the pension continues to be payable, be adjusted for inflation by multiplying the annual amount of the pension by the accumulated adjustment ratio for the pension of the person for that year, and the amount by which the pension thus adjusted exceeds the annual amount of pension before the adjustment in each year shall be paid to the person entitled to receive the pension for which it is calculated at the same times, in the same manner and subject to the same terms and conditions as apply to the pension in respect of which it is paid.

Conditional inflation adjustment for post-2009 credit

(3a) Notwithstanding subsections (1), (2) and (3), but subject to subsection (3b), benefits payable in respect of credit accrued under the pension plan for periods after 2009 shall only be adjusted for inflation under this section to the extent that sufficient funds are available to provide for such adjustments without creating a going concern unfunded liability. (Last amended October 9, 2008 – Effective January 1, 2009)

50% guaranteed inflation adjustment for post-2009 credit

(3b) Benefits payable in respect of credit accrued under the pension plan for periods after 2009 shall be adjusted for inflation under this section such that the adjustment made each year is not less than one half of the adjustment that would have been made for the year in accordance with this section as it read on December 31, 2008. (Last amended October 9, 2008 – Effective January 1, 2009)

Inflation adjustment for benefits payable after 2011

(3c) Revoked. (Last amended September 17, 2013 – Effective January 1, 2014)

0% guaranteed inflation adjustment for post-2013 credit

(3d) Notwithstanding subsection (3b), benefits payable in respect of credit accrued under the pension plan for periods after 2013 may be further adjusted for inflation under this section such that the total adjustment made each year is less than one half of the adjustment that would have been made for the year in accordance with this section as it read on December 31, 2008. (Last amended September 17, 2013 – Effective January 1, 2014)

Determination of inflation adjustment for post-2009 and post-2013 credit

(3e) For purposes of subsections (3a), (3b) and (3d), the inflation adjustments for benefits payable each year, in respect of credit accrued under the pension plan for periods after 2009 and after 2013 respectively, shall be determined by the co-sponsors of the pension plan, the Executive of the Ontario Teachers' Federation and the Minister of Education. (Last amended September 17, 2013 – Effective January 1, 2014)

Ratio not to apply

(4) The ratio determined for the year 1990 under the *Superannuation Adjustment Benefits Act* does not apply to a pension to which this section applies.

Effect of re-employment

(5) For the purpose of determining an accumulated adjustment ratio for benefits that commence to be paid on or after May 10, 2007, for members who cease to be employed in education on or after September 1, 1995:

(a) the last school year in which the member accumulated more than ten days of credited service during the period from January 1, 1997 onward, or, if the member did not accumulate more than ten days of credited service in a school year during this period, then

(b) the last school year in which the member accumulated more than twenty days of credited service during the period from September 1, 1990 to December 31, 1996,

is deemed to be the last year for which the member has credit in the pension plan. (Last amended December 21, 2007 – Effective May 10, 2007)

(6) Revoked. (Last amended July 19, 2007 – Effective May 10, 2007)

B. CPP Reduction

CPP reduction for pensions

81. (1) If a member has contributed to the *Canada Pension Plan* or the *Quebec Pension Plan*, the amount of the member's retirement pension, full disability pension or partial disability pension shall be reduced by the amount calculated under subsection (3).

Commencement, retirement pension

(2) A reduction of a member's pension shall apply with respect to pension payments due the month after the earlier of,

(a) the month in which the member reaches sixty-five years of age; or

(b) the month in which the first instalment of the member's disability pension, if any, under the *Canada Pension Plan* or the *Quebec Pension Plan* is due.

Amount of reduction

(3) The amount of the reduction in an annual pension payable for periods on or after January 1, 1997 and prior to January 1, 1999 is calculated using the formula,

0.0068 x A x B,

and the amount of the reduction in an annual pension payable for periods on or after January 1, 1999 and prior to January 1, 2002 is calculated using the formula,

0.0060 x A x B,

and the amount of the reduction in an annual pension payable for periods on or after January 1, 2002 is calculated using the formula,

0.0045 x A x B

in which,

"A" is the lesser of,

(a) the member's average salary, and

(b) the amount determined under subsection (4), and

"B" is the number of years of the member's credited service for employment on or after the 1st day of January, 1966 in respect of which the member made contributions under the *Canada Pension Plan* or the *Quebec Pension Plan*. (Last amended April 2, 2001 – Effective April 1, 2001)

(3a) For pension instalments due on or after January 1, 1997, the amount of the reduction in annual pension, for participation in the *Canada Pension Plan* or the *Quebec Pension Plan*, of a member, or a survivor of a member, calculated under Schedule 1 of the *Teachers' Pension Act* or a predecessor act, is recalculated substituting 0.0068 for 0.007 in the formula used to calculate the reduction, but the amount of the reduction to provide for a higher survivor pension will not be recalculated. (Last amended February 20, 1997 - Effective January 1, 1997)

(3b) For pension instalments payable for periods on or after January 1, 1999, the amount of the reduction in annual pension, for participation in the *Canada Pension Plan* or the *Quebec Pension Plan*, of a member, or a survivor of a member, calculated under Schedule "1" of the *Teachers' Pension Act* or a predecessor act, is recalculated substituting 0.0060 for 0.0068 in the formula used to calculate the reduction, but the amount of the reduction to provide for a higher survivor pension will not be recalculated. (Last amended May 27, 1998 - Effective June 1, 1998)

(3c) For pension instalments payable for periods on or after January 1, 2002, the amount of the reduction in annual pension, for participation in the *Canada Pension Plan* or the *Quebec Pension Plan*, of a member, or a survivor of a member, calculated under Schedule 1 of the *Teachers' Pension Act* or a predecessor act, is recalculated substituting 0.0045 for 0.0060 in the formula used to calculate the reduction, but the amount of the reduction to provide for a higher survivor pension or a 10 year guaranteed pension will not be recalculated. (Last amended September 8, 2006 – Effective April 1, 2001)

Average YMPE

(4) The amount is the average of the Year's Maximum Pensionable Earnings for the year in which the member ceases to be employed in education and for each of the two preceding years, except that for an annual pension payable for periods on or after January 1, 2002 the amount is the average of the Year's Maximum Pensionable Earnings for the year in which the member ceases to be employed in education and for each of the four preceding years. (Last amended April 2, 2001 – Effective April 1, 2001)

Idem

(4a) For pension instalments payable for periods on or after January 1, 2002, the amount of the reduction in annual pension, for participation in the *Canada Pension Plan* or the *Quebec Pension Plan*, of a member, or a survivor of a member, calculated under Schedule 1 of the *Teachers' Pension Act* or a predecessor act, is recalculated using the five year average of the Year's Maximum Pensionable Earnings, as described in subsection (4), in the formula used to calculate the reduction, but the amount of the reduction to provide for a higher survivor pension or a 10 year guaranteed pension will not be recalculated. (Last amended September 8, 2006 – Effective April 1, 2001)

(5) Where a reduction is applied as provided in subsection 81(2)(b) and the member's *Canada Pension Plan* or *Quebec Pension Plan* disability pension is terminated before the member reaches sixty-five years of age, the reduction will be suspended, effective the month following the month of the termination, until the payment of pensions due the month after the earlier of,

(a) the month in which the member reaches sixty-five years of age; or

(b) the month in which the first instalment of the member's disability pension, if any, under the *Canada Pension Plan* or the *Quebec Pension Plan* is due.

(Last amended April 15, 1998 - Effective January 1, 1997)

C. Payment of Benefits

Application for benefit

82. (1) No benefit under the plan shall be paid before the administrator receives an application for it in the form provided by the administrator.

Election or direction

(2) An election available under the plan or a direction that may be given to the administrator shall be made or given in the form provided by the administrator.

Repayment

82a. A person who receives payments to which the person is not entitled shall repay the amounts so received, together with interest thereon calculated at the standard interest rate. (Last amended May 5, 2010 – Effective January 1, 2002)

Multiple pensions

83. No member is entitled to payment of more than one pension under the plan during the same month or other payment period in respect of the member's credited service.

Commutation of pensions

84. The administrator shall pay the commuted value of a pension, other than a disability pension or dependent child pension, in accordance with subsections 44 (7) and (7.1), or clause 50 (1) (a), of the *Pension Benefits Act.* (Last amended January 15, 2014 – Effective January 1, 2014)

Shortened life expectancy

84a. (1) Upon application by a member, the administrator shall pay the commuted value of a pension or deferred pension in such circumstances of shortened life expectancy as may be prescribed under subsection 49(2) of the *Pension Benefits Act*, provided the prescribed conditions under that Act are satisfied. (Last amended June 17, 2003 – Effective March 3, 2000)

Amount

(2) Subject to subsections (3) and (4), the amount payable under subsection (1) shall be determined in accordance with the *Pension Benefits Act* and accepted actuarial practice. (Last amended September 8, 2006 – Effective March 3, 2000)

Idem

(3) The commuted value of a deferred pension shall be determined as if the member had a normal life expectancy. (Last amended June 17, 2003 – Effective March 3, 2000)

Idem

(4) The commuted value of a pension shall be determined based on the member having a shortened life expectancy. (Last amended June 17, 2003 – Effective March 3, 2000)

Application void

(5) An application made under this section is void if the member dies before the benefit under subsection (1) is paid. (Last amended June 17, 2003 – Effective March 3, 2000)

Deemed cessation

(6) A member who makes an application under this section and who satisfies the evidentiary requirements of the *Pension Benefits Act* is deemed to have ceased employment in education for the purposes of membership in the pension plan, on the date the member's physician signs the statement required under the *Pension Benefits Act*. (Last amended June 20, 2012 – Effective January 1, 2007)

(7) If a direction under section 70 regarding a "new spouse" has been delivered to the administrator, the benefit under subsection 84a (1) shall not be paid unless the "new spouse" provides to the administrator a signed statement waiving any entitlement under section 70. (Last amended June 20, 2012 – Effective March 3, 2000)

Deductions from pensions

85. (1) Despite section 65 of the *Pension Benefits Act*, a person receiving a pension under the pension plan or an allowance under a predecessor Act may direct the administrator to deduct and remit from the pension or allowance on behalf of the person,

(a) premiums payable under the Ontario Health Insurance Plan by the person;

(b) premiums for life, medical, dental or health-related insurance payable by the person under a contract of group insurance approved by the administrator for the purpose of this section; and

(c) membership fees payable to The Retired Teachers of Ontario (RTO)/Les enseignantes et enseignants retraités de l'Ontario (ERO). (Last amended September 8, 2006 – Effective January 1, 1999)

Conditions

(2) The administrator may impose and require compliance with such conditions as the administrator considers appropriate before acting upon a direction.

Revocation of direction

(3) A person making a direction may revoke it by written notice to the administrator.

Termination of pension

86. Every pension terminates as of the end of the month in which the event that terminates the pension occurs.

No assignment etc.

86a. No pension or benefit shall be capable of being assigned, charged, anticipated, given as security or surrendered except as provided for in the *Pension Benefits Act*. (Last amended September 8, 2006 - Effective January 1, 1992)

D. Administration

Appeal of decision

87. (1) A person who is aggrieved by a decision of an employee of the administrator respecting the person's entitlement to, or the amount of, a pension benefit may appeal the decision to a committee of the administrator designated for the purpose of this section and the committee of the administrator shall determine the appeal. (Last amended April 15, 1998 - Effective October 1, 1997)

Idem

(2) An appeal shall be made in accordance with the procedures established by the administrator.

Determination of commuted value

88. The commuted value of a benefit shall not be less than the amount calculated in accordance with the *Recommendations for Minimum Transfer Values of Pensions* published from time to time by the Canadian Institute of Actuaries and shall be calculated using the rate of interest specified by, and such actuarial tables as may be adopted by, the administrator.

Calculation of interest

89. (1) Unless otherwise indicated, interest shall be calculated at the standard interest rate. For a given year, the standard interest rate attributable to a transaction is a rate equal to the average yield for the 12 month period, ending on the 31st day of October in the preceding calendar year, of five-year personal fixed term chartered bank deposit rates as determined from the Canadian Socio-Economic Information Management (CANSIM) Series V 122515 published monthly in the Bank of Canada Review and interest is compounded annually each December 31st. (Last amended September 8, 2006 - Effective September 1, 2006)

Idem, transitional

(2) For 1990 the standard interest rate attributable to a transaction is the weighted average effective annual yield of the debentures held by the Teachers' Superannuation Fund under the *Teachers' Superannuation Act, 1983* as at the 31st day of December, 1989.

Idem, transitional

(3) Interest payable in respect of a period before the 31st day of December, 1989 shall be calculated up to that date at the applicable rate in effect under the *Teachers' Superannuation Act, 1983* and at the applicable standard rate in effect thereafter. (Last amended June 1, 1995 - Effective June 1, 1995)

Interest on contributions

(4) Interest credited under the pension plan on contributions shall be calculated in accordance with the *Pension Benefits Act* and credited to the member as at the 31st day of December in each year.

Interest on lump sums

(5) Interest is payable in accordance with the *Pension Benefits Act* on a lump sum payment of the commuted value of a benefit from the effective date of the determination of the commuted value to the day before the lump sum is paid. (Last amended February 28, 1992 - Effective January 1, 1992)

Report re employment in education

90. (1) Revoked. (Last amended May 6, 2010 – Effective September 1, 2012)

Failure to report

(2) Revoked. (Last amended May 6, 2010 – Effective September 1, 2012)

Prior refund re multiple pensions

91. Revoked. (Last amended April 15, 1998 - Effective January 1, 1992)

PART IX
PURCHASE OF CREDIT FOR SERVICE

A. General

Purchases, general

92. (1) A member may purchase or receive a maximum of five years of credited service,

(a) under sections 10 (2a), 10 (2f), 10 (4), 12a, 94 and 96, and

(b) for any unpaid portion of a period under subsections 10 (2e) and 10 (2g) in respect of which compensation is prescribed in accordance with Regulation 8507 (1) (a) of the *Income Tax Act* (Canada),

for absences after the 31st day of December, 1990.

(Last amended July 21, 2014 – Effective September 1, 2014)

Idem

(2) Subject to section 28, a member may not purchase credited service for a period of time for which the member has credited service under the plan. (Last amended December 20, 1999 - Effective September 1, 1998)

Past service pension adjustment

92a. (1) The purchase of credited service by a member who requires certification of a Past Service Pension Adjustment under the *Income Tax Act* (Canada) is not complete until the administrator has obtained a certificate from the Minister of National Revenue. (Last amended February 28, 1992 - Effective January 1, 1992)

Idem

(2) Credited service in respect of which certification has been obtained from the Minister of National Revenue shall not be included in the credited service maximums in subsections 92 (1) and 94 (15). (Last amended February 28, 1992 - Effective January 1, 1992)

Purchases, transitional

93. (1) The purchase of credited service by a member who delivers a completed application to the administrator before the 1st day of January, 1992 shall be made in accordance with sections 9, 10, 36, 45 and 48 of the *Teachers' Superannuation Act, 1983* and with sections 7 to 14 of Ontario Regulation 423/84 as those sections read on the 31st day of December, 1989.

Idem

(2) The *Teachers' Superannuation Act, 1983* as it reads on the 31st day of December, 1989 continues to apply for the purpose of determining a purchase of credited service under subsection (1).

Idem

(2a) Despite subsections (1) and (2) a member who has delivered a completed application to the administrator before the 1st day of January 1992 who fails to pay all of the contributions required to complete the purchase of credited service applied for before the 31st day of December, 1994 shall receive credited service in an amount based upon the contributions plus interest which he or she has actually made. (Last amended June 28, 1990 - Effective June 28, 1990)

Transitional

(3) Sections 95, 96 and 99 apply with respect to a member's application before the 1st day of January, 1992 in the circumstances described in those sections.

End of transitional period

(4) A person is not eligible after the 31st day of December, 1994 to make or complete a purchase of credited service to which a predecessor Act applies.

Interest rate

(5) For the purpose of a purchase of credited service described in subsection (1) for a period on or after the 1st day of January, 1990, references to the applicable rate of interest in Ontario Regulation 423/84 shall be read as if they were references to the standard interest rate.

Idem

(6) Subsection 89 (3) (calculation of interest, transitional) does not apply with respect to a purchase of credited service described in subsection (1) for a period before the 1st day of January, 1990.

B. For Employment in Education

Absences

94. (1) In this section,

"absence" means either an employer-approved leave of greater than five consecutive school days or a break in service;

"break in service" means a period when a member is not employed in education or is absent from employment without the employer's consent.

(Last amended July 21, 2014 – Effective September 1, 2014)

Purchase re break in service

(2) A member may purchase credited service for a break in service approved by the administrator for a period of disability immediately following a period of employment in education, where the member ceases to be employed in education as a result of the disability and meets the definition of "disabled" as defined under Regulation 8500 (1) of the *Income Tax Act* (Canada). (Last amended August 4, 2011 – Effective December 2, 2010)

Application for purchase re break in service

(2a) A member shall apply to purchase credited service for a break in service within two years after the date when the member ceases, as a result of the disability, to be employed in education. (Last amended August 4, 2011 – Effective December 2, 2010)

Idem

(2b) The administrator shall accept an application to purchase credited service for a break in service that is made after the time described in subsection (2a) if the administrator is satisfied,

(a) that the delay in making the application resulted from a delay in diagnosing the disability; or

(b) that the member was unable, because of the effects of the disability, to make the application within the time described in subsection (2a).

(Last amended August 4, 2011 – Effective December 2, 2010)

Proof of disability

(2c) No application to purchase credited service for a break in service shall be considered by the administrator until the administrator has received the certificate of a medical doctor licensed in Ontario certifying that the applicant became mentally or physically disabled while employed in education and indicating the nature and degree of the disability. (Last amended August 4, 2011 – Effective December 2, 2010)

Ongoing proof of disability

(2d) The administrator may at any time require a member who has applied to purchase credited service for a break in service to furnish evidence, in such form as the administrator directs, that the member was disabled, as defined under Regulation 8500 (1) of the *Income Tax Act* (Canada), throughout the break in service. A member's entitlement to purchase credited service for a break in service shall terminate if the administrator is not satisfied that the member is disabled. (Last amended August 4, 2011 – Effective December 2, 2010)

Limit

(2e) Despite subsections 92 (1) and 92a (2), no member may purchase credited service for a break in service in respect of a period that is after the fifth anniversary of the start of the break in service. (Last amended August 4, 2011 – Effective December 2, 2010)

Application

(3) A member may apply to purchase credited service for an absence by notifying the administrator of the member's intent to purchase. (Last amended December 30, 2009 - Effective September 1, 2010)

(3a) A member may only purchase credit for an absence for service outside of Canada, where that service was arranged by the member's employer, if the purchase is made on an ongoing basis during the period of the leave. (Last amended April 2, 2001 – Effective September 1, 2001)

Purchase re absence

(4) A member may purchase credited service for all or part of an absence. (Last amended April 2, 2001 – Effective September 1, 2001)

(4a) Despite subsection (4) a member on an absence from other than a full-time position is entitled to purchase credit under this section only for the time that, in the opinion of the administrator, the member would have been employed for compensation but for the absence. (Last amended December 30, 2009 - Effective September 1, 2010)

Idem

(5) No member may purchase credited service for an absence for the purpose of service in political office if the member is contributing to or is entitled to a pension under another registered pension plan other than the *Canada Pension Plan* or the *Quebec Pension Plan* in respect of the service.

Amount of contribution

(6) A member who purchases credited service on a monthly basis during the period of the absence shall contribute,

(a) the required contributions, based on the pensionable salary that the member's employer advises the administrator that the member would have earned, if the member were not absent, and as if the member were not required to contribute to the *Canada Pension Plan* or to the *Quebec Pension Plan*; and

(b) for any late monthly payments, interest thereon calculated at the standard interest rate from the date each contribution would have been made and ending on the day before the payment is made. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(6a) A member who purchases credited service other than on a monthly basis during the period of the absence shall contribute, on or before the end of the month in which the fifth anniversary of the end of the absence occurs, a lump sum which is equal to,

(a) the required contributions, based on the pensionable salary that the member's employer advises the administrator that the member would have earned, if the member were not absent, and as if the member were not required to contribute to the *Canada Pension Plan* or to the *Quebec Pension Plan*; and

(b) interest thereon calculated at the standard interest rate from the date each contribution would have been made and ending on the day before the payment is made. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(6b) Despite subsections (6) and (6a), a member who purchases credited service on or after the 1st day of September, 2010, shall contribute, on or before the end of the month in which the fifth anniversary of the end of the absence occurs,

(a) the required contributions, based on the pensionable salary as determined in accordance with section 14, and as if the member were not required to contribute to the *Canada Pension Plan* or to the *Quebec Pension Plan*; and

(b) interest thereon calculated at the standard interest rate from the first day of the month following the month in which the end of the absence occurs and ending on the day before the payment is made. (Last amended December 30, 2009 - Effective September 1, 2010)

Transition

(6c) Subsection (6b) shall only apply where the member has not previously completed payment for the purchase of the entire eligible absence period. (Last amended October 19, 2012 - Effective September 1, 2010)

Transition: Interest calculation for the portion of an absence previously considered complete

(6d) Despite subsections (6b) and (6c), where, in the opinion of the administrator, payment was considered to be complete as of the 1st day of September, 2010 for a portion of the entire eligible absence period, the interest applicable to that portion of the absence shall be calculated in accordance with subsection (6) (b) or (6a) (b). (Last amended October 19, 2012 - Effective September 1, 2010)

Due date

(7) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Return date

(8) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Matching contributions for purchases

(9) A contribution under subsection (6), (6a) or (6b) is considered to be a required contribution for the purpose of sections 25 and 26, and the required matching contribution shall be paid by the employer making the employer contributions in respect of the member immediately before the absence. (Last amended December 30, 2009 - Effective September 1, 2010)

Idem

(9a) Despite subsection (9), where a member was employed by a designated private school or a designated organization immediately before the absence and the employer is dissolved or in receivership at the time of the member's application to purchase credited service, the required matching contribution for a purchase of credited service for a break in service shall be paid by the member. (Last amended August 4, 2011 – Effective December 2, 2010)

Amount of contribution, delayed election

(10) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Advance payments

(11) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(12) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

No refund

(13) A member who makes contributions for an absence is not entitled to a refund of those contributions at any time, except to the extent that the member's purchase is not completed in accordance with subsection 92a.(1). (Last amended April 2, 2001 – Effective September 1, 2001)

Proportionate credit

(14) A member who does not complete payment for the full period of an absence shall receive proportionate credit. (Last amended April 2, 2001 – Effective September 1, 2001)

Maximum purchase, birth or adoption

(15) Despite subsection 92 (1) a member may also purchase a maximum of three years of credited service in respect of absences after the 31st day of December, 1990 taken at the birth or adoption of the member's children. (Last amended April 2, 2001 – Effective September 1, 2001)

Idem

(16) For the purposes of subsection (15) a member may purchase a maximum of one year of credited service for an absence taken at the birth or adoption of the member's child or if more than one child is born or adopted at once, in respect of one such birth or adoption. (Last amended April 2, 2001 – Effective September 1, 2001)

Eligibility for purchase

(17) Revoked. (Last amended May 5, 2010 – Effective September 1, 2009)

Lump sum payments

(18) Revoked. (Last amended June 28, 1990 - Effective June 28, 1990)

End Date

(19) For the purposes of this section, the end of an absence occurs on the last day that, in the opinion of the administrator, the member could have worked if not for the absence. (Last amended December 30, 2009 - Effective September 1, 2010)

End date

(20) Despite subsection (19), the end of an absence for a member who purchases credited service for a break in service shall be no later than the fifth anniversary of the start of the break in service. (Last amended October 19, 2012 - Effective September 1, 2010)

Transitional rules

94a. (1) A member whose absence ended prior to September 1, 2001 and who,

(a) returned to employment in education, following the absence, on or after September 1, 1996 but prior to September 1, 2001, or

(b) did not return to employment in education, following the absence, prior to September 1, 2001,

shall have until December 31, 2004 to complete a purchase of the absence. (Last amended April 2, 2001 – Effective September 1, 2001)

(2) A member who completes a purchase in accordance with subsection (1) shall contribute a lump sum on a contributions plus interest basis calculated in accordance with subsection 94 (6a). (Last amended April 2, 2001 – Effective September 1, 2001)

(3) A member whose absence ended prior to September 1, 2001 and who returned to employment in education, following the absence, prior to September 1, 1996 shall have until December 31, 2002 to complete a purchase of the absence by notifying the administrator by that date and by making the purchase within 90 days of the provision of a purchase cost quotation. (Last amended April 2, 2001 – Effective September 1, 2001)

(4) A member who completes a purchase in accordance with subsection (3) shall contribute a lump sum which is, on the date of the purchase, equal to the actuarial cost of the expected pension improvement. (Last amended April 2, 2001 – Effective September 1, 2001)

(5) This section shall only apply where the member has not previously completed a purchase of the absence, in which case the member may complete the purchase in accordance with this section without having to meet the requirements of subsection 94 (3) as it read on August 31, 2001. (Last amended April 2, 2001 – Effective September 1, 2001)

Transitional application deadline re: breaks in service

94b. (1) A member may purchase credited service for a break in service in accordance with subsection 94 (2) as it read on the 1st day of December, 2010, if the member delivers to the administrator a completed application to purchase credit, in the form provided by the administrator, including all supporting documents, by the 31st day of August, 2011. (Last amended August 4, 2011 – Effective December 2, 2010)

Transitional payment deadline re: breaks in service

(2) Despite subsections 94 (6) to (6c), a member described in subsection (1) shall have until the 30th day of December, 2011 to complete payment of the amount required under subsection 94 (6b). (Last amended August 4, 2011 – Effective December 2, 2010)

Absence during a school year

95. (1) Revoked. (Last amended June 20, 2012 – Effective January 1, 2012)

Amount of contribution

(2) Revoked. (Last amended June 20, 2012 – Effective January 1, 2012)

Interest payable

(3) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Status of contributions

(4) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Due date

(5) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Required contribution

(6) Revoked. (Last amended April 2, 2001 – Effective September 1, 2001)

Absence re strike or lockout

96. (1) A member may contribute for days that the member is absent from employment in education for the purpose of participating in a legal strike or because of a lockout. (Last amended April 2, 2001 – Effective September 1, 2001)

Amount of contribution

(2) The member shall contribute the amount of the member's required contribution for each day of absence plus the amount of the corresponding employer's contribution.

Interest payable

(3) The member shall pay interest, calculated at the standard rate, on any contribution received by the administrator more than one month after the end of the absence. (Last amended June 1, 1995 - Effective June 1, 1995)

For former membership

97. (1) This section applies with respect to a member who previously received a refund of required contributions under the pension plan. (Last amended April 2, 2001 – Effective September 1, 2001)

Eligibility

(2) No member may purchase credited service under this section until the member has accumulated, through employment in education, seventy days of credited service in one school year after returning to active membership.

Election within one year

(3) A member who elects to purchase credited service on or before the later of the first anniversary of the member's return to active membership and the 1st day of January, 1994 shall contribute the amount previously refunded together with interest thereon from the date the refund was made to the first day of the month in which the contribution is paid, calculated at the standard interest rate in effect on the date the refund was made. (Last amended April 2, 2001 – Effective September 1, 2001)

Limit

(4) No member may purchase more days of credited service under subsection (3) than the number of days in respect of which the member received the refund.

Due date

(5) A contribution under subsection (3) shall be paid as a lump sum before the later of the third anniversary of the member's return to active membership and the 1st day of January, 1995.

Required contribution

(6) A member who elects to purchase credited service after the deadline referred to in subsection (3) or who fails to make the payment before the deadline in subsection (5) shall contribute a lump sum which is, on the date of the purchase, equal to the actuarial cost of the expected pension improvement.

Repurchase of credited service

97a. (1) A member referred to in section 37 who becomes re-employed in education for more than 20 days in one school year may purchase credited service in an amount not greater than the credited service in respect of which a transfer and refund were made under that section. (Last amended February 28, 1992 - Effective January 1, 1992)

Amount of contribution

(2) A member who elects to purchase credited service under subsection (1) shall contribute a lump sum equal to the greater of,

(i) the amounts transferred and refunded under section 37 together with interest thereon calculated at the standard rate from the day of the transfer or refund to the day before the payment is made; or

(ii) the actuarial cost, on the date of the purchase, of the expected pension improvement. (Last amended February 28, 1992 - Effective January 1, 1992)

Approved service outside Ontario

98. (1) Revoked. (Last amended December 20, 1999 - Effective January 1, 1992)

Idem

(2) Revoked. (Last amended December 20, 1999 - Effective January 1, 1992)

Limit

(3) Revoked. (Last amended February 28, 1992 - Effective January 1, 1992)

Amount of contribution

(4) Revoked. (Last amended December 20, 1999 - Effective January 1, 1992)

Transitional re designated private schools

99. (1) This section applies to an active member,

(a) who is employed in an organization designated under the *Teachers' Superannuation Act, 1983* or in a school within the meaning of section 1 of the *Education Act*;

(b) who was employed before the 1st day of September, 1986 in a private school designated under a predecessor of this Act;

(c) who was employed on the 1st day of September, 1986 and for at least twenty days during the school year beginning on that date in an organization designated under the *Teachers' Superannuation Act, 1983* or in a school within the meaning of section 1 of the *Education Act*; and

(d) who elected before the 1st day of September, 1986 to be excluded from the benefits and obligations of the predecessor Act.

Purchase

(2) An active member may purchase credited service in accordance with subsections 13 (4), (6) and (7) of Ontario Regulation 423/84 as they read on the 31st day of December, 1989, with necessary modifications, for past teaching service in a private school designated under a predecessor of this Act.

Idem

(3) No member is entitled to apply to purchase credited service under this section after the 31st day of December, 1991.

C. For other Employment

For war service

100. (1) Revoked. (Last amended September 8, 2006 – Effective December 31, 2006)

Idem

(2) Revoked. (Last amended September 8, 2006 – Effective December 31, 2006)

For teaching special subjects

101. (1) Revoked. (Last amended September 8, 2006 – Effective December 31, 2006)

Idem

(2) Revoked. (Last amended September 8, 2006 – Effective December 31, 2006)

For foreign service as an educator

102. (1) Revoked. (Last amended December 20, 1999 - Effective January 1, 1992)

Eligibility

(2) Revoked. (Last amended December 20, 1999 - Effective January 1, 1992)

Limit

(3) Revoked. (Last amended February 28, 1992 - Effective January 1, 1992)

Amount of contribution

(4) Revoked. (Last amended December 20, 1999 - Effective January 1, 1992)

For other employment, R.S.C. 1952, c. 148

103. (1) A member may purchase credited service in the pension plan for employment not otherwise described in this Part if the employment was pensionable service under another pension plan registered under the *Income Tax Act* (Canada). (Last amended April 2, 2001 – Effective September 1, 2001)

Transfer from other plan

(2) For service prior to January 1, 1992, all funds associated with the service under the other plan shall be transferred to the pension plan and applied to the cost of the member's expected benefit improvement. Where no funds remain in the other plan, the member is not entitled to purchase pre-1992 credited service under this section. (Last amended September 8, 2006 - Effective January 1, 1992)

Amount of contribution

(3) For service after December 31, 1991, the member shall contribute an amount equal to the actuarial cost of the expected benefit improvement. (Last amended June 29, 1994 - Effective January 1, 1992)

(4) If the amount transferred under subsection (2) is less than the actuarial cost of the expected benefit improvement, the member shall contribute a lump sum which, on the date of the purchase, is equal to the difference. (Last amended June 29, 1994 - Effective January 1, 1992)

D. Reciprocal Agreements

Reciprocal agreements

104. (1) The administrator may enter into an agreement with the authorized representative of another pension plan respecting the terms upon which persons may transfer benefits and contributions between that plan and the pension plan.

Idem

(2) A reciprocal agreement must provide that a person transferring benefits and contributions to the pension plan acquires a benefit under the plan based upon the actuarial cost of the expected benefit on the date of the transfer.

(3) If a reciprocal agreement provides that a person may elect to pay directly to the administrator part or all of the difference between the required amount and the amount transferred (the "shortfall"), and provides the administrator with the authority to establish a deadline by which a person must complete payment of the shortfall, a person who elects to pay the shortfall shall complete such payment on or before the end of the month in which the fifth anniversary of the date the application to transfer was received by the administrator occurs. (Last amended June 20, 2012 – Effective September 1, 2001)

Reciprocal agreements, transitional

105. (1) Subject to subsection (2), reciprocal agreements entered into before the 1st day of January, 1990 by the Teachers' Superannuation Commission under section 49 of the *Teachers' Superannuation Act, 1983* are continued and expire on the 31st day of December, 1996.

Idem

(2) Reciprocal agreements referred to in subsection (1) do not expire on the 31st day of December, 1996 if, before that date, the reciprocal agreement is amended to include a term described in subsection 104 (2) or if the agreement includes such a term.

E. Administration

Application for purchase

106. An application to purchase credited service shall be made in a form provided by the administrator and shall be delivered to the administrator.

Applicability

106a. (1) Subsections 11 (6) to (9), 14 (1a) to (1i), 15 (2b), 94 (4a), (6b), (6c) and (9), as they read on the 1st day of September, 2010 apply to members who cease to be employed in education before the 1st day of September, 2010. (Last amended August 4, 2011 – Effective September 1, 2010)

Idem

(2) Subsections 94 (2) to (2e) and section 94b, as they read on the 2nd day of December, 2010 apply to members who cease to be employed in education before the 2nd day of December, 2010. (Last amended August 4, 2011 – Effective December 2, 2010)

Idem

(3) Section 84, as it read on the 1st day of January, 2014, applies to members who cease to be employed in education before the 1st day of January, 2014. (Last amended January 15, 2014 – Effective January 1, 2014)

Employed in education

106b. For a member who ceases to be employed in education before, on or after the 1st day of January, 2011, credited service purchased in accordance with subsection 94 (2) in respect of a period on or after the 1st day of January, 2011 is considered to be employment in education for the purposes of determining benefits. (Last amended August 4, 2011 – Effective January 1, 2011)

Effective date of purchase

107. A purchase of credited service is effective on the day the payment in relation to the purchase is made. (Last amended April 2, 2001 – Effective September 1, 2001)

Purchase of partial credit

108. A member who is entitled to purchase credited service for a period of employment or an absence may purchase credited service for a part of the employment or absence. (Last amended April 2, 2001 – Effective September 1, 2001)

Contribution by spouse, etc.

109. A member who dies before completing a purchase of credited service shall receive credited service in an amount based upon the contributions plus interest which he or she has made. (Last amended June 29, 1994 - Effective January 1, 1992)

Idem

(2) Revoked. (Last amended June 29, 1994 - Effective January 1, 1992)

Lump sum payments

109a. A lump sum payment under this Part may consist of,

(a) a partial payment by means of a transfer permitted under the *Income Tax Act* (Canada); and

(b) a second payment of the balance of the amount required to pay for the credited service being purchased by the lump sum. (Last amended June 28, 1990 - Effective June 28, 1990)

Eligibility for purchase

109b. A member is not eligible to purchase credited service while receiving a pension. (Last amended May 5, 2010 – Effective September 1, 2009)

PART X
ADMINISTRATION OF THE PLAN

A. General

Extension of time

110. The administrator may extend any time limit under the pension plan before or after the expiration of the time if the administrator is satisfied that there are reasonable grounds for the extension, and may give such directions as the administrator considers appropriate consequent upon the extension.

Provision of information

111. (1) The administrator shall provide to each member of the pension plan the information and documents required under this Act or any other Act.

Idem, to administrator

(2) A member, a person who applies for, or receives, a pension, refund or other payment from the pension fund, a board of education or an employer of a member shall provide the administrator, upon request, with such information as the administrator may require to administer the pension plan.

(2a) The administrator may conduct an audit of the records of a board of education or an employer for the purpose of validation of information required for administration of the pension plan. (Last amended June 20, 2012 – Effective January 1, 2012)

Idem, to members

(3) The administrator shall provide within a reasonable time to a member, upon written request, all information relating to the member's contributions and entitlements under the pension plan.

Fiscal year

112. The fiscal year of the pension plan is the twelve-month period that begins on the 1st day of January.

Actuarial calculations

113. Actuarial calculations and determinations required under the pension plan shall be made using such actuarial assumptions, principles and methods as may be required or adopted by the administrator.

B. Pension Fund

Payments from pension fund

114. A payment required under the pension plan must be paid from the pension fund.

Requirement to invest

115. Moneys in the pension fund that are not required to be paid out must be invested to meet the obligations of the pension plan.

C. Surplus and Deficiency

Actuarial gain

116. Revoked. (Last amended January 24, 1992 - Effective January 1, 1992)

Surplus

117. Revoked. (Last amended January 24, 1992 - Effective January 1, 1992)

Requirement to contribute to deficit

118. Revoked. (Last amended November 15, 1993 - Effective November 15, 1993)

PART XI
DESIGNATION OF PRIVATE SCHOOLS AND ORGANIZATIONS

Private schools

119. (1) The Partners' Committee by notice to the administrator may designate a school, college, academy or other educational institution as a designated private school for the purpose of the pension plan,

(a) if it gives instruction equivalent to that given in elementary or secondary schools in Ontario;

(b) if it is not supported in any way by school taxes or by provincial or municipal grants; and

(c) if it meets the criteria set out in subsection (3). (Last amended June 1, 1995 - Effective January 1, 1992)

Organizations

(2) The Partners' Committee by notice to the administrator may designate an organization as a designated organization for the purpose of the pension plan,

(a) if it provides services related to elementary or secondary education; and

(b) if it meets the criteria set out in subsection (3). (Last amended June 1, 1995 - Effective January 1, 1992)

Criteria

(3) The school, college, academy or other educational institution or the organization,

(a) must not be operated for profit or gain and any profits must be used to carry out its objects; and

(b) by its governing body must undertake in writing to make the reports described in subsection (5), to pay the amounts described in subsection (6), and to perform all administrative functions required of an employer for the purposes of the pension plan.

Effective date of designation

(4) A notice of designation under subsection (2) shall specify the effective date. (Last amended April 15, 1998 - Effective January 1, 1992)

Reports

(5) The administrator may require a designated private school or designated organization to make annual reports for the purpose of the administration of this Act and the pension plan and to supply such information as to its constitution, operations, teaching staff and otherwise as the administrator may require.

Payments under the plan

(6) A designated private school or designated organization shall, in accordance with the pension plan, make the employer contributions and collect and remit the contributions by its employees who become active members of the pension plan.

Past service in prescribed schools and institutions

119a.(1) Revoked. (Last amended June 1, 1995 - Effective January 1, 1992)

(2) Revoked. (Last amended June 1, 1995 - Effective January 1, 1992)

Termination of designation

120. (1) Revoked. (Last amended June 1, 1995 - Effective January 1, 1992)

Grounds

(2) The Partners' Committee by notice to the administrator may terminate the designation of a designated private school or a designated organization,

(a) if the designated private school or designated organization, by its governing body, has requested the termination of the designation;

(b) if the designated private school or designated organization is not complying with its undertakings; or

(c) if there is a change in the objects or mode of carrying out the objects of the designated private school or designated organization. (Last amended June 1, 1995 - Effective January 1, 1992)

Notice and submissions

(3) The Partners' Committee shall give notice of the termination to the governing body and to the employees of the designated private school or designated organization who are active members of the pension plan. (Last amended June 1, 1995 - Effective January 1, 1992)

Effective date

(4) A notice of termination of designation shall specify the effective date. (Last amended June 1, 1995 - Effective January 1, 1992)

Effect of termination of designation

(5) Upon the termination of a designation, the employees of the private school or the organization cease to be eligible to be active members of the pension plan.

Idem

121. (1) Revoked. (Last amended December 21, 2007 - Effective September 1, 2008)

Effective date

(2) Revoked. (Last amended December 21, 2007 - Effective September 1, 2008)

Designations, transitional

122. The designation of a designated private school, designated organization and a designated capacity under the *Teachers' Superannuation Act, 1983* that is in effect on the 31st day of December, 1989 shall have effect as a designation made under this Part.

PART XII-ONTARIO TEACHERS' PENSION PLAN BOARD (REVOKED)

(Last amended January 24, 1992 - Effective January 1, 1992)

ONTARIO TEACHERS' PENSION PLAN

AMENDMENT TO THE ONTARIO TEACHERS' PENSION PLAN

This is an agreement

B E T W E E N

Her Majesty the Queen
in right of the Province of Ontario
as represented by the Minister of Education

(the "Minister")

and

The Ontario Teachers' Federation
as represented by its Executive

(the "OTF")

WHEREAS the Minister and the OTF (collectively the "Partners") have established a partnership to administer the Ontario Teachers' Pension Plan and Fund, pursuant to an agreement between the Partners dated July 15, 1991 (the "Partners' Agreement"); and

WHEREAS paragraph 104 of the Partners' Agreement provides that the Partners may at any time agree to change any of the provisions of the Ontario Teachers' Pension Plan being Schedule 1 to the *Teachers' Pension Act*, as amended (the "Plan"); and

WHEREAS the Plan was most recently amended on September 22, 2015;

WHEREAS the Partners wish to amend the Plan further;

NOW THEREFORE the Partners agree as follows:

WIND UP

1. Section 118a is added to the Plan:

Wind Up

118a. If the pension plan is wound up within the meaning of the *Pension Benefits Act*, the assets of the pension fund shall first be used to pay or satisfy properly incurred liabilities to creditors, following which the remaining assets of the pension fund shall be used to pay or satisfy the accrued benefit entitlements of members, former members, retired members and any other persons entitled to a benefit under the pension plan in respect of a member, former member, or retired member before any other distribution is made.

Effective on the date this agreement is countersigned by both Partners.

Current - Partners’ Agreement - 03-06-15.pdf

This is an AGREEMENT

BETWEEN:

Her Majesty the Queen
in right of the Province of Ontario
represented by the Minister of Education and Training
("the Minister")

and

The Ontario Teachers' Federation
represented by its Executive
("the OTF")

These are the terms to which the Minister and the OTF agree;

Introduction

1. The Minister and the OTF have agreed to establish a partnership for the purpose of designing and administering the Ontario Teachers' Pension Plan and managing the Ontario Teachers' Pension Fund.

2. It is the intention of the partners that this partnership will start on the 1st day of January, 1992.

3. In this agreement,

(a) the Minister and the OTF will be referred to as the "partners" or the "partnership",

(b) the Ontario Teachers' Pension Plan Board continued by the *Teachers' Pension Act, 1989* will be referred to as "the Board",

(c) the Ontario Teachers' Pension Plan continued by the *Teachers' Pension Act, 1989* will be referred to as the "pension plan" or the "plan" and,

(d) the Ontario Teachers' Pension Fund continued by the *Teachers' Pension Act, 1989* to provide benefits in respect of the pension plan will be referred to as the "pension fund" or the "fund".

4. The partnership established by this agreement is intended to govern all aspects of the plan and the fund. Wherever this agreement differs with any law, that part of the agreement is of no effect but the rest of the agreement continues to govern the plan and the fund.

5. The Minister agrees to do everything possible to make sure that the Teachers' Pension Plan Board will not be considered a Scheduled Agency under the Guidelines of the Management Board of Cabinet.

6. The Minister agrees to do everything possible to have subsection 43(3) of Ontario Regulation 708/87 amended to provide that the pension fund is no longer exempted from the application of subsection 23(1) of the *Pension Benefits Act.*

7. The Minister may designate one or more persons to act in the Minister's place under this agreement. The OTF may designate one or more persons to act in its place under this agreement.

Role of the partners

8. The partners will be responsible for designing the plan structure, setting the benefits of the plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, making changes to the plan, this agreement or other plan documents, deciding whether or not to file a valuation more frequently than required by the *Pension Benefits Act*, appointing the Board, and defining the role of the Board.

9. The partners will enter into a memorandum of understanding with the Board setting out,

(a) the duties of the Board,

(b) the process for consultation in the preparation of valuations,

(c) the process for consultation on the amount of money to be paid to members of the Board, including the Chair and to members of committees appointed by the Board,

(d) the actuarial methods which the Board will use in valuing the plan and,

(e) any other terms of the relationship between the partners and the Board to which the partners agree.

10. The partners agree that every three years they will follow the procedure described in this agreement to meet and negotiate changes to the plan.

11. Either partner may ask the other to meet at any time to discuss changes to any of the matters referred to in paragraph 8 and the partners agree to make their best efforts to do so.

11a. The partners agree to meet as required to discuss the amount of the Minister's contribution due on the first business day of January that is to be deferred to the first business day of April of the same year and to determine the interest rate to be applied for the period of the deferral; determination of such interest rate to be guided by the principle that the Teachers' Pension Plan not be disadvantaged by the deferral. (Last amended May 29, 1992 - Effective May 29, 1992)

11b. The partners agree that the payment of a portion of the Minister's contribution that is due on the first business day of January of 1994 and a portion of the Minister's contribution that is due on the first day of January of 1995 may be deferred to March 31 of each respective year; the amount of the deferral, with interest, to equal $200 million in 1994 and $125 million in 1995; amounts to be adjusted to reflect payments authorized under Paragraph 65. (Last amended November 15, 1993 - Effective November 15, 1993)

12. If the Board advises the partners that a change must be made to the plan to comply with any law the partners agree that they will meet as soon as possible to discuss it.

13. The partners will establish a Partners Committee by each appointing three members. Either partner may refer to the Committee any matter referred to in paragraph 8 or 12 when no agreement results from discussion of the matter.

14. The Partners Committee may by agreement use the services of the manager of negotiations referred to in paragraph 76 to resolve any dispute. The Committee may by agreement use any dispute resolution mechanism including voluntary arbitration to resolve any dispute.

15. Either partner may ask the actuary hired by the Board to provide or prepare any information which that partner thinks it needs in discussing changes to the plan. The cost of the actuary in preparing that information will be paid out of the fund. The information will be provided to both partners.

15a. The partners may initiate, with the Board, discussions, reviews and research regarding the funded status of the plan including the design of conditional inflation protection, the reasonable costs of such reviews and research to be paid out of the fund subject to the prior approval of the Board. (Last amended October 9, 2008 – Effective January 1, 2009)

16. Either partner may audit the plan and the fund at any time at the expense of that partner. The Board will cooperate in the audit.

Role of the Board

17. The Board is responsible for the administration of the pension plan, the management of the pension fund and all other matters set out in this agreement.

18. The Board may exercise every power necessary to administer the pension plan, manage the pension fund and fulfil every other task which the partners assign to it.

19. The responsibilities of the Board include,

(a) investing and managing the pension fund to do all things possible so that the obligations of the pension plan will be met,

(b) preparing a valuation at least every three years to comply with the *Pension Benefits Act,*

(c) preparing annual valuations if the Board decides it is appropriate and providing preliminary results to the partners as soon as they are available,

(d) deciding on the actuarial assumptions used in administering the plan and in preparing valuations of the plan,

(e) consulting with the partners during the preparation of a valuation and making its best effort to respond to any comments and recommendations of the partners. The content of a final valuation is the decision of the Board,

(f) giving a copy of every valuation prepared for the Board to each partner and giving any information requested by a partner to each partner as quickly as possible,

(g) having the plan and the fund audited every year,

(h) preparing a report at the end of every fiscal year that tells how the plan and the fund have been doing in that year,

(i) holding a meeting with both partners at least once each year to explain the annual report to them and to answer any questions about the plan and fund,

(j) making sure that the plan and the fund are administered and managed to comply with all laws that affect them,

(k) advising the partners about any changes to the plan that need to be made to comply with the law,

(l) advising the partners about changes that would improve the administration of the plan,

(m) interpreting the plan and determining benefit entitlements,

(n) developing an investment policy and giving a copy to each partner and to the Financial Services Commission of Ontario,

(o) making rules regarding the conduct of its business,

(p) appointing or electing a vice Chair and any other officers that the Board feels are necessary for the conduct of its business.

The Board

20. The Board will have a maximum of nine members. The partners will each appoint four members.

21. The ninth member of the Board will be the Chair. The process for appointing a Chair is set out in the next section of this agreement.

22. The Minister and the OTF will each appoint two members to the Board to terms ending on the 31st day of December, 1992.

23. The Minister and the OTF will each appoint two members of the Board whose terms will end on the 31st day of December, 1993.

24. If a person appointed under paragraph 19 or 20 is a member of the Board when the partnership starts, the Lieutenant Governor in Council will make an Order changing the length of that person's term.

25. After the expiry of the term of a member of the Board who holds office on the 1st day of January, 1992 the partner who recommended to the Lieutenant Governor in Council the appointment of that member will fill the vacancy by appointing or re-appointing.

26. Unless a member cannot complete his or her term, is removed or is appointed after a member whose term was extended because of a delay in the appointment of his or her successor, the term of all members appointed after the 1st day of January, 1992 will be two years.

27. No person may be a member of the Board for more than four consecutive terms. The initial term of a member who is appointed as a successor under paragraph 29, or as a new member under paragraph 30 or 31, shall not be counted in the number of consecutive terms a member may serve. (Last amended January 15, 2014 – Effective January 1, 2014)

28. If no appointment is made to fill the vacancy at the end of a member's term, the member will continue in office until an appointment is made.

29. When a successor is appointed to a term after his or her predecessor's term has been extended for failure to appoint a successor, the successor's term will end two years after the predecessor's term would have ended but for the delay in appointment.

30. If a member of the Board cannot finish his or her term then the partner who appointed the member may appoint a new member for a term ending on the date when the term of the departing member would have ended.

31. At any time either partner may remove a board member whom that partner has appointed and appoint a new member for a term ending on the date when the term of the departing member would have ended.

The Chair

32. The partners may decide together on the person to be appointed as Chair of the Board. The partners agree to meet six months before the term of the Chair of the Board expires to discuss candidates, and attempt to agree upon the Chair.

33. Either partner may initiate the selection of a Chair in the following way as an alternative to the discussion referred to in paragraph 32,

(a) The partners will each prepare a list of at least three persons that they would like to be Chair. The partners will give each person named a number indicating priority. The lowest priority will be indicated by the number equal to the number of persons on the list.

(b) The partners will then examine the list prepared by the other.

(c) If one name appears on both lists that person will be appointed Chair.

(d) If two or more persons appear on both lists the priority ratings given to those persons by each partner will be added together. The person whose priority rating adds to the lowest number will be appointed Chair.

(e) If no name appears on both lists the partners agree to consult together and to prepare and exchange lists until a name does appear on lists prepared by each.

34. The person selected by the partners will be the Chair for a term of two years beginning on the 1st day of January of the year following selection.

35. No person may be Chair for more than four consecutive terms. Previous terms served by a Chair as a board member shall not be counted in the number of consecutive terms a Chair may serve. (Last amended December 16, 1994 - Effective December 16, 1994)

36. The Lieutenant Governor in Council will make an order making the term of the current Chair of the Board end on the 31st day of December, 1991.

37. If no appointment is made to fill the vacancy at the end of a Chair's term then the Chair will continue in office until an appointment is made.

38. If the Chair cannot finish his or her term then the Minister and the OTF will select a new Chair. The new Chair will be appointed for a term ending on the date when the term of the departing Chair would have ended.

39. The Chair may vote on any matter the Board is considering.

Operation of the Board

40. The Board may appoint committees and delegate to them any function of the Board. The Board may appoint persons who are not Board members to sit on any committee.

41. Committee members will be appointed for a term of up to two years.

42. A quorum of the Board or a Committee is a majority of the members. No meeting of the Board or a Committee may conduct any business unless a member appointed by each partner is present.

43. The Board will decide on a reasonable amount of money to be paid to the Board members, Committee members and the Chair for time and effort spent on Board business. The money will be paid out of the pension fund.

44. If any Board or Committee member is a public servant of Ontario that person will only be paid for any income the person loses as a result of time spent on Board business and for his or her expenses of doing Board business.

45. Any expenses that the Board must pay to operate and to administer the pension plan and manage the pension fund will be paid out of the pension fund.

46. The Board will employ a Chief Executive Officer and such other staff as are necessary to carry out its responsibilities.

47. The Board may decide which of its employees will be able to participate in the Public Service Pension Plan established under the *Public Service Pension Act, 1989* and the Minister agrees to do all things possible to ensure that those employees are covered.

48. The Board may employ persons to provide it with professional, technical or other help.

49. The Board must employ an external actuary and an external auditor.

50. The Board's employees will be paid out of the pension fund.

Indemnification

51. (a) Subject to subsection (e), the Board shall indemnify a person or his or her heirs or legal representatives (the "Indemnee") against all costs, charges and expenses, including an amount paid to settle an action or satisfy a judgment (collectively "Expenses"), reasonably incurred by the person in respect of any civil, criminal, administrative or investigative action or proceeding (collectively a "Proceeding") to which the person is made or threatened to be made a party by any person including the Board, by reason of being or having been a member, committee member, officer or employee of the Board or a person who acts or acted at the Board's direction as a member, director, officer, employee, partner or agent of another corporation, partnership, joint venture, trust or other enterprises (collectively "enterprise"), if,

i) the person acted honestly and in good faith with a view to the best interests of the Board or such other enterprise; and

ii) in the case of a criminal or administrative action or proceeding that is enforced by a monetary penalty, the person had reasonable grounds for believing that his or her conduct was lawful.

(Last amended August 4, 2011 – Effective September 1, 2000)

(b) In furtherance of its obligations under subsection (a) the Board may purchase and maintain insurance for the benefit of any person referred to in subsection (a) in relation to any Expenses that may be indemnifiable under subsection (a). (Last amended August 4, 2011 – Effective September 1, 2000)

(c) The Board's indemnification of a person referred to in subsection (a) and any cost of purchasing and maintaining insurance for the benefit of such person are expenses of operating and administering the pension plan and managing the pension fund and may be paid out of the pension fund. (Last amended August 4, 2011 – Effective September 1, 2000)

(d) The Board or a person referred to in subsection (a) may apply to the court for an order approving an indemnity under this section and the court may so order and make any further order it thinks fit. (Last amended August 4, 2011 – Effective September 1, 2000)

(e) An indemnity given pursuant to subsection (a) extends only to Expenses that exceed amounts otherwise recoverable (and, in fact, recovered) by the Indemnee under any indemnity or policy of insurance applicable in respect of a Proceeding, and is to be regarded specifically as excess to any such amounts. An indemnity given pursuant to subsection (a) shall be subject to the condition that, in the event any indemnor or insurer against whom an Indemnee may have a claim for indemnity shall decline to pay, deny liability or otherwise contest either a claim by a person or the due amount thereof, the Indemnee must, if so requested by the Board, co-operate with and assist the Board in pursuing any claim against the other indemnor or insurer as the case may be, in such manner and to the extent that counsel to the Board may recommend or advise in the circumstances. (Last amended August 4, 2011 – Effective September 1, 2000)

(f) In any case where the Board reasonably considers that a person has fulfilled the conditions set out in clauses (a)(i) and (ii), above, and that it is otherwise appropriate to do so, prior to any settlement or judgment the Board may make an advance to an Indemnee in respect of a person referred to in subsection (a) to defray Expenses incurred or to be incurred by the Indemnee in relation to a Proceeding on such conditions as the Board considers appropriate and necessary. Any advance made under this subsection (f) shall be repayable by the Indemnee if the Indemnee fails to meet the conditions set out in clauses a(i) and (ii), above, in respect of such person. (Last amended August 4, 2011 – Effective September 1, 2000)

(g) Where the Board considers it appropriate, the Board may enter into an indemnity agreement with any person and such agreement shall reflect the limitation of this provision. (Last amended August 4, 2011 – Effective September 1, 2000)

(h) The application of paragraph 51 is effective as of September 1, 2000. (Last amended August 4, 2011 – Effective September 1, 2000)

52. The Board may buy, sell or lease real estate either as an investment or to provide a place to carry on business.

53. The Board may delegate any of its powers or duties to a committee or to an employee. It may impose conditions on any delegation it makes.

54. A committee of the Board may delegate any of its tasks to an employee of the Board if the Board approves.

Initial unfunded liability

55. The going concern unfunded actuarial liability disclosed by the initial valuation of the pension fund as at the 1st day of January, 1990 will be paid by the Treasurer of Ontario out of the Consolidated Revenue Fund according to Schedule 2 of the *Teachers' Pension Act, 1989*.

56. Revoked. (Last amended November 15, 1993 - Effective November 15, 1993)

Gains and losses

57. A valuation which is prepared for filing with the Superintendent of Financial Services shall be actuarially balanced so that the present value of,

(a) benefits and costs to be paid out of the fund, and

(b) any contingency reserve,

are equal to the sum of the value of the plan's assets, including

(c) the present value of,

(i) the members' contributions,

(ii) the employers' contributions,

(iii) the outstanding balance of special payments to liquidate the going concern unfunded actuarial liability disclosed by the valuation as at January 1, 1990, and

(iv) any outstanding payments required to discharge a solvency deficiency. (Last amended March 5, 2002 - Effective April 2, 2001)

The IUL Settlement

57a. Notwithstanding any other provision in this agreement, and including without limitation, paragraphs 10, 55, 59, 60, 60a and paragraphs 73 to 101, during the IUL settlement period this paragraph shall apply to the application of actuarial gains.

(i) In this paragraph,

(a) the "initial unfunded liability settlement period" (the "IUL settlement period") means the period between January 1, 1998 and December 31, 2002 and includes any period of extension pursuant to subparagraph (v).

(b) the "initial unfunded liability" means the going concern unfunded actuarial liability disclosed by the initial valuation of the pension fund referred to in paragraph 55 of the agreement.

(ii) Notwithstanding subparagraph 19(c), during the IUL settlement period, an actuarial valuation for funding purposes of the pension fund shall be prepared by the Board's actuary as at the 1st day of January and filed annually with the Superintendent of Financial Services, unless the partners jointly agree to instruct the Board not to file the valuation.

(iii) Effective with the valuation as at January 1, 1998, any actuarial gains disclosed in a valuation prepared in accordance with subparagraph (ii) will be applied in the following order of priority:

(a) (1) to provide an early retirement pension calculated in accordance with subsection 43(4) of Schedule 1, to members who have accumulated at least that number of years of qualifying service that, when added to the member's age upon termination of employment in education, totals eighty-five years (the "factor 85 entitlement"), provided that such member so qualifies on or after June 1, 1998, and on or before December 31, 2002;

(2) to provide early retirement reductions measured from 85 points rather than 90 points for benefits calculated under sections 44 and 52 of Schedule 1 for members who cease to be employed in education between June 1, 1998 and December 31, 2002;

(b) to provide for a permanent reduction in the amount of the Canada Pension Plan or Quebec Pension Plan reduction for pension instalments payable on or after January 1, 1999 as provided for in subsection 81(3) of Schedule 1 by substituting "0.0060" for "0.0068" in the formula;

(c) to provide to members on an absence, as defined in subsection 94(1) of Schedule 1, that commences during the period from the 1st day of June, 1998 to the 31st day of December, 2002, an exemption from the requirement in subsection 94(3)(b) of Schedule 1 where the member is otherwise eligible to purchase credited service under that section, and where the member, at the beginning of the leave,

(1) was at least 60 years of age;

(2) has accumulated at least that number of years qualifying service that, when added to the member's age, totals 75 years; or

(3) has credited service which totals at least 30 years; and

(d) to eliminate the obligation on the Minister of Finance to make special payments on account of the initial unfunded liability, in accordance with this agreement.

(iv) Subject to subparagraphs (v) and (vi), if there are any actuarial gains remaining after providing for (iii) (a), (b), (c) and (d), such gains disclosed in the annual actuarial valuations for funding purposes up to and including the valuation as at January 1, 2002, will be available for benefit enhancements including, but not limited to, the renewal on a permanent or temporary basis of the factor 85 entitlement, member contribution rate reductions, or to be allocated to a contingency reserve, as determined by the OTF in its sole discretion. (Last amended March 5, 2002 - Effective April 2, 2001)

(v) (a) The sum of the actuarial gains available to the OTF under subparagraph (iv), including the actuarial gains disclosed in the valuation as at January 1, 2002, shall be equal to the present value of the special payments, before the application of actuarial gains pursuant to subparagraph (iii)(d), required to amortize the initial unfunded liability as determined by the Board's actuary and disclosed in the valuation as at January 1, 1998 (the "IUL amount"), and the increase in the going concern liabilities required to provide the benefits conferred by (iii)(a), (b) and (c) as determined by the Board's actuary as at January 1, 1998, (the "benefit cost amount"). The partners agree that, effective April 3, 2001, after recognition of plan changes adopted to that time, there remains $76 million in actuarial gains available to the OTF under subparagraph (iv). (Last amended March 5, 2002 - Effective April 2, 2001)

(b) In the event that the sum of the actuarial gains available to the OTF under subparagraph (iv) up to and including the actuarial gains disclosed in the valuation as at January 1, 2002 is less than the difference between the IUL amount and the benefit cost amount, all actuarial gains disclosed in any actuarial valuation for funding purposes subsequent to the valuation as at January 1, 2002, will be available for such benefit enhancements, member contribution rate reductions, or to be held in a contingency reserve, as determined by the OTF in its sole discretion, until the sum of the actuarial gains available to the OTF for such purposes equals the difference between the IUL amount and the benefit cost amount.

(c) In the event that the sum of the actuarial gains available to the OTF under subparagraph (iv) up to and including the actuarial gains disclosed in the valuation as at January 1, 2002 is less than the difference between the IUL amount and the benefit cost amount, the IUL settlement period shall be extended to the date that the sum of the actuarial gains available to the OTF under subparagraph (iv) and (v) equals the difference between the IUL amount and the benefit cost amount.

(vi) (a) Prior to April 1, 2001, if actuarial gains are available after provision has been made for (iii)(a) to (d), and the OTF wishes to apply such gains pursuant to subparagraph (iv) for benefit enhancements or member contribution rate reductions, the partners shall meet to determine the effective date for the implementation of such benefit enhancements or contribution rate reductions.

(b) Subsequent to April 1, 2001, the OTF may, at its sole discretion, determine when such benefit enhancements or contribution rate reductions, are to be implemented. The Minister agrees to waive his consent to the plan amendments necessary to implement such benefit enhancements or member contribution rate reductions, provided these amendments are not filed by the OTF prior to April 1, 2001. Pursuant to paragraphs 8 and 104 of this agreement, the partners agree that Schedule 1 shall be amended by the OTF, to implement such benefit enhancements or contribution rate reductions, and the OTF shall promptly deliver the amendment(s) to the Board, and the Board shall promptly file the amendment(s) with the Superintendent of Financial Services upon receipt of same from the OTF.

(vii) The Minister of Finance will continue to make special payments out of the Consolidated Revenue Fund in accordance with paragraph 55 of the agreement during the IUL settlement period until the obligation to make special payments on account of the initial unfunded liability is eliminated in accordance with this agreement. The amount of the special payments payable pursuant to this subparagraph shall be in accordance with the schedule of payments set out in Appendix H to the Report on the Actuarial Valuation for Funding Purposes for the plan as at January 1, 1996 ("Appendix H") until December 1, 2001, and in accordance with Schedule 2 subsequent to December 1, 2001, if the Minister of Finance continues to be obligated to make special payments on account of the initial unfunded liability beyond this date. If subsection 3(12) of Schedule 2 to the *Teachers' Pension Act* is applicable with respect to any actuarial gains disclosed in a valuation pursuant to subparagraph (ii), the Minister of Finance shall not exercise his discretion in subsection 3(12) of Schedule 2 to reduce the remaining special payments as set out in Appendix H, until the obligation of the Minister of Finance to make special payments on account of the initial unfunded liability is eliminated.

(viii)The issue raised in the "part-time leave" case pending before the Ontario Court of Appeal shall be referred to mediation by Mr. M. Stanley Beck. Mr. Beck will be asked to provide a non-binding opinion on the merits of the case by no later than July 15, 1998. The cost of the mediation pursuant to this subparagraph shall be paid from the fund.

(ix) The partners shall establish a committee to deal on a priority basis with accounting matters relating to joint pension plan sponsorship, and agree to contact the Public Sector Accounting and Auditing Board (PSAAB) to raise issues of concern to the partners. The committee shall report to the Partners by May 1, 1999. The reasonable costs of the committee shall be paid from the fund.

(x) Subject to any extension of the IUL settlement period pursuant to subparagraph (v), at the end of the IUL settlement period, the provisions of this agreement respecting the use of actuarial gains or losses, other than this paragraph 57a, will apply. The next triennial negotiation pursuant to paragraphs 73 to 101 will be based on the actuarial valuation for funding purposes as at January 1, 2002, unless the IUL settlement period is extended beyond this date, or the partners agree otherwise.

(xi) Any dispute regarding the interpretation, application, administration and implementation of the provisions in this paragraph 57a may be resolved in accordance with paragraph 14 of the agreement, and/or through such other proceedings as are otherwise available to either partner.

58. If the preliminary results of a valuation prepared for filing with the Financial Services Commission of Ontario as at a date after the 1st day of January, 1993 indicate a need to increase the contribution rate the partners agree to meet as soon as possible to discuss how to adjust for that need on an equally shared basis. If the partners cannot agree on how to adjust they will refer the issue to the mediation and arbitration procedures described elsewhere in this agreement to adjust the contribution rate and/or benefits. (Last amended November 15, 1993 - Effective November 15, 1993)

59. If the preliminary results of a valuation prepared for filing with the Financial Services Commission of Ontario as at a date after the 1st day of January, 1993 indicate that the contribution rate can be decreased the implicit actuarial gain disclosed by the valuation will be applied to reduce and, if possible, eliminate the payments required to liquidate any unamortized balance of a solvency deficiency. (Last amended November 15, 1993 - Effective November 15, 1993)

60. An implicit actuarial gain remaining after the elimination of a deficiency mentioned in paragraph 59, will be used to establish a contingency reserve in an amount agreed upon by the partners or for any of the following purposes upon which the partners have agreed or which an arbitrator has awarded,

(i) to reduce contributions which members and employers are required to pay, and/or

(ii) to improve benefits payable to members.

60a. The portion of the gain disclosed by the January 1, 1996 valuation remaining after the implementation of the benefit improvements contained in the December 30, 1996 arbitration award shall be placed in a contingency reserve called the Rate Stabilization Fund for the period January 1, 1996 to December 31, 1998. (Last amended February 20, 1997 - Effective January 1, 1996)

60b. The $76 million of actuarial gains that, effective April 3, 2001, remain available to the OTF under the subparagraph 57a (iv) shall be allocated to a contingency reserve until such time as the OTF, in its sole discretion, may determine, at which time such gains shall be used toward the provision of future benefit enhancements and/or member contribution rate reductions as determined by the OTF, in its sole discretion. (Last amended March 5, 2002 – Effective April 2, 2001)

60c. The portion of the actuarial surplus disclosed by the January 1, 2001 valuation that remains after providing for,

(a) the benefit improvements contained in the plan amendments dated April 2, 2001, and

(b) the contingency reserve pursuant to paragraph 60b,

shall be allocated to a contingency reserve called the Rate Stabilization Fund for the period January 1, 2001 to December 31, 2001, or until such later date agreed to by the partners. (Last amended March 5, 2002 – Effective April 2, 2001)

60d. The partners acknowledge that the $76 million referred to in paragraph 60b will be used towards reducing the additional contributions payable by active members in accordance with section 19 of Schedule 1 in 2008 from 3.1% to 2.3% and that this application will fully discharge the credit owing the Ontario Teachers' Federation under paragraph 60b. (Last amended December 21, 2006 – Effective January 1, 2007)

60e. The partners agree that $7 million shall be allocated to a contingency reserve, to the credit of the Minister, to reflect the additional $7 million that was used, in addition to the $76 million referred to in paragraph 60d, towards reducing the additional contributions payable by active members in accordance with section 19 of Schedule 1 in 2008 from 3.1% to 2.3%. (Last amended December 21, 2006 – Effective January 1, 2007)

61. The valuation as at January 1, 1992 that was prepared and provisionally filed with the Pension Commission of Ontario shall be considered invalid. (Last amended November 15, 1993 - Effective November 15, 1993)

62. The board will prepare a valuation of the plan as at the 1st day of January, 1993. (Last amended November 15, 1993 - Effective November 15, 1993)

63. A portion, in the amount of $1.2 billion, of the gain disclosed by the January 1, 1993 valuation is to be applied to reduce the Minister's scheduled special payments under Schedule 2 of the Act, in the period from January 1, 1993 until the entire amount is exhausted. (Last amended November 15, 1993 - Effective November 15, 1993)

64. A further portion, in the amounts of $200 million as at March 31, 1994 and $125 million as at March 31, 1995, of the gain disclosed by the January 1, 1993 valuation, is to be applied to reduce scheduled government payments to the plan on or before the 31st of March, 1995. (Last amended November 15, 1993 - Effective November 15, 1993)

65. The partners may authorize the use of an additional portion of the gains from the 1993 valuation to offset social contract targets for those members of the plan who are not covered by the Teachers' Sub-Sectoral Framework Agreement and who meet the set of principles agreed on by the partners; these gains will be allocated in the same proportion as members of the plan who are covered by the Teachers' Sub-Sectoral Agreement. (Last amended November 15, 1993 - Effective November 15, 1993)

66. Any residual portion of the gain disclosed by the January 1, 1993 valuation is to be placed in a contingency reserve for rate stabilization until at least January 1, 1996. (Last amended November 15, 1993 - Effective November 15, 1993)

67. Revoked. (Last amended November 15, 1993 - Effective November 15, 1993)

68. If a solvency valuation of the plan, conducted as at a date on or before the 1st day of January, 1996, discloses a solvency deficiency the contributions of members, the Minister and employers required to contribute to the fund under Schedule 1 will be adjusted in the following way,

(1) The members will during each of the fifteen years following the date of the solvency valuation contribute the members' contribution required under Schedule 1 plus an amount equal to "B" as defined in subparagraph (2).

(2) The Minister and employers will during each of the five years following the date of the solvency valuation contribute the Minister's and employers' contributions required under Schedule 1 plus an amount equal to,

$$A - B$$

where

"A" is equal to the amount of the annual payment required to amortize the solvency deficiency amortized over the five years following the date of the solvency valuation, and

"B" is equal to one half of the amount of the annual payment required to amortize the solvency deficiency over the fifteen years following the date of the solvency valuation.

(3) The Minister and employers will during each of the sixth through fifteenth years following the date of the solvency valuation contribute the contributions required of them under Schedule 1 less an amount equal to "B". (Last amended November 15, 1993 - Effective November 15, 1993)

69. If a solvency valuation of the plan, conducted as at a date after the 1st day of January, 1996, discloses a solvency deficiency the contributions of members, the Minister and employers required to contribute to the fund under Schedule 1 will be adjusted in the following way,

(1) The members will during each of the ten years following the date of the solvency valuation contribute the members' contribution required under Schedule 1 plus an amount equal to "B" as defined in subparagraph (2).

(2) The Minister and employers will during each of the five years following the date of the solvency valuation contribute the Minister's and employers' contributions required under Schedule 1 plus an amount equal to,

$$A - B$$

where

"A" is equal to the amount of the annual payment required to amortize the solvency deficiency amortized over the five years following the date of the solvency valuation, and

"B" is equal to one half of the amount of the annual payment required to amortize the solvency deficiency over the ten years following the date of the solvency valuation.

(3) The Minister and employers will during each of the sixth through tenth years following the date of the solvency valuation contribute the contributions required of them under Schedule 1 less an amount equal to "B". (Last amended November 15, 1993 - Effective November 15, 1993)

70. If a valuation done after one which showed a solvency deficiency discloses that there is no solvency deficiency or one that is less than would be expected based on the first valuation, the partners agree to adjust on an equally shared basis for any payments that have been made under paragraphs 68 or 69. (Last amended November 15, 1993 - Effective November 15, 1993)

71. Revoked. (Last amended November 15, 1993 - Effective November 15, 1993)

Triennial negotiation of changes to the plan

72. The Board will prepare a valuation of the plan as at the 1st day of January, 1996 as soon as possible after that date. This will be the valuation to be used for the first set of negotiations. (Last amended November 15, 1993 - Effective November 15, 1993)

73. The subject of the negotiations and of all subsequent triennial negotiations will be any of the matters referred to in paragraphs 8 and 12.

74. As soon as preliminary results of the valuation are available the partners will meet to bargain in good faith and make every reasonable effort to reach an agreement on the changes, if any, that will be made to the plan.

75. The partners will advise the Board what changes affecting benefits and contribution rates they are proposing and the Board will provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

76. There will be a manager of negotiations whose fees and expenses shall be paid by the fund. The manager will be appointed by agreement of the partners or if they cannot agree the Chief Executive Officer of the Board will act as manager. When the manager is appointed, the partners may give the manager any role in the negotiation process in addition to the role described in this agreement. (Last amended March 27, 1996 - Effective January 1, 1996)

77. At any time after the preliminary results of a valuation are available the partners may agree to appoint a mediator. The mediator will be chosen by the agreement of the partners or by a method to which they agree at that time.

78. If no agreement is reached on all proposed changes by the 1st day of May, 1996 and no mediator has been appointed by agreement the manager will appoint a mediator to mediate proposed changes to the contribution rate or benefits under the plan. The manager will do so by preparing a list of five persons willing to act as mediator and asking each partner to select three names from the list. The manager will appoint one of the persons chosen by both partners. (Last amended November 15, 1993 - Effective November 15, 1993)

79. Any proposed changes to the plan not involving the contribution rate or benefits which remain unresolved on the 1st day of May, 1996 will be referred to the Partners Committee established under paragraph 13. The Partners Committee will make every effort to resolve those issues referred to it. (Last amended November 15, 1993 - Effective November 15, 1993)

80. If the partners agree, the mediator may be appointed as a mediator/arbitrator in which case the appointee will decide on the process and time frame for conducting mediation/arbitration.

81. If the partners do not agree on mediation/arbitration the mediator will meet with them and try to mediate an agreement.

82. Within 30 days of appointment the mediator will prepare a confidential report setting out his or her views on the positions of the two partners and containing a recommendation. The report will be delivered to the partners.

83. The mediator may extend the deadline for delivering the report by 14 days if he or she is of the opinion that the partners are likely to reach an agreement during the extension.

84. If the partners do not accept the report within 14 days of its being delivered to them it will be destroyed and an arbitration board will be appointed.

85. At any time after a mediator has been appointed the partners may agree to appoint a board of arbitration.

86. If the partners agree to appoint a board of arbitration or if 14 days have passed since the mediator's report each partner will appoint one person to the board of arbitration and the two appointees will select a final member who will be the umpire.

87. This agreement together with a referral to a board of arbitration constitutes a submission under the *Arbitrations Act*, R.S.O. 1980, c. 25, as amended.

88. If the persons appointed by the partners to a board of arbitration do not appoint an umpire within 14 days of the appointment of the latter of them, the manager will prepare a list of five persons who are willing to act as umpire and ask each partner to select three names from the list. The manager will appoint as umpire one of the persons chosen by both partners.

89. The umpire will establish the procedure for conducting the arbitration but will allow each partner an opportunity to present evidence and make representations. The persons appointed by the partners will consult with the appointing partner during the arbitration.

90. The board of arbitration will hold a hearing within 30 days of its appointment and make an award within 60 days of the conclusion of the hearing. The board of arbitration will provide reasons for its award.

91. The board of arbitration in making an award will consider prevailing economic conditions and the overall state of the provincial economy.

92. The award made by the board of arbitration will,

(a) deal only with the contribution rate and/or benefits of the pension plan and otherwise maintain the plan as it is set out in Schedule 1,

(b) comply with the laws of Ontario,

(c) provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members,

(d) be based on the valuation of the plan and the costing of changes to benefits which were prepared by the Board,

(e) ensure that any increase in benefits is adequately funded,

(f) not impair the ability of the Board to fulfil its fiduciary responsibilities,

(g) if it includes benefit improvements, not provide for an increase in the contribution rate paid by plan members greater than .5% of pensionable salary,

provided that all such awards shall be subject to the limitations referred to in subparagraph EE(2). (Last amended March 26, 2003 – Effective January 1, 2003)

92.1 In the event that a board of arbitration is appointed pursuant to any provision of the agreement, other than paragraph 57a, to determine the application of actuarial gains disclosed in a valuation for funding purposes where a portion of the actuarial gains disclosed in such valuation is subject to the provisions of paragraph 57a, the board of arbitration shall not issue an award regarding that portion of the actuarial gains which is subject to the provisions of paragraph 57a. (Last amended May 27, 1998 - Effective April 18, 1998)

93. The board of arbitration will give the partners a copy of the award and reasons as soon as they are prepared.

94. The Board will prepare a final valuation of the plan which implements all of the changes to the plan which have been awarded or agreed to by the partners. The changes will take effect on the 1st day of January, 1997 or on such earlier date to which the partners have agreed. (Last amended November 15, 1993 - Effective November 15, 1993)

95. The final valuation will be filed with the Financial Services Commission of Ontario and Schedule 1 will be amended to reflect the changes agreed to and the award if any.

96. Every three years, after January 1, 1996, the process described in this section will be repeated unless the partners agree that no changes will be made to the plan. (Last amended November 15, 1993 - Effective November 15, 1993)

97. The manager and the umpire may agree to extend the timelines set out by this agreement if they think it will help the partners reach an agreement.

98. The partners may agree to change the procedure described in this agreement, either for one round of negotiations or for all future negotiations.

99. The costs of mediation and arbitration will be paid out of the fund. (Last amended March 27, 1996 - Effective January 1, 1996)

100. The mediator or the umpire may employ experts to assist her or him. The cost of employing experts will be shared equally by the partners. The mediator or umpire will consult with the partners about a reasonable budget for such costs.

101. Revoked. (Last amended March 26, 2003 – Effective January 1, 2003)

General

102. Schedule 1 to the *Teachers' Pension Plan, 1989* as amended is adopted by the partners as part of this agreement.

103. The partners agree that this agreement forms part of the plan documents of the pension plan and that they will file a copy of this agreement with the Pension Commission of Ontario.

104. The partners may at any time agree to change any of the provisions of Schedule 1. A change to Schedule 1 will be effected when it is filed with the Financial Services Commission of Ontario by the partners.

105. The partners will not make any change to Schedule 1 which is contrary to the laws of Ontario. Any change which is inconsistent will be void to the extent of the inconsistency.

106. Sections 116, 117, 118 and all of Part XII of Schedule 1 are revoked.

107. Revoked. (Last amended November 15, 1993 - Effective November 15, 1993)

108. The Board will print a new consolidation of Schedule 1 as soon as possible after any changes to it have been filed with the Financial Services Commission of Ontario.

109. The Minister will submit a copy of Schedule 1 and the annual report to the Lieutenant Governor in Council and lay it before the Assembly at the first opportunity after the report is prepared by the Board.

110. The partners agree that the Funding Management Policy attached hereto, and as amended from time to time, forms part of this agreement. (Last amended June 3, 2009 – Effective January 1, 2009)

July 15, 1991

APPENDIX "A"

Funding Management Policy

Article I. Application

Section 1.01 *Best Estimates Assumptions*: For the purposes of this Funding Management Policy, except as otherwise provided herein, the Board shall provide the required reports using the Board's best estimates assumptions including, in the case of the discount rate, a margin for adverse deviation. The Board's best estimate economic assumptions may be based on market data, smoothed data, the reference rate or the Board's expectation if the Board believes future experience may differ from market data. The Board's assumptions shall be used only if they would be consistent with accepted actuarial practice. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 1.02 *Escalated Adjustments Indices*: The Board shall also maintain indices to record escalated adjustments for post-2009 service. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 1.03 *Different Discount Rate*: If a preliminary valuation uses a discount rate lower than the restoration basis for valuations prepared under Article III and Article VI, lower than the temporary basis for valuations prepared under Article IV, or lower than the distribution basis for valuations prepared under Article V, then the Board shall notify the partners and the partners shall meet with the Board. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 1.04 *Exit Provision*: The provisions in Article II to Article IX shall expire twelve months after the notification referred to in Section 1.03 unless both partners otherwise notify the Board. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 1.05 This Funding Management Policy shall be applied as follows:

(a) *If there is a restoration basis excess when current contributions exceed basic contributions and/or current benefits are less than run-rate benefits, the excess can be used to reduce contributions and/or increase benefits in accordance with Article III*: If the results of a preliminary valuation, using the restoration basis, the definitions in Section 3.01 and the provisos in Section 3.02 and Section 3.03, satisfy the conditions in Section 3.04, then Section 3.05, Section 3.06, Section 3.07 and Section 3.08 shall apply;

(b) *If there is a restoration basis deficit using current contributions and current benefits, contributions must be increased and/or benefits must be reduced in accordance with Article III to eliminate the deficit*: If the results of a preliminary valuation, using the restoration basis, the definitions in Section 3.01 and the provisos in Section 3.02 and Section 3.03, satisfy the conditions in Section 3.09, then Section 3.10, Section 3.11, Section 3.12, Section 3.13, and Section 3.14 shall apply;

(c) *If there is a restoration basis excess when contributions are less than or equal to basic contributions and benefits are greater than or equal to run-rate benefits, prepare a temporary basis valuation in accordance with Article IV*: If the results of a preliminary valuation, using the restoration basis, the definitions in Section 3.01 and the provisos in Section 3.02 and Section 3.03, either:

(i) do not satisfy the conditions in either Section 3.04 or Section 3.09; or

(ii) satisfy the conditions in Section 3.04, and

1) the present value of revised benefits is equal to the present value of run-rate benefits, and

2) the present value of revised contributions is equal to the present value of basic contributions;

then the preliminary valuation shall be performed using the temporary basis, the definitions in Section 4.01 and the proviso in Section 4.02;

(d) *Temporary and Distribution Basis Valuations*:

(i) *If there is a temporary basis excess, prepare a distribution basis valuation in accordance with Article V*: If the results of a preliminary valuation, using the temporary basis, the definitions in Section 4.01 and the proviso in Section 4.02, satisfy the conditions in Section 4.03, then the preliminary valuation shall be performed using the distribution basis, the definitions in Section 5.01 and the proviso in Section 5.02, and

1) *If there is a distribution basis excess, the distribution basis excess can be used to make plan improvements in accordance with Article V*: if the results of that preliminary valuation satisfy the conditions in Section 5.03, then Article V shall apply;

2) *If there is a distribution basis deficit but a temporary basis excess, the temporary basis excess can be used to make temporary plan improvements in accordance with Article IV*: if the results of that preliminary valuation do not satisfy the conditions in Section 5.03, then the preliminary valuation shall be performed using the temporary basis, the definitions in Section 4.01 and the proviso in Section 4.02, and Article IV shall apply;

(ii) *If there is a temporary basis deficit, the restoration basis valuation will apply in accordance with Article III*: If the results of a preliminary valuation, using the temporary basis, the definitions in Section 4.01 and the proviso in Section 4.02, do not satisfy the conditions in Section 4.03, then the preliminary valuation shall be performed using the restoration basis, the definitions in Section 3.01 and the provisos in Section 3.02 and Section 3.03, and Section 3.05, Section 3.06, Section 3.07 and Section 3.08 shall apply;

(e) *Post-December 30, 2017 Valuations*: If the results of a preliminary valuation prepared as of a date after December 30, 2017, using the restoration basis and the definitions in Section 6.01, satisfy the conditions in Section 6.02, then Section 6.03 shall apply;

(f) *2013 Term Sheet Precedence*: The provisions of the 2013 Term Sheet shall take precedence over this Funding Management Policy. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 1.06 *Actions Subject to Pension Legislation*: Prior to the commitment of a surplus distribution or a contribution decrease, the partners shall ensure such distribution or contribution decrease is in accordance with the *Income Tax Act* (Canada), the *Pension Benefits Act* (Ontario) and their respective regulations. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 1.07 *Conditions on Temporary Improvements*: Any commitment to provide temporary improvements shall be made conditional on the results of a preliminary valuation for each year of the commitment period indicating that the conditions in Section 3.04(a) are met prior to and after such temporary improvement. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 1.08 *Headings*: Headings are underlined and are for convenience only and shall not affect the interpretation or meaning of any provision of this Funding Management Policy. (Last amended May 27, 2015 – Effective March 6, 2015)

Article II. Definitions

Section 2.01 For the purposes of this Funding Management Policy:

(a) "2013 Term Sheet" means the March 13, 2013 OTPP Term Sheet entered into by the partners;

(b) "basic contributions" are the contributions required by subsections 19(1) or (2) of Schedule 1 as it read on January 1, 2012;

(c) "commitment period" means the three-year period during which a temporary improvement is provided;

(d) "commitment value" means the present value of the portion of the temporary improvement value provided during the commitment period;

(e) "Consumer Price Index" means the Consumer Price Index for Canada as published by Statistics Canada under the authority of the *Statistics Act* (Canada);

(f) "CPI adjustment" means the ratio between 1.000 and 1.080 of the average for the Consumer Price Index over the last twelve months of the twenty-four-month period ending with the 30th day of September in the immediately preceding year to the average for the Consumer Price Index over the first twelve months of that period - 1. If the ratio would have been less than 1.000 or greater than 1.080, but for those limits, the difference shall be carried forward in a manner consistent with that set out in section 80 of Schedule 1;

(g) "current accumulated adjustment ratio" is an index maintained by the Board that begins with "1.000000" for 2010 and is the product of all current ratios for the years in the period commencing with 2010 and ending with the year prior to the year for which the current accumulated adjustment ratio is being determined. The index may differ in respect of service accrued before 2014 and service accrued after 2013 with both indices beginning with "1.000000" for 2010;

(h) "current benefits" are the pension benefits, current escalated adjustments and ancillary benefits calculated in accordance with Schedule 1 as it read at the current valuation date without taking into account any amendment made, or changes agreed to by the partners, on or after the current valuation date;

(i) "current contributions" are the contributions required by Schedule 1 as it read at the current valuation date without taking into account any amendment made on or after the current valuation date;

(j) "current escalated adjustments" are the escalated adjustments in respect of post-2009 service that were applied prior to the January 1st following the current valuation date and assumed thereafter at the rate set out in the most recent filed valuation;

(k) "current ratio", for a year, means 1 + the proportion of the CPI adjustment granted as agreed to by the partners, and as may have been revised from time to time, provided that the proportion shall not be less than 50% in respect of service accrued before 2014, but not including any revision agreed to by the partners in relation to the current valuation;

(l) "current valuation date" in respect of a valuation is the date provided in Section 7.01;

(m) "distribution basis" is the reference rate with a positive adjustment of 0.5% together with the Board's best estimate actuarial assumptions for all other factors;

(n) "freeze period" means the period from December 31, 2012 to December 30, 2017;

(o) "going concern liabilities" are the going concern liabilities within the meaning of Regulation 909 made under the *Pension Benefits Act* and must also include the present value of the pension benefits and escalated adjustments that both accrued prior to the valuation date and that will accrue on or after the valuation date to the persons who were members of the plan on the valuation date and the present value of the ancillary benefits for which the eligibility requirements will be satisfied on or after the valuation date by the persons who were members of the plan on the valuation date;

(p) "preliminary valuation" means a valuation referred to in Section 7.01;

(q) "reference rate" means the interest rate chosen by the Board representing the Government of Canada long bond yield (currently, CANSIM Series V39056 nominal and CANSIM Series V39057 real, or their reasonable respective replacements) that may be based on market data or smoothed data;

(r) "remaining amortization value" means the difference between the temporary improvement value and the commitment value;

(s) "restoration basis" is the reference rate with a positive adjustment of 1.55% together with the Board's best estimate actuarial assumptions for all other factors;

(t) "revised accumulated adjustment ratio" is an index maintained by the Board that begins with "1.000000" for 2010 and is the current accumulated adjustment ratio, as modified by an agreement between the partners to change the proportion of the CPI adjustment in respect of post-2009 service prior to the year following the current valuation date. The index may differ in respect of service accrued before 2014 and service accrued after 2013 with both indices beginning with "1.000000" for 2010;

(u) "revised benefits" are the current benefits including any amendment made, or changes agreed to by the partners, on or after the current valuation date based on that valuation;

(v) "revised contributions" are the current contributions including any amendment made on or after the current valuation date based on that valuation;

(w) "revised escalated adjustments" are the current escalated adjustments including any amendment made, or changes agreed to by the partners, on or after the current valuation date based on that valuation and assumed thereafter at the rate set out in that valuation;

(x) "run-rate accumulated adjustment ratio" is an index maintained by the Board that begins with "1.000000" for 2010 and is the product of all run-rate ratios for the years in the period commencing with 2010 and ending with the year prior to the year for which the run-rate accumulated adjustment ratio is being determined;

(y) "run-rate benefits" are the pension benefits, run-rate escalated adjustments and ancillary benefits calculated in accordance with Schedule 1 as it read on January 1, 2009, together with any benefits provided by amendments described in Article IX;

(z) "run-rate escalated adjustments" are the escalated adjustments in respect of post-2009 service that would have applied at the rate of 100% of the CPI adjustment prior to the January 1st following the current valuation date and that would be assumed thereafter at the rate of 100% of the CPI adjustment;

(aa) "run-rate ratio", for a year, means 1 + the CPI adjustment for the year;

(bb) "temporary basis" is the reference rate with a positive adjustment of 1.25% together with the Board's best estimate actuarial assumptions for all other factors;

(cc) "temporary improvement" means an improvement provided in accordance with Section 4.05;

(dd) "temporary improvement value" is the present value of a contribution decrease, a distribution of surplus and/or a benefit improvement that is amortized over a period of up to ten years, but is committed to for the duration of the commitment period only, provided that at the establishment of the commitment:

(i) the partners may elect an amortization period between three and ten years; and

(ii) for amortization periods of less than ten years, any temporary improvement for a given year shall be limited such that the present value of that given year's temporary improvement is not greater than the present value of basic contributions, calculated using the temporary basis, to be paid in the same year.

(Last amended May 27, 2015 – Effective March 6, 2015)

Article III. **<u>Funding Zone - Restoration</u>**

Section 3.01 *<u>Definitions</u>*: For the purposes of Article III, as at the current valuation date, using the restoration basis:

(a) "assets" are the assets described in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the *Pension Benefits Act*;

(b) "current liabilities" are the difference between:

(i) the going concern liabilities calculated using current benefits, and

(ii) the present value of current contributions;

(c) "revised liabilities" are the difference between:

(i) the going concern liabilities calculated using revised benefits, and

(ii) the present value of revised contributions.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.02 *Restoration Basis Plus an Adjustment*: For the purposes of Article III, current liabilities and revised liabilities may be calculated as at the current valuation date using the restoration basis plus an adjustment. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.03 *CPI Adjustment*: For the purposes of Article III, and subject to a subsequently filed valuation, the proportion of the CPI adjustment for the period covered by the current valuation, in respect of each applicable period of service, will be the same for each year in that period and assumed at the same rate thereafter. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.04 *Restoration Basis Excess, but Basic Contributions and/or Run-Rate Benefits Not Restored*:

(a) If assets are greater than current liabilities; and

(b) if:

(i) the present value of current contributions is greater than the present value of basic contributions, or

(ii) the present value of current benefits is less than the present value of run-rate benefits, or

(iii) both (i) and (ii);

then Section 3.05, Section 3.06, Section 3.07 and Section 3.08 shall apply.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.05 *Restoration Basis Excess Report*: The Board shall report to the partners:

(a) the excess of assets over current liabilities; and

(b) the extent to which the excess can be used to provide the changes specified in Section 3.06.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.06 *Application of Restoration Basis Excess*: For purposes of clarity, excesses identified pursuant to Section 3.05 shall be applied in the following order, provided that the partners reserve the right to reconsider such application having regard to the contribution rate and benefits then in effect, prevailing economic circumstances and other relevant factors:

(a) *Bring Escalated Adjustments to 50% for Post-2013 Service*: to provide escalated adjustments up to 50% of the CPI adjustment in respect of service accrued after 2013 for the period covered by the valuation, and assumed thereafter at the same rate;

(b) *Bring Escalated Adjustments to 100%*: to provide escalated adjustments up to 100% of the CPI adjustment for the period covered by the valuation, and assumed thereafter at the same rate;

(c) *Restore Escalated Adjustments for Post-2013 Years*: to provide escalated adjustments to increase, to the extent possible, the current accumulated adjustment ratio for each year after 2013, to the current accumulated adjustment ratio for the period from 2010 to 2013, beginning with the first year in which current escalated adjustments were less than 50% of the run-rate escalated adjustments;

(d) *Restore Escalated Adjustments for Post-2009 Years*: to provide escalated adjustments to increase, to the extent possible, the current accumulated adjustment ratio for each year after 2009 to the run-rate accumulated adjustment ratio, beginning with the first year in which current escalated adjustments were less than run-rate escalated adjustments;

(e) *Provide Benefit Increases or Contribution Rate Reductions*: to provide the following:

(i) an increase in benefits, where the present value of current benefits is less than the present value of run-rate benefits,

(ii) a reduction in contribution rates, where the present value of current contributions exceeds the present value of basic contributions, or

(iii) a combination of (i) and (ii).

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.07 *Conditions on Application of Excess*: Subject to Section 3.06 and Section 3.08 or any mutual agreement to the contrary, the partners shall apply the excess of assets over current liabilities to change benefits, contributions, or both, provided that no change or amendment shall be made unless, after such change or amendment:

(a) assets are equal to or greater than revised liabilities;

(b) the revised accumulated adjustment ratio is equal to or less than the run-rate accumulated adjustment ratio;

(c) the revised accumulated adjustment ratio is equal to or greater than the current accumulated adjustment ratio;

(d) the present value of revised benefits is equal to or less than the greater of the present value of current benefits and the present value of run-rate benefits;

(e) the present value of revised benefits is equal to or greater than the lesser of the present value of current benefits and the present value of run-rate benefits;

(f) the present value of revised contributions is equal to or greater than the lesser of the present value of current contributions and the present value of basic contributions; and

(g) the present value of revised contributions is equal to or less than the greater of the present value of current contributions and the present value of basic contributions.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.08 *2013 Term Sheet Limits*: As set out in further detail in the 2013 Term Sheet, during the freeze period:

(a) The partners may provide escalated adjustments pursuant to Section 3.06(a), Section 3.06(b), Section 3.06(c) and Section 3.06(d) only if the assets are greater than 100% of the current liabilities and do not fall below 100% of the revised liabilities after the adjustment; and

(b) The partners may agree to improve benefits, or to restore benefits that were reduced during the freeze period, pursuant to Section 3.06(e) only if the net assets available for benefits (as such term is used in the preliminary valuations) are equal to or greater than 105% of the current liabilities and do not fall below 105% of the revised liabilities after the benefit improvement or restoration.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.09 *Restoration Basis Deficit*: If current liabilities are greater than assets, then Section 3.10, Section 3.11, Section 3.12, Section 3.13 and Section 3.14 shall apply. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.10 *Restoration Basis Deficit Report*: The Board shall report to the partners:

(a) the excess of current liabilities over assets; and

(b) the amount required to change current benefits, current contributions, or both, to eliminate the excess referred to in Section 3.10(a) above, as requested by either partner.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.11 *Conditions on Elimination of Deficit*: Subject to Section 3.12 and Section 3.14, the partners may change benefits, contributions, or both, to eliminate the excess referred to in Section 3.10(a), provided that no change or amendment shall be made unless, after such change or amendment:

(a) assets are equal to or greater than revised liabilities; and

(b) revised member contributions shall be limited to 15% of pensionable salaries above the Year's Maximum Pensionable Earnings as prescribed under the *Canada Pension Plan*.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.12 *Restrictions on Benefit Reductions*: Current benefits shall not be reduced unless:

(a) the partners agree on the terms and conditions of any reduction in current benefits;

(b) the partners have entered into a written agreement governing the manner in which contributions by the Minister and the Employers will be adjusted to offset any reduction in benefits; and

(c) the revised accumulated adjustment ratio, in respect of each year, is equal to or greater than the current accumulated adjustment ratio for the year.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.13 *Restrictions on Contribution Increases*: Subject to Section 3.14, the partners have the authority to set the level of contributions that must be reached before current benefits are reduced below run-rate benefits, subject to the commitment that member contributions will not exceed 15% of pensionable salaries above the Year's Maximum Pensionable Earnings (as prescribed under the Canada Pension Plan). (Last amended May 27, 2015 – Effective March 6, 2015)

Section 3.14 *Further Restrictions on Contribution Increases*: As set out in further detail in the 2013 Term Sheet, during the freeze period there will be no employer contribution increases except as provided under the 2013 Term Sheet. (Last amended May 27, 2015 – Effective March 6, 2015)

Article IV. Funding Zone – Temporary Improvements

Section 4.01 *Definitions*: For the purposes of Article IV, as at the current valuation date, using the temporary basis:

(a) "assets" are either:

(i) the market value of net assets available to provide benefits as determined by the Board, if the excess of the market value of net assets available to provide benefits over current liabilities calculated using a reference rate based on market data is less than the excess of the assets in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act over current liabilities calculated using a reference rate based on smoothed data; or

(ii) the assets described in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act, if the excess of the assets described in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act over current liabilities calculated using a reference rate based on smoothed data is less than the excess of the market value of net assets available to provide benefits over current liabilities calculated using a reference rate based on market data;

(b) "current liabilities" are the sum of:

(i) the difference between:

1) the going concern liabilities calculated using the greater of current benefits and run-rate benefits, and

2) the present value of the lesser of current contributions and basic contributions;

and

(ii) the remaining amortization value (equal to zero with respect to a particular commitment period if, as of the valuation date, the payment in respect of the last year of a commitment period will be paid in that year);

(c) "revised liabilities" are the sum of:

(i) the difference between:

1) the going concern liabilities calculated using the greater of revised benefits and run-rate benefits, and

2) the present value of revised contributions;

and

(ii) the remaining amortization value (equal to zero with respect to a particular commitment period if, as of the valuation date, the payment in respect of the last year of a commitment period will be paid in that year);

(d) The reference rate for purposes of determining the temporary basis is based on:

(i) market data, if the excess of the market value of net assets available to provide benefits over current liabilities calculated using a reference rate based on market data is less than the excess of the assets in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act over current liabilities calculated using a reference rate based on smoothed data; and

(ii) smoothed data, if the excess of the assets in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act over current liabilities calculated using a reference rate based on smoothed data is less than the excess of the market value of net assets available to provide benefits over current liabilities calculated using a reference rate based on market data.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 4.02 *Temporary Basis Plus an Adjustment*: For the purposes of Article IV, current liabilities and revised liabilities may be calculated as at the current valuation date using the temporary basis plus an adjustment. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 4.03 *Temporary Basis Excess*: If assets are greater than current liabilities, then Section 4.04, Section 4.05 and Section 4.06 shall apply, provided that no temporary improvements may be provided unless the partners have provided all of the changes specified in Section 3.06. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 4.04 *Temporary Basis Excess Report*: The Board shall report to the partners:

(a) the amount by which assets exceed current liabilities;

(b) the commitment value;

(c) the extent to which the commitment value can be used to provide a reduction to current contributions, beginning with the year following the year in which a preliminary valuation is filed and lasting for the commitment period;

(d) the extent to which the commitment value can be used to provide annual surplus distributions, beginning with the year following the year in which a preliminary valuation is filed and lasting for the commitment period;

(e) the extent to which the commitment value can be used to provide a temporary benefit improvement, beginning with the year following the year in which a preliminary valuation is filed and lasting for the commitment period; and

(f) the extent to which the commitment value can be used to provide a combination of Section 4.04(c), Section 4.04(d) and Section 4.04(e).

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 4.05 *Conditions on Application of Excess*: Subject to Article VI and Section 4.06, the partners may apply all or part of the commitment value to change temporarily current contributions, provide surplus distributions on a temporary basis, or provide a temporary benefit improvement, provided that no amendment shall be made unless, after such amendment, the excess of assets over revised liabilities is equal to or greater than zero. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 4.06 *Side Agreement*: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 4.07 *Temporary Basis Deficit*: If assets are equal to or less than current liabilities, then Section 4.08 and Section 4.09 shall apply. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 4.08 *Temporary Basis Deficit Report*: The Board shall report to the partners the amount by which current liabilities exceed assets. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 4.09 *No Action on Temporary Basis and Return to Restoration Basis*: Subject to Article VI, the partners shall not provide new temporary improvements and Article III shall apply. (Last amended May 27, 2015 – Effective March 6, 2015)

Article V. Funding Zone – Permanent Improvements

Section 5.01 *Definitions*: For the purposes of Article V, as at the current valuation date, using the distribution basis:

(a) "assets" are either:

(i) the market value of net assets available to provide benefits as determined by the Board, if the excess of the market value of net assets available to provide benefits over current liabilities calculated using a reference rate based on market data is less than the excess of the assets in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act over current liabilities calculated using a reference rate based on smoothed data; or

(ii) the assets described in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act, if the excess of the assets described in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act over current liabilities calculated using a reference rate based on smoothed data is less than the excess of the market value of net assets available to provide benefits over current liabilities calculated using a reference rate based on market data;

(b) "current liabilities" are the sum of:

(i) the difference between:

1) the going concern liabilities calculated using the greater of current benefits and run-rate benefits, and

2) the present value of the lesser of current contributions and basic contributions;

and

(ii) the remaining amortization value (equal to zero with respect to a particular commitment period if, as of the valuation date, the payment in respect of the last year of a commitment period will be paid in that year);

(c) "current targeted funding amount" is 10% of current liabilities;

(d) "revised liabilities" are the sum of:

(i) the difference between:

1) the going concern liabilities calculated using the greater of revised benefits and run-rate benefits, and

2) the present value of revised contributions;

and

(ii) the remaining amortization value (equal to zero with respect to a particular commitment period if, as of the valuation date, the payment in respect of the last year of a commitment period will be paid in that year);

(e) The reference rate for purposes of determining the distribution basis is based on:

(i) market data, if the excess of the market value of net assets available to provide benefits over current liabilities calculated using a reference rate based on market data is less than the excess of the assets in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act over current liabilities calculated using a reference rate based on smoothed data; and

(ii) smoothed data, if the excess of the assets in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the Pension Benefits Act over current liabilities calculated using a reference rate based on smoothed data is less than the excess of the market value of net assets available to provide benefits over current liabilities calculated using a reference rate based on market data;

(f) "revised targeted funding amount" is 10% of revised liabilities.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 5.02 *Distribution Basis Plus an Adjustment*: For the purposes of Article V, current liabilities and revised liabilities may be calculated as at the current valuation date using the distribution basis plus an adjustment. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 5.03 *Distribution Basis Excess*: If the excess of assets over current liabilities is greater than the current targeted funding amount, then Section 5.04 and Section 5.05 shall apply, provided that no changes pursuant to Section 5.05 may be provided unless the partners have provided all of the changes specified in Section 3.06. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 5.04 *Distribution Basis Excess Report*: The Board shall report to the partners:

(a) the amount by which assets minus current liabilities exceed the current targeted funding amount; and

(b) the amount required to change current benefits, current contributions, or both, as requested by either partner.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 5.05 *Conditions on Application of Excess*: Subject to Article VI, the partners may apply all or part of the amount by which assets minus current liabilities exceed the current targeted funding amount to change current benefits, current contributions, or both, provided that no amendment shall be made unless:

(a) after such amendment the excess of assets over revised liabilities is equal to or greater than the revised targeted funding amount; and

(b) the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any change in current benefits that is reflected in the value of the liabilities.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 5.06 *Distribution Basis Deficit*: If:

(a) the excess of assets over current liabilities is less than the current targeted funding amount;

(b) the present value of current contributions is equal to or less than the present value of basic contributions;

(c) the present value of current benefits is equal to or greater than the present value of run-rate benefits; and

(d) the current accumulated adjustment ratio is equal to the run-rate accumulated adjustment ratio;

then Section 5.07 and Section 5.08 shall apply.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 5.07 *Distribution Basis Deficit Report*: The Board shall report to the partners the amount by which assets minus current liabilities are less than the current targeted funding amount. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 5.08 *No Action on Distribution Basis and Return to Temporary Basis*: Subject to Article VI, the partners shall not apply, pursuant to this Article V, any part of the amount by which assets exceed current liabilities, and Article IV shall apply. (Last amended May 27, 2015 – Effective March 6, 2015)

Article VI. Post December 30, 2017 Valuations

Section 6.01 *Definitions*: For the purposes of Article VI, as at the current valuation date, using the restoration basis:

(a) "assets" are the assets described in paragraph (a) of the definition of "going concern assets" in Regulation 909 made under the *Pension Benefits Act*;

(b) "current liabilities" are the difference between:

(i) the going concern liabilities calculated using current benefits, and

(ii) the present value of current contributions;

(c) "revised liabilities" are the difference between:

(i) the going concern liabilities calculated using revised benefits, and

(ii) the present value of revised contributions.

(Last amended May 27, 2015 – Effective March 6, 2015)

Section 6.02 *Post-2017 Excess*: Notwithstanding any other provision of this Funding Management Policy, as set out in further detail in the 2013 Term Sheet, after the end of the freeze period, if a valuation report with a valuation date after December 30, 2017 provides that assets are greater than current liabilities as at the date of the current valuation, then Section 6.03 shall apply. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 6.03 *2013 Term Sheet Provisions*:

(a) the OTF will have 'first call' on 100% of the value of the excess of the assets over the current liabilities (to take the form of "surplus credits") up to a cumulative total of the value of the lesser of:

(i) the value of the benefit reductions made during the freeze period, including the value of benefit reductions made in the January 1, 2012 valuation, but excluding: (1) the value of benefit reductions for which matching contributions are made by the Minister and the Employers, and (2) the value of benefit reductions relating to the removal and replacement of the remaining 50% guaranteed indexing with full conditional inflation protection for post-2013 service and the resulting change to the discount rate, and

(ii) the benefit reduction limit as calculated under the 2013 Term Sheet;

(b) if inflation protection is invoked below 50% during the freeze period, surplus credits will include an amount equal to the actual foregone pension payments during and after the freeze period that arise from the reduction in inflation protection invoked during the freeze period until such time as that inflation protection is restored at 50% or more during or after the freeze period; and

(c) the OTF may apply all or part of surplus credits to change current benefits, current contributions, or both, provided that no amendment shall be made unless assets are equal to or greater than revised liabilities after such amendment.

(Last amended May 27, 2015 – Effective March 6, 2015)

Article VII. Valuation Frequency and Timing

Section 7.01 The Board shall require the actuary to prepare a preliminary valuation of the plan as of January 1, 2003 and each January 1 thereafter and, in addition, on such other date as the partners mutually agree. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 7.02 Subject to the requirements of the *Pension Benefits Act*, the partners agree that valuations shall be filed with the Superintendent of Financial Services only by their mutual agreement. The partners shall direct the Board, no later than seven months following the valuation date, whether to file. No such filing shall affect the timing of triennial negotiations between the partners referred to in paragraph 96. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 7.03 The seven-month notice requirement referred to in Section 7.02 shall not apply to the January 1, 2005 valuation and shall not apply to the January 1, 2012 valuation. (Last amended May 27, 2015 – Effective March 6, 2015)

Article VIII. Arbitration

Section 8.01 Unless the partners mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 8.02 The limitations on amendments set out in Section 3.07, Section 4.05, Section 4.06, Section 4.09, Section 5.05, and Section 5.08 shall apply to an award made by a board of arbitration pursuant to paragraph 92. (Last amended May 27, 2015 – Effective March 6, 2015)

Section 8.03 Subject to the 2013 Term Sheet, nothing in Article II to Article IX affects the timing of the triennial negotiation, mediation and arbitration process referred to in paragraphs 72 to 100. (Last amended May 27, 2015 – Effective March 6, 2015)

Article IX. **Limitations**

Section 9.01 The limitations on amendments in this Funding Management Policy shall not apply to amendments:

(a) made pursuant to paragraphs 60b, 60d, or 60e;

(b) that are required to comply with provincial law or, where both partners agree, to maintain registration as a registered pension plan under the *Income Tax Act (Canada*); or

(c) made by mutual agreement of the partners that do not increase liabilities by more than 0.5%.

(Last amended May 27, 2015 – Effective March 6, 2015)

AMENDMENT TO THE TEACHERS' PENSION PLAN

This is an agreement

B E T W E E N

Her Majesty the Queen
in right of the Province of Ontario
as represented by the Minister of Education

(the "Minister")

and

The Ontario Teachers' Federation
as represented by its Executive

(the "OTF")

WHEREAS the Minister and the OTF (collectively the "Partners") have established a partnership to administer the Ontario Teachers' Pension Plan and Fund, pursuant to an agreement between the Partners dated July 15, 1991 (the "Partners' Agreement"); and

WHEREAS the Partners' Agreement was most recently amended on January 15, 2014; and

WHEREAS the Partners wish to amend the Partners' Agreement further;

NOW THEREFORE the Partners agree as follows:

The Board

1. Effective January 1, 2016, paragraphs 20 and 21 of the Partners' Agreement are revoked and replaced with the following:

    20. The Board will have a maximum of eleven members. The partners will each appoint five members.

    21. The eleventh member of the Board will be the Chair. The process for appointing a Chair is set out in the next section of this agreement.

Her Majesty the Queen
in right of the Province of Ontario
as represented by the
Minister of Education

Liz Sandals
Minister of Education

Dated at Toronto this 21st day
of May, 2015.

The Ontario Teachers' Federation
as represented by its Executive

Rian McLaughlin
OTF President

Key Funding Decisions.pdf

Key Funding Decisions Since 1990

Plan Funding

The Ontario Teachers' Federation (OTF) and the Ontario government, which jointly sponsor the Ontario Teachers' Pension Plan, must file a funding valuation with the provincial pension regulator at least every three years. A valuation must be filed with assets and liabilities (the cost of future pensions) in balance.

OTF and the Ontario government can file a valuation earlier than required to help manage the plan's funding status.

The following chart shows how OTF and the Ontario government have used surplus funds or resolved funding shortfalls for each valuation filed with the regulator since the inception of the Teachers' pension plan as an independent entity in 1990.

For more information on plan funding, visit the Corporate section of our website at www.otpp.com.

Funding decisions

Year	Valuation status and key decisions
1990	A preliminary unfunded liability of $7.8 billion to be amortized over 40 years by special payments from the Ontario government; basic contribution rate increased to 8% from 7%.
1993	A preliminary $1.5 billion surplus was distributed: $1.2 billion used to reduce government's special payments; $0.3 billion used to offset government cost reductions in the education sector (social contract days).
1996	A preliminary $0.7 billion surplus was distributed: $0.6 billion used to reduce early retirement penalty to 2.5% from 5% for each point short of 90 factor and lower the CPP reduction after age 65 (to 0.68% from 0.7%).
1998	A preliminary $6.8 billion surplus was distributed: $2.2 billion to pay for the 85 factor window from 1998 to 2002 and further lower the CPP reduction to 0.6%; $4.6 billion to reduce the value of special payments owed by the Ontario government. OTF and the Ontario government agree future surplus would be used to eliminate the government's remaining special payments, and the next $6.2 billion surplus would be available to OTF for benefit improvements.

Year	Valuation status and key decisions
1999	A preliminary $3.5 billion surplus was distributed to eliminate government's remaining special payments.
2000	$4.5 billion surplus; no changes to benefits or contribution levels.
2001	A preliminary $6.8 billion surplus was distributed: $6.2 billion to pay for benefit improvements, including a permanent 85 factor; 10-year pension guarantee; reduced pension as early as age 50; lower CPP reduction (to 0.45%); 5-year average Year's Maximum Pensionable Earnings (YMPE) to calculate CPP reduction; pension recalculation based on approximate best-5 salary years for older pensioners; and top-up waived for Long-Term Income Protection (LTIP) contributions. The remaining $76 million was set aside in a contingency reserve to be used by OTF at a later date.
2002	$1.9 billion surplus; no changes to benefits or contribution levels.
2003	$1.5 billion surplus; no changes to benefits or contribution levels. Funding Management Policy adopted by plan sponsors.
2005	A preliminary $6.1 billion shortfall was resolved, leaving plan with a $0.1 billion surplus. Shortfall resolved with special contribution rate increases, totalling 3.1% of base earnings by 2009 for teachers, the Ontario government and other employers. OTF used the $76 million contingency reserve set aside in 2001 to reduce contribution rate increases for members in 2008.
2008	A preliminary $12.7 billion shortfall was resolved with the introduction of conditional inflation protection for pension benefits earned after 2009 and an increase in the basic contribution rate for members and the government to 9% from 8%. Employers agree to make special payments equal to any annual pension increases retirees forgo to a maximum of 50% missed inflation.
2009	A preliminary $2.5 billion shortfall was resolved primarily by assuming a slightly higher long-term rate of return on investments: yield on real-return bonds plus 1.5%, versus real-return bonds plus 1.4%. Other minor changes made to assumptions to reflect recent plan experience.
2011	A preliminary $17.2 billion shortfall was resolved with a 1.1% contribution rate increase (phased in over three years), slightly smaller annual cost-of-living increases for teachers who retired after 2009, and recognition of current contribution rate as the permanent base rate.

Year	Valuation status and key decisions
2012	$9.6 billion preliminary shortfall adjusted to reflect changes in mortality assumptions and impact of two-year freeze on teachers' salaries. 2012 shortfall resolved by making inflation protection for pension credit earned after 2013 fully conditional on plan's funded status and providing slightly smaller pension increases, beginning in 2014, for members who retired after 2009. These changes enabled the plan to assume a slightly higher discount rate. The changes left the plan with a $200 million surplus at Jan. 1, 2012.
2014	$5.1 billion preliminary funding surplus used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided each year since they retired. The surplus funds were also used to raise conditional inflation protection to 60% of the increase in the cost of living for the portion of retirees' pensions earned after 2009. Both changes are effective with January 2015 pension payments.
2015	$6.8 billion preliminary funding surplus used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided each year since they retired. The surplus funds were also used to raise conditional inflation protection for pension credit earned after 2009 to 70% from 60% of the increase in the cost of living. Both changes go into effect in January 2016. In addition, some surplus funds were reserved to help facilitate stability in contribution and benefit levels should a future funding valuation show a decline in assets or increase in pension costs.

Hi Christina.

I received an out of office assistant message from Shayan. Please let us know if we shall plan to set up a call with you as we will want to bring closure to the pension analysis as soon as possible.

Thanks.

Shayan,

Below is the advice that we received from our legal services branch regarding liabilities for non-OPS employers. I think we should discuss implications to the analysis.

Nadine

From: Kaufman, Paul (TBS) <Paul.Kaufman@ontario.ca>

To: Petsche, Nadine (TBS)

Cc: Hatzis, Len (TBS); Compagnone, Lisa (TBS)

Subject: RE: Public Accounts Related Q's

Nadine, here is an analysis of the potential funding risks for the Crown relating to the participation of non-OPS employers in the OTPP and OPSEUPP. The discussion of the OTPP reflects input from EDU legal and staff who are familiar with the OTPP.

I have kept this high level given the urgency but can elaborate on specific areas as necessary. I haven't included a discussion of the general obligations of employers and members to contribute to Jointly Sponsored Pension Plans under the *Pension Benefits Act* (PBA), or discussed the implications of the exemption from solvency funding requirements under the PBA that I understand both of these plans enjoy, as I understood the focus of your question to be specific to the relationship between the Crown and other employers.

If you require anything further please let us know.

Paul

OTPP:

· The OTPP is governed by the *Teachers' Pension Act* (TPA), the Plan text for the OTPP (the "Plan Text"), a Partners' Agreement between the Minister of Education and the Ontario Teachers' Federation, and a Funding Management Policy ("FMP") that is an appendix to the Partners' Agreement.

· The OTPP is also subject to the *Pension Benefits Act* ("PBA"), under which the OTPP is a Jointly Sponsored Pension Plan (JSPP)

· Under Section 24(1) of the Plan Text, the Minister of Education is required to pay employer contributions in respect of certain active employees. These types of active employees include teachers at school boards and teachers at provincial schools (run by the Ministry of Education and where teachers are the employees of the Provincial Schools Authority).

· However, the Minister is not required to make employer contributions under the Plan Text in respect of some other employers whose employees may participate in the

OTPP, including participating private schools.

· Nothing in the Plan Text (or any other applicable OTPP document or statute) expressly requires the Minister of Education to make contributions in place of private schools and other ‘excluded’ employers who have failed to make their own required contributions to the OTPP.

· However, the Crown could be exposed to a funding risk where a private school or similar employer fails to make their contributions in the following ways:

o Subsection 5(3) of the TPA requires the Province to make contributions to the OTPP fund if the assets in the fund are insufficient to make required payments in a particular year

o Private schools and other ‘excluded employers’ not making required payments could impact on the overall funded status of the plan, in turn affecting the ability of the Minister of Education and OTF to access surpluses in accordance with the FMP

OPSEUPP:

· The OPSEUPP is governed by a Sponsorship Agreement dated April 18, 1994, as amended, between Ontario and OPSEU (“Sponsorship Agreement”); a trust agreement dated October 25, 1994, as amended, the OPTrust Plan Text and the *Ontario Public Service Employees' Union Pension Act, 1994*.

· Like the OTPP, the OPSEUPP is also a JSPP under the PBA.

· A list of participating employers for the OPSEUPP is set out below (this information is derived from the OPSEUPP’s most recent audited financial statements, but you may wish to verify it with the TBS Employee Relations Division). A number of the participating employers that are not part of the Province itself are nevertheless provincial agencies (AGCO, LCBO, OLGC, Public Health Ontario, etc.). The majority of the remaining employers are either public hospitals (that the Province funds) or public sector pension plan administrators. Therefore, the practical risk of a non-OPS employer failing to provide required contributions to the OPSEUPP seems quite low.

· However, in the event that such an employer did fail to make its contributions, and that failure resulted in a deficiency in the OPSEUPP fund, the Province (likely in conjunction with the other employers whose employees are members of the OPSEUPP), and the members would jointly be required to provide further contributions to the fund to address any such deficiency, pursuant to section 58 of the Sponsorship Agreement and section 6.3(5) of the OPTrust Plan Text.

Subject: Request to share Accounting Opinion

Matt,

Further to our discussion, we are seeking permission to share the Section 7600 report with PricewaterhouseCoopers, today if possible.

Please see our request below. We look forward to hearing back from you.

Thanks.

Nadine

This note is to confirm that Deloitte LLP (“Deloitte”) consents to the disclosure of its work product, including the accounting opinion, developed by Deloitte as part of or in connection with the work being done by PricewaterhouseCoopers LLP to assist Treasury Board Secretariat in compiling a Whitepaper describing the Province’s position on Pension Asset accounting. The purpose of the disclosure is to allow PricewaterhouseCoopers LLP to review and consider the Deloitte LLP documentation in compiling the above-noted Whitepaper. The Whitepaper will not be based solely on Deloitte’s work, but for purposes of consistency and completeness, it is considered beneficial to allow PricewaterhouseCoopers LLP to access the Deloitte’s document. Please confirm your consent by responding to Karen Hughes and cc’ing me on your response.

Best regards,

Cindy,

We've been sending a variety of requests to OTPP. If they are going to be asked about this item, are there other items we might want to enquire about based on today's discussions?

Nadine

From: Killoch, Alex (MOF)
Sent: September 22, 2016 5:02 PM
To: Petsche, Nadine (TBS)
Subject: RE: Review: Valuation Allowance

I would think that I have to ask the OTPP if they have the analysis.

This would assume that the partners did not spend the surplus as it arose. Now that I have thought more about it, the partners are unlikely to leave enough surplus in the plan to get to the cap. They will want to spend it as it arrives. As you can see in the temporary funding zone deck, we are very unlikely to get to the permanent improvement zone due to the creation of the temporary zone.

Do you want me to pursue the question with OTPP?

Subject: Re: FW: Review: Valuation Allowance

Thanks for sending that through Cindy. I will take a look at it.

I forgot to ask on the call whether you and Nadine had given any consideration to the impact of scheduling out anticipated (funding) surplus growth assuming that current service cost remains the same in perpetuity and minimum funding requirements are greater than current service cost under the current Schedule 1 contributions. It might take a long time, but eventually there would be a significant build up of surplus such that the cap on contributions in Schedule 1 section 19 (2a) would kick in (i.e. when the income tax act would not cap contributions). As soon as the minimum contributions under the Schedule 1 drops below the current service cost then you can start to recognize a benefit under paragraph 056 (a) calculations. The only question is, depending on the expectations of surplus growth and when the ITA caps kick in, is when does this occur, and how big is the effect. You have until perpetuity to reach the caps, but obviously the further away the cap is reached, then the lower the benefit when discounted back.

I have reached out to find the right contact in the Netherlands. Given the time difference, I am not sure I will know by tomorrow morning, but I will keep you posted on that avenue.

Regards,
Lucy

Pauline

I did look into your file and seems reasonable vs the previous illustrations that we have exchanged, just one adjustment
You will see in liability sheet I have a line 29 adjustment for other unamortized (this is the transitional asset amortization that goes back to the initial application which is to be included in the test of unamortized losses) this likely affects your 2002 / 2003 valuation allowance.

Also to note is the flaw of the PS3250 that I have highlighted in previous communication :

- In 2008 we did have very bad asset returns and this creates a significant income

through reduction of valuation allowance
- In opposite, the years 2010 and 2011 had good returns but you have significant expense through increase of valuation allowance

Hi Martin,

I mocked up the annual valuation allowance based on our discussion yesterday. We went through it with Cindy this morning and she would like you to take a look at the mock-up to confirm that it is consistent to your understanding. In particular bringing the unamortized gain/loss from market related values to market values. Thank you in advance.

Attachment 2: Draft Pension Asset Position Paper Oct 28 clean to cv.docx

---

Lucy,

Just as an FYI, sharing the version of the document provided to Cindy for her review on the weekend. Will also share a copy of the draft deck in a separate email.

Nadine

Subject: Revised Pension Asset Position Paper

Cindy,

Attached is the revised version of the Pension Asset Position Paper, both a clean copy as well as a compare doc to the initial version provided last week for your review. There are a couple of areas that are still being worked on as noted in the comments.

A draft briefing deck is also being drafted, based on the outline of this version of the report. A draft of the deck will be ready for your review early next week.

Nadine

Position paper for Ontario Teachers' Pension Plan

Preamble

Style Definition: Comment Text

This document addresses the accounting for pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

~~A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.~~

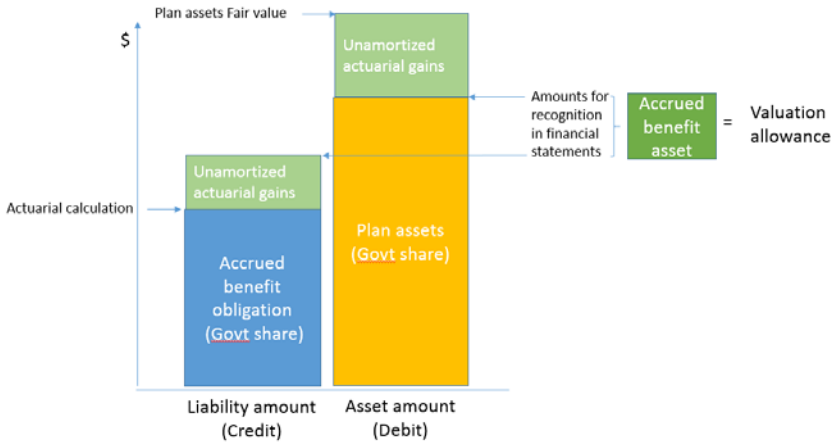
Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP. This position paper addresses the analysis for OTPP. A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.

As described in PSAS, ~~a~~ an accrued benefit asset (pension asset) arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. ~~Contributions reflect the funding objectives of the plan. The benefit~~ An Accrued Benefit Asset (AcBA) includes the effect of net unamortized experience gains or losses. Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation. OTPP currently has net unamortized experience gains. The following illustration reflects the compilation of the net pension asset (accrued benefit asset) reported on the Province's

DRAFT

books for the OTPP.



It is important to note that contributions to the plan are based on funding objectives of the plan. In contrast, Benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the asset balance (~~or~~ plan surplus for accounting purposes) in OTPP ~~and OPSEUPP are~~is an asset to the ~~province~~Province and it is ~~suitable~~appropriate to reflect ~~them~~it in the financial results in accordance with PSAS. The Province has also concluded that no valuation allowance under PSAS is required against the asset as at March 31, 2016.

The OAG disagrees with this position. The OAG has indicated that ~~because~~ the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and ~~in the absence of~~as such that ~~right, because~~ the Province does not ~~have~~ control the assets which the OAG interprets PSAS as requiring. Further, the OAG considers the lack of an enforceable agreement ~~in place~~at year-end with the Ontario Teachers' Federation (OTF) ~~with respect to how~~dictating lower contributions in the ~~surplus would be utilized such~~future as requiring that ~~it would provide~~ a ~~benefit to the Province, a pension~~full asset ~~in the Public Accounts is not appropriate.~~valuation allowance be taken against the asset under PSAS.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. RETIREMENT BENEFITS, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. Since 2001, there have been no consequential changes to Section PS 3250. As a result Ontario ~~had~~has followed the same pension accounting treatment for ~~all of~~OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the

Commented [NP1]:

LD – Pauline/Jim – please confirm that details are relevant to OTPP situation.

period is reflected in Appendix F. Unqualified audit reports have been received for each of the years from the OAG on the Public Accounts. ~~This~~ The pension accounting initially adopted by the Province for OTPP had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals. ~~There has been no change to the relevant PSAS (i.e. RETIREMENT BENEFIT, Section PS 3250) over the past 14 years.~~ for the prior years.

Formatted: English (Canada)

~~A regulation was made~~In light of the contrasting views on interpretation of PS 3250 to the Province's jointly sponsored pension plans, a regulation was necessary to allow the public service to sign-off on the impact of the OAG's view on accounting for pension assets in Ontario's 2015-16 financial statements. The ~~Province filed a~~regulation is time-limited ~~regulation, which~~and legislates the accounting for pension assets of its two jointly-sponsored pension plans (OTPP and OPSEUPP) for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The ~~impact of the~~ change in accounting treatment for 2015-16 resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the 2015-16 annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's accounting, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to ~~write off the pension assets.~~reflect the Auditor General's interpretation of PSAS. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt.

~~**What is being asked of the Expert Advisory Panel**~~

~~The Expert Advisory Panel is being asked to review and deliver advice and recommendations to the government as to the application of PSAS to Ontario's pension assets. The future accounting by the Government of its pension assets will be guided by the report of the Expert Advisory Panel.~~

~~The Expert Advisory Panel 's advice and recommendations to the government will address:~~

- ~~The requirement regarding control (or shared control) with respect to recognizing a pension asset for a defined benefit plan, as it relates to the pension plans reported by the Province of Ontario, including OTPP, OPSEUPP, HOOPP, and CAAT.~~
- ~~Appropriate valuation techniques to measure a pension asset that take into consideration future decision-making authority by plan sponsors.~~
- ~~Recommendations to the Employment Benefits Task Force of the Public Sector Accounting Board (PSAB) regarding issues that should be considered in their review of the retirement and post-employment benefits standards.~~

Position paper for Ontario Teachers' Pension Plan

Background

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1.

The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the ~~Ontario Teachers' Federation represented by its Executive (the "~~OTF~~")~~ (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. The OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for the OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the ~~Partners~~Partners' Agreement (FMP);
~~f) The Ontario Teachers' Pension Plan; and~~
~~g)~~f) ~~-~~The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
~~1~~a. It provides defined benefits.
~~2~~b. The defined benefits are contributory benefits.
~~3~~c. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
~~4~~d. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to the OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5][6] This clause has been interpreted as a short term solvency protection clause, rather than a clause that transfers substantive residual risk to the Province, as the rest of the arrangement is structured such that the risk of these payments is minimal and the risks of the long term funding of the plan must still be equitably shared. The Province is also permitted to make additional contributions in respect of a solvency deficiency[7] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [8] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

[7] TPA, subsection 5(7).
[8] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/~~101791209401 l5e47lc2b~~10179/20940/-/5e471c2b-23f1-44e6-~~b5cld22e3e50dbc3lHow~~b5c1d22e3e50dbc3/How+Contribution+Rates~~*HaverEvolved~~+Have+Evolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.~~20lo~~20% versus ~~l0.4yo/l2Vo,~~10.4%/12%, respectively). It ~~js~~is

~~Currently, the Sponsors are also required to mutually agree upon how any plan deficits are to be addressed.[9] While not binding upon the Sponsors, the FMP indicates that deficits may be addressed through increases to the contribution rates, lowering the amount of indexation and/or other decreases in benefits.~~

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the ~~FMP~~Partner's Agreement requires the Sponsors to negotiate and agree upon decisions relating to surplus or deficit utilization, which currently is outlined in the FMP. [10] The FMP indicates that deficits (or surpluses) may be addressed through increases (decreases) to the contribution rates, lowering (increasing) the amount of indexation and/or other decreases (increases) in benefits. While not binding upon the Sponsors, as the Sponsors can change the FMP at any time, any changes are required to have the mutual consent of both Sponsors. Accordingly, the Sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the Sponsors are included in appendix ~~E~~B. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization

our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.

~~[9] See, for example, Section 3.09 and 3.11 of the FMP.~~

[10] See, for example, Section 3.09 and 3.11 of the FMP.

options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Formatted: Indent: Left: 1.27 cm

Notwithstanding the foregoing, under the FMP the Sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the Sponsors to agree upon the manner in which surplus is to be utilized, neither Sponsor has a legally enforceable right to unilaterally utilize surplus in the OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What the Province does have, however, is a right to negotiate with the OTF the use of ~~surplus~~funding surpluses that may arise under the plan~~, at least in the context of an actuarial valuation that discloses surplus and that is to be filed with the regulators~~.

4. ~~When negotiations~~Negotiations on the use of the surplus occur ~~is laid out~~as specified in the Partners' Agreement. The Partner's Agreement requires that any actuarial funding valuation submitted to the pension regulators must be "actuarially balanced" (Section 57 of the Partners' Agreement). This must occur at least once every three years, but can occur every year if the partners agree. If a preliminary funding valuation shows a funding surplus or deficit then the joint sponsors must negotiate how this surplus or deficit is to be resolved prior to filing the funding valuation.

Accounting for OTPP by the Province

Since fiscal year 2001-2002, the Province has recorded a pension asset for OTPP on the Statement of Financial Position. A pension asset has arisen because the government's share (50%) of the total

contributions to OTPP plus ~~the actual~~recognized investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense~~.~~ (see illustrative examples in Appendix J). The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

~~The~~With regards to any comparisons between surplus or deficit amounts reported in the Province's financial statements verses the OTPP's financial statements or funding reports, it is important to acknowledge the different objectives of funding and accounting for a pension plan which are also explicitly addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*
>
> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.*

~~Paragraph~~Section PS 3250 paragraph .051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: "Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…"

OTPP's most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website. The Province's relative portion of this surplus would be $6.6 billion. The OTPP's public financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015~~.~~, for which the Province's portion would be a deficit of $900 million. The following background helps to clarify the reasons for these different results. OTPP's financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook ("Part IV"), which is a different accounting framework than

the Province uses for its financial reporting and is also a different framework than is used to calculate the ~~funding~~net surplus or deficit~~.~~ for funding purposes.

Accounting for employee future benefits requires the use of assumptions and methodologies to calculate both the obligation incurred to date and the value of the assets already set aside to meet those obligations. Accounting frameworks differ in standards that must be applied in determining appropriate assumptions and methodologies. Further, the assumptions and methodologies used in developing a "funding valuation" on a going concern basis may also differ from those required by accounting standards. These differences result in a number of different valuations for the same plan, depending on the purpose of the valuation and can be affected by certain choices made between acceptable options within each framework. A summary of the main differences between the methodologies used to calculate a going concern funding valuation, OTPP's accounting valuation and the Province's accounting valuation is shown in Appendix ~~H~~D.

Formatted: Not Highlight

Specifically, the discount rate used to value the obligations of the plan has a significant impact on the overall position of the plan. A lower discount rate results in a higher liability and a higher discount rate results in a lower liability, all else being equal. Put another way, a higher estimate of the time-value of money makes the promises made today that will be paid out in the future cheaper. ~~Both the PSAS accepted discount rate based on the expected asset return and the IFRS required discount rate of corporate/government bonds are "best estimate" rates. They must both be based on management's best estimate of the applicable discount rate.~~ OTPP uses a discount rate based on corporate/government bond rates in its financial statements, as permitted by Part IV. The Province uses a discount rate based on the expected asset return, as permitted by PSAS. ~~In both cases the estimates must be supportable. The difference result not from one being more "right" or "wrong" than the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.~~ The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds. Both a discount rate based on the expected asset return and one based on corporate/government bonds are "best estimate" rates; they must both be based on management's best estimate of the applicable discount rate. In both cases the estimates must be supportable. The difference results not from one being more "right" or "wrong" relative to the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.

Typically the funding discount rate used for the funding valuation falls between the bond discount rate and the expected asset return, but it differs in that it does not purport to be the "best estimate" of the discount rate, ~~but~~rather it is designed to indicate the contributions that are required to fund the promised benefits~~,~~ with an additional conservative margin for adverse deviations. Note that over the

long term the difference between funding valuations and accounting valuations would diminish as the impact of the discount rate unwinds and the asset valuation methods converge.

In practice, the discount rates used in the financial statements of government sponsored and joint defined benefit pension plans prepared under Part IV of the CPA Canada Handbook (Section 4600) use diverse methodologies. For example, in Alberta ~~7~~there are seven plans which prepare their financial statements under Part IV with reference to IFRS (same framework as OTPP). Of these none use a government bond discount rate and all use a discount rate calculated with some reference to a rate of return on invested assets, which may include factors for expenses, diversification and rebalancing. The analysis of a number of government sponsored plans is included as Appendix ~~[G]~~ E. The analysis demonstrates that a significant number of government sponsored plans use a discount rate aligned to an asset investment return rather than a bond discount rate. OTPP is actually in the minority of plans that choose to use the rate required by IFRS, resulting in a lower discount rate and higher liability for financial reporting purposes.

Formatted: Not Highlight

~~The above analysis indicates that the presentation of a deficit~~The above analysis explains how different discount rates impact the net surplus/deficit reported on OTPP's financial statements, OTPP funding reports and the Province's financial statements. The fact that OTPP reports a deficit on its financial statements, or that the 50% of the net surplus reported by OTPP for funding purposes is lower than the surplus reported on the government's financial statements under PSAB standards is of no consequence or relevance to the pension asset amount or pension expense reported by the Province for OTPP.

To further clarify, that there is a deficit reported in the OTPP financial statements while the Province of Ontario calculates a surplus under PSAS requirements does not mean that there is no accounting surplus and therefore no reportable asset for the Province. ~~It would be acceptable under~~ In fact, if the ~~Part IV framework for~~ OTPP ~~to have selected,~~ had chosen (as an acceptable accounting policy~~,~~ choice) to use a discount rate more consistent with its counterparts in other jurisdictions (see Appendix E) such as a discount rate based on an asset return which would be closer to that used by the Province ~~which~~, it would eliminate ~~a significant element~~much of the existing differences between the reported net surplus/deficit ~~for accounting purposes in~~ amounts between the OTPP statements and the ~~net surplus/deficit of the~~ Province's share of OTPP reported for accounting purposes in the Public Accounts.

~~Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook.~~ **Sufficiency of PS 3250 in assessing appropriate accounting for pension assets**

~~Unqualified audit reports have been received for each of the years from the OAG on the Public Accounts.~~

~~RETIREMENT BENEFIT, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. The Province has followed this standard over the prior 14 years. Over this period of time, there have been no consequential changes to~~

~~Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years.~~

~~The prior pension accounting for OTPP had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals during this period of time.~~

~~Over the prior 14 years, the Province has classified OTPP as a joint defined benefit plan as per Section PS 3250 (this classification will be discussed more in this document). Over this period of time, the pension expense and pension liability (asset) for OTPP reported by the Province is reflected in Appendix F.~~

~~**History regarding the PSA standards**~~

~~As mentioned, the financial statements for the Province have been prepared over the prior 14 years in accordance with the PSA Handbook.~~

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES, Section PS 1150 prescribes that, in developing and applying accounting policies, all primary sources of GAAP should be applied~~.~~ (Section PS 1150 paragraph .04). Primary sources of GAAP are Sections PS ~~1200~~1201-PS 3510, Public Sector Guidelines and appendices and illustrative material to those pronouncements. Only when there are no primary sources of GAAP that relate to the transactions or events under consideration, or more specific guidance is needed~~,~~ (Section PS 1150 paragraph .05), does an entity consider other primary sources of GAAP dealing with similar issues and also the concepts described in FINANCIAL STATEMENT CONCEPTS, Section PS 1000~~.~~ (issued January 2003). Section PS 1000 is not, however, a "primary source of GAAP" under the PSA Handbook.

The primary sources of GAAP specific to the accounting for pension assets is RETIREMENT BENEFITS, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, Section PS 3250 which was based on Accounting Statement No. 5).

Other primary sources of GAAP that deal with similar issues might also be considered where additional interpretation or guidance ~~is needed~~may be required. For the issues dealt with in this paper - recognition and measurement of a joint defined benefit plan - this could include standards that relate to ~~joint~~shared control, as OTPP is a joint defined benefit plan, standards that relate to the definition of an asset and standards that relate to measurement uncertainty:

- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015, effective from April 1, 2017)
- MEASUREMENT UNCERTAINTY, Section PS 2130 (issued in April 2005)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception of ASSETS, PS 3210 which is more recent and will be effective in for periods beginning on or after April 1, 2017. Section PS 3210 provides additional guidance on the various components of the existing asset definition found in Section PS 1000; it does not change the definition.

Accounting Analysis

Formatted: Font: Bold

Question 1 – ~~Recognition~~Classification of a pension asset

The analysis below addresses whether the Province's share of the pension surplus in OTPP, calculated in accordance with PSA standards under Section PS 3250, represents ~~an~~a reportable asset to the Province of Ontario ~~for purposes of preparation of~~in the Public Accounts.

Standards in the PSA Handbook

The focus of the following analysis is on the accounting requirements in RETIREMENT ~~BENEFIT~~BENEFITS, Section PS 3250 as this standard is a primary source of GAAP which specifically addresses the accounting for pension assets. The following highlights some key concepts and guidance contained in this standard.

RETIREMENT BENEFIT, Section PS 3250 – Purpose and Scope

The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250~~, paragraph~~ .003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

DRAFT

RETIREMENT ~~BENEFIT~~BENEFITS, Section PS 3250 – Types of pension plans

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*
>
> *(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;*
>
> *(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;*
>
> *(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and*
>
> *(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.*
>
> *The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.*

Additional guidance on identifying Joint Defined Benefit Plans (JDBPs) is in Section PS 3250 paragraphs .79 to .80 which similarly ~~highlights~~highlight the importance of both ~~shares~~shared control and shared risks and rewards in a JDBP:

> *.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.*

DRAFT

> *.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.*

~~A joint defined benefit plan (JDBP)~~It should be noted that the definition of a Joint Defined Benefit Plan under Section 3250 is not the same as the definition of a JSPP under the PBA, although there are some overlapping concepts between the two. A JDBP is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. The Province has concluded that OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. The OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees ~~(addressed in paragraph 8 of the Partners' Agreement for example),~~ ;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph ~~5~~10(1~~.1~~)3 of the TPA for example).

~~There is no uncertainty regarding the joint control of OTPP shared by the Province of Ontario and the Ontario Teachers Federation.~~ The TPA, the Partners' Agreement and the plan text collectively set out this shared control and that the Province of Ontario has an equitable sharing of the risks and rewards (surpluses and deficits) of the plan ~~based on~~, thus meeting the definition of a joint defined benefit plan.

The classification of OTPP as a JDBP for accounting purposes [and a JSPP under the PBA] by the Office of the Provincial Controller has been consistent since 2001 and ~~has~~had been consistently accepted ~~by the~~

~~OAG~~without question by the Office of the Auditor General, including throughout the 2015/16 Public Accounts.

~~**RETIREMENT BENEFIT, Section PS 3250 – Accounting**~~

Question 2 – Recognition of a pension asset for a JDBP

RETIREMENT BENEFITS, Section PS 3250 paragraphs .081 to .082 ~~mandate~~provide guidance on the accounting for a JDBP in the financial statements of the government sponsor. As OTPP meets the definition of a JDBP for the reasons noted above, the ~~Province should follow this guidance which states:~~relevant guidance for the Province for purposes of reporting retirement benefits in the Public Accounts includes:

> *.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]*
>
> *.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.*

Section PS 3250.81 clearly states that "The government should account for its portion of the plan in accordance with the standards for defined benefit plans". It is clear from this that only the government's portion of the plan is included in the government's financial statements consistent with the requirements of Section PS 3250 (recognition) and the measurement of that portion is based on the requirements of Section PS 3250 (measurement). ~~This paper discusses the two elements of recognition and measurement separately~~It is also then clear that the requirements of the standard for recognition and measurement, including the Limit of the Carrying Amount of an Accrued Benefit Asset guidance, are designed to be applied to a shared control situation and not only to situations where there is unilateral control. If it was intended that no pension asset could be recognized because the asset was subject to shared control and not unilateral control Section 3250 paragraph .081 would have made this clear. This paper discusses the question of measurement separately in Question 3.

The balance sheet recognition guidance for retirement benefits is stated in Section PS 3250 paragraphs .016 to .017:

> *.016 The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date. [SEPT. 2001]*
>
> *.017 The components of the retirement benefit liability are:*
>
> > *(a) accrued benefit obligation including the effects of plan amendments, settlements and curtailments;*
> >
> > *(b) plan assets, if any; and*
> >
> > *(c) unamortized actuarial gains and losses.*

As the OTPP is a funded plan there are plan assets that are recognized as part of the retirement benefit liability. When plan assets and the net impact of unamortized actuarial gains and losses exceed the accrued benefit obligation then there is an "Accrued benefit asset" (ABA). An ABA is defined in Section PS 3250 as follows:

> GLOSSARY - *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

Accordingly, the portion of the government's plan to be recognized includes their share of the accrued benefit obligation and also their share of the plan assets. In the case of the Province's portion of OTPP there is no uncertainty regarding the *existence* of an ABA for the government's portion of the plan~~,~~ ~~based on the best estimate assumptions used in measuring the~~; the ABA is calculated by reference to accrued benefit obligation and plan assets, ~~measured in accordance~~both determined based on the best estimate assumptions and the methodologies required by with Section PS 3250 ~~guidance~~ for these items. As noted above an ABA is defined as the sum of the government's ~~sum of the~~ accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance). For a jointly sponsored plan, this is the government's accumulated cash contributions less ~~the sum of~~ the government's share of the current and prior years' benefit expenses that are attributable to the government under the joint defined benefit plan. The Province's portion of OTPP resulted in an ABA of $10.1 billion as at March 31, 2016. There is no uncertainty regarding the occurrence of the cash contributions made (~~including~~and the interest earned thereon) measured in accordance with Section PS 3250 and the existence of the government's obligation. As ~~Paragraph~~Section 3250.80 *requires* a government to account for its portion of the plan in accordance with the standards for defined benefit plans, this would include the recognition of any asset that meets the definition of an ABA under the standard.

Further, Section PS ~~3250 paragraph~~ 3250.50 refers to the presentation of the ABA; this amount is presented in the financial statements, net of any valuation allowance. This indicates that an ABA should

be recognized in the financial statements, but measured in reference to the limit on the carrying amount of the asset - essentially a measurement requirement rather than a recognition requirement, as the limit could result in an ABA ~~could be~~being measured at anything from $nil to its full amount. Note that the *measurement* of any net asset is subject to guidance in Section PS 3250 paragraphs .50-.59 and is discussed later in this paper.

To recognize only their share of the liability and not their share of the plan assets, or to recognize only a net liability (accrued benefit obligation exceeds plan assets) but never a net asset (when plan assets exceeds the accrued benefit obligation, subject to the valuation allowance guidance discussed in the Measurement section below), would indicate that the ~~government~~Province does not share equitably in the risks and rewards of the ~~plan~~OTPP because they bear only the risk of increased liabilities without being able to bear ~~the~~any rewards of investment returns on the plan assets and under this interpretation the plan would not therefore be a joint defined benefit plan.

Concept of Shared Control and ~~asset recognition~~Asset Recognition

Included in the definition of a JDBP is the concept of shared control. Points (~~c~~b) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of ~~Shared Control~~shared control resulting in a recognition of an asset ~~may be seen~~could on the surface appear to conflict with the definition of an asset under FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210, as part of the definition of an asset ~~is~~under PS 1000 would suggest that the government ~~can~~must control the economic resource and access to the future economic benefits. ~~Joint~~Since shared control does not equate to control, ~~therefore the introduction of ASSETS, Section PS 3210 raises the question as~~there is a need to consider whether the recognition of any asset ~~for which~~under PS 3250 is appropriate where there is only shared control ~~is precluded under PSAS.~~.

The Province's position is that PSAS does not preclude asset recognition for assets under ~~joint~~shared control and specifically for plan assets of joint defined benefit plans for the following reasons:

- As discussed above GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity. Section PS 3250 is a primary source of GAAP for dealing specifically with joint defined benefit plans and, as noted above, requires the government to account for their portion of the plan – both the accrued benefit obligation and plan assets in accordance with Section PS 3250. As such, reference to Section PS 3250 is sufficient to indicate that the recognition criteria are met for joint defined benefit plan assets, no further source of PSAS guidance need be considered.

- ~~If~~Similarly, if other primary sources of GAAP are considered then it is relevant to consider GOVERNMENT PARTNERSHIPS, Section PS 3060 which also includes the concept of shared

Formatted: Space After: 18 pt

control. Under Section PS 3060, ~~joint~~shared control is sufficient for asset recognition~~. It is therefore consistent with this primary sources of GAAP to recognize an asset for a jointly controlled defined benefit plan, subject to measurement guidance including impairment considerations~~.

- The concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. With the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that PSAB did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

- ~~similarity~~The Province's reporting of a pension asset for the JDBP is therefore consistent with these primary sources of GAAP, subject to measurement guidance including impairment considerations.

Formatted: Space After: 10 pt, Bulleted + Level: 1 + Aligned at: 0.63 cm + Indent at: 1.27 cm

The similarities between the definitions of a JDBP and a government partnership under PSAS are demonstrated in Appendix ~~B~~F to this paper, and further support ~~Section~~ PS 3060 as being a relevant primary source of GAAP dealing with similar circumstances, should it be considered necessary to go outside of the requirements of Section PS 3250 to look for further clarification and guidance on recognition.

Under Section PS 3060 a critical condition for a Government partnership is shared control. Section PS 3060 explicitly acknowledges that under shared control "none of the partners is in a position to exercise unilateral control over the government partnership" (PS 3060.20), yet the accounting model required by Section PS 3060 for non- GBPs[11] is that of proportionate consolidation which is the ~~picking up~~recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership. Joint defined benefit plans are excluded from the scope of Section PS 3060 on the basis that control is shared with employees rather than with a party outside of the reporting entity (Section PS 3060 paragraph .06 footnote 3). This reason indicates that such plans are excluded because of a closer relationship between the government and the other party than normally exists for government partnerships. Even when an independent third party shares control, Section PS 3060 still requires the recognition of a share in an asset subject to ~~joint~~shared control, indicating that the PSAS framework does not require unilateral control in order to support asset recognition when there is ~~joint~~shared control. It would not be appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3060 for proportionate consolidation, and similarly it is not appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3250 to account for

[11] Government business partnerships (GBPs) are accounted for under the modified equity method rather than proportionate consolidation.

the government's portion of a joint defined benefit plan. In other words, PS 3250 is a primary source of GAAP and provides sufficient and complete guidance on how to account for assets related to joint defined benefit plans.

~~The~~

Concept of Contingent Asset

CONTINGENT ASSETS, Section PS 3320, provides guidance on the disclosure of contingent assets in a government's financial statements. It characterizes a contingent asset as one where there is uncertainty as to the existence of an asset (Section PS 3320 paragraph .04). It is the Province's position that the existence of the pension asset is not uncertain – there is an accrued benefit asset calculated in accordance with Section PS 3250 as noted above that is based on past transactions, being the impact of cumulative contributions and benefit expense. The fact that shared control exists with regards to access to the assets of the plan does not create additional uncertainty that would impact asset recognition under PSAS. The Province anticipates that in a broad sense, s any OTPP surplus would be shared in an "equitable manner" under the terms of the arrangement, and this is enabled through the ability to negotiate the utilization of the surplus including the ability to prevent the utilization of the surplus in a manner that does not benefit the Province. This expectation is further supported by past history of surplus utilization (see Appendix G). The method, extent and timing of which the Province will obtain the expected future benefits (contributions reductions vs increase in benefits) is not certain. However Section PS 3320 also states "The mere fact that an estimate of an amount is involved (measurement uncertainty) does not, in and of itself, constitute the type of uncertainty that characterizes a contingent asset. For example, even though there may be measurement uncertainty related to income tax receivable, there is nothing uncertain about the fact that this asset exists. Any uncertainty is related solely to the amount thereof" (Section PS 3320 paragraph .07). Based on past history of surplus utilization for OTPP and based on the constating documents, expected future benefits for the Government are present. The uncertainty as with many types of assets relates to measurement uncertainty which will be discussed below.

- ~~concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. On the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that PSAB did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.~~

Formatted: Space After: 10 pt, Bulleted + Level: 1 + Aligned at: 0.63 cm + Indent at: 1.27 cm

Conclusion on recognition

Therefore the Province has concluded that PSAS permits the ~~conceptual~~ recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets must be subject to unilateral control. The Province's share of OTPP's pension surplus meets the definition of an

Accrued Benefit Asset under Section PS 3250. The measurement of that accrued benefit asset is determined by reference to the guidance in Section PS 3250 regarding the Limit on the Carrying Amount of an Accrued Benefit Asset, which is discussed in Question 2 of this position paper.

Question ~~2~~3 – Measurement of a pension asset

~~For an asset to be recognized it must be reliably measureable. Section PS paragraphs 3250.050 to .059 address how to measure a pension asset. "When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit." Paragraphs~~For an asset to be recognized it must be reliably measureable (Section PS 1000.55). Section PS 3250 paragraphs .050 to .059 address how to measure a pension asset. This is a two-step process. Firstly the accrued plan obligation (a Credit) and the plan assets (a Debit) are measured in accordance with the standard, and adjusted for any unamortized actuarial gains or losses (a Debit for gains not yet realized, a Credit for losses not yet realized). This measurement results in a retirement benefit liability when it is a net liability (a Credit) amount or an accrued benefit asset when it is a net asset (a Debit) amount. When the resulting amount is an asset, the standard requires a second step to test that the asset is not impaired. It should be noted that impairment testing in some form is required for all assets recognized under PSAS standards except those carried at fair value, although the methodology of impairment tests will vary depending on the nature of the asset. The amount that is tested is the "adjusted benefit asset". When there are net unamortized gains the ABA is equal to the adjusted benefit asset. When there are net unamortized losses the ABA is reduced by those net unamortized losses to calculate the adjusted benefit asset. A graphical illustration of the calculation of the Accrued Benefit Asset (AcBA) and the Adjusted Benefit Asset (AdBA) are shown in appendix C. Section PS 3250 paragraphs .052 to .059 go on to explain what the standard means by expected future benefit and how a government may benefit from the ABA~~.~~ or adjusted benefit asset. Note that for OTPP the accrued benefit asset equals the adjusted benefit asset as there are net unamortized actuarial gains.

Section PS 3250.50-.59 are included here for completeness and ease of reference:

> ***Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)***
>
> *.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]*

DRAFT

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in Section PS 3250 paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to

calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Note that for purposes of Section PS 3250.053 the Province has

Formatted: Normal, Line spacing: single, Font Alignment: Auto

DRAFT

determined that the accrued benefit asset equals the adjustment benefit asset: (due to unamortized actuarial gains exceeding unamo

DRAFT

~~rtized actuarial losses).~~ Section 3250 paragraph

~~Paragraph~~ .052 states that a government may benefit from an ABA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions. ~~It~~This is an explanatory paragraph on how a government may benefit from an ~~accrued benefit asset~~ABA and why ~~an~~a valuation allowance may be needed, rather than detailing the test to be applied. Part of this justification is to note that that an ABA may be impaired when "the government is not entitled to benefit from [the ABA] fully". Examples of when a government may not be entitled to benefit from the ABA fully are given, such as a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

Formatted: Font: SimSun, 12 pt, English (United States)

~~As such, the Province's present~~Section PS 3250 paragraph .059 gives additional guidance to apply when an entity contemplates realizing future benefits through a surplus withdrawal: "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal". This introduces the concept of a legally enforceable right but only in the context of a government's withdrawal of surplus and not in the context of contribution holidays. If the standard setters had intended legal enforceability to be the test throughout the standard, they would not have raised it only in the context of a withdrawal of surplus, but as a more fundamental notion in the guidance on expected future benefit.

It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to shared control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Section 3250 paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays. When considering the

Formatted: Normal (Web), Line spacing: Multiple 1.15 li, Font Alignment: Center

DRAFT

ability to realize expected future benefits under Section PS 3250 paragraph .052, the Province's legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability~~.~~ which is not explicitly required by the standard to support recognition and measurement of JDBP pension assets. Specifically, the amount of ~~Pension Asset~~pension asset that gets recorded needs to ~~be subject to~~take into account considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a ~~Pension Asset.~~ pension asset in the Public Accounts. Pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". Expected does not equate to certainty (Section PS 1000.056).

~~While the Province does not have a unilateral legal right to reduce their contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to joint control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Paragraph .052 does not state that being "entitled to benefit" means having a current legally enforceable right to take contribution holidays or withdraw surplus. Under the plan text and Partners' Agreement means that if funding surpluses occur the partners must~~Under the Plan and Partners' Agreement, if funding surpluses occur the partners are required to negotiate the use of the funding surplus (at least once every three years) and the Province is entitled to negotiate a reduction in contributions in respect of ~~their~~its share of the surplus. Under the Partners' ~~agreement~~Agreement any funding surplus must be dealt with so that the funding valuation becomes actuarially balanced. *In other words when there is a funding surplus over a certain range the "status quo" cannot be maintained, the surplus must be reduced by a combination of reductions in contributions, increases in benefits or withdrawals of surplus*. This is confirmed by the Partners' Agreement Section 57 that requires an actuarially balanced valuation to be prepared at least once every three years, allowing for a contingency reserve, combined with the FMP which sets out the framework for determining when a surplus or deficit outside of agreed upon ranges are met and action must be taken. While the Province might choose to accept an increase in member benefits rather than to reduce funding ~~at their~~, any such decision is at the Province's discretion~~,~~ since the OTF cannot force the Province to increase benefits instead of reducing contributions. In other words ~~the Province can avoid that their~~it is at the Province's discretion whether to address the actuarial balancing requirements by allowing its portion of the surplus ~~is~~to be utilized ~~only~~ through increased benefits. The OTF equally has the right to not agree to reduced contributions from the Province, but they do not have the right to force an inequitable sharing of the surplus.

DRAFT

Therefore, the Province is entitled to negotiate their share of the JDBP ~~and take~~which may include taking contribution holidays in future negotiations and can effectively use their power in negotiations to benefit from the ABA. The joint partners do have the ability to renegotiate all aspects of the partners' agreement including the FMP. However all changes require the agreement of both parties and as such the Province can veto any changes to the agreement. Note that while the negotiations are based on funding surplus amounts rather than accounting surplus amounts, any differences would be captured in the mechanics of the calculation of the expected future benefit rather than precluding an ability to benefit from any of the accounting surplus.

Further, Section PS 3250 paragraph ~~PS 3250~~.055 indicates "The objective of the standard in Section PS 3250 paragraph ~~PS 3250~~.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Many generally accepted accounting frameworks use "expected" in a number of principles and is typically used in the probabilistic sense – something is expected when it is probable at some level, it does not equate to certainty. The Province has an expectation that they will benefit fully from the ABA by exercising their current rights under the plan arrangements to negotiate the use of current and future surpluses in the form of contribution holidays. This position is supported by the review of the constating documents and past history of negotiations that indicate:

1. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) to exceed the amount of contributions paid by or on behalf of active members in respect of credited service for the year (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.
2. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix G for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the Sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.
3. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right[12]), and the requirement to negotiate and agree (or in the absence

[12] The OTF Call Right is a one-time arrangement intended to compensate Plan members for absorbing 100% (rather than 50%) of funding shortfalls arising the government initiated Freeze period. Part of a previously agreed upon arrangement to ensure equitable sharing of the risks and rewards over the long term of the plan, it is not a general unilateral right to utilize future surpluses beyond the recovery of the specific funding shortfalls.

of agreement, arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.

4. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan. Under the plan, contributions are generally borne equally by the Province and the employees. Employees benefit economically from both an increase in benefits and from a reduction of contributions. The Province benefits economically directly from a reduction in contributions. This makes it reasonable that at least some contribution reductions would be agreed to by the joint sponsors as a highly unequal weighting towards increases in benefits would not balance the interests of taxpayers and teachers therefore may be unlikely to be a reasonable outcome of “good faith” negotiations between the Province and the OTF.

   This is further supported by the historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses, should also be considered. As previously discussed in respect of conditional indexing, a decrease in benefits by the employees were offset by an increase in payments by the Province. Similarly as the sponsors agreed to restore indexation, this increase in benefits resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.~~9~~98B for the 2015 change, and $1.~~6~~68B for the 2014 change). This demonstrates that historically and over the long term an equitable sharing of the deficits and surpluses has resulted in changes in the Province’s contributions, even when there are decreases or increases to benefits for employees.

5. In the event that the Sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, a mediator may be chosen by agreement of the ~~matter can be submitted to~~sponsors (section 77 of the Partners’ Agreement). If the sponsors do not accept the report of the mediator, an arbitration board will be appointed (section 84 of the Partners’ Agreement). The arbitration board would consist of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

   As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-

DRAFT

agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

~~Further to Section PS 3250.052 discussion regarding entitlement to benefit PS 3250.059 provides further guidance on what this means in respect of an entitlement to withdraw surplus. "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal." PS 3250.59 is clear that expected future benefit available from surplus withdrawal can only be asserted where the government has a current legally enforceable right to withdraw assets from the Plan. Section PS 3250.59 introduces the concept of a legally enforceable right, however it does so solely in the context of a government's future withdrawal of a Plan surplus, and not in the context of a government's reduction of future contributions. Had PSAB intended legal enforceability to be the test, they would have included that notion throughout the guidance (for example in paragraph .052), instead of only raising it in the context of a withdrawal of surplus.~~

Based on the above analysis, the Province believes that the uncertainties around how and when to utilize a surplus in the OTPP do not result in an inability or lack of entitlement to utilize the surplus in accordance with Section ~~PS~~ 3250.52.

Calculating the limit on the carrying amount of an accrued benefit asset

Section PS 3250.53 to .58 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in Section PS3250 paragraph .055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where actual realization ~~includes~~ of the benefit would be reflected in a reduction in future contributions. A valuation allowance is recorded against the ~~Pension Asset~~ pension asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test under Section PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as ~~that expected future benefit is~~ defined in Section 3250 paragraph .56.

Therefore in accordance with Section PS 3250 paragraph .56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Each of these is discussed separately.

Through withdrawal of the surplus (Section PS 3250.056 (b~~)~~))

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, Section 3250 paragraph ~~3250~~.059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

The TPA for OTPP does not ~~provide~~specify a method for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

DRAFT

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution~~, the~~. The Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

The Province's position is that there is no amount of expected future benefit included in respect of withdrawable plan surplus ~~as government does not have a legally enforceable right to the surplus. The OAG agrees with this position.~~ .

Through reducing future contributions (Section PS 3250 paragraph .056 (a))

PS 3250.56(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per PS 3250 paragraph.81 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the ~~Pension Asset~~pension asset value to be recorded in the accounts. For example, if the ~~Pension Asset~~pension asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the ~~Pension Asset~~pension asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. It is therefore relatively straightforward and is typically calculated based on the Province's share of the current service cost reported in the actuarial valuation taken into perpetuity unless there is evidence to indicate the workforce will significant diminish over time (for example a closed plan).

The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in ~~the determination~~this second part of the calculation. Note that

Formatted: Normal, Right: 0.1 cm, Space Before: 3.3 pt, Line spacing: single, Font Alignment: Auto

consistent with the calculation of the expected future ~~minimum~~accruals for service, no amounts are considered for employee contributions ~~required~~as these relate to the OTF's portion of the plan. The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (3250.56(a)). ~~be made by the government regardless of any surplus.~~ There is no further guidance in S 3250 as to how ~~this~~the calculation of minimum required contributions should be performed and what restrictions or parameters should be factored into this calculation. Typically for defined benefit plans minimum contributions include those that are required by the pension regulator to be made for funding. However, minimum contributions regardless of any surplus, may be required by plan text, legislation or other agreements with employees. For OTPP a key element of judgment is determining what contributions are required by the current plan arrangements "regardless of any surplus". The constating agreements for OTPP require that the parties negotiate every 3 years as a minimum, and when there is a funding surplus.

Determining the number of years of contributions to include should involve an assessment of the facts and circumstances of the plan and should consider uncertainty. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the contractual agreements between the Sponsors that provide for the sharing of risks and benefits and specifically in respect of assessing the minimum contributions required by the plan agreements the following:

- One view of minimum contributions might be that the agreed upon level of contributions are the minimum contributions until they are altered in the plan text. As this can only happen with agreement from OTF it cannot be assumed that changes will be made and therefore that the contribution formula as stated in the current agreements will continue in perpetuity. This view provides the most conservative view of minimum payments. However as the current contribution amounts are greater than the government's share of the annual current service cost for the existing workforce this indicates that continued contributions at this rate will result in ever increasing surpluses. Extrapolating the surpluses, at a certain point other requirements that are currently incorporated into the plan text, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan will apply to reduce the contributions. The effect of these caps on contributions would have to be estimated but cannot be ignored as they form part of the current contribution arrangements. Modelling could be performed to develop expectations as to when these CRA ~~limited~~limits could be expected to be reached assuming no changes in the contribution levels. As is the most conservative view (highest minimum contributions) the impact of this has been considered, as discussed below.
- An alternative view of the minimum contributions required by the plan is that there is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'. On this basis it could be argued that any agreed upon contribution levels are mandatory for only a three year period,

Formatted: Underline

Formatted: Underline

after which the contributions must be renegotiated to stay the same, increase or decrease, such that the stated contribution level in the plan text constitute minimum payments for only three years. ~~This view might be overly aggressive in~~It should be noted that the plan text requires an actuarially balanced funding valuation, so to the extent that a funding deficit currently existed a contribution holiday (contributions lower than the annual cost of the plan) could not be negotiated. However because the funding situation at the time of future negotiations is not known it could be argued that no amount is a fixed "minimum contribution" in this context, because all of the contribution amount is subject to future changes in funding and negotiation by the joint sponsors.

- Other views of what the minimum contributions are would fall between these two views, such as that the current funding level is set to ensure that there is no funding deficit over a 11 year period and after that changes in contributions would be negotiated. This view has been used in calculating the actuarial calculation of the asset ceiling as noted in the table below.
- ~~The~~Another consideration might be the specific framework within the Funding Management Plan for OTPP ~~that~~which contemplates ~~specific~~specified funding zones and ~~when~~expectations regarding possible contribution reductions ~~will be discussed~~ by the sponsors. ~~Modelling could~~Informed stochastic modelling would be ~~performed~~necessary to ~~help~~ estimate when the different funding zones will be reached and probability of contribution reductions may be increased.
- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to use some of the funding surplus to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change~~,~~~~$~~, $1.~~98~~98B for the 2015 change, and $1.~~68~~68B for the 2014 change).

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (PS 2130 paragraph .03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in Section PS 2130 paragraph .13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

~~Actuarial reports were completed to~~As part of the 2015/16 Public Accounts audit, the Office of the Provincial Controller engaged external consultants to conduct asset ceiling tests to assess the

requirement for a valuation allowance~~.~~ against the $10.1 billion of net pension assets reported by the Province for OTPP . The results of those reports are summarized ~~here:~~in Table 1 below.

Table 1: Summary of Asset Ceiling Models performed for OTPP

Model Assumptions			**Expected Future Benefit or Asset Ceiling ($ Billions)**	**Results**
1. There is no minimum employer contribution under the plan/legislation that is required even if a surplus is present.			$44.6	There is no reduction in the expected future benefit (EFB) as at March 31, 2016.
~~Plan~~	~~Asset recorded by Province (in billions)~~	2. ~~Asset ceiling computed (in billions) and assumption re: years of contributions~~The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of the current funding report. Contribution requirements are $1.7B per year for 2015, 2016 and 2017,	$41.2	~~Number~~ ~~be made~~ ~~valuation~~ contribut the curre report an completed. EFB is reduced for 2 years by $
~~OTPP~~	~~$ 10.1~~	The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of contribution requirement (i.e. 11 years through 2026) not just for the period of the current funding report.~~$29.3 (based on 11 years of contributions noted in the funding~~	$29.3~~3~~	Uses a pe period) b special co The EFB a reduced by $15.3B.

DRAFT

		~~report as the period additional contributions are~~ ~~3. required)~~		
4. The surplus is never used until the time it reaches the Income Tax Act (ITA) threshold. Once attained, the excess surplus is used at 50% for employees and 50% for the Province to reduce contributions in the following years.			$23.2	The ITA s… the end o… contribut… EFB is reduced by $21.4B at March 31, 2016
5. Every year, 50% of current year surplus is applied to improve member benefits and the remaining 50% of the current year surplus is retained and continues to accrue. Once the ITA threshold is attained, the excess surplus is used 50%-50% to reduce contributions by employees and the Province.			$12.9	The ITA surplus limit is reached at the end of 2041 leading to forced contribution reductions from 2042. EFB is reduced by minimum $37.7B at March 31, 2016.

Note: Models above made no assumption on any value of the surplus withdrawal.

~~The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (3250.56(a)). There is no guidance on the meaning of minimum contributions for purposes of this calculation in PS 3250. For purposes of the OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.~~

~~An important consideration in performing these asset ceiling calculations is how long contributions will be required to be made.~~ Under the Partners' Agreement, the parties are mandated to negotiate benefits and contributions every three years as a minimum and if agreement is not reached, it is reasonable to expect that a change in contributions might occur rather than the 'status quo' being retained.

For purposes of the OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

~~However, in~~In addition to the above calculations, ~~we have considered~~ the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan~~.~~ should also be considered. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that

no valuation allowance is required. ~~We would be happy to share this analysis with you, in addition to the actuarial reports we have already provided.~~

~~Determining~~The determination of the minimum contribution levels required ~~to calculated~~as input to the calculation of the expected future benefit involves significant judgements, estimation and assumptions about future funding surplus levels ~~that~~. These judgements, estimates and assumptions should be made on a consistent basis with ~~the~~ best estimates used in developing the accrued benefit obligations and plan asset amounts. ~~However, the fact that judgements, estimates and assumptions~~ Regardless of the need to ~~be made in respect of calculated expected future benefit should not~~ apply judgements, estimates and assumptions for the calculation, this does not imply that no asset can be recognized or that it cannot be reliably ~~measureable. Pension~~measured. In fact, pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". ~~Expected~~From the Province's perspective, 'expected' does not equate to ~~certainty~~'certainty'.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (3250.42) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (3250.41). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. 3250.57 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province ~~of Ontario~~ has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on Plan Assets, which is one of the acceptable references suggested on PS 3250.44.

The OAG and the Government differ regarding whether it needs to be "expected" that the Government will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in Section PS3250 paragraph .059. The Government considers that it needs to be expected that future economic benefits are to be obtained as reflected in the definition of an asset in Section PS 1000 and as reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to use a plan surplus.

Other guidance in the PSA Handbook on measurement

~~Furthermore~~ MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe would be a useful addition to the current year financial statements. Section PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by experience of similar transactions and, in some cases, reports from independent experts. Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.*
>
> *.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.*

~~We acknowledge that the~~The estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is ~~permissible~~an acceptable alternative under PSAB and consistent with rates followed by other senior Canadian governments. Historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets ~~on~~reported in the ~~Province's books.~~Public Accounts.

Impact of valuation allowance

Formatted: Not Expanded by / Condensed by

Formatted: Not Expanded by / Condensed by

Formatted: Character scale: 92%, Expanded by 0.05 pt

The ~~impact~~current AG's view challenges previous interpretations of the Provincial Controller and former Auditor Generals regarding the interpretation and application of PS 3250 to those JDBPs where the government is a joint sponsor. The impact of the OAG's view is that no pension accounting surplus ~~could ever~~should be recognized in the Province's Public Accounts for JDBPs until the joint sponsor agrees to a change in the plan text for the Province to provide for unilateral authority to access surplus or reduce future contributions to enters into an agreement by year-end enabling the government to take a contribution holiday. ~~Any~~In the absence of meeting either the criteria set out by the AG, any ABA would therefore be fully provided for through a valuation allowance~~. The impact of this in the~~, impacting each year's statement of operations ~~can be~~by the amount by which the asset would otherwise increase in value. These results are counterintuitive with pension expense being higher in years ~~when the impact of greater~~in which increased funding ~~or greater investments returns is recorded and a gain (income) in years when the impact of an increase in expected pension benefits or lower than expected~~is made and also higher when poor investment returns ~~is recorded. **[NTD – statements to be supplement by the visual aid requested by the Minister]**~~create actuarial losses that have not yet been amortized into the statement of operations. These examples are illustrated in Appendix C.

For information purposes, refer to Appendix ~~D~~H for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting compared with following the Province's interpretation of the PSAS. Of particular note is the impact in 2008 when the deficit would have be lower by $3 billion in a year when pension asset values fell significantly because of the financial crisis.

~~Comparison~~Comparability of Ontario accounting for JDBPs to other ~~provinces~~Provinces

Commented [NP2]: Section should focus on JDBPs in other jurisdictions. Pauline/Jim to update.

~~For your information, included~~Included in Appendix ~~C~~I is ~~the~~a legal opinion prepared by lawyers, Koskie Minsky, comparing access to the pension surplus of OTPP relative to ~~pension plans~~JDBPs in British Columbia. The Province of British Columbia does not ~~include~~report a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

Formatted: Font: +Body (Calibri), 11 pt, English (Canada)

Quebec, Nova Scotia, Manitoba and New Brunswick also have pension plans that are in a net accrued benefit asset position before valuation allowance.

Commented [NP3]: Not JDBPs?

In New Brunswick, the target benefit pension plans are governed by an Agreement and Declaration of Trust which restricts the Province's access to the plan assets. These target benefit plans targets

retirement benefits as opposed to guaranteeing it. Two of the four target benefit plans are in net asset position, where a full allowance is taken against the net pension asset.

Conclusion on measurement

Formatted: Font: Arial

Formatted: Normal (Web), Line spacing: Multiple 1.15 li, Font Alignment: Center

~~There~~As discussed, there is significant professional judgement and estimation ~~and judgements to be applied~~ in determining how to measure the valuation allowance under Section PS 3250, including the determination of the minimum contributions required by the current plan arrangements. ~~The Province concluded~~It is the Province's position that the attributes of the joint defined benefit plan arrangements for the OTPP entitle ~~them~~the Province to access ~~to their~~its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surplus through reduced contributions.

The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of those models to date no valuation allowance appears to be required and the OTPP pension assets should continue to be recorded on the books of the Province.

Appendix B – Guidance in the ~~PSA Handbook – FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210~~various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
~~**Guidance in FINANCIAL STATEMENT CONCEPTS, Section PS 1000**~~Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the Pension Benefits Act, appointing the OTTP Board, and defining the role of the Board. Section 10 requires that the partners meet and negotiate changes to the plan every three years. Section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the Sponsors to the OTPP have the authority to utilize

Commented [LD4]: JIM Can you also insert references to Sections 10 and section 57.
Also to Section 58 to 60 that are relevant.
Section 19 requires a valuation to be prepared every three years. This is also important.

DRAFT

ongoing surpluses. Section 19 also requires the Board to prepare a valuation at least every three years to comply with the PBA.

The process governing the use of ongoing surpluses by the Sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73).

Paragraph.~~35 **Assets** are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.~~

~~.36 Assets have three essential characteristics:~~

~~(a) they embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows;~~

~~(b) the public sector entity can control the economic resource and access to the future economic benefits; and~~

~~(c) the transaction or event giving rise to the public sector entity's control has already occurred.~~ ~~[Former paragraph PS 1000.36 retained in Archived Pronouncements.]~~

~~.37 An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph. Thus, for example, an item does not qualify as an asset of a government if the item involves:~~

~~(a) no future economic benefit;~~

~~(b) future economic benefit, but the government cannot obtain it; or~~

~~(c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred.~~

~~(paragraph PS 1000.38 deleted) [Former paragraph PS 1000.38 retained in Archived Pronouncements.]~~

~~.39 **Financial assets** are assets that could be used to discharge existing liabilities or finance future operations and are not for consumption in the normal course of operations.~~

~~.40 A financial asset is any asset that is:~~

~~(a) cash;~~

~~(b) a realizable asset that is convertible to cash;~~

~~(c) a contractual right to receive cash or another financial asset from another party;~~

~~(d) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;~~

~~(e) an equity instrument of another entity;~~

~~(f) an investment in a government business enterprise or government business partnership;~~

~~(g) a financial claim on an outside organization or individual; or~~

~~(h) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION,~~

Formatted: Normal, Line spacing: single, Font Alignment: Auto

DRAFT

paragraph PS 1201.055. [Former paragraph PS 1000.40 retained in Archived Pronouncements.]

.41 Non-financial assets include tangible capital assets, and other assets such as prepaid expenses and inventories of supplies.

.42 **Non-financial assets** are acquired, constructed or developed assets that do not normally provide resources to discharge existing liabilities, but instead:

(a) are normally employed to deliver government services;

(b) may be consumed in the normal course of operations; and

(c) are not for sale in the normal course of operations.

RECOGNITION

.52 Recognition is the process of including an item in the financial statements of an entity. Recognition consists of the addition of the amount involved into item totals on a financial statement together with a narrative description of the item (for example, receivables, user fees, grants) in a statement. Similar items may be grouped together in the financial statements for the purpose of presentation.

.53 Recognition means inclusion of an item within one or more individual statements and does not mean disclosure in the notes to the financial statements. Notes either provide further details about items recognized in the financial statements, or provide information about items that do not meet the criteria for recognition and thus are not recognized in the financial statements.

.54 The recognition criteria below provide general guidance on when an item is recognized in the financial statements. Whether a particular item is recognized or not will require the application of professional judgment in considering whether the specific circumstances meet the recognition criteria.

.55 The recognition criteria are as follows:

(a) the item has an appropriate basis of measurement, and a reasonable estimate can be made of the amount involved; and

(b) for an item that involves obtaining or giving up future economic benefits, it is expected that such benefits will be obtained or given up.

.56 It is possible that an item will meet the definition of an element but still not be recognized in the financial statements because it is not expected that future economic benefits will be obtained or given up or because a reasonable estimate cannot be made of the amount involved. It may be appropriate to provide information about items that do not meet the recognition criteria in notes to the financial statements. "Expected" is used with its usual general meaning and refers to that which can reasonably be anticipated, contemplated or believed on the basis of available evidence or logic but is neither certain nor proved. The use of the word in the recognition criteria is intended to acknowledge that economic activities occur in an environment characterized by uncertainty. It is not intended to accommodate the recognition of items that do not meet the definition of one of the elements of financial statements. By implication, recognition would, therefore, not be appropriate without the occurrence of a past transaction or economic event that gives rise to an asset, liability, revenue or expense as defined in this Section.

.57 Purchased natural resources and Crown lands are recognized in government financial statements.

DRAFT

However, when natural resources and Crown lands have been inherited by the government in right of the Crown and have not been purchased, they are not given accounting recognition as assets in government financial statements. These items are not recognized as assets because the costs, benefits and economic value of such items cannot be reasonably and verifiably quantified using existing methods. Similarly, art and historic treasures are also not recognized as assets.

.58 In the absence of appropriate public sector recognition and measurement criteria for intangibles, all intangibles, including those that have been purchased, developed, constructed or inherited in right of the Crown, are not recognized as assets in government financial statements. The intangible often called "human capital" that embodies the talent or intellectual capital of government employees is not recognized as an asset under existing accounting principles.

.59 Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting. The accrual basis of accounting recognizes the effect of transactions and events in the period in which the transactions and events occur, regardless of whether there has been a receipt or payment of cash or its equivalent. Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied. Accrual accounting recognizes an asset until the future economic benefit underlying the asset is partly or wholly used or lost.

MEASUREMENT

.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

.61 Present value is the discounted amount of future cash flows expected to be received from an asset or required to settle a liability. Present value is not a basis of measurement, but a valuation technique that may be used within historical cost based or current value models. This technique is used in the government reporting model, for example, to estimate the cost of retirement benefits, when determining the estimated total expenditure for closure and post closure care of a solid waste landfill site, and when determining the "grant portion" of concessionary loans and portfolio investments.

.62 Government financial statements are prepared on the basis that recognized economic resources used up are measured in financial terms with no adjustments made for the effect of a change in the general purchasing power of the currency during the period. Although a government's performance in the management of its service potential 2 is generally a focus more appropriate to the nature and objectives of government, it cannot entirely be measured in financial terms.

DRAFT

~~2. Service potential embodies both the quality of service provided and the efficiency with which it is provided.~~

~~.63 Financial statements are prepared on the assumption that the government is a going concern, meaning it will continue in operation, and will be able to realize assets and discharge liabilities and meet its statutory obligations in the normal course of operations for the foreseeable future.~~ 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the Sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the Sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the Sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the Sponsors on his or her views on the positions of the partners and provide a recommendation to the Sponsors. If the Sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

We note that the mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the Sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the Sponsors do not agree to file the valuation, then the Sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the Sponsors' responsibilities in making funding decisions and

surplus allocation regarding the Plan.

~~**Guidance in ASSETS, Section PS 3210**~~Funding Management Policy (FMP)

~~Economic resources~~

~~.06 Economic resources embody value because they enable an entity to meet its objectives, such as the provision of public goods and services, redistribution of wealth, generation of cash inflows or reduction of cash outflows.~~

~~.07 To embody value as an economic resource, there must also be some restriction on its availability. For example, the air we breathe generally cannot be an economic resource unless access to it is restricted.~~

~~.08 Economic resources can arise from, but are not limited to, the following:~~

~~(a) contracts or agreements (for example, accounts receivable and leases);~~

~~(b) another government's legislation (for example, transfers receivable);~~

~~(c) government's own legislation (for example, taxes, fines and penalties);~~

~~(d) voluntary contributions (for example, donations); or~~

~~(e) construction and development (for example, roads).~~

~~.09 Economic resources can be:~~

~~(a) financial in nature (for example, cash, accounts receivable and investments); or~~

~~(b) non-financial in nature (for example, tangible capital property, prepaid items and inventories of supplies).~~

~~.10 Without an economic resource, future economic benefits cannot be obtained. For example, a fire truck (the economic resource) needs to exist before it can provide fire suppression services (the future economic benefits).~~

~~Future economic benefits~~

~~.11 The essence of assets are their future economic benefits. Assets embody future economic benefits that allow public sector entities to achieve their objectives. The future economic benefits embodied in assets involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows or to reduce cash outflows.~~

~~.12 Often the public is the beneficiary of the goods and services provided by a public sector entity. For example, assets such as fire trucks are used to provide fire suppression services to the public. Hospital buildings and medical equipment are used to provide health care services. Parks, schools and libraries provide recreational, educational and research opportunities to the public. Water treatment plants provide goods, such as potable water. Such assets benefit public sector entities as they assist in achieving the entity's primary objective of providing public goods and services. This benefit is different from the benefit that the public receives.~~

~~.13 The future economic benefits embodied in an asset may also be in the form of generating future cash inflows. Cash inflows benefit the public sector entity because cash can be used to purchase or to provide goods and services, redistribute wealth or settle liabilities. Benefits in the form of cash inflows relate to resources, such as loans receivable, inventory for resale and portfolio investments. Also, some public sector resources generate cash inflows because they have user fees associated with them.~~

~~.14 The future economic benefits may also take the form of a capacity to reduce cash outflows. For~~

Formatted: Font color: Black, English (United States), Highlight

Formatted: Font: Not Bold, Font color: Black, Highlight

DRAFT

~~example, this may be the case when betterment of a tangible capital asset reduces the cost of providing goods and services.~~

~~.15 There is a close association between incurring a cost and the generation of an asset. However, not all costs result in a future economic benefit. For example, costs incurred to maintain the current service capacity of an asset do not provide a future economic benefit. Also, a public sector entity may obtain an asset without incurring costs. For example, items that have been donated to the public sector entity may provide that entity with future economic benefits and, hence, satisfy the definition of assets.~~

~~Control~~

~~.16 A public sector entity controls the economic resource and access to the future economic benefits when it:~~

~~(a) can benefit from the economic resource through its capacity to provide goods and services, to provide future cash inflows or to reduce cash outflows;~~

~~(b) can deny or regulate access to those benefits by others; and~~

~~(c) is exposed to the risks associated with the economic resource.~~

~~.17 An entity that controls an economic resource has the ability to benefit from the economic resource. For example, a recipient of a transfer benefits from the transfer as it can use the transfer to provide goods or services.~~

~~.18 An entity that controls an economic resource has the ability to deny or regulate access to the future economic benefits associated with the economic resource by others. For example, an entity controlling a bus has the ability to deny or regulate access to the related transportation services.~~

~~.19 An entity that controls an economic resource is exposed to the risks associated with the economic resource. For example, the entity may hold an investment, the value of which may decline and result in a loss.~~

~~.20 Some economic resources are subject to certain external restrictions that specify the purpose(s) for which resources are to be used. For example, there may be external restrictions imposed on the public sector entity's own assets, as is the case with some sinking fund investments. Such restrictions on the use of an economic resource do not negate the public sector entity's control of the economic resource.~~

~~.21 Although control may be seen as applying to an asset as a whole, the concept can also be applied to individual rights related to the asset. For example, a single leased asset embodies different economic benefits. It may give the lessee the right to use the property and the lessor the right to receive rents and any residual value. Thus, both parties may have assets corresponding to their respective rights.~~

~~.22 Control of an economic resource and of access to the future economic benefits are essential characteristics of an asset, whereas possession or ownership is not. For example, a public sector entity may control the economic resource and access to the future economic benefits through a capital lease arrangement yet not own the economic resource.~~

~~.23 A public sector entity's ability to regulate an economic resource does not, in and of itself, constitute control of an asset. A public sector entity may establish the regulatory environment in an industry or sector within which organizations operate and impose conditions or sanctions on their operations. For example, a pollution control authority may have the ability to close down the operations~~

DRAFT

~~of entities that are not complying with environmental regulations. However, this power does not constitute control because the pollution control authority's interest extends only to the regulatory use of the economic resources and does not include the ability to control access to the future economic benefits.~~

~~.24 A public sector entity may act as trustee when it administers trusts on behalf of the beneficiaries specified in the agreement or statute. As trustee, the public sector entity merely administers the assets, following the terms and conditions set out in the agreement. It does not control the asset because it does not have access to the future economic benefits. Those benefits flow to the beneficiaries.~~The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.

The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:

i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).

ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).

iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Sponsors are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both Sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone,

section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the Sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:
Section 8.01 Unless the Sponsors mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any

explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

~~In addition to consistent wording, the concepts in the definitions of a government partnership and a joint defined pension plan are similar.~~

~~While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.~~

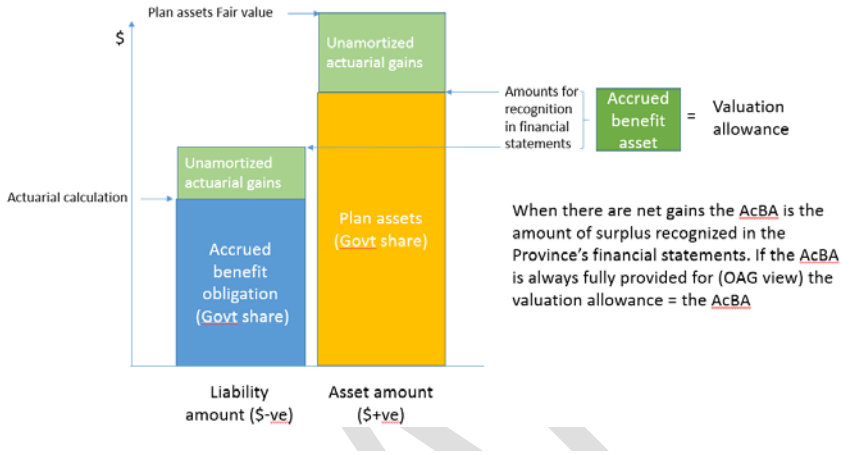
~~There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.~~

DRAFT

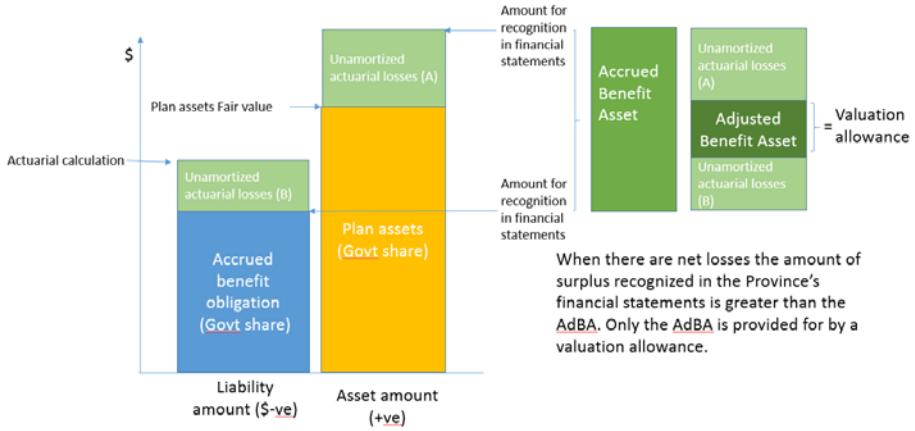
Appendix C– Impact of a Valuation Allowance on Pension Assets

Formatted: Font: 12 pt, English (United States)

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



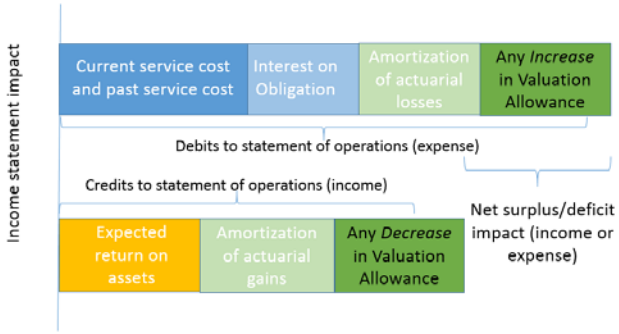
An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses



Components of Expense

The *change in* the valuation allowance flows directly through the statement of operations.

The change in valuation allowance = the change in the AcBA (or AdBA if applicable)



Changes in the Accrued Benefit Asset

Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]

Event or circumstance	Impact on ABA	Impact on VA	Impact on Fiscal position
Contributions in excess of current service cost – i.e. additional funding	Plan assets increase more than the ABO ↑	VA increases to reduce ABA to zero ↑	Fiscal position worsens with additional funding ↓
2015-2016 example: Contributions of $1,812M exceeded other elements of pension expense by $1,514M	2015-2016 example: Additional contributions increase plan assets. AcBA increases by $1,514M	2015-2016 example: AcBA increase of $1,514M results in an increase to the VA of $1,514M	2015-2016 example: Deficit increases by $1,514M. The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

Appendix D - Definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, Section PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

DRAFT

Appendix F – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension -Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners'

DRAFT

Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared- on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan ("PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation -to -the -MPP, -to utilize ongoing -surpluses to -reduce- contributions or improve Plan Member benefits.

DRAFT

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[13] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion- of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[13] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

DRAFT

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

We trust that these comments have been of assistance to you. Should you have any questions in regard to them, please do not hesitate to contact the undersigned.

DRAFT

Appendix ~~E~~H – History of Surplus Utilization for OTPP

Formatted: Font: 12 pt, English (United States)

The history of OTPP surplus utilization from the time the OTPP became a jointly sponsored pension plans to the date that the FMP was established (in March 2003) demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to	$0

DRAFT

			reduce the value of remaining special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion		

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the Sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

Appendix I – Summary of different valuation methodologies for pension valuations

Commented [NP7]: Provided to ISPPD for review and confirmation

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits and pension obligations.	Measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered.
Actuarial cost method	*[To confirm – not clear from the valuation report]*	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values [To confirm the approach taken in OTPP funding valuation]	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	Market -related values, which are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied consistently. The Province uses adjusted market values for some classes of assets in certain plans.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate.	In measuring a pension obligation amount, the defined benefit obligation amount determined by the	Not specified. However two methods are specifically acknowledged – a)

	For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR Reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work To confirm the approach taken in OTPP funding valuation]	plan's sponsor may be (but is not required to be) used. Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. Part I (IAS 19) requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario.	discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing.[14] The Province of Ontario uses a discount rate for OTPP determined by reference to plan asset earnings.
Underlying population data	All valuation methodologies should use consistent underlying data of the population covered by the plan		
Inflation rate	All valuation methodologies should treat inflation in a consistent manner and use a consistent inflation assumption (best estimate). [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Demographic assumptions	All valuation methodologies should use a consistent demographic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Other economic assumptions	All valuation methodologies should use a consistent other economic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		

[14] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

Appendix B – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act~~,~~ and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the Pension Benefits Act, appointing the OTTP Board, and defining the role of the Board. ~~By contrast, section~~ Section 10 requires that the partners meet and negotiate changes to the plan every three years. Section 19 of the ~~-~~Partners ~~-~~Agreement ~~-~~sets out the responsibilities~~-~~ of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing ~~-~~surpluses ~~-~~either to improve ~~-~~benefits or reduce ~~-~~contributions. Only the Sponsors to the OTPP have the authority to utilize ongoing surpluses. Section 19 also requires the Board to prepare a valuation at least every three years

Formatted: Normal, Space After: 0 pt, Line spacing: single

Formatted: Font: 12 pt

Formatted Table

Commented [NP8]: JIM - please insert references to Sections 10 and section 57.
Also to Section 58 to 60 that are relevant.
Section 19 requires a valuation to be prepared every three years.
This is also important.

DRAFT

to comply with the PBA.

The process governing the use of ongoing surpluses by the Sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the Sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the Sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the Sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the Sponsors on his or her views on the positions of the partners and provide a recommendation to the Sponsors. If the Sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

We note that the mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the Sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the Sponsors do not agree to file the valuation, then the Sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding

Management Policy which sets out the Sponsors' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Funding Management Policy (FMP)

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.

The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:

i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).

ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).

iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Sponsors are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both Sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the Sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

DRAFT

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the Sponsors mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to

DRAFT

2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

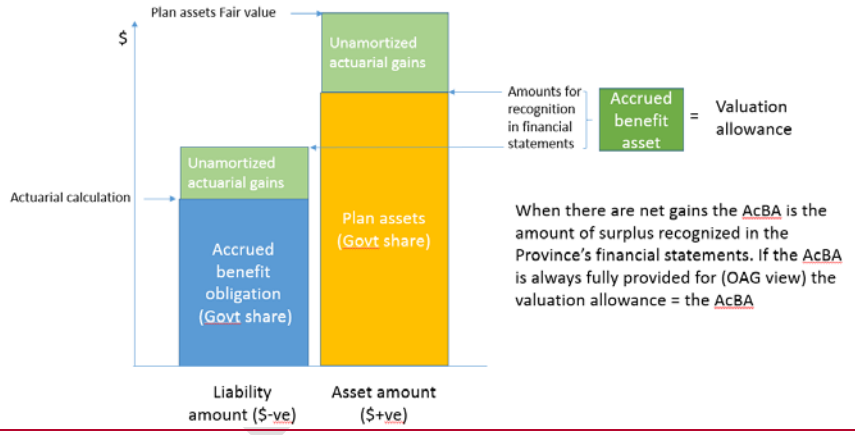
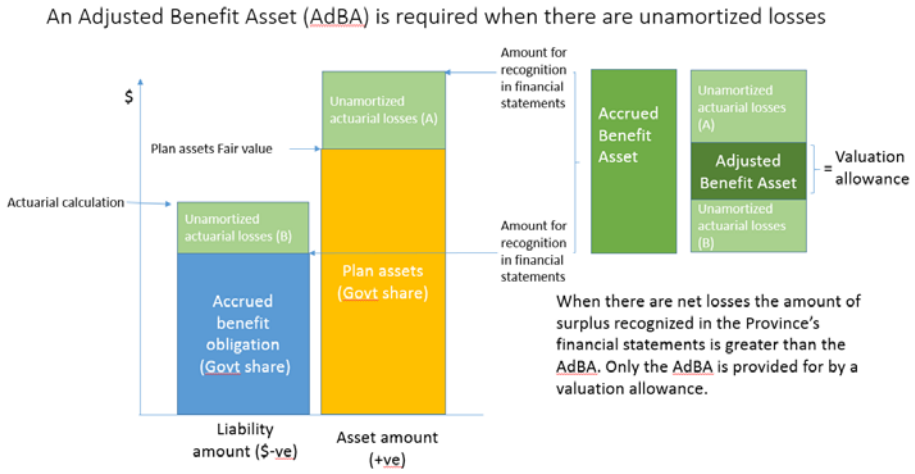
An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



When there are net gains the AcBA is the amount of surplus recognized in the Province's financial statements. If the AcBA is always fully provided for (OAG view) the valuation allowance = the AcBA



An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses
$
Plan assets Fair value

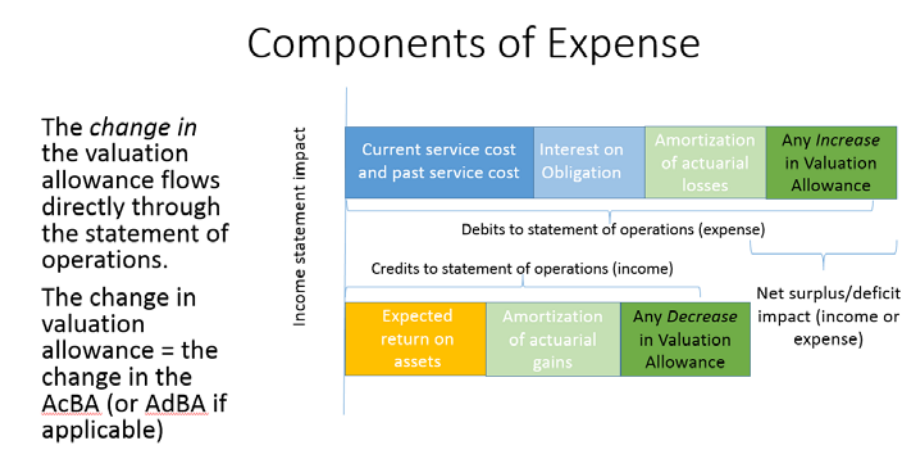
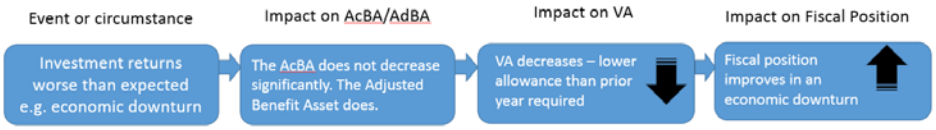
Asset amount (+ve)
Amount for recognition in financial statements
Amount for recognition in financial statements
Accrued Benefit Asset
Unamortized actuarial losses (A)
Adjusted Benefit Asset
Unamortized actuarial losses (B)
= Valuation allowance
When there are net losses the amount of surplus recognized in the Province's financial statements is greater than the AdBA. Only the AdBA is provided for by a valuation allowance.



Components of Expense
The change in the valuation allowance flows directly through the statement of operations.
The change in valuation allowance = the change in the AcBA (or AdBA if applicable)
Income statement impact
Current service cost and past service cost
Interest on Obligation
Amortization of actuarial losses
Any Increase in Valuation Allowance
Debits to statement of operations (expense)
Credits to statement of operations (income)
Net surplus/deficit impact (income or expense)
Expected return on assets
Amortization of actuarial gains
Any Decrease in Valuation Allowance

Changes in the Accrued Benefit Asset

Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA or AdBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]



Plan assets fair values significantly lower in one year.
Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.

The AcBA is based on the higher, smoothed value of plan assets and does not change significantly. However the actuarial losses are subtracted from the AcBA to calculate an AdBA, which is smaller than the AcBA.

Prior year allowance was based on AcBA (no net amortized actuarial losses). Current year is based on AdBA because there are unamortized actuarial losses. The AdBA is smaller than the AcBA because of the increase in unamortized losses. Therefore the VA is reduced correspondingly.

Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. The increased actuarial losses would only impact the statement of operations in future years.

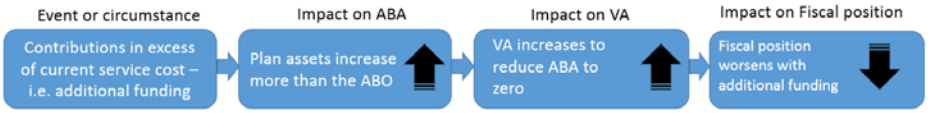
A similar impact would have been noted in 2008 if the OAG's position was reflected in the financial statements for that year.

[1] Impact of change, all other elements being held constant.

DRAFT

Changes in the Accrued Benefit Asset

Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]



2015-2016 example:
Contributions of $1,812M exceeded other elements of pension expense by $1,514M

2015-2016 example:
Additional contributions increase plan assets. AcBA increases by $1,514M

2015-2016 example:
AcBA increase of $1,514M results in an increase to the VA of $1,514M

2015-2016 example:
Deficit increases by $1,514M.

The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

DRAFT

Changes in the Accrued Benefit Asset

Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA or AdBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]

Event or circumstance	Impact on AcBA/AdBA	Impact on VA	Impact on Fiscal Position
Investment returns worse than expected e.g. economic downturn	The AcBA does not decrease significantly. The Adjusted Benefit Asset does.	VA decreases – lower allowance than prior year required	Fiscal position improves in an economic downturn
Plan assets fair values significantly lower in one year. Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.	The AcBA is based on the higher, smoothed value of plan assets and does not change significantly. However the actuarial losses are subtracted from the AcBA to calculate an AdBA, which is smaller than the AcBA.	Prior year allowance was based on AcBA (no net amortized actuarial losses). Current year is based on AdBA because there are unamortized actuarial losses. The AdBA is smaller than the AcBA because of the increase in unamortized losses. Therefore the VA is reduced correspondingly.	Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. Appendix D – Summary of different valuation methodologies for pension valuations

Commented [NP9]: Request sent Oct 28 to ISPPD requesting to review details and confirm.

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

Formatted Table

Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits and pension obligations.	Measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered.
Actuarial cost method	*[To confirm – not clear from the valuation report]*	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values [To confirm the approach taken in OTPP funding valuation]	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	Market -related values, which are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied consistently. The Province uses adjusted market values for some classes of assets in certain plans.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate.	In measuring a pension obligation amount, the defined benefit obligation amount determined by the	Not specified. However two methods are specifically acknowledged – a)

	For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR Reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work To confirm the approach taken in OTPP funding valuation]	plan's sponsor may be (but is not required to be) used. Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. Part I (IAS 19) requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario.	discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing.15 The Province of Ontario uses a discount rate for OTPP determined by reference to plan asset earnings.
Underlying population data	All valuation methodologies should use consistent underlying data of the population covered by the plan		
Inflation rate	All valuation methodologies should treat inflation in a consistent manner and use a consistent inflation assumption (best estimate). [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Demographic assumptions	All valuation methodologies should use a consistent demographic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Other economic assumptions	All valuation methodologies should use a consistent other economic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]

Appendix E - Comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP [Tables are to be updated]

Formatted: Normal, Space After: 0 pt, Line spacing: single

Formatted: Font: 12 pt

[15] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

Review of Discount Rates Across Jurisdictions

- In the inter-jurisdictional review of all funded provincial sponsored or joint sponsored plans which also have stand-alone plan financial statements:
  - the Ontario Teachers' Pension Plan (OTPP) is the only plan were the discount rate used in the plan's financial statements is more than 50 basis points below the discount rate used by the province.
  - OTPP stand-alone financial statements use the market rate of Provincial bonds.

- All other plans' financial statements (i.e. 23 plans across jurisdictions) use the long-term rate of return as the discount. The discount rate used by the plans' are lower than 50 basis points or less than the provinces' discount rate or at times higher than the provincial rate.

Appendix F - Definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, paragraph PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement 2 between the government and a party or parties outside of the government reporting entity 3 that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;	Consistent in concept with the definition of a GP focusing on investments in the partnership and the definition of a JDBP

Formatted: Normal, Space After: 0 pt, Line spacing: single, Font Alignment: Auto

Formatted Table

Formatted: Default Paragraph Font, Font: Not Bold, Not Superscript/ Subscript

			focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the government partnership.	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

Formatted: Default Paragraph Font

In addition to consistent wording, the concepts in the definitions of a government partnership and a joint defined pension plan are similar.

While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

Appendix G – History of Surplus Utilization for OTPP

The history of OTPP surplus utilization from the time the OTPP became a jointly sponsored pension plans to the date that the FMP was established (in March 2003) demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to reduce the value of remaining	$0

Formatted Table

DRAFT

			special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion		

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the Sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

Appendix I – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners'

DRAFT

Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan ("PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

DRAFT

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[16] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[16] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

DRAFT

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

~~The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.~~

	yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work To confirm the approach taken in OTPP funding valuation]	Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. Part I (IAS 19) requires the use of government bonds when no deep market for high-quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario.	The Province of Ontario uses a discount rate for OTPP determined by reference to plan asset earnings.
Underlying population data	All valuation methodologies should use consistent underlying data of the population covered by the plan		
Inflation rate	All valuation methodologies should treat inflation in a consistent manner and use a consistent inflation assumption (best estimate). [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Demographic assumptions	All valuation methodologies should use a consistent demographic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Other economic assumptions	All valuation methodologies should use a consistent other economic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		

of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

Draft Pension Asset Position Paper Oct 28 clean to cv.pdf

Position paper for Ontario Teachers' Pension Plan

Preamble

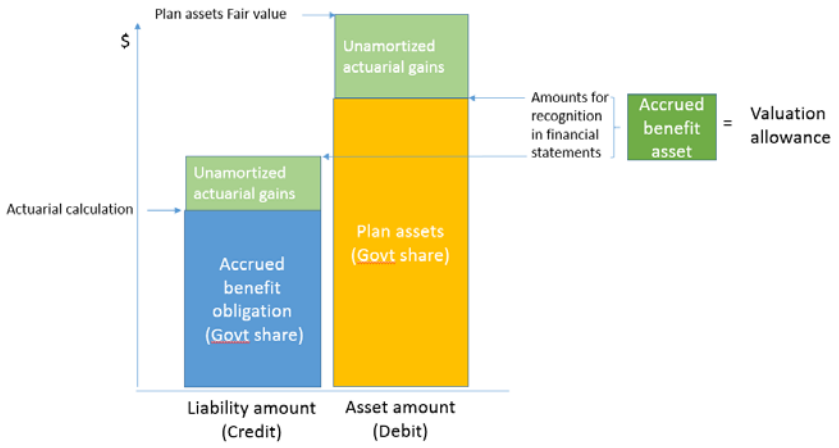
This document addresses the accounting for pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP. This position paper addresses the analysis for OTPP. A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.

As described in PSAS, an accrued benefit asset (pension asset) arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. An Accrued Benefit Asset (AcBA) includes the effect of net unamortized experience gains or losses. Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation. OTPP currently has net unamortized experience gains. The following illustration reflects the compilation of the net pension asset (accrued benefit asset) reported on the Province's books for the OTPP.



Commented [NP1]:

LD – Pauline/Jim – please confirm that details are relevant to OTPP situation.

DRAFT

It is important to note that contributions to the plan are based on funding objectives of the plan. In contrast, Benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the asset balance (plan surplus for accounting purposes) in OTPP is an asset to the Province and it is appropriate to reflect it in the financial results in accordance with PSAS. The Province has also concluded that no valuation allowance under PSAS is required against the asset as at March 31, 2016.

The OAG disagrees with this position. The OAG has indicated that the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and as such that the Province does not control the assets which the OAG interprets PSAS as requiring. Further, the OAG considers the lack of an enforceable agreement at year-end with the Ontario Teachers' Federation (OTF) dictating lower contributions in the future as requiring that a full asset valuation allowance be taken against the asset under PSAS.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. RETIREMENT BENEFITS, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. Since 2001, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the period is reflected in Appendix F. Unqualified audit reports have been received for each of the years from the OAG on the Public Accounts. The pension accounting initially adopted by the Province for OTPP had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

In light of the contrasting views on interpretation of PS 3250 to the Province's jointly sponsored pension plans, a regulation was necessary to allow the public service to sign-off on the impact of the OAG's view on accounting for pension assets in Ontario's 2015-16 financial statements. The regulation is time-limited and legislates the accounting for pension assets of its two jointly-sponsored pension plans (OTPP and OPSEUPP) for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The change in accounting treatment for 2015-16 resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the 2015-16 annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's accounting, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to reflect the Auditor

General's interpretation of PSAS. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt.

Background

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1. The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the OTF (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. The OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for the OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners' Agreement (FMP);
f) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
a. It provides defined benefits.
b. The defined benefits are contributory benefits.
c. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
d. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to the OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5] This clause has been interpreted as a short term solvency protection clause, rather than a clause that transfers substantive residual risk to the Province, as the rest of the arrangement is structured such that the risk of these payments is minimal and the risks of the long term funding of the plan must still be equitably shared. The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).
[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).
[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/10179/20940/-/5e471c2b-23f1-44e6-b5c1d22e3e50dbc3/How+Contribution+Rates+Have+Evolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20% versus 10.4%/12%, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.

DRAFT

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the Partner's Agreement requires the Sponsors to negotiate and agree upon decisions relating to surplus or deficit utilization, which currently is outlined in the FMP. [8] The FMP indicates that deficits (or surpluses) may be addressed through increases (decreases) to the contribution rates, lowering (increasing) the amount of indexation and/or other decreases (increases) in benefits. While not binding upon the Sponsors, as the Sponsors can change the FMP at any time, any changes are required to have the mutual consent of both Sponsors. Accordingly, the Sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the Sponsors are included in appendix B. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

[8] See, for example, Section 3.09 and 3.11 of the FMP.

DRAFT

> c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, under the FMP the Sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the Sponsors to agree upon the manner in which surplus is to be utilized, neither Sponsor has a legally enforceable right to unilaterally utilize surplus in the OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What the Province does have, however, is a right to negotiate with the OTF the use of funding surpluses that may arise under the plan.

4. Negotiations on the use of the surplus occur as specified in the Partners' Agreement. The Partner's Agreement requires that any actuarial funding valuation submitted to the pension regulators must be "actuarially balanced" (Section 57 of the Partners' Agreement). This must occur at least once every three years, but can occur every year if the partners agree. If a preliminary funding valuation shows a funding surplus or deficit then the joint sponsors must negotiate how this surplus or deficit is to be resolved prior to filing the funding valuation.

Accounting for OTPP by the Province

Since fiscal year 2001-2002, the Province has recorded a pension asset for OTPP on the Statement of Financial Position. A pension asset has arisen because the government's share (50%) of the total contributions to OTPP plus recognized investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense (see illustrative examples in Appendix J). The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

With regards to any comparisons between surplus or deficit amounts reported in the Province's financial statements verses the OTPP's financial statements or funding reports, it is important to acknowledge the different objectives of funding and accounting for a pension plan which are also explicitly addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial*

DRAFT

> *valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*
>
> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.*

Section PS 3250 paragraph .051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: "Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…"

OTPP's most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website. The Province's relative portion of this surplus would be $6.6 billion. The OTPP's public financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015, for which the Province's portion would be a deficit of $900 million. The following background helps to clarify the reasons for these different results. OTPP's financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook ("Part IV"), which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the net surplus or deficit for funding purposes.

Accounting for employee future benefits requires the use of assumptions and methodologies to calculate both the obligation incurred to date and the value of the assets already set aside to meet those obligations. Accounting frameworks differ in standards that must be applied in determining appropriate assumptions and methodologies. Further, the assumptions and methodologies used in developing a "funding valuation" on a going concern basis may also differ from those required by accounting standards. These differences result in a number of different valuations for the same plan, depending on the purpose of the valuation and can be affected by certain choices made between acceptable options within each framework. A summary of the main differences between the methodologies used to calculate a going concern funding valuation, OTPP's accounting valuation and the Province's accounting valuation is shown in Appendix D.

Specifically, the discount rate used to value the obligations of the plan has a significant impact on the overall position of the plan. A lower discount rate results in a higher liability and a higher discount rate results in a lower liability, all else being equal. Put another way, a higher estimate of the time-value of money makes the promises made today that will be paid out in the future cheaper. OTPP uses a discount rate based on corporate/government bond rates in its financial statements, as permitted by Part IV. The Province uses a discount rate based on the expected asset return, as permitted by PSAS. The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds. Both a discount rate based on the expected asset return and one based on corporate/government bonds are "best estimate" rates; they must both be based on management's best estimate of the applicable discount rate. In both cases the estimates must be supportable. The difference results not from one being more "right" or "wrong" relative to the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.

Typically the funding discount rate used for the funding valuation falls between the bond discount rate and the expected asset return, but it differs in that it does not purport to be the "best estimate" of the discount rate, rather it is designed to indicate the contributions that are required to fund the promised benefits with an additional conservative margin for adverse deviations. Note that over the long term the difference between funding valuations and accounting valuations would diminish as the impact of the discount rate unwinds and the asset valuation methods converge.

In practice, the discount rates used in the financial statements of government sponsored and joint defined benefit pension plans prepared under Part IV of the CPA Canada Handbook (Section 4600) use diverse methodologies. For example, in Alberta there are seven plans which prepare their financial statements under Part IV with reference to IFRS (same framework as OTPP). Of these none use a government bond discount rate and all use a discount rate calculated with some reference to a rate of return on invested assets, which may include factors for expenses, diversification and rebalancing. The analysis of a number of government sponsored plans is included as Appendix E. The analysis demonstrates that a significant number of government sponsored plans use a discount rate aligned to an asset investment return rather than a bond discount rate. OTPP is actually in the minority of plans that choose to use the rate required by IFRS, resulting in a lower discount rate and higher liability for financial reporting purposes.

The above analysis explains how different discount rates impact the net surplus/deficit reported on OTPP's financial statements, OTPP funding reports and the Province's financial statements. The fact that OTPP reports a deficit on its financial statements, or that the 50% of the net surplus reported by OTPP for funding purposes is lower than the surplus reported on the government's financial statements

DRAFT

under PSAB standards is of no consequence or relevance to the pension asset amount or pension expense reported by the Province for OTPP.

To further clarify, that there is a deficit reported in the OTPP financial statements while the Province of Ontario calculates a surplus under PSAS requirements does not mean that there is no accounting surplus and therefore no reportable asset for the Province. In fact, if the OTPP had chosen (as an acceptable accounting policy choice) to use a discount rate more consistent with its counterparts in other jurisdictions (see Appendix E) such as a discount rate based on an asset return which would be closer to that used by the Province, it would eliminate much of the existing differences between the reported net surplus/deficit amounts between the OTPP statements and the Province's share of OTPP reported for accounting purposes in the Public Accounts.

Sufficiency of PS 3250 in assessing appropriate accounting for pension assets

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES, Section PS 1150 prescribes that, in developing and applying accounting policies, all primary sources of GAAP should be applied (Section PS 1150 paragraph .04). Primary sources of GAAP are Sections PS 1201-PS 3510, Public Sector Guidelines and appendices and illustrative material to those pronouncements. Only when there are no primary sources of GAAP that relate to the transactions or events under consideration, or more specific guidance is needed (Section PS 1150 paragraph .05), does an entity consider other primary sources of GAAP dealing with similar issues and also the concepts described in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 (issued January 2003). Section PS 1000 is not, however, a "primary source of GAAP" under the PSA Handbook.

The primary sources of GAAP specific to the accounting for pension assets is RETIREMENT BENEFITS, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, Section PS 3250 which was based on Accounting Statement No. 5).

Other primary sources of GAAP that deal with similar issues might also be considered where additional interpretation or guidance may be required. For the issues dealt with in this paper - recognition and measurement of a joint defined benefit plan - this could include standards that relate to shared control, as OTPP is a joint defined benefit plan, standards that relate to the definition of an asset and standards that relate to measurement uncertainty:

- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015, effective from April 1, 2017)
- MEASUREMENT UNCERTAINTY, Section PS 2130 (issued in April 2005)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception of ASSETS, PS 3210 which is more recent and will be effective in for periods beginning on or after April 1, 2017. Section PS 3210 provides additional guidance on the various components of the existing asset definition found in Section PS 1000; it does not change the definition.

Accounting Analysis

Question 1 – Classification of a pension asset

The analysis below addresses whether the Province's share of the pension surplus in OTPP, calculated in accordance with PSA standards under Section PS 3250, represents a reportable asset to the Province of Ontario in the Public Accounts.

Standards in the PSA Handbook

The focus of the following analysis is on the accounting requirements in RETIREMENT BENEFITS, Section PS 3250 as this standard is a primary source of GAAP which specifically addresses the accounting for pension assets. The following highlights some key concepts and guidance contained in this standard.

RETIREMENT BENEFIT, Section PS 3250 – Purpose and Scope

The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250.003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

RETIREMENT BENEFITS, Section PS 3250 – Types of pension plans

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*
>
> *(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;*
>
> *(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;*
>
> *(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and*
>
> *(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.*
>
> *The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.*

Additional guidance on identifying Joint Defined Benefit Plans (JDBPs) is in Section PS 3250 paragraphs .79 to .80 which similarly highlight the importance of both shared control and shared risks and rewards in a JDBP:

> *.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.*
>
> *.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over*

DRAFT

> *decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.*

It should be noted that the definition of a Joint Defined Benefit Plan under Section 3250 is not the same as the definition of a JSPP under the PBA, although there are some overlapping concepts between the two. A JDBP is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. The Province has concluded that OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. The OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 10(1)3 of the TPA for example).

The TPA, the Partners' Agreement and the plan text collectively set out this shared control and that the Province of Ontario has an equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a joint defined benefit plan.

The classification of OTPP as a JDBP for accounting purposes [and a JSPP under the PBA] by the Office of the Provincial Controller has been consistent since 2001 and had been consistently accepted without question by the Office of the Auditor General, including throughout the 2015/16 Public Accounts.

DRAFT

Question 2 – Recognition of a pension asset for a JDBP

RETIREMENT BENEFITS, Section PS 3250 paragraphs .081 to .082 provide guidance on the accounting for a JDBP in the financial statements of the government sponsor. As OTPP meets the definition of a JDBP for the reasons noted above, the relevant guidance for the Province for purposes of reporting retirement benefits in the Public Accounts includes:

> *.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]*
>
> *.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.*

Section PS 3250.81 clearly states that "The government should account for its portion of the plan in accordance with the standards for defined benefit plans". It is clear from this that only the government's portion of the plan is included in the government's financial statements consistent with the requirements of Section PS 3250 (recognition) and the measurement of that portion is based on the requirements of Section PS 3250 (measurement). It is also then clear that the requirements of the standard for recognition and measurement, including the Limit of the Carrying Amount of an Accrued Benefit Asset guidance, are designed to be applied to a shared control situation and not only to situations where there is unilateral control. If it was intended that no pension asset could be recognized because the asset was subject to shared control and not unilateral control Section 3250 paragraph .081 would have made this clear. This paper discusses the question of measurement separately in Question 3.

The balance sheet recognition guidance for retirement benefits is stated in Section PS 3250 paragraphs .016 to .017:

> *.016 The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date. [SEPT. 2001]*
>
> *.017 The components of the retirement benefit liability are:*
>
> > *(a) accrued benefit obligation including the effects of plan amendments, settlements and curtailments;*
> >
> > *(b) plan assets, if any; and*

DRAFT

(c) unamortized actuarial gains and losses.

As the OTPP is a funded plan there are plan assets that are recognized as part of the retirement benefit liability. When plan assets and the net impact of unamortized actuarial gains and losses exceed the accrued benefit obligation then there is an "Accrued benefit asset" (ABA). An ABA is defined in Section PS 3250 as follows:

> GLOSSARY - *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

Accordingly, the portion of the government's plan to be recognized includes their share of the accrued benefit obligation and also their share of the plan assets. In the case of the Province's portion of OTPP there is no uncertainty regarding the *existence* of an ABA for the government's portion of the plan; the ABA is calculated by reference to accrued benefit obligation and plan assets, both determined based on the best estimate assumptions and the methodologies required by with Section PS 3250 for these items. As noted above an ABA is defined as the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance). For a jointly sponsored plan, this is the government's accumulated cash contributions less the government's share of the current and prior years' benefit expenses that are attributable to the government under the joint defined benefit plan. The Province's portion of OTPP resulted in an ABA of $10.1 billion as at March 31, 2016. There is no uncertainty regarding the occurrence of the cash contributions made (and the interest earned thereon) measured in accordance with Section PS 3250 and the existence of the government's obligation. As Section 3250.80 *requires* a government to account for its portion of the plan in accordance with the standards for defined benefit plans, this would include the recognition of any asset that meets the definition of an ABA under the standard.

Further, Section PS 3250.50 refers to the presentation of the ABA; this amount is presented in the financial statements, net of any valuation allowance. This indicates that an ABA should be recognized in the financial statements, but measured in reference to the limit on the carrying amount of the asset - essentially a measurement requirement rather than a recognition requirement, as the limit could result in an ABA being measured at anything from $nil to its full amount. Note that the *measurement* of any net asset is subject to guidance in Section PS 3250 paragraphs .50-.59 and is discussed later in this paper.

To recognize only their share of the liability and not their share of the plan assets, or to recognize only a net liability (accrued benefit obligation exceeds plan assets) but never a net asset (when plan assets exceeds the accrued benefit obligation, subject to the valuation allowance guidance discussed in the Measurement section below), would indicate that the Province does not share equitably in the risks and rewards of the OTPP because they bear only the risk of increased liabilities without being able to bear

any rewards of investment returns on the plan assets and under this interpretation the plan would not therefore be a joint defined benefit plan.

Concept of Shared Control and Asset Recognition

Included in the definition of a JDBP is the concept of shared control. Points (b) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of shared control resulting in a recognition of an asset could on the surface appear to conflict with the definition of an asset under FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210, as part of the definition of an asset under PS 1000 would suggest that the government must control the economic resource and access to the future economic benefits. Since shared control does not equate to control, there is a need to consider whether the recognition of any asset under PS 3250 is appropriate where there is only shared control.

The Province's position is that PSAS does not preclude asset recognition for assets under shared control and specifically for plan assets of joint defined benefit plans for the following reasons:

- As discussed above GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity. Section PS 3250 is a primary source of GAAP for dealing specifically with joint defined benefit plans and, as noted above, requires the government to account for their portion of the plan – both the accrued benefit obligation and plan assets in accordance with Section PS 3250. As such, reference to Section PS 3250 is sufficient to indicate that the recognition criteria are met for joint defined benefit plan assets, no further source of PSAS guidance need be considered.
- Similarly, if other primary sources of GAAP are considered then it is relevant to consider GOVERNMENT PARTNERSHIPS, Section PS 3060 which also includes the concept of shared control. Under Section PS 3060, shared control is sufficient for asset recognition.
- The concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. With the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that PSAB did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

- The Province's reporting of a pension asset for the JDBP is therefore consistent with these primary sources of GAAP, subject to measurement guidance including impairment considerations.

The similarities between the definitions of a JDBP and a government partnership under PSAS are demonstrated in Appendix F to this paper, and further support PS 3060 as being a relevant primary source of GAAP dealing with similar circumstances, should it be considered necessary to go outside of the requirements of Section PS 3250 to look for further clarification and guidance on recognition.

Under Section PS 3060 a critical condition for a Government partnership is shared control. Section PS 3060 explicitly acknowledges that under shared control "none of the partners is in a position to exercise unilateral control over the government partnership" (PS 3060.20), yet the accounting model required by Section PS 3060 for non- GBPs[9] is that of proportionate consolidation which is the recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership. Joint defined benefit plans are excluded from the scope of Section PS 3060 on the basis that control is shared with employees rather than with a party outside of the reporting entity (Section PS 3060 paragraph .06 footnote 3). This reason indicates that such plans are excluded because of a closer relationship between the government and the other party than normally exists for government partnerships. Even when an independent third party shares control, Section PS 3060 still requires the recognition of a share in an asset subject to shared control, indicating that the PSAS framework does not require unilateral control in order to support asset recognition when there is shared control. It would not be appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3060 for proportionate consolidation, and similarly it is not appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3250 to account for the government's portion of a joint defined benefit plan. In other words, PS 3250 is a primary source of GAAP and provides sufficient and complete guidance on how to account for assets related to joint defined benefit plans.

Concept of Contingent Asset

CONTINGENT ASSETS, Section PS 3320, provides guidance on the disclosure of contingent assets in a government's financial statements. It characterizes a contingent asset as one where there is uncertainty as to the existence of an asset (Section PS 3320 paragraph .04). It is the Province's position that the existence of the pension asset is not uncertain – there is an accrued benefit asset calculated in accordance with Section PS 3250 as noted above that is based on past transactions, being the impact of cumulative contributions and benefit expense. The fact that shared control exists with regards to access to the assets of the plan does not create additional uncertainty that would impact asset recognition under PSAS. The Province anticipates that in a broad sense, s any OTPP surplus would be shared in an "equitable manner" under the terms of the arrangement, and this is enabled through the ability to

[9] Government business partnerships (GBPs) are accounted for under the modified equity method rather than proportionate consolidation.

negotiate the utilization of the surplus including the ability to prevent the utilization of the surplus in a manner that does not benefit the Province. This expectation is further supported by past history of surplus utilization (see Appendix G). The method, extent and timing of which the Province will obtain the expected future benefits (contributions reductions vs increase in benefits) is not certain. However Section PS 3320 also states "The mere fact that an estimate of an amount is involved (measurement uncertainty) does not, in and of itself, constitute the type of uncertainty that characterizes a contingent asset. For example, even though there may be measurement uncertainty related to income tax receivable, there is nothing uncertain about the fact that this asset exists. Any uncertainty is related solely to the amount thereof" (Section PS 3320 paragraph .07). Based on past history of surplus utilization for OTPP and based on the constating documents, expected future benefits for the Government are present. The uncertainty as with many types of assets relates to measurement uncertainty which will be discussed below.

Conclusion on recognition

Therefore the Province has concluded that PSAS permits the recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets must be subject to unilateral control. The Province's share of OTPP's pension surplus meets the definition of an Accrued Benefit Asset under Section PS 3250. The measurement of that accrued benefit asset is determined by reference to the guidance in Section PS 3250 regarding the Limit on the Carrying Amount of an Accrued Benefit Asset, which is discussed in Question 2 of this position paper.

Question 3 – Measurement of a pension asset

For an asset to be recognized it must be reliably measureable (Section PS 1000.55). Section PS 3250 paragraphs .050 to .059 address how to measure a pension asset. This is a two-step process. Firstly the accrued plan obligation (a Credit) and the plan assets (a Debit) are measured in accordance with the standard, and adjusted for any unamortized actuarial gains or losses (a Debit for gains not yet realized, a Credit for losses not yet realized). This measurement results in a retirement benefit liability when it is a net liability (a Credit) amount or an accrued benefit asset when it is a net asset (a Debit) amount. When the resulting amount is an asset, the standard requires a second step to test that the asset is not impaired. It should be noted that impairment testing in some form is required for all assets recognized under PSAS standards except those carried at fair value, although the methodology of impairment tests will vary depending on the nature of the asset. The amount that is tested is the "adjusted benefit asset". When there are net unamortized gains the ABA is equal to the adjusted benefit asset. When there are net unamortized losses the ABA is reduced by those net unamortized losses to calculate the adjusted benefit asset. A graphical illustration of the calculation of the Accrued Benefit Asset (AcBA) and the Adjusted Benefit Asset (AdBA) are shown in appendix C. Section PS 3250 paragraphs .052 to .059 go on to explain what the standard means by expected future benefit and how a government may benefit from the ABA or adjusted benefit asset. Note that for OTPP the accrued benefit asset equals the adjusted benefit asset as there are net unamortized actuarial gains.

DRAFT

Section PS 3250.50-.59 are included here for completeness and ease of reference:

Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)

.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in Section PS 3250 paragraph .050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Section 3250 paragraph .052 states that a government may benefit from an ABA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions. This is an explanatory paragraph on how a government may benefit from an ABA and why a valuation allowance may be needed, rather than detailing the test to be applied. Part of this justification is to note that that an ABA may be impaired when "the government is not entitled to benefit from [the ABA] fully". Examples of when a government may not be entitled to benefit from the ABA fully are given, such as a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

Section PS 3250 paragraph .059 gives additional guidance to apply when an entity contemplates realizing future benefits through a surplus withdrawal: "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the

ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal". This introduces the concept of a legally enforceable right but only in the context of a government's withdrawal of surplus and not in the context of contribution holidays. If the standard setters had intended legal enforceability to be the test throughout the standard, they would not have raised it only in the context of a withdrawal of surplus, but as a more fundamental notion in the guidance on expected future benefit.

It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to shared control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Section 3250 paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays. When considering the ability to realize expected future benefits under Section PS 3250 paragraph .052, the Province's legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability which is not explicitly required by the standard to support recognition and measurement of JDBP pension assets. Specifically, the amount of pension asset that gets recorded needs to take into account considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a pension asset in the Public Accounts. Pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". Expected does not equate to certainty (Section PS 1000.056).

Under the Plan and Partners' Agreement, if funding surpluses occur the partners are required to negotiate the use of the funding surplus (at least once every three years) and the Province is entitled to negotiate a reduction in contributions in respect of its share of the surplus. Under the Partners' Agreement any funding surplus must be dealt with so that the funding valuation becomes actuarially balanced*. In other words when there is a funding surplus over a certain range the "status quo" cannot be maintained, the surplus must be reduced by a combination of reductions in contributions, increases in benefits or withdrawals of surplus*. This is confirmed by the Partners' Agreement Section 57 that requires an actuarially balanced valuation to be prepared at least once every three years, allowing for a contingency reserve, combined with the FMP which sets out the framework for determining when a surplus or deficit outside of agreed upon ranges are met and action must be taken. While the Province might choose to accept an increase in member benefits rather than to reduce funding, any such decision is at the Province's discretion since the OTF cannot force the Province to increase benefits instead of

reducing contributions. In other words it is at the Province's discretion whether to address the actuarial balancing requirements by allowing its portion of the surplus to be utilized through increased benefits. The OTF equally has the right to not agree to reduced contributions from the Province, but they do not have the right to force an inequitable sharing of the surplus. Therefore, the Province is entitled to negotiate their share of the JDBP which may include taking contribution holidays in future negotiations and can effectively use their power in negotiations to benefit from the ABA. The joint partners do have the ability to renegotiate all aspects of the partners' agreement including the FMP. However all changes require the agreement of both parties and as such the Province can veto any changes to the agreement. Note that while the negotiations are based on funding surplus amounts rather than accounting surplus amounts, any differences would be captured in the mechanics of the calculation of the expected future benefit rather than precluding an ability to benefit from any of the accounting surplus.

Further, Section PS 3250 paragraph .055 indicates "The objective of the standard in Section PS 3250 paragraph .050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Many generally accepted accounting frameworks use "expected" in a number of principles and is typically used in the probabilistic sense – something is expected when it is probable at some level, it does not equate to certainty. The Province has an expectation that they will benefit fully from the ABA by exercising their current rights under the plan arrangements to negotiate the use of current and future surpluses in the form of contribution holidays. This position is supported by the review of the constating documents and past history of negotiations that indicate:

1. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) to exceed the amount of contributions paid by or on behalf of active members in respect of credited service for the year (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.
2. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix G for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the Sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.

DRAFT

3. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right[10]), and the requirement to negotiate and agree (or in the absence of agreement, arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.
4. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan. Under the plan, contributions are generally borne equally by the Province and the employees. Employees benefit economically from both an increase in benefits and from a reduction of contributions. The Province benefits economically directly from a reduction in contributions. This makes it reasonable that at least some contribution reductions would be agreed to by the joint sponsors as a highly unequal weighting towards increases in benefits would not balance the interests of taxpayers and teachers therefore may be unlikely to be a reasonable outcome of "good faith" negotiations between the Province and the OTF.

   This is further supported by the historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses, should also be considered. As previously discussed in respect of conditional indexing, a decrease in benefits by the employees were offset by an increase in payments by the Province. Similarly as the sponsors agreed to restore indexation, this increase in benefits resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.98B for the 2015 change, and $1.68B for the 2014 change). This demonstrates that historically and over the long term an equitable sharing of the deficits and surpluses has resulted in changes in the Province's contributions, even when there are decreases or increases to benefits for employees.

5. In the event that the Sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, a mediator may be chosen by agreement of the sponsors (section 77 of the Partners' Agreement). If the sponsors do not accept the report of the mediator, an arbitration board will be appointed (section 84 of the Partners' Agreement). The arbitration board would consist of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral

[10] The OTF Call Right is a one-time arrangement intended to compensate Plan members for absorbing 100% (rather than 50%) of funding shortfalls arising the government initiated Freeze period. Part of a previously agreed upon arrangement to ensure equitable sharing of the risks and rewards over the long term of the plan, it is not a general unilateral right to utilize future surpluses beyond the recovery of the specific funding shortfalls.

DRAFT

award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Based on the above analysis, the Province believes that the uncertainties around how and when to utilize a surplus in the OTPP do not result in an inability or lack of entitlement to utilize the surplus in accordance with Section 3250.52.

Calculating the limit on the carrying amount of an accrued benefit asset

Section PS 3250.53 to .58 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in Section PS3250 paragraph .055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where actual realization of the benefit would be reflected in a reduction in future contributions. A valuation allowance is recorded against the pension asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test under Section PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as defined in Section 3250 paragraph .56.

Therefore in accordance with Section PS 3250 paragraph .56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Each of these is discussed separately.

Through withdrawal of the surplus (Section PS 3250.056 (b))

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, Section 3250 paragraph .059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

The TPA for OTPP does not specify a method for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution. The Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example

DRAFT

at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

The Province's position is that there is no amount of expected future benefit included in respect of withdrawable plan surplus.

Through reducing future contributions (Section PS 3250 paragraph .056 (a))

PS 3250.56(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per PS 3250 paragraph.81 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the pension asset value to be recorded in the accounts. For example, if the pension asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the pension asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. It is therefore relatively straightforward and is typically calculated based on the Province's share of the current service cost reported in the actuarial valuation taken into perpetuity unless there is evidence to indicate the workforce will significant diminish over time (for example a closed plan).

The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in this second part of the calculation. Note that consistent with the calculation of the expected future accruals for service, no amounts are considered for employee contributions as these relate to the OTF's portion of the plan. The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (3250.56(a)). There is no further guidance in S 3250 as to how the calculation of minimum required contributions should be performed and what restrictions or parameters should be factored into this calculation. Typically for defined benefit plans minimum contributions include those that are required by the pension regulator to be made for funding.

However, minimum contributions regardless of any surplus, may be required by plan text, legislation or other agreements with employees. For OTPP a key element of judgment is determining what contributions are required by the current plan arrangements "regardless of any surplus". The constating agreements for OTPP require that the parties negotiate every 3 years as a minimum, and when there is a funding surplus.

Determining the number of years of contributions to include should involve an assessment of the facts and circumstances of the plan and should consider uncertainty. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the contractual agreements between the Sponsors that provide for the sharing of risks and benefits and specifically in respect of assessing the minimum contributions required by the plan agreements the following:

- One view of minimum contributions might be that the agreed upon level of contributions are the minimum contributions until they are altered in the plan text. As this can only happen with agreement from OTF it cannot be assumed that changes will be made and therefore that the contribution formula as stated in the current agreements will continue in perpetuity. This view provides the most conservative view of minimum payments. However as the current contribution amounts are greater than the government's share of the annual current service cost for the existing workforce this indicates that continued contributions at this rate will result in ever increasing surpluses. Extrapolating the surpluses, at a certain point other requirements that are currently incorporated into the plan text, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan will apply to reduce the contributions. The effect of these caps on contributions would have to be estimated but cannot be ignored as they form part of the current contribution arrangements. Modelling could be performed to develop expectations as to when these CRA limits could be expected to be reached assuming no changes in the contribution levels. As is the most conservative view (highest minimum contributions) the impact of this has been considered, as discussed below.
- An alternative view of the minimum contributions required by the plan is that there is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'. On this basis it could be argued that any agreed upon contribution levels are mandatory for only a three year period, after which the contributions must be renegotiated to stay the same, increase or decrease, such that the stated contribution level in the plan text constitute minimum payments for only three years. It should be noted that the plan text requires an actuarially balanced funding valuation, so to the extent that a funding deficit currently existed a contribution holiday (contributions lower than the annual cost of the plan) could not be negotiated. However because the funding situation at the time of future negotiations is not known it could be argued that no amount is a fixed "minimum contribution" in this context, because all of the contribution amount is subject to future changes in funding and negotiation by the joint sponsors.

- Other views of what the minimum contributions are would fall between these two views, such as that the current funding level is set to ensure that there is no funding deficit over a 11 year period and after that changes in contributions would be negotiated. This view has been used in calculating the actuarial calculation of the asset ceiling as noted in the table below.
- Another consideration might be the specific framework within the Funding Management Plan for OTPP which contemplates specified funding zones and expectations regarding possible contribution reductions by the sponsors. Informed stochastic modelling would be necessary to estimate when the different funding zones will be reached and probability of contribution reductions may be increased.
- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to use some of the funding surplus to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change, $1.98B for the 2015 change, and $1.68B for the 2014 change).

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (PS 2130 paragraph .03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in Section PS 2130 paragraph .13, “As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.”

As part of the 2015/16 Public Accounts audit, the Office of the Provincial Controller engaged external consultants to conduct asset ceiling tests to assess the requirement for a valuation allowance against the $10.1 billion of net pension assets reported by the Province for OTPP . The results of those reports are summarized in Table 1 below.

DRAFT

Table 1: Summary of Asset Ceiling Models performed for OTPP

Model Assumptions	Expected Future Benefit or Asset Ceiling ($ Billions)	Results
1. There is no minimum employer contribution under the plan/legislation that is required even if a surplus is present.	$44.6	There is no reduction in the expected future benefit (EFB) as at March 31, 2016.
2. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of the current funding report. Contribution requirements are $1.7B per year for 2015, 2016 and 2017.	$41.2	The minimum contribution requirement applies to the current period of the funding report and until a new report is completed. EFB is reduced for 2 years by $1.7B at March 31, 2016.
3. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of contribution requirement (i.e. 11 years through 2026) not just for the period of the current funding report.	$29.3	Uses a period to 2026 (11 year period) based on the funding report special contribution requirement. The EFB at March 31, 2016 is reduced by $15.3B.
4. The surplus is never used until the time it reaches the Income Tax Act (ITA) threshold. Once attained, the excess surplus is used at 50% for employees and 50% for the Province to reduce contributions in the following years.	$23.2	The ITA surplus limit is reached at the end of 2025, leading to forced contribution reductions from 2026. EFB is reduced by $21.4B at March 31, 2016
5. Every year, 50% of current year surplus is applied to	$12.9	The ITA surplus limit is reached at the end of 2041 leading to forced

DRAFT

improve member benefits and the remaining 50% of the current year surplus is retained and continues to accrue. Once the ITA threshold is attained, the excess surplus is used 50%-50% to reduce contributions by employees and the Province.		contribution reductions from 2042. EFB is reduced by minimum $37.7B at March 31, 2016.

Note: Models above made no assumption on any value of the surplus withdrawal.

Under the Partners' Agreement, the parties are mandated to negotiate benefits and contributions every three years as a minimum and if agreement is not reached, it is reasonable to expect that a change in contributions might occur rather than the 'status quo' being retained.

For purposes of the OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

In addition to the above calculations, the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan should also be considered. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that no valuation allowance is required.

The determination of the minimum contribution levels required as input to the calculation of the expected future benefit involves significant judgements, estimation and assumptions about future funding surplus levels. These judgements, estimates and assumptions should be made on a consistent basis with best estimates used in developing the accrued benefit obligations and plan asset amounts. Regardless of the need to apply judgements, estimates and assumptions for the calculation, this does not imply that no asset can be recognized or that it cannot be reliably measured. In fact, pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions

will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". From the Province's perspective, 'expected' does not equate to 'certainty'.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (3250.42) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (3250.41). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. 3250.57 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on Plan Assets, which is one of the acceptable references suggested on PS 3250.44.

The OAG and the Government differ regarding whether it needs to be "expected" that the Government will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in Section PS3250 paragraph .059. The Government considers that it needs to be expected that future economic benefits are to be obtained as reflected in the definition of an asset in Section PS 1000 and as reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to use a plan surplus.

Other guidance in the PSA Handbook on measurement

MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe would be a useful addition to the current year financial statements. Section PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by experience of similar transactions and, in some cases, reports from independent experts. Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.*

> *.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.*

The estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is an acceptable alternative under PSAB and consistent with rates followed by other senior Canadian governments. Historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets reported in the Public Accounts.

Impact of valuation allowance

The current AG's view challenges previous interpretations of the Provincial Controller and former Auditor Generals regarding the interpretation and application of PS 3250 to those JDBPs where the government is a joint sponsor. The impact of the OAG's view is that no pension accounting surplus should be recognized in the Province's Public Accounts for JDBPs until the joint sponsor agrees to a change in the plan text for the Province to provide for unilateral authority to access surplus or reduce future contributions to enters into an agreement by year-end enabling the government to take a contribution holiday. In the absence of meeting either the criteria set out by the AG, any ABA would therefore be fully provided for through a valuation allowance, impacting each year's statement of operations by the amount by which the asset would otherwise increase in value. These results are counterintuitive with pension expense being higher in years in which increased funding is made and also higher when poor investment returns create actuarial losses that have not yet been amortized into the statement of operations. These examples are illustrated in Appendix C.

For information purposes, refer to Appendix H for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting compared with following the Province's interpretation of the PSAS. Of particular note is the impact in 2008 when the deficit would have be lower by $3 billion in a year when pension asset values fell significantly because of the financial crisis.

DRAFT

Comparability of Ontario accounting for JDBPs to other Provinces

Commented [NP2]: Section should focus on JDBPs in other jurisdictions. Pauline/Jim to update.

Included in Appendix I is a legal opinion prepared by lawyers, Koskie Minsky, comparing access to the pension surplus of OTPP relative to JDBPs in British Columbia. The Province of British Columbia does not report a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

Quebec, Nova Scotia, Manitoba and New Brunswick also have pension plans that are in a net accrued benefit asset position before valuation allowance.

Commented [NP3]: Not JDBPs?

In New Brunswick, the target benefit pension plans are governed by an Agreement and Declaration of Trust which restricts the Province's access to the plan assets. These target benefit plans targets retirement benefits as opposed to guaranteeing it. Two of the four target benefit plans are in net asset position, where a full allowance is taken against the net pension asset.

Conclusion on measurement

As discussed, there is significant professional judgement and estimation in determining how to measure the valuation allowance under Section PS 3250, including the determination of the minimum contributions required by the current plan arrangements. It is the Province's position that the attributes of the joint defined benefit plan arrangements for the OTPP entitle the Province to access its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surplus through reduced contributions.

The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of those models to date no valuation allowance appears to be required and the OTPP pension assets should continue to be recorded on the books of the Province.

Appendix B – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the Pension Benefits Act, appointing the OTTP Board, and defining the role of the Board. Section 10 requires that the partners meet and negotiate changes to the plan every three years. Section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the Sponsors to the OTPP have the authority to utilize ongoing surpluses. Section 19 also requires the Board to prepare a valuation at least every three years to comply with the PBA.

Commented [LD4]: JIM Can you also insert references to Sections 10 and section 57.
Also to Section 58 to 60 that are relevant.
Section 19 requires a valuation to be prepared every three years. This is also important.

DRAFT

The process governing the use of ongoing surpluses by the Sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the Sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the Sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the Sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the Sponsors on his or her views on the positions of the partners and provide a recommendation to the Sponsors. If the Sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

We note that the mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the Sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the Sponsors do not agree to file the valuation, then the Sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the Sponsors' responsibilities in making funding decisions and

DRAFT

surplus allocation regarding the Plan.

Funding Management Policy (FMP)

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.

The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:

i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).

ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).

iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Sponsors are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both Sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the Sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the Sponsors mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

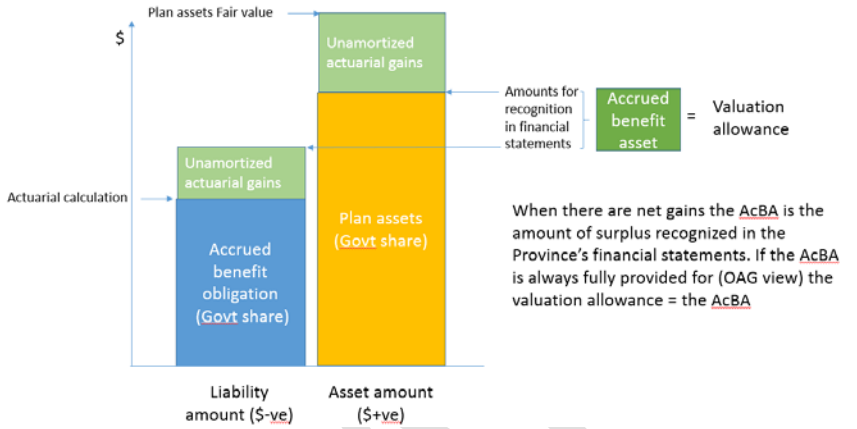
Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

DRAFT

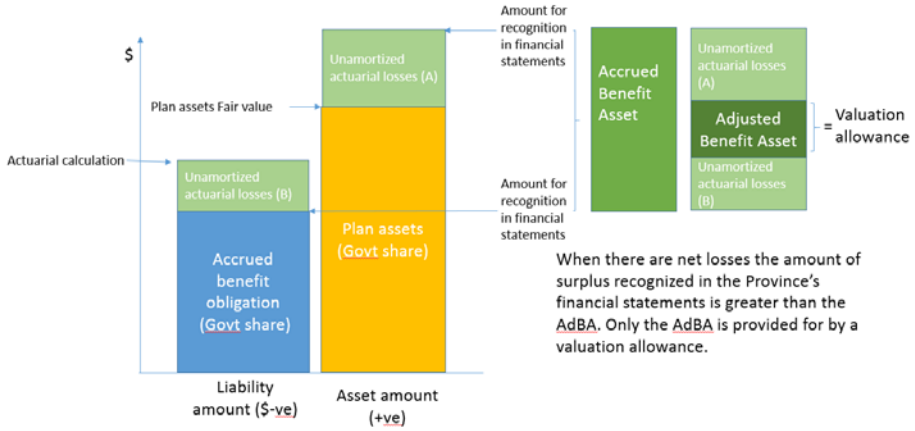
Appendix- C– Impact of a Valuation Allowance on Pension Assets

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



When there are net gains the AcBA is the amount of surplus recognized in the Province's financial statements. If the AcBA is always fully provided for (OAG view) the valuation allowance = the AcBA

An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses

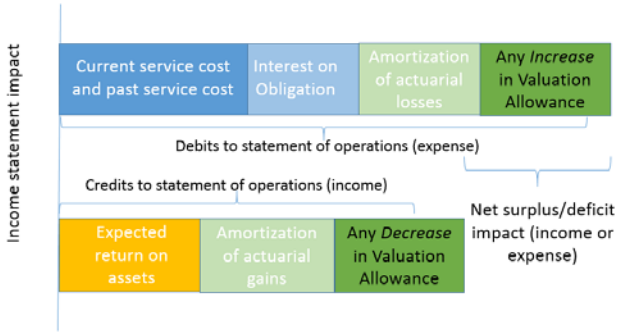


When there are net losses the amount of surplus recognized in the Province's financial statements is greater than the AdBA. Only the AdBA is provided for by a valuation allowance.

Components of Expense

The *change in* the valuation allowance flows directly through the statement of operations.

The change in valuation allowance = the change in the AcBA (or AdBA if applicable)



Changes in the Accrued Benefit Asset

Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]

Event or circumstance	Impact on ABA	Impact on VA	Impact on Fiscal position
Contributions in excess of current service cost – i.e. additional funding	Plan assets increase more than the ABO ↑	VA increases to reduce ABA to zero ↑	Fiscal position worsens with additional funding ↓
2015-2016 example: Contributions of $1,812M exceeded other elements of pension expense by $1,514M	2015-2016 example: Additional contributions increase plan assets. AcBA increases by $1,514M	2015-2016 example: AcBA increase of $1,514M results in an increase to the VA of $1,514M	2015-2016 example: Deficit increases by $1,514M. The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

Appendix D - Definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, Section PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;	Consistent in concept with the definition of a GP focusing on investments in the partnership and the definition of a JDBP

			focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the government partnership.	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former Section PS 3060.06 retained in Archived Pronouncements.]		

In addition to consistent wording, the concepts in the definitions of a government partnership and a joint defined pension plan are similar.

While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

DRAFT

Appendix E - Comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP [Tables are to be updated]

Commented [NP5]: Check (Pauline)

Formatted: Font color: Red

Formatted: Font color: Red

Review of Discount Rates Across Jurisdictions

- In the inter-jurisdictional review of all funded provincial sponsored or joint sponsored plans which also have stand-alone plan financial statements:
  - the Ontario Teachers' Pension Plan (OTPP) is the only plan were the discount rate used in the plan's financial statements is more than 50 basis points below the discount rate used by the province.
  - OTPP stand-alone financial statements use the market rate of Provincial bonds.

- All other plans' financial statements (i.e. 23 plans across jurisdictions) use the long-term rate of return as the discount. The discount rate used by the plans' are lower than 50 basis points or less than the provinces' discount rate or at times higher than the provincial rate.

1

Plan's discount rate is lower than the provincial rate by more than 50 bps

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate
Ontario				
Ontario Teachers' Pension Plan (OTPP)	6.25%	LT return on plan assets	3.25%	Market rate of Provincial Bonds

2

Plan's discount rate is lower by 50 bps or less (or higher than the provincial rate)

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate
Ontario				
Ontario Public Service Employees Union Pension Plan (OPSEUPP)	6.25%	LT return on plan assets	5.75%	LT return on plan assets
Healthcare of Ontario Pension Plan (HOOPP)	5.75%	LT return on plan assets	5.65%	LT return on plan assets plus margin

DRAFT

Appendix ~~C~~F – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners'

Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan ("PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

DRAFT

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[11] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[11] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

DRAFT

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

DRAFT

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

We trust that these comments have been of assistance to you. Should you have any questions in regard to them, please do not hesitate to contact the undersigned.

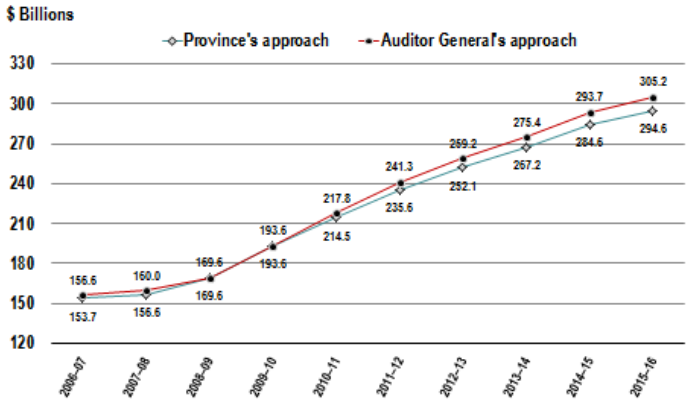
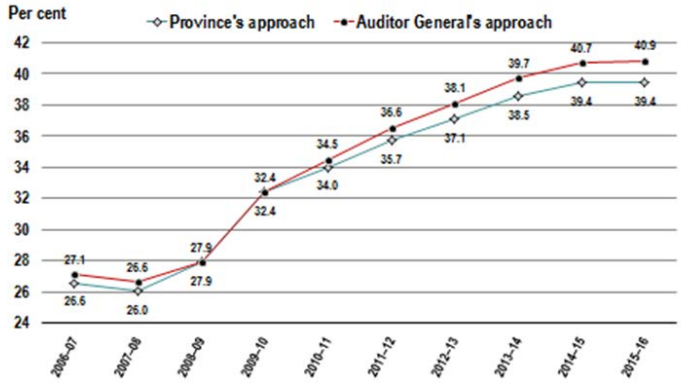
Chart 3



Net debt-to-GDP comparison — 10-year Chart 4



DRAFT

Appendix H – History of Surplus Utilization for OTPP

The history of OTPP surplus utilization from the time the OTPP became a jointly sponsored pension plans to the date that the FMP was established (in March 2003) demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to	$0

DRAFT

			reduce the value of remaining special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion		

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the Sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

DRAFT

Appendix I – Summary of different valuation methodologies for pension valuations

Commented [NP7]: Provided to ISPPD for review and confirmation

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits and pension obligations.	Measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered.
Actuarial cost method	*[To confirm – not clear from the valuation report]*	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values [To confirm the approach taken in OTPP funding valuation]	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	Market -related values, which are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied consistently. The Province uses adjusted market values for some classes of assets in certain plans.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate.	In measuring a pension obligation amount, the defined benefit obligation amount determined by the	Not specified. However two methods are specifically acknowledged – a)

	For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR Reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work To confirm the approach taken in OTPP funding valuation]	plan's sponsor may be (but is not required to be) used. Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. Part I (IAS 19) requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario.	discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing.[12] The Province of Ontario uses a discount rate for OTPP determined by reference to plan asset earnings.
Underlying population data	All valuation methodologies should use consistent underlying data of the population covered by the plan		
Inflation rate	All valuation methodologies should treat inflation in a consistent manner and use a consistent inflation assumption (best estimate). [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Demographic assumptions	All valuation methodologies should use a consistent demographic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Other economic assumptions	All valuation methodologies should use a consistent other economic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		

[12] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

Appendix B – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the Pension Benefits Act, appointing the OTTP Board, and defining the role of the Board. Section 10 requires that the partners meet and negotiate changes to the plan every three years. Section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the Sponsors to the OTPP have the authority to utilize ongoing surpluses. Section 19 also requires the Board to prepare a valuation at least every three years to comply with the PBA.

Commented [NP8]: JIM - please insert references to Sections 10 and section 57.
Also to Section 58 to 60 that are relevant.
Section 19 requires a valuation to be prepared every three years. This is also important.

DRAFT

The process governing the use of ongoing surpluses by the Sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the Sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the Sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the Sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the Sponsors on his or her views on the positions of the partners and provide a recommendation to the Sponsors. If the Sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

We note that the mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the Sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the Sponsors do not agree to file the valuation, then the Sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the Sponsors' responsibilities in making funding decisions and

DRAFT

surplus allocation regarding the Plan.

Funding Management Policy (FMP)

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.

The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:

i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).

ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).

iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Sponsors are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both Sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the Sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the Sponsors mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone

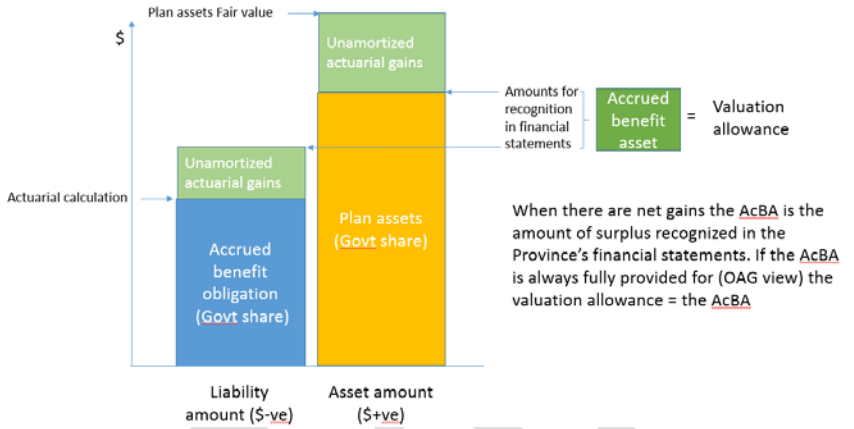
DRAFT

escalated adjustments for members).

DRAFT

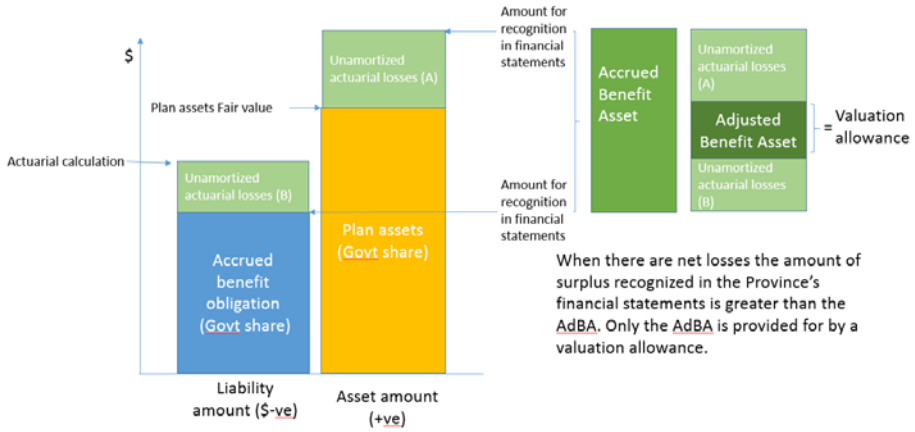
Appendix C – Impact of a Valuation Allowance on Pension Assets

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



When there are net gains the AcBA is the amount of surplus recognized in the Province's financial statements. If the AcBA is always fully provided for (OAG view) the valuation allowance = the AcBA

An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses

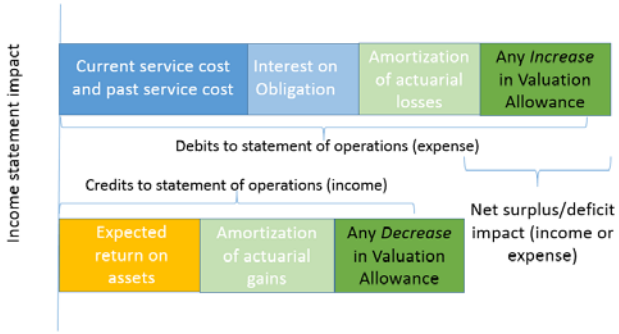


When there are net losses the amount of surplus recognized in the Province's financial statements is greater than the AdBA. Only the AdBA is provided for by a valuation allowance.

Components of Expense

The *change in* the valuation allowance flows directly through the statement of operations.

The change in valuation allowance = the change in the AcBA (or AdBA if applicable)



Changes in the Accrued Benefit Asset

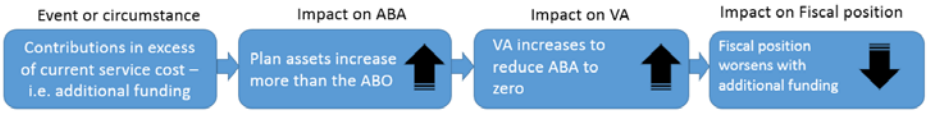
Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA or AdBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]

Event or circumstance	Impact on AcBA/AdBA	Impact on VA	Impact on Fiscal Position
Investment returns worse than expected e.g. economic downturn	The AcBA does not decrease significantly. The Adjusted Benefit Asset does.	VA decreases – lower allowance than prior year required	Fiscal position improves in an economic downturn
Plan assets fair values significantly lower in one year. Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.	The AcBA is based on the higher, smoothed value of plan assets and does not change significantly. However the actuarial losses are subtracted from the AcBA to calculate an AdBA, which is smaller than the AcBA.	Prior year allowance was based on AcBA (no net amortized actuarial losses). Current year is based on AdBA because there are unamortized actuarial losses. The AdBA is smaller than the AcBA because of the increase in unamortized losses. Therefore the VA is reduced correspondingly.	Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. The increased actuarial losses would only impact the statement of operations in future years. A similar impact would have been noted in 2008 if the OAG's position was reflected in the financial statements for that year.

[1] Impact of change, all other elements being held constant.

Changes in the Accrued Benefit Asset

Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]



2015-2016 example:
Contributions of $1,812M exceeded other elements of pension expense by $1,514M

2015-2016 example:
Additional contributions increase plan assets. AcBA increases by $1,514M

2015-2016 example:
AcBA increase of $1,514M results in an increase to the VA of $1,514M

2015-2016 example:
Deficit increases by $1,514M.

The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

Appendix D – Summary of different valuation methodologies for pension valuations

Commented [NP9]: Request sent Oct 28 to ISPPD requesting to review details and confirm.

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits and pension obligations.	Measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered.
Actuarial cost method	*[To confirm – not clear from the valuation report]*	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values [To confirm the approach taken in OTPP funding valuation]	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	Market -related values, which are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied consistently. The Province uses adjusted market values for some classes of assets in certain plans.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate.	In measuring a pension obligation amount, the defined benefit obligation amount determined by the	Not specified. However two methods are specifically acknowledged – a)

	For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR Reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work To confirm the approach taken in OTPP funding valuation]	plan's sponsor may be (but is not required to be) used. Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. Part I (IAS 19) requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario.	discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing.[13] The Province of Ontario uses a discount rate for OTPP determined by reference to plan asset earnings.
Underlying population data	All valuation methodologies should use consistent underlying data of the population covered by the plan		
Inflation rate	All valuation methodologies should treat inflation in a consistent manner and use a consistent inflation assumption (best estimate). [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Demographic assumptions	All valuation methodologies should use a consistent demographic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Other economic assumptions	All valuation methodologies should use a consistent other economic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		

[13] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

Appendix E - Comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP [Tables are to be updated]

Review of Discount Rates Across Jurisdictions

- In the inter-jurisdictional review of all funded provincial sponsored or joint sponsored plans which also have stand-alone plan financial statements:
  - the Ontario Teachers' Pension Plan (OTPP) is the only plan were the discount rate used in the plan's financial statements is more than 50 basis points below the discount rate used by the province.
  - OTPP stand-alone financial statements use the market rate of Provincial bonds.

- All other plans' financial statements (i.e. 23 plans across jurisdictions) use the long-term rate of return as the discount. The discount rate used by the plans' are lower than 50 basis points or less than the provinces' discount rate or at times higher than the provincial rate.

Appendix F - Definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, paragraph PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;	Consistent in concept with the definition of a GP focusing on investments in the partnership and the definition of a JDBP

			focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the government partnership.	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

In addition to consistent wording, the concepts in the definitions of a government partnership and a joint defined pension plan are similar.

While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

DRAFT

Appendix G – History of Surplus Utilization for OTPP

The history of OTPP surplus utilization from the time the OTPP became a jointly sponsored pension plans to the date that the FMP was established (in March 2003) demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to reduce the value	$0

DRAFT

			of remaining special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion		

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the Sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

Appendix I – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners'

Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan ("PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

DRAFT

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[14] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[14] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

DRAFT

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

DRAFT

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

Subject: TBS question re ITA Excess Surplus

Hi Len:

Further to our discussion and your emails, we have reviewed the emails you provided. The following is a brief overview of the excess surplus rule under the ITA:

Under the ITA, all pension plans that have a defined benefit provision (including JSPPs)

are prohibited from receiving further employer contributions while the plan holds an "excess surplus". The rules in the ITA operate such that essentially if an actuarial valuation illustrates that a pension plan's assets are greater than 125% of the plan's liabilities, the plan is considered to have an excess surplus and employer contributions are prohibited until such time as the excess surplus can be eliminated (or, alternatively, benefit improvements are provided – in this case the actuarial valuation has to include the improvements). The prohibition of ongoing contributions under the ITA rules generally applies to the employer. However, depending on the contractual terms, the prohibition could apply to both members and the employer.

Please let us know if you have any further questions or if we may be of further assistance.

Best regards,

Jana Steele

2016
CANADA'S BEST
DIVERSITY EMPLOYERS

Statement of Facts and Assumptions Sept 19 (3).pdf

Statement of Facts and Assumptions

The (Ontario Teachers') pension plan is jointly sponsored by the Ontario government, through the Minister of Education, and the executive of the Ontario Teachers' Federation (OTF). The OTF represents teachers, while the government represents employers.

OTF and the government are equally responsible for ensuring the pension plan has enough money to meet its long-term pension obligations. In addition, they appoint experienced, professional experts to the pension plan's Board.

Through a six-member Partners' Committee, the sponsors jointly:

- Set benefit levels
- Establish the contribution rate paid by working teachers (which is matched by the Ontario government and other designated employers)
- Decide how to address funding shortfalls or use surplus funds when they arise

(Source: OTPP.com)

The governing and other documents that are relevant to an accounting analysis are as follows:

- Teacher's Pension Act (TPA)
- Partners Agreement
- ~~Financial~~ Funding Management Policy (FMP)

The following facts and assumptions have been accepted without verification or further analysis:

- The plan meets the definition of a joint benefit plan under S. 3250 of the Public Sector Handbook and is appropriately accounted for as such.
- The actuarial and other assumptions that factored into the valuation used for accounting purposes are appropriate and meet the requirements of S. 3250.

Relevant Extracts from the TPA

Section 5 (1.1) of the TPA states that the total amount of contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year. The only instance where contributions would not be equal would include the government's payments in connection with forgone inflation adjustments and the additional contributions related to the 2008 filing agreement (1.1%) which is often referred to as "share the pain" payments) (Section 5 (8)).

Section 10 of the TPA provides that the Minister of Education and the executive of The Ontario Teachers' Federation (OTF) may enter into an agreement that provides for, among other things, the joint management of the Plan and the sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund.

Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Partners) have entered into an agreement for the management of the Plan (Partners Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the agreement.[1] The FMP provides for the funding of the Plan and how deficits and surpluses will be addressed.

Actuarial Valuation of the OTPP for accounting and funding purposes

[1] Partners Agreement, section 110.

Commented [HL1]: Is this accurate – nothing in the TPA says we represent employers.

Commented [RD2R1]: Agree.

Commented [RD3]: Not sure what this means; it would be more helpful to quote directly from the TPA or other sources (it seems to be more of a conclusion than a statement of fact)

Commented [RD4]: I believe there is matching in practice but I don't think it is mandated

Commented [RD5]: Not verified by us either

Commented [RD6]: Not sure they can say these are the *only* ways contributions would not be equal; and note that 5(1.1) does not technically say they must be equal.

Commented [RD7]: It provides a framework, but is by no means 100% prescriptive. Also the partners can deviate from the FMP by agreement.

The following is a summary of the components of the plan and the Province's calculation of its share of the plan as of March 31, 2016.

(all figures in $B)	Total plan	50% Share of the plan
Market related value of assets	157.0	78.5
Value of obligation	116.4	58.2
Surplus (deficit)	40.6	20.3
Unamortized (gains) losses	(18.0)	(9.0)
Adjustment for March 31, 2016	(1.8)	(0.9)
Asset (liability) position	20.8	10.4
Specific Government adjustment		(0.3)
Final asset (liability) position on balance sheet		10.1

According to the OTPP website, the most recent funding valuation reported a preliminary funding surplus of $13.2 billion on March 31, 2016.

Relevant Extracts from the Partners' Agreement

The Partnership Agreement is between the Province of Ontario and the OTF that sets out the formal relationship between the Province and the OTF in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the plan structure, setting the benefits of the plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, making changes to the plan, this agreement or other plan documents, deciding whether or not to file a valuation more frequently than required by the *Pension Benefits Act,* appointing the OTTP Board, and defining the role of the Board.

The Partner's agreement requires that when changes to the plan are required that the Partners negotiate how those changes are made in good faith (Paragraph ~~75~~74)

Paragraph 75 of the Partner's agreement requires the Partners to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

If the partners cannot agree on the changes required to the plan, a mediator is appointed to assist the Partners in coming up with an agreement. The mediator is responsible for submitting a report to the partners on his or her views on the positions of the partners and provide a recommendation to the Partners. If the partners do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the mediation, including part (c), which sets out that the contributions from the Minister and employers be equal to those of the members.

In addition to the clauses identified above, the Partnership agreement has an appendix called the Funding Management Policy which sets out the Partners' responsibilities in making funding decisions and surplus allocation regarding the plan.

Relevant Extracts from the FMP

Commented [RD8]: We have not checked these figures.

Commented [RD9]: Note that this provision relates to changes flowing from a valuation that is to be filed with the regulators.

Commented [HL10]: Inaccurate: This applies to arbitration NOT mediation

The FMP is an appendix to the ~~partnership~~ partners' agreement that speaks to how the plan should be funded by both parties. The protocol for the use of surplus under the OTPP is detailed in the Funding Management Policy ("FMP") adopted by the Ontario Government and Ontario Teachers Federation as sponsors of the OTPP.

The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the plan. The following three are most relevant to addressing surpluses:

i) Restoration zone (Article 3 of the FMP) allows for surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions to the basic target rate (or a combination of these two options) (Section 3.06(e)).

ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost). Section 4.05 of the FMP provides that in such a scenario, the parties may reduce current contributions, provide temporary surplus distributions or provide a temporary benefit improvement.

iii) Permanent improvement zone is where the plan is essentially fully funded and the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities plus the 10% margin noted previously. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. Should they be unable to agree the mediation process set out in the Partners Agreement, the arbitration process outlined in the Partners Agreement will be followed.

It is our understanding that the plan is currently in the Restoration Zone. We understand that contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would permit this special contribution to be eliminated.

History of Surplus

The FMP was not established until 2003. The following is a summary of the history of how surpluses we treated before the FMP and post the FMP. The following is a summary of deficits over the year.

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit	$4.6 billion to reduce the value of remaining special	$0

Commented [RD11]: I'd say it's broader than that; e.g. also deals with surplus utilization.

Commented [RD12]: 3.06(e) is not quite so prescriptive; e.g. it only speaks of "a reduction in contribution rates" but doesn't expressly say only down to the basic rate.

Commented [RD13]: Is that correct, or is it only the amount in excess of the 10% cushion?

Commented [RD14]: For a filing valuation, this is true – the parties must agree or go to mediation/arbitration. Arguably for any valuation that isn't being filed, either party can decide not to negotiate any changes and it would end there (that is our understanding).

Commented [Deloitte15]: Can this be confirmed as to whether the parties need to agree in order to reduce this cotnribution? Our understanding is that both parties do need to agree.

Commented [RD16R15]: We also interpret the FMP as requiring agreement to eliminate this special contribution.

Commented [RD17]: We didn't check this; we assume it was simply copied from the source.

		improvements	payments	
1999	$3.5 billion	N/A	$3.5 billion to reduce the value of remaining special payments	$0
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make contributions	any changes to benefits or	$1.9 billion
Total		**$9.3 Billion**	**$9.3 Billion**	

* Source: Ontario Teachers' Pension Plan Board "Report on Funding" (April 2002)

Year	Valuation Status and Key Decisions
2003	$1.5 billion surplus; no changes to benefits or contribution levels. Funding Management Policy adopted by plan sponsors.
2005	A preliminary $6.1 billion shortfall was resolved, leaving plan with a $0.1 billion surplus. Shortfall resolved with special contribution rate increases, totalling 3.1% of base earnings by 2009 for teachers, the Ontario government and other employers. OTF used the $76 million contingency reserve set aside in 2001 to reduce contribution rate increases for members in 2008.
2008	A preliminary $12.7 billion shortfall was resolved with the introduction of conditional inflation protection for pension benefits earned after 2009 and an increase in the basic contribution rate for members and the government to 9% from 8%. Employers agree to make special payments equal to any annual pension increases retirees forgo to a maximum of 50% missed inflation.
2009	A preliminary $2.5 billion shortfall was resolved primarily by assuming a slightly higher long-term rate of return on investments: yield on real-return bonds plus 1.5%, versus real-return bonds plus 1.4%. Other minor changes made to assumptions to reflect recent plan experience.
2011	A preliminary $17.2 billion shortfall was resolved with a 1.1% contribution rate increase (phased in over three years), slightly smaller annual cost-of-living increases for teachers who retired after 2009, and recognition of current contribution rate as the permanent base rate.
2012	$9.6 billion preliminary shortfall adjusted to reflect changes in mortality assumptions and impact of two-year freeze on teachers' salaries. 2012 shortfall resolved by making inflation protection for pension credit earned after 2013 fully conditional on plan's funded status and providing slightly smaller pension increases, beginning in 2014, for members who retired after 2009. These changes enabled the plan to assume a slightly higher discount rate. The changes left the plan with a $200 million surplus at Jan. 1, 2012.
2014	$5.1 billion preliminary funding surplus used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided each year since they retired. The surplus funds were also used to raise conditional inflation protection to 60% of the increase in the cost of living for the portion of retirees' pensions earned after 2009. Both changes are effective with January 2015 pension payments.

2015	Some of the $6.8 billion preliminary funding surplus was used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided on January 1, 2015. The surplus funds were also used to raise conditional inflation protection for pension credit earned after 2009 to 70% from 60% of the increase in the cost of living. Both changes were effective January 2016. In addition, some surplus funds were reserved to help facilitate stability in contribution and benefit levels should a future funding valuation show a decline in assets or increase in pension costs.
2016	Some of the $13.2 billion funding surplus will be used to raise conditional inflation protection for pension credit earned after 2009 to 90% from 70% of the increase in the cost of living. Some funds will also be reserved to increase the stability in contribution and benefit levels, should future valuations show a decline in asset value or an increase in pension costs.

* Source: Ontario Teachers' Pension Plan, "Key Funding Decisions Since 1990" adapted for September 14, 2016 announcement.

Impact of Restoring Inflation Indexation

As noted above, a preliminary $12.7 billion plan shortfall in 2008 was resolved with the introduction of conditional inflation protection for pension benefits earned after 2009 and an increase in the basic contribution rate for members and the government to 9% from 8%. Employers agreed to make special payments equal to any annual pension increases retirees forgo to a maximum of 50% missed inflation. In other words, employers and members shared in the outcome since the members would forego some benefits and the employers would also bear the cost to the extent of 50% of the missed inflation. These additional payments are often referred to as the "share the pain" payments. Despite the fact that the inflation protection was reduced, the cost of this protection has been fully reflected in the measurement of the accrued benefit obligation associated with the plan on the grounds that either the benefits would be restored and provided to pensioners or the "share the pain" payments would continue.

As also noted in the table above, plan surpluses arising in 2014-2016 are being used to restore some of the inflation protection that was reduced in 2008. This restoration of inflation protection is fully contemplated in the FMP under Section 3 describing the Restoration Zone. The direct impact of this action is that a portion of the "share the pain" payments that would otherwise be required have been eliminated. The estimated value of this reduction in contributions is $4.3 billion related to the 2016 action ($1.85 billion for 2015, and XX for 2014).

Commented [DK(-T18]: OPCD to make sure you agree with how I've worded this.

Commented [DK(-T19]: Amount outstanding

Commented [RD20]: We didn't verify this; we assume it all comes from the information cited above.

Subject: Call on cap and trade tomorrow

Hi Ian,

We have a call on cap and trade scheduled for tomorrow at 10am. The call would be most effective if you and Nadine have had a chance to read the memo in detail and, in light of the timing of the Public accounts and the issues that I have been discussing with Nadine, I would understand if you have not yet had this chance.

Please let me know if you would like to reschedule this call for another time, we would be happy to accomodate.

Hi Lucy.
We were wondering about your availability for a brief call to discuss the direction and next steps on the Cap and Trade accounting analysis. Please advise on your availability over the next couple of days to discuss with Cindy and myself. If more convenient, we can plan to meet via teleconference instead of in-person.
Thanks.
Nadine

Hello

We are in the process of preparing our budget and would like to know when your next billing on the above will arrive. So far you have billed us for $9129.27. I would really appreciate if you could provide me with the breakdown on how much you are planning to work on the above project for this fiscal which is ending on March 2017 and the next fiscal which starts from April 1, 2017 till your contract ends which would be in September 2017.

Your assistance would be greatly appreciate.

Thanks
Shyrose Virani

Subject: *Confidential: Re: OSS-00426611-AppG-ConfidentialityAgreement-October2014

Hi Shyrose,

I signed a confidentiality agreement for the cap and trade SOW and don't believe that I would need to sign another one, as the confidentiality agreement covers "each statement of work" pursuant to the agreement (the master agreement and SOWs) and already covers confidentiality for "any" services under the agreements.
Please advise if my interpretation of the wording in the confidentiality agreement is not correct.

I will ask Martin and Michael to sign the confidentiality agreement.

Sean Cable was listed on the SOW in the case that an accounting opinion was to be provided as a concurring reviewer. To date Sean has not been involved in any of the work and currently is not expected to be. Does this mean he should still sign a confidentiality agreement? Please confirm and I will arrange accordingly.

Regards,
Lucy

Hi Lucy

Can you please sign the attached Confidentiality Agreement and return it to me asap. Please back date it to when the contract was signed. Also, if you can please have Martin, Sean and Michael sign as well.

Thanks
Shyrose[attachment "OSS-00426611-AppG-ConfidentialityAgreement-October2014.docx" deleted by Lucy Durocher/CA/ABAS/PwC]

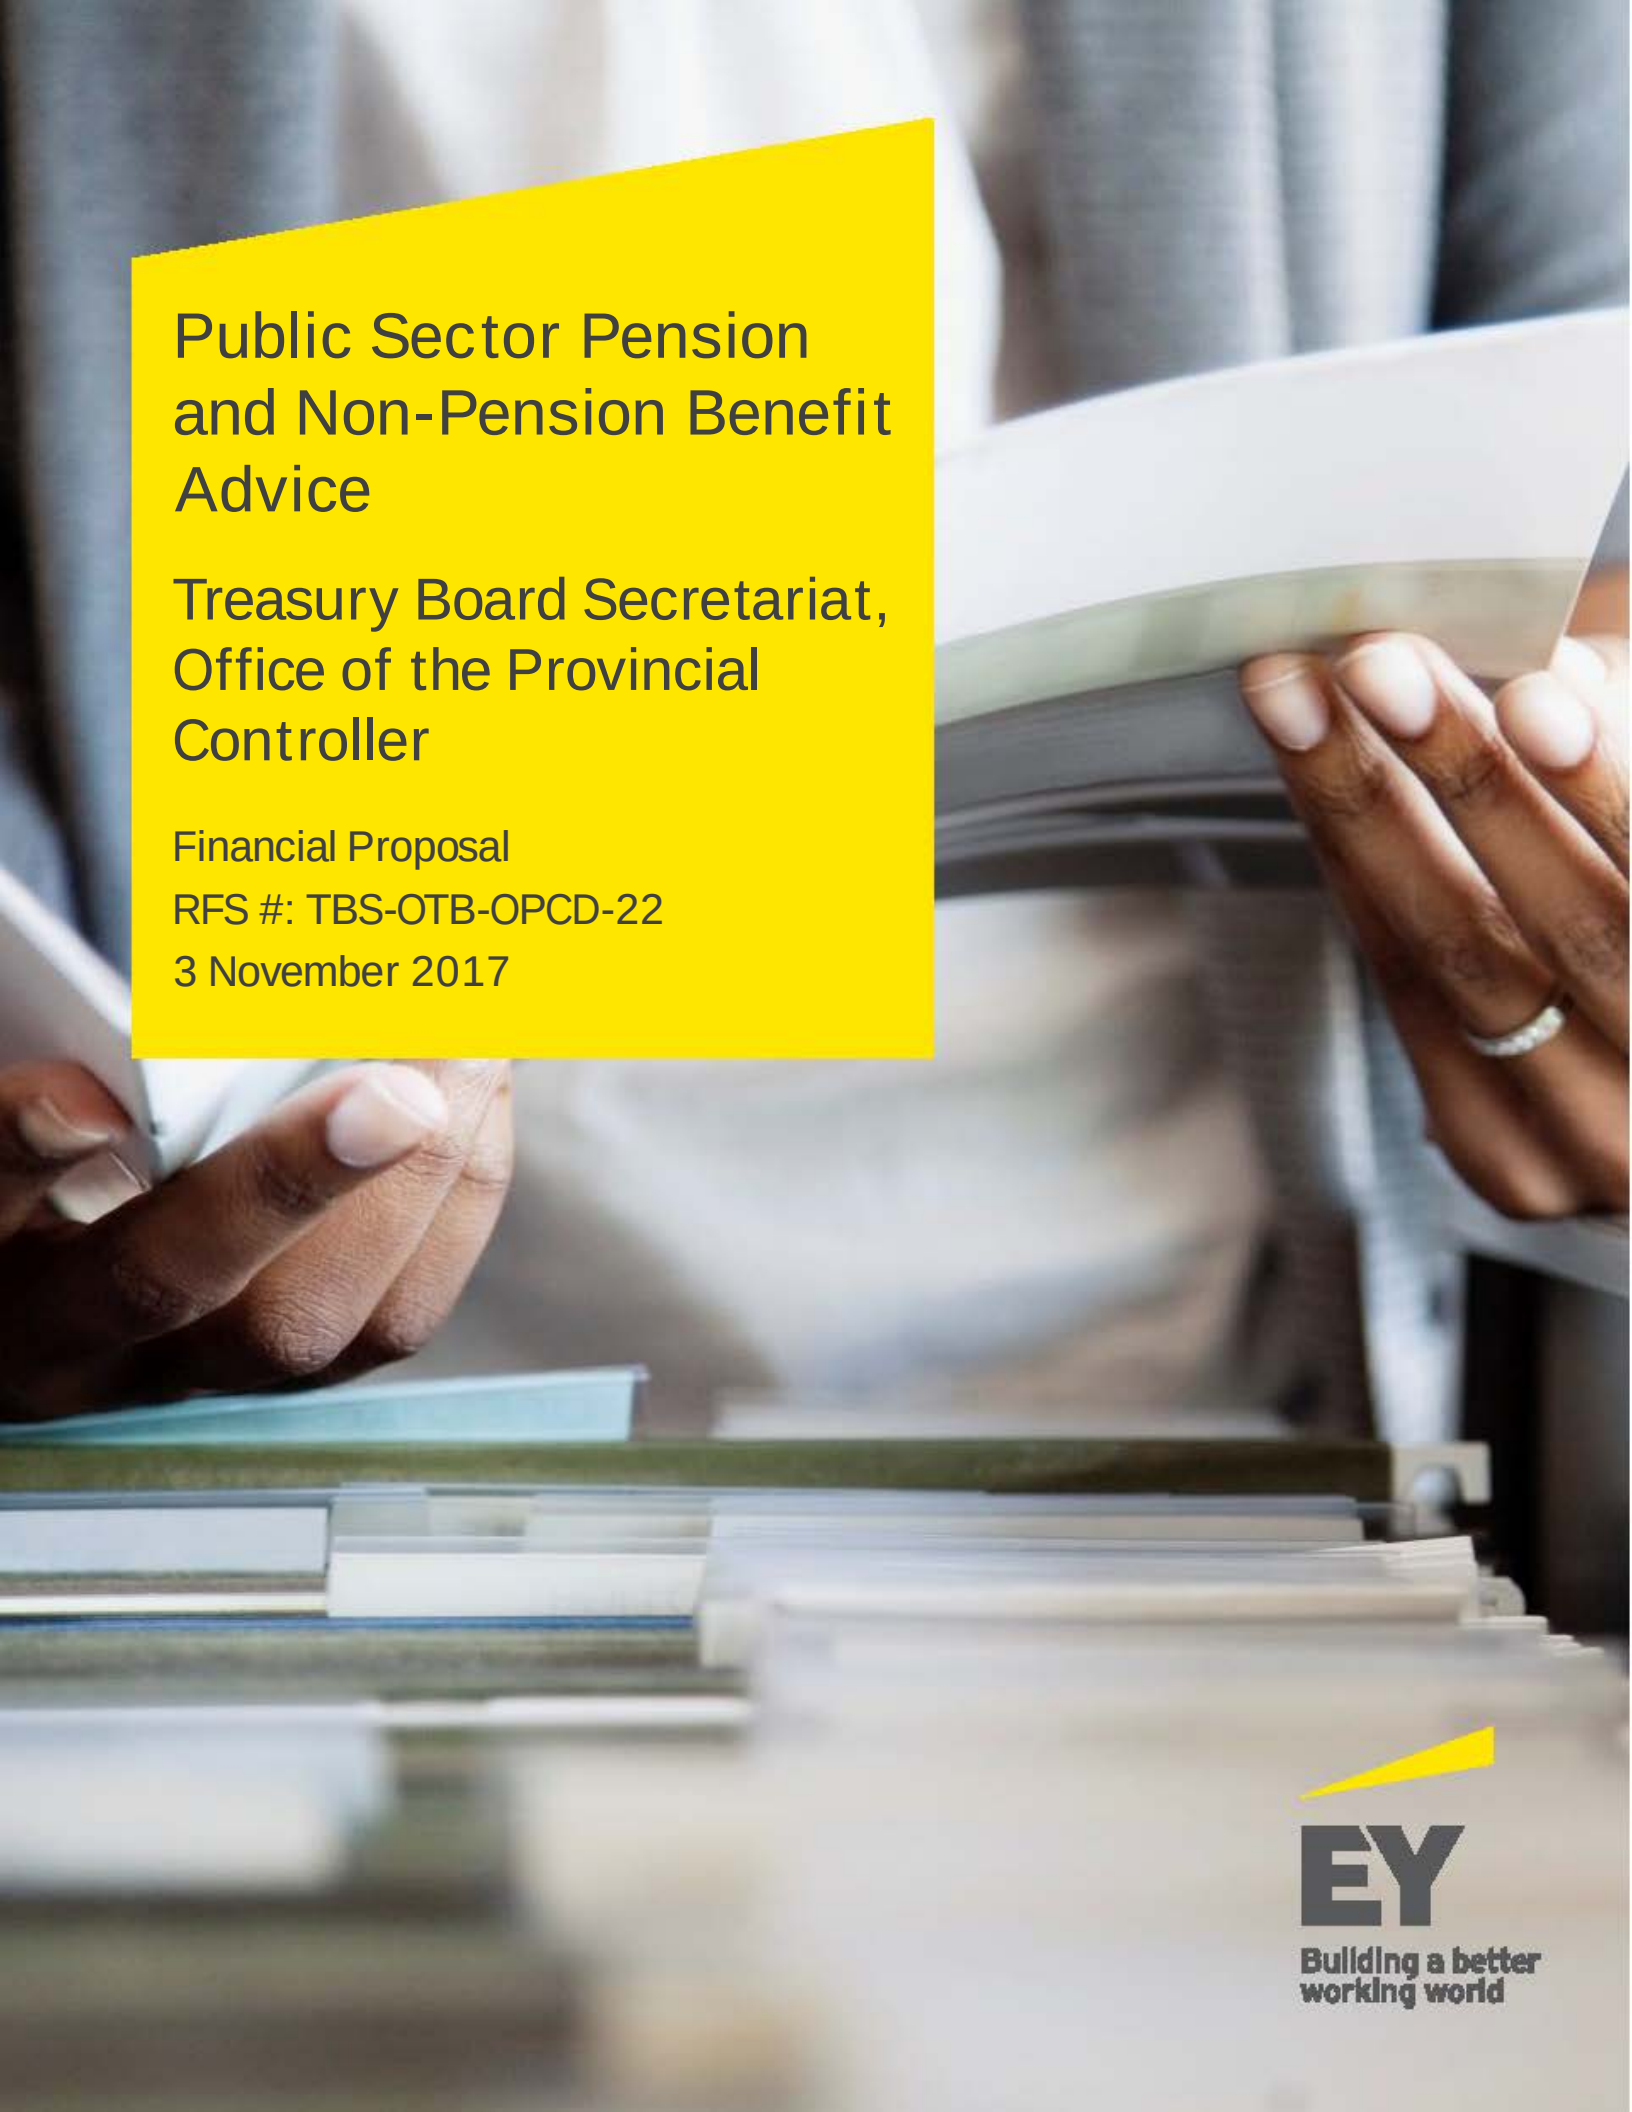
EY Proposal_TBS Pension and Non Pension Benefit Advice - Pricing (Schedule A).pdf



Public Sector Pension and Non-Pension Benefit Advice

Treasury Board Secretariat, Office of the Provincial Controller

Financial Proposal

RFS #: TBS-OTB-OPCD-22

3 November 2017

EY

Building a better working world

Schedule A - Pricing Schedule

Please provide the following information in accordance with Sections 2.2.1 and 2.2.2 of this Request for Services:

Legal Name of Vendor: Ernst & Young LLP

Part A – Vendor Personnel

Complete the following table in respect of all proposed Vendor Personnel that will perform the Services and/or provide the Deliverables. Vendors should not include proposed Subcontractors in this Part A of Schedule A.

List the names of Consultants who will be assigned to the Project	Role and Experience Level
Uros Karadzic	Senior Consultant/ Project Lead
Christina Chan	Intermediate Consultant/ Project Analyst

Will Subcontractors be used for this Project? Yes [ ] No [X] If "Yes", complete Part B.

Part B – Vendor Subcontractors

Complete the following table in respect of the proposed Vendor Subcontractors at any tier of subcontracting, including any Vendor contractors that will perform the Services and/or provide the Deliverables.

Legal Name of Subcontractor	List the names of Consultants who will be assigned to the Project	Role and Experience Level
N/A	N/A	N/A
N/A	N/A	N/A

Confidential – All Rights Reserved – Ernst & Young LLP

Part C – Fixed Price

In the following table, enter the Fixed Price in respect of each role to be performed and the particular Deliverables to be provided, which amount is fixed and not subject to change unless otherwise agreed to by the Client and the Vendor in a Change Order.

For the purposes of bidding, the Ministry has estimated that 75 hours of effort is required for each role totalling 150 hours over the term of the Agreement. The Ministry reserves the right to alter the number of working days for each role as the project unfolds. The Ministry reserves the right to alter the number of working days at the time of award.

Fixed Price for each Core Deliverable	**Amount**
· One (1) Senior Consultant / Project Lead shall provide **75 hours** of effort over the term of the agreement. The consultant shall provide all deliverable as described in Section 1.5 Client Requirements.	$ 42,825 ($571/hour X 75 hours)
· One (1) Intermediate Consultant / Sr. Analyst shall provide **75 hours** of effort over the term of the agreement. The consultant shall provide all deliverable as described in Section 1.5 Client Requirements.	$ 25,875 ($345/hour X 75 hours)
Total Fixed Price:	$68,700

Part D – Other Expenses

In the following table, Vendors should list all expenses applicable to the Project that have not been included in the Total Fixed Price amount as stated in Part C of this Schedule A. Vendors should review the Travel, Meal and Accommodation Expenses section of the RFS prior to completing this table.

Expenses by Type *(List each item below):*	**Proposed Amount**
	$
	$
Total Other Expenses:	$

Part E – Maximum Price

In the following table, Vendors shall calculate Subtotal Price by adding Total Fixed Price, as stated in Part C of this Schedule A, to Total Other Expenses, as stated in Part D of this Schedule A.

Vendors shall calculate Maximum Price by adding the Subtotal Price to the applicable HST.

Subtotal Price (Part C + Part D):	$68,700
HST (if applicable):	$8,931
Maximum Price (Subtotal Price + HST):	**$77,631**

Part F – Follow-on Work Rates

In the following table, enter the **Hourly Rates** in respect of each particular Role to be performed which amount is fixed and not subject to change unless otherwise agreed to by the Client and the Vendor in a Change Order.

In the event that Follow-on work is requested, the Ministry will prepare a contract amendment to engage the consultant(s) for a specified duration and hours worked. Details on deliverables will be disclosed in the amendment as well.

Fixed Price for each Core Deliverable	Hourly Amount
· One (1) Senior Consultant / Project Lead	$571
· One (1) Intermediate Consultant / Sr. Analyst	$345

Confidential and proprietary - Disclosure of this proposal to third parties is prohibited. It is intended to be used solely for the purpose of evaluating whether or not to engage us to provide you with professional services.

In the event you receive an access to information or freedom of information request that could require disclosure of our proposal (or any other information provided by us in this context) please immediately notify us so that we may avail ourselves of any available protections or exemptions under the applicable legislation. Our proposal is being provided to you in confidence and includes commercially sensitive information, the disclosure of which, among other things, may significantly prejudice the competitive position of EY or be otherwise harmful to our business interests.

© 2017 Ernst & Young LLP. All rights reserved.

"EY" as used in this proposal means the Canadian firm of Ernst & Young LLP or, as the context requires, other member firms of the global Ernst & Young network, each of which is a separate and independent legal entity.

Executive summary

We are pleased to put forward our proposal for actuarial services to the Treasury Board Secretariat (TBS), Office of the Provincial Controller Division (OPCD). We will support you in the preparation and review of pension and non-pension benefit expenses and liabilities of various benefit plans for which the Province is either a sole sponsor or a joint sponsor. These expenses and liabilities, determined by OPCD in accordance with Public Sector Accounting Standards (PSAS), are important for inputs reporting in various public documents.

EY has unparalleled knowledge and experience in the most important areas related to this project. Specifically, we bring:

- Deep and up-to-date understanding of PSAS as they relate to single and jointly sponsored public sector pension and non-pension plans
- Top-notch actuarial expertise and experience, with two of the most recognized and respected Canadian actuaries available to you as part of our team
- Familiarity and hands-on working experience with TBS and the OPCD team. This enables us to communicate our findings clearly, and assist TBS in interpreting and using the outcome of our work
- Ability to fine-tune our reporting and documentation approach for TBS in a way that is recognized by your stakeholders
- In-depth understanding of the key issues at hand, including asset ceiling interpretation, the importance of working with a variety of public sector stakeholders, the government financial reporting objectives of transparency and accountability, and the Ontario government's confidentiality requirements
- Provide directly applicable, useable and practical recommendations to TBS building off our familiarity with the reporting process at TBS

EY actuarial team

Your core EY resources for this project are Uros Karadzic as the project lead and Christina Chan as the intermediate consultant for this engagement. Both Uros and Christina have first-hand experience working with the TBS and OPCD.

Uros Karadzic is one of the most respected Canadian actuaries with deep knowledge and involvement in Canadian public sector pension accounting matters. He is a member of the PSAB's Employment Benefit Taskforce leading the review and revision of public sector accounting standards for pension plans in Canada. This means that he is both well-versed in the details of PSAS, and also aware of the key challenges with the standard that may be revised. He was a member of the Ontario Pension Asset Expert Panel in 2017.

Confidential | All Rights Reserved | EY

Both Uros and Christina have provided actuarial services to TBS previously, most recently supporting the team on the process related to compilation of inputs to the 2017/2018 Provincial Budget and the preparation of the 2016/2017 consolidated financial statements of the Province related to the pension plans in accordance with PSAS. They are cleared through the security requirements at TBS and their prior knowledge and experience allows them to initiate the project at full speed.

We recognize the needs of an engagement sometimes evolve and may require additional resources. Should there be additional service requests, need for an additional professional perspective, a change or extension in scope or urgent needs, we have the in-house capability to staff additional experienced resources as necessary to best serve TBS throughout this engagement:

Faisal Siddiqi: Faisal is a well-known and senior Canadian actuary who is joining our team on 13 November 2017 as an Associate Partner. He is an actuary with over 25 years of experience. Currently, Faisal is the Chair of Canadian Institute of Actuaries' Practice Council, member of the Financial Services Tribunal of Ontario, and member of Financial Services Commission of Ontario's (FSCO) actuarial advisory panel. He has provided actuarial advisory services related to many aspects of multi-employer, public sector and private sector benefit plans.

Gregory Winston: Greg is a Senior Manager at EY and an actuary with over ten years of experience. His primary focus includes actuarial audit support, due diligence and integration support on M&A transaction, and ongoing advisory services for both private and public sector clients. Greg has deep knowledge and experience with pension actuarial and accounting issues under PSAS and other accounting standards. He is a leading pension audit practitioner with many years of experience in reviewing actuarial assumptions, pension forecasts, accounting models and various specific issues including those related to asset ceiling calculations.

Our experience

Each year, our EY actuarial team provides actuarial services and audit support to over 250 audit entities with employee benefits programs. In addition to audit support, we provide actuarial services directly as the plan actuary. For most of our projects, our work includes developing reports with an executive summary, our findings and analysis both from the qualitative and quantitative perspective, and our recommendations, when applicable.

Our experience is demonstrated through our recent work in providing services for the following engagements:

- Treasury Board of Secretariat, Office of the Provincial Controller Division: Provided actuarial services to support the process related to compilation of input for the 2017/18 Provincial Budget and the preparation of the 2016/17 consolidated financial statements of the Province for its pension plans. In particular, we have reviewed the calculations prepared by TBS, clarifying information relied on by TBS, provided recommendations to improve the quality, usability, and consistency of the various calculation models used by TBS, advised on the interpretation of PS 3250 for both sole and jointly sponsored pension plans. We have also independently performed asset ceiling test analysis for two pension plans based on our interpretation and provided documentation on our procedure and recommendation. To conclude our prior engagement, we transferred knowledge by conducting three training sessions.

- Ontario Pension Asset Expert Panel: As a member, Uros's role included providing advice on the appropriate application of PSAS regarding pension accounting for the Province's jointly-sponsored pension plans, specifically with respect to asset ceiling and asset recognition.
- Federal Office of the Auditor General (OAG): Actuarial support to OAG as they audit federal Public Service Pension Plan (PSPP) liabilities. Uros has led this engagement for the past five audits, working closely with OAG and also the Office of the Chief Actuary (OCA) and the Office of the Superintendent of Financial Institutions (OSFI).
- Federal OAG and Provincial OAGs: Actuarial support for similar public sector audit related projects, such as OAG (Federal) – Canada Post Corporation; OAG (PEI) – Public Accounts; OAG (NL) – Public Accounts; OAG (NB) – Public Accounts; and OAG (Federal) – Via Rail, to name a few. The work often involved both actuarial and PSAS interpretation matters.
- OAG National Professional Practice Group: Provided on-call advisory services to the Federal OAG's Professional Practice on some of the most challenging actuarial and PSAS interpretation issues over the last five years.
- Treasury Board of Canada Secretariat: Provided assistance in the development of a funding policy proposal for the Public Service Pension Plan, including researching governance best practices relating to establishing funding policies in Canada and globally.
- Ontario Pension Board (OPB): Actuarial support for more than five years on the audit of the Public Service Pension Plan of the OPB. In particular, the work involves re-calculating the detailed actuarial calculations made by the OPB's actuary, to review methodology and valuation used to derive the employee benefit costs and balances.
- Ontario Pension Reform: by invitation, informed David Marshall's group on pension accounting impacts of pension reform alternatives, including how solvency and other funding requirements may impact pension accounting and asset ceiling calculations. Further, advised on possible changes to Pension Benefit Guarantee Fund (PBGF) in Ontario.
- Public Education Benefits Trust Fund (PEBT): Ongoing annual audit services for the review of the Core LTD Benefit Plan, including the review of the key economic and demographic assumptions, assessing the documentation of the assumption-setting process, and testing the actuary's valuation of the benefit obligations in accordance with the Canadian Institute of Actuaries (CIA) guidance.
- Canada Post Corporation Parliamentary Committee Testimony: Uros testified in front of a Parliamentary Committee on pension issues faced by Canada Post. The testimony was based on the EY report and analysis that looked at Canada Post's pension obligations and alternatives.
- Workplace Safety and Insurance Board (WSIB): Provided actuarial support, including the review of the benefits liabilities and funding status, the claims experience, the assumptions, sensitivity disclosed in the financial statement, and the methodology and the calculation of the benefits liabilities.

Confidential | All Rights Reserved | EY

- Ontario Hospitals: Provided audit support for the review of the non-pension post-retirement benefits (unfunded Plans) under PS 3250/3255 for a number of Ontario hospitals, such as Baycrest Centre for Geriatric Care, London Health Sciences, Woodstock General Hospital, Huron Perth Healthcare, and St. Joseph's Health Care London. Our audit review procedure includes assessing the appropriateness of accounting disclosures and assumptions under PS 3250/3255, discussions and review of the various methods used to determine each entity's cost of borrowing used as the basis for determining the discount rate assumption for unfunded plans.
- Newfoundland and Labrador English and French School Districts: Provided audit services for the review of the Sick Leave and Severance Plans, including the review of key economic assumptions, testing the actuary's valuation of benefit obligations under PS 3255 to confirm that the plan provisions are interpreted correctly, the actuarial assumptions are applied as disclosed, and the actuarial calculations have been carried out correctly.
- Canadian Institute of Actuaries taskforce on accounting discount rates: Uros has been a member of this taskforce since the financial crisis, setting and monitoring CIA's guidance on this important pension accounting topic.
- Directors College: Uros sits on the Advisory Board of Directors College and has taught a Pension Governance course to current and future corporate directors.

EY's Advisory Partners Council: bringing value to the TBS

In addition to the knowledge and experience of our actuarial team, we have selected senior EY partners to be part of our Advisory Partners Council for this engagement. The Advisory Partners Council brings together a diverse but complementary set of skills and experiences that, together with our actuarial team, will enable TBS to best benefit from the work undertaken through this project. By engaging the Advisory Partners Council at key times during the engagement, we will be able to ask key questions that help to strengthen the final results. Advice from the Advisory Partners Council members is a value-added service and will be included in the proposed fee for this engagement.

- Blake Langill: A senior Assurance Partner with more than 20 years of experience providing audit and advisory services to many of Canada's leading organizations. He was a part of our Professional Practice group, where he provided technical accounting and regulatory advice to audit and non-audit clients. Blake has experience in advising clients across various industries on the transition to US GAAP and/or IFRS and routinely deals with advising clients with complex accounting matters. His public sector experience includes an accounting advisory engagement with Infrastructure Ontario, as well as a current on-going engagement with TBS. *Blake brings specialist accounting and auditing knowledge and the current working experience with TBS.*
- Suzie Gignac: A senior Assurance Partner with over 20 years of experience providing assurance and advisory services to private and public sector clients. She participates on the Assets Task Force for the Public Sector Accounting Board of Canada which independently sets financial reporting standards critical to promoting confidence in public sector entities. Suzie is also a member of the Standards Council of Canada's (SCC) Governing Council, which is appointed by the federal government, and is Chair of the Audit Committee. *Suzie brings deep knowledge of public sector financial reporting and can help identify particular areas of focus that are relevant to accounting standards within the public sector.*

- Mark MacDonald: An experienced leader in public sector reform for dozens of governments worldwide in every major policy sector including health, human services, justice and security, finance and treasury, transportation and infrastructure, agriculture, trade and economic development, education and government services. *Mark brings a global view on some of the key questions that might need to be addressed, as well as a comparative perspective on best practices.*

We have the expertise both from accounting as well as advisory perspectives in the public sector and have many years of experience providing actuarial services relating to pension and other post-retirement benefits. We trust that our experience demonstrate our capability to carry out the services outlined in the RFS. We hope to be given the opportunity to apply those skills, as well as our knowledge of the issues at hand, to this engagement.

Confidential | All Rights Reserved | EY

About EY

EY is a global leader in assurance, tax, transaction and advisory services. We are 250,000 colleagues serving clients in the public and private sectors worldwide. EY Canada has 16 offices across the country with approximately 5,000 professionals.

We take great pride in the long-standing working relationships we have developed with our government clients, and have earned an excellent reputation through demonstrated commitment to understanding their business needs and delivering high quality services.

EY has invested in knowledge, resources, and technologies to help support both our clients and our professionals worldwide, bringing broad and deep understanding of actuarial services similar to those required by TBS. We have decades of experience providing actuarial services including employee benefits actuarial valuations. Our actuarial practice has more than 1,200 professionals globally with 25 located across Canada and ready to serve TBS.

Submission requirements

Experience and qualifications

Previous experience

As a global firm, we are able to leverage the knowledge, qualifications and experience from our professionals across the country and around the globe. For ease of evaluation, we have provided a project grid demonstrating the Team Leads' cumulative work experience in all the elements identified by TBS.

Experience	Treasury Board Secretariat, OPCD	Ontario Pension Asset Expert Panel	PSAB Taskforce	Ontario Pension Board	EY PPG/ OAG NPPG	Audit Support/ OAG PSPP	Treasury Board of Canada Secretariat	Canada Post Corporation
A) Current or past experience with similar projects, with examples of successful outcomes, anticipated challenges, and corresponding mitigation strategies	ü	ü	ü	ü	ü	ü		
B) Pension actuarial experience with the Ontario Government or other senior Canadian Governments	ü	ü	ü	ü	ü	ü	ü	ü

Experience	Treasury Board Secretariat, OPCD	Ontario Pension Asset Expert Panel	PSAB Taskforce	Ontario Pension Board	EY PPG/ OAG NPPG	Audit Support/ OAG PSPP	Treasury Board of Canada Secretariat	Canada Post Corporation
C) Demonstrated knowledge, skills, experience and expertise with developing reports with an executive summary that presents findings and analysis of the information collected both from the qualitative and quantitative of a public pension related initiative and any recommendation made as part of the report	ü	ü		ü		ü	ü	ü
D) Demonstrated knowledge, skills, experience and expertise with running different ceiling tests and sensitivity analysis scenarios including providing ceiling tests and sensitivity analysis advice	ü	ü	ü		ü	ü		

The following detailed project summaries demonstrate our current and past experience with the Ontario Government, the government of Canada and other provincial governments, in performing actuarial activities as outlined in the RFS for projects that are similar in size, nature and scope.

For each project, we have also included description of the type of reports delivered. Generally, our reports include an executive summary, an overview of our methodology, analyses, recommendations, and information we relied on.

Project #1: Ontario Treasury Board Secretariat, Office of the Provincial Controller	
Brief project description	EY provided actuarial services to support the process related to compilation of inputs for the 2017/18 Provincial Budget and the preparation of the 2016/17 consolidated financial statements of the Province for its pension plans, including asset ceiling test analysis.
Successful outcomes	By assessing the reasonability and providing recommendations on enhancements to the calculations, the EY actuarial team provided additional quality control for TBS prior to signing off the accounting reporting for the Province's pension plans. We independently performed analysis on asset ceiling test for the two pension plans in an accrued asset position based on our interpretation of PSAB 3250. Our independent analysis is considered and referenced by TBS in confirming their interpretation of the standard.

Anticipated challenges and mitigation strategies	Key challenges include the complexity of the models used by TBS, the potential misinterpretation of information received from different data source and/or inappropriately applied to the models, the various plan provisions and plan-specific considerations, and the lack of clarity regarding asset ceiling requirements under the PSAS. These risks are mitigated by detailed review of the models, discussions with project staff and developed thorough understanding of the plans, including requesting additional information from third-parties as necessary (e.g. plan actuaries, pension board, etc.).
Type of reports delivered	Asset ceiling test: report with an executive summary and detail outlining the calculation of the asset ceiling determined under PSAS per our interpretation. Summary description of our work related to the models used by OPCD to prepare the pension accounting results.
Relevance to TBS project deliverables	We believe the RFS is partly a continuation of work performed. Our prior engagement allows us to start the project immediately with minimal transition or kick-off effort. Building off our familiarity of stakeholders' priorities, the extensive knowledge of the plans and models, as well as our understanding of TBS' working preference, we are equipped to carry out the project effectively and seamlessly.

Project #2: Ontario Pension Asset Expert Panel	
Brief project description	As a member of the Ontario Pension Asset Expert Panel, Uros' role included providing advice on the appropriate application of PSAS regarding pension accounting for the Province's jointly-sponsored pension plans, specifically with respect to asset ceiling and asset recognition.
Successful outcomes	A report on the Panel's recommendations and reasoning.
Anticipated challenges and mitigation strategies	There are a number of challenges, including the lack of clarity regarding asset ceiling requirements under the PSAS, managing differing viewpoints among various stakeholders, and interpreting accounting rules in the context of the actuarial valuations and asset ceiling calculations. These challenges are mitigated by careful thought, analysis and broad consultations.
Type of reports delivered	Report with an executive summary that presents findings and analysis of the information collected both from the qualitative and quantitative sources. The report is related to a public pension related initiative and the Panel's recommendations are part of the report. The report provides analysis and advice related to ceiling tests and sensitivity analysis.

Relevance to TBS project deliverables	The work of the Expert Panel deals directly with the subject matter of the RFS. The participation on the Expert Panel will allow Uros and the team to hit the ground running as they will be familiar with the issues and the context of the work.

Project #3: PSAB's Employment Benefit Taskforce	
Brief project description	Uros is a member of the PSAB's Employment Benefit Taskforce leading the review and revision of public sector accounting standards for pension plans in Canada.
Successful outcomes	Participation on the PSAB Taskforce means that our team is both well-versed in the details of PSAS, and also aware of the key challenges with the standard that may be revised.
Anticipated challenges and mitigation strategies	Reviewing and revising the accounting standards is a significant and complex undertaking. The Taskforce therefore brings together senior professionals from different areas of practice. Uros contributes his actuarial and pension accounting knowledge and experience in the complex and challenging task.
Type of reports delivered	The PSAB Taskforce report and recommendation will deal with many aspects of pension accounting in the public sector, including pension asset ceiling issues and calculations.
Relevance to TBS project deliverables	Participation in the PSAB Employment Benefit Taskforce provides our team with deep and cutting-edge understanding of PSAS as they related to pension assets and liabilities. This includes the issues with asset and liability measurement, as well as asset ceiling calculations.

Project #4: Ontario Pension Board	
Brief project description	EY has provided actuarial audit services for more than five years on the audit of the Public Service Pension Plan (PSPP) of the OPB. In particular, we re-perform the detailed actuarial calculations made by the OPB's own actuary, to review methodology and calculations used to derive the employee benefit costs and liabilities.
Successful outcomes	The EY actuarial team provides the OPB's auditors with actuarial analysis and advice needed to sign off on OPB's actuarial liabilities. We identify actuarial valuation issues and provide recommendations on improvements to OPB.
Anticipated challenges and mitigation strategies	Key challenges include the complexity of the PSPP plan provisions and data, the appropriate interpretation of plan rules, and the correct application of actuarial assumptions and valuation methods to arrive at the actuarial liability. These risks are mitigated by application of EY's actuarial valuation tools, our professional knowledge and experience, and coordination with the various stakeholders (including auditors, plan actuaries and the OPB management) to resolve any differences.

Type of reports delivered	We provide a formal report to document our findings. This report presents a summary of key findings, analysis of the information collected from the qualitative and quantitative aspects of a public pension related initiative, narrative of the testing procedures, and any recommendation made as part of the report.
Relevance to TBS project deliverables	The work we perform for OPB involves design and execution of actuarial valuation models. The work is done in a context of a large and complex public service pension plan, and it requires both the actuarial knowledge and the experience in interpreting and applying accounting standards to pension plans. This experience enables us to assist TBS with the review of APFR's calculation of estimated accounting valuations based on actuarial input for pension plans reflected on the Province's various reporting.

Project #5: EY Professional Practice Group (EY PPG)/OAG National Professional Practice Group (NPPG)	
Brief project description	The EY team provides the Federal OAG's National Professional Practice Group with on-call advisory services on employee benefits actuarial and accounting issues under PSAS and IFRS. Issues discussed included actuarial valuation, discount rates, mortality assumptions, accounting for shared risk plans, asset ceiling and IFRIC 14 interpretation, asset and liability recognition and measurement, etc. The questions addressed are usually of a highly complex nature. Our team also provides the same type of advice to EY's own Professional Practice Group as well as individual audit teams.
Successful outcomes	EY provides resolution of the most complex accounting and actuarial questions, related to a wide range of PSAS and other standard interpretation issues. We provide technical and practical advice on actuarial matters, including issues related to valuations, asset and obligation measurement, and asset ceiling computations.
Anticipated challenges and mitigation strategies	Key challenges relate to the highly complex nature of the issues encountered, including issues with no practice or precedent. The resolution of these issues is sought through careful analysis, deep understanding of the standards, and diligent care taken to understand and agree on the facts and circumstances of each situation.
Type of reports delivered	The results of our analysis are provided through the means that best meet the clients' needs. The actuarial support and the accounting advice we provide, including the advice related to asset ceiling calculations and sensitivity analysis scenarios, is provided in formal reports, memos, or email and telephone calls.
Relevance to TBS project deliverables	Our team can provide high quality advice and subject matter expertise to APFR as our experience with this type of actuarial and pension accounting work is extensive. We routinely engage in complex discussions with many internal and external stakeholders, often with differing views. Our team has extensive experience of

	working with the Federal OAG and Provincial OAGs, as well as EY Professional Practice, experience that would directly benefit TBS on this project.

Project #6: Audit Support/OAG Public Service Pension Plan (PSPP)	
Brief project description	EY provides actuarial assistance to the federal OAG as they audit federal PSPP liabilities. In particular, we assess the appropriateness of actuarial assumptions and methods, accounting treatment and disclosure of PSPP's obligations and costs, assess the reasonableness of the sensitivity analysis. EY has provided these actuarial expertise to OAG for the past five audits, working closely with OAG and also the Office of the Chief Actuary (OCA) and the Office of the Superintendent of Financial Institutions (OSFI). In addition, our team provides actuarial services and audit support to over 250 audit entities including many with significant pension liabilities both in the public and private sector. In this context, we routinely interpret and apply asset ceiling tests under both PSAS and IFRIC 14.
Successful outcomes	The EY actuarial team provides the necessary actuarial analysis and advice needed for the auditors (EY and OAG) to sign off on the significant pension and post-retirement benefit liabilities under both PSAS and other accounting standards. Our work routinely addresses issues related to asset ceiling interpretation and calculation.
Anticipated challenges and mitigation strategies	Challenges involve the lack of clarity (PSAS) or the complexity (IFRS) in the interpretation of asset ceiling rules as they relate to the limit on a defined benefit asset under the applicable standards. Mitigation strategies involve a comprehensive analysis of the relevant accounting standards, plans facts and circumstances, discussions with knowledge experts from diverse backgrounds and their interpretations to address issues related to these large, complex plans that are of interest to many stakeholders.
Type of reports delivered	We provide a formal report to document our findings. This report presents a summary of key findings, analysis of the information collected from the qualitative and quantitative aspects of a public pension related initiative, narrative of the testing procedures, and any recommendation made as part of the report.
Relevance to TBS project deliverables	The work we perform for the federal OAG in respect of PSPP and on numerous EY audit client enables us to develop and execute various actuarial valuation models quickly. Our approach is tailored to purpose. We do not approach these actuarial valuations in the same manner that the plan actuary would, but rather develop models that are suitable to the analysis, scenarios or sensitivity modelling required. This often means that we exercise our judgement and experience to focus the analysis on the key elements enabling decision making, in the context that is similar to the development of the Province's Budget and the consolidated financial statements.

	The large number of clients we serve in this capacity puts us in a position to see many more different plans, valuations, and asset ceiling issues than a typical plan actuary.

Project #7: Treasury Board of Canada Secretariat /Public Service Pension Plan	
Brief project description	EY assisted TBS of Canada in the development of a Funding Policy including performing pension industry research on funding policy trends and commentary and advice on funding policy proposals. We prepared a research report outlining funding policy examples, elements and approaches; consideration of rules/limits-based versus risk-based funding policy; trends related to funding policies; impact of legislative environment; and considerations of provisions, demographics and actuarial methods applied in funding policies.
Successful outcomes	We have assisted TBS of Canada in successful development of a funding policy proposal that balanced many competing priorities and had to take into account varying views of many different stakeholders. Federal PSPP is a large pension plan sponsored by a senior Canadian government. Our work demonstrated our ability to be responsive and respectful of these differing perspective, while supporting the client in achieving their strategic objective.
Type of reports delivered	Our research report noted the key funding policy insights and themes based on Canadian and international best practices, pension industry regulatory guidelines and the review of approaches taken by other Canadian sponsors of significant pension plans. The findings of our report were considered and incorporated into the Final Policy Statement in all material respects. Further, our written comments, provided based on our review of the three draft funding policy statements, were considered and included in the Final Policy Statement, where appropriate. Overall, our assistance in preparing the Final Policy Statement presents a comprehensive and well-drafted funding policy that can help meet the governance objectives of the public sector pension plans. The Final Policy Statement, in its level of detail and sophistication provides a relevant and robust governance framework for these large, complex plans that are of interest to many stakeholders.
Relevance to TBS project deliverables	We can utilize our prior experience of assisting TBS of Canada on the development of the Funding Policy. Our report on that project demonstrated knowledge, skills, experience and expertise with developing reports with an executive summary that presents findings and analysis of the information collected both from the qualitative and quantitative aspects of a public pension related initiative, similar to the services requested by TBS.

Project #8: Canada Post Corporation Parliamentary Committee Testimony	
Brief project description	Uros testified in front of a Parliamentary Committee on pension issues faced by Canada Post, more specifically highlighting the factors that led to the large pension liability issues faced by Canada Post.
Successful outcomes	EY assisted the Parliamentary Committee to understand the issues facing Canada Post, including significant issues related to pension liabilities.
Type of reports delivered	EY assisted an independent taskforce appointed by the Minister of Public Services and Procurement in their responsibility of the review of the Canada Post Corporation. EY provided this taskforce with a report containing independent analysis of Canada Post's financial position and projections on pension related matters. As part of this mandate, our report presented as a discussion paper that outlined viable options for the future of Canada Post Corporation.
Relevance to TBS project deliverables	Our team can provide skills, experience and expertise with developing reports with an executive summary that presents findings and analysis of the information collected both from the qualitative and quantitative aspects of a public pension related initiative and any recommendation made as part of the report. We routinely engage in complex discussion with many internal and external stakeholders, often with differing views, bringing unparalleled experience in providing services similar to the services required by TBS.

Methodology and implementation plan

Our approach and methodology will be flexible and geared toward meeting your objectives and timelines. As a general principle, we will work with you to understand your requirements and validate our methodology and understanding of the deliverables. We will then work with you to meet those requirements under the timelines laid out in the engagement.

The following outlines our key project management elements and approach taken by the actuarial team in delivering our services to the TBS, based on the requirements of the RFS.

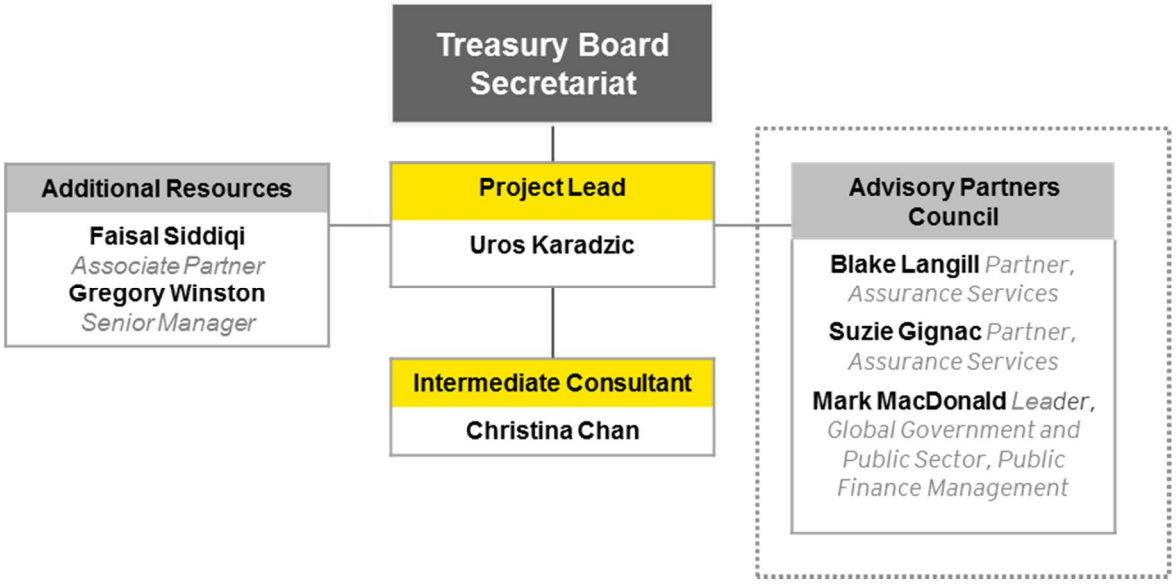
1.	Define expectations of the services required, including scope of work, timing, and expected effort required with a timeline for specific deliverables and milestones over the course of the engagement
2.	Collect data, analysis and documentation as necessary to complete the deliverables in a timely manner, such as plan provisions, assumptions, details of existing calculations and analysis, and any other documentation and data
3.	Review the economic assumptions used for accounting valuations, actual and forecast numbers prepared by APFR's staff for the Province's various pension and non-pension plans.
4.	Perform asset ceiling test in accordance with requirements under PSAS and any sensitivity analysis as required
5.	Identify and recommend potential improvements based on our review and analysis
6.	Participate in discussions and meetings with internal and external stakeholders as required
7.	Advise on any accounting issues related to pension and non-pension benefits as required
8.	Report our findings, analysis and recommendations in a document
9.	Transfer knowledge to the OPCD staff in an agreed upon and effective approach

In addition to the knowledge and experience of our actuarial team, we have selected senior EY partners to be part of our Advisory Partners Council for this engagement. This Advisory Partners Council would assist you and our actuarial team in matters related to PSAS interpretation, the review of the work product, and assisting with the interpretation and application of the work product to best support TBS throughout the engagement. The Council will help ensure that strategic issues are considered accordingly, including but not limited to stakeholder impacts, public policy implications and the Province's fiscal priorities.

Proposed resources

Core team

We selected team members that fulfil the necessary skills, qualifications and experience as described in the RFS. A diagram of our team structure is depicted below, followed by a brief description of our proposed team resources. Additional information on our team is attached in Schedule B – Resumes and references.



Uros Karadzic, Project Lead/Senior Consultant: Uros is the national leader of EY's Reward practice, and is an actuary with more than 18 years of experience. He specializes in pension accounting and audit; pension and benefit issues in merger & acquisition transactions; and on-going advisory services on retirement benefit plans. Uros has advised clients (Canadian and multinational) on all aspects of their pension and benefit plans, including accounting, funding, design, implementation, management, risk and administration. He has assessed and developed strategies, policies, guidelines, cost models and processes to identify, manage and reduce costs and risks to organizations related to these issues. Uros' responsibilities throughout the engagement will include direct engagement and oversight of all aspects of work, including the review of final deliverables before submission.

Christina Chan, Intermediate Consultant: Christina is an actuary with over nine years of experience. Her primary focus is on providing advice on pension and benefit plans, funding and accounting valuations and human resources transaction due diligence for employee benefit plans. During her last engagement with TBS, she provided substantial recommendations and assisted with the implementation process of improvements to the accounting reporting and forecasting models, which result in enhancements to both the usability and estimation approach of the models.

Confidential | All Rights Reserved | EY

Other actuarial resources

We recognize that needs of an engagement sometimes evolve and require additional input. This is why we have included our other actuarial resources below to demonstrate that we have the in-house capabilities necessary to perform the work and provide additional professional actuarial input and perspective:

- Faisal Siddiqi: Faisal is a well-known and senior Canadian actuary who is joining our team on 13 November 2017 as an Associate Partner. He is an actuary with over 25 years of experience. Currently, Faisal is the Chair of Canadian Institute of Actuaries' Practice Council, member of the Financial Services Tribunal of Ontario and a member of FSCO's actuarial advisory panel. He has provided actuarial advisory services related to many aspects of multi-employer, public sector and private sector benefit plans.

- Gregory Winston: Greg is a Senior Manager at EY and an actuary with over ten years of experience. His primary focus includes actuarial audit support, due diligence and integration support on M&A transaction, and on-going advisory services for both private and public sector clients. Greg has deep knowledge and experience with pension actuarial and accounting issues under PSAS and other accounting standards. He is a leading pension audit practitioner with many years of experience in reviewing actuarial assumptions, pension forecasts, accounting models and various specific issues including those related to asset ceiling calculations.

Advisory Partners Council

We have selected senior EY Partners to be part of our Advisory Partners Council for this engagement that will provide advice on a requested basis, based on their experience in Canada and across the globe in similar engagements. We have provided a brief overview of each council member's area of expertise. Advice from the Advisory Partners Council is a value-added service and will be included in the fee for this engagement:

- Blake Langill: a senior Assurance Partner with more than 20 years of experience providing audit and advisory services to many of Canada's leading organizations. He was a part of our Professional Practice group, where he provided technical accounting and regulatory advice to audit and non-audit clients. Blake has experience in advising clients across various industries on the transition to US GAAP and/or IFRS and routinely deals with advising clients with complex accounting matters. His public sector experience includes an accounting advisory engagement with Infrastructure Ontario, as well as a current engagement with TBS. *Blake brings specialist accounting and auditing knowledge and the current working experiences with TBS.*
- Suzie Gignac: a senior Assurance Partner with over 20 years of experience providing assurance and advisory services to private and public sector clients. She participates on the Assets Task Force for the Public Sector Accounting Board of Canada which independently sets financial reporting standards critical to promoting confidence in public sector entities. Suzie is also a member of the Standards Council of Canada's (SCC) Governing Council, which is appointed by the federal government, and is Chair of the Audit Committee. *Suzie brings deep knowledge of public sector financial reporting and can help identify particular areas of focus that are relevant to accounting standards within the public sector.*

- Mark MacDonald: an experienced leader in public sector reform for dozens of governments worldwide in every major policy sector including health, human services, justice and security, finance and treasury, transportation and infrastructure, agriculture, trade and economic development, education and government services. *Mark brings a global view on some of the key questions that might need to be addressed, as well as a comparative perspective on best practices.*

Communications and reporting

Ongoing communications with stakeholders and regular status updates are critical to project success. Based on our prior experience with TBS, we have incorporated weekly project status update emails (or meetings as appropriate) into our implementation plan and will confirm timing and content for written updates with the TBS project manager at the beginning of the project.

Status reports, which are used to report on performance, will help facilitate regular communications between team leads, the project manager, leadership and stakeholders. They will detail activity status, including risks, assumptions, issues and dependencies. Their goals will be to provide the following:

- Serve as an early warning system to team members which would allow them to adjust their work effort accordingly
- Provide an assessment of project performance on an ongoing basis relative to plans, objectives, and staffing
- Support the identification of corrective strategies to deal with issues identified during the assessment which may impact project timelines or performance

The common elements of status reports are:

- Project health: Summary of the project's health status (e.g., cost, schedule, scope, resource); this is derived from the individual status reports submitted by the team members to the team lead, including feedback from full-time ministry staff working in an integrated fashion with EY
- Individual project progress assessments: Narrative overview of project status including work completed; work in progress; planned key milestones, activities and/or events (e.g., the executive summary)
- Issues: Summary of major events that may impact the delivery of the project
- Risks: Summary of major, uncertain events or circumstances which, should they occur, will impact the project
- Project change requests: Summary of modifications that were identified, resolved or rejected
- Project milestones: Summary of progress based on significant points or events with information on description and due date
- Deliverables: Summary of completed client work products

The engagement lead will consolidate and summarize status information for scheduled status meetings, other leadership meetings and stakeholder reports, as required.

Contingency plan

We recognize that during the course of an engagement, unforeseen circumstances can have significant effects on the project timeline or resources. As a large, multinational firm that provides advisory services for assignments of all sizes, we are experienced at identifying, mitigating and correcting a host of scenarios that may impact a project.

To account for these factors, we build flexibility in our work plans. This can include, for instance, accelerating certain components of the work to balance the delay in others, with the overall goal of staying on track. More critically, we communicate with you regularly so that you are made aware of any delays and we work with you to find the best solution to mitigate.

Based on our experience the following are some of the risks associated with a project of this nature. We have identified the respective mitigation/management strategy for each risk. Working with the TBS team, we will validate these risks and identify and manage others throughout the lifecycle of the engagement.

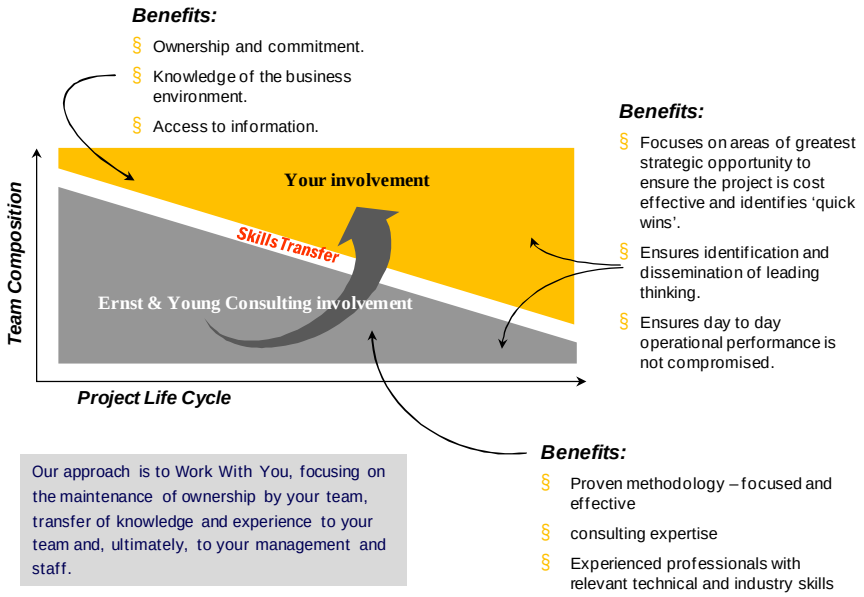
Risks	Mitigation/management
Access to necessary documentation and data in a timely manner	► During launch phase, we will create an inventory of documents and data that will be required as part of the engagement ► Where documentation does not exist or data is not currently housed, we will deploy other methods to collect the information required
Access to key stakeholders in a timely manner	► During the initiation phase, we will identify the stakeholders who we will need to meet with as part of the engagement ► We will arrange our activities based on availability of stakeholders
Changes to scope of the project	► Develop a change management process and incorporate the protocol for identifying, managing and approving any possible changes to the original scope
Communications and disclosure	► Provide clear documentation and appropriate disclosures to ensure our deliverables will not be misinterpreted ► Identify any limitation or additional advice from other sources (e.g. legal advice) may be required ► All actuarial opinions and advice will be in writing and signed by a Fellow of the Canadian Institute of Actuaries ► All accounting opinions and advice will be in writing and signed by a Chartered Professional Accountant
Availability of team resources	► Develop a detailed project plan outlining team resources and manage the resource schedule to identify any potential staffing conflicts ► Should any changes be required, we will propose a replacement staff ahead of time with similar of better qualifications for your approval and at no cost to you

Knowledge transfer

We understand that various stakeholders will have different roles and levels of responsibility and will require different types of knowledge, modes for delivery, and availability to gain such knowledge. EY is committed to delivering the full benefits of knowledge-sharing with our clients. Our strong commitment to collaborating with clients helps facilitate the transfer of knowledge in an effective way. In transferring knowledge to project resources we use a structured approach that includes:

- Working with project team members to define knowledge transfer plans
- Providing hands on training and walk-through sessions on any proposed improvements to existing tools
- Providing overviews of methodologies and approaches
- Reviewing progress against knowledge transfer plans

During the project, it is important that the knowledge, techniques and processes employed in the analysis and review are adequately transferred to the client to ensure that you have future continuity of the improvement process and allow for continued momentum. Below is a diagrammatic representation of our knowledge transfer approach.



Based on our understanding of your situation, our knowledge of the TBS objectives and our experience in providing actuarial support services, we will tailor an approach that aims to maximize all efforts, manage cost and achieve multiple objectives in parallel. The best way for this transfer to happen is to create a structured process. Accordingly, we will work with your project team members to develop knowledge transfer plans that outline the specific skills and capabilities to be transferred and the activities required to close the knowledge gap. Specific elements of the plan include:

- Knowledge transfer action plan
- Evidence of successful knowledge transfer – Identifies performance criteria that indicate development of specific knowledge/skills
- Assessment rating – Identifies the target assessment "rating" for identified knowledge/skills to be transferred

Performance management process

The methodology for maintaining overall engagement quality is EY's Quality Assurance approach. The foundation of all of EY's engagements is built on delivering a high quality engagement experience to our clients. We have built in checks and balances throughout our work plan and the EY core delivery team will work collaboratively with OPCD's project leadership team to ensure all deliverables are completed in agreed upon timeframes.

EY's quality process requires our partners and senior management to participate directly on a timely basis in the performance of our work and the supervision of our professionals. As the project lead, Uros will serve as the final quality check and will sign off on all deliverables to the TBS.

Direct participation of EY management means involvement in the actual performance of the work relating to a particular area. This may range from effective direction and supervision, usually on-site, of team members performing the tasks and generally will involve direct contact with key client personnel. Normally, the time spent by EY management in directly participating in the project will be offset by reduced time spent in the creation and review of working papers, including the time-consuming process of writing and clearing review comments.

The primary objectives of these reviews and supervision procedures, from a quality assurance perspective, are to determine the following:

- Project has been planned appropriately
- Scope of the project is sufficient to support our report
- Work has been performed in accordance with the standards of our firm and the profession
- Significant judgments made and conclusions reached throughout the project were appropriate work performed and the results and conclusions are adequately documented

Our previous work with the TBS and other government bodies has given us a continuous improvement process that takes into account the MGCS and client standards, processes and policies. EY will put in place the required management procedures to confirm that quality is embedded into all deliverables in compliance with the expectations put forth in the Statement of Work based on this RFS.

Additional submission requirements

Deliverables and milestones

As majority of Client Requirements described in the RFS refer to working with management to provide various aspects of actuarial support services as required, the deliverables and milestones will be dictated by management as required. We will be available to commence work on December 4, 2017 as required, and complete the work by March 2018.

We anticipate that, subject to management's request, we will be preparing a report, with an executive summary, to present the findings of our work. This report would be reviewed by our Advisory Partners Council, who along with our actuarial team would also be available to answer any questions you may have, and assist in interpretation and application of the report findings. This report will be the key deliverable for this project. However, we anticipate that other deliverables may be requested by management (e.g. shorter memos, email summaries, conference calls etc.) that we will provide as requested.

Level of effort to complete the project

We anticipate that we will be able to complete the work within the allotted 150 hours as described in the RFS. The hours will not exceed the total 150 hours as stated within the RFS over the term of the agreement without prior mutual written agreement.

Supplement B - Submission

SUPPLEMENT B - SUBMISSION FORM

Request for Services Number: TBS-OTB-OPCD-22

To: HER MAJESTY THE QUEEN in right of Ontario as represented by President of Treasury Board

1. Vendor Information

(a) The full legal name of the Vendor is: _Ernst & Young LLP_____

(b) Please identify any other relevant name under which the Vendor conducts business:

__EY_____

(c) The Vendor's address, telephone and facsimile numbers are:

100 Adelaide Street W., Toronto, Ontario M5H 1S3, Canada, Telephone: 416 864 1234; Fax: 416 864 1174_____

(d) The name and title of the Vendor's Representative:

_Uros Karadzic, Partner_____

(e) The mailing address, phone number and e-mail address of the Vendor's Representative:

100 Adelaide Street W., Toronto, Ontario M5H 1S3, Canada, Telephone: 416 943 2087, uros.karadzic@ca.ey.com_____

(f) State the name, address, telephone and facsimile numbers and e-mail address of the Company Security Officer (CSO) for the Vendor:

Laarni Tansingco 100 Adelaide Street W., Toronto, Ontario M5H 1S3, Canada, Telephone: 416 932 5822, laarni.tansingco@ca.ey.com_____

(g) State the name and title of each of the individuals that the Vendor is proposing for this Project:

Uros Karadzic, Partner, People Advisory Services – Reward

Christina Chan, Manager, People Advisory Services – Reward

[Instructions: Please add additional lines as required to accommodate each of the proposed Personnel]

2. Submission Requirements and Accuracy of Information

The Vendor accepts the terms and conditions set out in the RFS. While this submission is provided for evaluation purposes only and is not legally binding before the execution of a SOW, I confirm that the information provided is accurate.

3. Certificate(s) of Insurance

As required in Article 32.4 – Proof of Insurance in the Master Agreement, please identify the status of the Vendor's Certificate(s) of Insurance by placing a check mark (√) in one (1) of the following three (3) boxes:

☒ a) the Vendor has previously submitted a Certificate of Insurance to MGCS, which has been approved

☐ b) the Vendor has included its Certificate of Insurance with this RFS submission (that will be subject to approval by MGCS) prior to the Client issuing a SOW

☐ c) the Vendor agrees to submit a Certificate of Insurance (that will be subject to approval by MGCS) prior to the Client issuing a SOW

As required in the Request for Services, the Vendor agrees to submit a Certificate of Insurance (that will be subject to approval by the Client) prior to the Client issuing the SOW to evidence the additional insurance and/or the additional coverage required by the Client.**]**

4. Conflict of Interest

The Vendor must complete the following:

(a) If the box below is left blank, the Vendor will be deemed to declare that: (1) there was no Conflict of Interest in preparing its submission; and (2) there is no foreseeable Conflict of Interest in the Vendor or any of its Personnel performing the contractual obligations contemplated in the Request for Services.

(b) Otherwise, if the statement below applies, check the box.

☐ **The Vendor declares that there is an actual or potential Conflict of Interest relating to the preparation of its submission, and/or the Vendor foresees an actual or potential Conflict of Interest in it and/or its Personnel performing the contractual obligations contemplated in the Request for Services.**

(c) If the Vendor declares an actual or potential Conflict of Interest by marking the box above, the Vendor must set out below details of the actual or potential Conflict of Interest:

_____
_____
_____

(d) The following individuals, as employees, advisors, or in any other capacity (i) participated in the preparation of our submission; **AND** (ii were employees of the Ontario Public Service ("OPS") and have ceased that employment prior to the Requested Submission Date:

Name of Individual:

Job Classification (of last position with OPS):

Ministry/Agency/office of an officer of the Legislature of Ontario (where last employed with OPS):

Last Date of Employment with OPS:

Name of Last Supervisor with OPS:

Brief Description of Individual's Job Functions (at last position with OPS):

Brief Description of Nature of Individual's Participation in Preparation of Submission:

(Repeat above boxed information for each identified individual)

(e) The following are individuals that: (i) are proposed to be assigned by the Vendor to perform work under the SOW; **AND** (ii) were employees of the Ontario Public Service ("OPS") and have ceased that employment prior to the Requested Submission Date:

Name of Individual:

Job Classification (of last position with OPS):

Ministry/Agency/office of an officer of the Legislature of Ontario (where last employed with OPS):

Last Date of Employment with OPS:

Name of Last Supervisor with OPS:

Brief Description of Individual's Job Functions (at last position with OPS):

(Repeat above boxed information for each identified individual)

(f) We agree that, upon request, we shall provide the Client with a Conflict of Interest Declaration from each individual identified above in the form prescribed by the Client.

5. Schedules

This submission includes the following Schedules:

Schedule A (Pricing Schedule)
Schedule B (Resumes)
[Instructions to Vendor: List all other schedules.]

[Ernst & Young LLP]
I acknowledge that providing my name on the line below in electronic form will constitute a signature for the purposes of the *Electronic Commerce Act, 2000*, S.O. 2000, c. 17.
I have authority to bind the Vendor.

Per: Ernst & Young LLP

Signature:

Name: Uros Karadzic

Title: Partner

Date: 3 November 2017

Schedule B – Resumes and references

Uros Karadzic, FSA, FCIA
Partner, People Advisory Services - Reward
416 943 2087
uros.karadzic@ca.ey.com

Role – Project Lead

Background

- Uros Karadzic is a partner and the national leader of the Reward practice. He is a pension actuary located in Toronto, Canada.
- His primary focus is in the following areas:
  - Pension audit and internal audit
  - Pension and benefit issues in Merger & Acquisition transactions
  - On-going advisory services on retirement benefit plans
- Advised clients (Canadian and multinational) on all aspects of their pension and benefit plans, including accounting, funding, design, implementation, management, risk and administration.
- Extensive experience in accounting for benefit plan obligations. He works with numerous EY audit teams, the EY Professional Practice (Canadian and Global) and industry bodies on benefit accounting issues.
- M&A transaction and integration, supporting clients by clearly identifying and measuring risks and costs. He also advised on appropriate measures to reduce those costs, focusing on post-acquisition funding requirements.

Pension Industry Leadership

The following projects are either currently ongoing or have been completed within the last 12 months:

- Member of the Ontario Pension Asset Expert panel in 2017, advised on the appropriate application of PSAS regarding pension accounting for the Province's sponsored pension plans with respect to asset ceiling and asset recognition.
- Member of the Public Sector Accounting Board's task force on Employment Benefits, working on improving the current pension accounting standards, and developing the new standards.
- As the leader of EY's pension practice, Uros has advised companies, governments and professional bodies on a diverse and broad range of pension issues. This included advising the federal government on a new funding policy for PSPP, as well as plan sponsors (corporate and government) on funding issues related to the adoption of Shared Risk Plans.

- Works closely with EY's Professional Practice (Canadian and Global) in setting audit rules for pension plans. He has also consulted to the Federal Office of the Auditor General on pension issues, as well as to the AGs of NS, NB, PEI and NL.
- Helped to establish EY's global position on various emerging issues (e.g. Shared Risk Plans, mortality, discount rates, transition to new accounting standards, asset ceiling, IFRIC 14, etc.).
- Member of the Canadian Institute of Actuaries taskforce for setting accounting discount rates, and the Society of Actuaries Project Oversight Group for the Pension Assumption and Methods.
- Presented to various industry and accounting bodies (Canadian and global) on pension accounting issues in Canada, including:
  - Canadian Council of Legislative Auditors (CCOLA) on accounting for Shared Risk Plans
  - Presentation to International Accounting Standards Board (IASB) staff on the impact of IFRS conversion on Canadian pension plan sponsors
  - Presentation to the CPA Canada on various pension accounting topics

Education and professional qualification and accreditation

- Hon. BSc. (High Distinction) in Actuarial Science from University of Toronto.
- Fellow of the Canadian Institute of Actuaries and a Fellow of the Society of Actuaries.

Christina Chan, FSA, ACIA
Manager, People Advisory Services - Reward
416 943 3121
christina.chan@ca.ey.com

Role – Intermediate Consultant

Background

- Christina Chan is an actuarial manager in the Reward practice in Toronto, Canada with over 9 years of experience. Her primary focus is in the following areas:
  - Pension and non-pension benefit plans audit and internal audit
  - Funding and accounting valuations of private and public sector pension plans
  - On-going advisory services on retirement benefit plans
  - HR transaction due diligence of pension and non-pension employee benefit programs
- Provided advisory services to plan sponsors on special non-routine projects, including plan design, plan wind-up, plant closure with union members, and asset transfer. All these projects involved valuation and projections, cost and benefit analysis, member communications, and assistance for the administration practice.

Audit and advisory experience

The following projects are either currently ongoing or have been completed within the last 12 months:

- Treasury Board of Secretariat (OPCD): Supported and provided advisory services on the process of compilation of input for the 2017/18 Provincial Budget and the preparation of the 2016/17 consolidated financial statements of the Province of its pension plans.
- Treasury Board of Secretariat (OPCD): Conducted three pension training sessions and transferred knowledge to the OPCD staff at the end of engagement.
- Ontario Power Generation: Supports and advises EY audit teams in the areas of auditing pension disclosure in financial statements, including assessment of actuarial assumptions, accounting methodology, plan provision interpretation and valuation, and assessment of the accounting for special events (example: Ontario Power Generation).
- Offers advanced knowledge of reporting prerequisites to assist in the preparation of accounting disclosures for pension and benefit plans under CPA Canada, US Financial Accounting Standards Board (FASB), Public Sector Accounting board (PSAB) and International Financial Reporting Standards (IFRS) guidelines.

Education and professional qualification and accreditation

- Bachelor of Mathematics in Actuarial Science with Finance Option from the University of Waterloo.
- Associate of the Canadian Institute of Actuaries.
- Fellow of the Society of Actuaries.

Subject: Employee Life and Health Trusts (ELHTs) - accounting treatment

Hi Nadine,

As requested, we have prepared the attached document discussing the following topics:

1) Accounting treatment related to the provisions of the ELHTs under PSAB 3250/3255 (and the associated risks to the school boards)

2) Comparison of the ELHTs with Shared Risk Pension Plans

Both Shayan and I will be at Queen's Park tomorrow. Let us know if you have any comments. We are available if you would like to discuss prior to our meeting on Wednesday.

Regards,

Christina

Accounting Treatment - Employee Life and Health Trusts

OPCD has asked EY to comment on the accounting treatment related to the provisions of benefits from the Employee Life and Health Trusts ("ELHTs") under the Public Sector Accounting Standards.

Background

Historically, health, life and dental benefits were provided to employees in Ontario's educator sector through a multitude of individual plans administered separately by the Ontario school boards. To improve the cost-efficiency and delivery of benefits, all individual benefit plans are consolidated into six Employee Life and Health Trusts[1], each covering a certain group of employees. Each ELHT is established to meet the definition of an ELHT under the Income Tax Act Sc. 144.1. Benefits are provided through a joint governance structure between the bargaining/employee groups, school board trustees associations and the Government of Ontario under the ELHTs.

The ELHTs are intended to provide benefits to employees during their employment years. There are also separate retiree provisions intended to provide access to benefits for retirees.

Member groups

In order to determine the necessary accounting treatment, it is important to identify the different member groups and their respective benefit entitlements. Three groups of members with different benefit entitlements under the ELHTs are:

- "Active": approximately 211,000 members
- "Pre-August 2013 Retirees"[2]: approximately 5,700 members
- "Post-August 2013 Retirees"[3]: approximately: 1,400+ members

For current Active employees, the contributions by the boards to the ELHTs are fixed and negotiated during bargaining. Annual contribution amounts required from the boards per full-time employee are pre-determined for the period covered by collective bargaining agreements. Upon retirement, active members may be eligible for retiree benefits at full cost and they are not eligible for any cost subsidization (i.e. provisions for Post-August 2013 Retirees).

Certain members who retired prior to August 31, 2013 are eligible for a partial or full subsidization of benefit costs from the board, based on prior arrangements with their employer. The members are eligible to participate in the ELHTs until age 65 (with the exception of a small group who are eligible for lifetime coverage).

All members retiring after 31 August 2013 are eligible to participate in the ELHT through a Voluntary Plan and Separate Account. However, they are responsible for the entire cost of benefits. They are not eligible for any cost subsidization.

[1] OECTA, ETFO, AEFO, OSSTF Trust Agreements have been formally signed; CUPE and PVP/Non-union are to be finalized.
[2] Members retiring prior to 31 August 2013
[3] Members retiring after 31 August 2013

According to the ELHT Trust Agreements Article 6, "*the Trustees may establish any number of Separate Accounts within the Fund. The assets in each Separate Account shall be held as segregated funds and used for the provision of Benefits, in accordance with the terms of a Plan, to a discrete and identifiable group of Participating Employees*". Based on the benefit entitlements described above, presumably, a Separate Account is established for the Active members and a Separate Account is established for the Pre-August 2013 Retirees. Therefore, there is no cross-subsidy. For example, retiree costs are not cross-subsidized by premiums paid in respect of Active employees.

The Trust agreement state that any surpluses in a Separate Account may be used to increase Claims Fluctuations Reserve ("CFR"), enhance benefits, or reduce employee contributions. Conversely, any deficiencies in the trust may require the use of the CFR, amendment to benefit (reduction), or an increase to employee contribution levels.

For the Pre-August 2013 Retirees group, it is our understanding that if there is a funding deficiencies in the Separate Account for this group, the school board will be required to contribute and reimburse the Trust to make up the funding shortfall ("chargeback").

Accounting treatment

Paragraphs 011 – 012 of PSAB 3250 (see Appendix) discuss the classification of benefit plans as Defined Benefit ("DB") or Defined Contribution ("DC"). Further, in accordance with 3250.014, a government would determine its obligation for the defined benefit component of the plan as a defined benefit plan and the defined contribution component of the plan as a defined contribution plan.

Considering the different provisions applicable to member groups and PSAB 3250.011 – 3250.012, the benefits provided through the ELHTs include DB provisions in respect of retiree groups, whereas Active member benefits do not fall in the scope of PSA 3250/3255. Specifically:

- *Active:* Benefits/costs relating to current active members does not fall under the scope of PS 3250 (Retirement Benefits) or PS 3255 Retirement Benefits (Post-employment benefits, compensated absences and termination benefits). The scope of these sections cover benefits payable in retirement, after employment but before retirement, or compensated absences or termination benefits. Costs relating to providing benefits to active members during employment would be expensed annually in amounts equal to the fixed contribution. Further, as current active members are not eligible for subsidized benefits upon retirement (i.e. they pay for the entire cost of the post-retirement coverage without any cost to the employer), there is also no post-retirement obligation. To the extent that members on long-term disability are also eligible to receive benefits from the ELHT, a defined benefit obligation may need to be recognized under PS3255 in respect of expected future contributions over the anticipated period of long-term disability in respect of disabled employees.

- *"Pre-August 2013 Retirees:* The provisions relating to certain members who retired prior to 31 August 2013 would be classified as DB provisions as the boards are at risk with respect to the amount of benefits these employees will receive. These risks include the possibility of higher/lower than expected claims, or greater/less than expected longevity. We understand that the school boards have historically reported defined benefit obligations in respect of the ongoing commitment to subsidize retiree benefits for members in this group and will continue to do so subsequent to the transition to the ELHTs. This is appropriate as the ELHTs would be reimbursed by the boards for any contribution requirement to make up for the deficit in providing the coverage for these members.

- *"Post-August 2013 Retirees:* By contrast, there is no cost to the school boards relating to members retiring after 31 August 2013. The entire cost is borne by retirees and the school boards are not required to make any additional contributions in the future in the event of any shortfall. School board contributions are not

subject to any actuarial risk. Rather, all risks are borne by the retirees. In the event that funds are insufficient to pay for benefits, the trust agreements outline measures to address those deficiencies. The measures include the application of reserves, increases to member contributions and a reduction in benefits. None of the measures require any additional contributions from the school boards.

Therefore, we understand there to be a defined benefit obligation only in relation to the benefit entitlement for the subsidies provided to certain members retired prior to 31 August 2013. In addition, there may be a defined benefit obligation in respect of members on long-term disability to the extent that the ELHT covers such members.

Comparison with Shared Risk Pension Plans

In recent years, a number of Canadian provinces have adopted "Shared Risk Pension Plan" legislation. Shared Risk Pension Plans (SRPPs) provide benefits under a defined benefit formula, while putting cost constraints on employer contributions. Employer and employee contributions are often restricted within a band and benefits may be subject to reductions depending on the funded level.

In general, Shared Risk Pension Plans have been viewed as defined benefit plans. Risks are shared by the employer and employees, with the employer usually being subject to some level of actuarial and market risks. There may, however, be instances where DC accounting could be possible. This would be the case when no risk is retained by the employer, i.e. contributions are fixed in all scenarios. As there are many variations of Shared Risk Pension Plans, careful judgment is required to determine the appropriate accounting treatment in each case.

At the request of OPCD, we have compared the key characteristics of the ELHTs established by the Ontario school boards to those of Shared Risk Pension Plans. We have not considered the provisions relating to Pre-August 2013 Retirees, as these are clearly DB provisions under PS 3250/3255.

When comparing the benefits for the Active members under the ELHT with the SRPPS, there are a number of important differences to be considered but the following two are most significant:

- As SRPPs provide post-retirement benefits, they are within the scope of PS3250; however, as demonstrated in the previous section, the benefits provided for the Active members under ELHTs do not fall under the scope of PS3250.
- For SRPPs, the employer is subject to some level of actuarial risks and market risk as future contributions may be increased to pay for past deficiencies. Under ELHTs, the school boards are not subject to any risks: (a) contributions are fixed (as required by a Central Collective Agreement or any applicable Participation Agreement); (b) no additional contributions will be required for the related past service regardless of future actuarial or market experience; (c) the contributions required by the school boards are not dependent on the funding position of the Separate Account. Rather, employee's contributions (or benefits paid) may increase or decrease based on the surpluses/deficiencies of the Separate Accounts.

Further, there is no cost (and therefore, no post-retirement benefits) for members retiring after 31 August 2013 under the ELHTs. For these reasons, we would not expect the same accounting treatment to be applied for the SRPPs and ELHTs.

Appendix – Public Sector Accounting Board ("PSAB") 3250 Retirement Benefits (applicable excerpts)

.011 Two types of benefit plans are addressed in this Section — defined benefit plans and defined contribution plans. A defined benefit plan is one that specifies either the benefits to be received by employees after retirement or the method for determining those benefits. Generally, the amount and value of the benefits to be paid depend on a number of factors and events. These include how long the employee and any survivors live, how many years of service the employee renders, and the employee's compensation and retirement age. When a government provides benefits under a defined benefit plan, it is at risk with respect to the amount of the benefit that each employee will receive (actuarial risk) and with respect to the investment returns on any assets set aside to pay for the cost of these benefits (investment risk).

.012 When a government provides benefits under a defined contribution plan, it does not assume the actuarial and investment risks inherent in a defined benefit plan. A defined contribution plan (or money purchase plan) is one in which a government's contributions in respect of services rendered by employees are specified. The government is required by the plan to make a specific fixed contribution each period. If that contribution is made, no additional government contributions are required now or in the future for the related service. The employees are at risk. This is generally because the amount of the benefit that will be payable to an employee is dependent upon the funds accumulated for each employee's account and the investment earnings on the accumulated funds.

.013 Because benefit plans are often complex, careful analysis and professional judgment are needed to determine whether the substance of a particular plan makes it a defined benefit or a defined contribution plan.

. 014 In some circumstances, a benefit plan may include both defined benefit and defined contribution promises. The plan, for example, may guarantee a basic defined retirement benefit and state that additional benefits, such as inflation protection, will be provided on a defined contribution basis. In such circumstances, a government would determine its obligation for the defined benefit component of the plan as a defined benefit plan and the defined contribution component of the plan as a defined contribution plan. Once the type(s) of promise is identified, the accounting and reporting principles in this Section would be followed accordingly.

Appendix – Public Sector Accounting Board ("PSAB") 3255 Post-Employment Benefits (applicable excerpts)

Purpose and scope

.01 This Section establishes standards on how to account for and report obligations for post-employment benefits, compensated absences and termination benefits in government financial statements.

.02 This Section applies to post-employment benefits, compensated absences and termination benefits earned by employees and expected to be provided to them when they are no longer providing active service either on a temporary or permanent basis. For the purposes of this Section:

- *(a) Post-employment benefits are expected to be provided after employment but before retirement to employees and their beneficiaries. These benefits include long- and short-term disability income benefits (including workers' compensation), severance benefits, salary continuation, supplemental unemployment benefits, job training and counselling, and continuation of benefits such as health care benefits and life insurance.*
- *(b) Compensated absences are benefits for employee absences for which employees will be paid. These benefits include parental leaves, accumulated sick days, and sabbaticals that provide compensated, unrestricted time off for past service.*
- *(c) Termination benefits include the following:*
  - *a. Contractual termination benefits are benefits required to be provided to employees under the existing terms of a benefit arrangement when a specific event occurs that results in the downsizing and termination of a group of employees.*
  - *b. Special termination benefits are benefits that are not contractual termination benefits and that are offered to employees for a short period of time, normally not exceeding twelve months, in exchange for employees' voluntary or involuntary termination of employment.*

.03 The glossary in RETIREMENT BENEFITS, Section PS 3250, provides definitions for other relevant terms.

.04 This Section does not apply to short-term employee benefits, which would be accounted for under the general provisions for accruing liabilities. This accounting is generally straightforward because no actuarial assumptions are required and the liabilities are measured on an undiscounted basis.

.05 Examples of such short-term employee benefits are:

- *(a) Salaries, wages, bonuses, fringe benefits and similar items a government provides in the current reporting period or within twelve months thereafter, in exchange for services rendered by employees in the current reporting period; and*
- *(b) Occasional sick days and vacation days that do not vest or accumulate beyond twelve months after the current reporting period.*

Post-employment benefits, compensated absences and termination benefits are liabilities of a government. Accounting for all benefit plans is important because many governments have accumulated significant related liabilities. The fundamental accounting task is to determine the amount of the liability for these benefits and to what periods to attribute the costs.

.07 These standards are consistent with those established in RETIREMENT BENEFITS, Section PS 3250. The standards set out in that Section are appropriate for accounting for and disclosing post-employment benefits, compensated absences and termination benefits of a government. For example, a government providing these types of benefits through a defined contribution plan, multiemployer plan or joint defined benefit plan would refer to the guidance set out in Section PS 3250. This Section sets out those areas where the accounting and reporting are different from Section PS 3250.

Subject: Re: FW: Cap and Trade

Hi Cindy,

The information below does help explain Quebec's position, and on consideration I do think it has merit and is an acceptable approach to the issue of how to account for cap and trade.
Given the existing definitions of exchange vs non-exchange transactions and the high level of the SOP I believe that both approaches (Exchange and non-exchange) to examining this program would be acceptable under existing PSAS.

Given this, I think the question you have to determine is whether it is worth pursuing the "exchange transaction" view as an accounting policy in light of the AGs views, or whether to go with another equally acceptable accounting policy that will align with the AGs views and ensure there are no differences of opinion should the auction timing result in certification on or before March 31, 2017.

If the latter, I am happy to update the paper to conclude in line with a non-exchange view. I don't think it will take much time as the bulk of the paper is regarding asset recognition and liability recognition, both of which are important sections and do not significantly change based on the revenue recognition aspects.

We received this from Quebec - it sounds a little like they didn't need to come to an agreement so it seems they didn't agree on the application but they did on the unilateral revenue.
