- We didn't have an agreement with our AG about all the details of the basis of recognition. However, we know that the AG examined the accounting aspect of Cap and Trade since he had included this specific matter in his audit plan for the consolidated financial statement of the governement (march 31st, 2016). We assumed he agreed with our position because no comment were made about that aspect.

- For the accounting aspect, here are the foundations of the accounting for these revenues. They are recorded on an accrual basis, on the basis of the amounts collected during auctions or over-the-counter sells.
  - The revenues associated with the future units of vintage are recognized at the moment of their auction.
    - This treatment is in accordance with the government accounting policy on duties et permits, which stipulates that: "Revenue from duties and permits is recognized when receivable. Where duty or permit revenue is refundable on demand and is linked to clearly identifiable goods and services that the Government must supply to the holder of the duty or the permit, the revenue is recognized over the reference period of such duty or permit."
    - These revenues are earned from the moment they become receivable, which is to say from the moment a trader has to pay the selling price agreed upon for the units bought in auction. Also, these revenues are non-refundable.
  - This accounting treatment is analogous to the one recommended in the project Statement of principles on revenues issued by the Public Sector Accounting Board.
    - The statement suggests the following principle: "Unilateral revenues should be recognized by a public sector entity when there is:
(a) authority to claim economic resources from other parties; and
(b) a past event that gives rise to a claim of economic resources."
    - In the statement, we define unilateral revenues as "When there is no direct exchange for goods or services, as is the case when performance obligations arise directly from the consideration promised or received." The authority to these unilateral revenues " is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue."
    - Paragraph .113 of the statement specifies that "It is the occurrence of a past event together with the authority that gives the public sector entity a right to the revenue. Unilateral revenues are recognized when the public sector entity has an unconditional right to the revenue, regardless of when cash is received."
    - In this case, the past event is the acquisition of the rights during an auction. The government doesn't have any other obligation to fulfill towards the trader regarding the units he has acquired.

Hope this will be usefull,

Lucie

Hello Ian,

I am trying to find as much information as I can. I should be able to send you someting tomorrow in early afternoon.
Our AG and I didn't have that much of discussion about this matter but the AG agrees with our accounting.

Lucie

Bonjour Lucie

I am sorry to be a pest. Do you already have an accounting position paper that supports Quebec's booking of auction proceeds from WCI

If you don't have a written paper could we arrange a call to discuss.

Our Auditor General's office is saying the reasons for the accounting based on the certification date being of the basis of recognition from the view of the Quebec's auditor's office. Did you and your auditor agree to all the details (that it is a unilateral/

non-reciprocal transaction?

Thank you
I hope to see you again soon

Ian

Subject: Re: FW: auction timing

Hi Nadine,

Please see attached revised paper, clean, and tracked changes to version 6. I made all the MOECC changes and therefore removed the MOECC comments from this document to the extent I believe they have been appropriately addressed.
I also enhanced the discussion on revenue recognition for the points that Cindy was requesting and the point that Nadine and I discussed the other day regarding including a discussion of the alternative of not recognizing revenue until the end of the compliance period.
A key concern was over the use of the word "contract". I have removed all references to the EAs as contracts and replaced it with other terminology that is acceptable under the accounting standards that gets to the same accounting outcome without the legal characterization as a contract.

A few outstanding items were noted:

Issue 1 - ITEM TO RECONFIRM WITH MOECC

Termination of the program
Myra's comment - It's not clear what "arrangements with the WCI " is being referred to here. There are a number of agreements and they all include termination clauses, including Ontario's agreement with WCI, Inc. (the entity administering the program) and the linking agreement between Quebec and California provides for termination.

Response (included in document)
We had asked in an earlier meeting if there were specific termination provisions for withdrawal from the linked market.
To re-confirm whether the Quebec California agreement only provides for termination but the terms are to be negotiated, which was our understanding, or whether there are terms described in the agreement – in which case it would be beneficial to get an understanding of these. I have clarified the language, but want to make sure we have the right fact pattern. Note – that I don't think termination provisions with WCI Inc as a service provider is relevant to the broader question here.

New wording:

While we understand that the agreement between Quebec and California provides for termination of that agreement we are not aware of any specific terms in the arrangements with linked jurisdictions that would detail how a withdrawal from the linked jurisdictions might be undertaken, if and when such a link is made.

Issue 2 - ITEM TO CONFIRM WITH MOECC - possibly Adrienne Molnar is the best person

Issue: I would like to confirm that the decision as to exactly which EAs are transferred (by identifier) is only made upon transfer of EAs. For example, does the invoice to the participant list the EAs by serial identifier? Or would the participant only know exactly which EAs it owns after they are transferred. Another way of asking the question is does the algorithm allocate specific EAs to each successful participant as part of the auction certification process, or only allocate the number of EAs that the participant will receive.

New wording:

A Participant only knows which specific EAs it controls (by identifier) when they are credited to the CITSS account.

Issue 3 - ITEM FOR NADINE'S GROUP

Myra's comment See the legal advice above indicating identifying which of the sections in the document are subject to privilege (Cabinet or solicitor-client). This is a section that should be noted as solicitor-client privileged. Those sections that rely on

statements in the TB submission(s) or other Cabinet documents should be marked as Cabinet confidential.

Response (included in document)
Nadine/Ian – please can you ensure this is appropriately done?

(I would rather someone on staff determine what is the appropriate language to use here).

Hi Nadine,

Please see attached for an updated copy of the PwC document with MOECC feedback as well as proposed wording (in track changes).

It includes edits from our program areas as well as MOECC Legal re: the legislation and auction processes.

I didn't want to remove/edit any of their comments on the legislations/auction since they are the subject matter experts – so there are quite a bit of comments. Please let me know if you have any questions and I can follow-up with them.

From the accounting perspective, as you mentioned below, the revenue recognition aspect will require further discussion. I would recommend internal OPS discussions prior to your meeting with OAG.

Please let us know once you've had a chance to take a look – we are happy to discuss.

Thanks, Doris

Subject: FW: auction timing
Importance: High

Good morning Doris/Lucia.
Hoping you can help me out here w.r.t. the discussion below on auction date and how it would relate to the most recent information received from Jim Whitestone (through Helen Graham) that the expected date for allowances to be in hands of auction participants is Apr 12.

In our recent discussions on timing of various auction process milestones, we did not envision such a late date for transfer of the allowances, nor did I understand that any physical delivery of allowances was part of the process. I've attached a copy of the accounting analysis paper previously circulated, which included the illustrative timeline chart below. As a reminder, the preliminary accounting analysis concluded that revenue could only be recognized once the performance obligation was met. If that milestone is accomplished post March 31st, then the revenue would be reported in 17/18.

As previously noted, we are scheduling discussions with the OAG for next week to review the accounting. We had expected to receive feedback on the last version of the document by Monday at the latest. Not sure if it was sent to Ian? In light of the most recent info related to delivery/release of EAs, the paper would benefit from your team's

input/update.

Thanks in advance for your clarification and input.
Nadine

p.s. In light of the recent discussion on EA delivery/release, I have asked that the OAG meeting be scheduled for next Thursday to buy us more time to assess the implications of the latest info.

Subject: auction timing

Hi Dave

Would appreciate an update from you on possibility of achieving transfer of allowances to participants in the first auction before the end of the fiscal year? I understand you folks are working on whether the machinery can achieve that – whats your current view as to whether it can be done, whats your current estimate of how likely it is we will get there, any particular things that have to be solved to make that happen? Would appreciate at least an informal view today, please – happy to do a phone chat if that is best?

thanks

Cap and Trade accounting implications - memorandum to file v7 December 7 EPD comments addressed.pdf

Cap and trade accounting implications memorandum to file

1. Executive summary

2. Background and outline of cap and trade legislation and regulations

The *Climate Change Mitigation and Low-Carbon Economy Act, 2016* (the "Act") that was recently enacted establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario Regulation 144/16 and Ontario regulation 143/16 (together "the Regulations") have been made under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, sell, trade or otherwise deal with Ontario emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but whose greenhouse gas emissions ("emissions") meet the regulatory threshold and who choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the market so they can purchase, sell, trade or otherwise deal with EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Obtained free of charge from a distribution by the Minister of Environment and Climate Change ("the Minister") (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITSS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions, through sub-contractors. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as compliance within holding limits which limit the number of allowances participants can hold in these accounts. If holding limits are exceeded and not remedied within 5 days, the Minister has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, occurrences of this are expected to be rare as our understanding is that controls within the CITSS system should not generally allow individual limits to be exceeded except in very limited circumstances.

Auction process: In accordance with the Regulations there will be four auctions a year. EAs are sold at auction classified by "vintage". The Regulations provides for how many EAs are created of each vintage and how many EAs of each vintage will be available at auction, after the distribution of free EAs. The vintage of an EA affects which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held

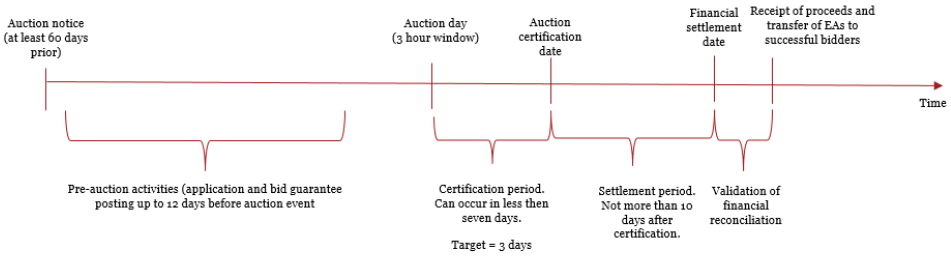
March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post financial assurance (a bid guarantee). This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash or a combination of these, and all bid guarantees are held in escrow by Deutsche Bank National Trust Company (DBNTC) in the auction participant's sub-account under the jurisdiction's escrow account. The jurisdiction's escrow account is opened by DBNTC in the name of WCI, Inc for the benefit of Her Majesty the Queen in Right of Ontario ("the Province's escrow settlement account"). The bid guarantee may be posted up to 60 days before the auction, and must be equal to or exceed the auction participants proposed maximum bid value for the auction (which is determined in accordance with the regulation).

At the auction the participants place bids for the number of EAs they will purchase at any price point at or above the auction minimum price. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results available on the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor of WCI, Inc. (currently Monitoring Analytics, LLC). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, notices (invoices) made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is given a notice by the Minister (invoiced) for the amounts due for the EAs resulting from a participant's successful bids. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's financial services sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay cash separately no later than 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC/LOG is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement account and Ontario's staff have confirmed that the amount in the escrow account match payments due from successful auction participants, then the escrowed amounts are transferred from Ontario's escrow account to Ontario's CRF bank account(s) and the EAs are transferred to the respective participant CITSS accounts.

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas in the regulation that are applied to the entity specific situation of the participant (applicant). The distribution of allowances free of charge is expected to diminish over time as risk of leakage declines and other capped emitters are transitioned to the price of carbon from the cap and trade program (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). These EAs issued as free allowances are identical to those sold at auction and may be sold, traded or otherwise dealt with by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet the primary compliance obligation (submitting allowances or credits that match attributed emissions) under the program for the 2017-2020 compliance period except in limited circumstances (i.e., they were received as part of a participants free allocation or for meeting the additional compliance obligation for 3-to-1 if imposed). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Capped participants may acquire more allowances to meet their obligations if needed by purchasing EAs from other participants in market trades. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs created and distributed for the compliance period is capped by regulation. Unused EAs for the compliance period can be carried forward by the capped participant and used in future compliance periods. If the total emissions from all capped participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism creates an incentive for those capped participants who can most cheaply reduce their emissions to do so, in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

Mandatory and voluntary participants are required to report their greenhouse gas emissions annually (which must be quantified/calculated, reported and verified). The sum of the verified emission amounts over the course of the compliance period forms the total compliance obligation and capped participants must ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts by the deadline. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to meet the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to submit an additional 3 EAs (the "additional compliance obligation"). This additional compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the additional compliance obligation for the 2017-2020 period, however, they cannot be used to settle the primary compliance obligation or shortfall).

Due to the additional compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are submitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are submitted as part of the additional compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and submit sufficient EAs to meet their compliance obligation, including the number required by any additional compliance obligation (i.e. the additional 3). If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation (primary and additional) be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account does not give rise to compensation. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" (ERAs) or "offset credits"(OCs) in certain circumstances. Credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with OCs as opposed to EAs. As emissions can be settled by either EAs or credits, the creation of OCs essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link with California and Quebec and their linked market in 2018. When linked to that market, there will be one market for EAs – all participants from participating jurisdictions can purchase, sell trade or otherwise deal with EAs with other participants registered in the participating jurisdictions. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage for each year in the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs issued or created in one jurisdiction can be used to settle a compliance obligation in any of the participating jurisdictions, regardless of which jurisdiction created and issued/distributed them. The instruments are intended to be completely fungible. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation. It does not matter how the participant purchased the EA (auction or from another participant) or which jurisdiction originally issued the EA. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California, thus reducing emissions overall, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued/distributed.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. A change in the legislation would likely need to be made to terminate the program. While we understand that the agreement between Quebec and California provides for termination of that agreement we are not aware of any specific terms in the arrangements with linked jurisdictions that would detail how a withdrawal from the linked jurisdictions might be undertaken, if and when such a link is made.

Greenhouse Gas Reduction Account

The Act establishes an account in the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Proceeds from the distribution of EAs are credited to this account. Amounts of any fees, penalties and the settlement of additional compliance obligations in cash are also credited to the GGRA. The funds credited to the

Commented [HM(1]: It's not clear what "arrangements with the WCI " is being referred to here. There are a number of agreements and they all include termination clauses, including Ontario's agreement with WCI, Inc. (the entity administering the program) and the linking agreement between Quebec and California provides for termination.

Commented [LD2R1]: We had asked in an earlier meeting if there were specific termination provisions for withdrawal from the linked market.
To re-confirm whether the Quebec California agreement only provides for termination but the terms are to be negotiated, which was our understanding, or whether there are terms described in the agreement – in which case it would be beneficial to get an understanding of these.

I have clarified the language, but want to make sure we have the right fact pattern.

Note – that I don't think termination provisions with WCI Inc as a service provider is relevant to the broader question here.

GGRA may be used for initiatives set out in a Schedule to the Act and other initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include initiatives that include the following actions: the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts credited to the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will make a report available to the public about his evaluation of initiatives that are funded from amounts charged to the GGRA In addition an annual report will be prepared describing the credits and charges to the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from (charged to) the GGRA, even if these expenditures were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government proposed that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Based on the proposals, it is assumed that Ontario's cap and trade program means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable (has a unique identifying number) and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. Market participants may also purchase or hold EAs without having a compliance obligation. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the legislation[1].

Is it a financial instrument?

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) defines financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument is by definition a contract, although PS 3450 does not define "contract" for its purposes.

It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an EA is analogous to a contract between the holder and the Province insofar as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange a previously issued EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an additional compliance obligation at its discretion). Similarly, once a participant holds an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may have to obtain the necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an additional compliance obligation (that may be converted to a cash payment requirement) but these are obligations arise through the act of directly or indirectly emitting greenhouse gas and not an obligation that is incurred through holding an EA. Rather an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs and credits). The creation and the maintenance of the Cap and Trade program, including the EAs in circulation, is due to legislation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand, although there are significant differences in the New Zealand program compared to the Ontario program (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. Further, once Ontario is linked to the California and Quebec market it will not be the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not completely control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it a charge (non-exchange transaction) on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce greenhouse gas emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation effectively requires capped participants to reduce emissions or to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed the number of allowances they have acquired (i.e., free-of-charge, at auction or by trading) EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be non-exchange transactions as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

Under this model, from an accounting perspective it is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that effectively requires a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the California and Quebec market (which is subject to government decisions and regulatory amendments that have not been made) capped participants will be able to meet their obligations by submitting EAs issued by California or Quebec. They will longer be required to effectively purchase EAs from the Province alone.

If the scheme is considered to be analogous to a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade legislation. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts:

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike capped participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Capped participants also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).

- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's receipt of payment from a participant arises from the auction process. If no EAs are purchased at auction the Province does not receive any payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario makes a decision to link, and has linked, with California and Quebec, then some or all of the EAs obtained by capped participants who emit greenhouse gas (or who are responsible for emissions) in Ontario could have been originally issued by other jurisdictions, as EAs can be purchased through auction or through the secondary market. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a non-exchange "charge" on emissions, for accounting purposes, does not hold as there is no consistent basis on which this charge is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions, the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was often limited direct costs to companies from emitting pollution - rather the costs were largely born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a "permit" to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not to provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a

participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of the nature of the EAs.

4. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for additional compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to additional compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

   Note that as it is expected that these amounts will be nominal this preliminary position has no material impact on the Public Accounts.

b) Escrow proceeds in the auction process: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized as deferred revenue until the EAs are the transferred to the participants (see section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the auction certification date to the delivery date of the EAs there is no derivative instrument required to be recognized.

d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation in relation to emissions that have been produced by capped participants are not recognized as assets, whether sold at auction or distributed as free allowances.

e) Failure of participant to pay additional compliance obligation: The right to demand payment in lieu of EAs for an additional compliance obligation is recognized after the time period that a participant has to rectify the shortfall by submitting EAs has expired, e.g. on the deadline specified in a notice issued under subsection 14 (8) of the Act of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On date of receipt of proceeds to Province's CRF account(s) (credited to GGRA) and transfer of EAs to participant CITSS accounts:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations and any additional compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying additional compliance shortfall by submitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) On creation of free and auctioned EAs:

EAs are "goods" created to be sold at auction to participants or by reserve sale or distributed free of charge to capped participants (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs therefore meet the definition of inventories held-for-sale as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount. PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

EAs that are returned to the government and not retired due to additional compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account, as the Province is the sole beneficiary of this account and WCI, Inc does not have authority to

give instructions for the funds in this account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids and therefore if their bids are successful. Only successful bids give the Province any rights to the escrow proceeds. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participants' sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DBNTC fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by various agreements between the entity administering the program on behalf of Ontario and its sub-contractors, including the agreed to terms and conditions governing the auction. The contractual arrangements are intended to protect the province from liability for errors by the financial services administrator (DBNTC).

Commented [HM(3]: See the legal advice above indicating identifying which of the sections in the document are subject to privilege (Cabinet or solicitor-client). This is a section that should be noted as solicitor-client privileged. Those sections that rely on statements in the TB submission(s) or other Cabinet documents should be marked as Cabinet confidential.

Commented [LD4R3]: Nadine/Ian – please can you ensure this is appropriately done?

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no mutual understanding of the agreed terms for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and reviews and accepts the auction report submitted by Monitoring Analytics LLC. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements. Internal jurisdiction approvals must also be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred and notice provided to the successful participants there is a mutual understanding of the terms of sale and purchase between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own CRF account(s) (credited to the GGRA) until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been transferred to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While the terms of the transfer of EAs for consideration has been agreed upon between the participant and the province, neither party has executed on the arrangement prior to cash being received into Escrow, and therefore it remains an executory arrangement until one party performs by paying consideration or delivering the goods. As there is no

amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow, return of LOCs/LOGs by courier, or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to settlement.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as arrangement date: An alternative view is that the auction date, rather than the certification date is the date that the terms of the transfer of EAs is set between the Province and the participant for the sale of EAs. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued that while the participant does not know whether they have been successful or not, once the auction algorithm has been run the Province does know who the successful bidders are and at what price the EAs will be sold and therefore from the Province's perspective there is an agreed upon arrangement, as the purchaser stands ready to transact at the bid price and collection of consideration is reasonably assured through the financial assurance process. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed

Settlement period/financial settlement date as arrangement date: Legally there is no obligation of the Province to deliver EAs until cash has been received. Therefore it could be argued that there is no enforceable obligation of the Province to transfer EAs until the cash is received during the settlement period. It should be noted that the financial settlement date itself is merely the date by which all cash will be received under the escrow process. It is not substantive for accounting purposes in that it does not reflect when the cash is received into the Province's Escrow Settlement account, nor when it is transferred into the Province's CRF account(s) (credited to GGRA). This view was rejected for accounting purposes because both parties have an understanding of the auction processes and arrangements to be able to determine their respective rights and obligations and payments terms under the program prior to this point. The auction system is arranged such the financial assurance process ensures that a successful bidder will pay and the Province is legally obligated to transfer the EAs upon receipt of payment. Therefore both the rights and obligations of the parties are enforceable at the auction certification date. (Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) even if accepted, this view would not substantially change any of the accounting entries.)

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the arrangement that exists from the certification date to the settlement of the arrangement by delivery of EAs date. The arrangement is at a fixed price as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not a contractual right to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Successful auction bids to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the arrangement

Alternative positions considered and rejected:

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 additional compliance obligation. However, when the EAs are distributed the Province cannot expect that any participants will be subject to the 3 for 1 additional compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 additional compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there being no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 5 below and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of

goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. The only exception is when EAs for a future compliance period are received as part of the 3 for 1 additional compliance obligation as these may be re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for additional compliance obligations. Any recognition of an asset for the right to receive back applied to all EAs would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not a fair presentation.

e) Failure of participant to pay additional compliance obligation:

An additional compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EAs during the compliance period or else the participant must obtain a greater number of EAs, potentially at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for additional compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or additional compliance obligations as they can purchase additional EAs on the market at the market price. EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is linked, those issued by another jurisdiction with whom Ontario links) there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the additional compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognize the receivable at the amount expected to be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an additional compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub- accounts.

Analysis

a) Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them for cash or any other financial asset, or exchange them for other financial instruments. For example, if EAs are not required to be submitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with California and Quebec it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all the three linked jurisdictions and once distributed all EAs are identical to each other in terms of rights and obligations relating to the EA (notwithstanding each EA does have an identifying number) and so there is no meaningful distinction between EA's that are "Ontario" EA's or those of another jurisdiction. If a capped participant has purchased an EA that was issued as an allocation from California or Quebec and submits it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the EAs distributed or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the

cap and trade program or bankruptcy of a participant. Based on the legislation there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of distribution.

In respect of the EAs that are given away for free, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the capped participant being registered and applying each year to be eligible to receive the EAs. To the extent that that a capped emitter has applied to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the distribution of EAs free of charge or by auction, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade program, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not

have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 6 below.

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA distribution, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of participants' cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DBNTC or its parent company, DB. Based on legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's escrow accounts as there is recourse under both the indemnification clause of the DBNTC contract and required insurance (depending on the nature of the error). Further, if DBNTC fails to make payment to a participating jurisdiction because it or its parent company bank, DB, has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DBNTC or DB's errors.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DBNTC and the Province of Ontario should be considered to confirm the above analysis.

6. Revenue recognition under the cap and trade program as sponsoring government

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix C for details.

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the date of delivery of the EAs as this is when the performance obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) What is the performance obligation for the sale of EAs? A performance obligation is defined in IFRS 15 as a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the Revenue SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". The following analysis has applied the IFRS concept, as permitted under PS 1150.

   In both IFRS 15 and the Revenue SOP, performance obligations are identified by reference to a contract or, in the case of the Revenue SOP, the terms of service set by legislation or regulation – both resulting in an arrangement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that the arrangement is considered to exist between a specific participant and the province to transfer a specified number of EAs.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the market or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to both capped participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix C for definition of "distinct goods and services")

   Based on the above analysis, a performance obligation is created when a participant successfully bids at auction and that bid is confirmed as successful in the auction certification process. The Province has distinct performance obligations to deliver each EA to each successful bidder under the auction arrangements.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the other jurisdictions, not all the participants will be located in Ontario. While the province has set targets for the reduction of greenhouse gas below the 1990 levels in Ontario and has represented that the cap and trade program will help them achieve these targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both an obligation to distribute the EA in the auction process and a stand-ready obligation to retire the EA in the future in settlement of a compliance obligation. In other words an EA is an intangible "right" that has been created and distributed by the Province that Province is obligated to retire. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province retires the EA's at the end of the compliance period. This view was rejected because the past event that gives rise to the obligation to retire the EA as settlement of a participant's compliance obligation occurs when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to retire all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to retire an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the other jurisdictions as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions and likewise there is an obligation to retire EAs submitted by Ontario participants, even when these were purchased from California or Quebec (if and when Ontario links) or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to submit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade ~~and~~or otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash

in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15 the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the Revenue SOP proposes a "control" model similar to IFRS 15, so this approach has been applied in the analysis. Under IFRS 15 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no creation of an does not have an alternative use. Therefore the performance obligation will be satisfied at a point in time.

   IFRS 15 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the Revenue SOP and have been considered in this analysis. See IFRS 15.38 in Appendix C. The indicators have been assessed as follows:

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and transfer of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the auction process must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not apply to EAs and is never transferred. However, holding limits are applied. This indicates that EAs can be legally held (below holding limits) or not legally held (above holding limits) which forces a sale of the excess EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date. Holding limits are measured on what is in a participant's CITSS account.
The entity has transferred physical possession of the asset	While EAs do not have physical form, each EA has a unique identifier when created, and as such separately exists and can be identified as being in a specific CITSS account. Under the legislation, the Province has a legal obligation to transfer the EAs to participants once cash payment has been received. This indicates that there is still some action to be taken by the Province in respect of the transfer of control of the EAs that is not met until that transfer has occurred.			The record of a participant's EAs is maintained in the CITSS account and so the right to trade or use an EA is confirmed only upon this date. A Participant only knows which specific EAs it controls (by identifier) when they are

				credited to the CITSS account. Therefore prior to this point a participant cannot be said to control specific EAs. There is a process performed by jurisdiction staff to transfer EAs on this date. The timing of this transfer and the specific EAs transferred is not controlled by the Participant.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset. Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or suffering from the fluctuations in the market price of EAs	Possibly – the price that the customer pays is determined by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	Yes – From this date the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	N/A already met	N/A already met

Commented [LD5]: MOECC to confirm this

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily. Additionally, although the EAs are

intangible, they are uniquely identified meaning that the transfer to the participants CITSS account can be seen as substantive delivery of the EAs.

Alternatives considered and rejected:

Auction date/Certification date/financial settlement date: See table above for analysis.

A point after transfer date: As the EAs can only exist be held in a participant CITSS account within the cap and trade program and legal title never transfers as EAs are not "property" it could be argued that control never passes to the participant and therefore revenue would not be recognized until the retirement of the EA at the end of the compliance period. This view was rejected as legal title is only one indicator and the other indicators suggest that control has passed to the participant at the transfer date. Additionally, as discussed in Section 3 above, the nature of the EA is that it is a permit that the holder has to settle the legislative compliance obligation that arises from producing one ton of emissions. The ability of the participant to be able to exercise that permit is a key determinate of control and this is passed on the transfer date. This is further emphasized by the fact that participants would be expected to recognize EAs as assets under various frameworks such as IFRS or ASPE. Both IFRS and ASPE have a similar definition of an asset as PSAS does, which includes a requirement that an entity controls the asset before recognition. As the same asset cannot be controlled by two parties simultaneously, some symmetry would be reasonable to expect.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash (up to 7 calendar days after the notice), the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a

government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to credit the auction proceeds to a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purposes specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be recorded in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet

their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction (as defined by PS 3100) on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to California and Quebec, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[2] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[2] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For a grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.	

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[3]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others

[3] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are submitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs sold or distributed in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has a government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem (retire) the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049).

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

This paper can be found at: http://www.ipsasb.org/system/files/meetings/files/Agenda-item-14.pdf

Cap and Trade accounting implications - memorandum to file v7 to v6 Compare.pdf

Cap and trade accounting implications memorandum to file ~~– proposed outline~~

1. Executive summary

2. Background and outline of cap and trade legislation and regulations ~~[INTD – MOECC to provide comments on accuracy of background terminology]~~

Formatted: Not Highlight

The *Climate Change Mitigation and Low-Carbon ~~Economic~~Economy Act, 2016* (the "Act") that was recently enacted ~~that~~ establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario ~~regulation~~Regulation 144~~.~~/16 and Ontario regulation 143~~.~~/16 (together "the Regulations") have been ~~passed~~made under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, ~~hold,~~ sell ~~or,~~ trade or otherwise deal with Ontario emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but whose greenhouse gas emissions ("emissions") meet the regulatory threshold and who choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the ~~program~~market so they can ~~hold~~purchase, sell ~~and,~~ trade or otherwise deal with EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- ~~Distribution as a free allowance~~Obtained free of charge from a distribution by the Minister of Environment and Climate Change ("the Minister") (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "~~CITTS~~CITSS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions~~.~~, through sub-contractors. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as ~~holding levels are~~compliance within holding limits~~.~~ which limit the number of allowances participants can hold in these accounts. If holding limits are exceeded and not remedied within 5 days, the Minister ~~of the Environment and Climate Change (the "Minister")~~ has the ability to remove the excess allowances~~. Currently proposed updates to the Regulations would require~~ for no compensation that ~~the amounts in excess of the holding limits~~could then be re-sold at ~~auction and the proceeds of that sale to be remitted back to the participant.~~future auctions. However, occurrences of this are expected to be rare as our understanding is that controls within the ~~systems~~CITSS system should not generally allow ~~sales over the~~ individual limits to be ~~processed so examples of this should be~~ exceeded except in very limited ~~in practice.~~circumstances.

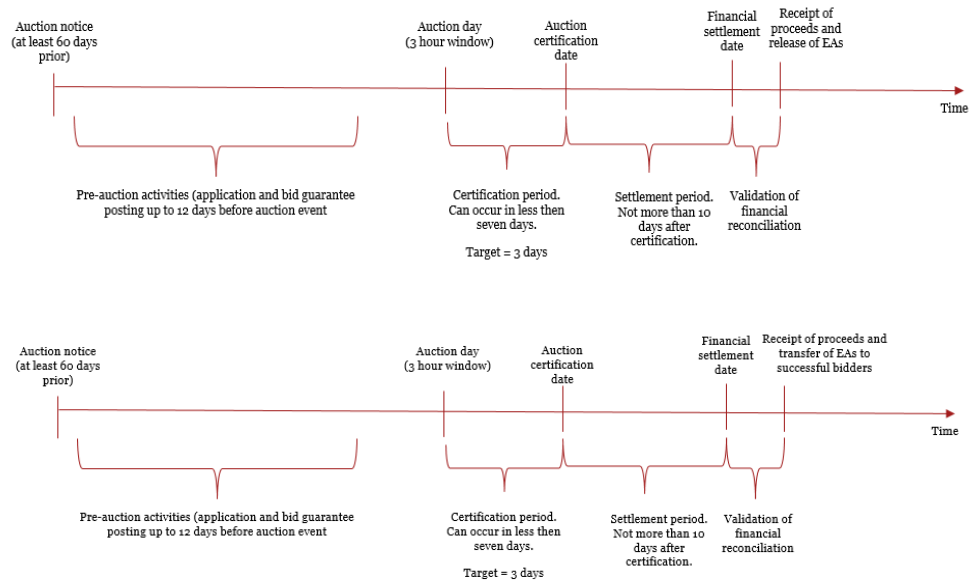
Auction process: In accordance with the Regulations there ~~are~~will be four auctions a year. EAs are sold at auction classified by "vintage". The Regulations ~~set out~~provides for how many EAs are created ~~for~~of each vintage and how many EAs of each vintage will be available at ~~each~~ auction, after the distribution of free EAs. The vintage of an EA ~~determines~~affects which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post financial assurance (a bid guarantee~~.~~). This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash~~, both~~ or a combination of ~~which~~ these, and all bid guarantees are held in escrow by Deutsche Bank ~~(DB~~National Trust Company (DBNTC) in the auction participant's sub-account under the jurisdiction's ~~Escrow~~escrow account. The ~~Province's~~jurisdiction's escrow account is opened by DBNTC in the name of WCI, Inc for the benefit of Her Majesty the Queen in Right of Ontario ~~Minister of~~ ("the ~~Environment and Climate Change.~~Province's escrow settlement account"). The bid guarantee may be posted up to 60 days before the auction, and must be equal to or exceed the ~~total amount of bids that will be submitted by~~ auction participants proposed maximum bid value for the ~~participant in~~ auction (which is determined in accordance with the ~~auction.~~regulation).

At the auction the participants place bids for the number of EAs they will purchase at any price point~~.~~ at or above the auction minimum price. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results ~~provided by~~available on the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor ~~called~~of WCI, Inc. (currently Monitoring Analytics, LLC). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, notices (invoices) made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is given a notice by the Minister (invoiced) for the amounts due for the EAs ~~purchased~~resulting from a participant's successful bids. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's financial services sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay cash separately ~~within~~no later than 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC/LOG is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement ~~accounting~~account and Ontario's staff have confirmed that the amount in the escrow account match payments due from successful auction participants, then the escrowed amounts are transferred ~~to the GGRA~~from Ontario's escrow account to Ontario's CRF bank account(s) and the EAs are transferred to the respective participant CITSS accounts.

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas in the regulation that are applied to the entity specific situation of the participant ~~and are~~ (applicant). The distribution of allowances free of charge is expected to diminish over time as ~~transition~~risk of leakage declines and other capped emitters are transitioned to the price of carbon from the cap and trade program ~~is completed and inter-provincial "leakage" declines~~ (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). ~~Once~~These EAs issued~~, these EAs~~ as free allowances are identical to those sold at auction and may be ~~held or~~sold, traded or otherwise dealt with by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet ~~normal~~the primary compliance obligation (submitting allowances or credits that match attributed emissions ~~obligations~~) under the program for the 2017-2020 compliance period ~~(although~~except in limited circumstances (i.e., they ~~can be used~~ were received as part of a participants free allocation or for meeting the additional compliance obligation for 3-to ~~settle increased compliance obligations~~ 1 if imposed). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. ~~Participants~~ Capped participants may ~~purchase~~acquire more allowances to meet their obligations if needed by purchasing EAs from other participants in market trades ~~to be able to meet their obligations~~. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs

~~issued~~created and distributed for the compliance period is capped by regulation. ~~Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price.~~ Unused EAs for the compliance period can be carried forward by the capped participant and used in future compliance periods. If the total emissions from all capped participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism ~~allows~~creates an incentive for those capped participants who can most cheaply reduce their emissions ~~an incentive~~ to do so, in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

~~At the end of the compliance period mandatory~~Mandatory and voluntary participants are required to report their ~~attributed carbon emissions (~~greenhouse gas emissions annually (which must be quantified/calculated, reported and verified~~) for the~~). The sum of the verified emission amounts over the course of the compliance period forms the total compliance ~~period~~obligation and capped participants must ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts by the deadline. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to ~~fulfil~~meet the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to ~~acquire and~~ submit an additional 3 EAs (the "~~increased~~additional compliance obligation"). This ~~increased~~additional compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the ~~increased~~additional compliance obligation for the 2017-2020 period, however, they cannot be used to settle the ~~original~~primary compliance obligation or shortfall).

Due to the ~~increased~~additional compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are ~~remitted~~submitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are ~~remitted~~submitted as part of the ~~increased~~additional compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs ~~for future compliance periods~~ is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and ~~remit~~submit sufficient EAs to meet their compliance obligation, including the number required by any additional compliance ~~obligations for shortfalls.~~obligation (i.e. the additional 3). If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation (primary and additional) be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account ~~is without payment~~does not give rise to ~~the participant~~compensation. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" (ERAs) or "offset credits""(OCs) in certain circumstances. ~~These credits~~Credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with ~~credits~~OCs as opposed to EAs. As emissions can be settled by either EAs or credits ~~and offsets~~, the creation of ~~credits or offsets~~OCs essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link ~~to the WCI in 2018. The WCI currently includes~~ with California and Quebec and ~~California.~~ their linked market in 2018. When linked to ~~the WCI~~that market, there will be one market for EAs – all participants from participating jurisdictions can ~~buy~~purchase, sell~~, hold and~~ trade or otherwise deal with EAs with other participants registered in the participating jurisdictions. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage ~~based on their cap~~ for each year in the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs ~~are not attributed back to a~~issued or created in one jurisdiction ~~of issuance and~~ can be used to settle a compliance obligation in any of the participating jurisdictions, regardless of which jurisdiction created and issued/distributed them. The instruments are intended to be completely fungible. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation ~~based on their emissions.~~. It does not matter ~~whether they~~how the participant purchased the ~~EAs at~~ EA (auction or from ~~a California~~another participant) or ~~Quebec participant~~which jurisdiction originally issued the EA. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California ~~below their caps~~, thus reducing emissions overall, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued/distributed.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. ~~The program could only be terminated through a~~ A change in the legislation~~. We~~ would likely need to be made to terminate the program. While we understand that the agreement between Quebec and California provides for termination of that agreement we are not aware of any specific terms in the arrangements with ~~the WCI~~linked jurisdictions that would ~~specify~~detail how a withdrawal from the ~~WCI~~linked jurisdictions might be undertaken~~.~~, if and when such a link is made.

Greenhouse Gas Reduction Account

The Act establishes an account ~~with~~in the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). ~~Other than limited exceptions, proceeds~~Proceeds from the distribution of EAs are ~~included in~~credited to this account. Amounts of any fees, penalties and the settlement of ~~increased~~additional compliance obligations in cash are also ~~included in~~credited to the GGRA. The funds ~~in~~credited to the GGRA may be used for initiatives set out in a Schedule to the Act and other initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include initiatives that include the following actions: the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts ~~in~~credited to the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will ~~issue~~make a report available to the public ~~notice regarding the~~ about his evaluation of initiatives that are funded ~~by~~from amounts charged to the GGRA~~.~~ In addition an annual report will be prepared describing the ~~activities of~~credits and charges to the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from (charged to) the GGRA, even if ~~they~~these expenditures were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government ~~announced~~proposed that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Based on the proposals, it is assumed that Ontario's cap and trade program means that it will not be subject to the federal carbon floor price

Commented [HM(1]: It's not clear what "arrangements with the WCI " is being referred to here. There are a number of agreements and they all include termination clauses, including Ontario's agreement with WCI, Inc. (the entity administering the program) and the linking agreement between Quebec and California provides for termination.

Commented [LD2R1]: We had asked in an earlier meeting if there were specific termination provisions for withdrawal from the linked market.
To re-confirm whether the Quebec California agreement only provides for termination but the terms are to be negotiated, which was our understanding, or whether there are terms described in the agreement – in which case it would be beneficial to get an understanding of these.

I have clarified the language, but want to make sure we have the right fact pattern.

Note – that I don't think termination provisions with WCI Inc as a service provider is relevant to the broader question here.

as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable (has a unique identifying number) and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. Market participants may also purchase or hold EAs without having a compliance obligation. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the ~~Act~~legislation[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) ~~define~~defines financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument is by definition a contract, although PS 3450 does not define "contract" for its purposes.

It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an EA ~~could be considered~~is analogous to ~~be~~ a contract ~~in the broadest sense~~ between the holder and the Province insofar as both parties know their respective rights and obligations that arise from holding and issuing EAs ~~as these are laid out by legislation and enforceable under it.~~.

Formatted: Comment Text, Space Before: 0 pt, After: 0 pt

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange ~~an~~a previously issued EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an ~~increased~~additional compliance obligation at its discretion). Similarly, once ~~they are the holder of~~a participant holds an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may ~~be obligated~~have to obtain the necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an ~~increased~~additional compliance obligation ~~in~~(that may be converted to a cash~~,~~ payment requirement) but these are obligations ~~that~~ arise through the act of directly or indirectly emitting ~~pollutants~~greenhouse gas and not an obligation that is incurred through holding an EA. Rather ~~holding~~ an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs and credits). The creation and the maintenance of the Cap and Trade program, including the EAs in circulation, is ~~required by Cap and Trade regulation~~due to legislation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand, although there are significant differences in the New Zealand program compared to the Ontario program (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. ~~These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with.~~ Further, once Ontario is linked to the ~~WCI~~California and Quebec market it ~~is~~will not be the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not completely control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it ~~similar to~~ a ~~"tax"~~charge (non-exchange transaction) on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same -- a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce greenhouse gas emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation effectively requires ~~mandatory~~capped participants to reduce emissions or to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed ~~their allowance of freely distributed EAs.~~the number of allowances they have acquired (i.e., free-of-charge, at auction or by trading) EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be ~~a~~ non-~~reciprocal transaction~~exchange transactions as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

~~It~~Under this model, from an accounting perspective it is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative

requirement that ~~forces~~effectively requires a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the ~~WCI there is no legislative requirement that the participant purchase an EA from the Province.~~California and Quebec market (which is subject to government decisions and regulatory amendments that have not been made) capped participants will be able to meet their obligations by submitting EAs issued by California or Quebec. They will longer be required to effectively purchase EAs from the Province alone.

If the scheme is considered to be ~~in substance like~~analogous to a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade ~~regulations~~legislation. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts:

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike ~~mandatory or voluntary~~capped participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. ~~Mandatory and Voluntary participant~~Capped participants also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's ~~right to~~receipt of payment from a participant arises from the auction process ~~and not solely from legislation.~~ If no EAs are purchased at auction the Province ~~has no right to~~does not receive any payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario makes a decision to link, and has linked, with ~~the WCI~~California and Quebec, then ~~mandatory and voluntary~~some or all of the EAs obtained by capped participants who ~~create~~emit greenhouse gas (or who are responsible for emissions) in Ontario could ~~obtain some or all their EAs from California, Quebec or~~ have

been originally issued by other jurisdictions, as EAs can be purchased through auction or through the secondary market ~~participants.~~ There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a ~~tax~~non-exchange "charge" on emissions, for accounting purposes, does not hold as there is no consistent basis on which this ~~"tax"~~charge is calculated.

- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions ~~as,~~ the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was ~~no cost~~ often limited direct costs to companies from emitting pollution - rather the costs were largely born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a "permit" to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not to provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of the nature of the EAs.

4. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for ~~increased~~additional compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to ~~increased~~additional compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

   Note that as it is expected that these amounts will be nominal this preliminary position has ~~not~~no material impact on the Public Accounts.

b) Escrow proceeds ~~held for auctions~~in the auction process: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized as deferred revenue until the ~~contract[2] is settled by the transfer of EAs~~EAs are the transferred to the participants (see section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the ~~date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of~~auction certification date to the delivery date of the EAs there is no derivative instrument required to be recognized.

~~[2] Please refer to analysis of "Escrow proceeds held for auctions" for explanation of the use of the word "contract" in this memorandum.~~

d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation ~~as~~in relation to emissions ~~are~~that have been produced by capped participants are not recognized as assets, whether sold at auction or ~~issued~~distributed as free allowances.

e) Failure of participant to pay ~~increased~~additional compliance obligation: The right to demand payment in lieu of EAs for an ~~increased~~additional compliance obligation is recognized after the time period that a participant has to rectify the shortfall by ~~remitting~~submitting EAs ~~as~~has expired, e.g. on the deadline specified in a notice issued under ~~Section~~subsection 14 (8) of the Act of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On date of receipt of proceeds to ~~GGRA~~Province's CRF account(s) (credited to GGRA) and transfer of EAs to participant CITSS accounts:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations ~~or increased~~and any additional compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying ~~increased~~additional compliance shortfall by ~~remitting~~submitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) On creation of free and auctioned EAs:

EAs are "goods" created to be sold ~~or distributed~~ at auction to participants or by reserve sale or distributed free of charge to capped participants (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs therefore meet the definition of inventories held-for-sale as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount. PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

EAs that are returned to the government and not retired due to ~~increased~~additional compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account~~.~~, as the Province is the sole beneficiary of this account and WCI, Inc does not have authority to give instructions for the funds in this account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot

recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids and therefore if their bids are successful. Only successful bids give the Province any rights to the escrow proceeds. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. ~~It is the view of the Province that~~After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the ~~participant's~~participants' sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if ~~DB~~DBNTC fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by various agreements between the entity administering the program on behalf of Ontario and its sub-contractors, including the agreed to terms and conditions governing the auction. ~~The participating jurisdiction should not be liable for DB's error. As the agreements between DB and the Province are still under negotiation, the final~~The contractual arrangements ~~between DB and~~are intended to protect the province from liability for errors by the ~~Province of Ontario should be considered to confirm the above analysis.~~financial services administrator (DBNTC).

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no ~~contract~~mutual understanding of the agreed terms for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and reviews and accepts the auction report~~.~~ submitted by Monitoring Analytics LLC. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements ~~and internal~~. Internal jurisdiction approvals must also be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred ~~there is a "contract" between a successful bid participant and the Province and the settlement process begins. Legally speaking, the Province is not obligated to issue an EA under legislation until the participant has paid the auction price, and therefore there is no legal obligations of the Province until payment is received. This would suggest that there is no "contract" until some point in the financial settlement process when proceeds are received into Ontario's escrow account. However, for purposes of this analysis the word "contract" is used consistent with the accounting definition found in IFRS 15 IFRS 15 is an appropriate source of GAAP consistent with reference to IFRS 15 for revenue recognition purposes – see Section 6), whereby an arrangement is a contract when both parties have approved the arrangement (in writing or in accordance with customary business practices); the entity can identify each party's rights and payment terms regarding the goods and services to be transferred, there is commercial substance and it is probable that the entity will collect the consideration in exchange for the goods and services (IFRS 15.9). Further uses of the word "contract in this memorandum refers to the accounting sense.~~

and notice provided to the successful participants there is a mutual understanding of the terms of sale and purchase between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to

Commented [HM(3]: See the legal advice above indicating identifying which of the sections in the document are subject to privilege (Cabinet or solicitor-client). This is a section that should be noted as solicitor-client privileged. Those sections that rely on statements in the TB submission(s) or other Cabinet documents should be marked as Cabinet confidential.

the Province's own ~~GGRA bank~~CRF account(s) (credited to the GGRA) until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been ~~delivered~~transferred to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While ~~there is a contract~~the terms of the transfer of EAs for consideration has been agreed upon between the participant and the province, neither party has executed on the ~~contract~~arrangement prior to cash being received into Escrow, and therefore it remains an executory ~~contract~~arrangement until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Formatted: Space Before: 0 pt, After: 12 pt, Tab stops: Not at 1.9 cm

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow, return of LOCs/LOGs by courier, or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to ~~the auction process.~~settlement.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as ~~contract~~arrangement date: An alternative view ~~to~~ is that the auction date, rather than the certification date ~~as~~is the ~~contract~~ date that the terms of the transfer of EAs is set between the Province and the participant for the sale of EAs ~~is that there is a contract on the auction date~~. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued that while the participant does not know whether they have been successful or not, ~~the Province has run~~once the auction algorithm ~~and~~ has been run the Province does know who the successful ~~bidder~~bidders are and at what price~~,~~ the EAs will be sold and therefore from the Province's perspective there is ~~a contract~~an agreed upon arrangement, as the purchaser stands ready to transact at the bid price and collection of consideration is reasonably assured through the financial assurance process. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed ~~holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.~~

Settlement period/financial settlement date as ~~contract~~arrangement date: ~~As noted above, legally~~Legally there is no obligation of the Province to deliver EAs until cash has been received. Therefore it could be argued that there is no ~~contract~~enforceable obligation of the Province to transfer EAs until the cash is received during the settlement period. It should be noted that the financial settlement date itself is merely the date by which all cash will be received under the escrow process. It is not substantive for accounting purposes in that it does not reflect when the cash is received into the ~~Ontario~~Province's Escrow Settlement account, nor when it is transferred into the ~~GGRA.~~Province's CRF account(s) (credited to GGRA). This view was rejected for accounting purposes because both parties have ~~a good~~an understanding of the auction processes and arrangements to be able to determine their respective rights and obligations and payments terms under the program prior to this point. The auction system is arranged such the financial assurance process ensures that a successful bidder will pay and the Province is legally obligated to transfer the EAs upon receipt of payment. Therefore both the rights and obligations of the parties are enforceable at the auction certification date. (Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) even if accepted, this view ~~was taken it~~ would not substantially change any of the accounting entries~~.~~.)

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the ~~contract~~arrangement that exists from the certification date to the settlement of the ~~contract~~arrangement by delivery of EAs date. The ~~contract~~arrangement is at a fixed price ~~contract~~ as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not a contractual ~~rights~~right to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. ~~Auction contracts~~Successful auction bids to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the ~~contract.~~arrangement

Alternative positions considered and rejected:

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 ~~increased~~additional compliance obligation. However, when the EAs are ~~issued~~distributed the Province cannot expect that any participants will be subject to the 3 for 1 ~~increased~~additional compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 ~~increased~~additional compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there ~~bring~~being no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 5 below and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. The only exception is when EAs for a future compliance period are received as part of the 3 for 1 ~~increased~~additional compliance obligation as these may be re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for ~~increased~~additional compliance obligations. Any recognition of an asset for the right to receive back applied to all EAs would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not a fair presentation.

e) Failure of participant to pay ~~increased~~additional compliance obligation:

An ~~increase~~additional compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough ~~EA "permits"~~EAs during the compliance period or else the participant must obtain a greater number of ~~permits~~EAs, potentially at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for ~~increased~~additional compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or ~~increased~~additional compliance obligations as they can purchase additional EAs on the market at the market price. EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is linked, those issued by another jurisdiction ~~of the WCI~~with whom Ontario links) there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the additional compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognize the receivable at the amount expected to be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an ~~increased~~additional compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts (“PS 1000”)

PS 3200, Liabilities (“PS 3200”)

PS 3300, Contingent liabilities (“PS 3300”)

PS 3310, Loan guarantees (“PS 3310”)

PS 3410, Government Transfers (“PS 3410”)

PS 3450, Financial instruments, effective from April 1, 2019 (“PS 3450”)

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant’s cash financial assurance held in escrow in the participant’s sub- accounts.

Analysis

a) Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them for cash or any other financial asset, or exchange them for other financial instruments. For example, if EAs are not required to be ~~remitted~~submitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with ~~the WCI~~California and Quebec it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all the three linked jurisdictions ~~in the WCI~~ and once ~~issued~~distributed all EAs are identical to each other in terms of rights and obligations relating to the EA (notwithstanding each EA does have an identifying number) and so there is no ~~way to determine whether an EA is an~~meaningful distinction between EA's that are "Ontario" ~~EA~~EA's or ~~that~~those of another jurisdiction ~~as all EAs are contractually identical.~~. If a ~~market~~capped participant has purchased an EA that was issued as an allocation from California or Quebec and ~~redeems~~submits it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the ~~issued~~ EAs distributed or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation ~~and regulations~~ there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of ~~issuance~~distribution.

In respect of the EAs that are given away ~~as~~for free ~~allowances~~, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the capped participant

~~registering~~being registered and applying each year to be eligible to receive the EAs. To the extent that that a capped emitter has ~~registered~~applied to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the ~~issue~~distribution of EAs free ~~EAs~~of charge or by auction ~~of other EAs~~, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade ~~system~~program, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 6 below.

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA ~~issuance~~distribution, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of ~~Participant's~~participants' cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DBNTC or its parent company, DB. Based on ~~a~~ legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's ~~Escrow~~escrow accounts as there is recourse under both the

indemnification clause of the ~~DB~~DBNTC contract and required insurance (depending on the nature of the error). Further, if ~~the DB~~DBNTC fails to make payment to a participating jurisdiction because it or its parent company bank, DB, has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DBNTC or DB's ~~error~~errors.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between ~~DB~~DBNTC and the Province of Ontario should be considered to confirm the above analysis.

6. Revenue recognition under the cap and trade program as sponsoring government

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix C for details.

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the date of delivery of the EAs as this is when the performance obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) What is the performance obligation for the sale of EAs? A performance obligation is defined in IFRS 15 as a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the Revenue SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor

as a result of exchange transactions". The following analysis has applied the IFRS concept, as permitted under PS 1150.

In both IFRS 15 and the Revenue SOP, performance obligations are identified by reference to a contract ~~– which is an agreement~~or, in the case of the Revenue SOP, the terms of service set by legislation or regulation – both resulting in an arrangement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that ~~a contract~~the arrangement is considered to exist between a specific participant and the province to transfer a specified number of EAs.

Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the ~~WCI~~market or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to ~~voluntary~~both capped participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix C for definition of "distinct goods and services")

Based on the above analysis, a ~~contract~~performance obligation is created when a participant successfully bids at auction ~~as~~ and that bid is confirmed as successful in the auction certification process. The Province has distinct performance obligations to deliver each EA to each successful bidder under ~~these contracts.~~the auction arrangements.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the ~~WCI,~~other jurisdictions, not all the participants ~~may not even~~will be located in Ontario. While the province ~~may have promised~~has set targets for the ~~public~~reduction of ~~Ontario and other parties that they will reduce carbon emissions~~greenhouse gas below the 1990 levels in Ontario ~~to meet emissions~~and has represented that the cap and trade program will help them achieve these targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both an obligation to ~~issue~~distribute the EA in the auction process~~,~~ and ~~also~~ a stand-ready ~~promise~~obligation to ~~redeem~~retire the EA in the future ~~to settle~~in settlement of a compliance obligation. In other words an EA is an intangible "right" that has been ~~issued~~created and distributed by the Province that ~~province~~Province is obligated to ~~redeem~~retire. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province ~~redeems~~retires the ~~EA.~~EA's at the end of the compliance period. This view was rejected because the past event that gives rise to the obligation to ~~redeem~~retire the EA as settlement of a participant's compliance obligation ~~is an obligation that arises~~occurs when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to ~~redeem~~retire all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations.

Therefore Ontario has no obligation to ~~redeem~~retire an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the ~~WCI~~other jurisdictions as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions ~~or to market participants,~~ and likewise there is an obligation to ~~redeem~~retire EAs submitted by Ontario participants, even when these were purchased from ~~another WCI jurisdiction~~California or Quebec (if and when Ontario links) or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to ~~remit~~submit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade ~~and~~or otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15 the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the Revenue SOP proposes a "control" model similar to IFRS 15, so this approach has been applied in the analysis. Under IFRS 15 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no ~~additional asset that~~ creation of an does not have an alternative use ~~that is created by the province to fulfil the contract~~. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the Revenue SOP and have been considered in this analysis. See IFRS 15.38 in Appendix C. The indicators have been assessed as follows:

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and ~~delivery~~transfer of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the ~~contract payment~~auction process must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not ~~technically~~ apply to EAs~~.~~ and is never transferred. However, holding limits are applied. This indicates that EAs can be legally held (below holding limits) or not legally held (above holding limits) which forces a sale of the excess EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date. Holding limits are measured on what is in a participant's CITSS account.
The entity has transferred physical possession of the asset	~~This indicator is not entirely relevant as~~ While EAs do not have physical form, each EA has a unique identifier when created, and as such separately exists and can be identified as being in a specific CITSS account. Under the legislation, the Province has a legal obligation to transfer the EAs to participants once cash payment has been received. This indicates that there is still some action to be taken by the Province in respect of the transfer of control of the EAs that is not met until that transfer has occurred.			~~However the~~The record of a participant's EAs is maintained in the CITSS account and so the right to trade or use an EA is confirmed only upon this date. A Participant only knows which specific EAs it controls (by identifier) when they are credited to the CITSS account. Therefore prior to this point a participant cannot be said to control specific EAs. There is a process performed by jurisdiction staff to transfer EAs on this date. The timing of this transfer and the specific EAs transferred is not controlled by the Participant.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset.				

Formatted Table

Commented [LD5]: MOECC to confirm this

Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or suffering from the fluctuations in the market price of EAs	Possibly – the price that the customer pays is ~~set~~determined by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	Yes – From this date the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	N/A already met	N/A already met

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily. Additionally, although the EAs are intangible, they are uniquely identified meaning that the transfer to the participants CITSS account can be seen as substantive delivery of the EAs.

Alternatives considered and rejected:

Auction date/Certification date/financial settlement date: See table above for analysis.

A point after transfer date: As the EAs can only exist be held in a participant CITSS account within the cap and trade program and legal title never transfers as EAs are not "property" it could be argued that control never passes to the participant and therefore revenue would not be recognized until the retirement of the EA at the end of the compliance period. This view was rejected as legal title is only one indicator and the other indicators suggest that control has passed to the participant at the transfer date. Additionally, as discussed in Section 3 above, the nature of the EA is that it is a permit that the holder has to settle the legislative compliance obligation that arises from producing one ton of emissions. The ability of the participant to be able to exercise that permit is a key determinate of control and this is passed on the transfer date. This is further emphasized by the fact that participants would be expected to recognize EAs as assets under various frameworks such as IFRS or ASPE. Both IFRS and ASPE have a similar definition of an asset as PSAS does, which includes a requirement that an entity controls the asset before recognition. As the same asset cannot be controlled by two parties simultaneously, some symmetry would be reasonable to expect.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash~~.~~ (up to 7 calendar days after the notice), the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to ~~place~~credit the auction proceeds ~~into~~to a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or ~~purpose~~purposes specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be ~~placed~~recorded in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction (as defined by PS 3100) on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to ~~the WCI~~California and Quebec, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of- NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For ~~an~~a grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.	

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are ~~remitted~~submitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs ~~issued~~sold or distributed in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has ~~an~~a government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem (retire) the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049).

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

FW_ Getting Ready for Pension Work - HOOPP, PSPP, and CAATPP.rtf

From: Christina Chan [Christina.Chan@ca.ey.com]
To: Virani, Shyrose (TBS) [Shyrose.Virani@ontario.ca]
CC: Gregory Winston [gregory.winston@ca.ey.com]
Subject: FW: Getting Ready for Pension Work - HOOPP, PSPP, and CAATPP
Date: Tuesday, January 16, 2018 14:43:22

Hi Shyrose,

Would you add us to the visitor list for next Monday?

As discussed, I will bring my now expired pass and have it renewed? Can we also arrange for Greg to receive a contractor pass?

Thanks!

Christina

Hi Christina,

Monday 1:00 p.m. works for us.

I will send out a meeting invite.

See you.

Alicia

Hi Alicia,

We are happy to come in early next week. We are available any time after 1pm on Monday, or whenever works best for you on Tuesday. Let us know your preference.

Vanessa/Patricia, would you be available for a call sometime this week to connect so we will be well prepared for the meeting to follow?

I also have it in my notes that we are expecting the assumptions (i.e. “basis”) to be finalized around the 3rd week of January. Please let us know once the basis is chosen so we can provide our comments on the assumptions as requested.

Thanks,

Christina

Hi Christina,

How are you?

Our pension work for the Budget is about to start, and we are expecting to receive actuarial letters from pension plans around Jan. 26. I wonder whether you can come in early next week to go through a few items for PSPP and HOOPP to get the models ready.

We probably need an hour and a half. If you need more background on what we are looking for, please feel free to contact Vanessa or Patricia.

Please let me know what time works for you.

Thank you very much and see you soon.

Alicia

Hi Nadine,

Further to your discussion with Shayan, here is the invoice for $65k. As you know, our work is on-going. We are also mailing a hard copy of this invoice today, but I thought you'd appreciate receiving a soft copy too.

If it is at all possible to process the payment before the end of the month (our year-end) that would be greatly appreciated.

Many thanks,

Uros

Subject: Invoice

Hi Cindy and Mark,

We have issued our final invoice today, and I am attaching a soft copy of it here for your convenience. This invoice covers the period to the conclusion of our contact, at 30 September 2017. You will note that the sum of all of our invoices (approx. $268k) has come in under the overall budget for the contract (approx. $299k).

Cindy, as you and I discussed last month, I believe there is a need and an opportunity to further improve pension reporting by the province. In particular, we discussed the work around assumption setting processes and documentation. This is the most important and strategic piece, but I think there is also further work that needs to be done on variance reconciliation and reporting, improvements how actuarial information is obtained and used, and further work related to OPEB plans.

Most of this work is continuation of the work we've been doing so far, and we would be available to continue supporting you in this regard. I recall that you were going to set up a meeting with Nancy Kennedy – please let me know if that still makes sense.

Subject: Meeting this Thursday?

Hi Shyrose,

I have two calendar invitations in the coming week for the cap and trade project - tomorrow at 1-2pm and also on Tuesday at 10-11am. The Tuesday one is important, but in light of it I thought we were going to cancel the Thursday one? I don't think we need both. Please confirm.

Subject: OTTP -- history re: use of surplus

I think may be a very useful document re: the past – summarizes use of surplus going back to 1990.

I found this document on a website www.mypensionhub.com

The description of the website is below and I think its legit.

“This website houses information to help affiliate pension representatives educate members on plan funding and other key pension matters.

This website is maintained by the Ontario Teachers’ Pension Plan on behalf of a communications working group (CWG) made up of representatives of: l’Association des enseignantes et des enseignants franco-ontariens (AEFO), Elementary Teachers’ Federation of Ontario (ETFO), Ontario English Catholic Teachers’ Association (OECTA), Ontario Secondary School Teachers’ Federation (OSSTF), Ontario Teachers’ Federation (OTF), Ontario Government and Ontario Teachers’ Pension Plan.

Key Funding Decisions.pdf

Key Funding Decisions Since 1990

Plan Funding

The Ontario Teachers' Federation (OTF) and the Ontario government, which jointly sponsor the Ontario Teachers' Pension Plan, must file a funding valuation with the provincial pension regulator at least every three years. A valuation must be filed with assets and liabilities (the cost of future pensions) in balance.

OTF and the Ontario government can file a valuation earlier than required to help manage the plan's funding status.

The following chart shows how OTF and the Ontario government have used surplus funds or resolved funding shortfalls for each valuation filed with the regulator since the inception of the Teachers' pension plan as an independent entity in 1990.

For more information on plan funding, visit the Corporate section of our website at www.otpp.com.

Funding decisions

Year	Valuation status and key decisions
1990	A preliminary unfunded liability of $7.8 billion to be amortized over 40 years by special payments from the Ontario government; basic contribution rate increased to 8% from 7%.
1993	A preliminary $1.5 billion surplus was distributed: $1.2 billion used to reduce government's special payments; $0.3 billion used to offset government cost reductions in the education sector (social contract days).
1996	A preliminary $0.7 billion surplus was distributed: $0.6 billion used to reduce early retirement penalty to 2.5% from 5% for each point short of 90 factor and lower the CPP reduction after age 65 (to 0.68% from 0.7%).
1998	A preliminary $6.8 billion surplus was distributed: $2.2 billion to pay for the 85 factor window from 1998 to 2002 and further lower the CPP reduction to 0.6%; $4.6 billion to reduce the value of special payments owed by the Ontario government. OTF and the Ontario government agree future surplus would be used to eliminate the government's remaining special payments, and the next $6.2 billion surplus would be available to OTF for benefit improvements.

Year	Valuation status and key decisions
1999	A preliminary $3.5 billion surplus was distributed to eliminate government's remaining special payments.
2000	$4.5 billion surplus; no changes to benefits or contribution levels.
2001	A preliminary $6.8 billion surplus was distributed: $6.2 billion to pay for benefit improvements, including a permanent 85 factor; 10-year pension guarantee; reduced pension as early as age 50; lower CPP reduction (to 0.45%); 5-year average Year's Maximum Pensionable Earnings (YMPE) to calculate CPP reduction; pension recalculation based on approximate best-5 salary years for older pensioners; and top-up waived for Long-Term Income Protection (LTIP) contributions. The remaining $76 million was set aside in a contingency reserve to be used by OTF at a later date.
2002	$1.9 billion surplus; no changes to benefits or contribution levels.
2003	$1.5 billion surplus; no changes to benefits or contribution levels. Funding Management Policy adopted by plan sponsors.
2005	A preliminary $6.1 billion shortfall was resolved, leaving plan with a $0.1 billion surplus. Shortfall resolved with special contribution rate increases, totalling 3.1% of base earnings by 2009 for teachers, the Ontario government and other employers. OTF used the $76 million contingency reserve set aside in 2001 to reduce contribution rate increases for members in 2008.
2008	A preliminary $12.7 billion shortfall was resolved with the introduction of conditional inflation protection for pension benefits earned after 2009 and an increase in the basic contribution rate for members and the government to 9% from 8%. Employers agree to make special payments equal to any annual pension increases retirees forgo to a maximum of 50% missed inflation.
2009	A preliminary $2.5 billion shortfall was resolved primarily by assuming a slightly higher long-term rate of return on investments: yield on real-return bonds plus 1.5%, versus real-return bonds plus 1.4%. Other minor changes made to assumptions to reflect recent plan experience.
2011	A preliminary $17.2 billion shortfall was resolved with a 1.1% contribution rate increase (phased in over three years), slightly smaller annual cost-of-living increases for teachers who retired after 2009, and recognition of current contribution rate as the permanent base rate.

Year	Valuation status and key decisions
2012	$9.6 billion preliminary shortfall adjusted to reflect changes in mortality assumptions and impact of two-year freeze on teachers' salaries. 2012 shortfall resolved by making inflation protection for pension credit earned after 2013 fully conditional on plan's funded status and providing slightly smaller pension increases, beginning in 2014, for members who retired after 2009. These changes enabled the plan to assume a slightly higher discount rate. The changes left the plan with a $200 million surplus at Jan. 1, 2012.
2014	$5.1 billion preliminary funding surplus used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided each year since they retired. The surplus funds were also used to raise conditional inflation protection to 60% of the increase in the cost of living for the portion of retirees' pensions earned after 2009. Both changes are effective with January 2015 pension payments.
2015	$6.8 billion preliminary funding surplus used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided each year since they retired. The surplus funds were also used to raise conditional inflation protection for pension credit earned after 2009 to 70% from 60% of the increase in the cost of living. Both changes go into effect in January 2016. In addition, some surplus funds were reserved to help facilitate stability in contribution and benefit levels should a future funding valuation show a decline in assets or increase in pension costs.

Hi Shyrose,

Uros and I are about to leave for our 3pm meeting at QP shortly. I have my access card but we will likely need someone to sign Uros in.

We'll call from security.

Thanks,

Shayan

Subject: Re: Outline of position paper proposed allocations Oct 7.docx

Hi Nadine,

In respect of one of the sections discussing the differences between the funding valuations/OTPP financial statements and the Province's financial statements, I think it would be helpful if I could get our actuary to read through the write up, particularly in respect of the funding valuation differences. Currently the SOW does not list our actuary as someone performing work (to date all my conversations with him have been high level and theoretical). However, I would like to get him added to the SOW as vendor personnel.

Individual's Legal Name

Individual's Role and Experience Level

Service Category

Per Diem Rate

Mario Chassé

General Consultant (Actuarial), Level 2

Service Category 2

See “charges on a per diem rate basis”

I can ask him to sign a confidentiality agreement.
What else should be done to ensure that the SOW reflects that he will be providing some work under the contract?

Thanks,
Lucy

Purpose and scope

.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.

.002 In this Section, terms that appear in **bold type** are defined in the glossary of terms.

.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.

.004 If employees and/or retirees are covered by more than one **retirement benefit plan**, then a government needs to determine its obligation separately for each plan.

.005 The standards in this Section are based on the accounting framework recommended in FINANCIAL STATEMENT OBJECTIVES, Section PS 1100, and FINANCIAL STATEMENT PRESENTATION, Section PS 1201. That framework emphasizes the need to account for all liabilities incurred by a government to help legislators, taxpayers, investors and other users of **financial statements** assess: a government's future cash requirements from taxes and other revenues; its ability to meet financial obligations, both short-term and long-term; and its ability to maintain current services and finance new programs. Such assessments are essential when making financial decisions in government and when evaluating those decisions.

.006 Accounting for all of the retirement benefits incurred by governments is

particularly important because many of those governments have accumulated significant liabilities. Many governments have chosen not to set aside funds to meet retirement benefit payments when they become due. Where those liabilities have not been recorded, financial statements do not adequately provide all of the information needed by users to help them assess a government's financial position and results of operations. It is important that financial statements account for a government's liabilities for all retirement benefits to show clearly the extent to which these obligations are to be paid from cash to be raised from future tax and other revenue sources.

.007 The basis for determining obligations for retirement benefits set out in this Section is also appropriate for determining a government's contractual obligations arising from guarantees or commitments to employee retirement benefit plans of other public sector organizations that are not part of the government reporting entity. Such obligations exist, for example, when a provincial government agrees to guarantee defined retirement benefits for employees of local school boards, agrees to guarantee a minimum rate of return on retirement benefit fund assets, or agrees to provide a significant portion of the funds required by a plan sponsor. A careful reading and evaluation of such agreements is necessary to determine the substance of the obligation and whether a **liability**, **contractual obligation** or **contingency** exists that would be reported in a government's financial statements.

The objectives of funding and accounting

.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An **actuarial valuation for funding purposes** is performed to calculate the contributions required to secure the benefits promised.

.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. Accordingly, it is necessary to develop accounting estimates of liabilities for retirement benefits and expenses using an **actuarial cost method** and **actuarial assumptions** that ensure essential information required for fair presentation of financial condition and results of operations can be reported in government financial statements.

.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.

Defined benefit and defined contribution plans

.011 Two types of benefit plans are addressed in this Section — **defined benefit plans** and **defined contribution plans**. A defined benefit plan

is one that specifies either the benefits to be received by employees after retirement or the method for determining those benefits. Generally, the amount and value of the benefits to be paid depend on a number of factors and events. These include how long the employee and any survivors live, how many years of service the employee renders, and the employee's compensation and retirement age. When a government provides benefits under a defined benefit plan, it is at risk with respect to the amount of the benefit that each employee will receive (actuarial risk) and with respect to the investment returns on any assets set aside to pay for the cost of these benefits (investment risk).

.012 When a government provides benefits under a defined contribution plan, it does not assume the actuarial and investment risks inherent in a defined benefit plan. A defined contribution plan (or money purchase plan) is one in which a government's contributions in respect of services rendered by employees are specified. The government is required by the plan to make a specific fixed contribution each period. If that contribution is made, no additional government contributions are required now or in the future for the related service. The employees are at risk. This is generally because the amount of the benefit that will be payable to an employee is dependent upon the funds accumulated for each employee's account and the investment earnings on the accumulated funds.

.013 Because benefit plans are often complex, careful analysis and professional judgment are needed to determine whether the substance of a particular plan makes it a defined benefit or a defined contribution plan.

.014 In some circumstances, a benefit plan may include both defined benefit and defined contribution promises. The plan, for example, may guarantee a basic defined retirement benefit and state that additional benefits, such as inflation protection, will be provided on a defined contribution basis. In such circumstances, a government would determine its obligation for the defined benefit component of the plan as a defined benefit plan and the defined contribution component of the plan as a defined contribution plan. Once the type(s) of promise is identified, the accounting and reporting principles in this Section would be followed accordingly.

Defined benefit pension plans

Liability and expense

.015 Obligations for retirement benefits result from a promise by a government to provide retirement benefits to employees because of retirement in return for their services. The obligations arise as employees render services. Therefore, as employees render services, the value of the retirement benefits attributed to those services would be recorded as a liability and expense as are other forms of current compensation.

.016 *The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date.* [SEPT. 2001]

.017 The components of the **retirement benefit liability** are:

(a) **accrued benefit obligation** including the effects of plan amendments, settlements and curtailments;

(b) **plan assets**, if any; and

(c) unamortized **actuarial gains and losses**.

.018 The cost of retirement benefits promised during the period is comprised of the **retirement benefits expense**, and the **retirement benefits interest expense**.

.019 The components of the retirement benefits expense are:

(a) **current period benefit cost**;

(b) cost of plan amendments incurred during the period;

(c) net actuarial gains or losses recognized in the determination of the cost of a plan amendment in accordance with paragraphs PS 3250.068 and PS 3250.071;

(d) gains and losses arising from plan settlements and curtailments incurred during the period;

(e) amortization of actuarial gains and losses;

(f) the amount recognized as a result of a temporary deviation from the plan, determined in accordance with paragraph PS 3250.073;

(g) the change in a valuation allowance against the carrying amount of an **accrued benefit asset**, determined in accordance with paragraph PS 3250.050; less

(h) employee contributions made during the period.

.020 The retirement benefits interest expense is the net of:

(a) the interest cost on the accrued benefit obligation determined by applying the discount rate determined at the beginning of the period in accordance with paragraph PS 3250.044 to the average value of the accrued benefit obligation for the period; and

(b) the expected return on plan assets for a defined benefit plan, determined by applying the assumed rate of return on plan assets to the average market-related value of assets for the period.

.021 The retirement benefits expense and the retirement benefits interest expense would be disclosed separately in the notes to the financial statements. A separate disclosure is needed to ensure that the amount reported as the retirement benefit expense is not affected by the purely financial decision of a government to fund or not fund the plan.

Actuarial cost methods

.022 Accounting for retirement benefits on the basis of employee services reflects the fact that there is no obligation for an employee when hired and that an obligation for retirement benefits exists as the employee renders service. The accounting task is to determine how to attribute the cost of the total retirement benefits promised to each period of employee service.

.023 For defined benefit plans, there are two main groups of actuarial cost methods. They are **level cost methods** and **accrued benefit methods**. Under the level cost methods, retirement benefit expenses are computed in such a manner as to produce a total current period benefit cost that remains constant, either in absolute dollars or as a percentage

of salary, throughout an employee's service life. However, level cost methods are not recommended for accounting purposes because they do not reflect the cost of benefits earned by employees to the financial statement date.

.024 Under the accrued benefit methods, a distinct unit of retirement benefit is associated with each year of employee service rendered to the financial statement date. The actuarial present value of that unit of benefit is computed separately for the period during which it accrued. These methods are recommended because they reflect more directly the cost of retirement benefits earned by employees to the financial statement date.

.025 *An accrued benefit method should be used to attribute the cost of retirement benefits to the periods of employee service.* [SEPT. 2001]

.026 For certain **flat benefit retirement plans**, benefits vary only with periods of service rendered. For those plans, future salary and wage changes do not enter into the determination of the cost of retirement benefits earned to the financial statement date. For other defined benefit plans, such as **final pay retirement plans**, future salary and wage changes need to be incorporated into the cost of retirement benefits earned to the financial statement date because the benefit promise is based on future salary and wage levels. To estimate those levels, forecasts are needed of future inflation rates and of future salary increases. Similarly, for retirement medical plans, forecasts are needed of medical inflation rates.

.027 Accounting for the effect of future salary and wage changes ensures consistency when determining the present value of the cost of the retirement benefits earned to the financial statement date, i.e., the accrued benefit obligation. Because the discount rate used to determine that obligation includes an inflation component, for consistency the amount of the retirement benefits to be discounted must also include an inflation component. If only the discount rate used to determine the obligation includes an inflation component, then the accrued benefit obligation and expense would be understated significantly.

.028 One accrued benefit method that incorporates the effect of future salary and wage changes and attributes the value of retirement benefits to the years of employee service is the **projected benefit method prorated on services**. Under this method, generally an equal portion of the total estimated benefit, with salary projection for final pay plans and projection of medical inflation for retirement medical plans, is attributed to each year of service. The actuarial present value of the accrued retirement benefits is derived after the benefits are attributed to the years of service up to the financial statement date.

.029 *The projected benefit method prorated on services should be used to attribute the cost of retirement benefits to the periods of employee service.* [SEPT. 2001]

.030 When a retirement plan provides benefits that accrue in a non-uniform manner, the projected benefit method prorated on services may need to be adjusted to reflect the manner in which retirement benefits are earned by employees. For example, a pension plan formula may state that the pension benefit accrues at one percent of salary for the first 15 years and at two percent of salary for the final 20 years. In this circumstance, the prorating of the total estimated benefit to each accounting period would be adjusted to reflect the rates at which pension benefits are earned in that 35-year period.

.031 In some retirement plans, benefits promised in a contractual agreement or in legislation include inflation protection for current and future retirees and for former employees who have **vested** retirement benefits. For those plans, it is necessary to incorporate the impact of inflation protection in the determination of the cost of retirement benefits earned to the financial statement date.

.032 In other retirement plans, regular benefit increases for inflation protection may be provided even when such protection is not promised in a contractual agreement or in legislation. For those plans, careful analysis and professional judgment are needed to determine the substance of a government's obligation. If a regular pattern of benefit increases can be established over a reasonable period, it may be appropriate to incorporate the cost of such inflation protection in the cost of retirement benefits earned to the financial statement date and reported as an accrued benefit obligation.

Asset valuation

.033 The periodic valuation of plan assets is important because, to determine its retirement benefit liability and expense, a government needs to value the assets set aside for the purpose of meeting benefit payments.

.034 Most government plans require contributions from the employees as well as from the sponsoring government. Some governments place those contributions in a separate fund, which invests them in marketable assets. Those contributions and earnings are used to meet benefit payments to current and future retirees.

.035 When determining a government's retirement benefit liability and expense, plan assets would be valued at market-related values. Under this method, plan assets are recorded at market value or they are adjusted to market value over a period not to exceed five years. Values adjusted to market closely approximate current economic value in a manner that can minimize short-term fluctuations. Market-related values would be used because they are objective and verifiable. Once a basis of valuation is chosen it would be applied consistently.

.036 For some assets, such as real estate investments or non-marketable securities, market values are not readily available. For such assets, a method that approximates market can be used. For example, independent appraisals could be obtained, market values of similar properties could be reviewed, or future expected cash flows discounted at a market rate could be determined.

.037 *For a defined benefit plan, plan assets should be valued at market-related values.* [SEPT. 2001]

.038 In some cases governments issue non-marketable securities to their benefit funds on the condition that those securities are held in the fund to maturity. Market-related values for these assets may not be readily determinable. In such cases, non-marketable securities can be valued at cost.

Measurement date

.039 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and

as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Actuarial assumptions

.040 Accounting for retirement benefit obligations of defined benefit plans requires forecasts of future events, such as inflation rates, investment returns, interest rates, wage and salary increases, medical inflation and employee turnover and mortality. Such forecasts form the basis of actuarial assumptions.

.041 Each key actuarial assumption would be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation. The assumptions would take into account the expected long-term experience of the plan and the short-term forecast. Such an approach ensures that the reported accrued benefit obligation and expense recognize the long-term nature of retirement benefit promises as well as the experience of the plan expected in the short term. Assumptions about the long-term future, however, are not to be unduly influenced by the experience expected in the short term. At each actuarial valuation, assumptions need to be reassessed; they would be revised if expectations about the future change. All assumptions are based on the presumption that the plan will continue in effect in the absence of evidence to the contrary.

.042 *Actuarial assumptions should be based on the government's best estimates of expected long-term experience and short-term forecasts.* [SEPT. 2001]

.043 One commonly used approach that meets this standard is the use of streamed rate assumptions. Under the streamed rate approach, the short-term forecast of fund asset earnings, for example, would reflect the rates of return that assets currently held in the fund will earn until their maturity. As those assets mature, assumptions about their expected earnings on reinvestment would move to the expected long-term rate. Similarly, there would be streamed rate assumptions for salary increases.

.044 The actuarial assumptions underlying the valuation of the retirement benefit liability and expense would be internally consistent. For example, when a government determines its discount rates by reference to its plan asset earnings, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the short-term forecast of rates of return on assets currently held in the fund. When a government determines its discount rates by reference to its cost of borrowing, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the specific rates of interest and the periods committed to by the government on the amounts borrowed.

.045 *Actuarial assumptions should be internally consistent.* [SEPT. 2001]

.046 Internally consistent assumptions about future inflation rates are particularly important because of the significant impact those rates have on the reported accrued benefit obligation and related expenses. The same assumptions about future inflation need to be used when forecasting future rates of return on fund assets, future costs of borrowing and future salary and wage increases, and when determining the appropriate discount rates. In addition, methods of developing actuarial assumptions need to be consistent over time.

.047 Measurement of the cost of future medical benefits requires assumptions about the level and frequency of future claims and the cost of meeting those claims. The level and frequency of claims are particularly sensitive to the age of employees (and their beneficiaries) and may be sensitive to other factors, such as gender and geographical location. A government estimates future medical costs on the basis of historical data about its own experience, supplemented when necessary by historical data from other entities, insurance enterprises, medical providers or other sources. Historical data is adjusted to reflect any differences in demographic mix of the population or when there is reliable evidence that historical trends will not continue.

.048 Certain medical claims may be covered by governmental programs under existing law or by other providers of health care benefits. Benefit coverage by governmental programs is assumed to continue as provided by the present law and by other providers pursuant to their present plans.

.049 When making assumptions about future events, a government would obtain expert assistance from internal or external sources. One source of expert assistance is the **actuary** carrying out the actuarial computations. Periodic assessments are needed to ensure that the assumptions continue to be relevant.

Limit on the carrying amount of an accrued benefit asset

.050 *An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.* [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the **adjusted benefit asset**. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the **expected future**

benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Actuarial gains and losses

.060 The periodic actuarial valuation of a government's obligation for

retirement benefits will usually determine that adjustments are required due to experience different from that assumed or to changes in actuarial assumptions. Adjustments are needed when the actual experience of the benefit plan is different than that expected. Adjustments due to changes in actuarial assumptions are needed when a government believes revised assumptions are necessary to reflect a relatively permanent change in expected experience or to reflect new information. Adjustments are inevitable because the actuarial valuation requires ongoing forecasts of uncertain future events.

.061 Actuarial gains and losses would be amortized over a reasonable future period because of their tentative nature and because further adjustments will likely be required in the future. A reasonable future period is the **expected average remaining service life of the related employee group**. Amortization may commence in the period following the determination of the adjustment. Actuarial gains and losses would be determined on a market value basis or a basis adjusted to market value, consistent with paragraph PS 3250.035.

.062 *Except in the circumstances in paragraph* PS 3250.068*,* PS 3250.071 *and* PS 3250.078*, actuarial gains and losses should be amortized to the liability or asset and the related expense in a systematic and rational manner over the expected average remaining service life of the related employee group.* [SEPT. 2001]

Prior period service costs arising from plan amendments

.063 A plan amendment occurs when a benefit plan is changed or initiated. In such circumstances, retroactive credit may be given to employees for services rendered previously and, as a result, **prior period service costs** are incurred. For example, if the benefit formula is changed from one percent to two percent of final pay per year of service, the extra one percent may be credited to employees for years of service prior to the change.

.064 Plan amendments include the inception of a new plan that grants retroactive credit for past service, an increase in benefits related to past service for active employees, or an increase in benefits for former employees already retired.

.065 The cost of plan amendments related to prior period employee services would be accounted for as an expense in the period of the plan amendment. This method is recommended because it ensures that, when a government provides retroactive credit to employees for past services, legislators, taxpayers and investors are provided a full accounting of the cost of that decision in the period the decision is made. Such an accounting ensures that the effect of that decision, as it relates to the cost of prior period services, is recognized as an expense in the period a liability is incurred. It also provides information needed to assess the extent to which future revenues are required by a government to pay for past transactions because all retirement benefit liabilities are accounted for in the financial statements.

.066 *The cost of plan amendments related to prior period employee services should be accounted for in the period of the plan amendment.* [SEPT. 2001]

.067 While all plan amendments related to prior period employee services are accounted for in the period of the plan amendment, the existence of the plan amendment may affect the recognition of actuarial gains, as

described in paragraph PS 3250.068.

.068 *In the period of a plan amendment related to prior period employee services that results in an increase in the accrued benefit obligation, if net unamortized actuarial gains exist, these should be recognized immediately, to a maximum of the prior period service cost, and offset against the prior period service cost in the statement of operations, with separate disclosure in the notes.* [SEPT. 2001]

.069 When a government makes a plan amendment related to prior period employee services and has net unamortized actuarial gains, it would recognize these net unamortized actuarial gains immediately in the statement of operations, to a maximum of the prior period service cost. Recognition would be applied first to the oldest net unamortized actuarial gains within a plan. These actuarial gains would be deducted from the prior period service cost in the statement of operations. The notes to the financial statements would disclose this information.

.070 A plan amendment may decrease, rather than increase, a government's accrued benefit obligation. A decrease in the accrued benefit obligation would be accounted for immediately in the period of the plan amendment. The existence of the plan amendment may affect the recognition of actuarial losses as described in paragraph PS 3250.071.

.071 *In the period of a plan amendment related to prior period employee services that results in a decrease in the accrued benefit obligation, if net unamortized actuarial losses exist, these should be recognized immediately, to a maximum of the decrease in the accrued benefit obligation. The net amount would be recognized in the statement of operations, with separate disclosure in the notes.* [SEPT. 2001]

.072 In the period of a plan amendment that decreases the accrued benefit obligation any net unamortized actuarial losses would be recognized immediately to a maximum of the decrease in the accrued benefit obligation. Recognition would be applied first to the oldest unamortized net actuarial losses within a plan.

Temporary deviation from the benefit plan

.073 A government may decide to deviate temporarily from the provisions of a benefit plan to increase or decrease the government's share of the benefit costs incurred in the current period or past periods. For example, a government may grant an employee contribution holiday as a temporary deviation from the normal terms of the benefit plan. A government would look to the substance of the temporary deviation to determine the most appropriate accounting.

Plan settlements and curtailments

.074 A **plan settlement** and a partial plan settlement consist of the discharge, in whole or in part, of a government's obligation existing under a retirement benefit plan. They are irrevocable events by which a government or a plan is relieved of the primary obligation to pay all or some of the benefits promised and is relieved of significant risks in relation to the obligation or the assets used to make settlement. When a full plan settlement occurs, a future actuarial valuation is not required because the government no longer has an obligation related to that plan. Because the cost of discharging the obligation may differ from the related liability recognized previously, a gain or loss may arise.

.075 A **plan curtailment** is an event that reduces significantly the expected

years of future service of present employees or eliminates, for a significant number of employees, the accrual of defined benefits for some or all of their future services. Plan curtailments include termination of a significant number of employees earlier than expected which may involve eliminating a government organization or program; they also include suspension of a plan so that a significant number of employees do not earn additional defined benefits for future services. When a plan curtailment occurs, future actuarial valuations are required because, even though the government's future obligations have been reduced, the government continues to have an obligation related to that plan.

.076 Generally, the act of settling or curtailing a retirement plan will result in a gain or loss because the actual cost of the settlement or curtailment will differ from the obligation recorded previously. Gains and losses determined upon a plan settlement or curtailment would be accounted for in the statement of operations in the period of the settlement or curtailment. This approach is recommended for plan settlements because the amount of the liability is known, it relates to services previously provided and it has been settled. Similarly, if a government settles only a part of a retirement plan obligation, the related gains and losses would be recognized immediately. This approach is also recommended for plan curtailments because the retirement benefit obligation is known with greater certainty, it relates to past employee services and the employees might no longer work for the government. For plan curtailments, the portion of the total gains and losses that would be accounted for would relate to the employees affected by the curtailment.

.077 In some circumstances, there will be unamortized actuarial gains and losses incurred prior to the plan settlement or curtailment. The net unamortized balances related to the obligation settled or to the employees affected by the curtailment would be recognized in the period of settlement or curtailment, and is included as part of the gain or loss arising on settlement or curtailment.

.078 *Gains and losses determined upon a plan settlement or curtailment should be accounted for in the period of the settlement or curtailment.* [SEPT. 2001]

Joint defined benefit plans

.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. **Joint defined benefit plans** are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets

the definition of a joint defined benefit plan.

.081 *When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]

.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Disclosure

.083 The notes and schedules integral to the financial statements would disclose the methods and judgments applied in accounting for accrued benefit obligations and expenses. Full disclosure is particularly important for retirement obligations because the measurements depend heavily upon judgments rather than objective evidence.

.084 *Financial statements should disclose:*

(a) a general description of retirement benefit plans, benefit formulae and funding policy, including a description of significant changes to retirement benefit plans during the period;

(b) the accrued benefit obligation at the end of the period, as determined by the actuarial valuation;

(c) the market value of plan assets at the beginning and the end of the period and, if different, the market-related value of plan assets at the beginning and the end of the period;

(d) the amount of retirement benefit liability or accrued benefit asset at the end of the period, indicating separately the amount of any valuation allowance determined in accordance with paragraph PS 3250.050*.*

(e) unamortized actuarial gains and losses and the periods of amortization;

(f) current period benefit cost;

(g) cost of plan amendments incurred during the period;

(h) net actuarial gains or losses recognized in the determination of the cost of plan amendments in accordance with paragraphs PS 3250.068 *and* PS 3250.071*;*

(i) other gains and losses on accrued benefit obligations arising during the period;

(j) other gains and losses on plan assets arising during the period;

(k) gains and losses arising from plan settlements and curtailments incurred during the period;

(l) amortization of actuarial gains and losses reflected in the current

year expense;

(m) the amount recognized as a result of a temporary deviation from the plan, determined in accordance with paragraph PS 3250.073*;*

(n) the change in a valuation allowance determined in accordance with paragraph PS 3250.050*;*

(o) the amount of contributions by employees during the period;

(p) the components of the retirement benefits interest expense for the period;

(q) the amount of contributions by the government during the period;

(r) the amount of benefits paid during the period;

(s) the expected return and actual return on plan assets during the period;

(t) assumptions about long-term inflation rates, expected rate of return on plan assets, assumed health care cost trends, rate of compensation increase (for pay-related plans) and discount rate; and

(u) the date of the most recent actuarial valuation performed for accounting purposes. [SEPT. 2001]

.085 Some of this disclosure information may be presented in reconciliations of the beginning and ending balances of the accrued benefit obligation and plan assets for the period, taking into account any unamortized actuarial gains or losses existing at the financial statement date.

.086 A reconciliation of the beginning and ending balances of the accrued benefit obligation would include the items disclosed in accordance with paragraph PS 3250.084(b), (i), (k) and (o)-(r). A reconciliation of the beginning and ending balance of plan assets for the period would include the items disclosed in accordance with paragraph PS 3250.084(c), (f)-(g), (j)-(k), (m), (o)-(p) and (r).

.087 *A government should provide these disclosures separately for plans that provide pension benefits and plans that provide retirement benefits other than pensions.* [SEPT. 2001]

.088 *A government that has aggregated disclosures for its defined benefit pension plans, or for its other defined benefit retirement plans, should provide the disclosures separately for the aggregate of plans with accrued benefit obligations in excess of plan assets.* [SEPT. 2001]

.089 The level of detail disclosed by governments would reflect the highly aggregated nature of financial statements. In deciding the level of detail to disclose, governments would consider the usefulness of the information to the reader in assessing the nature of, and the costs associated with, a government's retirement benefit plans. The level of disclosure would also consider the sensitivity of the information in relation to the government's financial position.

.090 The description of the significant benefit plans and benefit formulae might include the plan surplus or deficit at the end of the period, demographic information about the participants and whether the benefit obligation includes the cost of inflation protection. The description of the funding policy might include the major types of plan assets and the basis of their valuation. The extent to which the fund holds securities of the

sponsoring government would normally be disclosed.

.091 Governments are encouraged to provide additional disclosures about the significant actuarial assumptions underlying the reported amount of a government's accrued benefit obligation when the disclosures will enhance the financial statement users' understanding of that amount.

.092 A government may also choose to disclose a forecast of the cash required to pay its retirement benefit obligations in the short term, the medium term and the long term. If provided, such a forecast would include the amounts required in the next five years, and thereafter.

.093 *For joint defined benefit plans, in addition to the disclosures required in paragraphs* PS 3250.084 *government financial statements should disclose:*

(a) the significant accounting policies for joint plans;

(b) a description of the unique nature and terms of any joint plans;

(c) the government's share of the risks and benefits under the plans; and

(d) the total financial status of any joint plans. [SEPT. 2001]

.094 Users of government financial statements need an appreciation of the magnitude of the retirement benefit plans that governments jointly sponsor and the government's responsibility under the terms of any joint plans.

Defined contribution plans

.095 When a government establishes a defined contribution plan, it does not assume the actuarial and investment risks inherent in a defined benefit plan. The government typically agrees to contribute a certain amount in each period for services rendered by the employees and has no responsibility to make any further contributions. It is the employees who are at risk. This is generally because the amount of the benefit that will be payable to them is entirely dependent upon the amount of funds accumulated for each employee's account and the economic conditions prevailing at the retirement date (see paragraphs PS 3250.011-.014 for a further discussion of defined contribution plans).

Liability and expense

.096 For the most part, defined contribution plans do not present particular accounting problems. If the formula calls for government contributions on a regular predetermined basis and if those contributions have been made, then the expense recorded in the statement of operations is simply the required contribution of the accounting period. If the contributions have not been made as required, the retirement benefit expenses would include interest accrued during the period on any outstanding amounts payable to the fund. The liability for retirement benefits recorded in the statement of financial position would be the difference between the amount the government was required to contribute and the amount that was contributed to the financial statement date, including accumulated interest on any outstanding amounts payable to the fund at the financial statement date.

.097 *For defined contribution plans:*

(a) *the liability for retirement benefits should be the difference between the amount a government was required to contribute and the amount that was contributed by the financial statement date including accumulated interest on any outstanding amounts payable to the fund at the financial statement date;*

(b) *the retirement benefit liability should be accounted for in the statement of financial position;*

(c) *the expense for retirement benefits should be the amount of required contributions provided for employees' services rendered in the period. Interest accrued during the period on any outstanding amounts payable to the fund should be accounted for as a retirement benefit interest expense; and*

(d) *the retirement benefit expense and the retirement benefit interest expense should be accounted for in the statement of operations.* [SEPT. 2001]

.098 When a defined contribution plan is amended, a government may agree to make contributions in respect of past service. The cost of current and expected future years' contributions related to a past service plan amendment is recognized immediately in the period the decision is made to amend the plan.

.099 *For a defined contribution plan, the cost of current and expected future years' contributions related to a past service plan amendment should be accounted for in the period of the plan amendment.* [SEPT. 2001]

Disclosure

.100 *For defined contribution plans, financial statements should disclose:*

(a) *a general description of benefit plans, contribution formulae and funding policy;*

(b) *the expense recognized for the period; and*

(c) *a description of significant changes to benefit plans during the period.* [SEPT. 2001]

.101 The description of the significant retirement benefit plans and contribution formulae might include demographic information about the participants.

.102 The description of the funding policy might also include: the employee and government contributions during the accounting period; the major types of plan assets, the total amounts and the basis of their valuation; and the extent to which the fund holds securities of the sponsoring government.

.103 The description of significant changes to the plan or to the financing of the plan might also include which employee group(s) is affected and a description of the impact of such changes on current and future retirement benefit liabilities and related expenses.

.104 The level of detail disclosed by governments would reflect the highly aggregated nature of financial statements. In deciding the level of detail to disclose, governments would consider the usefulness of the information to the reader in assessing the nature of, and the costs associated with, a government's retirement benefit plans. The level of disclosure would also consider the sensitivity of the information in

relation to the government's financial position.

Multiemployer and multiple-employer benefit plans

Multiemployer plans

.105 A **multiemployer plan** is a defined benefit plan to which two or more governments or government organizations contribute, usually pursuant to legislation or one or more collective bargaining agreements. The main distinguishing characteristic of a multiemployer plan is that the contributions by one participating entity are not segregated in a separate account or restricted to provide benefits only to employees of the entity and thus may be used to provide benefits to employees of all participating entities.

.106 The federal and most provincial governments sponsor defined benefit plans in which many public sector organizations participate. Many local governments participate in such multiemployer plans. When benefits are provided to employees through a multiemployer plan, the amount for which an individual government is obligated under the plan may not be quantified. Generally, a contribution rate is established for each period to ensure that the plan assets are adequate to cover the plan's future benefit payments.

.107 When a government sponsors a defined benefit multiemployer retirement benefit plan, it has the responsibility to ensure that the defined benefits promised to employees are met. In that circumstance the sponsoring government is at risk for future experience gains or losses and would account for its related obligation for the entire multiemployer plan as a defined benefit plan.

.108 *When a government sponsors a defined benefit multiemployer retirement plan, the government should follow the standards for defined benefit plans in accounting for its obligation for the plan.* [SEPT. 2001]

.109 Although a multiemployer plan may have the characteristics of a defined benefit plan, sufficient information to follow the standards for defined benefit plans is normally not available for each participating employer other than the sponsoring government. For this reason, a multiemployer plan is accounted for by each participating government following the standards for defined contribution plans.

.110 *When benefits are provided to employees through a multiemployer retirement benefit plan, each entity participating in the plan, other than the sponsoring government, should follow the standards for defined contribution plans.* [SEPT. 2001]

.111 *The government should disclose any available information about any surplus or deficit in a multiemployer plan, the basis used to determine the surplus or deficit and the implications, if any, for the government.* [SEPT. 2001]

Multiple-employer plans

.112 A **multiple-employer plan** is a defined benefit plan maintained by more than one entity that is not a multiemployer plan. In contrast to multiemployer plans, a multiple-employer plan maintains separate accounts for each entity so that contributions provide benefits only for employees of the contributing entity. In addition, multiple-employer plans are intended to allow participating entities, commonly in the same

industry, to pool their plan assets for investment purposes and to reduce the cost of plan administration. Multiple-employer plans may have features that allow participating entities to have different benefit formulae, with the entity's contributions to the plan based on the benefit formula selected by the entity.

.113 When benefits are provided to employees through a defined benefit multiple-employer plan, each government in the plan follows the standards on defined benefit plans and bases its accounting for plan assets on its proportionate interest in the assets of the multiple-employer plan.

.114 *When benefits are provided to employees through a defined benefit multiple-employer retirement plan, each entity in the plan should follow the standards for defined benefit plans.* [SEPT. 2001]

Transitional provisions

.115 When implementing this Section, governments may have an initial unrecorded liability.

.116 The initial unrecorded liability would be accounted for as a change in accounting policy applied retroactively. This method is recommended because it ensures that all liabilities incurred to the financial statement date are accounted for in the statement of financial position. Such an accounting is needed to help users of financial statements assess the impact those liabilities may have on:

(a) a government's future cash requirements from revenues and other sources;

(b) a government's ability to meet its financial obligations, both short-term and long-term; and

(c) a government's ability to maintain the level and quality of its services and to finance new programs.

.117 *This Section should be accounted for as a change in accounting policy applied retroactively.* [SEPT. 2001]

Timing of actuarial valuations

.118 Most governments do not have full actuarial valuations performed annually because of the magnitude of the information gathering and processing required. **Actuarial valuations for accounting purposes** would generally be done once every three years because of the financial importance of retirement benefit obligations. They would be done as close to the related financial statement date as is practical. In the years between valuations, an extrapolation would be used to compute the expected accrued benefit obligation and related expenses. Each year the government reviews matters such as changes to the plan, the actuarial assumptions, occurrence of settlements and curtailments, changes to the employee group and the rate of return on plan assets, and determines whether such matters necessitate any adjustments to the extrapolations. When the effect of any change is significant, a new valuation may be necessary.

.119 In the period a government implements this Section, it would need to assess whether a new actuarial valuation of its retirement benefit obligations is needed. A new valuation would be needed, for example, if the prior one is not current or is not prepared in accordance with this

Section.

Glossary

An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).

An **accrued benefit obligation** is the value of retirement benefits attributed to services rendered by employees and former employees to the financial statement date.

Actuarial assumptions are made as to the occurrence of a future event that will affect retirement benefit costs and obligations. They include assumptions about such matters as mortality, withdrawal, disability and retirement and about changes in compensation, interest on obligations and investment earnings.

Actuarial cost methods are used to determine the cost of providing retirement benefits and to allocate that cost to specific time periods. The two main families of actuarial valuation methods are:

Accrued benefit methods (also known as unit credit or single premium actuarial cost methods) — Under these methods a distinct unit of retirement benefit is associated with each year of credited service and the actuarial present value of that unit of benefit is separately computed for the period during which it is presumed to have accrued. Salary projection, when appropriate, is required.

Projected benefit method prorated on services — Under this accrued benefit method, generally an equal portion of the total estimated benefit (i.e., with salary projection, when appropriate) is attributed to each year of service. The actuarial present value of the accrued retirement benefits is derived after the benefits are attributed to the years of service up to the date of determination.

Level cost methods — Under these methods the retirement benefit cost assigned to any period is either the same dollar amount or the same percentage of compensation as any other period, and is a portion of the cost of the total prospective benefits of an employee group, either in absolute dollars or as a percentage of salary. (Entry age, attained age and aggregate actuarial cost methods are included in this family of methods.)

Actuarial gains and losses are changes in the value of the accrued benefit obligation and the plan assets resulting from:

(a) experience different from that assumed; or

(b) changes in an actuarial assumption.

An **actuarial valuation for accounting purposes** is an assessment of the financial status of a benefit plan. It consists of the valuation of assets held by the plan and calculation of the actuarial present value of benefits to be paid under the plan. The valuation provides the information needed to determine the retirement benefit liability and related expenses in accordance with this Section.

An **actuarial valuation for funding purposes** is an assessment of the financial status of a benefit plan. It consists of the valuation of assets held to discharge the benefit liability and calculation of the actuarial present value of benefits to be paid under the plan. The valuation results in a calculation of the required future contributions and a determination of any gains or losses since the last valuation.

An **actuary** is a Fellow of the Canadian Institute of Actuaries.

An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.

A **contingency** is the result of an existing condition or situation involving uncertainty that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.

Contractual obligations are obligations of a government to others that will become liabilities when the terms of those contracts or agreements are met.

The **current period benefit cost** is the actuarial present value of benefits attributed to services rendered by employees in the period.

A **defined benefit plan** specifies either the benefits to be received by employees after retirement or the method for determining those benefits. The most commonly used defined benefit plans are:

Final pay plan — Bases benefits on an employee's length of service and compensation over a specified number of years (usually the years of an employee's highest earnings).

Flat benefit plan — Provides a specified benefit for each year of service rendered; the benefit earned in each period is usually fixed and determinable under the terms of the plan and the amount of benefits to be received varies only with the years of service rendered.

A **defined contribution plan** is one in which the employer's contributions are fixed, usually as a percentage of compensation, and allocated to specific individuals. The retirement benefit for each employee is the amount that can be provided at retirement based on the accumulated contributions made on that individual's behalf and investment earnings on those contributions.

The **expected average remaining service life (EARSL) of the related employee group** is the total number of years of future services expected to be rendered by that group divided by the number of employees in the group. The calculation of expected future services considers population decrements based on the actuarial assumptions but is not weighted by benefits or compensation.

The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Financial statements are summary financial statements published by a government that report on the financial position and changes in financial position of the government reporting entity. Such statements present aggregated information and serve as a means by which a government demonstrates its accountability for the financial affairs and resources entrusted to it.

A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Liabilities are present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits.

A **multiemployer plan** is a defined benefit plan to which two or more governments or government organizations contribute, usually pursuant to legislation or one or more collective bargaining agreements. The main distinguishing characteristic of a multiemployer plan is that the contributions by one participating entity are not segregated in a separate account or restricted to provide benefits only to employees of the entity and, thus may be used to provide benefits to employees of all participating entities.

A **multiple-employer plan** is a defined benefit plan maintained by more than one entity that is not a multiemployer plan. In contrast to multiemployer plans, a multiple-employer plan maintains separate accounts for each entity so that contributions provide benefits only for employees of the contributing entity. In addition, multiple-employer plans are intended to allow participating entities, commonly in the same industry, to pool their plan assets for investment purposes and to reduce the cost of plan administration. Multiple-employer plans may have features that allow participating entities to have different benefit formulae, with the entity's contributions to the plan based on the benefit

formula selected by the entity.

A **plan asset** is an asset segregated and restricted in a trust or other legal entity separate from the reporting government to provide for retirement benefits under the following conditions:

(a) the assets in the separate entity are to be used only to settle the related accrued benefit obligation, are not available to the government's own creditors, and either cannot be returned to the government or can be returned to the government only if the remaining assets of the trust are sufficient to meet the plan's obligations; and

(b) to the extent that sufficient assets are in the separate entity, the government will have no obligation to pay the related retirement benefits directly.

For purposes of this Section, plan assets do not include amounts held by the government and not yet paid into the trust or other legal entity.

A **plan curtailment** occurs when the expected years of future service to be rendered by the existing employee group are reduced significantly or when benefits will not be earned by employees for some or all future periods.

A **plan settlement** occurs when an employer legally discharges the obligation for accrued retirement benefits either by transferring assets directly to plan participants in exchange for their rights to retirement benefits or by purchasing annuity contracts in which a third party unconditionally undertakes to pay all accrued retirement benefits.

A **prior period service cost** is the increase in the accrued benefit obligation associated with past service benefit improvements.

The **retirement benefit expense** is the cost of the retirement benefits promised during the period in exchange for services rendered during the period.

The **retirement benefit interest expense** is the cost of financing an unfunded retirement benefit obligation during the period.

The **retirement benefit liability** is the amount of any liability recognized on a government's statement of financial position in respect of retirement benefits. It is the sum of the current and prior years' benefits expenses less the government's accumulated cash contributions.

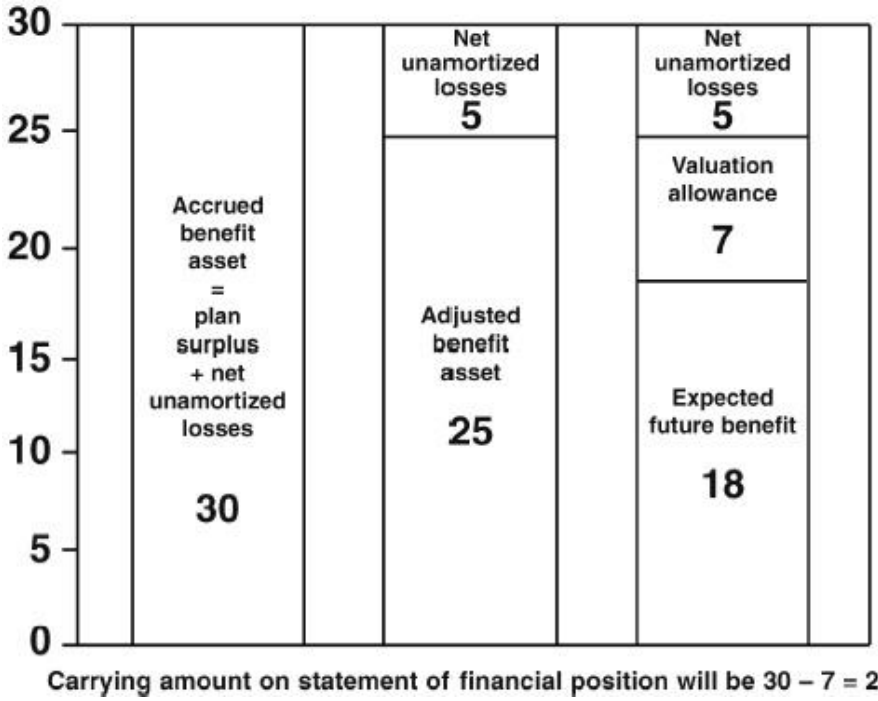
A **retirement benefit plan** is any arrangement (contractual or otherwise) by which a program is established to provide retirement income and other benefits to employees and/or retirees.

Retirement benefits are benefits expected to be provided after retirement to employees and their beneficiaries. These benefits include pension income, health care benefits, life insurance, and other miscellaneous benefits provided to employees after retirement.

Vesting is the recognition of the employees' rights to receive retirement benefits that are no longer conditional on the employees remaining in the service of the employer.

Appendix A — Limit on accrued benefit asset

Limit on accrued benefit asset



The carrying amount on the statement of financial position would be the accrued benefit asset of $30 less the valuation allowance of $7 for an amount of $23.

Appendix B — Illustrative examples

ILLUSTRATIVE EXAMPLES

The following examples have been prepared by CPA Canada staff to illustrate how the standards in Section PS 3250 might be implemented.

The examples are illustrative only and matters of principle relating to particular situations should be decided in the context of the Section. They are not intended to indicate preferred formats nor to prescribe standardized note disclosure, as variations in format and wording will be necessary to meet the requirements of differing circumstances.

For ease of presentation, selections are made from accounting alternatives permitted by the Section.

Example 1 — Defined benefit pension plan, assuming a separate pension fund is maintained

Example 2 — Defined benefit plan for retirement benefits other than pensions, assuming a separate fund is not maintained

Example 1 — Defined benefit pension plan, assuming a separate pension fund is maintained

The government sponsors contributory defined benefit pension plans for substantially all of its employees and for members of its Legislature. There are three main plans — the Public Service Plan, the Provincial Judges' Plan and the Elected Representatives' Plan. The Public Service and the Provincial Judges' plans provide for pensions equal to 1.5 percent of the average of the five highest years' salary for each year of service to a maximum of 35 years. The Elected Representatives' Plan provides for

pensions equal to four percent of the average of five years' session indemnities for each year of service to a maximum of 15 years. The plans do not provide inflation protection. The average age of the 45,000 active employees is 42. There are 5,000 former employees who are entitled to deferred pension benefits and 11,000 retirees now receiving benefits.

Each year employees contribute seven percent of their salary to a separate pension fund and the government contributes an equal amount. While the government and employees are required to contribute equal amounts into the pension fund, the government retains the full risk of the accrued benefit obligation. The pension fund invests monies from the contributions in securities of organizations external to the government reporting entity as well as investing in some non-marketable bonds of the government.

At the beginning of fiscal year 20X1, an actuarial valuation of the government's employee pension obligations was done for accounting purposes using the projected benefit method prorated on services. The liability for pensions recorded in the statement of financial position was $400 million. For purposes of this example it is assumed that there were no unamortized actuarial gains or losses at that time.

Key actuarial assumptions used in the valuation were based on the government's best estimates. Those assumptions involve forecasts of expected future inflation rates, investment returns, wage and salary increases, and employee turnover and mortality. A second actuarial valuation for accounting purposes was performed at the end of fiscal year 20X3. During the second valuation, the actuarial assumptions included in the first one were reviewed and no changes were considered necessary.

During fiscal 20X4, a plan amendment was made to the Public Service Plan increasing the benefits from 1.5 percent to two percent of the average of the five highest years' salary for each year of service to a maximum of 35 years. The plan amendment was effective March 31, 20X4 and relates to both future and past services. The government is responsible for funding the pension liability of $25 million related to past services over the next 12 years. The increase in current period benefit costs due to rendering of service for fiscal 20X5 was $1.5 million.

	April 1, 20X0	March 31, 20X3
Accrued benefit obligation	$1.5 billion	$2.2 billion
Pension fund asset	$1.1 billion	$1.8 billion
Pension liability recorded in the statement of financial position	$ .4 billion	$ .4 billion
	========	========
Expected average remaining service life of related employee groups (EARSL)		12 years
Plan amendment March 31, 20X4		$25,000

Expected current period benefit cost:		
20X1	$200 million	
20X2	$220 million	
20X3	$240 million	
20X4		$240 million
20X5		$250 million
20X5 related to plan amendment		$1.5 million
20X6		$260 million

Expected rates of return	8%
Expected salary escalations	5%
Expected inflation rates	3%

The following amounts related to other pension experience incurred throughout the period:

($ millions)	20X1	20X2	20X3	20X4
Employee funding contributions	110	115	120	126
Government funding contributions:				
— related to current service	110	115	120	126
Benefit payments to retirees	105	109	115	119

Exhibit I — Interest during the year on the average pension liability outstanding during the year

($ thousands)	20X1	20X2	20X3	20X4
Interest on expected average accrued benefit obligation:				
Accrued benefit obligation — opening balance (a)	1,500,000	1,718,800	1,971,744	2,200,000
Add: Current period benefit cost (b)	100,000	110,000	120,000	120,000
Deduct: Benefit payments (b)	(52,500)	(54,500)	(57,500)	(59,500)
Average accrued benefit obligation	1,547,500	1,774,300	2,034,244	2,260,500
Interest at 8% on average accrued benefit obligation	123,800	141,944	162,740	180,840

Expected earnings on average pension fund assets:				
Pension fund assets — opening balance (a)	1,100,000	1,417,600	1,598,048	1,800,000
Add: Employee and government funding contributions (b)	110,000	115,000	120,000	126,000
Deduct: Benefit payments (b)	(52,500)	(54,500)	(57,500)	(59,500)
Average pension fund assets	1,157,500	1,478,100	1,660,548	1,866,500
Expected earnings on average pension fund assets at 8%	92,600	118,248	132,844	149,320
Total interest during the period on the average pension liability outstanding during the period (c)	31,200	23,696	29,896	31,520

(a) In the period of an actuarial valuation, the opening balance of the accrued benefit obligation is the actuarially determined amounts (opening balances 20X1 and 20X4). In the periods between valuations (20X2 and 20X3), the opening balance is equal to the expected closing balance for the previous year as determined in Exhibit II. The opening balance of pension fund assets is the actual amount reported in the financial records of the fund.

(b) Accrued, or assumed to take place, evenly throughout the year, therefore interest is accrued on one-half of the total.

(c) Interest during the year on average pension liability outstanding during the year = 8% of [(average accrued benefit obligation) – (average pension fund assets)].

Exhibit II — Expected closing balance of accrued benefit obligation

($ thousands)	20X1	20X2	20X3	20X4
Accrued benefit obligation — opening balance	1,500,000	1,718,800	1,971,744	2,200,000
Add: Current period benefit cost	200,000	220,000	240,000	240,000
Increase due to plan amendment	—	—	—	25,000
Interest accrued (Exhibit I)	123,800	141,944	162,740	180,840
Deduct: Benefit payments	(105,000)	(109,000)	(115,000)	(119,000)
Expected closing balance	1,718,800	1,971,744	2,259,484	2,526,840

Exhibit III — Expected closing balance of pension fund

assets

($ thousands)	20X1	20X2	20X3	20X4
Pension fund assets — opening balance (actual)	1,100,000	1,417,600	1,598,048	1,800,000
Add: Employee and government funding and contributions	220,000	230,000	240,000	252,000
Expected earnings (Exhibit I)	92,600	118,248	132,844	149,320
Deduct: Benefit payments	(105,000)	(109,000)	(115,000)	(119,000)
Expected closing balance	1,307,600	1,656,848	1,855,892	2,082,320

Exhibit IV — Amortization of actuarial gains / losses on accrued benefit obligation

($ thousands)	20X1	20X2	20X3	20X4
Expected closing balance of accrued benefit obligation at March 31 (Exhibit II)	N/A	N/A	2,259,484	N/A
Actual accrued benefit obligation (per the March 31, 20X3 actuarial valuation)			2,200,000	
Actuarial gain			59,484	
EARSL			12 years	
Annual amortization over EARSL			4,957	

(a) A straight-line method is used to amortize actuarial gains and losses over the expected average remaining service life of the related employee groups. Amortization commences in the year following the effective date of the related actuarial valuation.

Exhibit V — Amortization of actuarial gains / losses on pension fund asset earnings

($ thousands)	20X1	20X2	20X3	20X4
Expected closing balance of pension fund assets at March 31 (Exhibit III)	1,307,600	1,656,848	1,855,892	2,082,320
Actual pension fund assets	1,417,600	1,598,048	1,800,000	2,142,320
Actuarial gain (loss)	110,000	(58,800)	(55,892)	60,000
EARSL	12 years	12 years	12 years	12 years
Annual amortization over EARSL	9,167	(4,900)	(4,658)	5,000

Exhibit VI — Unamortized actuarial gains and losses

($ thousands)	20X1	20X2	20X3	20X4
Unamortized actuarial gains and losses — opening balance	—	110,000	42,033	41,358
Actuarial gains (losses) due to:				
— accrued benefit obligation (Exhibit IV)	—	—	59,484	—
— earnings on pension fund assets (Exhibit V)	110,000	(58,800)	(55,892)	60,000
Amortization recorded during the year:				
— accrued benefit obligation (Exhibit IV)	—	—	—	(4,957)
— earnings on pension fund assets (Exhibit V)	—	(9,167)	(4,267)	391
— recognition of net unamortized actuarial gains as an offset to prior period service cost (a)	—	—	—	(25,000)
Unamortized actuarial gains and losses — closing balance	110,000	42,033	41,358	71,792

(a) When the cost of a plan amendment that improves a benefit related to prior service is offset against net actuarial gains, the cost is offset first against the oldest gains. Additionally, it is only offset against gains in the Public Service Plan.

Exhibit VII — Liability recorded in the statement of financial position

($ thousands)	20X1	20X2	20X3	20X4
Accrued benefit obligation — closing balance (a) (Exhibit II)	1,718,800	1,971,744	2,200,000	2,526,840
Deduct: Pension fund assets — closing balance (Exhibit III)	(1,417,600)	(1,598,048)	(1,800,000)	(2,142,320)
Unamortized actuarial gains / losses (Exhibit VI)	110,000	42,033	41,358	71,792
Pension liability	411,200	415,729	441,358	456,312

(a) In the period of an actuarial valuation, this is the actuarially determined amount (closing balance 20X3). In the periods between valuations, this is an expected closing balance.

Exhibit VIII — Expenses recorded in the statement of

operations

($ thousands)	20X1	20X2	20X3	20X4
Pension expense:				
Current period benefit cost	200,000	220,000	240,000	240,000
Prior period cost of plan amendment incurred during the year	—	—	—	25,000
Recognition of unamortized net actuarial gains	—	—	—	(25,000)
Amortization of actuarial gains / losses (Exhibit VI)	—	(9,167)	(4,267)	(4,566)
	200,000	210,833	235,733	235,434
Less: Employee contributions	(110,000)	(115,000)	(120,000)	(126,000)
Pension expense	90,000	95,833	115,733	109,434
Pension interest expense:				
Interest during year on the average pension liability outstanding during the year (Exhibit I)	31,200	23,696	29,896	31,520
Total pension-related expenses	121,200	119,529	145,629	140,954

($ thousands)	20X1	20X2	20X3	20X4
Pension liability:				
— beginning of year (Exhibit VII)	400,000	411,200	415,729	441,358
— end of year (Exhibit VII)	411,200	415,729	441,358	456,312
Increase in pension liability	11,200	4,529	25,629	14,954

Financial Statement Disclosure

Illustrative Note to the Financial Statements

The government sponsors contributory defined benefit pension plans for substantially all of its employees and for members of its Legislature. There are three main plans — the Public Service Plan, the Provincial Judges' Plan and the Elected Representatives' Plan. The plans provide pensions based on length of service and final average earnings. They do

not provide for inflation protection. The average age of the 45,000 active employees covered by the plans is 42. There are 5,000 former employees who are entitled to deferred pension benefits. At present, the plans provide benefits for 11,000 retirees; benefit payments were $119 million in 20X4 and $115 million in 20X3.

Employees make contributions equal to seven percent of their salary and the government contributes an equal amount. In 20X4, total contributions for current year's service were $252 million (20X3 — $240 million). Total benefit payments to retirees during the year were $119 million (20X3 — $115 million). A separate pension fund is maintained. Pension fund assets are invested primarily in marketable investments of organizations external to the government reporting entity, with some invested in non-marketable bonds of the government. The pension liability at March 31 includes the following components:

($ thousands)	20X4	20X3
Accrued benefit obligation	2,526,840	2,200,000
Pension fund assets:		
Marketable securities	(1,942,320)	(1,610,000)
Government bonds	(200,000)	(190,000)
	384,520	400,000
Unamortized actuarial gains / losses	71,792	41,358
Pension liability	456,312	441,358

Actuarial valuations for accounting purposes are performed triennially using the projected benefit method prorated on services. The most recent actuarial report was prepared at March 31, 20X3. The accrued benefit obligation shown for 20X4 is based on an extrapolation of that 20X3 valuation. There is a net unamortized actuarial gain to be amortized on a straight-line basis over the expected average remaining service life of the related employee groups (12 years).

The actuarial valuation was based on a number of assumptions about future events, such as inflation rates, interest rates, wage and salary increases and employee turnover and mortality. The assumptions used reflect the government's best estimates. The expected inflation rate is three percent. The discount rate used to determine the accrued benefit obligation is eight percent.

Pension fund assets are valued at market values. The expected rate of return on plan assets is eight percent. The actual return on plan assets was 8.6 percent. Plan assets include government bonds valued at an estimated market value of $200 million (20X3 — $190 million).

The total expenses related to pensions include the following components:

($ thousands)	20X4	20X3
Current period benefit cost	240,000	240,000
Prior period cost of plan amendment	25,000	—

Recognition of net unamortized actuarial gains	(25,000)	—
Amortization of actuarial gains / losses	(4,566)	(4,267)
	235,434	235,733
Less: Employee contributions	(126,000)	(120,000)
Pension expense	109,434	115,733
Interest cost on the average accrued benefit obligation	180,840	162,740
Expected return on average pension plan assets	(149,320)	(132,844)
Pension interest expense	31,520	29,896
Total expenses related to pensions	140,954	145,629

The pension expense is included in the statement of operations as a component of program expenses. The pension interest expense is included in the public debt interest expense.

On March 31, 20X4, a plan amendment was made to the Public Service Plan increasing the rate at which pension benefits accrue. The amendment relates to both future and past service. The benefit accrual of $25 million is based on an actuarial valuation of the increase in the accrued benefit obligation due to past service. The government intends to fund this amount over a 12-year period ($1 million in 20X4).

Example 2 — Other retirement benefits plan

The government provides certain retiree health and life insurance benefits to its employees. The plan is unfunded and requires no contribution from employees.

In 20X3 the government adopted accrual accounting for the benefit plan. Prior to that date the government recognized benefit expenses equal to its payments for the actual costs incurred by the retirees and no liability for retirement benefits other than pensions was recorded in the statement of financial position.

At the beginning of fiscal year 20X3, an actuarial valuation of the government's obligations for retirement benefits other than pensions was done for accounting purposes using the projected benefit method prorated on services. Key actuarial assumptions used in the valuation were based on the government's best estimates. Those assumptions involve forecasts of expected future inflation rates, cost of long-term debt, employee mortality and medical costs. A second actuarial valuation for accounting purposes was performed at the end of fiscal year 20X5. During the second valuation, the actuarial assumptions included in the first one were reviewed and no changes were considered necessary.

($ thousands)	April 1, 20X2	March 31, 20X5
Accrued benefit obligation	100,000	150,000
Expected average remaining service life of related employee groups (EARSL)	12 years	
Plan amendment September 30, 20X5		10,000
Expected current period benefit cost:		
20X3	3,500	
20X4	3,800	

20X5	4,000	
20X6		4,000
20X6 related to plan amendment		500
20X7		5,200
20X8		5,400

Expected cost of long-term debt	8%	
Expected salary escalations	5.5%	
Expected medical inflation rates	10%	
Expected inflation rates	5.5%	

Benefit payments to retirees	20X3	2,500
	20X4	2,800
	20X5	2,900
	20X6	3,100

Exhibit I — Interest during the year on the average liability for retirement benefits other than pensions outstanding during the year

($ thousands)	20X3	20X4	20X5	20X6
Interest on expected average accrued benefit obligation:				
Accrued benefit obligation — opening balance (a)	100,000	109,040	118,803	150,000
Add: Current period benefit cost (b)	1,750	1,900	2,000	2,125
Increase in accrued benefit obligation due to plan amendment (c)	—	—	—	5,000
Deduct: Benefit payments (b)	(1,250)	(1,400)	(1,450)	(1,550)
Average accrued benefit obligation	100,500	109,540	119,353	155,575
	======	======	======	======
Interest at 8% on average accrued benefit obligation (d)	8,040	8,763	9,548	12,446

(a) In the period of an actuarial valuation, the opening balance of the accrued benefit obligation is the actuarially determined amounts (opening balances 20X3 and 20X6). In the periods between valuations (20X4 and 20X5), the opening balance is equal to the

expected closing balance for the previous year.

(b) Accrued, or assumed to take place, evenly throughout the year, therefore interest is accrued on one-half of the total.

(c) Since the plan amendment was effective mid-year, interest is earned for one-half of the year on the increase in accrued benefit obligation due to past service = ½ (10,000). Similarly, interest is earned on the increase in the current period benefit cost following the plan amendment. The average current period benefit cost in 20X6 is, therefore, = ½ (4,000) + ¼ (500).

(d) Interest during the year on average liability outstanding during the year = 8% of average accrued benefit obligation.

Exhibit II — Expected closing balance of accrued benefit obligation

($ thousands)	20X3	20X4	20X5	20X6
Accrued benefit obligation — opening balance	100,000	109,040	118,803	150,000
Add: Current period benefit cost	3,500	3,800	4,000	4,500
Increase due to plan amendment	—	—	—	10,000
Interest accrued (Exhibit I)	8,040	8,763	9,548	12,446
Deduct: Benefit payments	(2,500)	(2,800)	(2,900)	(3,100)
Expected closing balance	109,040	118,803	129,451	173,846

Exhibit III — Amortization of actuarial gains / losses on accrued benefit obligation

($ thousands)	20X3	20X4	20X5	20X6
Expected closing balance of accrued benefit obligation at March 31 (Exhibit II)	N/A	N/A	129,451	N/A
Actual accrued benefit obligation (per the March 31, 20X5 actuarial valuation)			150,000	
Actuarial gain (loss)			(20,549)	
EARSL			12 years	
Annual amortization over EARSL			(1,712)	

(a) A straight-line method is used to amortize actuarial gains and losses over the expected average remaining service life of the related employee groups. Amortization commences in the year following the effective date of the related actuarial valuation.

Exhibit IV — Unamortized actuarial gains and losses

($ thousands)	20X3	20X4	20X5	20X6
Unamortized actuarial gains and losses — opening balance	N/A	N/A	—	(20,549)
Actuarial gains (losses) due to:				
— accrued benefit obligation (Exhibit III)			(20,549)	—
Amortization recorded during the year:				
— accrued benefit obligation (Exhibit III)			—	1,712
— recognition of net unamortized actuarial gains as an offset to prior period service cost			—	—
			(20,549)	(18,837)

Exhibit V — Liability for retirement benefits recorded in the statement of financial position

($ thousands)	20X3	20X4	20X5	20X6
Accrued benefit obligation — closing balance (a) (Exhibit II)	109,040	118,803	150,000	173,846
Unamortized actuarial gains / losses (Exhibit IV)	—	—	(20,549)	(18,837)
Liability for retirement benefits	109,040	118,803	129,451	155,009

(a) In the period of an actuarial valuation, this is the actuarially determined amount (closing balance 20X5). In the periods between valuations, this is an expected closing balance.

Exhibit VI — Expenses recorded in the statement of operations

($ thousands)	20X3	20X4	20X5	20X6
Retirement benefit expense:				
Current period benefit cost	3,500	3,800	4,000	4,500
Prior period cost of plan amendment incurred during the year	—	—	—	10,000
Recognition of unamortized net actuarial gains	—	—	—	—

Amortization of actuarial gains / losses (Exhibit III)	x	x	x	1,712
Retirement benefit expense	3,500	3,800	4,000	16,212
Retirement benefit interest expense (Exhibit I)	8,040	8,763	9,548	12,446
Total expenses related to retirement benefits	11,540	12,563	13,548	28,658

Financial Statement Disclosure

Illustrative Note to the Financial Statements

The government sponsors a defined benefit plan for retirement benefits other than pensions for substantially all of its employees. The plan provides extended health and dental as well as life insurance to employees.

Total benefit payments to retirees during the year were $3.1 million (20X5 — $2.9 million). The plan is unfunded and requires no contribution from employees. The retirement benefit liability at March 31 includes the following components:

($ thousands)	20X6	20X5
Accrued benefit obligation	173,846	150,000
Unamortized actuarial gains / losses	(18,837)	(20,459)
Retirement benefit liability	155,009	129,451

Actuarial valuations for accounting purposes are performed triennially using the projected benefit method prorated on services. The most recent actuarial report was prepared at March 31, 20X5. The accrued benefit obligation shown for 20X6 is based on an extrapolation of that 20X5 valuation. There is a net unamortized actuarial loss to be amortized on a straight-line basis over the expected average remaining service life of the related employee groups (12 years).

The actuarial valuation was based on a number of assumptions about future events, such as inflation rates, interest rates, medical inflation rates, wage and salary increases, and employee turnover and mortality. The assumptions used reflect the government's best estimates. The expected inflation rate is 5.5 percent. The discount rate used to determine the accrued benefit obligation is eight percent.

The total expenses related to retirement benefits other than pensions include the following components:

($ thousands)	20X6	20X5
Current period benefit cost	4,500	4,000
Prior period cost of plan amendment	10,000	—

Amortization of actuarial gains / losses	1,712	—
Retirement benefit expense	16,212	4,000
Retirement benefit interest expense	12,446	9,548
Total expenses related to retirement benefits	28,658	13,548

The retirement benefit expense is included in the statement of operations as a component of program expenses. The retirement benefit interest expense is included in the public debt interest expense.

On September 30, 20X5, a plan amendment was made to the plan increasing the rate at which retirement benefits accrue. The amendment relates to both future and past service. The benefit accrual of $10 million is based on an actuarial valuation of the increase in the accrued benefit obligation due to past service.

Statement of Financial Position (excerpts)

As at March 31 ($ thousands)	20X6	20X5
Liabilities		
Accounts payable	x	x
Accrued liabilities	x	x
Borrowings		
Treasury bills	x	x
From other governments	x	x
Other	x	x
Retirement benefit liability (note)	155,009	129,451
Total liabilities	x	x
Excess of liabilities over financial assets (a)	x	x

(a) The opening balance of the excess of liabilities over financial assets in 20X3 has been restated to reflect a change in accounting policy for employee retirement benefit obligations applied retroactively. The effect of this restatement is as follows:

($ thousands)	
Excess of liabilities over financial assets — beginning of year:	
As previously reported	x
Adjustments due to change in accounting policy applied retroactively	100,000
As restated	x

Excess of expenses over revenues during the year	x
Excess of liabilities over financial assets — end of year	x
	=====

Statement of Operations (excerpts)

For the year ended March 31 ($ thousands)		20X6	20X5
Expenses			
Health	(includes retirement benefit expense)	x	x
Education ...etc.		x	x
Public debt interest (includes retirement benefit interest expense)		x	x
		x	x
		=====	=====

Purpose and scope

.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.

.002 In this Section, terms that appear in **bold type** are defined in the glossary of terms.

.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.

.004 If employees and/or retirees are covered by more than one **retirement benefit plan**, then a government needs to determine its obligation separately for each plan.

.005 The standards in this Section are based on the accounting framework recommended in FINANCIAL STATEMENT OBJECTIVES, Section PS 1100, and FINANCIAL STATEMENT PRESENTATION, Section PS 1201. That framework emphasizes the need to account for all liabilities incurred by a government to help legislators, taxpayers, investors and other users of **financial statements** assess: a government's future cash requirements from taxes and other revenues; its ability to meet financial obligations, both short-term and long-term; and its ability to maintain current services and finance new programs. Such assessments are essential when making financial decisions in government and when evaluating those decisions.

.006 Accounting for all of the retirement benefits incurred by governments is

particularly important because many of those governments have accumulated significant liabilities. Many governments have chosen not to set aside funds to meet retirement benefit payments when they become due. Where those liabilities have not been recorded, financial statements do not adequately provide all of the information needed by users to help them assess a government's financial position and results of operations. It is important that financial statements account for a government's liabilities for all retirement benefits to show clearly the extent to which these obligations are to be paid from cash to be raised from future tax and other revenue sources.

.007 The basis for determining obligations for retirement benefits set out in this Section is also appropriate for determining a government's contractual obligations arising from guarantees or commitments to employee retirement benefit plans of other public sector organizations that are not part of the government reporting entity. Such obligations exist, for example, when a provincial government agrees to guarantee defined retirement benefits for employees of local school boards, agrees to guarantee a minimum rate of return on retirement benefit fund assets, or agrees to provide a significant portion of the funds required by a plan sponsor. A careful reading and evaluation of such agreements is necessary to determine the substance of the obligation and whether a **liability**, **contractual obligation** or **contingency** exists that would be reported in a government's financial statements.

The objectives of funding and accounting

.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An **actuarial valuation for funding purposes** is performed to calculate the contributions required to secure the benefits promised.

.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. Accordingly, it is necessary to develop accounting estimates of liabilities for retirement benefits and expenses using an **actuarial cost method** and **actuarial assumptions** that ensure essential information required for fair presentation of financial condition and results of operations can be reported in government financial statements.

.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.

Defined benefit and defined contribution plans

.011 Two types of benefit plans are addressed in this Section — **defined benefit plans** and **defined contribution plans**. A defined benefit plan

is one that specifies either the benefits to be received by employees after retirement or the method for determining those benefits. Generally, the amount and value of the benefits to be paid depend on a number of factors and events. These include how long the employee and any survivors live, how many years of service the employee renders, and the employee's compensation and retirement age. When a government provides benefits under a defined benefit plan, it is at risk with respect to the amount of the benefit that each employee will receive (actuarial risk) and with respect to the investment returns on any assets set aside to pay for the cost of these benefits (investment risk).

.012 When a government provides benefits under a defined contribution plan, it does not assume the actuarial and investment risks inherent in a defined benefit plan. A defined contribution plan (or money purchase plan) is one in which a government's contributions in respect of services rendered by employees are specified. The government is required by the plan to make a specific fixed contribution each period. If that contribution is made, no additional government contributions are required now or in the future for the related service. The employees are at risk. This is generally because the amount of the benefit that will be payable to an employee is dependent upon the funds accumulated for each employee's account and the investment earnings on the accumulated funds.

.013 Because benefit plans are often complex, careful analysis and professional judgment are needed to determine whether the substance of a particular plan makes it a defined benefit or a defined contribution plan.

.014 In some circumstances, a benefit plan may include both defined benefit and defined contribution promises. The plan, for example, may guarantee a basic defined retirement benefit and state that additional benefits, such as inflation protection, will be provided on a defined contribution basis. In such circumstances, a government would determine its obligation for the defined benefit component of the plan as a defined benefit plan and the defined contribution component of the plan as a defined contribution plan. Once the type(s) of promise is identified, the accounting and reporting principles in this Section would be followed accordingly.

Defined benefit pension plans

Liability and expense

.015 Obligations for retirement benefits result from a promise by a government to provide retirement benefits to employees because of retirement in return for their services. The obligations arise as employees render services. Therefore, as employees render services, the value of the retirement benefits attributed to those services would be recorded as a liability and expense as are other forms of current compensation.

.016 *The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date.* [SEPT. 2001]

.017 The components of the **retirement benefit liability** are:

(a) **accrued benefit obligation** including the effects of plan amendments, settlements and curtailments;

(b) **plan assets**, if any; and

(c) unamortized **actuarial gains and losses**.

.018 The cost of retirement benefits promised during the period is comprised of the **retirement benefits expense**, and the **retirement benefits interest expense**.

.019 The components of the retirement benefits expense are:

(a) **current period benefit cost**;

(b) cost of plan amendments incurred during the period;

(c) net actuarial gains or losses recognized in the determination of the cost of a plan amendment in accordance with paragraphs PS 3250.068 and PS 3250.071;

(d) gains and losses arising from plan settlements and curtailments incurred during the period;

(e) amortization of actuarial gains and losses;

(f) the amount recognized as a result of a temporary deviation from the plan, determined in accordance with paragraph PS 3250.073;

(g) the change in a valuation allowance against the carrying amount of an **accrued benefit asset**, determined in accordance with paragraph PS 3250.050; less

(h) employee contributions made during the period.

.020 The retirement benefits interest expense is the net of:

(a) the interest cost on the accrued benefit obligation determined by applying the discount rate determined at the beginning of the period in accordance with paragraph PS 3250.044 to the average value of the accrued benefit obligation for the period; and

(b) the expected return on plan assets for a defined benefit plan, determined by applying the assumed rate of return on plan assets to the average market-related value of assets for the period.

.021 The retirement benefits expense and the retirement benefits interest expense would be disclosed separately in the notes to the financial statements. A separate disclosure is needed to ensure that the amount reported as the retirement benefit expense is not affected by the purely financial decision of a government to fund or not fund the plan.

Actuarial cost methods

.022 Accounting for retirement benefits on the basis of employee services reflects the fact that there is no obligation for an employee when hired and that an obligation for retirement benefits exists as the employee renders service. The accounting task is to determine how to attribute the cost of the total retirement benefits promised to each period of employee service.

.023 For defined benefit plans, there are two main groups of actuarial cost methods. They are **level cost methods** and **accrued benefit methods**. Under the level cost methods, retirement benefit expenses are computed in such a manner as to produce a total current period benefit cost that remains constant, either in absolute dollars or as a percentage

of salary, throughout an employee's service life. However, level cost methods are not recommended for accounting purposes because they do not reflect the cost of benefits earned by employees to the financial statement date.

.024 Under the accrued benefit methods, a distinct unit of retirement benefit is associated with each year of employee service rendered to the financial statement date. The actuarial present value of that unit of benefit is computed separately for the period during which it accrued. These methods are recommended because they reflect more directly the cost of retirement benefits earned by employees to the financial statement date.

.025 *An accrued benefit method should be used to attribute the cost of retirement benefits to the periods of employee service.* [SEPT. 2001]

.026 For certain **flat benefit retirement plans**, benefits vary only with periods of service rendered. For those plans, future salary and wage changes do not enter into the determination of the cost of retirement benefits earned to the financial statement date. For other defined benefit plans, such as **final pay retirement plans**, future salary and wage changes need to be incorporated into the cost of retirement benefits earned to the financial statement date because the benefit promise is based on future salary and wage levels. To estimate those levels, forecasts are needed of future inflation rates and of future salary increases. Similarly, for retirement medical plans, forecasts are needed of medical inflation rates.

.027 Accounting for the effect of future salary and wage changes ensures consistency when determining the present value of the cost of the retirement benefits earned to the financial statement date, i.e., the accrued benefit obligation. Because the discount rate used to determine that obligation includes an inflation component, for consistency the amount of the retirement benefits to be discounted must also include an inflation component. If only the discount rate used to determine the obligation includes an inflation component, then the accrued benefit obligation and expense would be understated significantly.

.028 One accrued benefit method that incorporates the effect of future salary and wage changes and attributes the value of retirement benefits to the years of employee service is the **projected benefit method prorated on services**. Under this method, generally an equal portion of the total estimated benefit, with salary projection for final pay plans and projection of medical inflation for retirement medical plans, is attributed to each year of service. The actuarial present value of the accrued retirement benefits is derived after the benefits are attributed to the years of service up to the financial statement date.

.029 *The projected benefit method prorated on services should be used to attribute the cost of retirement benefits to the periods of employee service.* [SEPT. 2001]

.030 When a retirement plan provides benefits that accrue in a non-uniform manner, the projected benefit method prorated on services may need to be adjusted to reflect the manner in which retirement benefits are earned by employees. For example, a pension plan formula may state that the pension benefit accrues at one percent of salary for the first 15 years and at two percent of salary for the final 20 years. In this circumstance, the prorating of the total estimated benefit to each accounting period would be adjusted to reflect the rates at which pension benefits are earned in that 35-year period.

.031 In some retirement plans, benefits promised in a contractual agreement or in legislation include inflation protection for current and future retirees and for former employees who have **vested** retirement benefits. For those plans, it is necessary to incorporate the impact of inflation protection in the determination of the cost of retirement benefits earned to the financial statement date.

.032 In other retirement plans, regular benefit increases for inflation protection may be provided even when such protection is not promised in a contractual agreement or in legislation. For those plans, careful analysis and professional judgment are needed to determine the substance of a government's obligation. If a regular pattern of benefit increases can be established over a reasonable period, it may be appropriate to incorporate the cost of such inflation protection in the cost of retirement benefits earned to the financial statement date and reported as an accrued benefit obligation.

Asset valuation

.033 The periodic valuation of plan assets is important because, to determine its retirement benefit liability and expense, a government needs to value the assets set aside for the purpose of meeting benefit payments.

.034 Most government plans require contributions from the employees as well as from the sponsoring government. Some governments place those contributions in a separate fund, which invests them in marketable assets. Those contributions and earnings are used to meet benefit payments to current and future retirees.

.035 When determining a government's retirement benefit liability and expense, plan assets would be valued at market-related values. Under this method, plan assets are recorded at market value or they are adjusted to market value over a period not to exceed five years. Values adjusted to market closely approximate current economic value in a manner that can minimize short-term fluctuations. Market-related values would be used because they are objective and verifiable. Once a basis of valuation is chosen it would be applied consistently.

.036 For some assets, such as real estate investments or non-marketable securities, market values are not readily available. For such assets, a method that approximates market can be used. For example, independent appraisals could be obtained, market values of similar properties could be reviewed, or future expected cash flows discounted at a market rate could be determined.

.037 *For a defined benefit plan, plan assets should be valued at market-related values.* [SEPT. 2001]

.038 In some cases governments issue non-marketable securities to their benefit funds on the condition that those securities are held in the fund to maturity. Market-related values for these assets may not be readily determinable. In such cases, non-marketable securities can be valued at cost.

Measurement date

.039 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and

as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Actuarial assumptions

.040 Accounting for retirement benefit obligations of defined benefit plans requires forecasts of future events, such as inflation rates, investment returns, interest rates, wage and salary increases, medical inflation and employee turnover and mortality. Such forecasts form the basis of actuarial assumptions.

.041 Each key actuarial assumption would be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation. The assumptions would take into account the expected long-term experience of the plan and the short-term forecast. Such an approach ensures that the reported accrued benefit obligation and expense recognize the long-term nature of retirement benefit promises as well as the experience of the plan expected in the short term. Assumptions about the long-term future, however, are not to be unduly influenced by the experience expected in the short term. At each actuarial valuation, assumptions need to be reassessed; they would be revised if expectations about the future change. All assumptions are based on the presumption that the plan will continue in effect in the absence of evidence to the contrary.

.042 *Actuarial assumptions should be based on the government's best estimates of expected long-term experience and short-term forecasts.* [SEPT. 2001]

.043 One commonly used approach that meets this standard is the use of streamed rate assumptions. Under the streamed rate approach, the short-term forecast of fund asset earnings, for example, would reflect the rates of return that assets currently held in the fund will earn until their maturity. As those assets mature, assumptions about their expected earnings on reinvestment would move to the expected long-term rate. Similarly, there would be streamed rate assumptions for salary increases.

.044 The actuarial assumptions underlying the valuation of the retirement benefit liability and expense would be internally consistent. For example, when a government determines its discount rates by reference to its plan asset earnings, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the short-term forecast of rates of return on assets currently held in the fund. When a government determines its discount rates by reference to its cost of borrowing, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the specific rates of interest and the periods committed to by the government on the amounts borrowed.

.045 *Actuarial assumptions should be internally consistent.* [SEPT. 2001]

.046 Internally consistent assumptions about future inflation rates are particularly important because of the significant impact those rates have on the reported accrued benefit obligation and related expenses. The same assumptions about future inflation need to be used when forecasting future rates of return on fund assets, future costs of borrowing and future salary and wage increases, and when determining the appropriate discount rates. In addition, methods of developing actuarial assumptions need to be consistent over time.

.047 Measurement of the cost of future medical benefits requires assumptions about the level and frequency of future claims and the cost of meeting those claims. The level and frequency of claims are particularly sensitive to the age of employees (and their beneficiaries) and may be sensitive to other factors, such as gender and geographical location. A government estimates future medical costs on the basis of historical data about its own experience, supplemented when necessary by historical data from other entities, insurance enterprises, medical providers or other sources. Historical data is adjusted to reflect any differences in demographic mix of the population or when there is reliable evidence that historical trends will not continue.

.048 Certain medical claims may be covered by governmental programs under existing law or by other providers of health care benefits. Benefit coverage by governmental programs is assumed to continue as provided by the present law and by other providers pursuant to their present plans.

.049 When making assumptions about future events, a government would obtain expert assistance from internal or external sources. One source of expert assistance is the **actuary** carrying out the actuarial computations. Periodic assessments are needed to ensure that the assumptions continue to be relevant.

Limit on the carrying amount of an accrued benefit asset

.050 *An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.* [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the **adjusted benefit asset**. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the **expected future**

benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Actuarial gains and losses

.060 The periodic actuarial valuation of a government's obligation for

retirement benefits will usually determine that adjustments are required due to experience different from that assumed or to changes in actuarial assumptions. Adjustments are needed when the actual experience of the benefit plan is different than that expected. Adjustments due to changes in actuarial assumptions are needed when a government believes revised assumptions are necessary to reflect a relatively permanent change in expected experience or to reflect new information. Adjustments are inevitable because the actuarial valuation requires ongoing forecasts of uncertain future events.

.061 Actuarial gains and losses would be amortized over a reasonable future period because of their tentative nature and because further adjustments will likely be required in the future. A reasonable future period is the **expected average remaining service life of the related employee group**. Amortization may commence in the period following the determination of the adjustment. Actuarial gains and losses would be determined on a market value basis or a basis adjusted to market value, consistent with paragraph PS 3250.035.

.062 *Except in the circumstances in paragraph* PS 3250.068*,* PS 3250.071 *and* PS 3250.078*, actuarial gains and losses should be amortized to the liability or asset and the related expense in a systematic and rational manner over the expected average remaining service life of the related employee group.* [SEPT. 2001]

Prior period service costs arising from plan amendments

.063 A plan amendment occurs when a benefit plan is changed or initiated. In such circumstances, retroactive credit may be given to employees for services rendered previously and, as a result, **prior period service costs** are incurred. For example, if the benefit formula is changed from one percent to two percent of final pay per year of service, the extra one percent may be credited to employees for years of service prior to the change.

.064 Plan amendments include the inception of a new plan that grants retroactive credit for past service, an increase in benefits related to past service for active employees, or an increase in benefits for former employees already retired.

.065 The cost of plan amendments related to prior period employee services would be accounted for as an expense in the period of the plan amendment. This method is recommended because it ensures that, when a government provides retroactive credit to employees for past services, legislators, taxpayers and investors are provided a full accounting of the cost of that decision in the period the decision is made. Such an accounting ensures that the effect of that decision, as it relates to the cost of prior period services, is recognized as an expense in the period a liability is incurred. It also provides information needed to assess the extent to which future revenues are required by a government to pay for past transactions because all retirement benefit liabilities are accounted for in the financial statements.

.066 *The cost of plan amendments related to prior period employee services should be accounted for in the period of the plan amendment.* [SEPT. 2001]

.067 While all plan amendments related to prior period employee services are accounted for in the period of the plan amendment, the existence of the plan amendment may affect the recognition of actuarial gains, as

described in paragraph PS 3250.068.

.068 *In the period of a plan amendment related to prior period employee services that results in an increase in the accrued benefit obligation, if net unamortized actuarial gains exist, these should be recognized immediately, to a maximum of the prior period service cost, and offset against the prior period service cost in the statement of operations, with separate disclosure in the notes.* [SEPT. 2001]

.069 When a government makes a plan amendment related to prior period employee services and has net unamortized actuarial gains, it would recognize these net unamortized actuarial gains immediately in the statement of operations, to a maximum of the prior period service cost. Recognition would be applied first to the oldest net unamortized actuarial gains within a plan. These actuarial gains would be deducted from the prior period service cost in the statement of operations. The notes to the financial statements would disclose this information.

.070 A plan amendment may decrease, rather than increase, a government's accrued benefit obligation. A decrease in the accrued benefit obligation would be accounted for immediately in the period of the plan amendment. The existence of the plan amendment may affect the recognition of actuarial losses as described in paragraph PS 3250.071.

.071 *In the period of a plan amendment related to prior period employee services that results in a decrease in the accrued benefit obligation, if net unamortized actuarial losses exist, these should be recognized immediately, to a maximum of the decrease in the accrued benefit obligation. The net amount would be recognized in the statement of operations, with separate disclosure in the notes.* [SEPT. 2001]

.072 In the period of a plan amendment that decreases the accrued benefit obligation any net unamortized actuarial losses would be recognized immediately to a maximum of the decrease in the accrued benefit obligation. Recognition would be applied first to the oldest unamortized net actuarial losses within a plan.

Temporary deviation from the benefit plan

.073 A government may decide to deviate temporarily from the provisions of a benefit plan to increase or decrease the government's share of the benefit costs incurred in the current period or past periods. For example, a government may grant an employee contribution holiday as a temporary deviation from the normal terms of the benefit plan. A government would look to the substance of the temporary deviation to determine the most appropriate accounting.

Plan settlements and curtailments

.074 A **plan settlement** and a partial plan settlement consist of the discharge, in whole or in part, of a government's obligation existing under a retirement benefit plan. They are irrevocable events by which a government or a plan is relieved of the primary obligation to pay all or some of the benefits promised and is relieved of significant risks in relation to the obligation or the assets used to make settlement. When a full plan settlement occurs, a future actuarial valuation is not required because the government no longer has an obligation related to that plan. Because the cost of discharging the obligation may differ from the related liability recognized previously, a gain or loss may arise.

.075 A **plan curtailment** is an event that reduces significantly the expected

years of future service of present employees or eliminates, for a significant number of employees, the accrual of defined benefits for some or all of their future services. Plan curtailments include termination of a significant number of employees earlier than expected which may involve eliminating a government organization or program; they also include suspension of a plan so that a significant number of employees do not earn additional defined benefits for future services. When a plan curtailment occurs, future actuarial valuations are required because, even though the government's future obligations have been reduced, the government continues to have an obligation related to that plan.

.076 Generally, the act of settling or curtailing a retirement plan will result in a gain or loss because the actual cost of the settlement or curtailment will differ from the obligation recorded previously. Gains and losses determined upon a plan settlement or curtailment would be accounted for in the statement of operations in the period of the settlement or curtailment. This approach is recommended for plan settlements because the amount of the liability is known, it relates to services previously provided and it has been settled. Similarly, if a government settles only a part of a retirement plan obligation, the related gains and losses would be recognized immediately. This approach is also recommended for plan curtailments because the retirement benefit obligation is known with greater certainty, it relates to past employee services and the employees might no longer work for the government. For plan curtailments, the portion of the total gains and losses that would be accounted for would relate to the employees affected by the curtailment.

.077 In some circumstances, there will be unamortized actuarial gains and losses incurred prior to the plan settlement or curtailment. The net unamortized balances related to the obligation settled or to the employees affected by the curtailment would be recognized in the period of settlement or curtailment, and is included as part of the gain or loss arising on settlement or curtailment.

.078 *Gains and losses determined upon a plan settlement or curtailment should be accounted for in the period of the settlement or curtailment.* [SEPT. 2001]

Joint defined benefit plans

.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. **Joint defined benefit plans** are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets

the definition of a joint defined benefit plan.

.081 *When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]

.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Disclosure

.083 The notes and schedules integral to the financial statements would disclose the methods and judgments applied in accounting for accrued benefit obligations and expenses. Full disclosure is particularly important for retirement obligations because the measurements depend heavily upon judgments rather than objective evidence.

.084 *Financial statements should disclose:*

(a) a general description of retirement benefit plans, benefit formulae and funding policy, including a description of significant changes to retirement benefit plans during the period;

(b) the accrued benefit obligation at the end of the period, as determined by the actuarial valuation;

(c) the market value of plan assets at the beginning and the end of the period and, if different, the market-related value of plan assets at the beginning and the end of the period;

(d) the amount of retirement benefit liability or accrued benefit asset at the end of the period, indicating separately the amount of any valuation allowance determined in accordance with paragraph PS 3250.050*.*

(e) unamortized actuarial gains and losses and the periods of amortization;

(f) current period benefit cost;

(g) cost of plan amendments incurred during the period;

(h) net actuarial gains or losses recognized in the determination of the cost of plan amendments in accordance with paragraphs PS 3250.068 *and* PS 3250.071*;*

(i) other gains and losses on accrued benefit obligations arising during the period;

(j) other gains and losses on plan assets arising during the period;

(k) gains and losses arising from plan settlements and curtailments incurred during the period;

(l) amortization of actuarial gains and losses reflected in the current

year expense;

(m) the amount recognized as a result of a temporary deviation from the plan, determined in accordance with paragraph PS 3250.073*;*

(n) the change in a valuation allowance determined in accordance with paragraph PS 3250.050*;*

(o) the amount of contributions by employees during the period;

(p) the components of the retirement benefits interest expense for the period;

(q) the amount of contributions by the government during the period;

(r) the amount of benefits paid during the period;

(s) the expected return and actual return on plan assets during the period;

(t) assumptions about long-term inflation rates, expected rate of return on plan assets, assumed health care cost trends, rate of compensation increase (for pay-related plans) and discount rate; and

(u) the date of the most recent actuarial valuation performed for accounting purposes. [SEPT. 2001]

.085 Some of this disclosure information may be presented in reconciliations of the beginning and ending balances of the accrued benefit obligation and plan assets for the period, taking into account any unamortized actuarial gains or losses existing at the financial statement date.

.086 A reconciliation of the beginning and ending balances of the accrued benefit obligation would include the items disclosed in accordance with paragraph PS 3250.084(b), (i), (k) and (o)-(r). A reconciliation of the beginning and ending balance of plan assets for the period would include the items disclosed in accordance with paragraph PS 3250.084(c), (f)-(g), (j)-(k), (m), (o)-(p) and (r).

.087 *A government should provide these disclosures separately for plans that provide pension benefits and plans that provide retirement benefits other than pensions.* [SEPT. 2001]

.088 *A government that has aggregated disclosures for its defined benefit pension plans, or for its other defined benefit retirement plans, should provide the disclosures separately for the aggregate of plans with accrued benefit obligations in excess of plan assets.* [SEPT. 2001]

.089 The level of detail disclosed by governments would reflect the highly aggregated nature of financial statements. In deciding the level of detail to disclose, governments would consider the usefulness of the information to the reader in assessing the nature of, and the costs associated with, a government's retirement benefit plans. The level of disclosure would also consider the sensitivity of the information in relation to the government's financial position.

.090 The description of the significant benefit plans and benefit formulae might include the plan surplus or deficit at the end of the period, demographic information about the participants and whether the benefit obligation includes the cost of inflation protection. The description of the funding policy might include the major types of plan assets and the basis of their valuation. The extent to which the fund holds securities of the

sponsoring government would normally be disclosed.

.091 Governments are encouraged to provide additional disclosures about the significant actuarial assumptions underlying the reported amount of a government's accrued benefit obligation when the disclosures will enhance the financial statement users' understanding of that amount.

.092 A government may also choose to disclose a forecast of the cash required to pay its retirement benefit obligations in the short term, the medium term and the long term. If provided, such a forecast would include the amounts required in the next five years, and thereafter.

.093 *For joint defined benefit plans, in addition to the disclosures required in paragraphs* PS 3250.084 *government financial statements should disclose:*

(a) the significant accounting policies for joint plans;

(b) a description of the unique nature and terms of any joint plans;

(c) the government's share of the risks and benefits under the plans; and

(d) the total financial status of any joint plans. [SEPT. 2001]

.094 Users of government financial statements need an appreciation of the magnitude of the retirement benefit plans that governments jointly sponsor and the government's responsibility under the terms of any joint plans.

Defined contribution plans

.095 When a government establishes a defined contribution plan, it does not assume the actuarial and investment risks inherent in a defined benefit plan. The government typically agrees to contribute a certain amount in each period for services rendered by the employees and has no responsibility to make any further contributions. It is the employees who are at risk. This is generally because the amount of the benefit that will be payable to them is entirely dependent upon the amount of funds accumulated for each employee's account and the economic conditions prevailing at the retirement date (see paragraphs PS 3250.011-.014 for a further discussion of defined contribution plans).

Liability and expense

.096 For the most part, defined contribution plans do not present particular accounting problems. If the formula calls for government contributions on a regular predetermined basis and if those contributions have been made, then the expense recorded in the statement of operations is simply the required contribution of the accounting period. If the contributions have not been made as required, the retirement benefit expenses would include interest accrued during the period on any outstanding amounts payable to the fund. The liability for retirement benefits recorded in the statement of financial position would be the difference between the amount the government was required to contribute and the amount that was contributed to the financial statement date, including accumulated interest on any outstanding amounts payable to the fund at the financial statement date.

.097 *For defined contribution plans:*

(a) *the liability for retirement benefits should be the difference between the amount a government was required to contribute and the amount that was contributed by the financial statement date including accumulated interest on any outstanding amounts payable to the fund at the financial statement date;*

(b) *the retirement benefit liability should be accounted for in the statement of financial position;*

(c) *the expense for retirement benefits should be the amount of required contributions provided for employees' services rendered in the period. Interest accrued during the period on any outstanding amounts payable to the fund should be accounted for as a retirement benefit interest expense; and*

(d) *the retirement benefit expense and the retirement benefit interest expense should be accounted for in the statement of operations.* [SEPT. 2001]

.098 When a defined contribution plan is amended, a government may agree to make contributions in respect of past service. The cost of current and expected future years' contributions related to a past service plan amendment is recognized immediately in the period the decision is made to amend the plan.

.099 *For a defined contribution plan, the cost of current and expected future years' contributions related to a past service plan amendment should be accounted for in the period of the plan amendment.* [SEPT. 2001]

Disclosure

.100 *For defined contribution plans, financial statements should disclose:*

(a) *a general description of benefit plans, contribution formulae and funding policy;*

(b) *the expense recognized for the period; and*

(c) *a description of significant changes to benefit plans during the period.* [SEPT. 2001]

.101 The description of the significant retirement benefit plans and contribution formulae might include demographic information about the participants.

.102 The description of the funding policy might also include: the employee and government contributions during the accounting period; the major types of plan assets, the total amounts and the basis of their valuation; and the extent to which the fund holds securities of the sponsoring government.

.103 The description of significant changes to the plan or to the financing of the plan might also include which employee group(s) is affected and a description of the impact of such changes on current and future retirement benefit liabilities and related expenses.

.104 The level of detail disclosed by governments would reflect the highly aggregated nature of financial statements. In deciding the level of detail to disclose, governments would consider the usefulness of the information to the reader in assessing the nature of, and the costs associated with, a government's retirement benefit plans. The level of disclosure would also consider the sensitivity of the information in

relation to the government's financial position.

Multiemployer and multiple-employer benefit plans

Multiemployer plans

.105 A **multiemployer plan** is a defined benefit plan to which two or more governments or government organizations contribute, usually pursuant to legislation or one or more collective bargaining agreements. The main distinguishing characteristic of a multiemployer plan is that the contributions by one participating entity are not segregated in a separate account or restricted to provide benefits only to employees of the entity and thus may be used to provide benefits to employees of all participating entities.

.106 The federal and most provincial governments sponsor defined benefit plans in which many public sector organizations participate. Many local governments participate in such multiemployer plans. When benefits are provided to employees through a multiemployer plan, the amount for which an individual government is obligated under the plan may not be quantified. Generally, a contribution rate is established for each period to ensure that the plan assets are adequate to cover the plan's future benefit payments.

.107 When a government sponsors a defined benefit multiemployer retirement benefit plan, it has the responsibility to ensure that the defined benefits promised to employees are met. In that circumstance the sponsoring government is at risk for future experience gains or losses and would account for its related obligation for the entire multiemployer plan as a defined benefit plan.

.108 *When a government sponsors a defined benefit multiemployer retirement plan, the government should follow the standards for defined benefit plans in accounting for its obligation for the plan.* [SEPT. 2001]

.109 Although a multiemployer plan may have the characteristics of a defined benefit plan, sufficient information to follow the standards for defined benefit plans is normally not available for each participating employer other than the sponsoring government. For this reason, a multiemployer plan is accounted for by each participating government following the standards for defined contribution plans.

.110 *When benefits are provided to employees through a multiemployer retirement benefit plan, each entity participating in the plan, other than the sponsoring government, should follow the standards for defined contribution plans.* [SEPT. 2001]

.111 *The government should disclose any available information about any surplus or deficit in a multiemployer plan, the basis used to determine the surplus or deficit and the implications, if any, for the government.* [SEPT. 2001]

Multiple-employer plans

.112 A **multiple-employer plan** is a defined benefit plan maintained by more than one entity that is not a multiemployer plan. In contrast to multiemployer plans, a multiple-employer plan maintains separate accounts for each entity so that contributions provide benefits only for employees of the contributing entity. In addition, multiple-employer plans are intended to allow participating entities, commonly in the same

industry, to pool their plan assets for investment purposes and to reduce the cost of plan administration. Multiple-employer plans may have features that allow participating entities to have different benefit formulae, with the entity's contributions to the plan based on the benefit formula selected by the entity.

.113 When benefits are provided to employees through a defined benefit multiple-employer plan, each government in the plan follows the standards on defined benefit plans and bases its accounting for plan assets on its proportionate interest in the assets of the multiple-employer plan.

.114 *When benefits are provided to employees through a defined benefit multiple-employer retirement plan, each entity in the plan should follow the standards for defined benefit plans.* [SEPT. 2001]

Transitional provisions

.115 When implementing this Section, governments may have an initial unrecorded liability.

.116 The initial unrecorded liability would be accounted for as a change in accounting policy applied retroactively. This method is recommended because it ensures that all liabilities incurred to the financial statement date are accounted for in the statement of financial position. Such an accounting is needed to help users of financial statements assess the impact those liabilities may have on:

(a) a government's future cash requirements from revenues and other sources;

(b) a government's ability to meet its financial obligations, both short-term and long-term; and

(c) a government's ability to maintain the level and quality of its services and to finance new programs.

.117 *This Section should be accounted for as a change in accounting policy applied retroactively.* [SEPT. 2001]

Timing of actuarial valuations

.118 Most governments do not have full actuarial valuations performed annually because of the magnitude of the information gathering and processing required. **Actuarial valuations for accounting purposes** would generally be done once every three years because of the financial importance of retirement benefit obligations. They would be done as close to the related financial statement date as is practical. In the years between valuations, an extrapolation would be used to compute the expected accrued benefit obligation and related expenses. Each year the government reviews matters such as changes to the plan, the actuarial assumptions, occurrence of settlements and curtailments, changes to the employee group and the rate of return on plan assets, and determines whether such matters necessitate any adjustments to the extrapolations. When the effect of any change is significant, a new valuation may be necessary.

.119 In the period a government implements this Section, it would need to assess whether a new actuarial valuation of its retirement benefit obligations is needed. A new valuation would be needed, for example, if the prior one is not current or is not prepared in accordance with this

Section.

Glossary

An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).

An **accrued benefit obligation** is the value of retirement benefits attributed to services rendered by employees and former employees to the financial statement date.

Actuarial assumptions are made as to the occurrence of a future event that will affect retirement benefit costs and obligations. They include assumptions about such matters as mortality, withdrawal, disability and retirement and about changes in compensation, interest on obligations and investment earnings.

Actuarial cost methods are used to determine the cost of providing retirement benefits and to allocate that cost to specific time periods. The two main families of actuarial valuation methods are:

Accrued benefit methods (also known as unit credit or single premium actuarial cost methods) — Under these methods a distinct unit of retirement benefit is associated with each year of credited service and the actuarial present value of that unit of benefit is separately computed for the period during which it is presumed to have accrued. Salary projection, when appropriate, is required.

Projected benefit method prorated on services — Under this accrued benefit method, generally an equal portion of the total estimated benefit (i.e., with salary projection, when appropriate) is attributed to each year of service. The actuarial present value of the accrued retirement benefits is derived after the benefits are attributed to the years of service up to the date of determination.

Level cost methods — Under these methods the retirement benefit cost assigned to any period is either the same dollar amount or the same percentage of compensation as any other period, and is a portion of the cost of the total prospective benefits of an employee group, either in absolute dollars or as a percentage of salary. (Entry age, attained age and aggregate actuarial cost methods are included in this family of methods.)

Actuarial gains and losses are changes in the value of the accrued benefit obligation and the plan assets resulting from:

(a) experience different from that assumed; or

(b) changes in an actuarial assumption.

An **actuarial valuation for accounting purposes** is an assessment of the financial status of a benefit plan. It consists of the valuation of assets held by the plan and calculation of the actuarial present value of benefits to be paid under the plan. The valuation provides the information needed to determine the retirement benefit liability and related expenses in accordance with this Section.

An **actuarial valuation for funding purposes** is an assessment of the financial status of a benefit plan. It consists of the valuation of assets held to discharge the benefit liability and calculation of the actuarial present value of benefits to be paid under the plan. The valuation results in a calculation of the required future contributions and a determination of any gains or losses since the last valuation.

An **actuary** is a Fellow of the Canadian Institute of Actuaries.

An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.

A **contingency** is the result of an existing condition or situation involving uncertainty that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.

Contractual obligations are obligations of a government to others that will become liabilities when the terms of those contracts or agreements are met.

The **current period benefit cost** is the actuarial present value of benefits attributed to services rendered by employees in the period.

A **defined benefit plan** specifies either the benefits to be received by employees after retirement or the method for determining those benefits. The most commonly used defined benefit plans are:

Final pay plan — Bases benefits on an employee's length of service and compensation over a specified number of years (usually the years of an employee's highest earnings).

Flat benefit plan — Provides a specified benefit for each year of service rendered; the benefit earned in each period is usually fixed and determinable under the terms of the plan and the amount of benefits to be received varies only with the years of service rendered.

A **defined contribution plan** is one in which the employer's contributions are fixed, usually as a percentage of compensation, and allocated to specific individuals. The retirement benefit for each employee is the amount that can be provided at retirement based on the accumulated contributions made on that individual's behalf and investment earnings on those contributions.

The **expected average remaining service life (EARSL) of the related employee group** is the total number of years of future services expected to be rendered by that group divided by the number of employees in the group. The calculation of expected future services considers population decrements based on the actuarial assumptions but is not weighted by benefits or compensation.

The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Financial statements are summary financial statements published by a government that report on the financial position and changes in financial position of the government reporting entity. Such statements present aggregated information and serve as a means by which a government demonstrates its accountability for the financial affairs and resources entrusted to it.

A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Liabilities are present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits.

A **multiemployer plan** is a defined benefit plan to which two or more governments or government organizations contribute, usually pursuant to legislation or one or more collective bargaining agreements. The main distinguishing characteristic of a multiemployer plan is that the contributions by one participating entity are not segregated in a separate account or restricted to provide benefits only to employees of the entity and, thus may be used to provide benefits to employees of all participating entities.

A **multiple-employer plan** is a defined benefit plan maintained by more than one entity that is not a multiemployer plan. In contrast to multiemployer plans, a multiple-employer plan maintains separate accounts for each entity so that contributions provide benefits only for employees of the contributing entity. In addition, multiple-employer plans are intended to allow participating entities, commonly in the same industry, to pool their plan assets for investment purposes and to reduce the cost of plan administration. Multiple-employer plans may have features that allow participating entities to have different benefit formulae, with the entity's contributions to the plan based on the benefit

formula selected by the entity.

A **plan asset** is an asset segregated and restricted in a trust or other legal entity separate from the reporting government to provide for retirement benefits under the following conditions:

(a) the assets in the separate entity are to be used only to settle the related accrued benefit obligation, are not available to the government's own creditors, and either cannot be returned to the government or can be returned to the government only if the remaining assets of the trust are sufficient to meet the plan's obligations; and

(b) to the extent that sufficient assets are in the separate entity, the government will have no obligation to pay the related retirement benefits directly.

For purposes of this Section, plan assets do not include amounts held by the government and not yet paid into the trust or other legal entity.

A **plan curtailment** occurs when the expected years of future service to be rendered by the existing employee group are reduced significantly or when benefits will not be earned by employees for some or all future periods.

A **plan settlement** occurs when an employer legally discharges the obligation for accrued retirement benefits either by transferring assets directly to plan participants in exchange for their rights to retirement benefits or by purchasing annuity contracts in which a third party unconditionally undertakes to pay all accrued retirement benefits.

A **prior period service cost** is the increase in the accrued benefit obligation associated with past service benefit improvements.

The **retirement benefit expense** is the cost of the retirement benefits promised during the period in exchange for services rendered during the period.

The **retirement benefit interest expense** is the cost of financing an unfunded retirement benefit obligation during the period.

The **retirement benefit liability** is the amount of any liability recognized on a government's statement of financial position in respect of retirement benefits. It is the sum of the current and prior years' benefits expenses less the government's accumulated cash contributions.

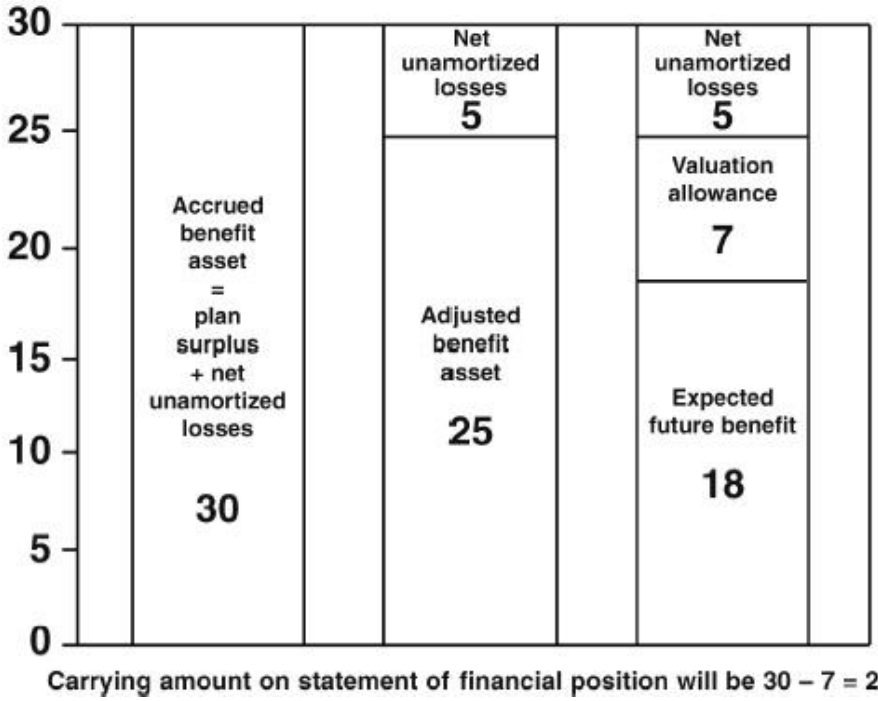
A **retirement benefit plan** is any arrangement (contractual or otherwise) by which a program is established to provide retirement income and other benefits to employees and/or retirees.

Retirement benefits are benefits expected to be provided after retirement to employees and their beneficiaries. These benefits include pension income, health care benefits, life insurance, and other miscellaneous benefits provided to employees after retirement.

Vesting is the recognition of the employees' rights to receive retirement benefits that are no longer conditional on the employees remaining in the service of the employer.

Appendix A — Limit on accrued benefit asset

Limit on accrued benefit asset



The carrying amount on the statement of financial position would be the accrued benefit asset of $30 less the valuation allowance of $7 for an amount of $23.

Appendix B — Illustrative examples

ILLUSTRATIVE EXAMPLES

The following examples have been prepared by CPA Canada staff to illustrate how the standards in Section PS 3250 might be implemented.

The examples are illustrative only and matters of principle relating to particular situations should be decided in the context of the Section. They are not intended to indicate preferred formats nor to prescribe standardized note disclosure, as variations in format and wording will be necessary to meet the requirements of differing circumstances.

For ease of presentation, selections are made from accounting alternatives permitted by the Section.

Example 1 — Defined benefit pension plan, assuming a separate pension fund is maintained

Example 2 — Defined benefit plan for retirement benefits other than pensions, assuming a separate fund is not maintained

Example 1 — Defined benefit pension plan, assuming a separate pension fund is maintained

The government sponsors contributory defined benefit pension plans for substantially all of its employees and for members of its Legislature. There are three main plans — the Public Service Plan, the Provincial Judges' Plan and the Elected Representatives' Plan. The Public Service and the Provincial Judges' plans provide for pensions equal to 1.5 percent of the average of the five highest years' salary for each year of service to a maximum of 35 years. The Elected Representatives' Plan provides for

pensions equal to four percent of the average of five years' session indemnities for each year of service to a maximum of 15 years. The plans do not provide inflation protection. The average age of the 45,000 active employees is 42. There are 5,000 former employees who are entitled to deferred pension benefits and 11,000 retirees now receiving benefits.

Each year employees contribute seven percent of their salary to a separate pension fund and the government contributes an equal amount. While the government and employees are required to contribute equal amounts into the pension fund, the government retains the full risk of the accrued benefit obligation. The pension fund invests monies from the contributions in securities of organizations external to the government reporting entity as well as investing in some non-marketable bonds of the government.

At the beginning of fiscal year 20X1, an actuarial valuation of the government's employee pension obligations was done for accounting purposes using the projected benefit method prorated on services. The liability for pensions recorded in the statement of financial position was $400 million. For purposes of this example it is assumed that there were no unamortized actuarial gains or losses at that time.

Key actuarial assumptions used in the valuation were based on the government's best estimates. Those assumptions involve forecasts of expected future inflation rates, investment returns, wage and salary increases, and employee turnover and mortality. A second actuarial valuation for accounting purposes was performed at the end of fiscal year 20X3. During the second valuation, the actuarial assumptions included in the first one were reviewed and no changes were considered necessary.

During fiscal 20X4, a plan amendment was made to the Public Service Plan increasing the benefits from 1.5 percent to two percent of the average of the five highest years' salary for each year of service to a maximum of 35 years. The plan amendment was effective March 31, 20X4 and relates to both future and past services. The government is responsible for funding the pension liability of $25 million related to past services over the next 12 years. The increase in current period benefit costs due to rendering of service for fiscal 20X5 was $1.5 million.

	April 1, 20X0	March 31, 20X3
Accrued benefit obligation	$1.5 billion	$2.2 billion
Pension fund asset	$1.1 billion	$1.8 billion
Pension liability recorded in the statement of financial position	$ .4 billion	$ .4 billion
	========	========
Expected average remaining service life of related employee groups (EARSL)		12 years
Plan amendment March 31, 20X4		$25,000

Expected current period benefit cost:		
20X1	$200 million	
20X2	$220 million	
20X3	$240 million	
20X4		$240 million
20X5		$250 million
20X5 related to plan amendment		$1.5 million
20X6		$260 million

Expected rates of return	8%
Expected salary escalations	5%
Expected inflation rates	3%

The following amounts related to other pension experience incurred throughout the period:

($ millions)	20X1	20X2	20X3	20X4
Employee funding contributions	110	115	120	126
Government funding contributions:				
— related to current service	110	115	120	126
Benefit payments to retirees	105	109	115	119

Exhibit I — Interest during the year on the average pension liability outstanding during the year

($ thousands)	20X1	20X2	20X3	20X4
Interest on expected average accrued benefit obligation:				
Accrued benefit obligation — opening balance (a)	1,500,000	1,718,800	1,971,744	2,200,000
Add: Current period benefit cost (b)	100,000	110,000	120,000	120,000
Deduct: Benefit payments (b)	(52,500)	(54,500)	(57,500)	(59,500)
Average accrued benefit obligation	1,547,500	1,774,300	2,034,244	2,260,500
Interest at 8% on average accrued benefit obligation	123,800	141,944	162,740	180,840

Expected earnings on average pension fund assets:				
Pension fund assets — opening balance (a)	1,100,000	1,417,600	1,598,048	1,800,000
Add: Employee and government funding contributions (b)	110,000	115,000	120,000	126,000
Deduct: Benefit payments (b)	(52,500)	(54,500)	(57,500)	(59,500)
Average pension fund assets	1,157,500	1,478,100	1,660,548	1,866,500
Expected earnings on average pension fund assets at 8%	92,600	118,248	132,844	149,320
Total interest during the period on the average pension liability outstanding during the period (c)	31,200	23,696	29,896	31,520

(a) In the period of an actuarial valuation, the opening balance of the accrued benefit obligation is the actuarially determined amounts (opening balances 20X1 and 20X4). In the periods between valuations (20X2 and 20X3), the opening balance is equal to the expected closing balance for the previous year as determined in Exhibit II. The opening balance of pension fund assets is the actual amount reported in the financial records of the fund.

(b) Accrued, or assumed to take place, evenly throughout the year, therefore interest is accrued on one-half of the total.

(c) Interest during the year on average pension liability outstanding during the year = 8% of [(average accrued benefit obligation) – (average pension fund assets)].

Exhibit II — Expected closing balance of accrued benefit obligation

($ thousands)	20X1	20X2	20X3	20X4
Accrued benefit obligation — opening balance	1,500,000	1,718,800	1,971,744	2,200,000
Add: Current period benefit cost	200,000	220,000	240,000	240,000
Increase due to plan amendment	—	—	—	25,000
Interest accrued (Exhibit I)	123,800	141,944	162,740	180,840
Deduct: Benefit payments	(105,000)	(109,000)	(115,000)	(119,000)
Expected closing balance	1,718,800	1,971,744	2,259,484	2,526,840

Exhibit III — Expected closing balance of pension fund

assets

($ thousands)	20X1	20X2	20X3	20X4
Pension fund assets — opening balance (actual)	1,100,000	1,417,600	1,598,048	1,800,000
Add: Employee and government funding and contributions	220,000	230,000	240,000	252,000
Expected earnings (Exhibit I)	92,600	118,248	132,844	149,320
Deduct: Benefit payments	(105,000)	(109,000)	(115,000)	(119,000)
Expected closing balance	1,307,600	1,656,848	1,855,892	2,082,320

Exhibit IV — Amortization of actuarial gains / losses on accrued benefit obligation

($ thousands)	20X1	20X2	20X3	20X4
Expected closing balance of accrued benefit obligation at March 31 (Exhibit II)	N/A	N/A	2,259,484	N/A
Actual accrued benefit obligation (per the March 31, 20X3 actuarial valuation)			2,200,000	
Actuarial gain			59,484	
EARSL			12 years	
Annual amortization over EARSL			4,957	

(a) A straight-line method is used to amortize actuarial gains and losses over the expected average remaining service life of the related employee groups. Amortization commences in the year following the effective date of the related actuarial valuation.

Exhibit V — Amortization of actuarial gains / losses on pension fund asset earnings

($ thousands)	20X1	20X2	20X3	20X4
Expected closing balance of pension fund assets at March 31 (Exhibit III)	1,307,600	1,656,848	1,855,892	2,082,320
Actual pension fund assets	1,417,600	1,598,048	1,800,000	2,142,320
Actuarial gain (loss)	110,000	(58,800)	(55,892)	60,000
EARSL	12 years	12 years	12 years	12 years
Annual amortization over EARSL	9,167	(4,900)	(4,658)	5,000

Exhibit VI — Unamortized actuarial gains and losses

($ thousands)	20X1	20X2	20X3	20X4
Unamortized actuarial gains and losses — opening balance	—	110,000	42,033	41,358
Actuarial gains (losses) due to:				
— accrued benefit obligation (Exhibit IV)	—	—	59,484	—
— earnings on pension fund assets (Exhibit V)	110,000	(58,800)	(55,892)	60,000
Amortization recorded during the year:				
— accrued benefit obligation (Exhibit IV)	—	—	—	(4,957)
— earnings on pension fund assets (Exhibit V)	—	(9,167)	(4,267)	391
— recognition of net unamortized actuarial gains as an offset to prior period service cost (a)	—	—	—	(25,000)
Unamortized actuarial gains and losses — closing balance	110,000	42,033	41,358	71,792

(a) When the cost of a plan amendment that improves a benefit related to prior service is offset against net actuarial gains, the cost is offset first against the oldest gains. Additionally, it is only offset against gains in the Public Service Plan.

Exhibit VII — Liability recorded in the statement of financial position

($ thousands)	20X1	20X2	20X3	20X4
Accrued benefit obligation — closing balance (a) (Exhibit II)	1,718,800	1,971,744	2,200,000	2,526,840
Deduct: Pension fund assets — closing balance (Exhibit III)	(1,417,600)	(1,598,048)	(1,800,000)	(2,142,320)
Unamortized actuarial gains / losses (Exhibit VI)	110,000	42,033	41,358	71,792
Pension liability	411,200	415,729	441,358	456,312

(a) In the period of an actuarial valuation, this is the actuarially determined amount (closing balance 20X3). In the periods between valuations, this is an expected closing balance.

Exhibit VIII — Expenses recorded in the statement of

operations

($ thousands)	20X1	20X2	20X3	20X4
Pension expense:				
Current period benefit cost	200,000	220,000	240,000	240,000
Prior period cost of plan amendment incurred during the year	—	—	—	25,000
Recognition of unamortized net actuarial gains	—	—	—	(25,000)
Amortization of actuarial gains / losses (Exhibit VI)	—	(9,167)	(4,267)	(4,566)
	200,000	210,833	235,733	235,434
Less: Employee contributions	(110,000)	(115,000)	(120,000)	(126,000)
Pension expense	90,000	95,833	115,733	109,434
Pension interest expense:				
Interest during year on the average pension liability outstanding during the year (Exhibit I)	31,200	23,696	29,896	31,520
Total pension-related expenses	121,200	119,529	145,629	140,954

— end of year (Exhibit VII)	411,200	415,729	441,358	456,312
Increase in pension liability	11,200	4,529	25,629	14,954

Financial Statement Disclosure

Illustrative Note to the Financial Statements

The government sponsors contributory defined benefit pension plans for substantially all of its employees and for members of its Legislature. There are three main plans — the Public Service Plan, the Provincial Judges' Plan and the Elected Representatives' Plan. The plans provide pensions based on length of service and final average earnings. They do

not provide for inflation protection. The average age of the 45,000 active employees covered by the plans is 42. There are 5,000 former employees who are entitled to deferred pension benefits. At present, the plans provide benefits for 11,000 retirees; benefit payments were $119 million in 20X4 and $115 million in 20X3.

Employees make contributions equal to seven percent of their salary and the government contributes an equal amount. In 20X4, total contributions for current year's service were $252 million (20X3 — $240 million). Total benefit payments to retirees during the year were $119 million (20X3 — $115 million). A separate pension fund is maintained. Pension fund assets are invested primarily in marketable investments of organizations external to the government reporting entity, with some invested in non-marketable bonds of the government. The pension liability at March 31 includes the following components:

($ thousands)	20X4	20X3
Accrued benefit obligation	2,526,840	2,200,000
Pension fund assets:		
Marketable securities	(1,942,320)	(1,610,000)
Government bonds	(200,000)	(190,000)
	384,520	400,000
Unamortized actuarial gains / losses	71,792	41,358
Pension liability	456,312	441,358

Actuarial valuations for accounting purposes are performed triennially using the projected benefit method prorated on services. The most recent actuarial report was prepared at March 31, 20X3. The accrued benefit obligation shown for 20X4 is based on an extrapolation of that 20X3 valuation. There is a net unamortized actuarial gain to be amortized on a straight-line basis over the expected average remaining service life of the related employee groups (12 years).

The actuarial valuation was based on a number of assumptions about future events, such as inflation rates, interest rates, wage and salary increases and employee turnover and mortality. The assumptions used reflect the government's best estimates. The expected inflation rate is three percent. The discount rate used to determine the accrued benefit obligation is eight percent.

Pension fund assets are valued at market values. The expected rate of return on plan assets is eight percent. The actual return on plan assets was 8.6 percent. Plan assets include government bonds valued at an estimated market value of $200 million (20X3 — $190 million).

The total expenses related to pensions include the following components:

($ thousands)	20X4	20X3
Current period benefit cost	240,000	240,000
Prior period cost of plan amendment	25,000	—

Recognition of net unamortized actuarial gains	(25,000)	—
Amortization of actuarial gains / losses	(4,566)	(4,267)
	235,434	235,733
Less: Employee contributions	(126,000)	(120,000)
Pension expense	109,434	115,733
Interest cost on the average accrued benefit obligation	180,840	162,740
Expected return on average pension plan assets	(149,320)	(132,844)
Pension interest expense	31,520	29,896
Total expenses related to pensions	140,954	145,629

The pension expense is included in the statement of operations as a component of program expenses. The pension interest expense is included in the public debt interest expense.

On March 31, 20X4, a plan amendment was made to the Public Service Plan increasing the rate at which pension benefits accrue. The amendment relates to both future and past service. The benefit accrual of $25 million is based on an actuarial valuation of the increase in the accrued benefit obligation due to past service. The government intends to fund this amount over a 12-year period ($1 million in 20X4).

Example 2 — Other retirement benefits plan

The government provides certain retiree health and life insurance benefits to its employees. The plan is unfunded and requires no contribution from employees.

In 20X3 the government adopted accrual accounting for the benefit plan. Prior to that date the government recognized benefit expenses equal to its payments for the actual costs incurred by the retirees and no liability for retirement benefits other than pensions was recorded in the statement of financial position.

At the beginning of fiscal year 20X3, an actuarial valuation of the government's obligations for retirement benefits other than pensions was done for accounting purposes using the projected benefit method prorated on services. Key actuarial assumptions used in the valuation were based on the government's best estimates. Those assumptions involve forecasts of expected future inflation rates, cost of long-term debt, employee mortality and medical costs. A second actuarial valuation for accounting purposes was performed at the end of fiscal year 20X5. During the second valuation, the actuarial assumptions included in the first one were reviewed and no changes were considered necessary.

($ thousands)	April 1, 20X2	March 31, 20X5
Accrued benefit obligation	100,000	150,000
Expected average remaining service life of related employee groups (EARSL)	12 years	
Plan amendment September 30, 20X5		10,000
Expected current period benefit cost:		
20X3	3,500	
20X4	3,800	

20X5	4,000	
20X6		4,000
20X6 related to plan amendment		500
20X7		5,200
20X8		5,400

Expected cost of long-term debt	8%	
Expected salary escalations	5.5%	
Expected medical inflation rates	10%	
Expected inflation rates	5.5%	

Benefit payments to retirees	20X3	2,500
	20X4	2,800
	20X5	2,900
	20X6	3,100

Exhibit I — Interest during the year on the average liability for retirement benefits other than pensions outstanding during the year

($ thousands)	20X3	20X4	20X5	20X6
Interest on expected average accrued benefit obligation:				
Accrued benefit obligation — opening balance (a)	100,000	109,040	118,803	150,000
Add: Current period benefit cost (b)	1,750	1,900	2,000	2,125
Increase in accrued benefit obligation due to plan amendment (c)	—	—	—	5,000
Deduct: Benefit payments (b)	(1,250)	(1,400)	(1,450)	(1,550)
Average accrued benefit obligation	100,500	109,540	119,353	155,575
	======	======	======	======
Interest at 8% on average accrued benefit obligation (d)	8,040	8,763	9,548	12,446

(a) In the period of an actuarial valuation, the opening balance of the accrued benefit obligation is the actuarially determined amounts (opening balances 20X3 and 20X6). In the periods between valuations (20X4 and 20X5), the opening balance is equal to the

expected closing balance for the previous year.

(b) Accrued, or assumed to take place, evenly throughout the year, therefore interest is accrued on one-half of the total.

(c) Since the plan amendment was effective mid-year, interest is earned for one-half of the year on the increase in accrued benefit obligation due to past service = ½ (10,000). Similarly, interest is earned on the increase in the current period benefit cost following the plan amendment. The average current period benefit cost in 20X6 is, therefore, = ½ (4,000) + ¼ (500).

(d) Interest during the year on average liability outstanding during the year = 8% of average accrued benefit obligation.

Exhibit II — Expected closing balance of accrued benefit obligation

($ thousands)	20X3	20X4	20X5	20X6
Accrued benefit obligation — opening balance	100,000	109,040	118,803	150,000

Liability for retirement benefits	109,040	118,803	129,451	155,009

(a) In the period of an actuarial valuation, this is the actuarially determined amount (closing balance 20X5). In the periods between valuations, this is an expected closing balance.

Exhibit VI — Expenses recorded in the statement of operations

($ thousands)	20X3	20X4	20X5	20X6
Retirement benefit expense:				
Current period benefit cost	3,500	3,800	4,000	4,500
Prior period cost of plan amendment incurred during the year	—	—	—	10,000
Recognition of unamortized net actuarial gains	—	—	—	—

Amortization of actuarial gains / losses (Exhibit III)	x	x	x	1,712
Retirement benefit expense	3,500	3,800	4,000	16,212
Retirement benefit interest expense (Exhibit I)	8,040	8,763	9,548	12,446
Total expenses related to retirement benefits	11,540	12,563	13,548	28,658

Financial Statement Disclosure

Illustrative Note to the Financial Statements

The government sponsors a defined benefit plan for retirement benefits other than pensions for substantially all of its employees. The plan provides extended health and dental as well as life insurance to employees.

Total benefit payments to retirees during the year were $3.1 million (20X5 — $2.9 million). The plan is unfunded and requires no contribution from employees. The retirement benefit liability at March 31 includes the following components:

($ thousands)	20X6	20X5
Accrued benefit obligation	173,846	150,000
Unamortized actuarial gains / losses	(18,837)	(20,459)
Retirement benefit liability	155,009	129,451

Actuarial valuations for accounting purposes are performed triennially using the projected benefit method prorated on services. The most recent actuarial report was prepared at March 31, 20X5. The accrued benefit obligation shown for 20X6 is based on an extrapolation of that 20X5 valuation. There is a net unamortized actuarial loss to be amortized on a straight-line basis over the expected average remaining service life of the related employee groups (12 years).

The actuarial valuation was based on a number of assumptions about future events, such as inflation rates, interest rates, medical inflation rates, wage and salary increases, and employee turnover and mortality. The assumptions used reflect the government's best estimates. The expected inflation rate is 5.5 percent. The discount rate used to determine the accrued benefit obligation is eight percent.

The total expenses related to retirement benefits other than pensions include the following components:

($ thousands)	20X6	20X5
Current period benefit cost	4,500	4,000
Prior period cost of plan amendment	10,000	—

Amortization of actuarial gains / losses	1,712	—
Retirement benefit expense	16,212	4,000
Retirement benefit interest expense	12,446	9,548
Total expenses related to retirement benefits	28,658	13,548

The retirement benefit expense is included in the statement of operations as a component of program expenses. The retirement benefit interest expense is included in the public debt interest expense.

On September 30, 20X5, a plan amendment was made to the plan increasing the rate at which retirement benefits accrue. The amendment relates to both future and past service. The benefit accrual of $10 million is based on an actuarial valuation of the increase in the accrued benefit obligation due to past service.

Statement of Financial Position (excerpts)

As at March 31 ($ thousands)	20X6	20X5
Liabilities		
Accounts payable	x	x
Accrued liabilities	x	x
Borrowings		
Treasury bills	x	x
From other governments	x	x
Other	x	x
Retirement benefit liability (note)	155,009	129,451
Total liabilities	x	x

Hi Shyrose,

To date I have $16,000 in our WIPs based on time incurred to dates at the rate in our engagement letter.

It would be a good time to send an interim bill, so I will get that arranged also.

Lucy

Hi Shyrose,

This was the latest version of the paper that I worked on. As it's a management paper, I don't know whether it was "finalized" or changed after this version, as this version is a still marked as draft.
It would be management's responsibility to finalize the paper and remove the Draft references, when comfortable with the content.

Hope this helps,

Regards,
Lucy

Position paper for Ontario Teachers' Pension Plan

Preamble

This document addresses the accounting for pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.

Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP.

As described in PSAS, a pension asset arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the asset balance (or plan surplus for accounting purposes) in OTPP is an asset to the province and it is suitable to reflect it in the financial results.

The OAG disagrees with this position. The OAG has indicated that because the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and in the absence of that right, because the Province does not have an agreement in place with the Ontario Teachers' Federation (OTF) with respect to how the surplus would be utilized such that it would provide a benefit to the Province, a pension asset in the Public Accounts is not appropriate.

Ontario had followed the same pension accounting treatment for all of the past 14 years. This had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals. There has been no change to the relevant PSAS (i.e. RETIREMENT BENEFIT, Section PS 3250) over the past 14 years.

A regulation was filed to allow the public service to sign-off on the impact of the OAG's view on accounting for pension assets in Ontario's 2015-16 financial statements. The regulation is time-limited and legislates the accounting for pension assets of its two jointly-sponsored pension plans (OTPP and

OPSEUPP) for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's accounting, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to reflect the Auditor General's interpretation of PSAS. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt.

Background

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1.

The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the Ontario Teachers' Federation represented by its Executive (the "OTF") (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. The OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for the OTPP ;

---

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
a. It provides defined benefits.
b. The defined benefits are contributory benefits.
c. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
d. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners Agreement (FMP);
f) The Ontario Teachers' Pension Plan; and
g) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to the OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5] The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and

Commented [CV1]: Let's discuss this next section – its new to me – was it in one of the legal opinions?

Yes, per the Osler September 20, 2016 letter – pages 7 and 8 – included in this section as we discuss that OTPP qualifies as a JSPP

Also – I'm confused by the footnotes below – 3. And 4. And then 2.3.4.?

The characteristics of a JSPP in footnote 1 includes 4 parts which were the first series of 1, 2, 3 and 4 – I have changed to a, b, c and d

Commented [CV2]: Does this have any impact on the JSPP status of the plan

I believe it is consistent with the characteristics of a JSPP- characteristic c

LD – I think there are a number of ways to interpret this clause It could be argued that the clause is there to ensure that there is sufficient money from a liquidity perspective. This does not necessarily negate the broader agreement to share on an equitable basis – i.e. it's not clear if this injection by the Province would be balanced by the OTF in some other form – one might argue that the rest of the arrangement (partner's agreement) would require it to.
The TPA does require that the assets of the pension fund should be maintained at a level that is reasonably sufficient to meet the liabilities. Therefore, if this requirement has been met then the requirements of subsection 5(3) would only be for liquidity/short term in nature and not for long term funding.

I can see how one might also argue that it indicates that residual risk is with the Province – for example, does this clause kick in when the pension plan has no more active members and runs out of assets to pay for the liabilities then is the Province on the hook. Again – the rest of the Plan's terms would indicate that this should not happen, While "should not" might not be the same as "cannot" it could be countered that the majority of the funding risk is not with the province, because the other requirements in the Partners' Agreement require shared funding.
However this would likely be a matter of interpreting the arrangement as a whole.

I don't know what the original thinking by mgt/OAG was when this was agreed upon to be a JDBP, but the above would be my guess as to how it was considered.

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).
[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).

for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Currently, the Sponsors are required to mutually agree upon how any plan deficits are to be addressed. [8] While not binding upon the Sponsors, the FMP indicates that deficits may be addressed through increases to the contribution rates, lowering the amount of indexation and/or other decreases in benefits.

Commented [CV3]: Not sure what we are referring re: the use of also

Section 3.11 of the FMP discusses options available to the partners to eliminate any deficit in the plan (i.e. change benefits, contributions, or both)

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the FMP requires the Sponsors to negotiate and agree upon decisions relating to surplus utilization. Accordingly, the Sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the Sponsors are included in appendix E. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

---

[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/101791209401-l5e47lc2b-23f1-44e6-b5cld22e3e50dbc3lHow+ Contribution+Rates*HaverEvolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20lo versus l0.4yo/l2Vo, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.

[8] See, for example, Section 3.09 and 3.11 of the FMP.

Position paper for Ontario Teachers' Pension Plan

DRAFT

1.0 Preamble

This document addresses the accounting for the net pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

2.0 Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed on an appropriate application of Public Sector Accounting Standards (PSAS) to net pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP. This position paper addresses the analysis for OTPP. A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, as well as HOOPP and CAAT.

This position paper addresses the following three questions in relation to the accounting for OTPP:

1. For accounting purposes, what type of pension plan is OTPP (i.e. how should OTPP be classified under Public Sector Accounting Standards (PSAS))?
2. As a result of the classification, how should the Province of Ontario account for the pension surplus of OTPP in the Public Accounts?
3. How should the pension asset of OTPP be measured in the Public Accounts of the Province of Ontario?

3.0 Conclusions

The following conclusions were reached regarding each of the above questions:

1. Classification of OTPP - The Province has concluded that OTPP meets the definition of a joint defined benefit plan as the Province and Ontario Teachers' Federation are shared sponsors of the plan. The Teachers' Pension Act, the Partners' Agreement and the plan text for OTPP collectively set out this shared control and equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a joint defined benefit plan in RETIREMENT BENEFITS, Section PS 3250 in PSAS. The classification of OTPP as a joint defined benefit plan for accounting purposes has been consistent since 2001 and had been consistently accepted without question by the OAG, including throughout the 2015/16 Public Accounts.

2. Recognition of a pension asset for a joint defined benefit plan - The Province has concluded that PSAS (Section PS 3250) supports the recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets be subject to unilateral control. Shared control is relevant and appropriate for a situation involving a joint defined benefit plan. The Province's share of OTPP's pension surplus meets the definition of an accrued benefit asset under Section PS 3250 which requires the Province to recognize its portion of the plan (50% for OTPP).
3. Measurement of a pension asset - The Province has concluded that the attributes of the joint defined benefit plan arrangements for the OTPP entitle the Province to access its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surpluses to reduce contributions in the future. The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of those models to date no valuation allowance appears to be required and the OTPP pension assets should be recorded on the books of the Province. The Province recognizes that professional judgement must be applied in deriving an estimate of a potential valuation allowance under Section PS 3250.

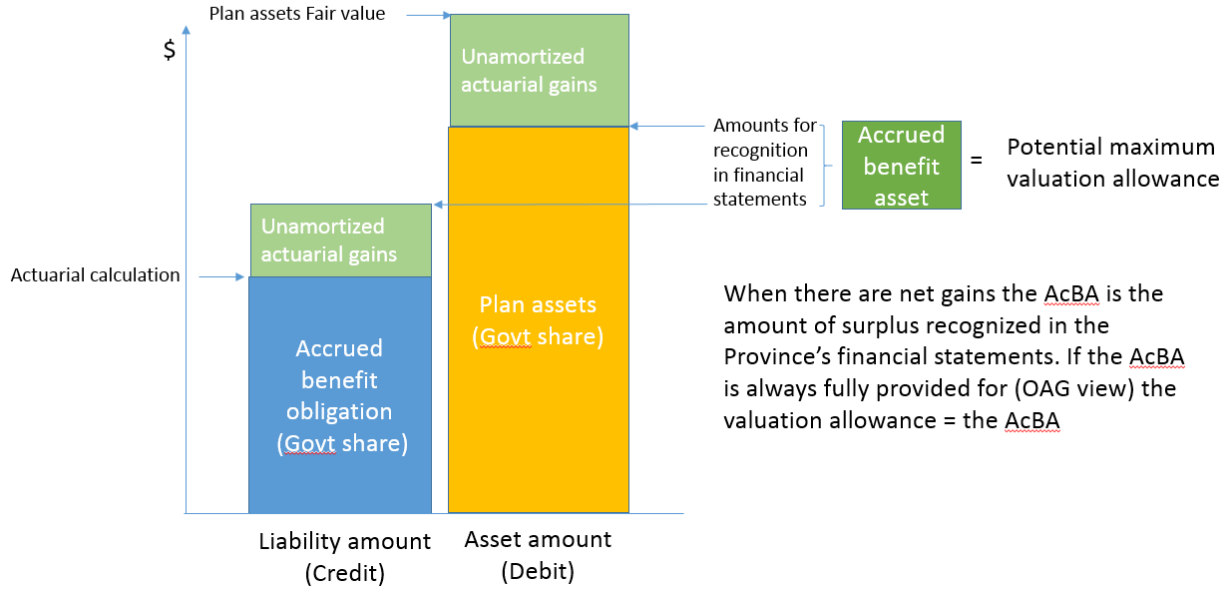
4.0 Background Information

4.1 Accrued benefit asset

As described in PSAS, an accrued benefit asset (net pension asset) arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. An Accrued Benefit Asset (AcBA) includes the effect of net unamortized experience gains or losses. Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation. OTPP currently has net unamortized experience gains. The following illustration reflects the compilation of the net pension asset (accrued benefit asset) reported on the Province's books for the OTPP.

DRAFT

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



It is important to note that contributions to the plan are based on funding objectives of the plan. In contrast, benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the net asset balance (plan surplus for accounting purposes) in OTPP is an asset to the Province and it is appropriate to reflect it in the financial results in accordance with PSAS. The Province has also concluded that no valuation allowance under PSAS is required against the asset as at March 31, 2016.

The OAG disagrees with the Province's position. Specifically, the OAG has indicated that the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and as such that the Province does not control the assets which the OAG interprets PSAS as requiring. Further, the OAG considers the lack of an enforceable agreement at year-end with the Ontario Teachers' Federation (OTF as the joint sponsor of the plan) that would provide for lower contributions in the future as requiring that a full asset valuation allowance be taken against the net asset under PSAS.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. RETIREMENT BENEFITS, Section PS 3250 of the PSA Handbook, addresses the accounting of obligations for employee retirement benefits in government financial statements. Since 2001, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the period is reflected in Appendix A. Unqualified audit reports have been received for each of the years from the

OAG on the Public Accounts. The pension accounting initially adopted by the Province for OTPP had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

In light of the contrasting views on interpretation of PS 3250 to the Province's jointly sponsored pension plans, a regulation was necessary to allow the public service to sign-off on the impact of the OAG's view on accounting for net pension assets in Ontario's 2015-16 financial statements. The regulation is time-limited and legislates the accounting for net pension assets of its two jointly-sponsored pension plans (OTPP and OPSEUPP) for 2015-16 in a manner that is consistent with the interpretation proposed by the Auditor General. The change in accounting treatment for 2015-16 resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the 2015-16 annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's interpretation, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to reflect the Auditor General's interpretation of PSAS. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt and would have only been appropriate if the government had agreed with the Auditor General's interpretation of PSAS which would have acknowledged errors in the prior year's comparative results.

4.2 Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1. The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the OTF (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
a. It provides defined benefits.
b. The defined benefits are contributory benefits.
c. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
d. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners' Agreement (FMP); and
f) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to OTPP in the event that there are insufficient assets to make required payments out of the plan in any

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).

particular year. [5] This clause has been interpreted as a short term solvency protection clause, rather than a clause that transfers substantive residual risk to the Province, as the rest of the arrangement is structured such that the risk of these payments is minimal and the risks of the long term funding of the plan must still be equitably shared. The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under OTPP). Notwithstanding that subsection 5(1.1) of OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under OTPP since OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Joint governance and cost sharing form two of the core features of OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the sponsors. In this regard, the Partner's Agreement requires the sponsors to negotiate and agree upon decisions relating to surplus or deficit utilization, which currently is outlined in the FMP. [8] The FMP indicates that deficits (or surpluses) may be addressed through increases (decreases) to the contribution rates, lowering (increasing) the amount of indexation and/or other decreases (increases) in benefits. While not binding upon the sponsors, as the sponsors can change the FMP at any time, any changes are required to have the mutual consent of both sponsors. Accordingly, the sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the sponsors are included in appendix B. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both

[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).
[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/10179/20940/-/5e471c2b-23f1-44e6-b5c1d22e3e50dbc3/How+ Contribution+Rates+Have+Evolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20% versus 10.4%/12%, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.
[8] See, for example, Section 3.09 and 3.11 of the FMP.

upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the sponsors regarding how any surpluses are to be utilized. We note that the sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the sponsors to utilize surplus in a variety of ways, depending on the funded status of OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, under the FMP the sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the sponsors to agree upon the manner in which surplus is to be utilized, neither sponsor has a legally enforceable right to unilaterally utilize surplus in OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What the Province does have, however, is a right to negotiate with the OTF the use of funding surpluses that may arise under the plan.

4. Negotiations on the use of the surplus occur as specified in the Partners' Agreement. The Partner's Agreement requires that any actuarial funding valuation submitted to the pension regulators must be "actuarially balanced" (Section 57 of the Partners' Agreement). This must occur at least once every three years, but can occur every year if the partners agree. If a preliminary funding valuation shows a funding surplus or deficit then the joint sponsors must negotiate how this surplus or deficit is to be resolved prior to filing the funding valuation.

4.3 Accounting for OTPP by the Province

Since fiscal year 2001-2002, the Province has recorded a net pension asset for OTPP on the Statement of Financial Position in accordance with Section PS 3250. A net pension asset has arisen because the government's share (50%) of the total contributions to OTPP plus recognized investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense (see illustrative examples in Appendix J). The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

The various valuations prepared for the OTPP – i.e. those for the Province's public accounts, those for the funding valuation and those for the OTPP stand-alone financial statements, can create confusion when assessing the Province's accounting. Therefore, this next section sets out the differences in those valuations.

With regards to any comparisons between surplus or deficit amounts reported in the Province's financial statements verses OTPP's financial statements or funding reports, it is important to acknowledge the different objectives of funding and accounting for a pension plan which are also explicitly addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*
>
> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.*

DRAFT

Section PS 3250 paragraph .051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: “Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…”

OTPP’s most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website (https://www.otpp.com/home). The Province’s relative portion of this surplus would be $6.6 billion. OTPP’s published stand-alone financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015, for which the Province’s portion would be a deficit of $900 million. The following background helps to clarify the reasons for these different results. OTPP’s financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook (“Part IV”), which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the net surplus or deficit for funding purposes.

Accounting for employee future benefits requires the use of assumptions and methodologies to calculate both the obligation incurred to date and the value of the assets already set aside to meet those obligations. Accounting frameworks differ in standards that must be applied in determining appropriate assumptions and methodologies. Further, the assumptions and methodologies used in developing a “funding valuation” on a going concern basis also differ from those required by accounting standards. These differences result in a number of different valuations for the same plan, depending on the purpose of the valuation and can be affected by certain choices made between acceptable options within each framework. A summary of the main differences between the methodologies used to calculate a going concern funding valuation, OTPP’s accounting valuation and the Province’s accounting valuation is shown in Appendix D.

Specifically, the discount rate used to value the obligations of the plan has a significant impact on the overall position of the plan. A lower discount rate results in a higher liability and a higher discount rate results in a lower liability, all else being equal. Put another way, a higher estimate of the time-value of money results in the value the promises made today that will be paid out in the future cheaper. OTPP uses a discount rate based on corporate/government bond rates in its financial statements, as permitted by Part IV. The Province uses a discount rate based on the expected asset return, as permitted by PSAS. The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds. Both a discount rate based on the expected asset return and one based on corporate/government bonds are “best estimate” rates; they must both be based on management’s best estimate of the applicable discount rate. In both cases the estimates must be supportable. The difference results not from one being more “right” or “wrong” relative to the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.

Typically the funding discount rate used for the funding valuation falls between the bond discount rate and the expected asset return, but it differs in that it does not purport to be the "best estimate" of the discount rate, rather it is designed to indicate the contributions that are required to fund the promised benefits with an additional conservative margin for adverse deviations. Note that over the long term the difference between funding valuations and accounting valuations would diminish as the impact of the discount rate unwinds and the asset valuation methods converge.

In practice, the discount rates used in the financial statements of government sponsored and joint defined benefit pension plans prepared under Part IV of the CPA Canada Handbook (Section 4600) use diverse methodologies. For example, in Alberta there are seven plans which prepare their financial statements under Part IV with reference to IFRS (same framework as OTPP). Of these none use a government bond discount rate and all use a discount rate calculated with some reference to a rate of return on invested assets, which may include factors for expenses, diversification and rebalancing. The analysis of a number of government sponsored plans is included as Appendix E. The analysis demonstrates that in their stand-alone financial statements, a significant number of government sponsored plans use a discount rate aligned to an asset investment return rather than a bond discount rate. OTPP is actually in the minority of plans that choose to use the rate required by IFRS, resulting in a lower discount rate and higher liability for financial reporting purposes.

The above analysis explains how different discount rates impact the net surplus/deficit reported on OTPP's financial statements, OTPP's funding reports and the Province's financial statements. The fact that OTPP reports a deficit on its financial statements, or that the 50% of the net surplus reported by OTPP for funding purposes is lower than the surplus reported on the government's financial statements under PSAS does not impact the net pension asset amount or pension expense reported by the Province for OTPP.

To further clarify, that there is a deficit reported in OTPP's stand-alone financial statements while the Province of Ontario calculates a surplus under PSAS requirements does not mean that there is no accounting surplus and therefore no reportable asset for the Province. In fact, **if** OTPP had chosen (as an acceptable accounting policy choice) to use a discount rate more consistent with its counterparts in other jurisdictions (see Appendix E) such as a discount rate based on an expected asset return which would be closer to that used by the Province, it would eliminate much of the existing difference between the reported net surplus/deficit amounts in OTPP's stand-alone financial statements and the Province's share of OTPP reported for accounting purposes in the Province's Public Accounts.

4.4 Applicability of PS 3250 as primary source of GAAP

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES, Section PS 1150 prescribes that, in developing and applying accounting policies, all primary sources of GAAP should be applied (Section PS 1150 paragraph .04). Primary sources of GAAP are Sections PS 1201-PS 3510, Public Sector Guidelines and appendices and illustrative material to those pronouncements. Only when there are no primary sources of generally accepted accounting principles (GAAP) that relate to the transactions or events under consideration, or more specific guidance is needed (Section PS 1150 paragraph .05), does an entity

consider other primary sources of GAAP dealing with similar issues and also the concepts described in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 (issued January 2003). Section PS 1000 is not, however, a "primary source of GAAP" under the PSA Handbook.

The primary sources of GAAP specific to the accounting for pension assets is RETIREMENT BENEFITS, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, also titled Section PS 3250).

Other primary sources of GAAP that deal with similar issues might also be considered where additional interpretation or guidance may be required. For the issues dealt with in this paper - recognition and measurement of a joint defined benefit plan - this could include standards that relate to shared control, as OTPP is a joint defined benefit plan, standards that relate to the definition of an asset and standards that relate to measurement uncertainty:

- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015, effective from April 1, 2017)
- CONTINGENT ASSETS, Section 3320 (issued in June 2015, effective from April 1, 2017)
- MEASUREMENT UNCERTAINTY, Section PS 2130 (issued in April 2005)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception of ASSETS, PS 3210 and CONTINGENT ASSETS, Section PS 3320 which are more recent and will be effective in for periods beginning on or after April 1, 2017. Section PS 3210 provides additional guidance on the various components of the existing asset definition found in Section PS 1000; it does not change the definition.

5.0 Question 1 – Classification of a pension asset

The analysis below addresses whether the Province's share of the pension surplus in OTPP, calculated in accordance with PSAS under Section PS 3250, represents a reportable asset to the Province of Ontario in the Public Accounts.

5.1 RETIREMENT BENEFITS PSAS 3250

The focus of the following analysis is on the accounting requirements in RETIREMENT BENEFITS, Section PS 3250 as this standard is a primary source of GAAP which specifically addresses the accounting for pension assets. The following highlights some key concepts and guidance contained in this standard.

5.1.1 Section PS 3250 – Purpose and Scope

The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250.003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

5.1.2 PS 3250 – Types of pension plans

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*
>
> *(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;*
>
> *(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;*
>
> *(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and*

> *(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.*
>
> *The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.*

Additional guidance on identifying joint defined benefit plans (JDBPs) is in Section PS 3250 paragraphs .79 to .80 which similarly highlight the importance of both shared control and shared risks and rewards in a JDBP as follows:

> *.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.*
>
> *.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.*

It should be noted that the definition of a JDBP under Section PS 3250 is not the same as the definition of a JSPP under the PBA, although there are some overlapping concepts between the two. A JDBP is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. The Province has concluded that OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 10(1)3 of the TPA for example).

The TPA, the Partners' Agreement and the plan text collectively set out this shared control and that the Province of Ontario has an equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a JDBP.

The classification of OTPP as a JDBP for accounting purposes [and a JSPP under the PBA] by the Office of the Provincial Controller has been consistent since 2001 and had been consistently accepted without question by the OAG, including throughout the 2015/16 Public Accounts.

5.2 Conclusion on classification

The Province has concluded that OTPP meets the definition of a joint defined benefit plan as the Province and Ontario Teachers' Federation are shared sponsors of the plan. The Teachers' Pension Act, the Partners' Agreement and the plan text for OTPP collectively set out this shared control and equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a joint defined benefit plan in RETIREMENT BENEFITS, Section PS 3250 in PSAS. The classification of OTPP as a joint defined benefit plan for accounting purposes has been consistent since 2001 and had been consistently accepted without question by the OAG, including throughout the 2015/16 Public Accounts.

6.0 Question 2 – Recognition of a pension asset for a JDBP

6.1 Standards in the PSA Handbook

RETIREMENT BENEFITS, Section PS 3250 paragraphs .081 to .082 provide guidance on the accounting for a JDBP in the financial statements of the government sponsor. As OTPP meets the definition of a JDBP for the reasons noted above, the relevant guidance for the Province for purposes of reporting retirement benefits in the Public Accounts includes:

> *.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]*
>
> *.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially*

> *curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.*

Section PS 3250 paragraph .081 clearly states that "The government should account for its portion of the plan in accordance with the standards for defined benefit plans". It is clear from this that only the government's portion of the plan is included in the government's financial statements consistent with the requirements of Section PS 3250 (recognition) and the measurement of that portion is based on the requirements of Section PS 3250 (measurement). It is also then clear that the requirements of the standard for recognition and measurement, including the Limit of the Carrying Amount of an Accrued Benefit Asset guidance, are designed to be applied to a shared control situation and not only to situations where there is unilateral control. If it was intended that no pension asset could be recognized because the asset was subject to shared control and not unilateral control Section PS 3250 paragraph .081 would have made this clear. This paper discusses the question of measurement separately in Question 3.

The balance sheet recognition guidance for retirement benefits is stated in Section PS 3250 paragraphs .016 to .017:

> *.016 The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date. [SEPT. 2001]*
>
> *.017 The components of the retirement benefit liability are:*
>
> > *(a) accrued benefit obligation including the effects of plan amendments, settlements and curtailments;*
> >
> > *(b) plan assets, if any; and*
> >
> > *(c) unamortized actuarial gains and losses.*

As OTPP is a funded plan there are plan assets that are recognized as part of the retirement benefit liability. When plan assets and the net impact of unamortized actuarial gains and losses exceed the accrued benefit obligation then there is an "Accrued benefit asset" (ABA). An ABA is defined in Section PS 3250 as follows:

> GLOSSARY - *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

Accordingly, the portion of the government's plan to be recognized includes their share of the accrued benefit obligation and also their share of the plan assets. In the case of the Province's portion of OTPP there is no uncertainty regarding the *existence* of an ABA for the government's portion of the plan; the

ABA is calculated by reference to accrued benefit obligation and plan assets, both determined based on the best estimate assumptions and the methodologies required by with Section PS 3250 for these items. As noted above an ABA is defined as the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance). For a jointly sponsored plan, this is the government's accumulated cash contributions less the government's share of the current and prior years' benefit expenses that are attributable to the government under the JDBP. The Province's portion of OTPP resulted in an ABA of $10.1 billion as at March 31, 2016. There is no uncertainty regarding the occurrence of the cash contributions made (and the interest earned thereon) measured in accordance with Section PS 3250 and the existence of the government's obligation. As Section PS 3250 paragraph .080 *requires* a government to account for its portion of the plan in accordance with the standards for defined benefit plans, this would include the recognition of any asset that meets the definition of an ABA under the standard.

Further, Section PS 3250 paragraph .050 refers to the presentation of the ABA; this amount is presented in the financial statements, net of any valuation allowance. This indicates that an ABA should be recognized in the financial statements, but measured in reference to the limit on the carrying amount of the asset - essentially a measurement requirement rather than a recognition requirement, as the limit could result in an ABA being measured at anything from $nil to its full amount. Note that the *measurement* of any net asset is subject to guidance in Section PS 3250 paragraphs .050-.059 and is discussed later in this paper.

To recognize only their share of the liability and not their share of the plan assets, or to recognize only a net liability (when the accrued benefit obligation exceeds plan assets) but never a net asset (when plan assets exceeds the accrued benefit obligation, subject to the valuation allowance guidance discussed in the Measurement section below), would indicate that the Province does not share equitably in the risks and rewards of OTPP because they bear only the risk of increased liabilities without being able to bear any rewards of investment returns on the plan assets and under this interpretation the plan would not therefore be a JDBP.

6.2 Concept of Shared Control and Asset Recognition

Included in the definition of a JDBP is the concept of shared control. Points (b) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of shared control resulting in a recognition of an asset could on the surface appear to conflict with the definition of an asset under FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210, as part of the definition of an asset under Section PS 1000 would suggest that the government must control the economic resource and access to the future economic benefits. Since shared control does not equate to control, there is a need to consider whether the recognition of any asset under PS 3250 is appropriate where there is only shared control.

The Province's position is that PSAS does not preclude asset recognition for assets under shared control and specifically for plan assets of JDBPs for the following reasons:

- As discussed above GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity. Section PS 3250 is a primary source of GAAP for dealing specifically with JDBPs and, as noted above, requires the government to account for their portion of the plan – both the accrued benefit obligation and plan assets in accordance with Section PS 3250. As such, reference to Section PS 3250 is sufficient to indicate that the recognition criteria are met for JDBP assets, no further source of PSAS guidance need be considered.

- Similarly, if other primary sources of GAAP are considered then it is relevant to consider GOVERNMENT PARTNERSHIPS, Section PS 3060 which also includes the concept of shared control. Under Section PS 3060, shared control is sufficient for asset recognition.

- The concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. With the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that the Public Sector Accounting Board (PSAB) did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

- The Province's reporting of a pension asset for the JDBP is therefore consistent with these primary sources of GAAP, subject to measurement guidance including impairment considerations.

The similarities between the definitions of a JDBP and a government partnership under PSAS are demonstrated in Appendix F to this paper, and further support Section PS 3060 as being a relevant primary source of GAAP dealing with similar circumstances, should it be considered necessary to go outside of the requirements of Section PS 3250 to look for further clarification and guidance on recognition.

Under Section PS 3060 a critical condition for a Government partnership is shared control. Section PS 3060 explicitly acknowledges that under shared control "none of the partners is in a position to exercise unilateral control over the government partnership" (Section PS 3060 paragraph .20), yet the accounting model required by Section PS 3060 for non- GBPs[9] is that of proportionate consolidation which is the recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership. JDBPs (or pension plans in general) are not specifically excluded from the scope of Section PS 3060 (Section PS

[9] Government business partnerships (GBPs) are accounted for under the modified equity method rather than proportionate consolidation.

3060 paragraph .05 lists a number of exclusions from its scope and pension plans are not noted), however some may interpret that they are excluded from the scope of Section PS 3060 on the basis that control is shared with employees rather than with a party outside of the reporting entity (Section PS 3060 paragraph .06 footnote 3). The Province of Ontario and OTF, which represents employees of the Province (Teachers), share control of OTPP. This interpretation indicates that such plans are excluded because of a closer relationship between the government and the other party than normally exists for government partnerships. Even when an independent third party shares control, Section PS 3060 still requires the recognition of a share in an asset subject to shared control, indicating that the PSAS framework does not require unilateral control in order to support asset recognition when there is shared control. It would not be appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3060 for proportionate consolidation, and similarly it is not appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3250 to account for the government's portion of a JDBP. In other words, Section PS 3250 is a primary source of GAAP and provides sufficient and complete guidance on how to account for assets related to JDBPs.

6.3 Concept of Contingent Asset

CONTINGENT ASSETS, Section PS 3320, provides guidance on the disclosure of contingent assets in a government's financial statements. It characterizes a contingent asset as one where there is uncertainty as to the existence of an asset (Section PS 3320 paragraph .04). It is the Province's position that the existence of the pension asset is not uncertain – there is an accrued benefit asset calculated in accordance with Section PS 3250 as noted above that is based on past transactions, being the impact of cumulative contributions and benefit expense. The fact that shared control exists with regards to access to the assets of the plan does not create additional uncertainty that would impact asset recognition under PSAS. The Province anticipates that in a broad sense, any OTPP surplus would be shared in an "equitable manner" under the terms of the arrangement, and this is enabled through the ability to negotiate the utilization of the surplus including the ability to prevent the utilization of the surplus in a manner that does not benefit the Province. This expectation is further supported by past history of surplus utilization (see Appendix G). The method, extent and timing during which the Province will obtain the expected future benefits (contributions reductions vs increase in benefits) is not certain. However Section PS 3320 also states "The mere fact that an estimate of an amount is involved (measurement uncertainty) does not, in and of itself, constitute the type of uncertainty that characterizes a contingent asset. For example, even though there may be measurement uncertainty related to income tax receivable, there is nothing uncertain about the fact that this asset exists. Any uncertainty is related solely to the amount thereof" (Section PS 3320 paragraph .07). Based on past history of surplus utilization for OTPP and based on the constating documents, expected future benefits for the Government are present. The uncertainty as with many types of assets relates to measurement uncertainty which will be discussed below.

6.4 Conclusion on recognition

Therefore the Province has concluded that PSAS supports the recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets must be subject to unilateral control. The Province's share of OTPP's pension surplus meets the definition of an Accrued Benefit Asset under Section PS 3250. The measurement of that accrued benefit asset is determined by reference to the guidance in Section PS 3250 regarding the Limit on the Carrying Amount of an Accrued Benefit Asset, discussed in Question 3 of this position paper.

7.0 Question 3 – Measurement of a pension asset

7.1 Standards in the PSA Handbook

Section PS 3250 addresses how to measure a pension asset. This is a two-step process for OTPP. Firstly the accrued plan obligation (a Credit) and the plan assets (a Debit) are measured in accordance with the standard, and adjusted for any unamortized actuarial gains or losses (a Debit for gains not yet realized, a Credit for losses not yet realized). This measurement results in a retirement benefit liability when it is a net liability (a Credit) amount or an accrued benefit asset when it is a net asset (a Debit) amount. When the resulting amount is an asset, the standard requires a second step to test that the asset is not impaired. It should be noted that impairment testing in some form is required for all assets recognized under PSAS standards except those carried at fair value, although the methodology of impairment tests will vary depending on the nature of the asset. The amount that is tested is the "adjusted benefit asset". When there are net unamortized gains the ABA is equal to the adjusted benefit asset. When there are net unamortized losses the ABA is reduced by those net unamortized losses to calculate the adjusted benefit asset. A graphical illustration of the calculation of the Accrued Benefit Asset (AcBA) and the Adjusted Benefit Asset (AdBA) are shown in appendix C. Section PS 3250 paragraphs .052 to .059 go on to explain what the standard means by expected future benefit and how a government may benefit from the ABA or adjusted benefit asset. Note that for OTPP the accrued benefit asset equals the adjusted benefit asset as there are net unamortized actuarial gains.

Section PS 3250 paragraphs .050-.059 are included here for completeness and ease of reference:

> ***Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)***
>
> *.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]*

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in Section PS 3250 paragraph .050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to

calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Section 3250 paragraph .052 states that a government may benefit from an ABA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions. This is an explanatory paragraph on how a government may benefit from an ABA and why a valuation allowance may be needed, rather than detailing the test to be applied. Part of this justification is to note that that an ABA may be impaired when "the government is not entitled to benefit from [the ABA] fully". Examples of when a government may not be entitled to benefit from the ABA fully are given, such as a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

Section PS 3250 paragraph .059 gives additional guidance to apply when an entity contemplates realizing future benefits <u>through a surplus withdrawal</u>: "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal". This introduces the concept of a legally enforceable right but only in the context of a government's withdrawal of surplus and <u>not in the context of contribution holidays</u>. If the standard setters had intended legal enforceability

to be the test throughout the standard, they would not have raised it only in the context of a withdrawal of surplus, but as a more fundamental notion in the guidance on expected future benefit. [10]

It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to shared control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Section 3250 paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays. When considering the ability to realize expected future benefits under Section PS 3250 paragraph .052, the Province's legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability which is not explicitly required by the standard to support recognition and measurement of JDBP pension assets. Specifically, the amount of pension asset that gets recorded needs to take into account considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a pension asset in the Public Accounts. Pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". Expected does not equate to certainty or the absence of uncertainty (Section PS 3250 paragraph .056).

Under the Plan and Partners' Agreement, if funding surpluses occur the partners are required to negotiate the use of the funding surplus (at least once every three years) and the Province is entitled to negotiate a reduction in contributions in respect of its share of the surplus. Under the Partners' Agreement any funding surplus must be dealt with (which includes the option of parking the surplus in the contingency reserve) so that the funding valuation becomes actuarially balanced. *In other words when there is a funding surplus over a certain range the "status quo" cannot be maintained, the surplus must be reduced by a combination of reductions in contributions, increases in benefits or withdrawals of surplus*. This is confirmed by the Partners' Agreement Section 57 that requires an actuarially balanced valuation to be prepared at least once every three years, allowing for a contingency reserve, combined with the FMP which sets out the framework for determining when a surplus or deficit outside of agreed upon ranges are met and action must be taken. While the Province might choose to accept an increase in member benefits rather than to reduce funding, any such decision is at the Province's discretion since the OTF cannot force the Province to increase benefits instead of reducing contributions. In other words

[10] Per page 10 of the October 2, 2016 dated letter from Deloitte LLP addressed to Ms. Karen Hughes, Associate Deputy Minister, Treasury Board Secretariat

it is at the Province's discretion whether to address the actuarial balancing requirements by allowing its portion of the surplus to be utilized through increased benefits. The OTF equally has the right to not agree to reduced contributions from the Province, but they do not have the right to force an inequitable sharing of the surplus. Therefore, the Province is entitled to negotiate their share of the JDBP which may include taking contribution holidays in future negotiations and can effectively use their power in negotiations to benefit from the ABA. The joint partners do have the ability to renegotiate all aspects of the partners' agreement including the FMP. However all changes require the agreement of both parties and as such the Province can veto any changes to the agreement. Note that while the negotiations are based on funding surplus amounts rather than accounting surplus amounts, any differences would be captured in the mechanics of the calculation of the expected future benefit rather than precluding an ability to benefit from any of the accounting surplus.

Further, Section PS 3250 paragraph .055 indicates "The objective of the standard in Section PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Many generally accepted accounting frameworks use "expected" in a number of principles and it is typically used in the probabilistic sense – something is expected when it is probable at some level, it does not equate to certainty. The Province has an expectation that they will benefit fully from the ABA by exercising their current rights under the plan arrangements to negotiate the use of current and future surpluses in the form of contribution holidays. This position is supported by the review of the constating documents and past history of negotiations that indicate[11]:

1. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) from exceeding the amount of contributions paid by or on behalf of active members in respect of credited service for the year[12] (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.
2. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix G for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.

[11] Per pages 3 to 6 of the September 20, 2016 dated letter from Osler, Hoskin & Harcourt LLP addressed to Len Hatzis and Paul Kaufman, Treasury Board Secretariat Legal Services
[12] TPA, subsection 5(1.1)

3. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right[13])[14], and the requirement to negotiate and agree (or in the absence of agreement, mediate and/or arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.
4. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement (section 74) may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan. Under the plan, contributions are generally borne equally by the Province and the employees. Employees benefit economically from both an increase in benefits and from a reduction of contributions. The Province benefits economically directly from a reduction in contributions. This makes it reasonable that at least some contribution reductions would be agreed to by the joint sponsors as a highly unequal weighting towards increases in benefits would not balance the interests of taxpayers and teachers therefore may be unlikely to be a reasonable outcome of “good faith” negotiations between the Province and the OTF.

   This is further supported by the historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses, and therefore, which should also be considered. In respect of conditional indexing, reduced indexation for current retirees was matched by an increase in payments by the Province for the first 50% of the indexation reduction. As the sponsors agreed to utilize the funding surplus to partially restore indexation, this restoration of indexation resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.98B for the 2015 change, and $1.68B for the 2014 change). This demonstrates that historically and over the long term an equitable sharing of the deficits and surpluses has resulted in changes in the Province’s contributions, even when there are decreases or increases to benefits for employees.

5. In the event that the sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, a mediator may be chosen by agreement of the sponsors (section 77 of the Partners’ Agreement). If the sponsors do not accept the report of the mediator, an arbitration board will be appointed (section 84 of the Partners’ Agreement). The arbitration board would consist of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would

[13] The OTF Call Right is a one-time arrangement intended to compensate Plan members for absorbing 100% (rather than 50%) of funding shortfalls arising the government initiated Freeze period. Part of a previously agreed upon arrangement to ensure equitable sharing of the risks and rewards over the long term of the plan, it is not a general unilateral right to utilize future surpluses beyond the recovery of the specific funding shortfalls.
[14] FMP, section 6.03

engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Based on the above analysis, the Province believes that the uncertainties around how and when to utilize a surplus in the OTPP do not result in an inability or lack of entitlement to utilize the surplus in accordance with Section PS 3250 paragraph .052.

7.2 Calculating the limit on the carrying amount of an accrued benefit asset

Section PS 3250 paragraphs .053 to .058 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in Section PS3250 paragraph .055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where actual realization of the benefit would be reflected in a reduction in future contributions. A valuation allowance is recorded against the pension asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test under Section PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as defined in Section 3250 paragraph .56.

Therefore in accordance with Section PS 3250 paragraph .56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Each of these is discussed separately.

7.3 Considerations re: withdrawal of the surplus (Section PS 3250 paragraph .056 (b))

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, Section 3250 paragraph .059 indicates “The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal.”

The TPA for OTPP does not specify a method for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution. The Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

The Province's position is that there is no amount of expected future benefit included in respect of withdrawable plan surplus.

7.4 Considerations re: reduced future contributions (Section PS 3250 paragraph .056 (a))

Section PS 3250 paragraph .056(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per Section PS 3250 paragraph.081 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

Section PS 3250 paragraph .055 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the pension asset value to be recorded in the accounts. For example, if the pension asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the pension asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. It is therefore relatively straightforward and is typically calculated based on the Province's share of the current service cost reported in the actuarial valuation taken into perpetuity unless there is evidence to indicate the workforce will significant diminish over time (for example a closed plan).

The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for

judgment in the above calculation is in this second part of the calculation. Note that consistent with the calculation of the expected future accruals for service, no amounts are considered for employee contributions as these relate to the OTF's portion of the plan. The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (Section PS 3250 paragraph .056(a)). There is no further guidance in Section PS 3250 as to how the calculation of minimum required contributions should be performed and what restrictions or parameters should be factored into this calculation. Typically for defined benefit plans minimum contributions include those that are required by the pension regulator to be made for funding. However, minimum contributions regardless of any surplus, may be required by plan text, legislation or other agreements with employees. For OTPP a key element of judgment is determining what contributions are required by the current plan arrangements "regardless of any surplus". The constating agreements for OTPP require that the parties negotiate every 3 years as a minimum, and when there is a funding surplus.

Determining the number of years of contributions to include should involve an assessment of the facts and circumstances of the plan and should consider uncertainty. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the contractual agreements between the sponsors that provide for the sharing of risks and benefits and specifically in respect of assessing the minimum contributions required by the plan agreements (there is no minimum contributions stipulated in the Plan text, legislation or Partners' Agreement) including the following:

- One view of minimum contributions might be that the agreed upon level of contributions are the minimum contributions until they are altered in the plan text. As this can only happen with agreement from OTF it cannot be assumed that changes will be made and therefore that the contribution formula as stated in the current agreements will continue in perpetuity. This view provides the most conservative view of minimum payments. However as the current contribution amounts are greater than the government's share of the annual current service cost for the existing workforce this indicates that continued contributions at this rate will result in ever increasing surpluses. Extrapolating the surpluses, at a certain point other requirements that are currently incorporated into the plan text, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan will apply to reduce the contributions. The effect of these caps on contributions would have to be estimated but cannot be ignored as they form part of the current contribution arrangements. Modelling could be performed to develop expectations as to when these CRA limits could be expected to be reached assuming no changes in the contribution levels. As is the most conservative view (highest minimum contributions) the impact of this has been considered, as discussed below.
- An alternative view of the minimum contributions required by the plan is that there is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'. On this basis it could be

argued that any agreed upon contribution levels are mandatory for only a three year period, after which the contributions must be renegotiated to stay the same, increase or decrease, such that the stated contribution level in the plan text constitute minimum payments for only three years. It should be noted that the plan text requires an actuarially balanced funding valuation, so to the extent that a funding deficit currently existed a contribution holiday (contributions lower than the annual cost of the plan) could not be negotiated. However because the funding situation at the time of future negotiations is not known it could be argued that no amount is a fixed "minimum contribution" in this context, because all of the contribution amount is subject to future changes in funding and negotiation by the joint sponsors.

- Other views of what the minimum contributions are would fall between these two views, such as that the current funding level is set to ensure that there is no funding deficit over a 11 year period and after that changes in contributions would be negotiated. This view has been used in calculating the actuarial calculation of the asset ceiling as noted in the table below.
- Another consideration might be the specific framework within the Funding Management Plan for OTPP which contemplates specified funding zones and expectations regarding possible contribution reductions by the sponsors. Informed stochastic modelling would be necessary to estimate when the different funding zones will be reached and probability of contribution reductions may be increased.
- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to use some of the funding surplus to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change, $1.98B for the 2015 change, and $1.68B for the 2014 change).

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (Section PS 2130 paragraph .03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in Section PS 2130 paragraph .13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

As part of the 2015/16 Public Accounts audit, the Office of the Provincial Controller engaged external consultants to conduct asset ceiling tests to assess the requirement for a valuation allowance against the $10.1 billion of net pension assets reported by the Province for OTPP . The results of those reports are summarized in Table 1 below.

Table 1: Summary of Asset Ceiling Models performed for OTPP

Model Assumptions	Expected Future Benefit or Asset Ceiling ($ Billions)	Results
1. There is no minimum employer contribution under the plan/legislation that is required if a surplus is present.	$44.6	There is no reduction in the expected future benefit (EFB) as at March 31, 2016.
2. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of the current funding report. Contribution requirements are $1.7B per year for 2015, 2016 and 2017.	$41.2	The minimum contribution requirement applies to the current period of the funding report and until a new report is completed. EFB is reduced for 2 years by $1.7B at March 31, 2016.
3. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of contribution requirement (i.e. 11 years through 2026) not just for the period of the current funding report.	$29.3	Uses a period to 2026 (11 year period) based on the funding report special contribution requirement. The EFB at March 31, 2016 is reduced by $15.3B.
4. The surplus is never used until the time it reaches the Income Tax Act (ITA) threshold. Once attained, the excess surplus is used at 50% for employees and 50% for the Province to reduce contributions in the following years.	$23.2	The ITA surplus limit is reached at the end of 2025, leading to forced contribution reductions from 2026. EFB is reduced by $21.4B at March 31, 2016
5. Every year, 50% of current	$12.9	The ITA surplus limit is reached at

DRAFT

year surplus is applied to improve member benefits and the remaining 50% of the current year surplus is retained and continues to accrue. Once the ITA threshold is attained, the excess surplus is used 50%-50% to reduce contributions by employees and the Province.		the end of 2041 leading to forced contribution reductions from 2042. EFB is reduced by minimum $31.7B at March 31, 2016.

Note: Models above made no assumption on any value of the surplus withdrawal.

In all 5 models above, the expected future benefit (EFB) for OTPP is greater than the accrued pension asset of OTPP of $10.1 billion, at March 31, 2016. Even under the most conservative model (number 5 above) under which 50% of the current year surplus is applied to improve member benefits while the remaining 50% is retained and continues to accrue a return on assets until the Income Tax Act (IITA) surplus threshold is reached, the EFB of $12.9 billion is greater than the accrued pension asset of $10.1 billion. As such no valuation allowance was required and reported for OTPP as of March 31, 2016.

For purposes of OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

In addition to the above calculations, the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan should also be considered. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that no valuation allowance is required.

The determination of the minimum contribution levels required as input to the calculation of the expected future benefit involves significant judgements, estimation and assumptions about future funding surplus levels. These judgements, estimates and assumptions should be made on a consistent basis with best estimates used in developing the accrued benefit obligations and plan asset amounts. Regardless of the need to apply judgements, estimates and assumptions for the calculation, this does not imply that no asset can be recognized or that it cannot be reliably measured. In fact, pension plans,

by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". From the Province's perspective, 'expected' does not equate to 'certainty' or the absence of uncertainty.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (Section PS 3250 paragraph .042) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (Section PS 3250 paragraph .041). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. Section PS 3250 paragraph .057 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on plan assets, which is one of the acceptable references suggested on Section PS 3250 paragraph .044.

The OAG and the Province differ in their interpretation regarding whether it needs to be "expected" that the Province will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in Section PS3250 paragraph .059. The Province considers that it needs to be expected that future economic benefits are to be obtained reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to benefit from a plan surplus.

7.5 Other guidance in the PSA Handbook on measurement

MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe would be a useful addition to the financial statements. Section PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would*

be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by experience of similar transactions and, in some cases, reports from independent experts. Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.

.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.

The estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the net pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is an acceptable alternative under PSAB and consistent with rates followed by other senior Canadian governments. Actual historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets reported in the Public Accounts. Appendix J includes a comparison of the OTPP funding rate assumptions, the Provincial discount rate for OTPP and the actual performance of OTPP from 2005 to 2016. Historical rates of return on plan assets have supported the past discount rates used by the Province in relation to OTPP.

7.6 Impact of valuation allowance

The current Auditor General's view challenges previous interpretations of the Provincial Controller and former Auditor Generals regarding the interpretation and application of Section PS 3250 to those JDBPs where the government is a joint sponsor. The impact of the OAG's view is that no net pension asset should be recognized in the Province's Public Accounts for JDBPs until the joint sponsors agree to a change in the plan text to provide for unilateral authority to the Province to access surplus or reduce future contributions or the sponsors enter into an agreement by year-end enabling the government to take a contribution holiday. In the absence of meeting either the criteria set out by the Auditor General, any ABA would therefore be fully provided for through a valuation allowance, impacting each year's

statement of operations by the amount by which the asset would otherwise increase in value. These results are counterintuitive with pension expense being higher in years in which increased funding is made and also higher when poor investment returns create actuarial losses that have not yet been amortized into the statement of operations. These examples are illustrated in Appendix C.

For information purposes, refer to Appendix H for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting for OTPP compared with following the Province's interpretation of the PSAS. Of particular note is the impact in 2008 when the deficit would have been lower by $3 billion in a year when pension asset values fell significantly because of the financial crisis.

7.7 Comparability of Ontario's accounting to other Provinces defined benefit plans

Not all of the jurisdictions noted in this comparative overview have joint defined benefit plans. Furthermore, the specific terms and conditions of any jurisdiction's plans will determine the appropriate accounting under PSAS. This information is provided for reference purposes only and has no direct impact on the Province's accounting treatment for OTPP or other defined benefit plans on the Province's financial reports.

The Province of British Columbia does have a jointly sponsored pension plan. Appendix I provides details from a legal opinion prepared by lawyers, Koskie Minsky which compared access to the pension surplus of OTPP relative to JDBPs in British Columbia. The Province of British Columbia does not report a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

The Province of Manitoba has a multi-employer defined benefit plan for their healthcare employees. The Province neither records the net pension liability or the net pension asset on their financial statements as the Province is not a direct sponsor of the plan. The Province of Manitoba appropriately reduces the accrued benefit asset to nil in accordance with Section PS 3250 paragraph .050 as the Province does not expect future benefits from any plan surplus in contrast to OTPP and the Province of Ontario.

The Province of Nova Scotia's Public Service Superannuation Plan transitioned to a joint governance structure in April 1, 2013. Due to the wording of the legislation, the Province has determined it no longer has any residual liability for the plan, and therefore has no entitlements to its assets. The legislation and funding policy alleviated the Province from any responsibility to fund shortfalls or to benefit from fund surpluses. As a result, the Province no longer records a net pension asset or liability in their financial statements. The Province of Nova Scotia therefore appropriately reduces the accrued

benefit asset to nil in accordance with Section PS 3250 paragraph .050 as the Province does not expect future benefits from any plan surplus in contrast to OTPP and the Province of Ontario.

Quebec has two joint sponsored plans: Government and Public Employees Retirement Plan, and Pension Plan Management Plan. These plans are structured such that employee and employer contributions are in separate funds. Currently both of these plans are in net pension liability positions.

In New Brunswick, the target benefit pension plans are governed by an Agreement and Declaration of Trust which restricts the Province's access to the plan assets. On this basis, the Province records the value of the plan net assets as nil when these plans are in a net asset position. These plans are shared risk plans that are governed by a Board of Trustees to which the Province has appointed one-half of the members. The Plans are jointly funded by employees and the Province. These target benefit plans target retirement benefits as opposed to guaranteeing them. Two of the four target benefit plans are in a net asset position, where a full allowance is taken by the Province against the net pension asset. The Province of New Brunswick appropriately reduces the accrued benefit asset to nil in accordance with Section PS 3250 paragraph .050 (there is no specific guidance on target benefit plans in PSAS) as the Province does not expect future benefits from any plan surplus in contrast to OTPP and the Province of Ontario.

As noted above, the constating documents for pension plans in other provinces are different than those of OTPP, therefore caution should be exercised when trying to compare accounting among the jurisdictions, or others.

7.8 Conclusion on measurement

As discussed, there is significant professional judgement and estimation in determining how to measure the valuation allowance under Section PS 3250, including the determination of the minimum contributions required by the current plan arrangements. It is the Province's position that the attributes of the JDBP arrangements for the OTPP entitle the Province to access its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surplus through reduced contributions.

The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of various actuarial assessments for the asset ceiling test date, no valuation allowance appears to be required and the OTPP pension assets should continue to be recorded on the books of the Province.

DRAFT

Appendix B – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Pension Act and to the Partners' Agreement and Funding Management Policy in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners (sponsors) can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners (sponsors) in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the PBA, appointing the OTTP Board, and defining the role of the Board. Section 10 requires that the partners meet and negotiate changes to the plan every three years. Section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the sponsors to the OTPP have the authority to utilize ongoing surpluses. Section 19 also requires the Board to prepare a valuation at least every three years to comply with the PBA.

DRAFT

Paragraph 57 requires a valuation prepared for filing with the Superintendent of Financial Services to be actuarially balanced so that the present value of benefits and costs to be paid out of the fund (plus any contingency reserve) be equal to the present value of sponsor contributions. An actuarial valuation for funding purposes of the pension fund shall be prepared by the Board's actuary as at the 1st day of January and filed annually with the Superintendent of Financial Services, unless the partners jointly agree to instruct the Board not to file the valuation. The partners shall establish a committee to deal with accounting matters relating to joint pension plan sponsorship and agree to contact the Public Sector Accounting Board to raise issues of concern to the partners.

Paragraphs 58 to 60 indicate the actions to be taken based on the preliminary results of a valuation prepared for filing with the Financial Services Commission of Ontario. If the valuation indicates a need to increase the contribution rate, the partners need to meet as soon as possible to discuss how to adjust for that need on an equally shared basis. If the valuation indicates the contribution rate can be decreased, the actuarial gain can be applied to reduce the payments required to liquidate any unamortized balance of a solvency deficiency.

The process governing the use of ongoing surpluses by the sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the sponsors on his or her views on the positions of the partners and provide a recommendation to the sponsors. If the sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one

representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented.

Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

The mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the sponsors do not agree to file the valuation, then the sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the sponsors' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Funding Management Policy (FMP)

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP. The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:

i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).

ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).

iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the sponsors are unable to agree the mediation process set out in the

Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the sponsors mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

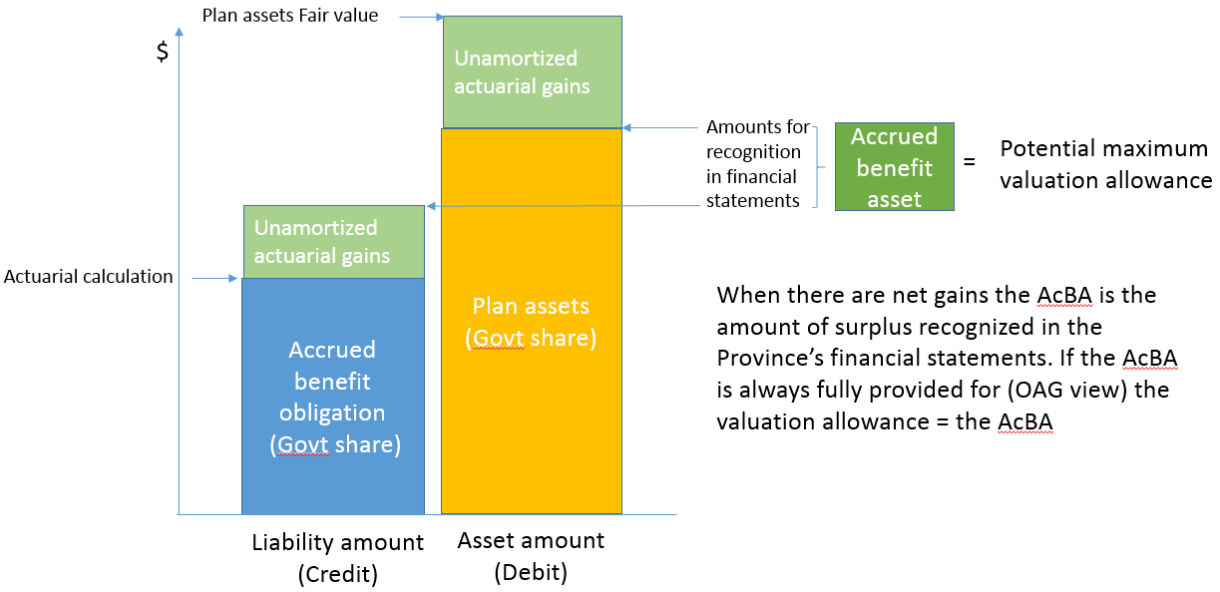
Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the

arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

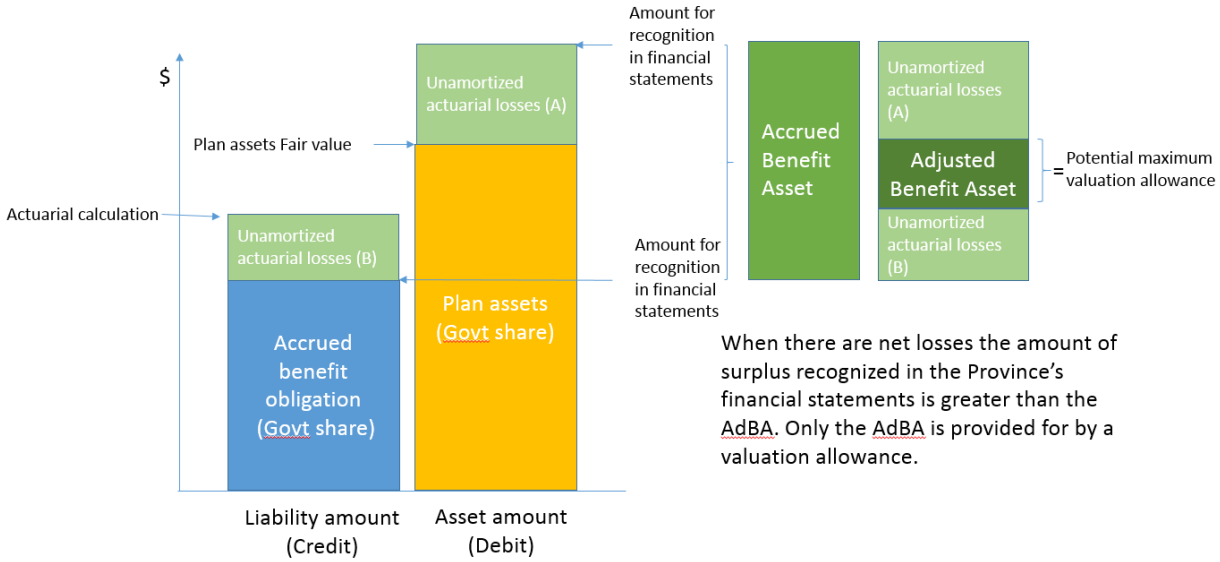
DRAFT

Appendix C – Overview of a Valuation Allowance on Pension Assets

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



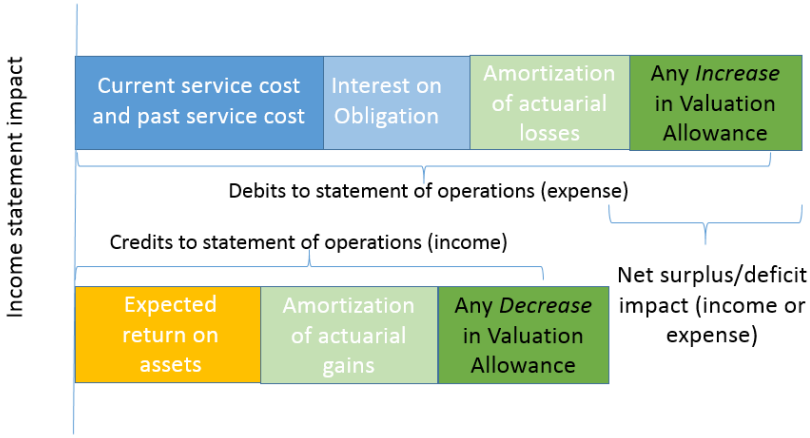
An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses



Components of Expense

The *change in* the valuation allowance flows directly through the statement of operations.

The change in valuation allowance = the change in the AcBA (or AdBA if applicable)



Changes in the Accrued Benefit Asset

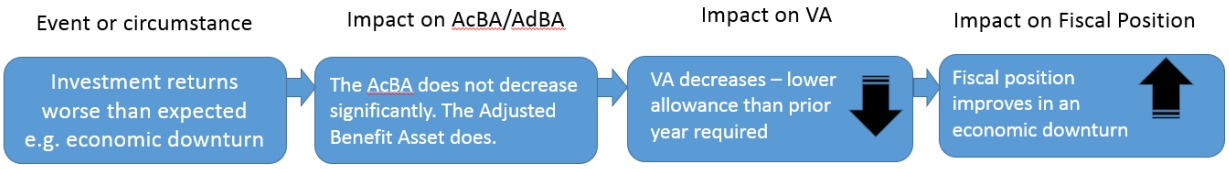
Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]

Event or circumstance	Impact on ABA	Impact on VA	Impact on Fiscal position
Contributions in excess of current service cost – i.e. additional funding	Plan assets increase more than the ABO	VA increases to reduce ABA to zero	Fiscal position worsens with additional funding
2015-2016 example: Contributions of $1,812M exceeded other elements of pension expense by $1,514M	2015-2016 example: Additional contributions increase plan assets. AcBA increases by $1,514M	2015-2016 example: AcBA increase of $1,514M results in an increase to the VA of $1,514M	2015-2016 example: Deficit increases by $1,514M. The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

Changes in the Accrued Benefit Asset

Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA or AdBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]



Plan assets fair values significantly lower in one year.
Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.

The AcBA is based on the higher, smoothed value of plan assets and does not change significantly. However the actuarial losses are subtracted from the AcBA to calculate an AdBA, which is smaller than the AcBA.

Prior year allowance was based on AcBA (no net amortized actuarial losses). Current year is based on AdBA because there are unamortized actuarial losses. The AdBA is smaller than the AcBA because of the increase in unamortized losses. Therefore the VA is reduced correspondingly.

Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. The increased actuarial losses would only impact the statement of operations in future years.

A similar impact would have been noted in 2008 if the OAG's position was reflected in the financial statements for that year.

[1] Impact of change, all other elements being held constant.

DRAFT

Appendix D – Summary of different valuation methodologies for pension valuations

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV of the CPA Canada Handbook – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits and to provide information on the financial position of the plan as of the valuation date on a funding basis in accordance with the Pension Benefits Act, the Income Tax Act as well as generally accepted actuarial practice.	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits, pension obligations and the financial position of the plan as of the valuation date in accordance with Part IV of the CPA Canada Handbook (Part I of the CPA Canada Handbook (i.e. IFRS) is referred to where Part IV is silent).	Measure and report the obligation for employee retirement benefits, attribute the costs of those benefits to the periods in which the related services are rendered and to provide information on the financial position of the plan in accordance with PSAS.
Actuarial cost method	Modified aggregate method (level cost method)	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	PSAS allows choice regarding the valuing of plan assets at market-related value. Market -related values, are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied

	moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values For funding valuation, the plan uses the actuarial value of assets which are the market value of assets adjusted for investment gains / losses spread over a period of 3 years.		consistently. The Province has chosen to value OTPP's plan assets by adjusting to market value over a period of 5 years in accordance with PSAS.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate. For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work	Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. OTPP follows Part I (IAS 19) which requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on	Not specified. However two methods are specifically acknowledged in PSAS – a) discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing. [15] The Province of Ontario uses a discount rate for OTPP determined by reference to the expected long-term

[15] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

	For the purpose of the funding valuation, the plan uses a discount rate which is based on market related rates averaged over a period of 36 months. The discount rate used in the most recent funding valuation for OTPP as at January 1, 2015 was 4.85%.	bonds issued by the Province of Ontario. As illustrated in Appendix E, this is inconsistent with other Provincial pension plans in Canada which use as a discount rate, the long-term rate of return on plan assets. The discount rate used by OTPP in their December 31, 2015 financial statements was 3.25%.	return on plan assets. The discount rate used by the Province to account for OTPP in their March 31, 2016 financial statements was 6.25%. This is the long-term rate of return on plan assets which is in accordance with PSAS.
Independent verification		OTPP's financial statements are audited by Deloitte LLP.	The Province's financial statements are audited by the OAG.
Underlying population data	All valuations use consistent underlying data of the population covered by the plan (membership data as at August 30 of the prior year projected to the valuation date is used].		
Inflation rate	All valuations treat inflation in a consistent manner (on a best estimate basis). Best estimate assumptions are derived based on the best estimate of future events. Best estimates of inflation by the Province may be different from those of the OTPP Board, even though they are both best estimate assumptions. In developing its best estimate assumptions, the Province references a broad range of available data, including the best estimate from the OTPP Board.		
Demographic assumptions	Valuations use consistent demographic assumptions (best estimate by the OTPP Board).		Under PSAS, the Province is not required to prescribe demographic assumptions.
Other economic assumptions	The OTPP Board develops its own salary escalation assumption to be used for both the funding and the Board's financial statement valuation. Economic assumptions other than the discount rate, inflation rate and salary assumptions are determined by the Board. These are the same for funding valuation and the Board's financial statement valuation.		The Province prescribes the future salary escalation rates. The Province develops this assumption by referencing the outcome of the most recent collective agreements as

DRAFT

		well as compensation policies issued from time to time by the government and the historic increases granted.

DRAFT

Appendix E - Comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP

Review of Discount Rates Across Jurisdictions

- In the inter-jurisdictional review of all funded provincial sponsored or joint sponsored plans which also have stand-alone plan financial statements:
  - the Ontario Teachers' Pension Plan (OTPP) is the only plan were the discount rate used in the plan's financial statements is more than 50 basis points below the discount rate used by the province.
  - OTPP stand-alone financial statements use the market rate of Provincial bonds.

- All other plans' financial statements (i.e. 23 plans across jurisdictions) use the long-term rate of return as the discount. The discount rate used by the plans' are lower than 50 basis points or less than the provinces' discount rate or at times higher than the provincial rate.

Appendix F – Comparison of definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, Section PS 3060 paragraph .06. Section PS 3060 was introduced into the Public Sector Accounting (PSA) Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;	Consistent in concept with the definition of a GP focusing on investments in the partnership and the

			definition of a JDBP focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

In addition to consistent wording, the concepts in the definitions of a government partnership and a JDBP are similar.

While similar in concept and wording, the definition of a JDBP is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including JDBPs.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

DRAFT

Appendix G – History of Surplus Utilization for OTPP

The history of OTPP surplus utilization from 1990 to the date that the FMP was established (in March 2003) demonstrates a past practice of the sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Contributions by teachers increased by 1 percentage point (from 7.9% to 8.9%) effective January 1, 1990 per legislation.	Legislated an increase in matching contributions (from 7.9% to 8.9%) effective January 1, 1990 and responsibility to finance the initial unfunded liability through a series of special payments	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to	$0

DRAFT

			reduce the value of remaining special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion	$9.3 Billion	

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

Appendix I – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the

event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan (''PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[16] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[16] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

DRAFT

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

Subject: Proposal - RFS NUMBER : TBS-OTB-OPCD-22

Mr. Donaldson

You will find attached our technical proposal and separately our pricing proposal to provide pension and non-pension benefit advice.

We have structured our technical proposal in order to cover the various criteria of the RFS while the pricing proposal is provided separately as per the RFS requirement in the provided form.

Should you have any question, you can contact me directly.

We look forward to the possibility of working with the Treasury Board Secretariat (Office of the Provincial Controller) in this important mandate.

Have a nice weekend

Regards

Attention of Mark Donaldson
Director, Treasury Board Secretariat
Office of the Provincial Controller Division

Re: Actuarial Services – RFS TBS-OTB-OPCD-22 (technical proposal)

Deloitte is pleased to submit this technical proposal to provide actuarial services to the Office of the Provincial Controller Division (the "OPCD") about pension and non-pension benefit management consulting services. As you will see from our proposal, professionals at Deloitte possess relevant experience and have conducted similar engagements for a variety of clients, including public sector. Should we be the successful bidder, we are also able to draw upon an experienced team who not only understands actuarial services, but also appreciates the challenges and complexities associated with the communication issues of actuarial results and accounting complexities. Deloitte being highly involved in pension and non-pension benefit plans audit, the OPCD will have access to individuals that have significant expertise in understanding the market practice on accounting for these benefits and have specialized views on interpretation of accounting standards.

If you have any questions with respect to the information contained within this proposal, please do not hesitate to contact us. We look forward to working with the OPCD on this important initiative.

For ease of presentation and to maintain the format of the submission in line with the RFS requirement, we note that after an executive summary, the next 2 sections include the completed Submission form and a summary of the Scope of services. The other sections will cover the required Schedules, pricing (A) being provided in a separate document and the resume / references for our team members (B). We have added other Schedules to answer the Experience and Qualifications aspects of the Evaluation criteria.

Sincerely,

Martin Raymond
Partner

Deloitte LLP

Executive summary

Deloitte is delighted to have this opportunity to propose actuarial services to the OPCD with regards to pension and non-pension benefit management consulting services. We believe that our firm is an ideal choice to serve you.

> We surpass the mandatory requirements

Deloitte, one of Canada's leading professional services firms, provides audit, tax, consulting, and financial advisory services through more than 8,000 people in 56 offices, including a key office in the Toronto area.

Deloitte actuarial group has an extensive experience in performing and reviewing actuarial accounting valuations for pension and non-pension benefit plans. We serve a various range of clients, including many municipal clients or other public sector entities.

> We have the experience and skills to provide an outstanding service

Our team is built up of actuaries and they have a continuous access to highly qualified accountants that will provide the OPCD with work of high-quality. Their experience in pension and benefit accounting under PSAS and their profile will ensure that the work will be performed in timely manner in accordance with professional standards. All the team members are familiar with the recommendations contained in PSAS for pension accounting.

> We have a clear understanding of the process and requirements to perform accounting valuations

As we provide similar services to a various range of clients on a continuous basis, we have a good understanding of the issues and a comprehensive view of the market practice. We do review actuarial calculations, we do perform actuarial calculations for other clients, we perform review and selection of best estimate assumptions in a large number of cases so we are involved in all of the steps that are required by the activities listed in the RFS.

> We offer a wide range of value added services to our clients

As actuarial consultants, we focus on listening to clients and designing specific solutions to achieve targeted results. We do not restrict ourselves to regular traditional approaches but try to define the most efficient one that applies to the client. In every task, we will tailor our level of involvement to your requirements and internal resources. We will advise you, and work in partnership with you, to achieve your objectives.

We value personalized approach and use open dialogue as much as possible. Our team will work with you in suggesting creative opportunities that add value to their consulting assignments. Our professionals are used in their day-to-day job to perform reviews and build valuation models. They will be in great position to support the specific needs as they come up.

Our group has a unique balance in that it does work on providing consulting services, with also other work coming from audit support. This situation provides the group with both the consulting aspect and creativity along with the vision of rigorous application from auditing. This balance is important to develop better consultants that will provide services in line with today's highly regulated environment.

> We regularly provide similar services to satisfied clients

Deloitte takes pride in developing relations based on communication and trust. Our knowledge and understanding of the pension and non-pension benefits allowed us to thrive on the financial services market. Here is a list of public sector clients that Deloitte serves or have served recently:

- City of Montreal
- NB Government
- OTPP
- Quebec Municipal Ministry
- City of Laval
- City of St-John (NB)
- Office of the Auditor General of Canada
- Revenu Québec

Submission form

Request for Services Number: **TBS-OTB-OPCD-22**

To: HER MAJESTY THE QUEEN in right of Ontario as represented by President of Treasury Board Secretariat

1. Vendor Information

(a) The full legal name of the Vendor is: **Deloitte LLP**

(b) Please identify any other relevant name under which the Vendor conducts business:

Deloitte S.E.N.C.R.L./s.r.l
Deloitte Inc.

(c) The Vendor's address, telephone and facsimile numbers are:
Bay Adelaide Centre, East Tower
22 Adelaide Street West, Suite 200
Toronto, ON M5H 0A9

Tel: 416-601-6150
Fax: 416-601-6151

(d) The name and title of the Vendor's Representative:
Martin Raymond, Partner

(e) The mailing address, phone number and e-mail address of the Vendor's Representative:

1190 Avenue des Canadiens-de-Montréal,
Montréal, Quebec
Canada
H3B 0M7
Tel: 514-393-7367
Fax: 514-390-4104
Email: maraymond@deloitte.ca

(f) State the name, address, telephone and facsimile numbers and e-mail address of the Company Security Officer (CSO) for the Vendor:

Cara Warburton
Bay Adelaide Centre, East Tower
22 Adelaide Street West, Suite 200
Toronto, ON M5H 0A9
Tel: 416-601-5763
Fax: 416-601-6151
E-mail: cawarburton@deloitte.ca

(g) State the name and title of each of the individuals that the Vendor is proposing for this Project:

Names	**Titles**
Martin Raymond	Partner
Trevor Gary	Senior
Matt Colley	Senior Manager

2. Submission Requirements and Accuracy of Information

The Vendor accepts the terms and conditions set out in the RFS. While this submission is provided for evaluation purposes only and is not legally binding before the execution of a SOW, I confirm that the information provided is accurate.

3. Certificate(s) of Insurance

As required in Article 32.4 – Proof of Insurance in the Master Agreement, please identify the status of the Vendor's Certificate(s) of Insurance by placing a check mark (√) in one (1) of the following three (3) boxes:

☒ a) the Vendor has previously submitted a Certificate of Insurance to MGCS, which has been approved

☐ b) the Vendor has included its Certificate of Insurance with this RFS submission (that will be subject to approval by MGCS) prior to the Client issuing a SOW

☐ c) the Vendor agrees to submit a Certificate of Insurance (that will be subject to approval by MGCS) prior to the Client issuing a SOW

4. Conflict of Interest

The Vendor must complete the following:

(a) If the box below is left blank, the Vendor will be deemed to declare that: (1) there was no Conflict of Interest in preparing its submission; and (2) there is no foreseeable Conflict of Interest in the Vendor or any of its Personnel performing the contractual obligations contemplated in the Request for Services.

(b) Otherwise, if the statement below applies, check the box.

☐ **The Vendor declares that there is an actual or potential Conflict of Interest relating to the preparation of its submission, and/or the Vendor foresees an actual or potential Conflict of Interest in it and/or its Personnel performing the contractual obligations contemplated in the Request for Services.**

(c) If the Vendor declares an actual or potential Conflict of Interest by marking the box above, the Vendor must set out below details of the actual or potential Conflict of Interest:
N/A

(d) The following individuals, as employees, advisors, or in any other capacity (i) participated in the preparation of our submission; **AND** (ii were employees of the Ontario Public Service ("OPS") and have ceased that employment prior to the Requested Submission Date:

Name of Individual:
Job Classification (of last position with OPS):
Ministry/Agency/office of an officer of the Legislature of Ontario (where last employed with OPS):
Last Date of Employment with OPS:
Name of Last Supervisor with OPS:
Brief Description of Individual's Job Functions (at last position with OPS):

Brief Description of Nature of Individual's Participation in Preparation of Submission:

(e) The following are individuals that: (i) are proposed to be assigned by the Vendor to perform work under the SOW; **AND** (ii) were employees of the Ontario Public Service ("OPS") and have ceased that employment prior to the Requested Submission Date:

Name of Individual:
Job Classification (of last position with OPS):
Ministry/Agency/office of an officer of the Legislature of Ontario (where last employed with OPS):
Last Date of Employment with OPS:
Name of Last Supervisor with OPS:
Brief Description of Individual's Job Functions (at last position with OPS):

(f) We agree that, upon request, we shall provide the Client with a Conflict of Interest Declaration from each individual identified above in the form prescribed by the Client.

5. Schedules

This submission includes the following Schedules:

Schedule A (Pricing Schedule) – provided in a separate document as required
Schedule B (Resumes and references)
Schedule C (Similar projects and working with Governments)
Schedule D (Reports for public pension related initiative)
Schedule E (Ceiling test and sensitivity analysis scenarios)
Schedule F (Methodology and implementation plan)

Deloitte LLP
I acknowledge that providing my name on the line below in electronic form will constitute a signature for the purposes of the *Electronic Commerce Act, 2000*, S.O. 2000, c. 17.

I have authority to bind the Vendor.

Per:

Signature:

Name: Martin Raymond
Title: Partner
Date: November 3, 2017

Scope of services

Treasury Board Secretariat, Office of the Provincial Controller (OPCD) requires accounting/actuarial services to support the preparation/review of pension and non-pension benefit expense/liability numbers of various pension plans where Province is sole owner and joint sponsor. The Province reports these numbers in various public documents (i.e. Fall Economic Statements, Budget, Pre-election Report and Public Accounts) and consultant requires to review these numbers/accounting and to make sure that numbers/accounting prepared by the OPCD met with requirements with Public Sector Accounting Standards.

Scope of the services

The Services and Deliverables to be provided by the Vendor will include the following:

- Working with management of the Office of the Provincial Controller's Accounting Policy and Financial Reporting Branch (APFRB), the provider will provide actuarial/accounting services related to the following possible areas:
  - Review the economic assumptions (i.e. management best estimates) used for the accounting valuations of the pension plans and non-pension benefits reported by the Province.
  - Review the actual and forecast numbers prepared by APFR staffs for the Province's various pension and non-pension benefits. Including assessing the reasonableness and completeness of assumptions used by APFRB staff in the models, including any sensitivity analysis as required.
  - Provide recommendations, if any, on improvements in the pension and non-pension benefits accounting models currently used to by APFRB.
  - Perform ceiling test requirements in accordance with PS3250.50 to PS3250.59 for all sole sponsor or joint sponsor pension plans that are in an accrued benefit asset position.
  - Provide advice on any accounting issues related to pension and non-pension benefits, as required.
  - Participate in discussions with internal and external stakeholders, as required.

- The Vendor will participate in meetings as necessary to support the engagement objectives.

Based on the RFS, it is estimated that 150 hours of effort over the term of the agreement to be split equally between the following resources for the deliverables of this project:

- One (1) Senior Consultant / Project Lead
- One (1) Intermediate Consultant / Sr. Analyst

The work is expected to start December 4, 2017 and end June 15, 2019.

The successful candidate must demonstrate experience/expertise:

- Understanding and experience with government financial reporting objectives of transparency and accountability, including an in-depth understanding of public sector accounting standards
- With Public Sector Accounting Standards (PSAB), especially as related to pension and non-pension actuarial valuation.
- Working with a variety of Public Sector stakeholders in appropriate accounting and measurement under PSAB.
- With Ontario government's protocols regarding document confidentiality.

Schedule A – Pricing

As per the RFS requirement, the pricing proposal has been provided in a separate file named:
Deloitte_Ontario_TBS_OTB_OPCD_22 – Pricing Proposal

Schedule B – Resumes and References

Based on the RFS requirement:

- Vendors are expected to submit a resume for each consultant proposed in the Submission Form - please include the resumes as Schedule B to your Submission Form

  NOTE : resumes are included in this Section

- For each proposed consultant, Vendors are expected to submit the consultant's most current project(s), and submit references (include name, title, organization and telephone number) whom the Client may contact for the purpose of conducting reference checks

  NOTE : some projects are presented and references are included in this Section

- Vendors are expected to demonstrate in their submission that each proposed consultant has the knowledge, experience and all other qualifications for the proposed Role, and will be able to provide the requested services

  NOTE : the description found in this Section will show the qualification of our proposed team

- Vendors must provide the Client with the opportunity to interview each proposed consultant, and must not charge the Client in connection with any interview

  NOTE : we confirm that interview with our proposed team is available as needed

- Vendors must identify all subcontractors that they propose to use, and must also identify which consultant(s) is provided by which subcontractor

  NOTE : we will not use any subcontractors, all services required will be provided by Deloitte professionals

Proposed Team

As you will see from this section, our proposed team does have the necessary qualification, skills and experience to deliver the needed activities related to this mandate. Considering that the focus of the work will be related to pension and non-pension benefit plans accounting results and work will include some technical application of elements such as asset ceiling, we have included 2 actuaries in the Submission form that have both deep actuarial and accounting knowledge, experience and expertise. One member is fully qualified Fellow.

Having worked in large actuarial consulting firms and also being within Deloitte, our group has built the deep key accounting knowledge to provide them with the overall skills to deliver the actuarial/accounting work that the OPCD is looking for.

The Project Lead that will handle OPCD work is Martin Raymond (partner), the leading consulting actuary for pension and non-pension benefit plans at Deloitte. In his work, Martin will be supported by Trevor Gary (senior). Martin joined Deloitte in October 2011 to lead the actuarial pension and benefit practice. Since then,

his group has been supporting Deloitte auditors with all regards related to pension and benefits. He is also responsible for any specific consulting pension and benefit services on non-audit Deloitte clients.

In their everyday work, Martin and Trevor have access to some specific personnel of Deloitte that do have very deep pension and benefit accounting expertise. Although not expected to be involved, the availability of the other resources makes it of additional value to the OPCD should any complex accounting issue come up. If required, their involvement is likely to be more for sound-boarding support or validation of approach. Matt Colley will be one subject matter expert that may have some implication in supporting our 2 actuaries. Matt is already involved in some other advice support to the Ontario government. His understanding of the OPCD environment, structure and strategy will ensure that we always provide the optimal approach in working with the OPCD. His involvement with Ontario Government for many years will be helpful to the team for any protocol or process considerations. The RFS mentions confidentiality of documents.

Both Martin and Trevor have worked previously with the OPCD on specific pension accounting matters and therefore are familiar with the approach and the communication / discussion process. They will use this experience to ensure that the implementation is performed on solid basis and that we keep open communication ongoing for the period of the project. Matt though his extensive experience will give an additional source of knowledge to ensure adequate steps are taken by our team.

Since Martin and Trevor are identified as the 2 main members of the team to work on deliverables (Project Lead and Senior Analyst) we have provided more details for experience and references for these 2. For Matt, we provided the resume but if needed, additional references will be available on demand.

Proposed resources		
Name of Individual	**Level**	**Description of role**
Martin Raymond (Project Lead)	Partner, Actuarial Services	As the account manager, Martin will be responsible for relation with the OPCD. He will be the reference person for any strategic issue and will ensure that high-quality services be provided. He will work in collaboration with Trevor on the delivery of documents and advice. He will be responsible for the timeliness and quality of services performed, as well as ensuring that OPCD expectations are met or exceeded. His vast experience in both accounting and actuarial fields will provide all the expertise that will be needed for the activities to be performed. Considering the extensive knowledge that Martin has in public sector accounting for pension and non-pension benefit plans, he will drive the orientation of the analysis and advice.
Trevor Gary (Senior Analyst)	Senior, Actuarial Services	Trevor will be responsible to prepare along with Martin the documentation needed on the account. He will be involved in any data and calculations that may be required. He will be a day-to-day contact for data, questions and follow-ups. He will participate in most of the communications with the OPCD. Trevor and Martin will meet on regular basis to provide status updates and agree to the required steps. During the implementation, his role will be to lead the information gathering and prepare initial documentation.
Matt Colley (subject matter expert on Ontario processes and protocols)	Senior Manager, Audit	Matt is a Deloitte professional that is highly familiar with the Ontario processes and protocols. Based on his experience, he will support, as needed the proposed team on adhoc basis. He will help ensure approach taken is optimal considering the Ontario government practices. Considering he also has knowledge in pension accounting, he may serve as needed for sound boarding in accounting issues that may be faced during the mandate.

Shown expertise of the proposed team

Within the resumes of the proposed team, you will find more specific expertise for both Martin and Trevor. The following paragraphs are meant to show the extent of the work that both Martin and Trevor are involved on a regular basis. The proposed team works significantly with PS3250 and PS3255 annually as well as other pension and non-pension benefit plans accounting standards. The team has worked in all aspects of a valuation required for accounting purposes, namely:

- Review of membership data and sufficient information to support extrapolation purposes
- Selection and review of management best estimate assumptions for economic and demographic factors
- Prepare models needed for selection of assumptions
- Determine the approach to define the accounting discount rate
- Prepare the asset (liability) on the balance sheet and reconcile year change, explaining gains and losses
- Perform accounting valuations and apply actuarial valuation methodology mandated by PS3250 and PS3255
- Prepare the year expense and reconcile year change
- Apply asset ceiling test when asset shown on the balance sheet
- Prepare sensitivity analysis to key parameters
- Prepare actuarial report with the required content for accounting disclosures
- Answer auditor questions, including Auditor Generals

The pension actuarial group do perform annually more than 150 audits on different standard basis. Among these we are involved in 15 to 20 comprehensive audit reviews of public sectors. Sitting in an accounting firm and being employee benefit accounting specialists, we are always searching through the applicable accounting standards to assess if work is performed in accordance with the requirements of those standards. This is definitively one key advantage that our professionals do have to support our clients in that we know the details of the standards along with the detailed actuarial calculations. We also have access internally to very highly specialized experts (accountants) that are very familiar with how a standard has been developed. Sometimes it is important to understand the spirit of the standard to determine what is acceptable or not and not just the wording of a paragraph of the standard.

As you will see from some experiences we have detailed, our team has been involved in very complex key actuarial and accounting issues, such as application of public sector to Shared risk plan model in New Brunswick. In performing this work, our team demonstrated a high level of knowledge of the accounting standards to define how it would apply to the specific plan model and how the actuarial calculations are performed. This is one proof of the high familiarity that we do have with the standards and not only the public sector but also with other standards.

We need to design and run valuation models for a large number of our audit files. Above this audit part, we also perform a number of specific actuarial valuation reports prepared for accounting purposes to help entities in the preparation of their financial statements. We are therefore involved with many different clients in steps starting from data gathering through accounting valuation results calculation and all the way to audit of results and financial reporting.

Considering the large number of clients we worked with, we are exposed to best practices, which makes us very familiar with the evolution of the public standards and the actuarial work performed.

Our team is really connected to future public sector changes as Martin Raymond is involved in the CPA Task Force working on PS 3250 and PS 3255 review since 2016.

We perform a significant number of actuarial mandates for public sector in valuation services and also in audit services. As an illustration, here is a list of high-profile public sector clients for which we have been involved in recent years:

- City of Montreal
- NB Government
- OTPP
- Quebec Municipal Ministry
- City of Laval
- City of St-John (NB)
- Office of the Auditor General of Canada
- Revenu Québec

Resumes and references

Following are the resumes of the proposed team along with references and specific relevant experience for Martin and Trevor the main resources identified to provide the deliverables.

Martin Raymond, FSA, FCIA

Partner – Audit & Advisory
Actuarial, Rewards and Analytics

Profile

For 23 years, Martin has been with the Consulting practice as a specialist in pension plans. He is also an expert in retirement and benefits accounting, having served as the national specialist in this area for a large actuarial consulting firm. This experience has provided him with the skills to serve a diverse clientele and to handle complex accounting and financial disclosure issues.

As a partner in the actuarial department, Martin is responsible for managing and supervising the work related to Canadian pension plans and benefits for Audit teams but also for general consulting. Additionally, he is also actively involved in answering questions related to the application of pension accounting and pension legislation while assisting the firm's decision-making process in these areas.

His role includes follow-up on changes in accounting standards and best practices. Over the years, he developed different tools required to perform calculations and ensured integrity of work in accordance with the standards. He was also highly involved in training, both internally and to the firm's clients. His expertise was used many times in resolving clients' issues for accounting treatment of special events and also situations that demanded specific accounting interpretations.

Along with his responsibility as national specialist on accounting, Martin also served as general consultant for clients on actuarial issues. His work encompassed looking at funding and accounting projections along with optimizing strategies. He also helped employers in negotiation support to identify possible plan design changes and evaluating the costs. He supported employers in selecting actuarial assumptions and reviewed work of more junior staff to assess reasonableness of results. He was responsible for quality of services offered along with satisfaction of clients.

His skills as communicator has made him highly appreciated by clients, pension plan members and fellow colleagues. He takes pride in translating complex issues into accessible actuarial and accounting concepts for people less familiar with these matters. For pension and benefit arrangements to be appreciated by members, it needs to be well understood. This represents in many cases the challenge for today's plan sponsors and Martin would surely be an addition to this mandate.

Professional affiliations/Certifications

- Fellow of the Society of Actuaries (FSA since 1998)
- Fellow of the Canadian Institute of Actuaries (FICA since 1998)

Education

- B.Math. (actuarial science) – Université de Montréal

Other activities

- Speaker at the Canadian Institute in 2001-2002 on termination of plans
- Instructor at the AGFMQ (Quebec association of municipal financial managers) in benefits programs accounting in a municipal setting in 2006
- Member of the CIA (Canadian Institute of Actuaries) Task Force on Pension and Post-retirement Benefit Accounting Discount Rates (2009 to the present)
- Speaker at the Canadian Institute of Actuaries' pension seminar in 2012.
- Member of the CPA Task force on review of Public Sector accounting standards (2016 and forward)

Knowledge / experience and current / recent projects

His expertise in the pension accounting field has been recognized by clients, fellow actuaries and also by participation through accounting specific working groups. Of particular interest for this specific mandate, we note that Martin is part of the CPA Task Force on employee benefits that is reviewing the standards (PS3250 and PS3255) to determine if and to what extent changes might be made to these standards to reflect the evolution in accounting practice since their initial implementation. Some issues that are to be looked at include deferral of actuarial gains and losses, discount rate selection, shared risk plan (SRP) treatment and multi-employer plans. Since a number of these elements are of interest to public sector entities, having someone that is involved in the discussions will provide great insight for the OPCD to understand the issues, the discussion elements and the possible outcomes. Some of these possible changes might be included part of the analysis and sensibility work in order to get a complete perspective of what might eventually come up and affect the public sector accounting for pension and non-pension benefits.

Martin has also worked with numerous public sector clients either as a consultant providing full valuation services but also through the auditing role of ensuring that accounting was performed in conformity with the accounting standards. His involvement in all types of employee benefit accounting standards (US, IFRS, ASPE, PSAS) has provided him with a broad view of the possible issues that come up and the likely ways of addressing them.

He is also recognized by the Québec municipalities Ministry as a key person involved in number of complex actuarial / accounting issues that have come up on pension and benefit accounting since the Québec municipalities have transitioned to public sector accounting in 2007. This implication is still ongoing on regular occasions when specific situations come up that need insights on the appropriate treatment. He has been involved in a number of areas that demanded accounting and actuarial expertise since that date, including:

- Impact of 2007 transition on municipalities financial statements
- Treatment of funded and non funded plans
- Selection of discount rate based on cost of borrowing
- Treatment of asset ceiling
- Use of reliefs for taxation purposes for various elements (past service costs, asset ceiling, non funded plans)
- Special approach used after the 2008 financial crisis to alleviate the taxation requirements
- Review of changes in pension plan legislation specific to municipalities and define the appropriate treatments.

He also has worked closely with the federal OAG on a number of pension and non-pension audit supports for which his collaborative approach along with his understanding of issues and ease to communicate have been greatly appreciated by the OAG personnel. The reporting format of the information, the illustrations provided on complex issues and the deep knowledge of both actuarial work and accounting understanding have been part of the successes of all the mandates performed.

Along with the Québec Ministry support and the OAG audit supports described as current projects, for which we do provide references, it should be noted that another main area that shows expertise relates to his involvement with the Government of NB and City of St John (NB) on Shared Risk Plan (SRP) accounting treatment. This is a very complex actuarial and accounting area that is still being regularly discussed with actuarial firms and accounting standard setters. The main elements that were part of the activities are:

- Review of the SRP legislation
- Review of plan provisions and funding policy
- Review of actuarial valuation reports on SRP

- Review of stochastic projection results to meet the risk management criteria
- Review of the accounting standards to define the defined benefit / defined contribution classification for accounting treatment
- Review the selection of assumption process as some benefits are conditional on plan situation
- Review of the joint defined benefit accounting provisions
- Meetings / discussions with clients and their actuaries
- Work in collaboration with the actuaries to define the appropriate calculations
- Review valuation numbers, accounting figures and confirm it is performed in accordance with accounting standards

All through these 2 SRP mandates, Martin was highly involved in helping understanding the standards to define the appropriate actuarial valuation approach, working in collaboration to find appropriate solutions and providing along the way the knowledge enhancements that the various parties needed to appreciate the issues and understand the solutions.

References

We authorize the OPCD to verify information provided to confirm client satisfaction and demonstrated success.

Relevant project #1 – Office of the Auditor General	
Years of work	2016 and 2017
Description of Contract	The Office of the Auditor General provides an allotment of sick leave days per month of service to its employee. The unused sick days given in a year may be carried forward to future years. This type of benefit requires an actuarial valuation to determine the defined benefit obligation and the expense of each fiscal year under PSAS. • Review plan provisions and prepare a summary • Review data and prepare a summary • Recommend appropriate assumptions • Perform a detailed calculation of the liability of the OAG for sick leave benefits accumulated by its employees as of year-end; • Determine the related components to be disclosed in the financial statements, I.e. the benefit costs, the interest cost, and the actuarial loss or gain for the year; • Estimate the benefit costs for the following year; • Perform a sensitivity analysis on the following assumptions: discount rate, annual rate of increase in salary, retirement age and use of accumulated sick leave. • Prepare a report in accordance with standards of practice of the Canadian Institute of Actuaries (CIA) and with PSAS (PS 3255)
Contact Person	Shawn Audette
Telephone and Email	(613) 952-0213 ext: 5290 shawn.audette@oag-bvg.gc.ca

Relevant project #2 – City of Montréal	
Year of work	1997 to 2017
Description of Contract	Numerous cities on the island of Montreal merged in recent years into the City of Montreal. With these mergers came also the application of public sector accounting to municipalities in Quebec. As such, the City was faced with more than 40 pension and benefit plans to account for. Martin was involved over 5 years into preparing accounting results for the various plans and harmonizing communications for the City representatives. Communications to the management was also crucial and Martin was involved in many key employer meetings. His work also included treatment of many special events and also ensuring that work was in accordance with accounting requirements. He supported the setup of an accounting document that follow-up the quarterly evolution of the expense and the explanation of changes. The document also showed the expected expense over a 5-yr period in stochastic modelling. More recently, Martin is involved in the review of the accounting results of the pension plans. This includes the reconciliation of the results, the review of the assumptions, the impact of the changes in assumptions, the impact of changes in legislation and many more audit procedures related to employee benefits accounted under PS 3250 and PS 3255.
Contact Person	Jacques Marleau
Telephone and Email	(514) 872-3155 jmarleau@ville.montreal.qc.ca

Relevant project #3 – City of St John (NB)	
Year of work	2016
Description of Contract	Accounting of a pension plan under the Shared-Risk Plan model, a complex new pension framework in New-Brunswick. Define the accounting treatment under PS 3250: • Review plan provisions • Review legislation • Identify key accounting standards provisions • Discuss with Entity and actuary about the valuation of the obligation and accounting results • Work some illustrations and calculations to help the client through the process Define an acceptable approach within the accounting framework.
Contact Person	Hilary Nguyen
Telephone and Email	(506) 648-3713 hilary.nguyen@saintjohn.ca

Relevant project #4 – Québec Ministry of municipalities	
Year of work	1997 to 2017
Description of Contract	Public standards accounting is applicable to Québec municipalities since 1997. Martin involvement with the Ministry has been of different natures • Identify key accounting provisions that apply to pension plans • Review the impact on the municipalities financial statements • Identify some relief options to manage taxation level • Discuss the impact of the 2008 crisis on municipalities and identify the options / treatments to offer some tax management relief to the municipalities • Look more recently at the major changes in pension legislation that affected municipalities and identify the appropriate accounting treatment • On number of occasions be an expert / sound boarding resource for the Ministry on issues that come up
Contact Person	Yvon Bouchard
Telephone and Email	(418) 691-2015 (extension 3812) yvon.bouchard@mamot.gouv.qc.ca

Relevant project #5 – Revenu Québec	
Years of work	2016 and 2017
Description of Contract	Revenu Québec provides an allotment of sick leave days per month of service to its employee. The unused sick days given in a year may be carried forward to future years. This type of benefit requires an actuarial valuation to determine the defined benefit obligation and the expense of each fiscal year under PSAS. • Review plan provisions and prepare a summary • Review data and prepare a summary • Recommend appropriate assumptions • Perform a detailed calculation of the liability for sick leave benefits accumulated by its employees as of year-end; • Determine the related components to be disclosed in the financial statements, I.e. the benefit costs, the interest cost, and the actuarial loss or gain for the year; • Estimate the benefit costs for the following year; • Prepare a report in accordance with standards of practice of the Canadian Institute of Actuaries (CIA) and with PSAS (PS 3255)

Trevor Gary

Senior – Audit & Advisory
Actuarial, Rewards & Analytics

Profile

Trevor joined Deloitte's Actuarial, Rewards & Analytics Team from McMaster University where he completed his B.Sc. Mathematical Science and B.A. Economics. In the Audit practise, he actively leads on 50+ pension plan audits under various accounting standards. This included: review of accounting schedules, disclosures, and assumptions, audit planning for the pension plan, and liaising with clients and their consulting actuary to resolve pension related issues.

In the Advisory practice, Trevor acts as the main point of contact for Pension Due Diligence related to M&A/Transactions, he continues to actively pursue opportunities in the de-risking space including Buy-Outs, DB to DC conversion, and Plan Design, and has experience providing support for plans with a foreign domicile including the US, UK, and Switzerland.

Trevor's 'historical' Actuarial experience at Deloitte has included work on actuarial valuations, annual client regulatory filings, benefit calculations including Family Law Value calculations, and providing client support in regards to following Canadian Pension Regulation. Trevor has worked on plans under each of the 11 pension regulators in Canada.

Education
BA, McMaster University, 2012
B.Sc., McMaster University, 2013

Training
Trevor is close to completion of his Associate of the Society of Actuaries (A.S.A.) designation.

Awards
- 1st place - 2014 Actuarial National Student Association (ASNA) Case Study Competition
- 2012 Vanier Cup Champion

Knowledge / experience and current / recent projects

Trevor has been involved over recent years in a large number of audit supports on the different accounting standards. Over all of these mandates, Trevor's work did cover the full array of the accounting support:

- Review of assumptions used and confirm they are reasonable
- Ensure the methodologies applied are in accordance with the accounting standards
- Question management on accounting choices made
- Explain the major changes occurring during a year
- Detail the main gains and losses
- Compute the expense and balance sheet entry
- Review content of financial statements notes and comment on it
- Provide sensitivity and extrapolation results
- Review asset ceiling calculations and determine the economic future benefit calculation

In one of its main audit assignment he was involved in a very large pension plan in recalculating specific member benefit obligation by analysing plan provisions, applying the accounting methodology, perform the projection and determine obligation and current service cost. He did prepare an actuarial report covering the methodology, data and calculations results to compare with the actuary calculation.

He has also been recently involved in a very large accounting work with the OAG that covered 7 pension and employee benefit plans. The work specifically covered an array of the accounting valuation activities such as review of best estimate assumptions, review of sensitivities, and projection of results leading to a formal reporting going out to external user (the OAG). The documentation prepared by Trevor was received with high level of satisfaction and showed his level of professionalism and his commitment to quality work.

Matt Colley, CPA, CA

Senior Manager
Assurance and Advisory

Profile

Matt is a Senior Manager in the Audit Advisory Practice in Toronto, which focuses on Accounting Advisory, Transaction Consultation, Finance Transformation, and Audit Analytic services. Matt has over 12 years of public accounting experience and has been exposed to a variety of engagements and cross functional teams. Matt joined Deloitte in 2004 and spent the majority of his initial years with the firm performing attest services mainly in the public sector organizations. Matt currently advises Public Sector and Private Sector organizations on complex accounting matters, as well as systems and process improvements. From 2012 to 2014, Matt was seconded to Deloitte's National Office to assist audit practitioners with complex accounting issues and to audit practitioners prepare their clients for new accounting standards that were being developed under IFRS, ASPE, Accounting Standards for Not for Profit Organizations and Public Sector Accounting Standards, including helping many clients with the adoptions of PS 3450.

Through his experience in auditing and advising many different types of public sector organizations, Matt has been exposed to various public sector accounting and regulatory issues. In addition to providing complex accounting advice to public sector organizations, Matt is currently supports clients in finance transformation initiatives and helping organizations elevate the profile and efficiency of their finance function.

Relevant Experience

Provincial Ministry of Finance Complex Accounting Support: 2015 - Current: Matt is Deloitte's lead senior manager on engagement to advise management on a large complex transaction on a Government Business Enterprise. This engagement required Deloitte to work with the client to understand the transaction being proposed and to provide guidance to relevant stakeholders on the accounting implications of the transaction. Deloitte worked with management and various professional advisors to inform decision makers about the implications of the proposed transaction and to help the client document their analysis and conclusions. Deloitte also assisted the client in presenting the client's analysis and views to the Auditor General. This engagement required extensive research across all parts of the CPA Canada Handbook (Not-for-Profit, Public Sector, Private Company, and Public Reporting Issuers) to support the conclusions reached by management.

Provincial Review of the Implementation of a New Accounting Standard (PS 3260) - 2015: Deloitte was engaged to advise the internal audit function within a Provincial government on the complexities of implementing a new accounting standard on contaminated sites. Matt was the lead senior manager on the engagement which involved helping internal audit provide recommendations to identified ministries and a central agency on how to deal with complex issues associated with implementing the accounting standard and providing support to various ministries on how to improve their internal controls and documentation around the implementation of the accounting standard. The engagement also involved assisting management and internal audit in developing a position paper on how to treat certain complex issues resulting from the implementation of PS 3260 that was used in discussions with the auditor general.

Provincial Government Business Enterprise Complex Accounting Support - 2013- Current: Matt is the lead senior manager on a Deloitte engagement to advise Provincial Government Business Enterprise on complex accounting issues resulting from new transactions, and challenges with adopting new accounting standards under IFRS around employee benefits, revenue, and leases. Deloitte supports this client by providing updates on changes in accounting standards and by working with the client to develop analysis on the impact of new standards and proposed transactions.

Community involvement

- Board Member and Finance Committee Member – 2015: The Meighen Health Centre
- Finance Committee Member – 2009 – 2015: The Change Foundation
- Board Member and Treasurer– 2003 – 2009: Intrada Brass

Education / Professional designations / Industry Conferences

- Bachelor of Business Administration, University of Toronto (2004)
- Chartered Professional Accountant, Chartered Accountant (2007)

Schedule C – Similar Projects and Working with Governments

Each Vendor should provide in its proposal:

- A description of the proponent's current or past experience with similar projects, with examples of successful outcomes, anticipated challenges, and corresponding mitigation strategies that the Vendor would employ.
- Provide a description of the proponent's experience and previous pension actuarial experience with the Ontario Government or other senior Canadian Governments and provide specific examples of how that experience would assist the proponent with the deliverables of this initiative.

Similar projects

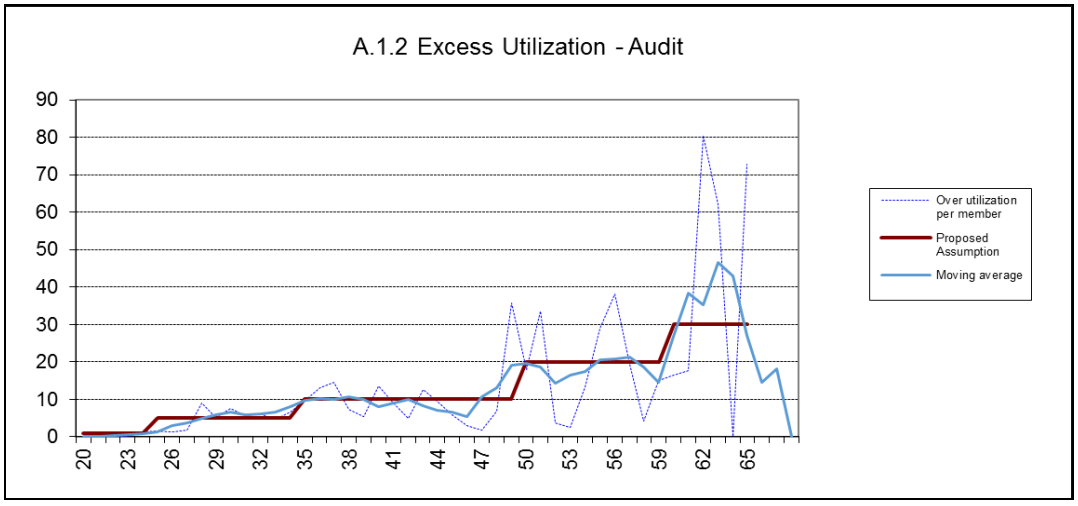
Number of similar projects were performed by Deloitte over recent years covered actuarial valuations for accounting purposes and also complex accounting issues. Some of these have already been described in the Schedule B of team members to show their expertise. Some examples are described below.

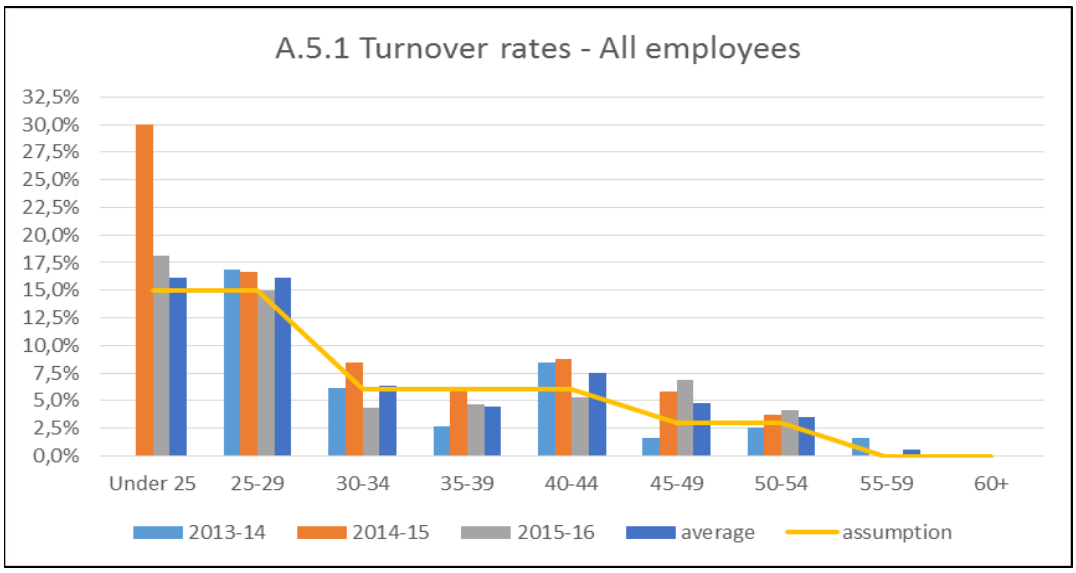
Under PSAS for one specific client, Martin and Deloitte provided various accounting advice over many years. Success was measured in that the client was satisfied and so was the Auditor General. Work was performed on accounting standards compliant basis and we did find practical approaches to prepare some elements of accounting calculation in an environment of multiple plans. Challenge was mostly around getting some harmonized approach to the multiple plans that were present (more than 40 at some point). Determining the main goals, identifying the material elements were crucial and helped mitigate the multiple plans situation. We were able to focus on the main ones that represented the biggest piece of the obligation. The other challenge was the level of knowledge of the various parties relating to accounting requirement. To overcome this, Martin was involved in number of training sessions to really provide a solid basis for the different key persons that would be involved. Throughout the years of engagement, Martin also used his communication skills and illustrative approach to help the client and the Auditor General to get familiar with the pension accounting and get a comprehensive understanding of the calculations performed. On every occasion, he found a way to increase the appreciation of the actuarial concepts / accounting standards and the required work. Complex elements that came up and needed to be explained and dealt with included; asset ceiling calculation and its non-intuitive effect, market-related value of asset methodology, discount rate for non funded plans, use of the available information to determine how to make some available results accounting compliant (time and cost savings).

Under IFRS, for 3 main clients of Deloitte, we did have asset ceiling consideration this year due mainly to the plans being closed to new entrants. Asset ceiling is a very complex application under IFRS that encompass minimum funding requirement calculations and determination of economic future benefits. Letters of credit could also be used to avoid minimum funding requirement effect. So a large number of pieces come into play in the calculations performed. Success of our work was measured by raising issues around the asset presented on the balance sheet, making the clients aware of the complexity of this and getting them understanding our approach and therefore limits on balance sheet asset. The main challenge we had was to get the actuaries to view the arguments we had on this issue and have them agree at least to some extent to our views. In order to overcome this challenge, we held some calls with the actuarial firm and we did have the client also listening to these calls, and provide their inputs. Having all interested parties included in the discussion proved to be a good way to mitigate that and avoid simple back and forth emails from actuary to actuary. We also did validate some of our position elements with other colleagues in various firms (actuarial and accounting) to understand the practice for some components of asset ceiling and get a broader view of the flexibility that exists and boundaries applied.

One other main success we can mention is how we work in the audit mandates either with our own Deloitte auditors, the firm clients or with Auditor Generals. Being specialists of pension, actuarial calculations and accounting standards, we do provide significant value to auditors and clients. We even get great comments from actuarial firms that we work with, even if we can be seen at some point as counterparties to them. The success we think can be measured in different ways. The main things we can mention are: we understand the benefits offered, we know how they are calculated from an accounting actuarial valuation perspective and we know how accounting results are determined. We work efficiently in identifying the main issues, getting the appropriate questions out and preparing a documentation that will answer the objectives that are set out. When an event occurs that need special accounting treatments (past service costs, curtailments, settlement, annuity purchase, asset ceiling calculation,…) we know what information is important and what is needed to support a file. As such, we find that success comes with a complete documentation, an effective approach, avoid unnecessary questions to clients / actuaries. We sometimes have challenge in dealing with actuaries as they may see us as competing with them to find an actuarial / accounting answer. Also, by reviewing calculations that they perform we may be seen as the ones that are looking for their errors. In order to mitigate this kind of feeling and ensure orderly communications with the actuaries, we do adopt an approach of collaboration. We always make the communications with actuaries very professional and in good faith on both sides. We keep our mind opened to evolving approaches but maintaining adequate actuarial practice and the accounting results being compliant with the standards. We also discuss openly on adhoc basis with accounting specialists in all major actuarial firms to exchange views and keep transparent on new issues and evolving practices. So far, the communication has been great for most cases even when significant issues have come up.

From a specific valuation perspective, we have helped 2 clients in recent years to perform actuarial accounting valuation of sick leave benefits and document adequately the valuation and results. The success was measured on different basis. Ultimately, the client received its required information on a timely basis. The client was also able to ask a large number of questions and get the appropriate answers in an understandable language. Finally, the client had a solid basis and high confidence to face the questions coming from their auditors on the various areas such as data review, assumption selection, valuation process, actuarial results, accounting calculations and finally the reporting in the financial statements. One of the main challenge we faced was getting the necessary support for assumption selection. The client wanted to be comfortable with its selection of assumptions but also be able to explain for both internal / external stakeholders how these were derived. Understanding that assumption selection is one key area that auditors look for and to mitigate this risk, we recommended providing a better structure for their assumption support documents, especially for sick leave utilization and turnover rates that are supported by plan specific experience. It resulted in a more efficient approach that was time and cost saving. We have provided visual support in order to help all the parties understand the behavior from an historical point of view and the assumption setting process. We also performed back testing of the assumption to show that assumption was reasonable with the experience of the plan. You will find below 2 examples of the supporting graphs that were used in the documentation.





Working with Governments

We have been working with governments both on very specific pension issues but also on many other occasions for non pension elements. Deloitte being a provider of a vast array of professional services, we do have a number of initiatives that were specifically performed with Ontario.

From a pension specific perspective, we have been involved highly with the Québec municipal Ministry to apply the PS3250 and PS3255 accounting standards to municipalities since 1997 when it was first adopted. In Québec, contrary to other major provinces in Canada, the pension plans are direct responsibility of the municipalities (local Governments). There is no multiemployer plan like OMERS or BC Municipal. As such, there are a large number of plans following PS3250 and PS3255 and some cover a large number of members. In applying the standards, a number of issues came up and needed the Ministry to look at the effect on municipalities but also define some guidelines to apply the standards. Martin and Deloitte have been involved since 1997 with the Ministry to discuss numerous issues and help the Ministry to provide recommendations on complex actuarial and accounting elements. We can note the following:

- Identify key accounting provisions that apply to pension plans
- Review the impact on the municipalities financial statements of transition
- Identify some relief options to manage taxation level for number of accounting events
- Discuss the impact of the 2008 crisis on municipalities and identify the options / treatments to offer some tax management relief to the municipalities
- Look more recently at the major changes in pension legislation that affected municipalities and identify the appropriate accounting treatment
- Asset ceiling, market-related value of assets, discount rate selection, mortality changes, presentation in financial statements …

In this implication with the Quebec Ministry, we did get exposure to a very large number of issues in accounting actuarial valuations and we did have to provide support from the very specific accounting literature (key paragraphs). Since this was applied to very large public employers, it also had a significant impact on the practice in general and how actuaries were calculating results under PSAS. We believe that this involvement makes us very well positioned to support the OPCD on complex actuarial and accounting issues that will come up. The large number of plans for Québec municipalities do provide us with a large exposure to situations that have come up and prepares us to the needs that OPCD will have.

In another work with the Québec government, Deloitte has been providing support to compare the accounting practice in Canada of various governments on how they select the discount rate and what valuation methodology they used. A review of the valuation results presented in the notes or annual report of the main plans was also looked at. In performing this work, we did have to prepare reporting in specific format that could be used by interested parties at government level. As such, we needed to be sure the explanation was appropriate, to the point and accessible to a non-familiar reader. We believe that this experience, above the fact that it provided us a good view of the Canadian public sector plans in Canada, will also help us define the appropriate communication needs and format that OPCD will be able to use.

We also did work with the NB Government on the preparation of a white paper on Shared Risk Plan accounting. This new type of plan is highly complex and also is not totally contemplated by the PS3250 that is more based on traditional plan structures (either DB or DC). Plans with conditional benefits are more addressed under IFRS, although there is also some grey area in this standard. We did provide support to the Government to define an approach to value and account for these plans. In doing this we needed to educate some people on accounting, we needed to understand the steps of the actuarial valuation process and we needed again to report on a complex issue to non-familiar individuals. We think that this is something that will be helpful to support the OPCD in the upcoming challenges of complex accounting issues.

Deloitte has been involved with a number of large municipal Auditor Generals in particular in Québec where large municipalities do have audit firm working on the financial statements but also Auditor General looking at the work. We have been either supporting the Auditor General review (as a support expert to the AG) or in communication with the Auditor General (as the auditor of the municipalities) for most of the large municipalities:

- City of Montréal and Transport Commission
- City of Laval
- City of Longueuil
- City of Gatineau
- City of Terrebonne

Through these mandates, we have performed work in all areas included in accounting valuation and reporting; methodologies, assumptions, gains and losses, expense and balance sheet, asset ceiling, disclosures, detailed calculations, sensitivity testing. We also provided advice throughout these mandates to ensure the Auditor General would improve the understanding and also become aware of good practices for documentation as well as tests to perform. This provided some knowledge transfer opportunity for Deloitte to make our contacts better professionals in an area they are usually less familiar.

We also provided similar support to the OAG (Canada) in their review of a number of Crown corporations. In all our mandates, we did get good feedback from our OAG contacts, some of which are included in our references. We did also ensure that formal communication would be through an external report that has a structure to facilitate the review of conclusions and the reading of the document. We reached our objective since all our contacts did confirm that they were impressed with our documentation process and the working papers we provided.

In addition, Martin and Trevor have the experience working with the OPCD in regards to pension accounting advice. In a recent mandate, they have been involved in providing advice and guidance to OPCD on complex accounting and reporting matters related to accounting for pensions and the Province's consolidated financial statements. More specifically, they provided expertise in actuarial assessment in relation to applying the ceiling test to the accrued pension benefit assets in accordance with PS3250. In that work, both the accounting expertise, knowledge of the tests and the actuarial calculation requirements were involved to support OPCD understand the work performed by an actuary with that regards. They were also involved in looking at models used to project expense and balance sheet figures over future years using different scenarios. We understand that different views could be applied to asset ceiling test and this will be part of the initial steps to be defined and a crucial input to any projection of results. Still, this experience of having already worked with your team gives us the confidence that we will be able to coordinate our efforts, both Deloitte and OPCD, to deliver you the optimal results you will be expecting and support you in the calculations and assumption requirements.

Schedule D – Reports for Public Pension Related Initiative

Each Vendor should provide in its proposal:

- Describe the proponent's demonstrated knowledge, skills, experience and expertise with developing reports with an executive summary that presents findings and analysis of the information collected both from the qualitative and quantitative of a public pension related initiative and any recommendation made as part of the report.

Audit report to our auditors and Auditor Generals

As indicated in a previous section, our pension actuarial group performs more than 150 pension and non-pension benefits audit supports annually, among which 15 to 20 relate to public pension. These are used for Deloitte audits but also for supporting Auditor Generals. In performing our work, we do prepare formal reports and working papers. These documents need to be orderly prepared and contain the necessary requirements to support the audit. The usual documentation includes:

- background section
- tailored executive summary portion
- section detailing our approach
- section with the findings for each of our tests (methodologies, assumptions, events, expense, asset ceiling, …)
- section with the list of professionals that were involved
- finally, a list of detailed working papers is also included

We prepare the structure of our reporting in order to maximize the understanding of the work performed and the findings. We have found by use with auditors and Auditor Generals that this answers the need for documentation. We specifically received great feedbacks from working with external stakeholders on how the information communicated was complete, to the point and easily accessible. We believe that we have shown expertise in preparing these documents over the last few years and we will use this to ensure optimal communication with OPCD and the stakeholders. Our reporting to auditors led to their file being complete but also in some cases has impacted the audited entity process / reporting for which adjustments were made.

Government analysis of accounting approach

We did perform a pension review of the major public pension plans in Canada for the Quebec government. This document was meant to cover main plan provisions, main assumptions used, accounting results and methodologies. We did perform the analysis, summarized the information received and prepare the necessary report. Reporting to a Government, we did structure our report again to have a succinct but complete executive summary. The document needed to cover all steps of the work and really tie to the objectives that were set out initially. We did work this in a collaborative approach with the Government representatives and therefore ended doing some back and forth iterations to incorporate both our views of what made it a successful document that would answer the stated objectives but also include the Government views about what wording might be more appropriate to some stakeholders. We still had the ultimate responsibility to define the structure based on the work we were performing and findings in the course of the mandate. We also think that this shows our experience in this type of communication and will help us ensure high-quality work to OPCD. Although we did not end up with specific recommendation, the content and our analysis of the information was aiming to support the position taken by the Government on some of its accounting decisions compared to other governments.

Shared risk plan white paper

Another example of reporting on public pension plan is the work we did with the Government of NB to define the accounting treatment for transition of a traditional DB plan to a Shared Risk Plan model. This work required us to really cover a highly complex accounting issue but also having legislative and actuarial complexities. We performed the analysis of the legislation and the accounting and prepared a report with our findings. An executive summary was needed to ensure the conclusion of our analysis was highlighted appropriately and the main elements leading to it were also summarized. As this is a complex issue, numerous subsections covering the plan details, the legislation considerations, the valuation reports, the funding and benefit policy, and the accounting standards were also included in the reporting. This work shows that we do have the expertise to translate complex issues into accessible documentation and provide with a summary that adequately covers the issue, the process and our conclusions. Our work led to a recommendation on the adequate treatment of this particular type of plan in order to support the financial statement preparation.

Schedule E – Ceiling Test and Sensitivity Analysis Scenarios

Each Vendor should provide in its proposal:

- Describe the proponent's demonstrated knowledge, skills, experience and expertise with running different asset ceiling tests and sensitivity analysis scenarios. Cite examples to demonstrate experience and describe results achieved.

Quebec municipalities Ministry for application of PS3250 and PS3255 standards

Through the implication with the Québec municipalities Ministry Deloitte has provided a number of recommendations on accounting treatment of some events / issues that are closely looked at by the Auditor Generals. We have been involved in the treatment of special events including the asset ceiling and its accounting treatment. PS3250 has extreme volatility consequence for asset ceiling while IAS19 has some self-correcting mechanisms that help alleviate this extreme fluctuation. At some point, this element did become a sensitive issue for some municipalities' pension plans and affected their financial statements and taxation needs. We were involved with the Ministry to define a possible recommendation of how this would be applied and eventually determine some recommendation to mitigate the taxation impact for municipalities. Our expertise in PS3250 combined with our knowledge of IFRS for asset ceiling proved to support the Ministry. We did projection of plan situations and tested asset ceiling under numerous scenarios to search for an adequate solution to the situation and taxation issues.

Comprehensive review of the ceiling test under PS3250

In preparation of the Province of Ontario's Financial Statements, Deloitte was engaged by the OPC to provide support in analyzing issues around pension accounting. A key element of the work prepared was the assessment of the application of the public sector accounting standards as related to asset ceiling and valuation allowance. Our work included review of two large Ontario plans for which we prepared a document containing the following details for each:

- Summary of the accounting situation
- Overview of the accounting paragraphs that apply to this and the explanation
- Review of the considerations that go into the ceiling test and the Future Economic Benefit (FEB) calculation
- Review of the employer access to future contribution reduction or surplus withdrawal
- Summary of findings relating to observations made in discussing the applicability of the asset ceiling test for Ontario's 2015-16 Financial statements

One section above the rest from the document we prepared for the OPCD highlights our expertise with running different ceiling tests and scenario testing. Within our review of the consideration that go into the ceiling test and the Future Economic Benefits (FEB) calculation, we highlighted the main components of a ceiling test including notion of an open group, future service accruals on an accounting and funding basis, required contributions and contribution holiday. Further, we defined different levels of testing in regards to the minimum contribution that we ran through testing and projection. This allowed us to work through different examples with OPCD, going from a basic testing to a very comprehensive level of testing under PS3250.

This experience has allowed Deloitte and the OPCD to better understand the asset ceiling notion and the concepts that go into it. We recognize that a significant number of assumptions and inputs go into this type of work and that different views may lead to different results. These may be part of the scenarios to look at in the accounting calculations. This is why we believe that any work on asset ceiling will need to start by defining a solid basis on these assumptions and scenarios.

Asset ceiling and annual audits

As indicated previously, our pension actuarial team supports Deloitte audit teams on a large number of annual audits. Although not always applicable, there are number of plans that show an asset position and for which testing of the amount presented needs to be performed. Even more complex, the test under IFRS, including IFRIC14 requires usually some projection of results to validate the asset position, even for plans that might currently be in liability position. So our team does have extensive experience in these issues, calculations and discussions with clients / actuaries. We are exposed to a significant number of these situations. As an illustration, you can refer to the section on similar projects where we noted that under IFRS, for 3 main clients of Deloitte, we did have asset ceiling consideration this year due mainly to the plans being closed to new entrants and for which we did go through a comprehensive process with the clients and actuaries. Plan closing and reduction in active membership are an illustration of important considerations in asset ceiling tests but we can think of many other elements that are of importance in the detailed calculations of asset ceiling. Deloitte being involved on a large volume of clients, we believe that we are well-positioned to be faced with all of these particular situations that may come up and as such be able to support OPCD in understanding the effect of "what if" situations.

Sensitivity and Scenario Analysis for Audit

As actuaries in a large Audit firm, we act as the pension specialists for many pension and benefit plans. Each of these engagements has a defined scope but typically it involves the review of actuarial assumptions and review of the accounting results to gain comfort with the movements of the obligation, plan assets, profit and loss, and other comprehensive income where applicable. To completely gain comfort, reviewing both assumptions and results, we must use both sensitivity and scenario testing.

When reviewing actuarial assumptions, particular assumptions may depend on stochastic projections. For example:

- For plans under all standards, if there is an element of increase of pensions in payment that is linked to the Consumer Price Index (CPI) or the return on assets, we will perform stochastic projection. For illustration, if a plan assumed an annual increase of pension in payment of 1.2%, and the plan formula for the increase was the maximum of a) 50% of CPI and b) 75% CPI minus 1%, we would perform a stochastic projection of inflation levels over future years to determine the likely distribution for what the underlying indexation would be. Finally we would compare our expectation with the assumption retained. Doing so will require some modelling for projection of future events like CPI.

- For plans under PSAS, there is use of the expected return on assets assumption. When there is an expected return on assets assumption, we would look at the plans target investment strategy (the distribution of total assets into asset classes), and then we would perform a stochastic projection of these asset classes over a defined period to determine the likely distribution for what we would expect the aggregate return to be. This would be compared with the assumption retained. So again, we do use modelling into our regular work.

Sensitivity analysis is a particularly useful tool for completing our review of accounting schedules. For example:

- For reconciliation of the benefit obligation to explain how it evolves every year, there are 3 main elements of gain/loss; change in financial assumptions, change in demographic assumptions, and plan experience. When there is a change in the assumptions, this will result in some element of gain/loss whether it's very minimal or large. In order for the Deloitte team to determine the impact of changes in assumptions, we often rely on sensitivity testing. A common example is determining the impact of a 100 bps decrease in the discount rate. We would use the plan duration, which is the sensitivity of the

cash-flows, and determine the percentage increase in pension benefit obligation from a 100 bps decrease in the discount rate.

Other assumption changes may also incorporate sensitivity analysis; change in retirement assumption may rely more on active member duration, change in the indexation for deferred members may rely more on deferred member cash-flow sensitivity, change in the mortality assumption may rely on the complete cash-flows sensitivity to all members living an extra year. We will make use of the actuarial knowledge we have about how an obligation for a member is valued. We also have available valuation tools that help us estimate the impact of very specific assumption changes. Our proposed team members have been involved in actuarial valuation preparation and actuarial results review hence they are very familiar with the elements that go into the calculations.

Finally, for sensitivity, we can also mention that our team often supports the disclosure for sensitivity results. When entities present such information in their notes, often seen under IFRS where disclosure of significant assumptions must come with a sensitivity analysis of these assumptions. The actuarial team will support the auditors in assessing whether a change in obligation value disclosed is acceptable based on the actuarial principles and calculations. Our actuarial group would prepare a similar analysis to validate the actuary results.

In a similar manner, we provide support to audit teams at the start of their audit process when they identify what are the major risks to be reviewed and covered. To do this, our team will prepare sensitivity analysis of the main plan assumptions to calculate the impact on the obligation and help the audit team determine if this change is material for the audit work and therefore represents a major risk. To do this, we need to understand the main plan provisions and define the impact of the assumption change in the actuarial valuation calculation.

Schedule F – Methodology and Implementation Plan

Each Vendor should provide in its proposal:

- The proponent shall describe the methodology and implementation plan they will use to deliver the Client's Requirements as described in Section 1.5 of this RFS.

From Section 1.5 of the RFS

- Working with management of the Office of the Provincial Controller's Accounting Policy and Financial Reporting Branch (APFRB), the provider will provide actuarial/accounting services related to the following possible areas:
  - Review the economic assumptions (i.e. management best estimates) used for the accounting valuations of the pension plans and non-pension benefits reported by the Province.
  - Review the actual and forecast numbers prepared by APFR staffs for the Province's various pension and non-pension benefits. Including assessing the reasonableness and completeness of assumptions used by APFRB staff in the models, including any sensitivity analysis as required.
  - Provide recommendations, if any, on improvements in the pension and non-pension benefits accounting models currently used to by APFRB.
  - Perform ceiling test requirements in accordance with PS3250.50 to PS3250.59 for all sole sponsor or joint sponsor pension plans that are in an accrued benefit asset position.
  - Provide advice on any accounting issues related to pension and non-pension benefits, as required.
  - Participate in discussions with internal and external stakeholders, as required.

- The Vendor will participate in meetings as necessary to support the engagement objectives.

Implementation Plan – start of mandate

In order to start the mandate on a solid basis, we believe that a first initial meeting between Deloitte and OPCD would be the best first step. Martin and Trevor will cover a number of elements to ensure that the mandate starts on the right track and uses most optimal approach.

With this initial meeting, many elements of process and basic information will be covered like:

- Identify the key personnel on both sides and define their expected role
- Review the list of pension and non-pension benefit plans that are to be covered
- Identify the documents that are to be made available (valuation reports, plan texts, internal procedures, financial statement notes, assumption selection documents, data)
- Determine the assumption selection process already in place
- Determine the valuation process used and discuss the main models in place for APFR staffs work and

the projection / sensitivity scenarios

- Identify the list of issues that are currently foreseen
- Agree to the communication procedures for information
- Discuss expected timing of the support needed by OPCD over the period covered by the mandate
- Billing procedures also will be defined

The objective of this meeting will be to cover the important elements and allow for both sides to define their needs / expectations.

Although the scope of work description under 1.5 of the RFS does not clearly identify tangible deliverables or definite milestones and delivery dates, we have identified below how we would proceed to get some of the main activities to a conclusion. These activities are identified as follows:

- Review economic assumptions (management best estimate) under PSAS
- Review actual and forecast numbers prepared by the APFR staffs, including sensitivity analysis
- Work with OPCD on discussions with internal / external stakeholders
- Perform ceiling test requirements

Review economic assumptions (management best estimate) under PSAS

This activity covers a very important step in performing accounting actuarial valuation. This is an area where our expertise comes into play and where we can provide a good support to management in its process. This will usually follow a review of the management actual position on the assumptions and provide documentation to support / comment the assumptions and provide possible adjustments where applicable.

Step	Description
Initial discussion with the OPCD	Identify the process for selection of assumption used Determine outside resources being used to make selection Identify the basis and rationale for each key assumption selected Determine the objective of our review and confirm the documentation expected
Obtain the necessary documents	Detail of assumptions selected Rationale behind the selection, process and supporting information Explanation for changes made in methodologies over year, if applicable
Review of assumptions	Review plan provisions that may have an impact on the key assumptions selected Compare with assumptions in funding valuation (especially demographic ones) Identify inputs used for any assumption, including expected return on plan assets (which is a key assumption and more subjective inputs being challenged usually) Review market information available and surveys Review assumption models (ex when stochastic methodology used)
Prepare the preliminary analysis document	Summary of the assumptions and the process Identification of documents received and used in review Comments on every assumption scoped in our work Identification of any assumption that may be of concern
Discuss the analysis with OPCD	Send the preliminary analysis document to OPCD Run through the main elements of the analysis performed and the conclusion Discuss further if any assumptions need deeper analysis or support
Prepare formal communication	Document to be used with internal / external stakeholders

Although the deliverable may differ somewhat in format based on the needs, it will contain these most likely elements:

- Summary of the assumptions
- Identification of the documents used and prepared
- Summary of the conclusion reached

Review actual and forecast numbers prepared by APFR staffs

This activity covers our accounting expertise for actuarial calculations in an accounting environment. It also makes use of our experience in dealing with design and use of valuation models and projection of results through deterministic or stochastic scenarios.

Step	Description
Initial discussion with the OPCD	Identify the valuation process in place and the models used Determine the projection assumptions used in forecasting results Define the access to the models / excel spreadsheets for our work Determine the data being used Determine the sensitivity applied to some of the assumptions Identify the scenarios (assumptions and others) that are expected to be prepared Determine the document / outcome expected from our work
Review the APFR staffs results prepared	Review the calculations and projections Reperform accounting results for expense and balance sheet Identify any difference and determine the rationale for difference Review any stochastic input / output being used Perform the work on the various scenarios
Identify questions	Define queries that may come up in our review Identify weaknesses of the process and possible improvements Raise questions to OPCD Review answers and adjust as needed the work (support APFR staffs as needed)
Prepare analysis document for OPCD	Identify information received Describe work performed and steps taken List the issues / questions raised and adjustments if any Comment on the appropriateness of the results
Discuss document prepared	Review with OPCD Go over the conclusion of our review of the results Identify elements that may need to be improved in the valuation process or future scenarios to include in future years

Although the deliverable may differ somewhat in format based on the needs, we will ensure that the content will be prepared considering the following

- The identification of the valuation process and forecast modelling
- The scenarios being looked at (sensitivity)
- The extent of our findings and how they are to be addressed
- The specific needs of OPCD if changes are required to be supported by comprehensive documentation or regular communications with OPCD and APFR staffs

Work with OPCD on discussion with internal / external stakeholders

This activity is about discussion. As such, it will make use of our expertise in delivering comprehensive, understandable information and explanation for actuarial and accounting elements or concepts. This is one area where the multiple files we work on with auditors, actuaries and entity management will provide the needed skills to deliver quality services. Below we provide some summary of steps that we would take to engage in these discussions.

Step	Description
Initial discussion with the OPCD	Identify the issue / concept that is to be discussed Identify the main message that is to be delivered and elements to cover Identify the key people (stakeholders) that we will be having discussion Define the level of understanding of the people and whether some basic information needs to be provided Defined the supporting documentation or agenda needed Identify where Deloitte and OPCD get involved respectively in the discussion
Obtain documents	If the discussion is to be focused on some specific documentation, it needs to be obtained
Have the discussion	Go over the elements that need to be covered Maintain the discussion at appropriate level of understanding Explain some concepts that may not be familiar to the stakeholders Ensure that discussion is held at professional level, never lose sight of the objective and the spirit of collaboration Identify if any next step is required after the discussion (document, analysis, meeting …)
Deloitte and OPCD review the outcome of the discussion	Identify how the discussion went Determine the next steps, as applicable (who, what, when)

Even if these discussions may be with different stakeholders and cover various issues, some common features of our approach to these discussions will be:

- Make sure we all agree on the elements to discuss and the needed documentation
- Ensure that discussions are at the appropriate understanding level for the stakeholders
- Always make those in collaborative and professional manner
- Understand what role Deloitte plays and OPCD plays to avoid misunderstanding of responsibilities
- Identify any next steps required

Perform ceiling test requirements

This activity covers a very specific area of the pension accounting standards. It is an element that needs some judgment and also that needs a comprehensive analysis to document appropriately the position taken. Under PSAS, the asset ceiling test is required when the plan presents a surplus and shows an asset on the balance sheet. This is done on a plan by plan basis. It does encompass a notion of future economic benefit (FEB) that requires the Government to define what it believes can represent a benefit in form of either surplus withdrawal or future reduction in the Government contribution through contribution holiday. The asset ceiling is important since as per the accounting standards, any change of the ceiling over year will have an immediate impact on the annual expense of the Government and thus may be a very volatile component when the asset ceiling applies. Here are the steps we think could be taken to provide expertise to the specific situation of the Government.

Step	Description
Initial discussion with the OPC	Identify the plans that are to be modelled Determine the various components of the test and how it is to be applicable Discuss for the affected plans the initial view on whether the Government could take some contribution holiday, if so on what circumstances Identify if one approach applies to all plans or if different situations exist (ex a closed plan)
Obtain the necessary documents	Accounting results for the affected plans Supporting plan text/funding policy for contribution holiday judgment Initial analysis that exists at OPCD
Prepare an analysis of the situation for the plans	Define and structure the valuation model Prepare the assumptions that will be included in the model Based on the elements defined above, determine the FEB components for the affected plans
Perform valuation models	Determine possible contribution holidays FEB calculation basis Impact of the asset ceiling
Discuss the valuation models with OPCD	Send the valuation models documents to OPCD Run through the main elements of the analysis performed and the conclusion
Prepare formal communication	Depending on the needs, could take the form of a revised analysis or more formal document to be used with Auditor General or other external stakeholders

Some key elements are really important to look at when preparing this analysis:

- Valuation basis used for plan assets (market-related value?)
- Possibility of Contribution holiday – what supports this and what are the constraints
- Well-defined process to calculate this since it is a very complex element of accounting that not all stakeholders fully understand and can appreciate the accounting requirements
- Actuarial assumptions to include in projection

Re: Actuarial Services – RFS TBS-OTB-OPCD-22 (Pricing proposal)

Deloitte is pleased to submit this pricing proposal to provide actuarial services to the Office of the Provincial Controller Division (the "OPCD") about pension and non-pension benefit management consulting services. As you will see from our proposal, professionals at Deloitte possess relevant experience and have conducted similar engagements for a variety of clients, including public sector. Should we be the successful bidder, we are also able to draw upon an experienced team who not only understands actuarial services, but also appreciates the challenges and complexities associated with the communication issues of actuarial results and accounting complexities. Deloitte being highly involved in pension and non-pension benefit plans audit, the OPCD will have access to individuals that have significant expertise in understanding the market practice on accounting for these benefits and have specialized views on interpretation of accounting standards.

If you have any questions with respect to the information contained within this proposal, please do not hesitate to contact us. We look forward to working with the OPCD on this important initiative.

Sincerely,

Martin Raymond
Partner

Deloitte LLP

Pricing considerations

Extract from the RFS

- Pricing Schedule (Schedule A) completed and submitted as a separate file.
- If HST is applicable, Vendors must itemize HST as a separate line item in the Pricing Schedule
- Vendors must propose all dollar amounts in Canadian funds
- The Pricing Schedule must set out the full legal name of the Vendor; a list of each Role (including Experience Level) proposed; and the full legal name of each consultant proposed for each Role (by experience level) to achieve completion of the proposed services within the timeframe specified by the Client; and total Fixed Price that the Vendor will charge the Client for Services performed and Deliverables provided
- The amount for Total Fixed Price is fixed and not subject to change unless otherwise agreed to by both the Client and the Vendor in a Change Order
- If required by the Client, the Vendor must also include a list of each Role (including experience level) proposed; and the hourly rate for each Role, to be applicable only in the case of a Change Order

Notes

- The role / experience is provided in general terms. More details are found under the Schedule B of the Technical proposal

Schedule A - Pricing Schedule

Please provide the following information in accordance with Sections 2.2.1 and 2.2.2 of this Request for Services:

Legal Name of Vendor:
Deloitte LLP

Part A – Vendor Personnel

Complete the following table in respect of all proposed Vendor Personnel that will perform the Services and/or provide the Deliverables. Vendors should not include proposed Subcontractors in this Part A of Schedule A.

List the names of Consultants who will be assigned to the Project	**Role and Experience Level**
Martin Raymond	Project Lead (Partner at Deloitte): over 20 years of experience
Trevor Gary	Senior Analyst (Senior at Deloitte) : 4 years of experience
Matt Colley	Subject Matter Expert (Senior Manager at Deloitte) : 12 years of experience

Will Subcontractors be used for this Project? Yes [ ] No [x] If "Yes", complete Part B.

Part B – Vendor Subcontractors

Complete the following table in respect of the proposed Vendor Subcontractors at any tier of subcontracting, including any Vendor contractors that will perform the Services and/or provide the Deliverables.

Legal Name of Subcontractor	List the names of Consultants who will be assigned to the Project	Role and Experience Level
N/A	N/A	N/A
N/A	N/A	N/A

Part C – Fixed Price

In the following table, enter the Fixed Price in respect of each role to be performed and the particular Deliverables to be provided, which amount is fixed and not subject to change unless otherwise agreed to by the Client and the Vendor in a Change Order.

For the purposes of bidding, the Ministry has estimated that 75 hours of effort is required for each role totalling 150 hours over the term of the Agreement. The Ministry reserves the right, as required, to alter the number of working days for each role as the project unfolds. The Ministry reserves the right to alter the number of working days at the time of award.

Fixed Price for each Core Deliverable	Amount
• One (1) Senior Consultant / Project Lead shall provide 75 hours of effort over the term of the agreement. The consultant shall provide all deliverable as described in Section 1.5 Client Requirements. – Martin Raymond	$ 33,750
• One (1) Intermediate Consultant / Sr. Analyst shall provide 75 hours of effort over the term of the agreement. The consultant shall provide all deliverable as described in Section 1.5 Client Requirements. – Trevor Gary	$ 18,750
Total Fixed Price:	$ 52,500

Part D – Other Expenses

In the following table, Vendors should list all expenses applicable to the Project that have not been included in the Total Fixed Price amount as stated in Part C of this Schedule A. Vendors should review the Travel, Meal and Accommodation Expenses section of the RFS prior to completing this table.

Expenses by Type *(List each item below):*	Proposed Amount
N/A	$ -
N/A	$ -

Part D – Other Expenses

In the following table, Vendors should list all expenses applicable to the Project that have not been included in the Total Fixed Price amount as stated in Part C of this Schedule A. Vendors should review the Travel, Meal and Accommodation Expenses section of the RFS prior to completing this table.

Expenses by Type *(List each item below):*	**Proposed Amount**
Total Other Expenses:	$ Nil

Part E – Maximum Price

In the following table, Vendors shall calculate Subtotal Price by adding Total Fixed Price, as stated in Part C of this Schedule A, to Total Other Expenses, as stated in Part D of this Schedule A.

Vendors shall calculate Maximum Price by adding the Subtotal Price to the applicable HST.

Subtotal Price (Part C + Part D):	$ 52,500
HST (if applicable):	$ 6,825
Maximum Price (Subtotal Price + HST):	**$ 59,325**

Part F – Follow-on Work Hourly Rates

In the following table, enter the Hourly Rates in respect of each particular Role to be performed which amount is fixed and not subject to change unless otherwise agreed to by the Client and the Vendor in a Change Order.

In the event that Follow-on work is requested, the Ministry will prepare a contract amendment to engage the consultant(s) for a specified number of days of work. Details on deliverables will be disclosed in the amendment as well.

Fixed Price for each Core Deliverable	**Hourly Amount**
• One (1) Senior Consultant / Project Lead Partner (Martin Raymond)	$ 450
• One (1) Intermediate Consultant / Senior Analyst Senior (Trevor)	$ 250
• Other possible consultants Senior Manager (Matt Colley)	$ 375

Pension Asset Expert Advisory Panel

Technical Briefing

September 7, 2017

Pension Asset Expert Advisory Panel -- Process

- Panel was provided with briefings and documents (relevant legislation, plan texts, sponsor agreements) to assist members to fully understand the facts and circumstances of the Plans and the basis for the government's accounting conclusions.

- Panel met with the Auditor General and members of her team to fully understand the basis for the OAG's accounting conclusions.

- Panel performed its own independent analysis of those documents and the legal, actuarial and accounting issues and reached its own conclusions.

- Panel considered:
  - guidance in PSAS specifically on Retirement Benefits
  - other relevant guidance in PSAS, and that issued by other standard setters identified in PSAS as sources to consult, in areas where the retirement benefits standard is not clear

Panel's Position on Recognition of Asset

- Net pension asset meets the definition of an economic resource because:
  - accounting surplus exists, and
  - future economic benefit is available to government as contribution reductions, freeing cash for other purposes.

- Unilateral control not necessary for asset recognition:
  - in fact, cannot exist in JDBPs or any other jointly controlled arrangement
  - sponsors jointly control the total net pension asset and must agree on how it will be used
  - key notion with joint control is that each sponsor can deny the other sponsor(s) access to the asset, ensuring no one side can make unilateral decisions
  - each sponsor should then recognize an asset relating to its portion of that jointly controlled surplus.

Panel's Position on Measurement of Asset

- Retirement benefits standard states that a sponsor measures the benefit of a surplus by the extent to which it can either take assets out of plan or reduce future contributions

- Contribution reductions are not the same as surplus withdrawal:
  - legal requirements for surplus withdrawal and contribution reductions are very different
  - joint sponsors free to decide on level of contributions in compliance with terms of Plan and Pension Benefits Act
  - no third-party approvals needed for contribution reductions

- No requirement for any agreement to be in place specifying exactly when and by how much contributions will be reduced
  - agreements in place already sufficient
  - standard says benefits need only be reasonably expected

- No onerous funding requirements exist for OTPP or OPSEUPP

Overall Conclusions of Panel

Recognition and measurement of the asset

- Net pension asset, without any valuation allowance, should be recognized in the Province's financial statements.
- Recognizing the asset will provide a faithful representation of the Province's financial position.
- Recognizing the asset will properly reflect the intention of the "deal" between the sponsors.

Overall

- Reasonable expectation that Sponsors will be able to benefit from lower contribution levels in future
- Established mechanisms exists to put these expectations into practice (in Plan documents and legislation)
- Surplus assets have real economic value government can benefit from so should be recognized

Appendix: Panel members

- Patricia O'Malley (Chair) – former Chair of Canadian Accounting Standards Board, former member of International Accounting Standards Board, Chair of the Canadian Actuarial Standards Oversight Council, former technical partner KPMG

- Murray Gold – Leading practitioner and senior pension and benefits partner at Koskie Minsky LLP

- Uros Karadzic – Pension actuary, member of the PSAB's Employment Benefit Taskforce, partner at EY

- Paul Martin – Comptroller with the Government of New Brunswick, member of the PSAB's Employment Benefit Taskforce and previously a partner with the national accounting firm of Grant Thornton LLP

Shannon,

Please schedule a meeting to brief Cindy on these results. We are still awaiting feedback from the OAG on our proposed direction w.r.t. adjustments, but would like to brief Cindy on these results and receive her feedback/direction.

Thanks.

Nadine

Hi everyone,

Thank you for forwarding us the most updated spreadsheets for all plans. We have reflected them accordingly for our analysis.

As promised, please find attached a summary of impact based on the proposed year-end adjustments. We have prepared an one-pager with both years on it (on legal size paper), as well as an individual summary page for each of the two comparative years.

Let us know if you have any questions.

Regards,

Christina

F2016 differences, excluding opening balance adjustment		167		(54)		(19)		(11)		0.5		47		131

Commentary

1. Reflect all proposed adjustments (contribution receivable, unamortized contribution differences, cumulativetransfer, reflect other participating employers)
2. Need to consider the treatment of recognizing difference between the portion of contributions included in assets and actual ON contributions
   For HOOPP, expense is subsequently determined based on the calculated opening and ending pension liability and actual contributions by other source. As such, it's implicitly included in pension expense (outside of calculation tool)
3. Pension expenditure for HOOPP reflects immediate gain/loss recognition arising from change in % allocation
   This is consistent with OPCD's current practice performed outside of the calculation spreadsheet
4. Increase of approximately $100M on OTPP's annual pension expense relates to removal of expected return on contribution receivable
5. F2016 Pension expense (income) for other agencies is estimated based on F2015 for illustration purposes
6. Above figures do not reflect asset ceiling test and the adjustment for the differential use of the Rate Stabilization Fund ("RSF") for OPSEUPP

Shyrose and Nadine,

Find enclosed the signed version of the SOW.

I have added the start date of July 21, 2016 as we are having an initial call on this Thursday.

I have also added my electronic signature.

No other change to the document you provided.

We really look forward to working with you.

Let us know if anything else is needed for paperwork.

Regards

FORM OF STATEMENT OF WORK – OPS ENTITY

Statement of Work for Management Consulting Services

This Statement of Work no. **– RFS TBS-OTB-OPCD-15 made in duplicate and effective July 21, 2016 ending on March 31, 2017.**

Deloitte LLP (the "Vendor" or “Deloitte”) and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of **July 21, 2016** between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$ $100,000.00 does not include HST

4. *Project Start Date:* July 21, 2016

5. *Project End Date:* March 31, 2017

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following

- Taking into account public sector accounting principles, advice and guidance on complex accounting and reporting matters related to accounting for pensions on the Province’s consolidated financial statements.

- The Vendor will participate in meetings as necessary to support the engagement objectives:

- Working with management of OPCD’s Accounting Policy and Financial Reporting Branch (APFR), the provider of complex accounting services related to the following possible areas:
    - Develop discussion and analysis material
    - Develop draft input/briefing materials/option papers
    - Provide accounting advice and guidance related to the accounting for pensions on the Province’s financial statements
    - Participate in discussions with internal and external stakeholders, as required

  As part of this engagement, the consultant(s) would be expected to provide professional accounting expertise in assessing actuarial assessments for specified plans in relation to

applying the ceiling test to the accrued pension benefit assets in accordance with PS3250 (3250.050 to PS3250.059).

7. *Ownership and Licences* - **Attachment D** of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* - The structure of Deloitte's working relationship with OPCD is vital to the success of their engagement. The Project Lead that will handle OPCD work is Martin Raymond (partner), the leading consulting actuary for pension at Deloitte. In his work, Martin will be supported by Trevor Gary. Martin and Trevor will have access to some specific personnel of Deloitte that may be involved to limited extent depending on the needs. Clair Grindley and Matt Colley will be the 2 main subject matter experts that may have some implication.. Max Bazile, another actuarial resource is identified just as a support should a very large workload come in a short period of time and OPCD needing some urgent support. _Deloitte's communication strategy will be centred on periodic project update meetings, the frequency of which will be determined by the OPCD and Deloitte.

9. *Work Location* - All meetings will be within Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive.

    If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Fixed Price or Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Billing and Payment Process* – The Vendor shall provide the Client with quarterly billing statements that outline the per diem charges [as provided Deloitte's response to RFS TBS-OTB-OPCD-15, no later than 10 Business Days after the end of each quarter.

    Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Name of Individual	**Level**
Martin Raymond (Project Lead)	Partner, Actuarial Services
Trevor Gary (Senior Analyst)	Senior, Actuarial Services
Matt Colley (subject matter expert on Ontario process and protocols)	Senior Manager, Audit

Clair Grindley (subject matter expert on pension accounting)	Partner, Audit
Max Bazile (backup resource for actuarial team)	Senior Manager, Actuarial Services

14. **Invoices** - Invoices for payment of any charges under this Statement of Work shall be sent to:

Client:	Treasury Board Secretariat, Office of the Provincial Controller Division
Branch:	Accounting Policy and Financial Reporting
Representative:	Nadine Petsche
Title:	Director, Accounting Policy and Financial Reporting
Phone number:	416-325-8027
Email:	Nadine.petsche@ontario.ca

15. *Knowledge Transfer:* The Vendor will work closely with the Client to ensure knowledge transfer to the Client's designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* - The Vendor shall destroy all information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Indemnity* – the indemnity set out in the Master Agreement applies to this assignment.

18. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	**Treasury Board Secretariat**
Client Representative:	**Nadine Petsche**
Telephone number:	**416-325-8027**
E-mail:	**Nadine.petsche@ontario.ca**

19. *Vendor Representative and Receipt of Notices*

The name and title of the Vendor's Representative: Martin Raymond
1190 Avenue des Canadiens-de-Montréal,
Montréal, Quebec
Canada
H3B 0M7

IN WITNESS WHEREOF the parties hereto have executed this Statement of Work as of the date first above written.

Her Majesty the Queen in right of Ontario as represented by The President of the Treasury Board

Cara

I did do the Triton access and completed some info.

Is this a 2nd requirement to complete additional info ? or just the Max access ?

I had used my passport info to complete it.

Thanks

I spoke to Shyrose this morning and she initiated these security clearance requests in connection with the Pension Accounting and Premier's Advisory accounting work.

She is going to resubmit the requests with Triton shortly, please can you all action the email when received.

Items to note:

· The link can only be accessed once – so do not action if you do not have time to

complete in one sitting

· It takes approx. 20 minutes to complete the clearance process

· Each individual page times-out after 5 minutes

· You will need the following information in order to complete the process – 5 years address history, Proof of legal status to work in Canada eg. Passport #, Birth Certificate, PR card, credit card for payment

Thanks very much

Cara

Subject: Re: some advice

Hi Nadine,

Of course. I assume this would be under the pension accounting advice engagement - which is still open, as opposed to the Panel writer engagement.

In terms of timing, the Panel is close to finalizing the internal memo to be shared with your group (in addition to the public supplemental report). While it asks more questions than gives answers, it may be a useful starting point for a conversation. I expect this to be finalized early next week.

Pina,
In the interest of expediting the analysis and documentation related to the other plans, I think it might make more sense to just build on the information note format that was provided for OPSEUPP. We (OPCD) will just leverage the key elements of the analysis in developing the supplement to the OTPP position paper. Your thoughts? N

Hi, Nadine. We will have some alternate wording for this to propose to you. But before we do, I'm wondering if it would be possible to see the comment that it is responding to? Or to get an understanding of the key points raised in that comment? Please let me know. If it's easier to just talk about it, we can have a call.

The summary itself is in for final review as is the wording for the limitations around the opinion to be given to the panel.

Regards,

Kerry

Good morning!

Just forwarding the most current wording for your review and feedback. Please advise of any concerns. Thanks.

Nadine

During the course of the Public Accounts audit, the Auditor General was provided with analysis and support on the province's interpretation of public sector accounting standards to the Province's jointly sponsored pension plans. This information included an external accounting opinion that addressed issues related to the requirement for a legally enforceable right to reduce contributions (which supported the Province's interpretation) and considerations on incorporating the impact of legal uncertainty in estimating the valuation of the net pension assets.

Cc: Veinot, Cindy (TBS)
Subject: RE: Advisory

Thanks Kerry. Your feedback is helpful.

For additional context, the extract is part of a response that would be reflected in the AG's Annual Report which is expected to be released in December. Based on your feedback, I have amended the wording below. Your feedback on the revised wording would be appreciated.

Nadine

To: Petsche, Nadine (TBS); Colley, Matthew (CA - Toronto); Jesty, Paula (CA - Toronto)
Subject: RE: Advisory

Hi, Nadine. I'd like to understand the context a bit better. Will this commentary go in a public document? We will need to have the context before responding.

With respect to the actual wording, I don't think it's true to say that our report supported your accounting treatment. You recorded an asset of around $10 billion and we declined to provide a view on the amount of the asset. So this description goes beyond the scope of our report and we would not agree to it as worded below.

Regards,

Kerry

Matt/Paula/Kerry,

We are currently drafting our responses to the AG's Chapter 2 of her Annual Report. Below is an extract that refers to your opinion. It is a generic reference which I understand from discussions is OK. Please confirm.

Nadine

During the course of the audit of the Public Accounts of Ontario 2015-16, the Province shared background and analysis on interpretation of public sector accounting standards to the Province's jointly sponsored pension plans, including an accounting opinion from an external public accounting firm which addressed questions regarding legally enforceability of the Province's right to recognize a pension asset under PS 3250 and the impact of uncertainty with regards to assessing the government's expectations of future benefit from a pension asset.

To: Sun, Alicia (TBS)
Cc: Yeung, Anthony (EDU); Yang, Andrew Dehai (EDU); Di Pasquale, Romina (EDU)
Subject: Benefit Trust Accounting - employees on LTD

Hi Alicia,

We recently had a question from one of the school boards on the proposed accounting treatment of employees on long term disability (LTD).

Q – The funding that flows from school boards to the trust is a fixed amount based on 2014-15 financial statement information plus prescribed percentage increases. If an active employee goes on LTD, the amount of funding to the trust does not change. If more or less employees join the plan, the amount of funding does not change. Due to this, the actuaries are not clear how to value the liability related to the LTD since it is not based on a “per person” amount; it is a fixed amount for the board. How would the LTD liability be valued now that the funding is now fixed? Even though an person will go on LTD and receive benefits, this doesn’t mean that the boards’ funding to the Trust will increase. How would the liability get adjusted?

Is this a question you could pass on to your consultants for review?

Thanks,

Elizabeth

Valuation allowance, based on regulation (AG's interpretation)		-1,514
Revised net asset value based on regulation		0
Pension **recovery** estimated for fiscal 2016-17		317
Contributions to plans in fiscal 2016-17		1,901
Impact of HOOPP plan (not included elsewhere as immaterial)		22
Pension asset prior to valuation allowance		
	31-Mar-17	2,240
Valuation allowance based on AG's interpretation (no regulation)		-2,240
Revised net asset value based on regulation		0

2015-16 actual fiscal impact

2016-17 estimated fiscal impact

2015-16 Public Accounts

In 2015-16, the increase in the pension asset for OTPP and OPSEU resulted from the **net** of:

1) Pension **expense** (reduces net asset)

2) Contributions from the Province to the plan (increases net asset)

2016-17 FES

In 2016-17, the estimated increase in the pension asset for OTPP and OPSEU results from the **sum** of:

1) Pension **recovery** (increases net asset) – see next slide

2) Contributions form the Province to the plan (increases net asset)

Why does pension expense become a recovery in 2016-17?

The pension recovery estimated for fiscal 2016-17 for OTPP and OPSEUPP is:

OTPP -- Pension recovery	-452
OPSEUPP -- Pension expense	135
Analysis of pension recovery for OTPP	-317

Why is OTPP in a recovery position?

The pension recovery is made up of:

Current period benefit cost		1,512
Expected interest on accumulated obligation (6.25%)		3,617
Expected return on assets (6.25%)	-	4,871
Amortization of net actuarial gains	-	682
Other adjustments	-	27
Pension recovery	-	452

Two key issues:

- The assets exceed the obligation in the plan (measured using a discount rate based on the long-term rate of return on assets -- 6.25%), therefore, the expected return on the assets exceeds the interest on the obligation
- The **actual** performance of the assets has exceeded the **expected** performance, therefore leading to net actuarial gains that are being amortized over time, also offsetting the benefit cost

I am responding to the questions on the surplus credits under the term sheet.

It is important to understand the purpose of the term sheet. The OTF and the government entered into this agreement to freeze any increase in contribution rates for a specified period. That meant that if the plan funding deteriorated during this perIod such that an actuarial report identified a funding shortfall that had to be addressed by the sponsors, this shortfall would have to be addressed by benefit reductions for future service.

If there were benefit reductions, the term sheet created a corresponding surplus credit that could be used by the OTF if and when the plan was in surplus. There have been no material benefit reductions to date nor are any anticipated now that the next required filing is after the expiration of the term sheet. Any credit that exists would be a negligible amount.

Allan

Hi Lucy.... here are a list of good actuaries that are outside of accounting firms:

Andrew Fung - Morneau Shepell - 416-380-2168 - AFung@morneaushepell.com - Andrew used to work at OMERS, so very familiar with JSPP. Before OMERS he was a consultant at another large actuarial firm.

Anne G.S. Soh - OMERS - (416) 369-3133 - asoh@omers.com - Anne is Vice President, Actuarial Services & Plan Actuary at OMERS (an internal actuary of a large JSPP in Ontario)

Phillip Morse - Willis Towers Watson - (416) 960-7113 - philip.morse@willistowerswatson.com - Phillip is the valuation actuary and senior consultant of a large JSPP

Subject: Pension Asset Expert Panel

Hi Lucy,

As you may have seen, the Province is setting up an expert panel to review the pension asset issue. We would like to include an actuary on the panel, from outside the accounting firms (so as not to conflict another firm as the panel may well engage someone). Would you be able to ask your internal actuarial contacts if they have any recommendations for someone from one of the actuarial firms who has a high level of expertise in JSPPs. It could be someone who has recently retired.

Thanks,

Cindy

Paul/Len,

Not sure if it's feasible, but given the AG's focus on level of 'uncertainty' associated with the ability of the Province to benefit from the assets, if the analysis can also address how the plans differ in that regard as well, it would be very beneficial to our position.

Subject: Pension Comparison - question and timelines confirmation

Hi Murray -

To confirm our discussion, you are going to provide a comparative legal/governance analysis of how the frameworks for the two Ontario pension plans we identified (OTPP and OPSEU) and the four BC plans we identified (municipal, teachers, college, public service) compare on the issue of the authority of the pension boards and the plan partners to determine the utilization of plan surpluses. Your preliminary thinking is that in Ontario this determination is left to the partners, while in BC either the boards or the partners can make this determination.

You expect that you can provide this analysis by Monday or Tuesday.

We've provided the relevant joint trust agreements for the plans noted above and you don't expect that you need further documentation from us to respond to this request, but you will let us know if any need arises.

Cindy, if the above is inconsistent with what you are looking for please advise.

Paul

Alex Killoch, Director
BPS Pensions Branch
Ministry of Finance
1st Floor, Frost Building South
7 Queen's Park Crescent
Toronto, Ontario
M7A 1Y7

Dear Alex:

As requested, we are outlining the annual process for providing actuarial and financial information about the Ontario Teachers' Pension Plan (Plan) to the Ministry of Finance. We are also providing information related to the funding valuation of the Plan and in particular, the discount rate setting process. Copies of various documents, correspondence and memos have been attached for reference purposes with applicable dates noted below.

Annual Process Related to the Province of Ontario Budget

Each December, the Ministry of Finance provides a request for information to the President and CEO of the Plan to assist in the preparation of the Ontario Budget. Specific assumptions to be used in the analysis are provided including return on investment, inflation, real rate of return and anticipated salary growth. The Province selects the best estimate assumptions in accordance with the Chartered Professional Accountants of Canada Public Sector Accounting Board Handbook. (December 11, 2015 request from the Province attached).

The external Plan actuary – Mercer – prepares the liability and current service cost calculations using the "projected benefit method, pro-rated on services" and economic assumptions are requested by the Province. Supporting information including contribution and benefit information is provided by the Plan. (January 26, 2016 correspondence from Mercer and the Plan attached).

Supplemental information was prepared by Mercer at the request of the Province in June of 2016 to assist in addressing inquiries from the Office of the Auditor General of Ontario. (June 17, 2016 Memo attached).

Annual Funding Valuation Process

On an annual basis, Mercer prepares a preliminary valuation for review by the Ontario Teachers' Pension Plan Board (Board). It is the Board's responsibility to decide key actuarial assumptions in close collaboration with the Plan actuary. The independent actuary must confirm that the

assumptions are independently reasonable and are appropriate in aggregate in accordance with the Canadian Institute of Actuaries Standards of Practice.

The annual assumption setting exercise is robust. The determination of the discount rate is informed by the Funding Management Policy (described below) and the Discount Rate Review process which reflects what the Plan's assets can reasonably be expected to earn over the long run less expenses and less provisions for adverse deviation (PFAD). The Plan takes into consideration two key PFADs: plan maturity and insufficient return. PFADs are set with reference to the demographic profile of the Plan, the risk tolerance and intergenerational fairness between members. A key challenge is the maturity of the Plan with the ratio of active members to pensioners being 1.4 to 1 with the ratio projected to decrease in the future. Longevity compounds this challenge as Teachers in Ontario live longer than the general Canadian population and their life expectancy continues to increase.

For the January 1, 2016 funding valuation (which will be filed with the regulatory authorities by September 30th), the nominal discount rate is 4.8% with an underlying real return of 2.75%. This real return takes into account PFADs of approximately 150 basis points.

Funding versus Accounting Valuations

The funding valuation assesses the Plan's long-term financial health to facilitate determination of future contribution rates and benefit levels. For the Plan, the cost method used is the aggregate method which allows the Plan to address funding surpluses and deficits through future benefits changes (eg. Conditional Inflation Protection (CIP)) and enables the Plan to factor in cash flows from future service. This differs from accounting standards which requires use of the projected benefit method prorated on services.

There are also differences in the assumption setting process. The Plan's assumption setting process for the annual funding valuation is noted above. Please refer to the attached Memo prepared by Mercer dated September 15, 2016, which outlines key methods and assumptions to be used to value pension plans per Canadian Public Sector Accounting Standards (PS3250).

Funding Management Policy

The Plan Sponsors (the Province of Ontario and Ontario Teachers' Federation) are jointly-responsible for two key decisions: a) what pension benefits the Plan will provide, and b) the contribution rate needed to ensure the Plan's benefits are fully funded over the long term. In doing so, the Sponsors negotiate the use of surplus funds and, when there is a funding shortfall, both share responsibility for eliminating it.

In March 2003, the Sponsors adopted a Funding Management Policy (FMP) as a supplement to the Partners' Agreement, with the objective to provide a guidance framework for decision making when there is a funding surplus or shortfall. A key component in the creation of the FMP was the concept of 'funding zones', each defined by a range. The funding zones provide a point of reference for whether action is required by the Sponsors, and if so, guidance is provided on how to use any surplus funds or resolve any shortfall – specifically, answering the question of when is it prudent to increase or decrease benefits, raise or lower contribution rates, or simply conserve assets for an uncertain time. While the FMP outlines preferred mechanisms

associated with its various funding zones, it is ultimately the Sponsors' responsibility to decide what actions to take.

In March 2015, a zone for Temporary Plan Improvements was added to the FMP, to allow for temporary contribution decreases, surplus distribution and/or benefit improvements (so long as they do not increase the long-term cost of the Plan) when assets exceed the projected cost of future benefits when valued using the Temporary Basis. Uses of surplus in this zone are paced, amortized over a period between three and 10 years, with an annual spending limit applied to amortization terms shorter than 10 years. The zone includes a provision that temporary improvements cease if a significant market event occurs. (FMP Framework and Summary attached).

As noted in Mercer's June 17th Memo, "should the plan earn future returns that are equal to the valuation discount rate adopted by the Province for financial statement reporting purposes, it is possible that some of the future contribution requirements could be reduced by agreement of the Sponsors as experience gains would be recognized in the funding valuation based on the assumptions currently used for funding purposes".

*****

We trust that the above information and various attachments provide a helpful overview of the annual process for providing financial information to the Ministry of Finance as well as the process in place for the annual funding valuation. Please do not hesitate to call if you have any questions or require further information.

Sincerely,

Barbara Zvan, FSA, FCIA, CERA

Ontario

December 11, 2015

Mr. Ron Mock
President and Chief Executive Officer
Ontario Teachers' Pension Plan Board
5650 Yonge Street, Suite 400
Toronto, Ontario
M2M 4H5

Dear Mr. Mock:

In preparation for the 2016 Ontario Budget, I am writing to request actuarial and financial information, as at December 31, 2015, on the Teachers' Pension Plan (TPP) and the Teachers' Retirement Compensation Arrangement (TRCA). This information is required for calculating the Province's 2015-16 pension expense and pension liability.

To ensure that the information requested in this letter is consistent with the Province's best estimates (as required by the Public Sector Accounting Board [PSAB]), please use the following economic assumptions in your actuarial calculations for the requested TPP information.

Economic Assumption (annual rates)	Basis 1	Basis 2	Basis 3	Basis 4
Return on Investment	6.50%	6.25%	6.25%	6.00%
Inflation	2.25%	2.25%	2.00%	2.00%
Real Rate of Return	4.25%	4.00%	4.25%	4.00%
Salary Growth	2.25% for 2016 to 2019 and 3.25% thereafter	2.25% for 2016 to 2019 and 3.25% thereafter	2.00% for 2016 to 2019 and 3.00% thereafter	2.00% for 2016 to 2019, 3.00% thereafter

Despite the salary growth assumption above, please reflect in the valuation a 1% lump sum increase for the school year 2015-16, a 1% increase for the school year 2016-17 and additional 0.5% increase half-way through the school year 2016-17.

...2

We understand the Board may be preparing its financial statements based on International Financial Reporting Standards and Canadian Institute of Chartered Accountant Standard Section 4600. There has not been any change in reporting requirements under the Public Sector Accounting Board. Therefore, the actuarial and financial information we are requesting in this letter should be prepared in the same manner as has been provided to us in prior years.

Please provide the following actuarial and financial information with one set of calculations for each set of assumptions outlined in the table above. In these calculations for the TPP, please use the projected benefit method, prorated on services:

1. Actuarial present value (APV) of accrued benefit obligations, as at December 31, 2015. ***Basis 4 in last year's letter was used by the Province for 2015. Please include an APV reconciliation on that basis from December 31, 2014 to December 31, 2015 for all four bases.***

2. Actuarial value and market value of pension fund assets, as at December 31, 2015. The actuarial value of assets should be determined on the same basis as in prior years.

3. Interest on accrued benefits, cost of benefits accrued (separating out current period benefit cost, cost related to any plan amendments, transfers and other costs), actuarial adjustments, and the benefits paid (separate retirement pensions from other benefit payments) for the year ended December 31, 2015.

4. Contributions broken down by employee contribution, Province of Ontario contribution and other transfers for the year ended December 31, 2015 and the additional payments from the Province of Ontario with respect to "payments re foregone inflation adjustment" under subsection 5(2.1) of the *Teachers' Pension Act* for the year ended December 31, 2015. Please provide the same level of detail as would be disclosed in the "Contributions" note to the TPP's 2015 financial statements.

5. Return on investment, inflation and salary escalation assumptions that will be used in the TPP's 2015 financial statements.

6. Expected average remaining service life of active employees, as at December 31, 2015.

7. Net gain and loss for the year ended December 31, 2015 that would be subject to smoothing on the same basis as in prior years. Please also provide the same level of detail as in prior years.

...3

8. The "Schedule of Contributions and Interest Receivable from the Province of Ontario" (due in early January, 2016).

9. Number of pensioners and active members, as at December 31, 2015.

10. Please provide a brief, high level explanation of the source(s) of the actuarial gains and losses for 2015.

11. Please provide the 2016 service cost for all requested bases.

12. 2015 financial statements of the TPP and the TRCA as soon as they are available.

Please provide items 1 to 5 above for the TRCA based on what will be reported in the TRCA's 2015 financial statements. Note that we do not require that the information on the TRCA be based on the Province's economic assumptions.

Although the TPP has been amended to provide conditional inflation protection for service after December 31, 2009, the intention of the Partners is to provide 100% inflation protection to the extent possible. As such, please provide us with the actuarial calculation for #1 and #3 above assuming that inflation protection for post 2009 service will be provided at 100% and at 50% of the annual increase in the Consumer Price Index.

We require these estimates by **January 29, 2016.** Should you have any questions, please contact Mr. Rob Pomykacz at robert.pomykacz@ontario.ca, or by telephone at (416) 327-0156.

To expedite the preparation of Ontario's 2015-16 *Public Accounts*, I would also ask that you communicate by letter by April 30, 2016 whether, to the best of your knowledge, there were any events between December 31, 2015 and March 31, 2016, which would in your opinion, affect these valuation results in a material way.

Toronto, Ontario M7A 1Y7

Dear Mr. Rozic:

I am responding to a letter dated December 11, 2015 from Ms. Leah Myers that requested actuarial and financial information about the Ontario Teachers' Pension Plan (registered pension plan - RPP) and the Retirement Compensation Arrangement (RCA) at December 31, 2015.

Items 1, 3 (except the benefit payment breakdown), 6, 10 and 11 are included in the enclosed letter from Mercer (Canada) Limited.

Item 2 - Market Value of Pension Fund Assets ($ millions)

Please note that we no longer use an asset smoothing method for our financial statements. As such, there is no separate "actuarial" value of assets.

Market value of assets at December 31, 2015	Not yet available

Item – 3(a) RPP Benefits Paid ($ millions)

Retirement Pensions	$ 5,056
Survivor Pensions	273
Disability Pensions	27
Lump Sum Death Benefits	71
Refunds	1
Commuted Value Transfers	74
Transfers to Other Plans	8
Family Law Value Transfers	27
Total	$ 5,537

Item – 3(b) RCA Benefits Paid

The RCA pension payments made in 2015 were $7.40 million and the RCA lump sum payments in 2015 were $4.87 million.

Item - 4(a) RPP Contributions ($ millions)

Members		
Current Service	$	1,580
Optional Credit		35
Total	$	1,615
Province of Ontario		
Current Service	$	1,568
Interest		37
Optional Credit		32
Total	$	1,637
Other Employers	$	33
Transfers from Other Plans		14
Total	$	47
Grand Total	$	3,299

Item 4(b) - RCA Contributions ($ millions)

Members	$	5.6
Province of Ontario		3.3
Other Employers		2.4
Total	$	11.3

Item 4(c) - Payments re: Foregone Inflation Adjustments

The foregone inflation amounts for 2014 payments which are part of the government billing for payment in January 2016 are as follows:

		Total		**Province of Ontario**
RPP	$	1,130,253	$	1,106,279
RCA		12,205		11,946
Total	$	1,142,458	$	1,118,225

Item 5 - Economic Assumptions	**RPP**	**RCA**
Discount Rate	3.25%	1.625%
Salary Escalation Rate	2.50%	2.50%
Inflation Rate	1.50%	1.50%
Real Rate	1.70%	0.125%

Item 7 - Net Gain and Loss on Actuarial Value of Assets

Not applicable. Please note that we no longer use an asset smoothing method for our financial statements. As such, there is no separate "actuarial" value of assets.

Item 8 - Schedule of Contributions and Interest Receivable ($ millions)

Contributions	$	3,157
Interest		51
Total	$	3,208

Item 9 - Number of Pensioners and Active Members as at December 31, 2015

Pensioners	133,000
Active Members	183,000

Item 12 – Financial Statements

Not yet available.

We will provide any outstanding information as soon as it is available. In addition, we will send an updated version of this letter if any of the information contained herein is subsequently changed.

Please do not hesitate to call if you have any questions.

Sincerely,

Mary Cover, FSA, FCIA

Subject: December 31, 2015 Valuation Results Using the Province's Assumptions

Dear Mary,

As requested, we have provided you with information for the Ontario Teachers' Pension Plan (OTPP) on points 1, 3, 6, 10 and 11 in the December 11, 2015 letter from the Ministry of Finance to Mr. Ron Mock. As instructed in the Ministry letter, the following sets of assumptions have been used in calculating the liabilities as at December 31, 2015:

	Basis 1	**Basis 2**	**Basis 3**	**Basis 4**
Valuation discount rate	6.50%	6.25%	6.25%	6.00%
Inflation rate	2.25%	2.25%	2.00%	2.00%
Real valuation discount rate	4.25%	4.00%	4.25%	4.00%
Salary escalation rate	2.25% for the years 2016 to 2019, 3.25% thereafter	2.25% for the years 2016 to 2019, 3.25% thereafter	2.00% for the years 2016 to 2019, 3.00% thereafter	2.00% for the years 2016 to 2019, 3.00% thereafter

For each basis, all the other assumptions and the valuation methods are those used by the Ontario Teachers' Pension Plan Board in the December 31, 2015 valuation for financial statement purposes. This includes proposed demographic assumption changes as well as negotiated salary increases providing a 1% lump sum increase at September 1, 2015, a 1% increase at September 1, 2016 and a 0.5% increase half-way through the school year commencing September 1, 2016. The demographic assumptions were updated to reflect recent experience of Plan members related to retirement, termination of plan membership, re-

instatement of inactive members and increases in salaries related to experience. The changes to the demographic assumptions are described in the presentation material from our meeting with the Technical Committee on January 13, 2016. The remaining demographic assumptions are provided in our Report on the Actuarial Valuation for Financial Statement Purposes as at December 31, 2014. We expect that our report on the December 31, 2015 actuarial valuation will be finalized in March, 2016.

For the sake of clarity, we note that the assumed increases in the YMPE and maximum pension limits under the Income Tax Act are the same rates as the long-term salary growth rates noted for each of the four bases.

The Province has requested that we prepare the results assuming that inflation protection for post 2009 service will be provided at 100% and at 50% of the assumed inflation rate. In this letter we have included results using both of these alternative inflation protection levels. We note that at the time of preparing this letter, the Plan provides for 70% of conditional inflation protection for post 2009 service.

At the Province's request, the liabilities have been calculated using the "projected benefit method, pro-rated on services". In the calculations presented in this letter, we have used the projected benefit method, pro-rated on service with three attribution periods to reflect the different indexing provisions for service accrued to December 31, 2009, service accrued from January 1, 2010 to December 31, 2013 and service accrued from January 1, 2014. However, we note that the same level of indexing was applied to all service from January 1, 2010 to December 31, 2015 for purposes of calculating the liabilities provided in this letter (whether the results are based on 100% or 50% conditional indexing).

We have included information regarding the experience gain/loss incurred relative to salary growth during the year as well as the impact on the December 31, 2015 liabilities due to changing the rate of inflation and salary growth assumption in Bases 3 and 4 in our tables relative to the assumptions from Bases 1 and 2. We note that since the assumed increases in salaries determined by the Province are set equal to the assumed inflation rate plus 1%, we have not separately identified the changes in salary only without the corresponding changes in inflation.

The results as at December 31, 2015 are summarized in the following tables.

Results using 100% conditional indexing for post 2009 service (results in $ millions)

	Basis 1	Basis 2	Basis 3	Basis 4
Valuation discount rate:	**6.50%**	**6.25%**	**6.25%**	**6.00%**
Inflation rate:	**2.25%**	**2.25%**	**2.00%**	**2.00%**
Salary escalation rate:	**2.25% for the years 2016 to 2019, 3.25% thereafter**	**2.25% for the years 2016 to 2019, 3.25% thereafter**	**2.00% for the years 2016 to 2019, 3.00% thereafter**	**2.00% for the years 2016 to 2019, 3.00% thereafter**
1. Actuarial present value (APV) of accrued pension benefits at December 31, 2014 using **Last Year's Basis 4**	$113,801	$113,801	$113,801	$113,801
2. Increase in the APV of accrued pension benefits				
Interest on the APV of accrued pension benefits	$7,310	$7,310	$7,310	$7,310
Current Service Cost (mid-year)	2,868	2,868	2,868	2,868
Contributions for optional credit	34	34	34	34
Repayment of refunds	0	0	0	0
Transfers from other plans	14	14	14	14
Change in valuation assumptions and methods:				
Change in demographic assumptions	350	350	350	350
Change in interest rate from Basis 1	0	4,142	4,142	8,309
	$10,576	$14,718	$14,718	$18,885
3. Decrease in the APV of accrued pension benefits				
Pensions paid	$5,356	$5,356	$5,356	$5,356
Refund of contributions	0	0	0	0
Lump sum payments and transfers	180	180	180	180
Salary experience gains	1,028	1,028	1,028	1,028
All other experience gains	552	552	552	552
Negotiated Salary Increases	1,161	1,161	1,161	1,161
Change in inflation rate and salary growth rates from Basis 1	0	0	3,829	3,829
Change in other actuarial assumptions and methods	46[1]	46	46	46
	$8,323	$8,323	$12,152	$12,152
4. Net increase in the APV of accrued pension benefits	$2,253	$6,395	$2,566	$6,733
5. APV of accrued pension benefits at December 31, 2015	$116,054	$120,196	$116,367	$120,534
6. Annual current service cost at January 1, 2016 (BOY)	$2,880	$3,058	$2,899	$3,079

[1] Change to commuted value assumption to value benefits payable upon termination

Results using 50% conditional indexing for post 2009 service (results in $ millions)

	Basis 1	Basis 2	Basis 3	Basis 4
Valuation discount rate:	**6.50%**	**6.25%**	**6.25%**	**6.00%**
Inflation rate:	**2.25%**	**2.25%**	**2.00%**	**2.00%**
Salary escalation rate:	**2.25% for the years 2016 to 2019, 3.25% thereafter**	**2.25% for the years 2016 to 2019, 3.25% thereafter**	**2.00% for the years 2016 to 2019, 3.00% thereafter**	**2.00% for the years 2016 to 2019, 3.00% thereafter**
1. Actuarial present value (APV) of accrued pension benefits at December 31, 2014 using **Last Year's Basis 4**	$112,004	$112,004	$112,004	$112,004
2. Increase in the APV of accrued pension benefits				
Interest on the APV of accrued pension benefits	$7,182	$7,182	$7,182	$7,182
Current Service Cost (mid-year)	2,508	2,508	2,508	2,508
Contributions for optional credit	34	34	34	34
Repayment of refunds	0	0	0	0
Transfers from other plans	14	14	14	14
Change in valuation assumptions and methods:				
Change in demographic assumptions	322	322	322	322
Change in interest rate from Basis 1	0	3,975	3,975	7,990
	$10,060	$14,035	$14,035	$18,050
3. Decrease in the APV of accrued pension benefits				
Pensions paid	$5,356	$5,356	$5,356	$5,356
Refund of contributions	0	0	0	0
Lump sum payments and transfers	180	180	180	180
Salary experience gains	979	979	979	979
All other experience gains	545	545	545	545
Negotiated Salary Increases	1,104	1,104	1,104	1,104
Change in inflation rate and salary growth rates from Basis 1	0	0	3,461	3,461
Change in other actuarial assumptions and methods	36[2]	36	36	36
	$8,200	$8,200	$11,661	$11,661
4. Net increase in the APV of accrued pension benefits	$1,860	$5,835	$2,374	$6,389
5. APV of accrued pension benefits at December 31, 2015	$113,864	$117,839	$114,378	$118,393
6. Annual current service cost at January 1, 2016 (BOY)	$2,523	$2,671	$2,574	$2,727

[2] Change to commuted value assumption to value benefits payable upon termination

We have the following comments on the results:

- Our valuation of the actuarial present value of the accrued pension benefits as at December 31, 2015 and the 2016 current service costs are based on membership data as at August 31, 2015. The actuarial present value of accrued pension benefits as at August 31, 2015 is then extrapolated forward to December 31, 2015, reflecting expected cashflows and the actual inflation adjustment as at January 1, 2016 of 1.30% for pre-2010 service and 0.91% for post-2009 service. The 2015 mid-year current service is based on membership data as at August 31, 2014. A summary of the membership data as at August 31, 2015 was included with our email of October 23rd, 2015 to Glen Tunney.

- We understand that the Province adopted Last Year's Basis 4 in establishing the actuarial present value of accrued pension benefits as at December 31, 2014. This is the same as Basis 1 for the current year.

- We have assumed that any change in the Province's assumptions (i.e. nominal and real discount rates, inflation rate, and salary escalation rate would occur at December 31, 2015).

The Expected Average Remaining Service Lifetime (EARSL) of active employees at August 31, 2015 and estimated for December 31, 2015, is 15.3 years. The increase in the EARSL from the prior year is primarily attributable to the change in assumed termination and retirement rates.

The net experience gain incurred on the plan liability since the prior year was primarily attributable to the lower than expected level of inflation for the January 1, 2016 indexing. Other experience gains and losses were relatively small.

The figures presented in this letter exclude the Ontario Teachers' Retirement Compensation Arrangement ("OTRCA"), which provides benefits to members that are in excess of those permitted to be provided from the registered pension plan. The Province has requested information on the OTRCA based on what will be reported in the OTRCA's 2015 financial statements, and does not require calculations on any other basis.

While the actuarial demographic assumptions used to estimate liabilities for the Plan represent the Ontario Teachers' Pension Plan Board's best estimate of future events and the economic assumptions are as provided by the Province, and while in our opinion the assumptions used for the valuation are appropriate provided the Province selected the economic assumptions in accordance with the Chartered Professional Accountants of Canada Public Sector Accounting Board Handbook ("PSAB Handbook"), the Plan's future experience will inevitably differ, perhaps significantly, from the actuarial assumptions. Any differences between the actuarial

assumptions and future experience will emerge as gains or losses in future valuations, and will affect the financial position of the Plan at that time.

We have tested the data for reasonableness and consistency, and in my opinion, the membership data on which the valuation is based are sufficient and reliable for the purpose of the valuation. In my opinion, the calculations have been made in accordance with my understanding of the reporting requirements under the PSAB Handbook and this report has been prepared, and, my opinions given, in accordance with accepted actuarial practice in Canada.

If you have any questions, please do not hesitate to call.

Sincerely,

Lise Houle

MEMO

TO: Mary Cover, Ontario Teachers' Pension Plan
DATE: 17 June 2016
FROM: Lise Houle
SUBJECT: Ministry of Finance Request for Supplemental Accounting Results
COPY: Scott Clausen, Jason Lipping, Mercer

As a follow-up to the accounting results we provided to you with our letter of January 26th, 2016, determined using the actuarial assumptions provided by the Ministry of Finance, we understand that the Ministry has requested supplemental information from the Ontario Teachers' Pension Plan as the Ministry addresses inquiries from the Office of the Auditor General of Ontario.

In particular, the Ministry has requested the following information relating to the Ontario Teachers' Pension Plan, using Bases 3 and 4 described in our January 26th letter:

- Present value of future current service accruals,
- Present value of future basic contributions, and
- Present value of future supplemental contributions

The requested information, calculated as at August 31, 2015 and rolled forward to December 31, 2015 is as follows:

	Basis 3	**Basis 4**
Valuation Discount Rate	6.25%	6.00%
Inflation Rate	2.00%	2.00%
Real Valuation Discount Rate	4.25%	4.00%
Salary Escalation Rate	2.00% for the years 2016 to 2019, 3.00% thereafter	2.00% for the years 2016 to 2019, 3.00% thereafter
PV of future service accruals	$36,767 million	$39,563 million
PV of future basic contributions	$36,073 million	$36,826 million
PV of future supplemental contributions	$2,888 million	$2,924 million

The present value of future service accruals is calculated as the difference between the actuarial present value of total projected pension benefits (ie aggregate liabilities) less the actuarial present value of accrued pension benefits as at December 31, 2015. The benefits used in our calculations reflect 100% conditional indexing for both pre-2010 and post-2009 service. The actuarial present

value of accrued pension benefits as at December 31, 2015 are those provided in our January 26th letter while the actuarial present value of total projected pension benefits are calculated using the same approach, but captures all projected service to date of expected decrement.

The actuarial present value of basic contribution reflects both expected basic employee and employer contributions to be paid to date of assumed decrement.

The actuarial present value of future service accruals and of basic contributions only considers current active and inactive members of the Ontario Teachers' Pension Plan. In keeping with the approach used for the funding valuation, the present value of future supplemental contributions is determined on an open-group basis and reflects scheduled contributions to December 31, 2026.

It is our understanding that the province intends to use these figures to perform a high level test to consider if there should be a limit applied to the asset/surplus held as at December 31, 2015. We note that, should the plan earn future returns that are equal to the valuation discount rate adopted by the Province for financial statement reporting purposes, it is possible that some of the future contribution requirements could be reduced by agreement of the Sponsors as experience gains would be recognized in the funding valuation based on the assumptions currently used for funding purposes.

For more details on the actuarial assumptions, methods and data used in our calculations, please refer to our January 26th letter. The demographic assumptions are summarized in our Report on the Actuarial Valuation for Financial Statement Purposes as at December 31, 2015.

MEMO

TO: Mary Cover, Ontario Teachers' Pension Plan
DATE: 15 September 2016
FROM: Scott Clausen, Mercer
SUBJECT: Canadian Public Sector Accounting Standards (PS3250)

As discussed, the purpose of this memo is to provide section references from Canadian Public Sector Accounting Standards (PS 3250) that refer to the selection of methods and assumptions to be used to value pension plans for the purpose of the province's financial reporting. All Section references shown in this memo refer to Sections from PS3250.

Actuarial Cost Method:

.029
The projected benefit method prorated on services should be used to attribute the cost of retirement benefits to the periods of employee service.

.030
When a retirement plan provides benefits that accrue in a non-uniform manner, the projected benefit method prorated on services may need to be adjusted to reflect the manner in which retirement benefits are earned by employees. For example, a pension plan formula may state that the pension benefit accrues at one percent of salary for the first 15 years and at two percent of salary for the final 20 years. In this circumstance, the prorating of the total estimated benefit to each accounting period would be adjusted to reflect the rates at which pension benefits are earned in that 35-year period.

.032
In other retirement plans, regular benefit increases for inflation protection may be provided even when such protection is not promised in a contractual agreement or in legislation. For those plans, careful analysis and professional judgment are needed to determine the substance of a government's obligation. If a regular pattern of benefit increases can be established over a reasonable period, it may be appropriate to incorporate the cost of such inflation protection in the cost of retirement benefits earned to the accounting date and reported as an accrued benefit obligation.

Asset Valuation:

.035

When determining a government's retirement benefit liability and expenditure / expense, plan assets would be valued at market-related values. Under this method, plan assets are recorded at market value or they are adjusted to market value over a period not to exceed five years. Values adjusted to market closely approximate current economic value in a manner that can minimize short-term fluctuations. Market-related values would be used because they are objective and verifiable. Once a basis of valuation is chosen it would be applied consistently.

Actuarial Assumptions:

.042

Actuarial assumptions should be based on the government's best estimates of expected long-term experience and short-term forecasts.

.044

The actuarial assumptions underlying the valuation of the retirement benefit liability and expenditure / expense would be internally consistent. For example, when a government determines its discount rates by reference to its plan asset earnings, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the short-term forecast of rates of return on assets currently held in the fund. When a government determines its discount rates by reference to its cost of borrowing, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the specific rates of interest and the periods committed to by the government on the amounts borrowed.

Limit on Accrued Benefit Asset:

.050

An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in operations for the period in which the change occurs.

.053

To determine the extent to which an accrued benefit asset may be impaired, the government first determines the **adjusted benefit asset**. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054

The adjusted benefit asset is then compared to the **expected future benefit**. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055

The objective of the Recommendation in paragraph .050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056

A government determines its expected future benefit as the sum of:

a. the present value of its expected future annual accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and
b. the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Actuarial Gains and Losses:

.061

Actuarial gains and losses would be amortized over a reasonable future period because of their tentative nature and because further adjustments will likely be required in the future. A reasonable future period is the **expected average remaining service life of the related employee group**. Amortization may commence in the period following the determination of the adjustment. Actuarial gains and losses would be determined on a market value basis or a basis adjusted to market value, consistent with paragraph .035.

Past Service Costs:

.066

The cost of plan amendments related to prior period employee services should be accounted for in the period of the plan amendment.

Joint Defined Benefit Plans:

.079

Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. **Joint defined benefit plans** are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.081

When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the Recommendations for defined benefit plans.

FUNDING MANAGEMENT POLICY (FMP) FRAMEWORK DESCRIPTION

Valuation Basis

Assets = 110% of Liabilities valued at interest rates + 0.5%

Zone:	**Permanent Plan Improvements**
Mechanism:	**Improve benefits as negotiated**
Funding Risk:	Plan is essentially fully funded at Government of Canada long bond rates. Funding security is desired to ensure the Plan can support these benefits continually in the future. The impact of new teachers is important as they will create losses.

That is, Assets ~ 133% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1.25%

Zone:	**Temporary Plan Improvements**
Mechanism:	**Improve benefits or lower contributions as negotiated[1]**
Funding Risk:	Plan is well funded and can afford changes that temporarily provide a benefit enhancement (as long as it does not create a long term cost) and/or lower the contributions being paid into the Plan.

[1] Amortization period used to determine temporary benefit

That is, Assets ~ 107% Liabilities valued at interest rates + 1.55%

Assets = Liabilities valued at interest rates + 1.55%

Zone:	**Fully Funded (Do Nothing)**
Mechanism:	**Maintain Base Benefits and Contributions**
Funding Risk:	Plan is adequately funded to provide base benefits supported by the base contributions. Given the volatility of market factors and the numerous assumptions in the funding valuation, "fully funded" is considered a range.

Zone:	**Additional Support Required From Current FMP Levers**
Mechanism:	**Raise Contribution Rates and/or Invoke Conditional Inflation Protection as negotiated**
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions. An increase to the contribution rate (within FMP maximum) and/or a decrease to the level of indexing being provided are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

Zone:	**Additional Support Required From New/Additional Changes**
Mechanism:	**Negotiate other plan changes**
Funding Risk:	Plan is not considered adequately funded to provide base benefits supported by the base contributions and CIP is fully invoked and contribution rates are increased to maximum outlined in FMP. Plan changes are necessary to recoup the deficit. As the funding position improves, these plan changes will be reversed.

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
Application (Article I):	**Section 1.01 and 1.02** ▪ Requires the Board to use Board's "best estimates assumptions," including a margin for adverse deviation in the case of the discount rate. ▪ Sets out what best estimates economic assumptions may be based on. ▪ Requires the Board to maintain indices to record inflation adjustments for post-2009 service. **Sections 1.03 and 1.04** ▪ If the Board uses a discount rate different from that outlined in the FMP and this discount rate is more penalizing (that is, produces a larger deficit or a smaller surplus), the FMP becomes void in 12 months unless both Partners notify the Board otherwise. These sections serve as an "exit" provision for the Partners. **Section 1.05** sets out under what circumstances each section of the FMP applies. **Section 1.06** limits surplus distributions or contribution decreases to those permitted by law. **Section 1.07** makes temporary improvements conditional on not having a restoration basis deficit.
Definitions (Article II):	**Section 2.01** Defines key terms, including: ▪ Basic contributions (contributions as per Sch.1 on January 1, 2012), which is used throughout the FMP as the target contribution rate (10.4% on earnings up to the YMPE/12% above the YMPE). ▪ Run-rate benefits (benefits as per Sch.1 on January 1, 2009), which include 100% inflation protection and assume basic contributions. ▪ Reference Rate (rate chosen by the Board representing Government of Canada nominal and real return bonds, which may be based on market or smoothed data; has recently been 3 year smoothed nominal and real return bonds). ▪ Remaining amortization value (difference between the temporary improvement value and the commitment value). ▪ Temporary improvement value (present value of a temporary improvement amortized over 3-10 years; if amortized over fewer than 10 years, improvement for a year is limited to the amount of basic contributions paid during a year).
Restore basic contributions and benefits (Article III):	**Section 3.01** ▪ Restoration basis is used (*reference rate* + 1.55%). ▪ Defines assets (refers to PBA Regulations) and current and revised liabilities. **Section 3.02** ▪ Sets out that current and revised liabilities are calculated using the restoration basis, plus an adjustment. The phrase "plus an adjustment" is used throughout the FMP and reflects the fact that the Board often files using a basis that is higher than required under the FMP. **Section 3.03** ▪ Outlines how indexing is accounted for in the valuation (that is, level of indexing provided in current filing zone continues).
Restoration Basis: *Surplus* (Article III continued)	*Sections 3.04 to 3.08 apply when surplus exists using the restoration basis and current contributions are higher than target, partial indexing (for previous years or go forward) exists or other benefits have been reduced.* **Section 3.04** Sets conditions under which sections 3.05-3.08 apply: ▪ If Assets > Liabilities (surplus reported); and ▪ Current contributions > Basic contributions (i.e., contributions are above long-term target level); or ▪ Current Benefits < Run-Rate Benefits (i.e. contributions are above long-term target level or benefits are below the long-term target level). **Section 3.06** Sets out the order of how to restore past benefit reductions or contribution increases: ▪ Actions can consist of increasing benefits to run-rate (long-term target) including prospective restoration or lowering contributions to basic (target) or a combination. ▪ First, increase go-forward indexing to 50% for post-2013 service period, then to 100% on all post-2009 service periods. Second, restore current pension amounts to run rate level, as much as possible, starting with the years where indexing was less than 50% until all years of partial indexation are restored to the same level and then restore to 100% for all service periods. ▪ Partners reserve the right to reconsider order in the future. **Section 3.07** A number of conditions apply after a decision: ▪ Assets equal to or greater than revised liabilities (i.e. no deficit created); ▪ Inflation indexing restored to no more than if 100% of inflation was provided;

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
	▪ Inflation indexing restored to no less than current level (i.e. can't lower prior inflation indexing given); ▪ The value of revised benefits needs to be between current and run-rate benefits (similarly, contributions must be between current and target). **Section 3.08** (Expires December 30, 2017) Sets out the limits from the 2013 Term Sheet (commonly known as the JSPP Agreement) with respect to escalated adjustments and benefit improvements: ▪ Escalated adjustments if assets are greater than 100% of the current liabilities (and not below 100% after). ▪ Benefit improvement or restoration if net assets available for benefits are greater than 105% of the current (unsmoothed) liabilities (and not below 105% after).
Restoration Basis: *Deficit* (Article III continued)	*Sections 3.09 to 3.14 apply when the liabilities are greater than the assets using the restoration basis; thus the Partners must raise contribution rates, lower the amount of indexing and/or decrease other benefits.* **Section 3.09** Sets conditions under which Sections 3.10 to 3.14 apply: ▪ If Current liabilities > Assets (i.e., deficit reported). **Section 3.11** Sets out that deficit can be eliminated by changing contributions or benefits provided that: ▪ Assets are equal to or greater than revised liabilities; and ▪ Revised member contributions are no more than 15% (above YMPE). **Section 3.12** The Partners can agree to change benefits or contribution level as long as: ▪ Partners have entered into a written agreement governing the manner in which contributions by the Minister and the Employers will be adjusted to offset any reduction in benefits; and ▪ No indexing granted gets taken away. **Section 3.13** Outlines the current intention that member contributions will be increased up to 15% (above YMPE) before benefits are reduced or less than full indexing is provided. **Section 3.14** Sets out the limits with respect to the 2013 Term Sheet regarding employer contribution increases.
Funding Zone: Temporary (Article IV):	**Section 4.01** ▪ Temporary basis is used (*reference rate* + 1.25%). ▪ Defines: - Assets (either market value of net assets or assets defined in PBA Regulations; that is, if smoothing creates surplus that otherwise would not exist, it cannot be spent). - Current liabilities (liabilities including the greater of current and run-rate benefits and any remaining amortization value from a previous temporary commitment). - Revised liabilities (liabilities including the greater of revised and run-rate benefits and any remaining amortization value from a previous temporary commitment). - Reference rate (ensures that smoothed data is not used to get a surplus if there otherwise would not be surplus). **Section 4.02** Sets out that the liabilities are calculated using the temporary basis, plus an adjustment. *Sections 4.03 to 4.06 apply when the plan has a surplus using the temporary basis; that is, there is surplus available for improving benefits, decreasing contributions or distributing surplus, all on a temporary basis. The surplus spend is amortized over a period of three to ten years, at the partners' choice. If amortization period is less than ten years, the annual spend limit is the amount of basic contributions for a year.* **Section 4.03** Sets out conditions under which Sections 4.04 and 4.05 apply: - If assets > liabilities; and - Current Contributions ≤ Basic Contributions (current contributions are equal to or lower than long-term target); and - Current Benefits ≥ Run-Rate Benefits (current benefits are equal to or higher than long-term target); and - Full inflation indexing has been provided. **Section 4.04**

APPENDIX I. FUNDING MANAGEMENT POLICY SUMMARY

Subject	Summary of Provisions
	The Board reports the commitment value (the amount of surplus that can be used to provide a temporary improvement). **Section 4.05** The Partners can agree to temporary improvements so long as after the change, assets over revised liabilities are equal to or greater than zero. **Section 4.06** provides a requirement for a side agreement setting out how Minister contributions are adjusted if there is a surplus distribution or temporary improvement of benefits.
"Do Nothing" Zone (Article IV continued):	*Sections 4.07 to 4.09 apply if assets are equal to or less than current liabilities using the temporary basis; that is, if there is a deficit using the temporary basis.* **Section 4.09** States that the Partners will not provide new improvements if there is a temporary basis deficit. That is, the Partners will do nothing, and Article III (restoration basis) will apply. However, no actions result from move to restoration because contributions and indexing are already at run-rate in order to be in temporary zone. The Partners could, however, have to file a valuation (using the restoration basis) if the filing schedule required a filing.
Funding Zone: Distributions (Article V):	**Section 5.01** ▪ Distribution basis is used (*reference rate* + 0.5%). ▪ Defines: - Assets (either market value of net assets or assets defined in PBA Regulations; that is, if smoothing creates surplus that otherwise would not exist, it cannot be spent) - Liabilities (includes remaining amortization value) - Current targeted funding amount - Revised targeted funding amount - Reference rate (ensures that smoothed data is not used to get a surplus if there otherwise would not be surplus) **Section 5.02** Sets out that the liabilities are calculated using the distribution basis, plus an adjustment. *Sections 5.03 to 5.05 apply when the plan has a surplus using the distribution basis; that is, there is usable surplus for improving benefits above run-rate permanently or decreasing contributions below target level permanently.* **Section 5.03** Sets out conditions under which Sections 5.04 and 5.05 apply: - If Assets > 110% of Liabilities; and - Current Contributions ≤ Basic Contributions (current contributions are equal to or lower than long-term target); and - Current Benefits ≥ Run-Rate Benefits (current benefits are equal to or higher than long-term target); and - Full inflation indexing has been provided prospectively and benefits are fully restored. **Section 5.05** The Partners can agree to change benefits or contributions so long as after the change assets remain greater than 110% of the liabilities and a side agreement has been entered into to set out how Minister contributions are adjusted if there is a surplus distribution or temporary improvement of benefits. *Sections 5.06 to 5.08 apply when the plan has a funding ratio that is at least 100% but less than 110% and valued using contribution rates at the basic or target level, full indexing provided prospectively and benefits fully restored.* **Section 5.06** Sets out the conditions under which Sections 5.07 and 5.08 apply: ▪ If Assets ≤ 110% of Liabilities; and ▪ Current Contributions ≤ Basic Contributions (current contributions are equal to or lower than long-term target); and ▪ Current Benefits ≥ Run-Rate Benefits (current benefits are equal to or higher than long-term target); and ▪ Full inflation indexing has been provided prospectively and benefits are fully restored. **Section 5.08** If the conditions in Section 5.06 are satisfied, there is not sufficient surplus to provide a permanent improvement; therefore, Article IV will apply to determine whether there is surplus using the temporary basis.

Subject	Summary of Provisions
Post-December 30, 2017 Valuations (Article VI):	*This section articulates at a high level the use of the surplus credits (earned pre-January 1, 2018) after December 30, 2017. OTF earns surplus credit for any unmatched forgone inflation (i.e., inflation indexing less than 50%) prior to January 1, 2018 or via other benefit reductions made before January 1, 2018. See the JSPP Agreement for more detail.* **Section 6.01** ▪ Restoration basis is used (reference rate + 1.55%). ▪ Defines: - Assets (PBA regulations) - Current Liabilities - Revised Liabilities **Section 6.02** Provides overriding provision for post-December 30, 2017: for valuations where assets are greater than current liabilities, Section 6.03 applies (with reference to the 2013 Term Sheet). **Section 6.03** Sets out the use of surplus credits: ▪ OTF has first call on surplus up to a limit;
Valuation frequency and filing (Article	*This section reinforces an earlier section of the Partners' Agreement that specifies that it is the Partners' joint decision whether to file (other than in a required filing year).* ▪ Partners' decision when to file. ▪ Partners will notify the Board within 7 months of valuation date.
Arbitration (Article VIII):	Refers to Arbitration already in prior section of the Partners' Agreement.
Limitations (Article IX):	FMP does not apply for changes required by law or for changes that increase the liabilities by less than 0.5% or for changes that use the $76m in section 60 *(Note $76m was utilized with January 1, 2008 filing).*

Subject: Share the Pain

Hello Nadine

The Ontario Teachers' Pension Plan has provided the following explanation regarding the calculation of the $4.3 billion reduction in "share the pain" contributions that arose as a result of the Partner's decision to use $8.6 billion of the January 1, 2016 surplus.

Please let me know if you have any questions.

Alex

Subject: RE: Share the Pain

Dear Alex,

As requested and further to our conversation this afternoon, the purpose of this email is to outline the change in the present value of the future "share the pain" contributions from the January 1, 2016 preliminary valuation results of $6.6B to the January 1, 2016 filed results of $2.3B – i.e., a reduction of $4.3B.

Conditional Inflation Protection (CIP) is a key funding lever for the Ontario Teachers' Pension Plan (OTPP). When CIP is invoked, benefits earned subsequent to December 31, 2009 are subject to inflation protection levels below 100%. CIP levels are established when a funding valuation report is filed with the regulators. The level remains unchanged until a subsequent valuation is filed at which time the plan sponsors may decide to increase or decrease the percentage. This decision is informed by the funded status of the plan as at the valuation date.

In the January 1, 2016 preliminary valuation, CIP levels were 70% (in accordance with the most recently filed valuation report). The reduction in liabilities due to providing less than 100% inflation protection was $6.6B. The vast majority of this amount was in respect of active plan members. As a reminder, the OTPP utilizes an aggregate valuation funding method where the liabilities include future pension benefits in respect of both service accrued to date and service that is projected to be earned in the future. This valuation method recognizes the potential impact of reducing CIP levels below 100% on not just service from December 31, 2009 to the valuation date but also

on service projected to be earned in the future for current plan members. As an example, the valuation results assume that a member who joined the plan in 2015 will receive 70% inflation protection on the full pension entitlement they will eventually earn over their future career and that this reduction will apply each and every year for the remainder of their lifetime.

For every dollar that a member forgoes in inflation protection, the province and other employers contribute an extra dollar to the pension plan – i.e., their share the pain payment. Thus, for the 1.1.2016 preliminary valuation, given the present value of benefits to reflect less than 100% indexing for service earned after 2009 was $6.6B, the present value of future share the pain contributions was also $6.6B.

The plan sponsors chose to file the January 1, 2016 valuation using some of the preliminary surplus to increase the level of inflation protection from 70% to 90%. As a result, the reduction in liabilities due to providing less than 100% inflation protection decreased to $2.3B as did the present value of future share the pain contributions. Overall, the effect was an increase in liabilities of $4.3B and a corresponding decrease in the present value of future projected share the pain contributions of $4.3B.

It's worth noting that for benefits earned after 2013, share the pain payments are limited to the first 50% of forgone inflation protection. It's also worth noting that approximately 98% of the share the pain payments come from the Province – the remainder coming from other employers. Current annual share the pain contributions are significantly smaller as these contributions only apply to retirees that are in receipt of pensions and only in respect of the portion of their pension that was earned after December 31, 2009.

Please let me know if you have any questions or would like further elaboration.

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective September 16, 2016.

PricewaterhouseCoopers LLP (the "Vendor" or "PwC") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client" or the "Province") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of March 22, 2016 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$100,000.00, excluding HST.

4. *Project Start Date:* September 16, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide accounting advice (the "accounting advisory services") regarding the acceptability of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards. The accounting advice may include:

   - Review of background information, position papers developed by the Client or third parties that have been engaged by the Client to draft accounting positions on accounting for the recognition and measurement of pension assets for jointly-sponsored pension plans, and other supporting information.
   - Provide written or oral comments on draft position papers as provided by the Client with respect to the application of Canadian Public Sector Accounting Standards.
   - Participation in discussions with internal and external stakeholders and other parties as directed by the Client.

   During the course of this project, the Client will provide to PwC a written statement of all relevant facts and assumptions, and a description of the circumstances and the nature of any relevant disagreements with the Client's auditor. If an accounting opinion is to be provided, the Client's auditor will confirm to us in writing that the information the Client

has provided to PwC is complete and consistent with their knowledge of the facts and circumstances of the specific transaction.

If requested to by the Client during the course of the project, the Vendor shall provide an accounting opinion (the "accounting opinion"), prepared in accordance with Section 7600, *Reports on the application of accounting principles* of the CPA Canada Handbook – Assurance ("Section 7600"), regarding the appropriateness of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards.

Vendor may be required to participate in meetings with the Client and other stakeholders, and to support the Client with respect to the Vendor's accounting advice or accounting opinion (if applicable), including discussions with the Office of the Auditor General.

The Client agrees that any accounting advisory services are solely for the information and use of the Client. Subject to the obligations in Article 27 (Privacy) of the Master Agreement and as required by law by the Client's independent auditors, the Client agrees that any written work product of PwC will not be made available to any other persons or entities. An accounting opinion prepared in accordance with Section 7600 will, in compliance with Canadian GAAS, include restriction of use language identifying the parties to whom use is restricted and a statement that the report is not intended to be and should not be used by anyone other than the specified parties or for any other purposes. However the Client may provide access to PwC's observations and an accounting opinion prepared under Section 7600 (if applicable) to the Client's independent auditors solely for their informational purposes. Except as provided for in the preceding sentence, the Client agrees to seek and obtain the Vendor's written consent before including our accounting opinion (if applicable) or referring to the Vendor in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent. The Client agrees that prior to or as part of providing their independent auditors with any written work product of PwC, including an accounting opinion prepared under Section 7600, the Client will notify its independent auditors that it is PwC's desire to be notified of, and to consent to, the disclosure of any PwC written work product or reference to any PWC work product in any materials to be disclosed to third parties. PwC agrees that the Client's obligation is only to notify its independent auditors of PwC's desire to be notified about, and to consent to, disclosure, and that the Client is not making any representation or warranty that its independent auditors will notify PwC or seek PwC's consent.

Acknowledgements and agreements

The Client acknowledges and agrees to the following:

a. The performance of the accounting advisory services does not constitute an engagement to provide audit, compilation, review or attest services in accordance with professional standards issued by the Chartered Professional Accountants of Canada ("CPA Canada") and, therefore, PwC will not express an opinion or any other form of assurance with respect to the accounting advisory services.
b. The accounting advisory services and accounting opinion (if applicable) to be provided do not include the delivery of any verbal or written advice on the application of accounting principles to a hypothetical transaction.
c. This engagement cannot be relied on to disclose internal control deficiencies, errors or fraud, should they exist.

d. PwC has no responsibility for updating the accounting advisory services or accounting opinion or for performing any additional services, except as agreed to in writing with the Client.
e. The Client's purpose for engaging PwC to perform the accounting advisory services is to supplement management's own technical accounting resources in performing accounting analysis and to assist management in making its determination as to the application of accounting principles and not to obtain an opinion from PwC as to such application, unless an accounting opinion is requested by the Client.
f. The Client shall be solely responsible for, among other things: (a) making all management decisions and performing all management functions; (b) designating one or more individuals who possess suitable skill, knowledge and/or experience, preferably within senior management to oversee the accounting advisory services (c) evaluating the adequacy and results of the accounting advisory services; (d) accepting responsibility for the results of the accounting advisory services; and (e) establishing and maintaining internal controls, including, without limitation, monitoring ongoing activities.
g. All management decisions and final conclusions reached in connection with the accounting advisory services will be the responsibility of the Client. PwC will not perform any management functions, make management decisions, or perform in a capacity equivalent to that of an employee of the Client.
h. PwC has no responsibility related to the Client's accounting or disclosure conclusions, whether or not such conclusions of the Client are related to the accounting advisory services and PwC has no responsibility for any disagreements between the Client and its independent auditor related to the Client's accounting.
i. The Client will be solely responsible for all decisions regarding the accounting treatment of any item or transaction and acknowledges that the accounting advisory services do not include the recording of any amounts in the Client's books or records. All amounts derived from the performance of the accounting advisory services will be reviewed and approved by, and will be the responsibility of, the Client's management.
j. The nature, scope and design of the accounting advisory services and the accounting opinion are solely the responsibility of the Client. PwC will rely, without independent verification, on the facts, information and assumptions provided by the Client. PwC will make no representation nor provide any assurance with respect to the adequacy of the services for the Client's purposes. Furthermore, PwC has no responsibility to advise the Client of other procedures that might be performed.
k. The Client will be solely responsible for providing accurate and complete information requested by PwC. PwC has no responsibility for the accuracy or completeness of the information provided by or on behalf of the client.
l. PwC's accounting and technical assistance will be based on the existing public sector generally accepted accounting principles. Should those generally accepted accounting principles be amended, superseded or revised in any manner, PwC's advice might change. PwC has no responsibility to inform the Client of any changes in generally accepted accounting principles that may occur after the completion of the engagement or any other oral or written work product prepared hereunder that would impact PwC's advice on the appropriate application of generally accepted accounting principles or to update its recommendations or any other oral or written work produce to take any such changes into account.
m. This engagement does not create a relationship between PwC and any person or party other than the Client. This engagement is not intended for the express of implied benefit of any third party.

n. The Client will identify an appropriate individual to serve as the project manager, including overseeing the accounting advisory services.

7. *Ownership and Licences* - **Attachment D** of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* - The structure of Vendor's working relationship with OPCD is vital to the success of their engagement. Vendor's main point of contact will be Lucy Durocher who is the engagement leader.

9. *Work Location* - All meetings will be within the Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive. If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Charges On Per Diem Rate Basis*– The Vendor and the Client agree that Work performed under this Statement of Work will be charged on a Per Diem Rate basis. The Per Diem Rate will vary, based on the nature of the final deliverable, as follows:

Nature of final deliverable	Per Diem Rate	Service Category	Estimated hours	Per Diem Rate
Accounting Advisory	General Consultant, Level 2	Service Category 2	20-25	$390/hour
Accounting Opinion	General Consultant, Level 2	Service Category 2	30-35	$990/hour

13. *Billing and Payment Process* – The Vendor shall invoice the Client in accordance with the requirements of the Master Agreement. Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Individual's Legal Name	Individual's Role and Experience Level	Service Category	Per Diem Rate
Lucy Durocher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Martin Boucher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Sean Cable (or alternative as agreed to by the Client)	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"
Michael Walke	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"

14. **Invoices** - Invoices for payment of any charges under this Statement of Work shall be sent to:

Client: Treasury Board Secretariat,
Office of the Provincial Controller Division
Branch: Accounting Policy and Financial Reporting

Representative:	Nadine Petsche
Title:	Director, Accounting Policy and Financial Reporting
Phone number:	416-325-8027
Email:	Nadine.petsche@ontario.ca

15. *Knowledge Transfer:* The Vendor will work closely with the Client to ensure knowledge transfer to the Clients designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* - The Vendor shall destroy all Confidential information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	**Treasury Board Secretariat**
Client Representative:	**Nadine Petsche**
Telephone number:	**416-325-8027**
E-mail:	**Nadine.petsche@ontario.ca**

18. *Vendor Representative and Receipt of Notices*

Vendor's address for receipt of notices:	**PricewaterhouseCoopers LLP, PwC Tower, 18 York Street, Suite 2600, Toronto ON M5J 0B2**
Vendor Representative:	**Lucy Durocher**
Telephone number:	**416-869-2311**

Subject: Deloitte proposal / TBS- OTB - OPCD - 20

Dear Nadine,

Please find enclosed the documents prepared for the RFS related to Actuarial support services.
As requested under the RFS, the pricing schedule is provided as a separate file and not within the technical proposal.
Should you have any question in regards to those documents, you can reach out directly to my attention.

We look forward in working with the OPC on this mandate.

Have a nice day.

Office of the Provincial Controller

Re: Actuarial Services – RFS TBS-OTB-OPCD-20 (Pricing proposal)

Deloitte is pleased to submit this pricing proposal to provide actuarial support services to the Office of the Provincial Controller (the "OPC"). As you will see from our proposal, professionals at Deloitte possess relevant experience and have conducted similar engagements for a variety of clients, including public sector. Should we be the successful bidder, we are also able to draw upon an experienced team who not only understands actuarial services, but also appreciates the challenges and complexities associated with the communication issues of actuarial results and accounting complexities. Deloitte being highly involved in pension audit, the OPC will have access to individuals that have significant expertise in understanding the market practice on accounting for pension benefits and have specialized views on interpretation of accounting standards.

If you have any questions with respect to the information contained within this proposal, please do not hesitate to contact us. We look forward to working with the OPC on this important initiative.

Sincerely,

Martin Raymond

Pricing considerations

Extract from the RFS

- Pricing Schedule (Schedule A) completed and submitted as a separate file.
- If HST is applicable, Vendors must itemize HST as a separate line item in the Pricing Schedule
- Vendors must propose all dollar amounts in Canadian funds
- The Pricing Schedule must set out the full legal name of the Vendor; a list of each Role (including Experience Level) proposed; and the full legal name of each consultant proposed for each Role (by experience level) to achieve completion of the proposed services within the timeframe specified by the Client; Fixed Price for each Deliverable; and total Fixed Price that the Vendor will charge the Client for Services performed and Deliverables provided
- The amount for Total Fixed Price is fixed and not subject to change unless otherwise agreed to by both the Client and the Vendor in a Change Order
- If required by the Client, the Vendor must also include a list of each Role (including experience level) proposed; and the per diem rate for each Role, to be applicable only in the case of a Change Order

Notes

- For fixed price and Core deliverables, we have assumed 90% of the estimated time found in the RFS (90% of 60 days) 54 days split 10 / 44 between Martin and Trevor
- For per diem, we have also included Matt and Clair, should they get involved in specific required activities but we did not include any specific fixed price for them as we expect Martin and Trevor to deliver the necessary services described
- The role / experience is provided in general terms. More details are found under the Schedule B of the Technical proposal
- We have used 7.25 hours for a working day, similar to OPC

© Deloitte LLP and affiliated entities

Schedule A - Pricing Schedule

Please provide the following information in accordance with Sections 2.2.1 and 2.2.2 of this Request for Services:

Legal Name of Vendor:
Deloitte LLP

Part A – Vendor Personnel

Complete the following table in respect of all proposed Vendor Personnel that will perform the Services and/or provide the Deliverables. Vendors should not include proposed Subcontractors in this Part A of Schedule A.

List the names of Consultants who will be assigned to the Project	**Role and Experience Level**
Martin Raymond	Project Lead (Partner at Deloitte): over 20 years of experience
Trevor Gary	Senior Analyst (Senior at Deloitte) : 3 years of experience
Matt Colley	Subject Matter Expert (Senior Manager at Deloitte) : 11 years of experience
Clair Grindley	Subject Matter Expert (Partner at Deloitte) : over 20 years of experience

Will Subcontractors be used for this Project? Yes [ ] No [x] If "Yes", complete Part B.

Part B – Vendor Subcontractors

Complete the following table in respect of the proposed Vendor Subcontractors at any tier of subcontracting, including any Vendor contractors that will perform the Services and/or provide the Deliverables.

Legal Name of Subcontractor	**List the names of Consultants who will be assigned to the Project**	**Role and Experience Level**
N/A	N/A	N/A
N/A	N/A	N/A

Part C – Fixed Price

In the following table, enter the Fixed Price in respect of each role to be performed and the particular Deliverables to be provided, which amount is fixed and not subject to change unless otherwise agreed to by the Client and the Vendor in a Change Order.

For the purposes of bidding, please include the estimated number of working days for each role not to exceed 45 in total. The Ministry reserves the right, as required, to alter the number of working days for each role as the project unfolds. The Ministry reserves the right to alter the number of working days at the time of award.

Fixed Price for each Core Deliverable	**Amount**
• One (1) Senior Consultant / Project Lead shall provide 10 working days of effort over the term of the agreement. The consultant shall provide all deliverable as described in Section 1.5 Client Requirements. – Martin Raymond	$ 30,100
• One (1) Intermediate Consultant / Sr. Analyst shall provide up to 44 working days of effort over the term of the agreement. The consultant shall provide all deliverable as described in Section 1.5 Client Requirements. – Trevor Gary	$ 68,640
Total Fixed Price:	$ 98,740

Part D – Other Expenses

In the following table, Vendors should list all expenses applicable to the Project that have not been included in the Total Fixed Price amount as stated in Part C of this Schedule A. Vendors should review the Travel, Meal and Accommodation Expenses section of the RFS prior to completing this table.

Expenses by Type *(List each item below):*	**Proposed Amount**
N/A	$ -
N/A	$ -
Total Other Expenses:	$ Nil

Part E – Maximum Price

In the following table, Vendors shall calculate Subtotal Price by adding Total Fixed Price, as stated in Part C of this Schedule A, to Total Other Expenses, as stated in Part D of this Schedule A.

Vendors shall calculate Maximum Price by adding the Subtotal Price to the applicable HST.

Subtotal Price (Part C + Part D):	$ 98,740
HST (if applicable):	$ 12,836
Maximum Price (Subtotal Price + HST):	**$ 111,576**

Part F – Follow-on Work Per Diem Rates

In the following table, enter the Per Diem Rates in respect of each particular Role to be performed which amount is fixed and not subject to change unless otherwise agreed to by the Client and the Vendor in a Change Order.

Fixed Price for each Core Deliverable	Per Diem Amount
• One (1) Senior Consultant / Project Lead Partner (Martin Raymond, Clair Grindley)	$ 3,010
• One (1) Intermediate Consultant / Senior Analyst Senior (Trevor)	$ 1,560
• Other possible consultants Senior Manager (Matt Colley)	$ 2,425

Re: Actuarial Services – RFS TBS-OTB-OPCD-20 (technical proposal)

Deloitte is pleased to submit this technical proposal to provide actuarial support services to the Office of the Provincial Controller (the "OPC"). As you will see from our proposal, professionals at Deloitte possess relevant experience and have conducted similar engagements for a variety of clients, including public sector. Should we be the successful bidder, we are also able to draw upon an experienced team who not only understands actuarial services, but also appreciates the challenges and complexities associated with the communication issues of actuarial results and accounting complexities. Deloitte being highly involved in pension audit, the OPC will have access to individuals that have significant expertise in understanding the market practice on accounting for pension benefits and have specialized views on interpretation of accounting standards.

If you have any questions with respect to the information contained within this proposal, please do not hesitate to contact us. We look forward to working with the OPC on this important initiative.

For ease of presentation and to maintain the format of the submission in line with the RFS requirement, we note that after an executive summary, the next 2 sections include the completed Submission form and a summary of the Scope of services. The other sections will cover the required Schedules, pricing (A) being provided in a separate document and the resume / reference for our team members (B). We have added other Schedules to answer the Experience and Qualifications aspects of the Evaluation criteria.

Sincerely,

Martin Raymond
Partner

Deloitte LLP

Executive summary

Deloitte is delighted to have this opportunity to propose actuarial services to the OPC with regards to pension accounting advice. We believe that our firm is an ideal choice to serve you.

> We surpass the mandatory requirements

Deloitte, one of Canada's leading professional services firms, provides audit, tax, consulting, and financial advisory services through more than 8,000 people in 56 offices, including a key office in the Toronto area.

Deloitte actuarial group has an extensive experience in performing and reviewing actuarial accounting valuation for pension plans. We serve a various range of clients, including many municipal clients and other public sector entities.

> We offer a competitive pricing

Pricing is provided under a separate document as required and reflects our desire to serve the OPC. This competitive pricing will not impact in any way the quality, time or effort put into the mandate. On the contrary, it will push our team to find innovative ways to serve the OPC and provide cost saving solutions for optimal delivery.

> We have the experience and skills to provide an outstanding service

Our team is built up of actuaries and accountants that will provide the OPC with work of high-quality. Their experience in pension and benefit accounting under PSAS and their profile will ensure that the work will be performed in timely manner in accordance with professional standards. Roles have been distributed between the team members according to their skills and experiences in order to maximize efficiency. All the team members are familiar with the recommendations contained in PSAS for pension accounting.

> We have a clear understanding of the process and requirements to perform accounting valuations and financial statements disclosures

As we provide similar services to a various range of clients on a continuous basis, we have a good understanding of the issues and a comprehensive view of the market practice.

> We offer a wide range of value added services to our clients

As consultants, our focus is to listen to clients and design specific solutions to achieve targeted results. We do not restrict ourselves to regular traditional approaches but try to define the most efficient one that applies to the client. In every task, we will tailor our level of involvement to your requirements and internal resources. We will advise you, and work in partnership with you, to achieve your objectives.

We value personalized approach and use open dialogue as much as possible. Our team will work with you in suggesting creative opportunities that add value to their consulting assignments.

Deloitte actuarial group has a unique balance in that it does work on providing consulting services, with also other work coming from audit support. This situation provides the group with both the consulting aspect and creativity along with the vision of rigorous application from auditing. This balance is important to develop better consultants that will provide services in line with today's highly regulated environment. Regular reviews we perform in audit and support we provide to some auditor generals in Canada give us a very clear knowledge of the communication challenges and the needed supporting documents for audit acceptance.

© Deloitte LLP and affiliated entities

> We regularly provide similar services to satisfied clients

Deloitte takes pride in developing relations based on communication and trust. Our knowledge and understanding of the pension and other post-retirement benefits allowed us to provide clients with the quality of service they deserve. Here is a list of public sector clients that Deloitte serves or has served recently:

- City of Montreal
- NB Government
- OTPP
- Quebec Municipal Ministry
- Ontario Government
- City of St-John (NB)
- Office of the Auditor General of Canada
- Revenu Québec

Tel: 514-393-7367
Fax: 514-390-4104
Email: maraymond@deloitte.ca

(f) State the name, address, telephone and facsimile numbers and e-mail address of the Company Security Officer (CSO) for the Vendor:

Cara Warburton
Bay Adelaide Centre, East Tower
22 Adelaide Street West, Suite 200
Toronto, ON M5H 0A9
Tel: 416-601-5763
Fax: 416-601-6151
E-mail: cawarburton@deloitte.ca

(g) State the name and title of each of the individuals that the Vendor is proposing for this Project:

Names	**Titles**
Martin Raymond	Partner
Trevor Gary	Senior
Matt Colley	Senior Manager
Clair Grindley	Partner

2. Submission Requirements and Accuracy of Information

The Vendor accepts the terms and conditions set out in the RFS. While this submission is provided for evaluation purposes only and is not legally binding before the execution of a SOW, I confirm that the information provided is accurate.

3. Certificate(s) of Insurance

As required in Article 32.4 – Proof of Insurance in the Master Agreement, please identify the status of the Vendor's Certificate(s) of Insurance by placing a check mark (√) in one (1) of the following three (3) boxes:

☒ a) the Vendor has previously submitted a Certificate of Insurance to MGS, which has been approved

☐ b) the Vendor has included its Certificate of Insurance with this RFS submission (that will be subject to approval by MGS) prior to the Client issuing a SOW

☐ c) the Vendor agrees to submit a Certificate of Insurance (that will be subject to approval by MGS) prior to the Client issuing a SOW

4. Conflict of Interest

The Vendor must complete the following:

(a) If the box below is left blank, the Vendor will be deemed to declare that: (1) there was no Conflict of Interest in preparing its submission; and (2) there is no foreseeable Conflict of Interest in the Vendor or any of its Personnel performing the contractual obligations contemplated in the Request for Services.

(b) Otherwise, if the statement below applies, check the box.

☐ **The Vendor declares that there is an actual or potential Conflict of Interest relating to the preparation of its submission, and/or the Vendor foresees an actual or potential Conflict of Interest in it and/or its Personnel performing the contractual obligations contemplated in the Request for Services.**

(c) If the Vendor declares an actual or potential Conflict of Interest by marking the box above, the Vendor must set out below details of the actual or potential Conflict of Interest:
N/A

(d) The following individuals, as employees, advisors, or in any other capacity (i) participated in the preparation of our submission; **AND** (ii were employees of the Ontario Public Service ("OPS") and have ceased that employment prior to the Requested Submission Date:

Name of Individual:
Job Classification (of last position with OPS):
Ministry/Agency/office of an officer of the Legislature of Ontario (where last employed with OPS):
Last Date of Employment with OPS:
Name of Last Supervisor with OPS:

Brief Description of Individual's Job Functions (at last position with OPS):
Brief Description of Nature of Individual's Participation in Preparation of Submission:

(e) The following are individuals that: (i) are proposed to be assigned by the Vendor to perform work under the SOW; **AND** (ii) were employees of the Ontario Public Service ("OPS") and have ceased that employment prior to the Requested Submission Date:

Name of Individual:
Job Classification (of last position with OPS):
Ministry/Agency/office of an officer of the Legislature of Ontario (where last employed with OPS):
Last Date of Employment with OPS:
Name of Last Supervisor with OPS:
Brief Description of Individual's Job Functions (at last position with OPS):

(f) We agree that, upon request, we shall provide the Client with a Conflict of Interest Declaration from each individual identified above in the form prescribed by the Client.

5. Schedules

This submission includes the following Schedules:

Schedule A (Pricing Schedule) – provided in a separate document as required
Schedule B (Resumes and references)
Schedule C (Similar projects and working with Governments)
Schedule D (Reports for public pension initiative)
Schedule E (Ceiling Test and Sensitivity Analysis)
Schedule F (Methodology and implementation plan)

Deloitte LLP
I acknowledge that providing my name on the line below in electronic form will constitute a signature for the purposes of the *Electronic Commerce Act, 2000*, S.O. 2000, c. 17.

I have authority to bind the Vendor.

Per:

Signature:

Name: Martin Raymond
Title: Partner
Date: January 17, 2017

Scope of services

Treasury Board Secretariat, Office of the Provincial Controller (OPC) requires actuarial services to support input to the 2017/18 Provincial Budget and the preparation of the 2016/17 consolidated financial statements of the Province, specifically related to pension balances and costs in accordance with public sector accounting standards.

Scope of the services

The Services and Deliverables to be provided by the Vendor will include the following:

- Working with management of the OPC's Accounting Policy and Financial Reporting Branch (APFR), to provide actuarial services related to the following possible areas:
    - Review APFR's calculation of estimated accounting valuations based on actuarial input for pension plans reflected on the Province's consolidated financial statements (Ontario Public Service Employees Union Pension Plan, Ontario Teachers' Pension Plan, College of Applied Arts and Technology, Health Care of Ontario Pension Plan and Public Service Pension Plan) as well as post-retirement benefits
    - Conduct related sensitivity and/or scenario analysis as requested by APFR
    - Participate in discussions and meetings with internal and external stakeholders, as required

- Working with management of the OPC, through the (APFR), provide actuarial services related to the following possible areas relating to the Ontario Public Sector Employees Union Pension Plan and Ontario Teachers' Pension Plan:
    - Design and execute various valuation models, as requested by APFR, relating to the ceiling test requirements in the CPA Canada public sector accounting handbook (PS3250.050 to PS3250.059)
    - Conduct sensitivity and/or scenario analysis as requested by APFR
    - Provide advice to APFR, for accounting purposes, on the ceiling tests and sensitivity analysis
    - Participate in discussions and meetings with internal and external stakeholders, as required

Based on the RFS, it is estimated that 60 working days of effort over the term of the Statement of Work (SOW), at the discretion of the provider, to be split between members, or for one individual as deemed appropriate.

- One (1) Senior Consultant / Project Lead
- One (1) Intermediate Consultant / Sr. Analyst

The successful candidate must demonstrate their understanding and experience/expertise with:

- Government financial reporting objectives of transparency and accountability, including an in-depth understanding of public sector accounting standards (PSAS)
- Specific public sector accounting standards as related to pension actuarial valuation and measurement
- Working with a variety of public sector stakeholders in matters related to actuarial assessments/accounting/measurement of pension assets under PSAS
- Ontario government's protocols regarding document confidentiality

Schedule A – Pricing

As per the RFS requirement, the pricing proposal has been provided in a separate file named:
Deloitte_Ontario_TBS_OTB_OPCD_20 – Pricing Proposal

Schedule B – Resumes and References

Based on the RFS requirement:

- Vendors are expected to submit a resume for each consultant proposed in the Submission Form - please include the resumes as Schedule B to your Submission Form

  NOTE : resumes are included in this Section

- For each proposed consultant, Vendors are expected to submit the consultant's most current project(s), and submit references (include name, title, organization and telephone number) whom the Client may contact for the purpose of conducting reference checks

  NOTE : some projects are presented and references are included in this Section

- Vendors are expected to demonstrate in their submission that each proposed consultant has the knowledge, experience and all other qualifications for the proposed Role, and will be able to provide the requested services

  NOTE : the description found in this Section will show the qualification of our proposed team

- Vendors must provide the Client with the opportunity to interview each proposed consultant, and must not charge the Client in connection with any interview

  NOTE : we confirm that interview with our proposed team is available as needed

- Vendors must identify all subcontractors that they propose to use, and must also identify which consultant(s) is provided by which subcontractor

  NOTE : we will not use any subcontractors, all services required will be provided by Deloitte professionals

Proposed Team

As you will see from this section, our proposed team does have the necessary qualification, skills and experience to deliver the needed activities related to this mandate. Considering that the focus of the work will be highly related to Public Service Accounting Standards and technical application of elements such as asset ceiling and sensitivities of actuarial results, we have included 2 actuaries in the Submission form that have both deep actuarial and accounting knowledge, experience and expertise. One member is fully qualified Fellow.

They have been exposed to working in large actuarial consulting firms and also have been within Deloitte gaining the deep key accounting knowledge that provide them with the overall skills to deliver the accounting work that the OPC is looking for.

The Project Lead that will handle OPC work is Martin Raymond (partner), the leading consulting actuary for pension at Deloitte. In his work, Martin will be supported by Trevor Gary (senior). Martin has joined Deloitte in October 2011 to lead the actuarial pension and benefit practice. Since then, his group has been supporting

Deloitte auditors with all regards related to pension and benefits. He is also responsible for any specific consulting pension and benefit services on non-audit Deloitte clients.

In their work, Martin and Trevor will also have access to some specific personnel of Deloitte that may be involved to limited extent depending on the needs. If required, their involvement is likely to be more for sound-boarding support or validation of approach. Clair Grindley and Matt Colley will be the 2 main subject matter experts that may have some implication. Matt is already involved in some other advice support to the Ontario government and as such will likely participate in some of the meetings in the course of the project. His understanding of the OPC environment, structure and strategy will ensure that we always provide the optimal approach in working with the OPC.

Since Martin and Trevor are identified as the 2 main members of the team to work on Core deliverables (Project Lead and Senior Analyst) we have provided more details for experience and references for these 2. For Matt and Clair, we provided their resumes but if needed, additional references will be available on demand.

The following table will provide a summary description of the team members.

Proposed resources		
Name of Individual	**Level**	**Description of role**
Martin Raymond (Project Lead)	Partner, Actuarial Services	As the account manager, Martin will be responsible for relation with the OPC. He will be the reference person for any strategic issue and will ensure that high-quality services be provided. He will work in collaboration with Trevor on the delivery of documents and advice. He will be responsible for the timeliness and quality of services performed, as well as ensuring that OPC expectations are met or exceeded. His vast experience in both accounting and actuarial fields will provide all the expertise that will be needed for the activities to be performed. Considering the deep knowledge that Martin has in public sector accounting for pension, he will drive the orientation of the analysis and advice.
Trevor Gary (Senior Analyst)	Senior, Actuarial Services	Trevor will be responsible to prepare along with Martin the documentation needed on the account. He will be involved in sensitivity and/or scenario analysis to support the file and will participate in data and calculations that will be required. He will be an every-day contact for data, questions and follow-ups. He will participate in most of the communications with the OPC. Trevor and Martin will meet on regular basis to provide status updates and agree to the required steps. During the implementation, his role will be to lead the information gathering and prepare initial documentation.
Matt Colley (subject matter expert on Ontario process and protocols)	Senior Manager, Audit	Matt is a Deloitte professional that is highly familiar with the Ontario processes and protocols. Based on his experience, he will support as needed the proposed team on adhoc basis. He will likely participate in some meetings with OPC and help ensure approach taken is optimal considering the Ontario government practices.
Clair Grindley (subject matter expert on pension accounting)	Partner, Audit	Clair is a specialist in complex accounting issues of different nature. She does specialize in pension specific area. She has a deep knowledge of the various accounting standards on pension and provide with a deep view of the accounting world. She works on regular mandates with Martin to provide a solid joint accounting and actuarial expertise that our clients are looking for. She will be an additional expert on pension accounting and a sound boarding support.

Shown expertise of the proposed team

Within the resumes of the proposed team, you will find more specific expertise for both Martin and Trevor. The following paragraphs are meant to show the extent of the work that both Martin and Trevor are involved on a regular basis. The proposed team works significantly with PS3250 and PS3255 annually as well as other pension accounting standards. The team has worked in all aspects of a valuation required for accounting purposes, namely:

- Review of membership data and sufficient information to support extrapolation purposes
- Selection and review of management best estimate assumptions
- Prepare models needed for selection of assumptions
- Determine the approach to define the accounting discount rate
- Prepare obligation reconciliation for gains and losses
- Prepare the year expense and reconcile year change
- Apply asset ceiling test when asset shown on the balance sheet
- Prepare actuarial report with the required content for accounting disclosures
- Answer auditor questions, including Auditor Generals

The pension actuarial group do perform annually more than 150 audits on different standard basis. Among these we are involved in 15 to 20 audit reviews specifically of public sectors and are very familiar with the requirements of PS3250 and PS3255. Sitting in an accounting firm, we are always searching through the applicable accounting standards to assess if work is performed in accordance with the requirements of those standards. This is definitively one key advantage that our professionals do have to support our clients. We also have access internally to very highly specialized experts (accountants) that are very familiar with how a standard has been developed. Sometimes it is important to understand the spirit of the standard to determine what is acceptable or not and not just the wording of a paragraph of the standard.

As you will see from some experiences we have detailed, our team has been involved in very complex key accounting issues, such as application of public sector to Shared risk plan model in New Brunswick. In performing this work, our team demonstrated a high level of knowledge of the accounting standards to define how it would apply to the specific plan model. This is one proof of the high familiarity that we do have with the standards and not only the public sector but also with other standards.

Our team is really connected to future public sector changes as Martin Raymond is involved in the CPA Task Force on PS3250 and PS3255 review. We also have connections with auditor generals around Canada. We therefore know how to communicate appropriately and prepare a file that will be complete.

The team performs a significant number of actuarial mandates for public sector in valuation services and also in audit services. As an illustration, here is a list of high-profile public sector clients for which we have been involved in recent years:

- City of Montreal
- NB Government
- OTPP
- Quebec Municipal Ministry
- Ontario Government
- City of St-John (NB)
- Office of the Auditor General of Canada
- Revenu Québec

Resumes and references

Following are the resumes of the proposed team along with references and specific relevant experience for Martin and Trevor the main resources identified to provide the core deliverables.

Martin Raymond, FSA, FCIA

Partner – Audit & Advisory
Actuarial, Rewards and Analytics

Profile

For 23 years, Martin has been with the Consulting practice as a specialist in pension plans. He is also an expert in retirement and benefits accounting, having served as the national specialist in this area for a large actuarial consulting firm. This experience has provided him with the skills to serve a diverse clientele and to handle complex accounting and financial disclosure issues.

As a partner in the actuarial department, Martin is responsible for managing and supervising the work related to Canadian pension plans and benefits for Audit teams but also for general consulting. Additionally, he is also actively involved in answering questions related to the application of pension accounting and pension legislation while assisting the firm's decision-making process in these areas.

His role includes follow-up on changes in accounting standards and best practices. Over the years, he developed different tools required to perform calculations and ensured integrity of work in accordance with the standards. He was also highly involved in training, both internally and to the firm's clients. His expertise was used many times in resolving clients' issues for accounting treatment of special events and also situations that demanded specific accounting interpretations.

Along with his responsibility as national specialist on accounting, Martin also served as general consultant for clients on actuarial issues. His work encompassed looking at funding and accounting projections along with optimizing strategies. He also helped employers in negotiation support to identify possible plan design changes and evaluating the costs. He supported employers in selecting actuarial assumptions and reviewed work of more junior staff to assess reasonableness of results. He was responsible for quality of services offered along with satisfaction of clients.

His skills as communicator has made him highly appreciated by clients, pension plan members and fellow colleagues. He takes pride in translating complex issues into accessible actuarial and accounting concepts for people less familiar with these matters. For pension and benefit arrangements to be appreciated by members, it needs to be well understood. This represents in many cases the challenge for today's plan sponsors and Martin would surely be an addition to this mandate.

Professional affiliations/Certifications

- Fellow of the Society of Actuaries (FSA since 1998)
- Fellow of the Canadian Institute of Actuaries (FICA since 1998)

Education

- B.Math. (actuarial science) – Université de Montréal

Other activities

- Speaker at the Canadian Institute in 2001-2002 on termination of plans
- Instructor at the AGFMQ (Quebec association of municipal financial managers) in benefits programs accounting in a municipal setting in 2006
- Member of the CIA (Canadian Institute of Actuaries) Task Force on Pension and Post-retirement Benefit Accounting Discount Rates (2009 to the present)
- Speaker at the Canadian Institute of Actuaries' pension seminar in 2012.
- Member of the CPA Task force on review of Public Sector accounting standards (2016 and forward)

Knowledge / experience and current / recent projects

His expertise in the pension accounting field has been recognized by clients, fellow actuaries and also by participation through accounting specific working groups. Of particular interest for this specific mandate, we note that Martin is a member of the CPA Task Force on employee benefits that will review the standards (PS3250 and PS3255) in upcoming years to determine if and to what extent changes are to be made to these standards to reflect the evolution in accounting practice since their initial implementation. Some issues that are to be looked at include deferral of actuarial gains and losses, discount rate selection, shared risk plan (SRP) treatment and multi-employer plans. Since a number of these elements are of interest to public sector entities, having someone that is involved in the discussions will provide great insight for the OPC to understand the issues, the discussion elements and the possible outcomes.

Martin has also worked with numerous public sector clients either as a consultant providing full valuation services but also through the auditing role of ensuring that accounting was performed in conformity with the accounting standards. His involvement in all types of employee benefit accounting standards (US, IFRS, ASPE, PSAS) has provided him with a broad view of the possible issues that come up and the likely ways of addressing them.

He is also recognized by the Québec municipalities Ministry as a key person involved in number of complex issues that have come up on pension and benefit accounting since the Québec municipalities have transitioned to public sector accounting in 2007. This implication is still ongoing on regular occasions when specific situations come up that need insights on the appropriate treatment. He has been involved in a number of areas that demanded accounting and actuarial expertise since that date, including:

- Impact of 2007 transition on municipalities financial statements
- Treatment of funded and non funded plans
- Selection of discount rate based on cost of borrowing
- Treatment of asset ceiling
- Use of reliefs for taxation purposes for various elements (past service costs, asset ceiling, non funded plans)
- Special approach used after the 2008 financial crisis to alleviate the taxation requirements
- Review of changes in pension plan legislation specific to municipalities and define the appropriate treatments.

He also has worked closely with the OAG on a number of pension and benefit audit supports for which his collaborative approach along with his understanding of issues and ease to communicate it has been greatly appreciated by the OAG personnel. The reporting format of the information, the illustrations provided on complex issues and the deep knowledge of both pension actuarial work and pension accounting understanding have been part of the successes of all the mandates performed.

Along with the Québec Ministry support and the OAG audit supports described as current projects, for which we do provide references, it should be noted that one other main area that shows expertise relates to his involvement with the Government of NB and City of St John (NB) on Shared Risk Plan (SRP) accounting treatment. This is a very complex accounting issue that is still being regularly discussed with accounting standard setters and accounting firms, but on which some judgment is needed to define a reasonable approach. The main elements that were part of the activities are:

- Review of the SRP legislation, plan provisions and funding policy
- Review of actuarial valuation reports on SRP

- Review of stochastic projection results to meet the risk management criteria
- Review of the accounting standards to define the defined benefit / defined contribution classification for accounting treatment
- Review the selection of assumption process as some benefits are conditional on plan situation
- Review of the joint defined benefit accounting provisions
- Meetings / discussions with clients and their actuaries
- Work in collaboration with the actuaries to define the appropriate calculations
- Review valuation numbers, accounting figures and confirm it is performed in accordance with accounting standards

All through these 2 SRP mandates, Martin was highly involved in helping understanding the standards, working in collaboration to find appropriate solutions and providing along the way the knowledge enhancements that the various parties were needing to appreciate the issues and understand the solutions.

In addition, Martin has experience working with the OPC in regards to pension accounting advice. In a recent mandate, his role was to provide advice and guidance to OPC on complex accounting and reporting matters related to accounting for pensions and the Province's consolidated financial statements. More specifically, Martin provided his expertise in actuarial assessment in relation to applying the ceiling test to the accrued pension benefit assets in accordance with PS3250. In that work, both the accounting expertise, knowledge of the tests and the actuarial calculation requirements were involved to support OPC understand the work performed by an actuary with that regards.

Relevant project #1 – Office of the Auditor General	
Year of work	2016
Description of Contract	The Office of the Auditor General provides an allotment of sick leave days per month of service to its employee. The unused sick days given in a year may be carried forward to future years. This type of benefit requires an actuarial valuation to determine the obligation and the expense under PSAS. • Review plan provisions / data and prepare a summary • Recommend appropriate assumptions • Perform a detailed calculation of the liability of the OAG for sick leave benefits accumulated by its employees as of March 31, 2016; • Determine the related components to be disclosed in the financial statements, I.e. the benefit costs, the interest cost, and the actuarial loss or gain for 2015-16; • Estimate the benefit costs for the following year (2016-17); • Perform a sensitivity analysis on the following assumptions: discount rate, annual rate of increase in salary, retirement age and use of accumulated sick leave. • Prepare a report in accordance with standards of practice of the Canadian Institute of Actuaries (CIA) and with PSAS (PS 3255)
Contact Person	Shawn Audette
Telephone and Email	(613) 952-0213 ext: 5290 shawn.audette@oag-bvg.gc.ca

Relevant project #2 – City of Montréal	
Year of work	1997 to 2016
Description of Contract	Numerous cities on the island of Montreal merged in recent years into the City of Montreal. With these mergers came also the application of public sector accounting to municipalities in Quebec. As such, the City was faced with more than 40 pension and benefit plans to account for. Martin was involved over 5 years into preparing accounting results for the various plans and harmonizing communications for the City representatives. Communications to the management was also crucial and Martin was involved in many key employer meetings. His work also included treatment of many special events and also ensuring that work was in accordance with accounting requirements. He supported the setup of an accounting document that follow-up the quarterly evolution of the expense and the explanation of changes. The document also showed the expected expense over a 5-yr period in stochastic modelling. More recently, Martin is involved in the review of the accounting results of the pension plans. This includes the reconciliation of the results, the review of the assumptions, the impact of the changes in assumptions, the impact of changes in legislation and many more audit procedures related to employee benefits accounted under PS 3250 and PS 3255.

Telephone and Email	(514) 872-3155 jmarleau@ville.montreal.qc.ca

Relevant project #3 – City of St John (NB)	
Year of work	2016
Description of Contract	Accounting of a pension plan under the Shared-Risk Plan model, a complex new pension framework in New-Brunswick. Define the accounting treatment under PS 3250: • Review plan provisions • Review legislation • Identify key accounting standards provisions • Discuss with Entity and actuary about the valuation of the obligation and accounting results • Work some illustrations and calculations to help the client through the process Define an acceptable approach within the accounting framework.
Contact Person	Hilary Nguyen
Telephone and Email	(506) 648-3713 hilary.nguyen@saintjohn.ca

Relevant project #4 – Québec Ministry of municipalities	
Year of work	1997 to 2016
Description of Contract	Public standards accounting is applicable to Québec municipalities since 1997. Martin involvement with the Ministry has been of different natures • Identify key accounting provisions that apply to pension plans • Review the impact on the municipalities financial statements • Identify some relief options to manage taxation level • Discuss the impact of the 2008 crisis on municipalities and identify the options / treatments to offer some tax management relief to the municipalities • Look more recently at the major changes in pension legislation that affected municipalities and identify the appropriate accounting treatment • On number of occasions be an expert / sound boarding resource for the Ministry on issues that come up
Contact Person	Yvon Bouchard
Telephone and Email	(418) 691-2015 (extension 3812) yvon.bouchard@mamot.gouv.qc.ca

Trevor Gary

Senior – Audit & Advisory
Actuarial, Rewards & Analytics

Profile

Trevor joined Deloitte's Actuarial, Rewards & Analytics Team from McMaster University where he completed his B.Sc. Mathematical Science and B.A. Economics. In the Audit practise, he actively leads on 30+ pension plan audits under various accounting standards. This included: review of accounting schedules, disclosures, and assumptions, audit planning for the pension plan, and liaising with clients and their consulting actuary to resolve pension related issues.

In the Advisory practice, Trevor acts as the main point of contact for Pension Due Diligence related to M&A/Transactions, he continues to actively pursue opportunities in the de-risking space, and has experience providing support for plans with a foreign domicile including the US, UK, and Switzerland.

Trevor's 'traditional' Actuarial experience at Deloitte has included work on actuarial valuations, annual client regulatory filings, benefit calculations including Family Law Value calculations, and providing client support in regards to following Canadian Pension Regulation. Trevor has worked on plans under each of the 11 pension regulators in Canada.

Education
BA, McMaster University, 2012
B.Sc., McMaster University, 2013

Training
Trevor is close to completion of his Associate of the Society of Actuaries (A.S.A.) designation.

Awards
- 1st place - 2014 Actuarial National Student Association (ASNA) Case Study Competition
- 2012 Vanier Cup Champion

Knowledge / experience and current / recent projects

Trevor has been involved over recent years in a large number of audit supports on the different accounting standards. Over all of these mandates, Trevor's work did cover the full array of the accounting support:

- Review of assumptions used and confirm they are reasonable
- Ensure the methodologies applied are in accordance with the accounting standards
- Question management on accounting choices made
- Explain the major changes occurring during a year
- Detail the main gains and losses
- Compute the expense and balance sheet entry
- Review content of financial statements notes and comment on it
- Provide sensitivity and extrapolation results
- Review asset ceiling calculations and determine the economic future benefit calculation

In one of its main audit assignment he was involved in recalculating specific member benefit obligation by analysing plan provisions, applying the accounting methodology, perform the projection and determine obligation and current service cost. He did prepare an actuarial report covering the methodology, data and calculations results to compare with the actuary calculation.

He has also been involved in a large audit support work with the OAG that covered 7 pension and employee benefit plans. The work specifically covered the array of the audit work described above but also covered a formal reporting going out to external user (the OAG). The documentation prepared by Trevor was received with high level of satisfaction and showed his level of professionalism and his commitment to quality work.

References

We authorize the OPC to verify information provided to confirm client satisfaction and demonstrated success. In addition to these references, Trevor has also been involved in the recent asset ceiling work with the OPC main contacts.

Relevant project #1 – Canada Post Corporation (OAG support)	
Year of work	2016
Description of Contract	Trevor, along with Martin supported the OAG in reviewing the actuary's work and ensure work performed in accordance with the accounting standards and actuarial practice. Activities covered: • Review of assumptions and changes during the year • Review main elements of gains and losses (explain the source and calculate independent assessment) • Comment on content of report and disclosures • Validate sensitivity disclosures • Prepare a formal report for external use to be sent to the OAG • Prepare knowledge transfer to the OAG on some complex accounting and actuarial elements Deloitte did receive a very good feedback from the OAG on work performed and communication between OAG and Deloitte
Contact Person	Patrick Charbonneau
Telephone and Email	(613) 952-0213 (extension 2226) Patrick.charbonneau@oag-bvg.gc.ca

Relevant project #2 – OTPP	
Year of work	2015 - 2016
Description of Contract	Working with the Deloitte audit team, Trevor has been involved in reviewing actuarial results. Applying the calculation requirements defined under accounting standards to perform independent assessment of member obligation result • Review plan provisions • Define appropriate benefit calculation and apply assumptions • Apply legislation limits • Discuss with the actuary some may results obtain to validate some aspects of the calculation • Compare results with the actuary calculation • Prepare a report defining our approach and key observations / results Objective was to ensure adequate obligation reported based on the accounting requirements.
Contact Person	Name and email will be provided on demand.

Matt Colley, CPA, CA

Senior Manager
Assurance and Advisory

Profile

Matt is a Senior Manager in the Audit Advisory Practice in Toronto, which focuses on Accounting Advisory, Transaction Consultation, Finance Transformation, and Audit Analytic services. Matt has over 11 years of public accounting experience and has been exposed to a variety of engagements and cross functional teams. Matt joined Deloitte in 2004 and spent the majority of his initial years with the firm performing attest services mainly in the public sector organizations. Matt currently advises Public Sector and Private Sector organizations on complex accounting matters, as well as systems and process improvements. From 2012 to 2014, Matt was seconded to Deloitte's National Office to assist audit practitioners with complex accounting issues and to audit practitioners prepare their clients for new accounting standards that were being developed under IFRS, ASPE, Accounting Standards for Not for Profit Organizations and Public Sector Accounting Standards, including helping many clients with the adoptions of PS 3450.

Through his experience in auditing and advising many different types of public sector organizations, Matt has been exposed to various public sector accounting and regulatory issues. In addition to providing complex accounting advice to public sector organizations, Matt is currently supports clients in finance transformation initiatives and helping organizations elevate the profile and efficiency of their finance function.

Relevant Experience

Provincial Ministry of Finance Complex Accounting Support: 2015 - Current: Matt is Deloitte's lead senior manager on engagement to advise management on a large complex transaction on a Government Business Enterprise. This engagement required Deloitte to work with the client to understand the transaction being proposed and to provide guidance to relevant stakeholders on the accounting implications of the transaction. Deloitte worked with management and various professional advisors to inform decision makers about the implications of the proposed transaction and to help the client document their analysis and conclusions. Deloitte also assisted the client in presenting the client's analysis and views to the Auditor General. This engagement required extensive research across all parts of the CPA Canada Handbook (Not-for-Profit, Public Sector, Private Company, and Public Reporting Issuers) to support the conclusions reached by management.

Provincial Review of the Implementation of a New Accounting Standard (PS 3260) - 2015: Deloitte was engaged to advise the internal audit function within a Provincial government on the complexities of implementing a new accounting standard on contaminated sites. Matt was the lead senior manager on the engagement which involved helping internal audit provide recommendations to identified ministries and a central agency on how to deal with complex issues associated with implementing the accounting standard and providing support to various ministries on how to improve their internal controls and documentation around the implementation of the accounting standard. The engagement also involved assisting management and internal audit in developing a position paper on how to treat certain complex issues resulting from the implementation of PS 3260 that was used in discussions with the auditor general.

Provincial Government Business Enterprise Complex Accounting Support - 2013- Current: Matt is the lead senior manager on a Deloitte engagement to advise Provincial Government Business Enterprise on complex accounting issues resulting from new transactions, and challenges with adopting new accounting standards under IFRS around employee benefits, revenue, and leases. Deloitte supports this client by providing updates on changes in accounting standards and by working with the client to develop analysis on the impact of new standards and proposed transactions.

Community involvement

- Board Member and Finance Committee Member – 2015: The Meighen Health Centre
- Finance Committee Member – 2009 – 2015: The Change Foundation
- Board Member and Treasurer– 2003 – 2009: Intrada Brass

Education / Professional designations / Industry Conferences

- Bachelor of Business Administration, University of Toronto (2004)
- Chartered Professional Accountant, Chartered Accountant (2007)

Clair Grindley, CPA, CA, ACA

Partner
National Office

Profile

Clair Grindley is a Partner in Deloitte's National Office and is focused on the application and interpretation of technical accounting guidance both in Canada and on a global level. She is the firm's technical accounting leader on employee benefit issues and works closely with our Firm actuarial experts on this area. Clair is involved in the development of technical accounting publications for the Canadian Firm and globally. She is also involved in the development and delivery of technical accounting learning to Deloitte practitioners and to Deloitte clients.

Clair has been with the Firm for 20 years including 5 years with Deloitte in the United Kingdom. Prior to joining National office she worked in the audit and assurance sector and subsequently in Deloitte's accounting advisory services group.

Professional and Community Affairs

- Member of Deloitte's Global Employee Benefits Subject Matter Group
- Member of CPA Canada's EFB ASPE (Section 3462) Briefing Taskforce (project now completed)
- Former Member of the Accounting Standards Boards IFRS Discussion Group (since inception)
- Former Member of the Accounting Standards Boards IFRS Advisory Committee (now replaced by IFRS Discussion Group)

Education and professional designations

- Bachelor of Accounting and French (Joint Honours) (Southampton, 1995)
- CPA, CA, ACA

Schedule C – Similar projects and working with Governments

Each Vendor should provide in its proposal:

- A description of the proponent's current or past experience with similar projects, with examples of successful outcomes, anticipated challenges, and corresponding mitigation strategies that the Vendor would employ.
- Provide a description of the proponent's previous pension actuarial experience with the Ontario Government or other senior Canadian Governments and provide specific examples of how that experience would assist the Vendor with the Deliverables.

Similar projects

Number of similar projects were performed by Deloitte over recent years that covered many complex accounting issues. Some of these have already been described in the Schedule B of team members to show their expertise. A summary of some examples for both PSAS and IFRS / ASPE is described below.

Under PSAS for one specific client, Martin and Deloitte provided various accounting advice over many years. Success was measured in that the client was satisfied and so was the Auditor General. Work was performed on accounting standards compliant basis and we did find practical approaches in an environment of multiple plans. Challenge was mostly around getting some harmonized approach to the multiple plans that were present (more than 40 at some point). Determining the main goals, identifying the material elements were crucial and helped mitigate the multiple plans situation. We were able to focus on the main ones that represented the biggest piece of the obligation. The other challenge was the level of knowledge of the various parties relating to accounting requirement. To overcome this, Martin was involved in number of training sessions to really provide a solid basis for the different key persons that would be involved. Throughout the years of engagement, Martin also used his communication skills and illustrative approach to help the client and the Auditor General to get familiar with the pension accounting and get a comprehensive understanding of the calculations performed. On every occasion, he found a way to increase the appreciation of the accounting standards and the required work. Complex elements that came up and needed to be explained and dealt with included; asset ceiling calculation and its relation to gains and losses, market-related value of asset methodology, discount rate for non funded plans, use of the available information to determine how to make some already available results into accounting compliant (time and cost savings).

Under IFRS, for 3 main clients of Deloitte, we did have asset ceiling consideration this year due mainly to the plans being closed to new entrants. Asset ceiling is a very complex application under IFRS that encompass minimum funding requirement calculations and determination of economic future benefits. Letters of credit could also be used to avoid minimum funding requirement effect. So a large number of pieces come into play in the calculations performed. Success of our work was measured by raising issues around the asset presented on the balance sheet, making the clients aware of the complexity of this and getting them understanding our approach and therefore limits on balance sheet asset. The main challenge we had was to get the actuaries to view the arguments we had on this issue and have them agree at least to some extent to our views. In order to overcome this challenge, we held some calls with the actuarial firm and we did have the client also listening to these calls, and provide their inputs. Having all interested parties included in the discussion proved to be a good way to mitigate that and avoid simple back and forth emails from actuary to actuary. We also did validate some of our position elements with other colleagues in various firms (actuarial and accounting) to understand the practice for some components of asset ceiling and get a broader view of the flexibility that exists and boundaries applied.

One other main success we can mention is how we work in the audit mandates either with our own Deloitte auditors, the firm clients or with Auditor Generals. Being specialists of pension, actuarial calculations and accounting standards, we do provide significant value to auditors and clients. We even get great comments from actuarial firms that we work with, even if we can be seen at some point as counterparties to them. The success we think can be measured in different ways. The main things we can mention are: we understand the benefits offered, we know how they are calculated, we know how accounting results are determined. We work efficiently in identifying the main issues, getting the appropriate questions out and preparing a documentation that will answer the objectives that are set out. When an event occurs that need special accounting treatments (past service costs, curtailments, settlement, annuity purchase, asset ceiling calculation…) we know what information is important and what is needed to support a file. As such, we find that success comes with a complete documentation, an effective approach, avoid unnecessary questions to clients / actuaries. We sometimes have challenge in dealing with actuaries as they may see us as competing with them to find an accounting answer and maybe reviewing calculations that they perform and thus being the ones that are looking for their errors. In order to mitigate this kind of feeling and ensure orderly communications with the actuaries, we do adopt an approach of collaboration. We always make the communications with actuaries very professional and in good faith on both sides. We keep our mind opened to evolving approaches but maintain the accounting compliance as a main goal. We also discuss openly on adhoc basis with accounting specialists in all major actuarial firms to exchange views and keep transparent on new issues and evolving practices. So far the communication has been great for most cases even when significant issues have come up.

Working with Governments

We have been working with governments both on very specific pension issues but also on many other occasions for non pension elements. Deloitte being a provider of a vast array of professional services, we do have a number of initiatives that were specifically performed with Ontario.

From a pension specific perspective, we have been involved highly with the Québec municipal Ministry to apply the PS3250 and PS3255 accounting standards to municipalities since 1997 when it was first adopted. In Québec, contrary to other major provinces in Canada, the pension plans are direct responsibility of the municipalities. There is no one single plan like OMERS or BC Municipal. So there are a large number of plans and some cover a large number of members. In applying the standards, a number of issues came up and needed the Ministry to look at the effect on municipalities but also define some guidelines to apply the standards. Martin and Deloitte have been involved since 1997 with the Ministry to discuss numerous issues and help the Ministry to provide recommendations on complex accounting elements. We can note the following:

- Identify key accounting provisions that apply to pension plans
- Review the impact on the municipalities financial statements of transition
- Identify some relief options to manage taxation level for number of accounting events
- Discuss the impact of the 2008 crisis on municipalities and identify the options / treatments to offer some tax management relief to the municipalities
- Look more recently at the major changes in pension legislation that affected municipalities and identify the appropriate accounting treatment
- Asset ceiling, market-related value of assets, discount rate selection, mortality changes, presentation in financial statements …

In this implication with the Quebec Ministry, we did get exposure to a very large number of accounting issues and we did have to provide support from the very specific accounting literature (key paragraphs). Since this was applied to very large public employers, it also had a significant impact on the practice in general and how actuaries were calculating results under PSAS. We believe that all these make us very well positioned to support the OPC on complex issues that will come up. The large number of plans for Québec municipalities do provide us with a large exposure to situations that have come up and prepares us to the needs that OPC will have.

In another work with the Québec government, Deloitte has been providing support to compare the accounting practice in Canada of various governments on how they select the discount rate and what valuation methodology they used. A review of the valuation results presented in the notes or annual report of the main plans was also looked at. In performing this work, we did have to prepare reporting in specific format that could be used by interested parties at government level. As such, we needed to be sure the explanation was appropriate, to the point and accessible to a non-familiar reader. We believe that this experience, above the fact that it provided us a good view of the Canadian public sector plans in Canada, will also help us define the appropriate communication needs and format that OPC will be able to use.

We also did work with the NB Government on the preparation of a white paper on Shared Risk Plan accounting. This new type of plan is highly complex and also is not totally contemplated by the PS3250 that is more based on traditional plan structures (either DB or DC). Plans with conditional benefits are more addressed under IFRS, although there is also some grey area in this standard. We did provide support to the Government to define an approach to account for these plans. In doing this we needed to educate some people on accounting, we needed to review standards and we needed again to report on a complex issue to non-familiar individuals. We think that this is something that will be helpful to support the OPC in the upcoming challenges of complex accounting issues.

In 2016 Martin and Trevor worked with the OPC to derive supporting analysis for complex accounting elements that may be scrutinized during the Public Accounts audit. Deloitte's role was to provide advice and guidance to OPC on complex accounting and reporting matters related to accounting for pensions and the Province's consolidated financial statements. More specifically, the Deloitte team provided their expertise in actuarial assessment in relation to applying the ceiling test to the accrued pension benefit assets in accordance with PS3250. In doing so, we were able to work with the OPC to define a process for calculating the valuation allowance, highlight key elements of the calculation such a future economic benefit and contribution reduction versus surplus withdrawal, and support discussion with the Province AG. The positive working relationship we had with the OPC team during this engagement will service as a foundation for the upcoming project. Further, our understanding of the OPC's process will serve as an efficiency to get the mandate started.

Schedule D – Reports for public pension initiative

Each Vendor should provide in its proposal:

- Describe the proponent's demonstrated knowledge, skills, experience and expertise with developing reports with an executive summary that presents findings and analysis of the information collected both from the qualitative and quantitative of a public pension related initiative and any recommendation made as part of the report..

Audit report to our auditors and Auditor Generals

As indicated in a previous section, our pension actuarial group performs more than 150 pension audit supports annually, among which 15 to 20 relate to public pension. These are used for Deloitte audits but also for supporting Auditor Generals. In performing our work, we do prepare formal reports and working papers. These documents need to be orderly prepared and contain the necessary requirements to support the audit. The usual documentation includes:

- background section
- tailored executive summary portion
- section detailing our approach
- section with the findings for each of our tests (methodologies, assumptions, events, expense, asset ceiling, …)
- section with the list of professionals that were involved
- finally, a list of detailed working papers is also included

We prepare the structure of our reporting in order to maximize the understanding of the work performed and the findings. We have found by use with auditors and Auditor Generals that this answers the need for documentation. We specifically received great feedbacks from working with external stakeholders on how the information communicated was complete, to the point and easily accessible. We believe that we have shown expertise in preparing these documents over the last few years and we will use this to ensure optimal communication with OPC and the stakeholders.

Government analysis of accounting approach

We did perform a pension review of the major public pension plans in Canada for the Quebec government. This document was meant to cover main plan provisions, main assumptions used, accounting results and methodologies. We did perform the analysis, summarized the information received and prepare the necessary report. Reporting to a Government, we did structure our report again to have a succinct but complete executive summary. The document needed to cover all steps of the work and really tie to the objectives that were set out initially. We did work this in a collaborative approach with the Government representatives and therefore ended doing some back and forth iterations to incorporate both our views of what made it a successful document that would answer the stated objectives but also include the Government views about what wording might be more appropriate to some stakeholders. We still had the ultimate responsibility to define the structure based on the work we were performing and findings in the course of the mandate. We also think that this shows our experience in this type of communication and will help us ensure high-quality work to OPC.

Shared risk plan white paper

Another example of reporting on public pension plan is the work we did with the Government of NB to define the accounting treatment for transition of a traditional DB plan to a Shared Risk Plan model. This work required us to really cover a highly complex accounting issue but also having legislative and actuarial complexities. We performed the analysis of the legislation and the accounting and prepared a report with our findings. An executive summary was needed to ensure the conclusion of our analysis was highlighted appropriately and the main elements leading to it were also summarized. As this is a complex issue, numerous subsections covering the plan details, the legislation considerations, the valuation reports, the funding and benefit policy, and the accounting standards were also included in the reporting. This work shows that we do have the expertise to translate complex issues into accessible documentation and provide with a summary that adequately covers the issue, the process and our conclusions.

Analysis of Pension Valuation Allowance Accounting Considerations

Our final example of reporting on public pension plan is the recent work we did with the OPC to define the methodology for determining the accounting treatment of plans in an asset position. We received information from the OPC for plans in an asset position including Funding Policies, Actuarial Funding Valuations, and current accounting results. We then prepared an analysis of the applicable Pension Acts and the accounting standards to ensure our methodology was sound in relation to both. Finally, we calculated any asset impairment at different levels of testing. We prepared an executive summary as the conclusions from our analysis leveraged several working papers and the calculation methodology relied on several inputs, the public sector accounting standards, and the applicable Act. This work shows that we do have the expertise to effectively communicate qualitative elements that govern a process such as the valuation test as well as proposing methods for successfully quantifying these elements.

Schedule E – Ceiling Test and Sensitivity Analysis

Each Vendor should provide in its proposal:

- Describe the proponent's demonstrated knowledge, skills, experience and expertise with running different ceiling tests and sensitivity analysis scenarios including providing ceiling tests and sensitivity analysis advice. Cite examples to demonstrate experience and describe results achieved. .

Quebec municipalities Ministry for application of PS3250 and PS3255 standards

Through the implication with the Québec municipalities Ministry Deloitte has provided a number of recommendations on accounting treatment of some events / issues that are closely looked at by the Auditor Generals. We have been involved in the treatment of special events including the asset ceiling and its accounting treatment. PS3250 has extreme volatility consequence for asset ceiling while IAS19 has some self-correcting mechanisms that help alleviate this extreme fluctuation. At some point, this element did become a sensitive issue for some municipalities' pension plans. We were involved with the Ministry to define a possible recommendation of how this would be applied and eventually determine some recommendation to mitigate the taxation impact for municipalities. Our expertise in PS3250 combined with our knowledge of IFRS for asset ceiling proved to be important to provide the needed support.

Comprehensive review of the ceiling test under PS3250

In preparation of the Province of Ontario's Financial Statements, Deloitte was engaged by the OPC to provide support in analyzing issues around pension accounting. A key element of the work prepared was the assessment of the application of the public sector accounting standards as related to asset ceiling and valuation allowance. Our work included review of two large Ontario plans for which we preparesd a document with the following details for each:

- Summary of the accounting situation
- Overview of the accounting paragraphs that apply to this and the explanation
- Review of the considerations that go into the ceiling test and the Future Economic Benefit (FEB) calculation
- Review of the employer access to future contribution reduction or surplus withdrawal
- Summary of findings relating to observations made in discussing the applicability of the asset ceiling test for Ontario's 2015-16 Financial statements

One section above the rest from the document we prepared for the OPC highlights our expertise with running different ceiling tests and scenario testing. Within our review of the consideration that go into the ceiling test and the Future Economic Benefits (FEB) calculation, we highlighted the main components of a ceiling test including notion of an open group, future service accruals on an accounting and funding basis, required contributions and contribution holiday. Further, we defined different levels of testing in regards to the minimum contribution that we ran through testing and projection. This allowed us to work through different examples with OPC, going from a basic testing to a very comprehensive level of testing under PS3250.

This experience has allowed Deloitte and the OPC to better understand the asset ceiling notion and the concepts that go into it.

Asset ceiling and annual audits

As indicated previously, our pension actuarial team supports Deloitte audit teams on a large number of annual audits. Although not always applicable, there are number of plans that show an asset position and for which testing of the amount presented needs to be performed. Even more complex, the test under IFRS, including IFRIC14 requires usually some projection of results to validate the asset position. So our team does have extensive experience in these issues, calculations and discussions with clients / actuaries. As an illustration, you can refer to the section on similar projects where we noted that under IFRS, for 3 main clients of Deloitte, we did have asset ceiling consideration this year due mainly to the plans being closed to new entrants and for which we did go through a comprehensive process with the clients and actuaries.

Sensitivity and Scenario Analysis for Audit

As actuaries in a large Audit firm, we act as the pension specialists for many pension and benefit plans. Each of these engagements has a defined scope but typically it involves the review of actuarial assumptions and review of the accounting results to gain comfort with the movements of the obligation, plan assets, profit and loss, and other comprehensive income where applicable. To completely gain comfort, reviewing both assumptions and results, we must use both sensitivity and scenario testing.

When reviewing actuarial assumptions, particular assumptions depend on stochastic projections. For example:

- For plans under all standards, if there is an element of increase of pensions in payment that is linked to the Consumer Price Index (CPI) or the return on assets, we will perform stochastic projection. For illustration, if a plan assumed an annual increase of pension in payment of 1.2%, and the plan formula for the increase was the maximum of a) 50% of CPI and b) 75% CPI minus 1%, we would perform a stochastic projection of inflation levels over future years to determine the likely distribution for what the underlying indexation would be. Finally we would compare our expectation with the assumption retained. Doing so will require some modelling for projection of future events like CPI.

- For plans under US GAAP and PSAS, there is use of the expected return on assets assumption. When there is an expected return on assets assumption, we would look at the plans target investment strategy (the distribution of total assets into asset classes), and then we would perform a stochastic projection of these asset classes over a defined period to determine the likely distribution for what we would expect the aggregate return to be. This would be compared with the assumption retained. So again, we do use modelling into our regular work.

Sensitivity analysis is a particularly useful tool for completing our review of accounting schedules. For example:

- For reconciliation of the benefit obligation to explain how it evolves every year, there are 3 main elements of gain/loss; change in financial assumptions, change in demographic assumptions, and plan experience. When there is a change in the assumptions, this will result in some element of gain/loss whether it's very minimal or large. In order for the Deloitte team to determine the impact of changes in assumptions, we often rely on sensitivity testing. A common example is determining the impact of a 100 bps decrease in the discount rate. We would use the plan duration, which is the sensitivity of the cash-flows, and determine the percentage increase in pension benefit obligation from a 100 bps decrease in the discount rate.

  Other assumption changes may also incorporate sensitivity analysis; change in retirement assumption may rely more on active member duration, change in the indexation for deferred members may rely more on deferred member cash-flow sensitivity, change in the mortality assumption may rely on the complete cash-flows sensitivity to all members living an extra year. We will make use of the actuarial knowledge we have about how an obligation for a member is valued. We also have available valuation tools that help us estimate the impact of very specific assumption changes. Our proposed team members have been involved in actuarial valuation preparation and actuarial results review hence they are very familiar with the elements that go into the calculations.

Finally, for sensitivity, we can also mention that our team often supports the disclosure for sensitivity results. When entities present such information in their notes, often seen under IFRS, the actuarial team will support the auditors in assessing whether a change in obligation value disclosed is acceptable based on the actuarial principles and calculations. Our actuarial group would prepare a similar analysis to validate the actuary results. In a similar manner, we provide support to audit teams at the start of their audit process when they identify what are the major risks to be reviewed and covered. To do this, our team will prepare sensitivity analysis of the main plan assumptions to calculate the impact on the obligation and help the audit team determine if this change is material for the audit work and therefore represents a major risk.

Schedule F – Methodology and implementation plan

Each Vendor should provide in its proposal:

- The proponent shall describe the methodology and implementation plan they will use to deliver the Client's Requirements as described in Section 1.5 of this RFS.

From Section 1.5 of the RFS

- Working with management of the OPC's Accounting Policy and Financial Reporting Branch (APFR), to provide actuarial services related to the following possible areas:
    - Review APFR's calculation of estimated accounting valuations based on actuarial input for pension plans reflected on the Province's consolidated financial statements (Ontario Public Service Employees Union Pension Plan, Ontario Teachers' Pension Plan, College of Applied Arts and Technology, Health Care of Ontario Pension Plan and Public Service Pension Plan) as well as post-retirement benefits
    - Conduct related sensitivity and/or scenario analysis as requested by APFR
    - Participate in discussions and meetings with internal and external stakeholders, as required

- Working with management of the OPC, through the (APFR), provide actuarial services related to the following possible areas relating to the Ontario Public Sector Employees Union Pension Plan and Ontario Teachers' Pension Plan:
    - Design and execute various valuation models, as requested by APFR, relating to the ceiling test requirements in the CPA Canada public sector accounting handbook (PS3250.050 to PS3250.059)
    - Conduct sensitivity and/or scenario analysis as requested by APFR
    - Provide advice to APFR, for accounting purposes, on the ceiling tests and sensitivity analysis
    - Participate in discussions and meetings with internal and external stakeholders, as required

Implementation – start of mandate

In order to start the mandate on a solid basis, we believe that a first initial meeting between Deloitte and OPC would be the best first step. As Martin, Trevor, and Matt, are all familiar in working with OPC, we suggest that these three team members join the meeting on behalf of Deloitte to ensure that the mandate starts on the right track and uses most optimal approach.

Having worked with OPC recently on a previous accounting mandate, we do have a good understanding of the process and approach that will help deliver the necessary results. Still, in this initial meeting, many elements of process and basic information will be covered like:

- Identify the key personnel on both sides and define their expected role
- Review the list of pension plans that are to be covered
- Identify the documents that are to be made available (valuation reports, plan texts, internal procedures, financial statement notes, assumption selection documents, APFR's calculations)

- Identify the list of issues that are currently foreseen
- Key Internal and External stakeholders that are foreseen to be involved in discussions and meetings
- Discuss the other elements that may be of concerned based on our experience
- Agree to the communication procedures for information
- Define the expected process for any formal advice / recommendation prepared

Although the scope of work description under 1.5 of the RFS does not clearly identify tangible deliverables or definite milestones and delivery dates, we have identified below how we would proceed to get the main activities to a conclusion. These activities are identified as follows:

- Review of calculations used for pension and other benefits reporting under PSAS
- Design and execute valuations models related to the ceiling test under PSAS
- Conduct sensitivity/scenario analysis
- Participate in meetings

Review of calculations used for pension and other benefits reporting under PSAS

This activity covers most of what our work is likely to focus on. Our goal is to act as an internal control for the APFR. By leveraging our expertise auditing plans under PSAS, we will provide in-depth analysis and give value-add feedback.

Step	Description
Initial discussion with the OPC	Identify the plans in scope Identify whether we are looking at calculations and /or assumptions Identify calculations that the APFR believes require more scrutiny Identify the documents required for the work to be performed Get initial reaction from OPC
Review of plan document	Review documents provided to ensure all necessary information is obtained Identify any constraints or missing information that needs to be requested
Discuss Work Papers (WPs) to be prepared	Identify what OPC would like to see as a deliverable from Deloitte Use or amend Deloitte templates that will be in line with OPC's expectations
Prepare and Perform review of APFR's calculations	Use Deloitte WPs to perform review Provide a work document summarizing findings and Deloitte WPs Identification of any issues Define the options available in regards to any possible issues Give advice / guidance on possible issue
Discuss the analysis with OPC	Send the Deloitte WPs to OPC Run through the main elements of the review performed and the conclusions Discuss the options available in regards to possible issues

Although the deliverable may differ somewhat in format based on the needs, it will contain these most likely elements:

- Summary of the work (background)
- Identification of the documents used and prepared
- Identification of any issues that have arose

- Summary of calculations and steps performed
- Summary of the conclusion reached

Design and execute valuations models related to the ceiling test under PSAS

This activity covers a very specific area of the pension accounting standards. It is an element that needs some judgment and also that needs a comprehensive analysis to document appropriately the position taken. The asset ceiling test will be required when the plan presents a surplus and shows an asset on the balance sheet. This is done on a plan by plan basis. It does encompass a notion of future economic benefit (FEB) that requires the Government to define what it believes can represent a benefit in form of either surplus withdrawal or future reduction in the Government contribution through contribution holiday. The asset ceiling is important since based on the accounting standards, it does have an immediate impact on the annual expense of the Government and thus may be a very volatile component when the asset ceiling applies. Here are the steps we think could be taken to provide expertise to the specific situation of the Government. Much of this work will be leveraged from our prior engagement with OPC as a starting basis.

Step	Description
Initial discussion with the OPC	Identify the plans that are to be modelled Determine the various components of the test and how it is to be applicable Discuss for the affected plans the initial view on whether the Government could take some contribution holiday, if so on what circumstances Identify if one approach applies to all plans or if different situations exist (ex a closed plan)
Obtain the necessary documents	Accounting results for the affected plans Supporting plan text/funding policy for contribution holiday judgment Initial analysis that exists at OPC
Prepare an analysis of the situation for the plans	Define and structure the valuation model Prepare the assumptions that will be included in the model Based on the elements defined above, determine the FEB components for the affected plans
Perform valuation models	Determine possible contribution holidays FEB calculation basis Impact of the asset ceiling
Discuss the valuation models with OPC	Send the valuation models documents to OPC Run through the main elements of the analysis performed and the conclusion
Prepare formal communication	Depending on the needs, could take the form of a revised analysis or more formal document to be used with Auditor General or other external stakeholders

Some key elements are really important to look at when preparing this analysis:

- Valuation basis used for plan assets (market-related value?)
- Possibility of Contribution holiday – what supports this and what are the constraints
- Well-defined process to calculate this since it is a very complex element of accounting that not all stakeholders fully understand and can appreciate the accounting requirements
- Actuarial assumptions to include in projection

Conduct Sensitivity/Scenario Analysis

The scope of this engagement is similar to internal audit procedures we have experience with. Internal audit typically encompasses an element of sensitivity testing as a form of checks and balances. A sensitivity test will lend another layer of review. For example, we may see that an assumption changed from year-to-year and we would like to better understand if the impact makes sense. If we perform a sensitivity analysis, and we see 100 bps movement results in an impact of 10%, then a 50 bps movement should result in an impact of approximately 5%. Sensitivity is also a useful tool for shedding light on elements of risk.

Stochastic projections performed in tandem with different liability projections is a very robust form of scenario testing that OPC can also consider when working with us. By running 1000's of different scenarios to project the asset position in future years, OPC will have a more complete picture of a plan position.

Step	Description
Initial discussion with the OPC	Identify OPCs goals from the tests performed Understand OPCs 2017/2018 budget concerns Identify calculations that sensitivity analysis could prove to add value Identify concerns OPC may have in regard to certain future changes Determine which sensitivity/scenario tests will be performed Identify the extent of sensitivity to test (level of assumption change)
Prepare Sensitivity/Scenario analysis	Determine the impact of each test on the 2017/2018 budget
Deloitte and OPC discuss the outcome	Discuss the results of the testing Link the testing results to the initial goals of OPC Identify subsequent needs, if any

Some key elements are really important to look at when preparing this analysis:

- Assumptions / scenarios to be tested, horizon for the test
- Impact of changes in assumptions
- Impact of changes in methodology such as determining the Market-Related Value of Assets

Participate in meetings

This activity covers our presence and participation to meetings. It can be for internal or external stakeholders. It can be for meetings where we are more receiving information (ex Auditor General providing its view on one key accounting element and asking questions) or were we are presenting results of our analysis. So depending on the needs, we will adjust our work accordingly. Below is one situation where we are presenting analysis. In this case, we would have worked through the advice and guidance steps to work the analysis (activity described just before) and here we just identify the specific steps for the meetings.

Step	Description
Initial discussion with the OPC	Identify the participants to the meeting and their level of expertise Identify the meeting date and the location, length of meeting, agenda Identify the expected outcome for OPC Identify the key messages that are to be delivered Identify the role that OPC and Deloitte play in the meeting Determine the presentation support needed (document, power point, one-pager)

Step	Description
Prepare the necessary documents based on the advice / guidance analysis performed	Prepare the document Keep it accessible Use an approach of building the understanding from basis up to the conclusion Use as much as possible standards reference to support the conclusion
Review with OPC the document prepared	Review document for content Clarify elements that need to be adjusted Identify new elements to be added as needed
Identify questions	Define queries that may come up Identify weaknesses of document that may be questioned Prepare for likely answers to these should they come up Identify who between OPC and Deloitte handles the question part
Present document at the meeting	Introduction of the people present and role Identification of the objective of the meeting Formal presentation, answer questions
Post-meeting discussion	Review with OPC how the meeting went Identify elements that may need to be improved in the analysis Determine if a follow-up document needs to be prepared Identify if some questions were not answered appropriately and need subsequent answer, if so identify timeline for it Identify if we are waiting for some feedbacks or comments after the meeting
Follow-up	If questions needed subsequent answers If feedbacks or comments were expected

Although the deliverable may differ somewhat in format based on the needs, we will ensure that the content will be prepared considering the following

- The expected level of understanding from the participants
- The time allowed for the presentation
- The goal of the meeting (what we want to achieve).

SOW - Actuarial Support Services.pdf

FORM OF STATEMENT OF WORK – OPS ENTITY

Statement of Work for Management Consulting Services

This Statement of Work No. **RFS TBS-OTB-OPCD-20 made in duplicate and effective February 3, 2017 ending on September 30, 2017.**

Ernst & Young LLP (the vendor" or "EY") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of June 16, 2014 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$ $150,000 does not include HST

4. *Project Start Date:* February 3, 2017

5. *Project End Date:* September 30, 2017

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following

    1. Taking into account public sector accounting principles, advice and guidance on complex accounting and reporting matters related to accounting for pensions on the Working with management of the Office of the Provincial Controller's Accounting Policy and Financial Reporting Branch (APFR), the Vendor will provide actuarial services related to the following possible areas:
        - Review APFR's calculation of estimated accounting valuations based on actuarial input for pension plans reflected on the Province's consolidated financial statements (Ontario Public Service Employees Union Pension Plan, Ontario Teachers' Pension Plan, College of Applied Arts and Technology, Health Care of Ontario Pension Plan and Public Service Pension Plan) as well as post-retirement benefits.
        - Conduct related sensitivity and/or scenario analysis as requested by APFR.
        - Participate in discussions and meetings with internal and external stakeholders, as required.

    2. Working with management of the Office of the Provincial Controller, through the Accounting Policy and Financial Reporting Branch (APFR), provide actuarial services related to the following possible areas relating to the Ontario Public Sector Employees Union Pension Plan and Ontario Teachers' Pension Plan:
        - Design and execute various valuation models, as requested by APFR, relating

to the ceiling test requirements in the CPA Canada public sector accounting handbook (PS3250.050 to PS3250.059).
- Conduct sensitivity and/or scenario analysis as requested by APFR.
- Provide advice to APFR, for accounting purposes, on the ceiling tests and sensitivity analysis.
- Participate in discussions and meetings with internal and external stakeholders, as required.

7. *Ownership and Licences* – Attachment D of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* - The structure of Ernst & Young's working relationship with OPCD is vital to the success of their engagement. The Project Lead that will handle OPCD work is Uros Karadzic. Ernst & Young's communication strategy will be centred on periodic project update meetings, the frequency of which will be determined by the OPCD and Ernst & Young.

9. *Work Location* - All meetings will be within Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive.

    If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Fixed Price or Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Billing and Payment Process* – The Vendor shall provide the Client with quarterly billing statements that outline the per diem charges no later than 10 Business Days after the end of each quarter.

    Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Name of Individual	**Level**
Uros Karadzic	Senior Consultant/Project Lead
Shayan Jafrani	Intermediate Consultant/Sr. Analyst
Christina Chan	Consultant/Analyst

Note that participation of Uros Karadzic will commence only upon completion of his engagement with the Pension Asset Expert Advisory Panel.

14. **Invoices** - Invoices for payment of any charges under this Statement of Work shall be sent to:

    Client: Treasury Board Secretariat
    Office of the Provincial Controller Division

Branch: Accounting Policy and Financial Reporting
Representative: Nadine Petsche
Title: Director, Accounting Policy and Financial Reporting
Phone Number: 416 325 8027
Email: Nadine.petsche@ontario.ca

15. *Knowledge Transfer:* The Vendor will work closely with the Client to ensure knowledge transfer to the Client's designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* - The Vendor shall destroy all information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Indemnity* – the indemnity set out in the Master Agreement applies to this assignment.

18. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	**Treasury Board Secretariat**
Client Representative:	**Nadine Petsche**
Telephone number:	**416 325 8027**
E-mail:	**Nadine.petsche@ontario.ca**

19. *Vendor Representative and Receipt of Notices*

Uros Karadzic, Partner
Ernst & Yojng LLP
Ernst & Young Tower
P O Box 251
222 Bay Street
Toronto ON M5K 1J7

IN WITNESS WHEREOF the parties hereto have executed this Statement of Work as of the date first above written.

Her Majesty the Queen in right of Ontario as represented by The President of the Treasury Board

Per:

Signature:

Name: **Nadine Petsche**

Title: **Director, Accounting Policy and Financial Reporting**

Pursuant to delegated authority.

Subject: Expert Panel - end of work

Hi Nadine,

I've just submitted my timesheet to Nelson for the Expert Panel work. I believe we are now done, although my understanding is that the official mandate only ends on 31st.

I'm in all-day PSAB Taskforce meetings until Thursday, but following that please let me know if you're now comfortable with me joining Shayan and Christina.

Uros

updated memo attached for tomorrow's discussion.

Upon arrival, please call Shyrose Virani at 416 325 1448 to gain entry into our building.

Thanks
Shyrose

As per recent discussion, this meeting will be to review the proposed accounting treatment for Ontario's Cap and Trade program. Subject to any changes in the proposed approach, OPCD will initiate a discussion with the Auditor General's office to review the planned accounting treatment.

Pre-reading materials will be provided in advance of the meeting.

Cap and Trade accounting implications - memo for Nov 23 meeting.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [NTD – *MOECC to provide comments on accuracy of background terminology*]

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, after the distribution of free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular

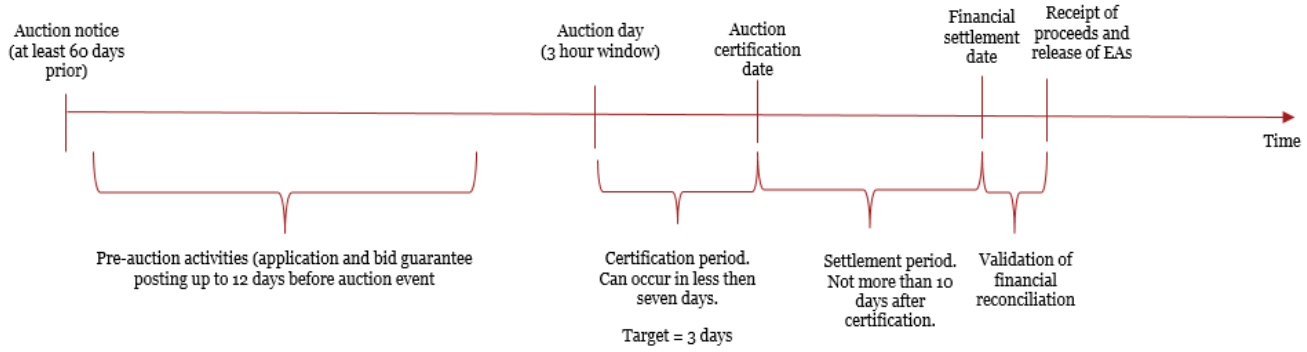
auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts.

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the

participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director

under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program

means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction

and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the

payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

4. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants (see section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

On distribution of "free" EAs to capped emitters (see section 6 - included here for completeness of entries)

Dr Expense (expected to be nil as at cost of inventory)

Cr Inventory held-for-sale (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On date of receipt of proceeds to GGRA and transfer of EAs to participant CITSS accounts:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

As emissions are made by participants

No journal entry required

On receipt of EAs for the current compliance period in respect of compliance obligations or increased compliance obligations:

No journal entry required

On receipt of any EAs of future vintages settled in respect of a 3 for 1 compliance obligation:

Dr Inventory held for sale (expected to be nil cost)

Cr Revenue (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) <u>On creation of free and auctioned EAs</u>:

EAs are "goods" created to be sold or distributed to participants (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs therefore meet the definition of inventories held-for-sale as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount. PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no

cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids and therefore if their bids are successful. Only successful bids give the Province any rights to the escrow proceeds. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those

deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected:

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 5 below and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. The only exception is when EAs for a future compliance period are received as part of the 3 for 1 increased compliance obligation as these may be re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations. Any recognition of an asset for the right to receive back applied to all EAs would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not a fair presentation.

e) Failure of participant to pay increased compliance obligation:

An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations as they can purchase additional EAs on the market at the market price. EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognize the receivable at the amount expected to be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance

obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub- accounts.

Analysis

a) Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them for cash or any other financial asset, or exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an

Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 6 below.

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

6. Revenue recognition under the cap and trade program as sponsoring government

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix C for details.

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the date of delivery of the EAs as this is when the performance obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) <u>What is the performance obligation for the sale of EAs?</u> A performance obligation is defined in IFRS 15 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the Revenue SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". The following analysis has applied the IFRS concept, as permitted under PS 1150.

   In both IFRS 15 and the Revenue SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix C for definition of "distinct goods and services")

   Based on the above analysis, a contract is created when a participant successfully bids at auction as confirmed in the auction certification process. The Province has distinct performance obligations to deliver each EA to each successful bidder under these contracts.

   <u>Alternative positions considered and rejected:</u> It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon

in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to redeem an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) <u>When is the performance obligation satisfied?</u> There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15 the performance obligations are satisfied as control

of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the Revenue SOP proposes a "control" model similar to IFRS 15, so this approach has been applied in the analysis. Under IFRS 15 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the Revenue SOP and have been considered in this analysis. See IFRS 15.38 in Appendix C. The indicators have been assessed as follows:

<table>
<tr><td>Indicator</td><td>Auction day</td><td>Auction Certification date</td><td>Financial Settlement date</td><td>Receipt of proceeds and delivery of EAs</td></tr>
<tr><td>Present right to payment</td><td>Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.</td><td>Yes. Under the contract payment must be received prior to delivery of EAs</td><td>N/A payment must be received before this date</td><td>N/A payment must be received before this date</td></tr>
<tr><td>Legal title to the asset</td><td colspan="3">Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.</td><td>However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.</td></tr>
<tr><td>The entity has transferred physical possession of the asset</td><td colspan="3">This indicator is not entirely relevant as EAs do not have physical form.</td><td>However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.</td></tr>
<tr><td>The customer has accepted the asset</td><td colspan="4">There are no customer acceptance clauses. This indicates is not relevant.</td></tr>
<tr><td>The customer has significant risks and rewards of ownership of the asset.</td><td colspan="4"></td></tr>
</table>

Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or suffering from the fluctuations in the market price of EAs	Possibly – the price that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	Yes – From this date the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	N/A already met	N/A already met

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected:

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.

- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the

requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

8. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

9. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

10. Implementation risks and audit considerations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.	

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

<u>Is there a liability created?</u>

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049).

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

This paper can be found at: http://www.ipsasb.org/system/files/meetings/files/Agenda-item-14.pdf

Cap and Trade accounting implications - memorandum to file v5 November 2....pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations [INTD – *MOECC to provide comments on accuracy of background terminology*]

Formatted: Highlight

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (~~mandatory~~capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: ~~There~~In accordance with the Regulations there are four auctions a year. ~~MOECC determines~~ EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction, ~~and how many of each "the vintage"~~after the distribution of ~~the EAs is available.~~free EAs. The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage~~", but more~~". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which

Formatted: Tab stops: 17.62 cm, Left

case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value~~.~~, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

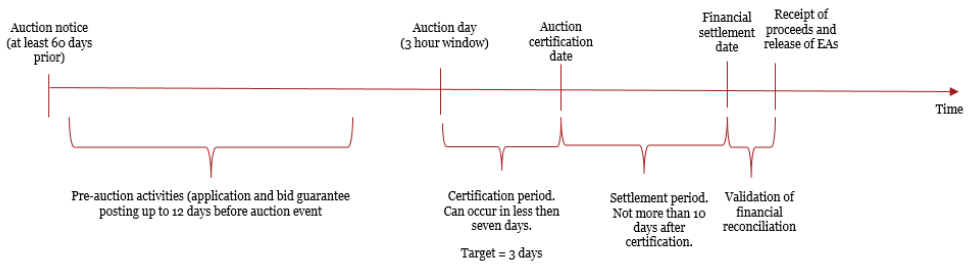
Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB~~).~~.) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province ~~(and a market monitor, for WCI auctions)~~ reviews the results for compliance with the ~~Province's regulations.~~regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices~~.~~ by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days~~, in~~ into their sub-account, which ~~case~~ is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once ~~payment has~~all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts. ~~[Question for MOECC – up to the date of auction can a registered participant remove themselves from the auction and get back their cash/LOC or are they locked in until after the auction date?]~~

~~[o/s is to determine if there is an insolvency risk prior to the auction period; if there is, has the Province effectively guaranteed the return of the bid collateral if the escrow holder became insolvent]~~

Auction timeline illustration



Free allowances

~~Mandatory and capped~~Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the participant~~.~~ and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period~~.~~ (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs ~~available~~issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations~~.~~ and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are ~~cancelled~~retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If

they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits ~~for early action~~" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall~~.~~, and in the jurisdiction where the reduction is the cheapest (most efficient). There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). ~~Any~~Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities

of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that Canadian provinces that do not have a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. As such, actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. What is the nature of EAs

Relevant guidance - See Appendix C for details.

PS 3450, Financial Instruments ("PS 3450") (effective for years on or after April 1, 2019)

PS 3510, Tax revenue ("PS 3510") (for definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles ("Revenue SOP") (non-authoritative due process document)

IPSASB staff paper "Emissions Trading Schemes" Agenda Item 14 March 2016.

Preliminary position:

The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.

Analysis:

In order to determine the appropriate accounting for EAs it is important to understand what they are and what they are not.

An EA is separately identifiable and is a permit (a non-exclusive, non-expiring right) that allows the holder to settle the legislative compliance obligation that arises from producing one ton of emissions. This is subtly different from a "quotas" (for example a milk or fishing quota) that gives a holder the right to produce a certain level of product that the producer can then sell for economic benefit, because the ultimate benefit of the EA to the participant is the permission to avoid a fine or payment that would otherwise be required for non-compliance with the Act[1].

Is it a financial instrument?

Current PSAS does not define financial instruments. However, PS 3450 (effective in 2019) define financial instruments as "any contracts that give rise to financial assets of one entity and financial liabilities or equity instruments of another entity". An EA is clearly not an equity instrument, and so it will only meet the definition of a financial instrument if it creates a financial liability to one party (and a financial asset to another). A financial liability is defined in PS 3450 as any liabilities that are contractual obligations (a) to deliver cash or another financial asset to another entity; or (b) to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government. A financial instrument by definition a contract. It could be argued that EAs are statutory instruments created by legislation and issued in a unilateral transaction (see "is it similar to a "tax" on emissions?") in which case an EA could never be a financial instrument. For purposes of this analysis an

[1] This is consistent with the conclusions of Mr. Stephen Morris QC in hearing a case regarding the EU ETS system and the nature of European Union Allowances in Armstrong DLW GmbH v Winnington Networks Ltd (2012).

EA is considered to be a contract between the holder and the Province as both parties know their respective rights and obligations that arise from holding and issuing EAs.

An EA does not create an obligation for any party to pay cash or other financial assets. The province has no contractual requirement to pay cash to redeem an EA and is never required to exchange an EA for another financial asset under any circumstances. (The province may accept cash payment in lieu of EAs for an increased compliance obligation at its discretion). Similarly, once they are the holder of an EA they are not obligated to pay cash or other financial assets to another party under the terms of the individual EA. A participant may be obligated to obtain the necessary number of EAs to meet their compliance obligations under the cap and trade program, to reduce their emissions accordingly, or in some cases to pay an increased compliance obligation in cash, these are obligations that arise through the act of emitting pollutants and not an obligation that is incurred through holding an EA. Rather holding an EA permits the participant to avoid an outflow of cash otherwise payable.

Is it similar to a currency?

Governments are unique in that they have the power to issue currency as legal tender. By analogy the EAs could be viewed as similar to a form of "currency" – a medium of exchange - that must be accepted by the government to settle compliance obligations. Compliance obligations only exist through government legislation, and the government also provides the means by which to settle those obligations (EAs). The maintenance of EAs in circulation is required by Cap and Trade regulation. The issuance of EAs at auction could be an issuance of this "currency" for cash. The distribution of EAs could be similarly a distribution of currency for no consideration (similar to a government grant). EAs can be traded like a currency (with a varying exchange rate to Canadian dollars depending on the market price). This is the position taken by certain governments in accounting for their Emissions Trading Systems such as New Zealand (See Appendix A). The arguments that the EAs are a form of "currency" have some merits. However unlike currency, the EAs in circulation are retired after they are submitted for a compliance obligation and not recirculated. In addition the amount of EAs in circulation is planned to decline over time as emissions are reduced. These caps may also be influenced by external parties such as the Federal Government setting emissions reduction targets that must also be complied with. Further, once Ontario is linked to the WCI it is not the only jurisdiction issuing EAs in circulation that can be used to comply with an Ontario emissions obligation. This means that Ontario could accept back "currency" in excess of that which it issued, or equally never receive back "currency" that it has issued. These factors mean that unlike a currency in circulation, Ontario does not control the EA supply that can be used to settle the compliance obligations. However, for completeness Appendix B considers how the circulation in currency model could be applied to the Ontario cap and trade system.

Is it similar to a "tax" on emissions?

While the mechanics of a cap and trade system are different than a carbon tax, the policy objectives are the same - a price is put on pollution with the purpose of reducing pollution. The primary purpose of the cap and trade system is to reduce emissions and any revenues earned from the sale of EAs is incidental and similar to revenues obtained from taxing other undesired behaviours (such as taxes on alcohol or cigarettes).

The cap and trade legislation requires mandatory participants to purchase EAs in order to settle a legislative obligation to the extent that the participant's emissions exceed their allowance of freely distributed EAs. Under this approach any amounts received, regardless of the timing of those receipts, are considered to be a non-reciprocal transaction as the participants did not have to pay these amounts prior to the implementation of the cap and trade legislation, therefore these costs to the participants are created by legislation in respect of their emissions.

It is the act of emitting in excess of "free" EAs that creates an obligation of participants to pay for a certain amount of EAs. While Participants must obtain EAs in order to meet their compliance obligations which are created by legislation and initially EAs are only available from the Province, it is not the act of auctioning the EAs itself that gives rise to a right to the revenues as there is no legislative requirement that forces a participant to purchase an EA prior to them creating emissions that must be settled through EAs. Further, once linked to the WCI there is no legislative requirement that the participant purchase an EA from the Province.

If the scheme is considered to be in substance like a tax, it would be appropriate that the recognition of revenue would be accounted for in accordance with PS 3510. This would result in "revenue received in advance" for EAs that are sold, and something similar to a "tax concession" for participants that receive free EAs. There would be no accounting recognition for EAs. If the scheme was considered to be another form of unilateral transaction created by the constitutional rights of the Province then it is relevant to consider the proposed guidance in the Revenue SOP. Although not authoritive until a standard is approved, the proposals indicate that revenue for unilateral transactions is recognized when the Authority to collect the revenue exists and the event that gives a right to those revenues has occurred. Paragraph .114 of the SOP states "The past event is specific to the nature of the transaction and the legal authority that gives the public sector entity a right to the revenue. The desired effect is that the past event should be readily identifiable and consistent, both over time and amongst those jurisdictions with similar sources of unilateral revenue. In TAX REVENUE, Section PS 3510, the equivalent concept is the taxable event". It is considered that the event that gives rise to a right to the revenue is the participant's emissions and not solely the auction of EAs.

The key determination to support this view is whether the sale of EAs is an exchange transaction or a non-exchange transaction as those terms are defined in PS 3510. It might be argued that the Province has not given up anything by issuing the EAs regardless of whether they sell the EAs in an auction or freely distribute them because the EAs do not cost anything to create and are to be used only to settle obligations created by the cap and trade regulations. Therefore any amounts received are non-reciprocal.

However, the sale at auction seems to meet the definition of an "exchange transaction" because one entity (the auction participant) receives assets (the EAs – which are assets from the perspective of the participant and assets to the Province immediately prior to the auction) and directly gives approximately equal value in the form of cash to another entity (the Province) as the amount of cash paid for an EA equates to the fair value of the EAs. This is supported by the following facts

Formatted: Line spacing: At least 12 pt

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see also Section 4 (a) below).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- The Province's right to payment from a participant arises from the auction process and not solely from legislation. If no EAs are purchased at auction the Province has no right to payment. The province has an obligation to deliver the EA to a participant's CITSS account as part of the auction process.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

Is it a "good or service" and if so, of what nature?

The analysis in the above section supports the sale of EAs as being an exchange transaction. This is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the Revenue SOP. Because of the exchange nature of the auctions as the EAs can be considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no inflows to the Province or inflows are less than expected.

Prior to pollution pricing mechanisms the ability to emit pollution was a "free good". There was no cost to companies from emitting pollution - rather the costs were born by society as a whole. The cap and trade legislation forces companies to internalize the costs of pollution, thus turning a "free good" into a "good" that has a price. The price of being able to emit pollution is the cost of obtaining an EA i.e. a permit to settle the compliance obligation.

From the perspective of the participant, the EA is a "good or service". Accounting standards do not clearly define the difference between a "good" or a "service". Often it is evident. Goods are usually understood to be tangible items for which physical possession can be transferred. Services are usually understood to be actions that benefit the recipient that are consumed as the service is provided. Other examples of "goods and services" that are less clear are:

- Stand ready obligations, such as standby charges levied to have good or service providers ready to act
- Rights to use tangible or intangible assets, such as leases or licences for intellectual property
- Options to purchase future goods and services (for example, gift cards or future discounts)
- Providing a decision (for example, fees to apply for a driver's licence and its issuance to a qualifying driver)

(see "Revenue" Statement of Principles issued by PSAB, August 2013)

An EA does not fit neatly into any of these categories. It is intangible (it does not have physical form). It is not a right to use an existing asset (tangible or intangible) of the Province as the right relates to an action of the participant (emissions). As the participant can transfer the EA to other participants, it is clear that the issuance of an EA is not provide a benefit to the recipient that is consumed as it is delivered. The EA does not give a participant the right to future goods or services to be provided by the Province, nor does it represent that the province is on "stand-by" to deliver future goods and services as there is no transfer of further goods and services when the EA is remitted in settlement of a compliance obligation.

As an EA is tradeable and can be transferred or sold to other participants it is most similar to a "good", albeit one in intangible form. If a participant receives a good from the Province in a transaction then the Province must be delivering a good. Therefore although the province creates the EA and the use value of the EA is dependent on the Province's own legislation regarding compliance obligations it makes sense to apply symmetry between participants and the Province in respect of the determination of nature of the EAs.

~~3.~~4. *Identification of assets relating to the cap and trade program as sponsoring government*

Summary of relevant guidance – See Appendix ~~A~~C

PS 1000, Financial statement concepts ("PS 1000")

PS 1200, Financial statement presentation ("PS 1200")/PS 1201, Financial statement presentation, effective April 1, 2019 ("PS 1201")

PS 3210, Assets, effective April 1, 2017 ("PS 3210")

PS 3450, Financial instruments, effective April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation ~~and sales~~ of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not ~~cancelled~~retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

~~b) [NTD preliminary conclusions subject to change, based on further understanding of escrow accounts, whether "delivery of EAs" is substantive, importance of certification date vs auction date and subject to discussion with TBS.]~~

   Note that as it is expected that these amounts will be nominal this preliminary position has not material impact on the Public Accounts.

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the ~~date of the auction~~transfer of funds into the Province's escrow settlement account.

   ~~On the~~After auction ~~date, a receivable~~certification cash from successful bidders is ~~recognized by the Province for the sale of EAs.~~transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash in Escrow). A corresponding amount is recognized ~~in Revenue~~as deferred revenue until the contract is settled by the transfer of EAs to the participants (see ~~Part 5).~~section 6 below). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) Period between the auction certification date and the delivery date of the EAs: From the date of the contract between the Province and the successful bidder and the settlement of the contract by delivery of EAs there is no derivative instrument required to be recognized.

~~c)~~d) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation as emissions are produced by participants are not recognized as assets, whether sold at auction or issued as free allowances.

~~d)~~e) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs or receipt of EAs that can be re-sold:

Analysis

~~*Analysis*~~

Formatted: Font: Italic

Formatted: Font: Italic

Formatted: Font: Not Italic

Formatted: List Paragraph, Line spacing: single

a) On creation ~~and sales~~ of free and auctioned EAs:

EAs are "goods" created to be sold or distributed to participants~~. These~~ (see analysis in section 3 above). The sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. ~~Therefore despite being intangible in nature,~~ PS 1200.048 notes that inventories for sale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. The EAs ~~also~~therefore meet the definition of inventories held-for-sale ~~and~~as they are held for sale in the ordinary course and the revenues can be used to finance future operations. Despite being intangible in nature these could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount.

~~EAs that are returned to the government and not cancelled due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).~~ PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory. ~~[ASK MOECC CREATION PROCESS – EXPECTATION IS THAT NO FIXED PRODUCTION OVERHEADS EITHER – ALL WOULD BE GENERAL MANAGEMENT I.E. IF NO PRODUCTION OCCURRED WOULD ANY OVERHEAD COSTS BE ELIMINATED.]~~

~~It is noted that upon the adoption of PS 3450 in fiscal 2020, inventories held-for-sale would be in scope of PS 3450 as they are classified as financial assets under PS 1201 (currently PS 1200). PS 3450 requires financial assets other than equity instruments that are quoted in an active market to be measured at amortized cost, net of any allowance for recovery. While EAs may be considered to trade in an active market, if an active market develops, EAs are not equity instruments and therefore will not be required to be measured at fair value.~~

~~Under PS 3450 financial assets can be designated as measured at fair value when they are part of a portfolio of instruments that is managed at fair value or contain an embedded derivative. It is unlikely that the Province would be considered to manage newly created EAs on a fair value basis and there have not been any embedded derivatives identified in the EAs. Therefore EAs held as inventory must be measured at cost.~~ EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities).

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view is an acceptable view under PSAS, but was ultimately rejected as the preliminary position because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for

production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and ~~lead to~~provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

An asset is recognized by the province as cash is transferred to the Province's escrow settlement account. Prior to the auction process, the Province does not control the ~~proceeds~~ cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party ~~(DB)~~ in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids~~, or~~ and therefore if their bids are successful ~~and therefore whether~~. Only successful bids give the Province ~~has~~ any rights to the escrow proceeds ~~prior to the auction being held. Rather~~. Instead the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. ~~[NTD – Add additional support if bidders can retract bid guarantees prior to auction date.]~~ If no auction occurs for any reason then the Province does not have any right to the escrowed ~~amounts. [NTD – to confirm]~~cash amounts in the sub-account. After consulting with legal counsel from Ministry of Finance and Treasury Board, it has been determined that at the point in time when money is deposited into Ontario's escrow account, that money is "public money" within meaning of the Financial Administration Act (see subsection 1 (3) of that Act) in that it "belongs" to Ontario. Therefore prior to this point, funds (such as those in the participant's sub-accounts) are not considered to belong to Ontario and should not be recognized as an asset. Further if DB fails to make payment to the Province because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for the FSA's error[2]. As the agreements between DB and the Province are still under negotiation, the final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

~~From the auction date there is a contract between the Province and the purchasers of EAs. While the Province has not yet credited EAs to the recipient's account, the process of crediting EAs is considered not to be substantive as EAs are not in physical form and the Province controls the recording of EAs in the participants' accounts. Rather, the legal and contractual rights of the EAs are obtained by a purchaser on the auction date. In addition, the participant has also substantially performed under the contract as payment has already been made either through a cash bid guarantee or by the submission of an adequate LOC or LOG. The Province would recognize this as a receivable to the extent that the cash has not been received from Deutsche Bank.~~

~~This position is also analogous to "trade date" accounting which is required by PS 3450.A16 for financial assets traded on a recognized exchange in regular way purchases and sales. While the initial auction of EAs is not on a recognized exchange, they are financial assets and they are auctioned into a~~

Formatted: Normal, Indent: Left: 1.9 cm, Line spacing: Multiple 1.15 li, Tab stops: Not at 1.9 cm

[2] Legal position outlined in "Report back on WCI Inc Auction process" Submission to Treasury Board/Management Board of Cabinet, August, 2016.

~~market place on a regular basis and give rise to a fixed price commitment between the participant and the government, therefore an analogy to the trade date requirement may be appropriate.~~

~~*Measurement of receivable:* The receivable would be measured at the auction price, being the amount of consideration expected to be received from the sale. Due to the bid guarantees it would be expected that the full auction price would be received. [IF EXPOSED TO DB CREDIT RISK MAY NEED TO ADD SOMETHING REGARDING BAD DEBT EXPENSE]~~

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date because the certification process is considered to be substantive. Certification is considered substantive because the Province reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Based on this analysis there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. Once cash has been transferred from participant's sub-account to the Province's escrow account it is an asset of the Province. It is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the validation of the financial reconciliation, which is considered to be only a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash (in escrow) by the Province. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue (see Section 6 below). Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) would not be recognized as an asset of the Province prior to settlement of the LOC/LOG and cash being deposited in the Province's escrow settlement account. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract until one party performs by paying consideration or delivering the goods. As there is no amount receivable (as the Province will never deliver the EAs prior to cash being received) there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the

restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 6 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected: ~~Three alternative views were considered for asset recognition – 1) at the posting of bid guarantees; 2) on settlement date; and 3) on auction certification date.~~

~~*Posting of bid guarantees:* For this option, escrow amounts meet definition of an asset when the participant posts a bid guarantee in cash. Under this view it is argued that the Province~~It was considered whether an asset should be recognized by the province when cash is received into a participant's escrow "sub-account" - which is a sub-account of the Province's escrow account - and only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders~~, therefore effectively controlling the escrowed amounts. The cash held in escrow is therefore held on behalf of the Province (an asset) with a corresponding liability to either return the cash or EAs. This view was rejected as the use of escrow accounts, as opposed to deposits lodged directly with the Province, sets out the relevant terms as to how and when escrow proceeds are released and therefore the Province does not have discretion to direct the funds as they wish. As the Province has not yet delivered any EAs they do not have a right to the amounts in escrow, and nor do they have legal title. Therefore, the Province does not have any substantive mechanisms of control over the escrow accounts.~~. A bidder cannot retract their posted financial assurance until after an auction has gone ahead.

Therefore any escrowed cash amounts could be considered similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. This view was rejected as based on legal assessment the Province does not own or control the participant's cash in Escrow and has no rights to it prior to the auction process.

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 6 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

Auction date as contract date: An alternative view to certification date as the contract date between the Province and the participant for the sale of EAs is that there is a contract on the auction date. This view would indicate that the certification process is not substantive and is a matter of course with changes or rejection of the initial auction algorithm results expected to be rare. It might also be argued

Formatted: Normal, Indent: Left: 1.9 cm

that while the participant does not know whether they have been successful or not, the Province has run the auction algorithm and does know who the successful bidder are and at what price, and therefore from the Province's perspective there is a contract. This view was ultimately rejected on the basis that the auction certification process is considered to be substantive to ensure the successful bids are legitimate and do not exceed holding limits. Note that based on the preliminary revenue conclusions (revenue recognized on delivery of EAs to CITSS accounts) if this view was taken it would not substantially change any of the accounting entries.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement creates a derivative that needs to be recognized for the contract that exists from the certification date to the settlement of the contract by delivery of EAs date. The contract is a fixed price contract as the Province has agreed to sell a specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

Alternative positions considered and rejected: ~~*On settlement date:* It could be considered that the contract is wholly unperformed until the Province has received the cash released from escrow (or other cash payment from participants) as this cash must be received before the EAs are credited to participant accounts. Under this view an asset and revenue is only recorded once cash has been received. This view was rejected as the bid guarantee and escrow process means it is only a matter of time before the funds are received by the Province and therefore this is not substantive enough to preclude asset recognition as the Province controls a right to cash from the date of auction under the cap and trade auction mechanism.~~

Formatted: Font: Not Italic, No underline

~~*On auction certification date:* It could be considered was that the certification date is the point for asset recognition as prior to this the auction may not have been valid. This was rejected because the certification date is only to confirm compliance and does not change the date that the contractual arrangements between the Province and the participant for the sale of EAs was made. However, if the certification process rejected certain sales or the auction as a whole, this would be an adjusting subsequent event that would be considered in determining whether assets/revenue from the auction process should be recognized.~~

No alternative views considered on the basis that EAs are not financial assets for purposes of PS 3450 as discussed below in "EAs in circulation".

~~c)~~d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can

deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are ~~cancelled~~retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs~~. This alternative view would be consistent with a~~ as a participant emits. This is symmetrical with the participant's accounting for an emission obligation as they emit. However, while the Province arguably has a right to receive an EA due to a past event (the emissions) that the Province controls (through the cap and trade legislation) once returned the EAs do not have future service potential or the ability to generate future economic benefits as they are retired immediately.

Any recognition of a right to receive an EA that is created when a participant emits over time must create revenue as the corresponding credit, as there is no liability that is created by the right to receive an EA. This then results in a write-off to expense when the EA is actually received back. This expense would not reflect the economic substance as it implies that the Province is "better off" financially when emissions are produced despite there being no inflow of economic benefits due to emissions, and "worse off" when EAs are remitted for the pollution, despite there bring no outflow of economic resources (expense) for the Province at the point the EAs are returned and written off. For these reasons this view would not result in a fair presentation.

This alternative view is more consistent when there is a corresponding view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section ~~4~~5 below~~.~~ and Appendix B.

It was also considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. ~~Therefore~~ The only exception is when EAs for a future compliance period are received as part of the ~~right to receive an EA is also not an asset. The~~3 for 1 increased compliance obligation as these may be

re-sold in the future. However for these EAs, the Province does not control how many EAs may be received back that can be re-sold ~~(i.e. those remitted~~ or how many of these are for a future compliance period and so the asset criteria of control cannot be met in respect of this right to receive EAs for increased compliance obligations~~) and so any~~. Any recognition of an asset for the right to receive back ~~was recognized for~~ applied to all EAs~~,~~ would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then ~~cancelled~~retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not ~~appropriate accounting~~a fair presentation.

~~d)~~e) Failure of participant to pay increased compliance obligation:

~~The~~An increase compliance obligation is similar to a fine or penalty in that it increases the incentive for a capped participant to obtain enough EA "permits" during the compliance period or the participant must obtain a greater number of permits at a greater cost. However, while the compliance obligation is increased for the participant, the Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations~~. As participants~~ as they can ~~settle their obligations with~~purchase additional EAs ~~that~~on the market at the market price. EAs do not enhance or create expected economic future benefits for the government~~. It~~ for the reasons noted in part (d) above in that they are resources that are controlled, but do not lead to future economic benefits for the Province. As participants can settle their obligations with EAs (including those from a future compliance period and after Ontario is ~~only when~~linked, those issued by another jurisdiction of the WCI) there is no asset of the Province until a participant has not settled with EAs ~~that~~and under legislation the Province has a right to demand cash as settlement of the compliance obligation~~.~~ (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: ~~The~~ There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues*. However, it would be consistent with PS 3510 and other standard to recognize the receivable ~~would be recognized~~ at the amount expected to ~~-~~be received at the time of initial recognition. This would take into account the *expected* settlement of the receivable. For example, some or part of the amount might be settled by a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province as the cost of creating free EAs for distribution is nominal (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation. Therefore there can be no further expected future benefits to be obtained for the Province prior to this point.

~~4.~~5. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance – See Appendix C

PS 1000, Financial statement concepts ("PS 1000")

PS 3200, Liabilities ("PS 3200")

PS 3300, Contingent liabilities ("PS 3300")

PS 3310, Loan guarantees ("PS 3310")

PS 3410, Government Transfers ("PS 3410")

PS 3450, Financial instruments, effective from April 1, 2019 ("PS 3450")

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial ~~liability~~liabilities for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There is no exposure for the Province in respect of Participant's cash financial assurance held in escrow in the participant's sub-accounts.

Formatted: Not Highlight

Analysis~~Loan guarantees and contingent liabilities: **EITHER** There may be an implicit loan guarantee by the Province in respect of the funds held in escrow for the participants prior to the auction date and up to the date of settlement. Absent any specific information to the contrary regarding DB's solvency it would usually be considered not likely that the Province would have to pay any amounts in respect of the escrow proceeds and no accrual would be made. To the extent that there are escrowed proceeds held over a balance sheet date disclosures of the implicit loan guarantee should be made, if material.~~

~~**OR** There are no contingent liabilities or loan guarantees by the Province in respect of the funds held in escrow for the participants either prior to the auction date or between the auction date and settlement date.~~
~~[NTD – position to be confirmed based on discussion of insolvency risk with DB~~

~~c)~~ Financial liabilities: As noted in the analysis in part 3 above and Appendix B the EAs themselves are not financial instruments and therefore do not create a financial liability, as once~~accounts. I'm not sure there is, but if it is considered to be "public money" prior or post auction then the Province might have a duty to repay it.]~~

Formatted: Not Highlight

Formatted: Font: Not Italic

Formatted: List Paragraph, Line spacing: single

~~*Analysis*~~

a) ~~Financial liabilities: Under the cap and trade legislation the Province will issue a certain number of EAs under the program (the cap) and, as EAs are financial assets, being inventory held-for-sale (see Section 3 (a) above) this is an obligation to deliver financial assets. However the obligation, such that it exists (see also (b) below), is not a contractual obligation with the participants, as it is brought about through the cap and trade legislation and regulations not individual contracts with participants.~~

a) ~~Once~~ the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them ~~in a manner that results in a sacrifice of economic benefits. Under the legislation, the EAs can only be redeemed to settle a participant's compliance obligation under the legislation and cannot be redeemed~~ for cash or any other financial asset, or ~~exchanged~~exchange them for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

Formatted: Indent: Left: 0.95 cm, Hanging: 0.95 cm, Numbered + Level: 1 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 0.63 cm + Indent at: 1.27 cm

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of ~~cancelled~~retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach ~~and recognizes a liability for the obligation to repatriate or redeem the EAs for their emissions value to the participant (Dr Cash (auction EAs) or Dr Expense (free EAs) and Cr Liability for Emissions Notes for market price), along with a right to receive EAs from participants to settle the EA obligation as emissions occur (Dr Receivable, Cr Revenue). This accounting has the benefit of being most symmetrical with the common accounting methods used by participants under other Frameworks such as IFRS.~~. Whether the EAs can be considered similar to "currency in circulation has been considered in Section 3 above". Whether this view would result in a financial liability being recognized by the Province for EAs in circulation is explored further in Appendix B.

~~Our understanding is that New Zealand took this view, in part, because their EAs (NZUs) are interchangeable with "Kyoto AAU's" (International units), which may create an obligation for New Zealand to accept Kyoto AAUs for NZUs under terms that could be unfavourable. However, this view was rejected as based on the cap and trade program applied by Ontario the obligation to repatriate or redeem the Emissions Notes does not result in an outflow or sacrifice of future economic benefits as~~

~~there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.~~

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to ~~deliver~~transfer "goods" (being the free EAs) in total or to specific participants. ~~Ultimately however, the~~The delivery of free EAs is a transition mechanism and is ~~at the discretion of the Province, rather than a contractual or constructive obligation~~non-reciprocal (as opposed to the ~~participants, as the Province retains discretion over the issuances~~sale of EAs which is a reciprocal transaction). The transfer of ~~free EAs. [To confirm with MOECC – may have to switch to the alternative view if MOECC~~EAs is not ~~comfortable with the idea~~technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is ~~no~~an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs~~]~~. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

~~*Alternative positions considered and rejected:* It could be argued that there is a constructive (rather than contractual) obligation to deliver free allowances to certain participants, due to actions and communications of the Province that have raised valid expectations for specific participants that they will receive free allowances in order to meet their compliance obligations. The obligation would be settled when free allowances are issued. However, even if this view is taken, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material.~~

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the

Formatted: Tab stops: 1.9 cm, Left

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Font: Georgia, 10 pt

Formatted: Font: Not Italic, No underline

Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section ~~5~~6 below.

~~c) Loan guarantees and contingent liabilities: [TBD – To be supported by facts, if any, that indicate the Province may be liable for the return of amounts held in escrow if DB goes insolvent and does not return the escrowed amounts to participants. If it is concluded that there is no implicit guarantee or contingent liability because the Province cannot be liable for the return of the escrowed amounts, the facts will support that position.]~~

It was also considered if there is an obligation of the Province to run the Cap and Trade Program pursuant to legislation and if this creates a liability for the costs of running the program. Under the government's own legislation the Province is responsible for managing the ETS, which will require an outflow of resources in the form of administration costs, including the costs of administering EA issuance, emissions monitoring and compliance settlement activities at the end of the compliance period. There is also a past event that gives rise to this obligation being the enactment of the ETS legislation. However, as the cap and trade program is pursuant to the Province's own legislation there is still discretion to avoid the future outflows through the ability to change the legislation. The federal government has recently announced plans that mean provinces must come up with some form of carbon pricing scheme or else a federal carbon price will be imposed. Currently there is no indication that the federal government is requiring that Ontario continue with its cap and trade program as that program could be replaced with other carbon pricing mechanisms or could be removed and Ontario become subject to any future federal scheme. As such there is no third party that means Ontario has little or no realistic alternative but to continue with the Cap and Trade Program. Indeed, the actions of the federal government indicate that Ontario could stop its own program at its discretion and rely on any federal scheme to achieve carbon reductions.

Loan guarantees and contingent liabilities: It was considered whether the Province has an implied loan guarantee or contingent liability in respect of Participant's cash financial assurance, and whether the Province has the obligation to ensure the amounts are returned to participants if the auction does not run or they are not successful, even in cases of insolvency or error on the part of DB. Based on a legal analysis the Province does not appear to have exposure for loan guarantees or contingent liabilities to the extent that participants have submitted cash bid guarantees in participant's Escrow accounts as there is recourse under both the indemnification clause of the DB contract and required insurance (depending on the nature of the error). Further, if the DB fails to make payment to a participating jurisdiction because it has lost or mishandled funds provided by a successful bidder, the respective rights and obligations of the bidder and participating jurisdiction is governed by the agreed to terms and conditions governing the auction. The participating jurisdiction should not be liable for DB's error.

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts. The final arrangements between DB and the Province of Ontario should be considered to confirm the above analysis.

~~5.~~6. Revenue recognition under the cap and trade program as sponsoring government

Formatted: Font: 10 pt, Not Bold, Not Italic, Font color:

Formatted: Indent: Left: 1.98 cm, Line spacing: At least 12 pt

This section is divided into three sub-sections. The first examines whether the transactions being accounted for are exchange (reciprocal) or non-exchange (non-reciprocal) transactions. The second considers what performance obligations exist. The third section looks at the pattern and timing of revenue recognition for the performance obligations identified.

Sale of EAs as exchange or non-exchange transactions

Revenue recognition on sale and distribution of EAs

Relevant guidance - See Appendix AC for details.

PS 3510, Tax revenue (definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles (non-authoritative due process document)

Preliminary position – The sale of EAs are exchange transactions.

***Analysis*:**

The auctioning of the EAs is meets the definition of an "exchange transaction" in PS 3510 as participants receive an asset (an EA) and gives approximately equal value in exchange. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see Section 3 (a) above).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

The analysis above is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the PSAS Revenue Statement of principles, as the EAs are considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. The Province's right to payment from a participant arises from the auction process and not solely from legislation. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no or reduced inflows to the Province.

***Alternative positions considered and rejected*:** An alternative view is that the cap and trade legislation forces mandatory participants to purchase EAs in order to settle a legislative obligation. Participants *must* obtain EAs in

Formatted: Font: +Headings (Georgia), Italic

Formatted: Line spacing: Multiple 1.15 li

Formatted: Font: +Headings (Georgia)

Formatted: Indent: Left: 0 cm, First line: 0 cm

Formatted: Line spacing: At least 12 pt

Formatted: Underline

~~order to meet their compliance obligations which are created by legislation, and initially EAs are only available from the Province. Therefore, in substance the purchase of EAs equates to a pre-paid "tax" on emissions, and therefore there is a non-reciprocal transaction as participants do not get anything of economic benefit in exchange, but rather have an outflow of cash to the Province that they previously did not have to pay prior to the cap and trade legislation. This view was rejected for the reasons given in support of "exchange transactions" above as the nature of the cap and trade program and the auction mechanisms are designed to create a carbon market, and under this system EAs become a "good" that has economic value. Therefore the characterization of the sale of EAs as non-exchange transaction would not be consistent with the substance of the cap and trade program.~~

~~Revenue recognition for sale of EAs (Exchange transactions)~~

~~*Relevant guidance* - See Appendix A for details.~~

PS 1000, Financial statement concepts ("PS 1000")

PS 1150, Generally accepted accounting principles ("PS 1150")

PS 3410, Government transfers ("PS 3410")

Other GAAP accounting frameworks including IFRS 15, *Revenue from contracts with customers* ("IFRS 15")

PSAB Revenue – Statement of Principles ("Revenue SOP")

Preliminary position: Revenue is recognized for the sale of EAs on the ~~auction~~ date of delivery of the EAs as ~~there are no further substantive~~this is when the performance ~~obligations~~obligation is settled by the Province. No revenue is recognized on the distribution of free EAs for no consideration.

Analysis:

The following analysis follows from the preliminary position in Section 3 on the nature of EAs – *The sale of EAs are exchange transactions. The distribution of EAs for no consideration is a non-exchange transaction. EAs are intangible permits (rights) that are "goods" that are transferred to participants.* Given the nature of the EAs as intangible goods it is appropriate to consider revenue recognition requirements for exchange transactions. PSAS does not have a specific standard on revenue from exchange transactions. Therefore other sources of GAAP and consideration of the conceptual framework must be applied to develop an accounting policy.

a) What is the performance obligation~~?~~ for the sale of EAs? A performance obligation is defined in IFRS 15~~/ASC 606~~ a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". ~~This~~The following analysis has applied the IFRS concept, as permitted under PS 1150.

~~a)~~ In both IFRS 15~~/ASC 606~~ and the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the ~~standard auction process. The completion of the auction bid process creates the enforceable right of the province to payment and the obligation to credit the EA to the participant, as well as creating the right of the participant to the EA and the obligation to pay the Province. The auction mechanisms are published and standardized such that each participant understands the~~

Formatted: Tab stops: 16.21 cm, Left

Formatted: Indent: Left: 0.63 cm, No bullets or numbering

~~enforceable rights and obligations that are entered into when an auction occurs.~~auction process or strategic reserve sale. As discussed in Section 4 above, the auction certification date is the date that a contract is considered to exist.

Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix ~~A~~C for definition of "distinct goods and services")

Based on the above analysis, a contract is created when a participant successfully bids at auction~~,~~ as confirmed in the auction certification process. The Province has ~~only one~~ distinct performance ~~obligation~~obligations to deliver each EA to each successful bidder under ~~this contract, which is the delivery of the EAs~~these contracts.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in ~~4~~5 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario ~~has an obligation to redeem only~~accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions~~.~~ as settlement of their compliance obligations. Therefore ~~this~~Ontario has no obligation to redeem ~~cannot arise~~an EA that arises from the original exchange transaction and ~~is~~ therefore ~~not a~~there is no performance obligation ~~of~~ that ~~transaction~~exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at

auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the exchange transaction that is the sale of EAs. Section 5 (b) above discusses whether there is a general liability of the Province to continue the cap and trade program. Finally, it is noted that there is no legislative provisions for the termination of the program~~,~~ and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written ~~of~~or implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15~~/ASC 606~~ the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400, *Revenue* or IAS 18, *Revenue* there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP proposes a "control" model similar to IFRS 15~~/ASC 606~~, so this approach has been applied in the analysis. Under IFRS 15~~/ASC 606~~ an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15~~/ASC 606~~ provides indicators of when a point-in-time obligation has been satisfied. These are also included in the ~~PSAS~~ Revenue ~~Statement of Principles~~SOP and have been considered in this analysis. See IFRS 15.38 in Appendix ~~A~~C. The indicators have been assessed as follows:

~~Present right to payment – As noted in Section 3 above, there is a present right to payment at the auction date.~~

~~Legal title to the asset – Legal title is transferred when the EAs are credited to the participants account. This occurs after the auction certification and settlement process is completed. [MOECC implementation group to confirm when legal title transfers is this analysis correct?]~~

~~The entity has transferred physical possession of the asset – This indicator is not relevant as EAs do not have physical form.~~

~~The customer has significant risks and rewards of ownership of the asset – The participant has significant risks and rewards of ownership of the asset from the auction date. If the price of EAs increases after the auction date, the customer can benefit from this increase by selling the EA. Similarly if the price decreases after the auction date, the customer bears this decrease in value. The participant can decide what to do with the EA – sell it, keep it or use it to settle a compliance obligation - from the date of the auction. While EAs are credited to a~~

~~participants account only after auction certification and settlement process are completed, these are administrative processes that do not substantively change the risks and rewards of ownership of the EAs.~~

~~The customer has accepted the asset – There are no customer acceptance clauses. While the auction process is subject to certification this is not performed by the participant, but rather by the Province.~~

Indicator	Auction day	Auction Certification date	Financial Settlement date	Receipt of proceeds and delivery of EAs
Present right to payment	Possible – there is a right to payment from successful bidders but it has not been confirmed who these are.	Yes. Under the contract payment must be received prior to delivery of EAs	N/A payment must be received before this date	N/A payment must be received before this date
Legal title to the asset	Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs.			However, EAs can only be traded or used after they have been credited to the participant's account. This occurs only on this date.
The entity has transferred physical possession of the asset	This indicator is not entirely relevant as EAs do not have physical form.			However the record of a participant's EAs is maintained in the CITSS account and so the right to use an EA is confirmed only upon this date.
The customer has accepted the asset	There are no customer acceptance clauses. This indicates is not relevant.			
The customer has significant risks and rewards of ownership of the asset. Specifically:				
- Using the EA to settle a compliance obligation (permit to settle a compliance obligation)	No. The EAs cannot be transferred from a participant's holding account to its compliance account to settle an obligation until it has been credited to the holding account.			Yes. Once credited to a holding account a participant can use the EA to settle a compliance obligation.
- Benefiting or	Possibly – the price	Yes – From this date	N/A already met	N/A already met

suffering from the fluctuations in the market price of EAs	that the customer pays is set by the auction process. However the customer does not yet know what price that is or how many EAs will be obtained. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.	the participant knows how many EAs they have and for what price. Any changes in EA value after this date will be obtained or absorbed by the customer if they choose to sell.		

Based on the balance of the indicators above it can be concluded that there is most support for recognizing revenue on a "point in time" basis on the ~~auction date.~~date when the EAs are transferred to the participant. As part of this it was considered that the nature of the EAs is ultimately as a permit to settle compliance obligations and therefore this element of risks and rewards was weighted more heavily.

Alternatives considered and rejected: ~~It was considered whether revenue should be recognized at a point in time when the EAs are credited to the participant account (legal title to the asset has transferred). This was rejected as the delay between the auction date and crediting the participant account is to confirm the settlement of the auction payment and that the auction was carried out legally and in accordance with the regulations. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset". Therefore, limited weight was placed on the fact that the participant's accounts are not credited until some time after the auction.~~

Formatted: Font: Italic, Underline

Auction date/Certification date/financial settlement date: See table above for analysis.

Trade date accounting: It was also considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for

participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.

- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

c) What are the implications of free allowances? Free allowances are not sold in an exchange transaction but are distributed in a non-exchange transaction, similar to a government transfer. As noted in Section 5 above, the distribution of EAs are technically not in scope of PS 3410, Government Transfers as they are not tangible capital assets or monetary assets. Further PS 3410 does not provide guidance on the measurement of a government transfer. However, the distribution of EAs to participants is similar to a government grant given that EAs are considered "goods" for which control is transferred at a point in time. This indicates that there is an outflow of economic benefits to participants. Typically under PSAS expenses incurred that are a result of derecognition of assets are measured at the difference between the carrying amount of the asset and the consideration received (in this case nil). The carrying amount of the EAs is at cost; expected to be a nominal amount. This is an acceptable policy under PSAS and consistent with PS 1000.60 (See Appendix C).

Alternatives considered and rejected:

An alternative to measuring the free EAs at cost is to measure them at fair value at the date of distribution being the opportunity cost of the economic resources foregone by not selling the EAs at auction. This policy also appears to be supportable by PS 1000.60 which indicates transactions can be measured at the "fair value ascribed to them when they took place". However this alternative is not proposed because the expense from recognizing the EAs at fair value would be necessarily offset by a gain as the carrying amount of the EAs is nominal. This gain (revenue) does not seem to meet the definition of revenues under the Conceptual framework as there is no inflow of economic benefits to the government from issuing free EAs to participants. Therefore this alternative was rejected as it results in a gross up in the statement of operations that is not a fair presentation of the economic activities of the Province in respect of the issuance of free EAs.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix ~~A~~C for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted. ~~[NTD – to confirm that all interested parties agree with this statement]~~

~~6.~~7. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

~~7.~~8. Accounting for Emission Allowances held by government organizations

Appendix A – Comparison to other select jurisdictions

	Quebec *Applies Canadian Public Sector Accounting Standards*	New Zealand[3] *Applies International Public Sector Accounting Standards*
Similarities and differences to Ontario	Quebec's cap and trade program substantially the same design as Ontario, as it is intended that Ontario will link into the WCI within the first compliance period	Similarities: Entities must provide New Zealand Units (NZUs) (not cash) to the government based on total emissions. NZUs can be traded between entities. Differences: New Zealand (NZ) had an obligation to the United Nations to keep emissions within the prescribed cap. NZUs are interchangeable with International Assigned Amount Units (AAUs) and New Zealand has an obligation to hold a quantity of international units equal to 90% of its AAU allocation. These units can be used to settle the New Zealand Government's Kyoto obligation. There is no hard domestic cap. International units can be used to settle emissions obligations. If the amount of NZUs are not sufficient for New Zealand to meet its international obligations the government must purchase more AAUs. For every NZU the government stands ready to swap it into an AAU (or equivalent international unit)
Asset recognition	None.	a) Creation of NZUs as "currency" results in inventory prior to issuance b) As Participants emit NZ has a "right to receive" the NZUs, created by legislation. The emissions are similar to a "taxable event"

[3] Information regarding the New Zealand ETS taken from the IPSASB paper "Emissions Trading Schemes" Agenda Item 14, March 2016 and "The Emissions Trading Scheme – Summary information for public entities and auditors"

Liability recognition	None. Although linked to the WCI, there is no cash changing hands with California, therefore no obligations/additional transactions that arise from a combined market.	When issued an NZU is an obligation, similar to "currency in circulation" that represents the obligation to redeem the NZU for their emissions value. NZUs are exchangeable for AAUs and an AAU or equivalent unit can be surrendered instead of an NZU, emphasizing that NZUs are a "medium of exchange" for settling the obligations. The liability is measured by reference to the cash received. For an grant of NZUs it would be nil. For NZUs issued for cash it is measured at the cash amount received. At the end of the compliance period the liability is settled by the return of NZUs (or other acceptable units) recorded under the "right to receive NZUs" asset. There are no assets or liabilities at the end of the compliance period.
Accounting for free allowances	Not recognized in the public accounts as revenue/expense.	Revenue is recognized when the "right to receive" NZUs is recognized – i.e. as the emissions are created by participants. Cash received from sale of NZUs is used to measure the liability representing the obligation to redeem NZUs and is not recognized as a revenue directly.
Accounting for sold/auctioned allowances	Revenue recognized immediately on sale/auction. Rationale was that sold rights are in scope of "unilateral rights" in the Revenue Statement of Principles and therefore result in immediate revenue recognition as government has sole authority to grant the right under constitutional powers and the past event (the auction) has occurred. No further obligations of the government. The revenues are non-refundable. Currently unknown whether recognized on auction date/certification date/settlement date/delivery date. Note that based on auction dates for WCI this is unlikely an issue for the Province of Quebec.

Formatted Table

Appendix B – Currency in circulation model

If the currency in circulation model is applies, as has been applied in New Zealand, the following analysis would be relevant for consideration. It is noted that the results are similar in respect of revenue recognition and liability recognition as for the "exchange transaction model".

The accounting for currency in circulation is not dealt with specifically in PSAS, however central banks typically recognized a liability for currency in circulation when it is issued as the central bank has an obligation to take back or issue notes and coins from banks with an offset to the bank's reserve liability with the central bank – in other words currency in circulation is exchangeable by holders into a different form of financial asset/ financial liability from the perspective of the central bank. In July 2016 IPSASB released a consultation paper on "Public Sector Specific Financial Instruments" that includes a discussion of currency in circulation[4]. This consultation paper lays out the critical questions to the application of this model. It is noted that the consultation paper considers the issuance of currency in circulation for its face value to be an "exchange transaction".

1. Is there a liability created?
2. What are the revenue implications?

Is there a liability created?

The consultation paper analyses the circumstances under which a liability may be created for currency in circulation by reference to the conceptual Framework. The analysis below considered the factors in the Consultation Paper in reference to the PSAS definition of a liability in PS 1000 and Section 3200 (Note that the IPSASB definition of a liability contains similar concepts to the PSAS definition in PS 1000 and PS 3200 although the words used are different).

- A past event has occurred when the EAs are issued, whether distributed for free or sold for cash.
- The issuance of a currency will embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation when there are legally enforceable obligations of the issuing government. For example, laws requiring the government to exchange damaged currency for new currency, hold collateral for the amount in circulation or establish explicit claims against the assets of the government for the currency in circulation. Where these legal obligations exist to redeem currency there is likely to be an outflow of resources required to discharge the obligation.
- If there are not legally enforceable obligations, the issuance of currency may still be a liability if the government has indicated they will accept certain responsibilities, have raised a valid expectation in others

[4] https://www.ifac.org/system/files/publications/files/IPSASB-Consultation-Paper-Public-Sector-Financial-Instruments.pdf

and have little or no alternative to avoid an outflow of economic resources. It may be less clear whether there will be an outflow of economic resources to settle these obligations, but a past practice of settling them (e.g. redeeming for cash) may create a valid expectation that will be settled by an outflow of economic resources.

There are a number of aspects that indicate the Ontario issued EAs do not meet the definition of a liability (and are not similar to the New Zealand Units):

- When they are remitted to the Province they are retired and not re-sold into circulation (with some limited exceptions)
- EAs issued in Ontario do not require the Province to exchange the EA into any other unit that is in turn can be sold by the Province for cash or used to settle a Provincial obligation, and does not require the Province to exchange an EA for cash. Ontario is not obligated to:
    - Hold collateral for amounts of EAs in circulation
    - Exchange EAs for "new" EAs
    - Honour any claims against other assets of the Province through the redemption of EAs
- In the absence of any legal obligation to redeem EAs for cash or another claim on an asset there is also no constructive obligation created by past practice of such claims/redemptions.
- This contrasts with the New Zealand system where New Zealand has an government Kyoto obligation to settle with international units and the government stands ready to exchange New Zealand Units into Assigned Amount Units (AAUs) or equivalent international unit. This may be on terms that are unfavourable or result in the requirement for New Zealand to pay cash to obtain the necessary AAUs for exchange.

Based on an analysis of the cap and trade program applied by Ontario the obligation to repatriate or redeem the EAs does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

What are the revenue implications?

The consultation paper goes on to discuss whether, if no present obligation exists upon the issuance of currency in circulation if and when would revenue be recognized. Similar to IPSASB, under PSAS revenue is an increase in net financial position of the entity. (IPSASB also has the concept of ownership contributions, which are not relevant in this situation). The Consultation paper paragraph 3.43 notes that "when the issuance of currency does not satisfy the definition of a liability in the Conceptual Framework and recognition criteria, it should be recognized as revenue". This indicates that the test for a currency in circulation model is whether any attributes of the issuance of the EAs create a liability, and if not, any proceeds received from their issuance would be immediately credited to revenue as an inflow of economic resources to the government.

Appendix C – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35~~-.37.~~.

1000.35 Assets are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04 and PS 1000.36)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not ~~defined under PSAS.~~specifically defined under PSAS, although PS 1200.48 provides guidance that Inventories for resale and other assets held for sale are items that are held for sale in the ordinary course of operations and, therefore, are expected to provide resources to discharge existing liabilities or finance future operations. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and ~~OS~~PS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049). ~~After the adoption of PS 3450, which is currently effective for the Province for~~

~~fiscal 2020, financial assets may be designated into the "fair value" category but only if they are managed and evaluated on a fair value basis in accordance with a risk management or investment strategy or they contain embedded derivatives.~~

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

~~PS 3200 does not contain measurement guidance for liabilities. Other standards such as PS 3250, *Retirement benefits* and PS 3260, *Liability for contaminated sites* use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate).~~

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Measurement of Liabilities

There is no general measurement guidance for liabilities in PS 3200, although specific standards specify measurement bases to be used. Other standards such as PS 3250, Retirement benefits and PS 3260, Liability for contaminated sites use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate). It is also noted that PS 1000.60 includes the following guidance:

PS 1000.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

PS 3410 Government Transfers - Scope

04 Government transfers are transfers of monetary assets or tangible capital assets from a government to an individual, an organization or another government for which the government making the transfer does not:

(a) receive any goods or services directly in return, as would occur in a purchase / sale or other exchange transaction;

(b) expect to be repaid in the future, as would be expected in a loan; or

(c) expect a direct financial return, as would be expected in an investment.

.05 This Section does not deal with:

(a) transfers made through a tax system that are authorized through tax legislation;

(b) grants in lieu of taxes;

(c) settlements of lawsuits or other types of legal compensation provided by governments;

(d) Canada Pension Plan (CPP) and Quebec Pension Plan (QPP) payments; and

(e) transfers of non-monetary assets other than tangible capital assets. Examples of transfers of non-monetary assets that are excluded from the scope of the Section are: transfers of purchased natural resources and rights, transfers of equity investments, transfers of items inherited in right of the Crown or transfers of works of art and historical treasures. 4

(footnote 4 - In accordance with FINANCIAL STATEMENT CONCEPTS, Section PS 1000, all intangibles, and items inherited by right of the Crown, such as Crown lands, forests, water and mineral resources, as well as works of art and historical treasures, are not recognized as assets in government financial statements)

PS 3410 Government Transfers - Expense (and liability) recognition

.12 A government transfer should be recognized by a transferring government as an expense in the period the transfer is authorized and all eligibility criteria have been met by the recipient.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - "Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations."

PS 3100.04 (a) - "External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used."

PS 3100.11 - "Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified."

PS 3100.27-.28 - Designated assets – "...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises...."

IPSASB discussions

The International Public Sector Accounting Board (IPSASB) debated a paper in March 2016 that outlined a number of different accounting options that could be applied to various emissions trading schemes including conceptual considerations for and against each model. To date the IPSASB has not concluded on an appropriate model for accounting for emissions trading schemes such as Ontario's cap and trade scheme. The various approaches outlined in the paper were considered in developing the preliminary positions of this memorandum. The proposed approach for Ontario is most closely aligned with "Approach 2" of the paper, altered where necessary to account the specifics of the Ontario cap and trade system and the application within the PSAS Framework.

This paper can be found at: http://www.ipsasb.org/system/files/meetings/files/Agenda-item-14.pdf

Thanks Lucy. I am copying Shyrose on this response. I think we would likely just need his name and to get the necessary clearance in place. Shyrose will be in touch if further details are required.
Regards,
Nadine

Subject: Re: Outline of position paper proposed allocations Oct 7.docx

Hi Nadine,

In respect of one of the sections discussing the differences between the funding valuations/OTPP financial statements and the Province's financial statements, I think it would be helpful if I could get our actuary to read through the write up, particularly in respect of the funding valuation differences. Currently the SOW does not list our actuary as someone performing work (to date all my conversations with him have been high level and theoretical). However, I would like to get him added to the SOW as vendor personnel.

Individual's Legal Name
Individual's Role and Experience Level
Service Category
Per Diem Rate

Mario Chassé
General Consultant (Actuarial), Level 2
Service Category 2
See “charges on a per diem rate basis”

I can ask him to sign a confidentiality agreement.
What else should be done to ensure that the SOW reflects that he will be providing some work under the contract?

Thanks,
Lucy

Hi Lucy.
As discussed, the attached version of the paper outline includes proposed section allocations. Please let me know if any of the notes are inconsistent with your understanding.
Thanks and have a wonderful Thanksgiving weekend!

Shayan,
Below is the advice that we received from our legal services branch regarding liabilities for non-OPS employers. I think we should discuss implications to the analysis.
Nadine

From: Kaufman, Paul (TBS) <Paul.Kaufman@ontario.ca>
Sent: Thursday, June 8, 2017 4:09 PM
To: Petsche, Nadine (TBS)
Cc: Hatzis, Len (TBS); Compagnone, Lisa (TBS)
Subject: RE: Public Accounts Related Q's

Nadine, here is an analysis of the potential funding risks for the Crown relating to the participation of non-OPS employers in the OTPP and OPSEUPP. The discussion of the OTPP reflects input from EDU legal and staff who are familiar with the OTPP.

I have kept this high level given the urgency but can elaborate on specific areas as necessary. I haven't included a discussion of the general obligations of employers and members to contribute to Jointly Sponsored Pension Plans under the *Pension Benefits Act* (PBA), or discussed the implications of the exemption from solvency funding requirements under the PBA that I understand both of these plans enjoy, as I understood the focus of your question to be specific to the relationship between the Crown and other employers.

If you require anything further please let us know.

Paul

OTPP:

· The OTPP is governed by the *Teachers' Pension Act* (TPA), the Plan text for the OTPP (the "Plan Text"), a Partners' Agreement between the Minister of Education and the Ontario Teachers' Federation, and a Funding Management Policy ("FMP") that is an appendix to the Partners' Agreement.

· The OTPP is also subject to the *Pension Benefits Act* ("PBA"), under which the OTPP is a Jointly Sponsored Pension Plan (JSPP)

· Under Section 24(1) of the Plan Text, the Minister of Education is required to pay employer contributions in respect of certain active employees. These types of active employees include teachers at school boards and teachers at provincial schools (run by the Ministry of Education and where teachers are the employees of the Provincial Schools Authority).

· However, the Minister is not required to make employer contributions under the Plan Text in respect of some other employers whose employees may participate in the OTPP, including participating private schools.

· Nothing in the Plan Text (or any other applicable OTPP document or statute) expressly requires the Minister of Education to make contributions in place of private schools and other 'excluded' employers who have failed to make their own required contributions to the OTPP.

· However, the Crown could be exposed to a funding risk where a private school or similar employer fails to make their contributions in the following ways:

o Subsection 5(3) of the TPA requires the Province to make contributions to the OTPP fund if the assets in the fund are insufficient to make required payments in a particular year

o Private schools and other 'excluded employers' not making required payments could impact on the overall funded status of the plan, in turn affecting the ability of the Minister of Education and OTF to access surpluses in accordance with the FMP

OPSEUPP:

· The OPSEUPP is governed by a Sponsorship Agreement dated April 18, 1994, as amended, between Ontario and OPSEU ("Sponsorship Agreement"); a trust agreement dated October 25, 1994, as amended, the OPTrust Plan Text and the *Ontario Public Service Employees' Union Pension Act, 1994*.

· Like the OTPP, the OPSEUPP is also a JSPP under the PBA.

· A list of participating employers for the OPSEUPP is set out below (this information is derived from the OPSEUPP's most recent audited financial statements, but you may wish to verify it with the TBS Employee Relations Division). A number of the participating employers that are not part of the Province itself are nevertheless provincial agencies (AGCO, LCBO, OLGC, Public Health Ontario, etc.). The majority of the remaining employers are either public hospitals (that the Province funds) or public sector pension plan administrators. Therefore, the practical risk of a non-OPS employer failing to provide required contributions to the OPSEUPP seems quite low.

· However, in the event that such an employer did fail to make its contributions, and that failure resulted in a deficiency in the OPSEUPP fund, the Province (likely in conjunction with the other employers whose employees are members of the OPSEUPP), and the members would jointly be required to provide further contributions to the fund to address any such deficiency, pursuant to section 58 of the Sponsorship Agreement and section 6.3(5) of the OPTrust Plan Text.

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective September 16, 2016.

PricewaterhouseCoopers LLP (the "Vendor" or "PwC") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client" or the "Province") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of March 22, 2016 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$100,000.00, excluding HST.

4. *Project Start Date:* September 16, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide accounting advice (the "accounting advisory services") regarding the acceptability of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards. The accounting advice may include:

   - Review of background information, position papers developed by the Client or third parties that have been engaged by the Client to draft accounting positions on accounting for the recognition and measurement of pension assets for jointly-sponsored pension plans, and other supporting information.
   - Provide written or oral comments on draft position papers as provided by the Client with respect to the application of Canadian Public Sector Accounting Standards.
   - Participation in discussions with internal and external stakeholders and other parties as directed by the Client.

   During the course of this project, the Client will provide to PwC a written statement of all relevant facts and assumptions, and a description of the circumstances and the nature of any relevant disagreements with the Client's auditor. If an accounting opinion is to be provided, the Client's auditor will confirm to us in writing that the information the Client

has provided to PwC is complete and consistent with their knowledge of the facts and circumstances of the specific transaction.

If requested to by the Client during the course of the project, the Vendor shall provide an accounting opinion (the "accounting opinion"), prepared in accordance with Section 7600, *Reports on the application of accounting principles* of the CPA Canada Handbook – Assurance ("Section 7600"), regarding the appropriateness of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards.

Vendor may be required to participate in meetings with the Client and other stakeholders, and to support the Client with respect to the Vendor's accounting advice or accounting opinion (if applicable), including discussions with the Office of the Auditor General.

The Client agrees that any accounting advisory services are solely for the information and use of the Client. Subject to the obligations in Article 27 (Privacy) of the Master Agreement and as required by law by the Client's independent auditors, the Client agrees that any written work product of PwC will not be made available to any other persons or entities. An accounting opinion prepared in accordance with Section 7600 will, in compliance with Canadian GAAS, include restriction of use language identifying the parties to whom use is restricted and a statement that the report is not intended to be and should not be used by anyone other than the specified parties or for any other purposes. However the Client may provide access to PwC's observations and an accounting opinion prepared under Section 7600 (if applicable) to the Client's independent auditors solely for their informational purposes. Except as provided for in the preceding sentence, the Client agrees to seek and obtain the Vendor's written consent before including our accounting opinion (if applicable) or referring to the Vendor in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent. The Client agrees that prior to or as part of providing their independent auditors with any written work product of PwC, including an accounting opinion prepared under Section 7600, the Client will notify its independent auditors that it is PwC's desire to be notified of, and to consent to, the disclosure of any PwC written work product or reference to any PWC work product in any materials to be disclosed to third parties. PwC agrees that the Client's obligation is only to notify its independent auditors of PwC's desire to be notified about, and to consent to, disclosure, and that the Client is not making any representation or warranty that its independent auditors will notify PwC or seek PwC's consent.

Acknowledgements and agreements

The Client acknowledges and agrees to the following:

a. The performance of the accounting advisory services does not constitute an engagement to provide audit, compilation, review or attest services in accordance with professional standards issued by the Chartered Professional Accountants of Canada ("CPA Canada") and, therefore, PwC will not express an opinion or any other form of assurance with respect to the accounting advisory services.
b. The accounting advisory services and accounting opinion (if applicable) to be provided do not include the delivery of any verbal or written advice on the application of accounting principles to a hypothetical transaction.
c. This engagement cannot be relied on to disclose internal control deficiencies, errors or fraud, should they exist.

d. PwC has no responsibility for updating the accounting advisory services or accounting opinion or for performing any additional services, except as agreed to in writing with the Client.
e. The Client's purpose for engaging PwC to perform the accounting advisory services is to supplement management's own technical accounting resources in performing accounting analysis and to assist management in making its determination as to the application of accounting principles and not to obtain an opinion from PwC as to such application, unless an accounting opinion is requested by the Client.
f. The Client shall be solely responsible for, among other things: (a) making all management decisions and performing all management functions; (b) designating one or more individuals who possess suitable skill, knowledge and/or experience, preferably within senior management to oversee the accounting advisory services (c) evaluating the adequacy and results of the accounting advisory services; (d) accepting responsibility for the results of the accounting advisory services; and (e) establishing and maintaining internal controls, including, without limitation, monitoring ongoing activities.
g. All management decisions and final conclusions reached in connection with the accounting advisory services will be the responsibility of the Client. PwC will not perform any management functions, make management decisions, or perform in a capacity equivalent to that of an employee of the Client.
h. PwC has no responsibility related to the Client's accounting or disclosure conclusions, whether or not such conclusions of the Client are related to the accounting advisory services and PwC has no responsibility for any disagreements between the Client and its independent auditor related to the Client's accounting.
i. The Client will be solely responsible for all decisions regarding the accounting treatment of any item or transaction and acknowledges that the accounting advisory services do not include the recording of any amounts in the Client's books or records. All amounts derived from the performance of the accounting advisory services will be reviewed and approved by, and will be the responsibility of, the Client's management.
j. The nature, scope and design of the accounting advisory services and the accounting opinion are solely the responsibility of the Client. PwC will rely, without independent verification, on the facts, information and assumptions provided by the Client. PwC will make no representation nor provide any assurance with respect to the adequacy of the services for the Client's purposes. Furthermore, PwC has no responsibility to advise the Client of other procedures that might be performed.
k. The Client will be solely responsible for providing accurate and complete information requested by PwC. PwC has no responsibility for the accuracy or completeness of the information provided by or on behalf of the client.
l. PwC's accounting and technical assistance will be based on the existing public sector generally accepted accounting principles. Should those generally accepted accounting principles be amended, superseded or revised in any manner, PwC's advice might change. PwC has no responsibility to inform the Client of any changes in generally accepted accounting principles that may occur after the completion of the engagement or any other oral or written work product prepared hereunder that would impact PwC's advice on the appropriate application of generally accepted accounting principles or to update its recommendations or any other oral or written work produce to take any such changes into account.
m. This engagement does not create a relationship between PwC and any person or party other than the Client. This engagement is not intended for the express of implied benefit of any third party.

n. The Client will identify an appropriate individual to serve as the project manager, including overseeing the accounting advisory services.

7. *Ownership and Licences* - **Attachment D** of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* - The structure of Vendor's working relationship with OPCD is vital to the success of their engagement. Vendor's main point of contact will be Lucy Durocher who is the engagement leader.

9. *Work Location* - All meetings will be within the Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive. If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Charges On Per Diem Rate Basis*– The Vendor and the Client agree that Work performed under this Statement of Work will be charged on a Per Diem Rate basis. The Per Diem Rate will vary, based on the nature of the final deliverable, as follows:

Nature of final deliverable	Per Diem Rate	Service Category	Estimated hours	Per Diem Rate
Accounting Advisory	General Consultant, Level 2	Service Category 2	20-25	$390/hour
Accounting Opinion	General Consultant, Level 2	Service Category 2	30-35	$990/hour

13. *Billing and Payment Process* – The Vendor shall invoice the Client in accordance with the requirements of the Master Agreement. Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Individual's Legal Name	Individual's Role and Experience Level	Service Category	Per Diem Rate
Lucy Durocher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Martin Boucher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"

Appendix D – Tax Compliance Declaration Form

The Ontario Government expects all suppliers to meet their Ontario tax obligations on a timely basis. In this regard, proponents are advised that their Ontario tax obligations, if any, must be in good standing in order to be considered for a contract award (see Section 3.2.3 of the RFP). In order to be considered for a contract award, the proponent must submit the following tax compliance status statement and the following consent to disclosure:

Declaration

I/WE hereby certify that **PricewaterhouseCoopers LLP** (the "Proponent") at the time of submitting its proposal, is in full compliance with all applicable Ontario tax statutes, whether administered by the Treasury Board Secretariat or by the Canada Revenue Agency, and that, in particular, all returns required to be filed have been filed and all taxes due and payable under those statutes have been paid or satisfactory arrangements for their payment have been made and maintained; or the Proponent will take all necessary steps prior to being considered for contract award in order to be in full compliance with all applicable Ontario tax statutes.

(Please check applicable box)

The Proponent ☐ is / ☒ is not a corporation subject to Ontario corporate tax under the *Taxation Act, 2007* (Ontario).

(Please insert Proponent's Business Number) NO ONTARIO # FEDERAL 870576089

Consent to Disclosure

The Proponent consents to the Ministry of Finance releasing the taxpayer information to the Ministry of Finance as necessary for the purpose of verifying the Proponent's compliance with Ontario tax statutes.

The Proponent consents to the Treasury Board Secretariat releasing taxpayer information to the Requesting Ministry as necessary for the purpose of verifying the Proponent's compliance with Ontario tax statutes.

Dated at TORONTO, ONTARIO this 31ST day of OCTOBER 20 16

Mario ChassØ - Confidentiality agreement.pdf

Confidentiality Agreement

During and following the term of the Agreement between **Pricewaterhouse Coopers LLP** (the "Vendor") and Her Majesty the Queen in right of Ontario as represented by the **President of Treasury Board Secretariat** and during and following the term of each Statement of Work entered into by the Vendor and pursuant to the Agreement (collectively, the "Agreements"), the undersigned agrees with the Vendor to keep confidential and secure all Confidential Information to which the undersigned may have access to in the course of the performance of services pursuant to any of the Agreements (including requests for services) or otherwise in connection with any of the Agreements (including requests for services). "Confidential Information" means all information of the Ontario Public Service and of the Client's subcontractors at any tier of subcontracting that is confidential by its nature or in the circumstances in which it is received, including all confidential information in the custody or control of the Ontario Public Service, regardless of whether it is identified as confidential or not, and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge, possession or control of the Vendor in connection with any of the Agreements. "Ontario Public Service" means the ministries and other administrative units of Her Majesty the Queen in right of Ontario ("Ontario") over which ministers of Ontario preside, and for the purposes of this Confidentiality Agreement, includes Ontario and Ontario's agencies, boards, commissions and Crown corporations, offices of an officer of the Legislative Assembly or of the Ontario Legislature and OPS Entities, and "**OPS**" has the same meaning.

The undersigned acknowledges that the Client is bound to maintain custody of or control over information, material and records, however recorded, within the meaning of the Freedom of Information and Protection of Privacy Act ("FIPPA"). The undersigned agrees to comply with the privacy provisions of the Agreements in the course of providing services pursuant to the Agreements.

The undersigned shall not directly or indirectly disclose, destroy, exploit or use any Confidential Information except for the purpose of performing services pursuant to the Agreements. The undersigned shall not copy any Confidential Information, in whole or in part, unless copying is essential for the performance of services pursuant to the Agreements. On each copy, the undersigned must reproduce all notices that appear on the original.

The undersigned acknowledges that the Vendor is obliged to implement and maintain measures to ensure the security and integrity of Confidential Information and to protect it against loss, alteration and destruction and against access by unauthorized persons, and to select, implement, use and maintain the most appropriate products, tools, measures and procedures to do so. The undersigned covenants and agrees to adhere to all of the measures instituted by the Vendor.

The undersigned agrees to return all Confidential Information, including all copies and portions thereof, to the Vendor or to the Client with no copy kept by the undersigned as soon as the need to possess them ends, at the request of the Client, and in any event, prior to concluding the performance of services pursuant to the applicable Agreements.

Have you received a request to release a copy of the accounting opinion to the Expert Panel? If not, then would a request worded similarly to the request to release to PwC suffice?

If not, please advise as to appropriate wording to include.

Thanks.

Nadine

Lucy,

In relation to some of your Q's on the call.

Contribution rates between the employee and employers are always equal, with one exception of 2008, when the OTF made a portion of the employee contribution. See table:

2016-17 Public Accounts

Technical Briefing

September 7, 2017

CONFIDENTIAL DRAFT

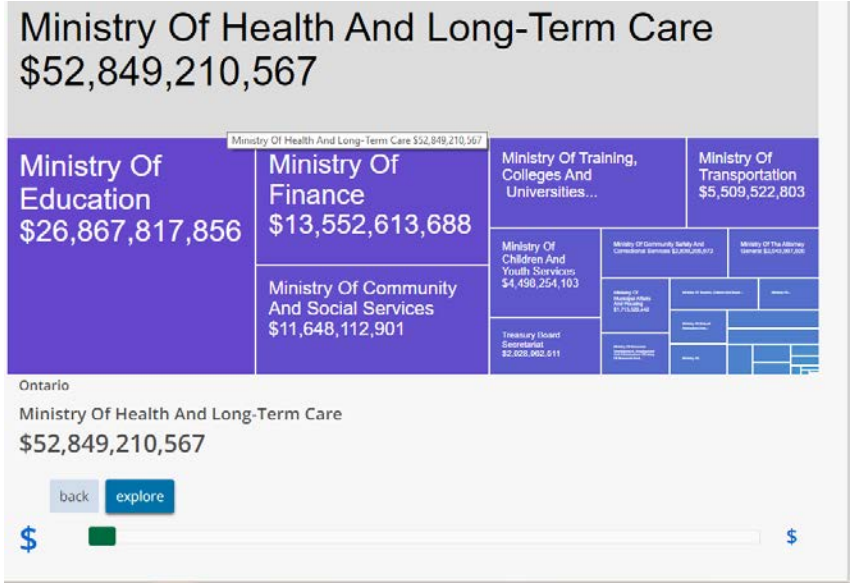
Purpose of today's briefing

1. Provide an overview of the results for fiscal 2016-17
2. Highlight the changes made in the 2016-17 financial statements:
   a) Classification of third-party revenues for hospitals, colleges and school boards
   b) Accounting basis for Ontario Power Generation and Hydro One
   c) Accounting for the Independent Electricity System Operator (IESO) and market accounts
   d) Accounting for net pension assets of jointly sponsored pension plans

CONFIDENTIAL - For Internal
Discussion Purposes Only

2016-17 Highlights

- New digital tools have been developed that present the Public Accounts data in innovative, visual formats.
- This year, Ontario has:
  - Released six new downloadable data sets
  - Created new data visualizations tools
  - Published the web page under the Open Ontario Licence



CONFIDENTIAL - For Internal Discussion Purposes Only

Ontario

2016-17 Highlights

- Ontario has beaten its deficit target eight years in a row. The 2016-17 Public Accounts of Ontario show that Ontario's deficit is $1 billion - $3.3 billion lower than projected in the 2016 Ontario Budget.
- In the 2016-17 fiscal year (April to March):
  - revenue was $140.7 billion – $2.2 billion more than expected in the 2016 Budget
  - expenses were $141.7 billion – $0.01 billion less than planned in the 2016 Budget
  - Some of the top spending areas included

$56B Health

$26.6B Education

$12.9B Infrastructure

CONFIDENTIAL - For Internal
Discussion Purposes Only

Ontario

2016-17 Highlights

Other highlights include:

- Ontario's real gross domestic product (GDP) was 2.7%, up from 2.2% in the 2016 Budget. Over the last three years, Ontario's GDP growth has outpaced that of all G7 countries.
- Net debt-to-GDP continues to be forecasted lower than expected for 2016-17 at 37.8%, an improvement over the 2016 Budget of 39.6%.

Visit **Ontario.ca/publicaccounts** for more highlights and digital tools that help make Ontario's finances easier to understand, access and use.

CONFIDENTIAL - For Internal

Summary 2016-17 Results

2016-17 Actual Results					
$ Billions	2016-17 Budget[1]	2016-17 Actual	2015-16 Actual [1 2]	Change from Budget	% Change
Revenues	138.5	**140.7**	136.1	2.2	1.6%
Expenses	141.8	**141.7**	139.7	(0.1)	-0.1%
Reserve	1.0	**-**	-	(1.0)	
Annual Deficit	(4.3)	**(1.0)**	(3.5)	3.3	-76.7%
Net Debt		**(301.6)**	(295.4)		
Accumulated Deficit		**(193.5)**	(192.0)		

[1] 2015-16 Actuals and 2016-17 Budget have been reclassified to reflect the change in presentation for third party revenues of hospitals, colleges and school boards (no change to deficit)

[2] 2015-16 Actual has been restated to reverse the impact of regulated accounting for pensions

CONFIDENTIAL - For Internal Discussion Purposes Only

Preparation of the Financial Statements

- The consolidated financial statements are prepared by the Government of Ontario in accordance with the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB).
- PSAB independently establishes accounting standards for the public sector in Canada.
- The objective of PSAB standards is to meet the needs of users of financial statements by providing the information needed for accountability and decision making.
- PSAB standards specify how transactions and other events are to be recognized, measured, presented and disclosed in a public sector entity's financial statements.
- PSAB recognizes that their standards cannot address every potential situation, and that it may be necessary to refer to other sources of guidance.
  - *No rule of general application can be phrased to suit all circumstances or combinations of circumstances that may arise. As a result, matters may arise that are not specifically addressed in the primary sources of GAAP. It is necessary to refer to other sources when the primary sources do not deal with the accounting and reporting in financial statements of transactions or events that a public sector reporting entity encounters, or when additional guidance is needed to apply a primary source to specific circumstances. (Section PS 1150.07 from the PSA Handbook)*

CONFIDENTIAL - For Internal
Discussion Purposes Only

Accounting Changes for 2016-17

- The Province adopted several new accounting changes for the 2016-17 Public Accounts to better reflect the financial position and activities of the government during the fiscal year
- These changes included:
  a) Classification of third-party revenues for hospitals, colleges and school boards
  b) Accounting basis for Ontario Power Generation and Hydro One
  c) Accounting for the Independent Electricity System Operator (IESO) and market accounts
  d) Accounting for net pension assets of jointly sponsored pension plans

CONFIDENTIAL - For Internal Discussion Purposes Only

Classification of Third-Party Revenues for Hospitals, Colleges and School Boards

- 2016-17 Public Accounts present third-party revenues for hospitals, school boards and colleges with provincial revenue.
- In prior years, these revenues were netted against the expenses of the respective sectors (health, education, post-secondary).
- This is a change in presentation only.
- The changes increases total revenues and expenses by approximately $8 billion.
- There is no impact to the Province's deficit, net debt or accumulated deficit.
- This change is consistent with PSAB standards and the reporting practices of other senior Canadian governments.
- This change was recommended by the Office of the Auditor General in prior years.

CONFIDENTIAL - For Internal Discussion Purposes Only

Accounting basis for Ontario Power Generation and Hydro One

- The 2016-17 Public Accounts include the financial results of Ontario Power Generation (OPG) and Hydro One using International Financial Reporting Standards (IFRS).
- These two government business enterprises currently report their stand-alone financial results using Generally Accepted Accounting Principles in the United States (US GAAP).
- In prior years, the reported results of OPG and Hydro One were included in the results of the Province based on US GAAP.
- This change does not have a material impact on this year's Public Accounts.
- This change was recommended by the Office of the Auditor General in prior years.

CONFIDENTIAL - For Internal Discussion Purposes Only

Accounting for Independent Electricity System Operator and Market Accounts

- Independent Electricity System Operator (IESO) is a not-for-profit, non-taxable corporation established pursuant to Part II of the *Electricity Act, 1998*.
- IESO prepares its financial statements in accordance with PSAB standards.
- IESO's financial statements are audited by KPMG LLP, which issued an unqualified opinion on the December 31, 2016 financial statements.
- IESO is a party to agreements with market participants for which are there are amounts due *to* the entities that provide electricity to the market (e.g. power generators) and due *from* those who consume electricity (e.g. local distribution companies on behalf of their consumers).
- In 2016, IESO changed the accounting for the market accounts, recognizing the amounts to be settled as assets and liabilities, equal in amount. In prior years, these amounts were not reflected in the financial statements of IESO.
- IESO made the change to be better reflect its' administration of $17 billion in amounts due to and from the market participants.
- This change has no impact to the province's annual deficit, net debt or accumulated deficit.

CONFIDENTIAL - For Internal Discussion Purposes Only

Accounting for Independent Electricity System Operator and Market Accounts

- The Ontario Power Authority (which was merged with the IESO on January 1, 2015) included market accounts in its financial statements, which were not subject to qualification from the Office of the Auditor General at that time
- Additional background on IESO:
  - On January 1, 2015, IESO was amalgamated with Ontario Power Authority (OPA) and continued as IESO.
  - Prior to the amalgamation, OPA prepared its financial statements in accordance with PSAB standards.
  - OPA's last financial statements prior to amalgamation were audited by KPMG LLP, which issued an unqualified opinion on the December 31, 2014 financial statements.
  - OPA's audited financial statements included a segment of the market accounts.
- The Province consolidates the financial statements of the IESO (and the OPA until it amalgamated with the IESO)

CONFIDENTIAL - For Internal
Discussion Purposes Only

IESO Market Accounts

- Based on professional staff's interpretation of PSAB standards, the government believes that reporting the IESO's market accounts in the consolidated financial statements of Province is more transparent accounting.
- The IESO is a party to agreements with each market participant, and each market participant either owes an amount to the IESO or is owed an amount from the IESO.
- For example:
  - Ontario Power Generation has a receivable from IESO recorded on its financial statements related to power generated, and historically, IESO did not have a payable recorded to Ontario Power Generation – now it does
  - Hydro One has a payable to IESO recorded on its financial statements related to power purchases, and historically, IESO did not have a receivable recorded from Hydro One – now it does
- The amounts due from market participants meet the definition of an asset and the amounts due to market participants meet the definition of a liability under PSAB standards.
- KPMG reviewed the accounting for eight other independent system operators in North America, and all but one recognize market accounts in the financial statements.
- IESO management, their Audit Committee, their Board of Directors, their external auditor and the Office of the Provincial Controller support the change in accounting.
- A qualified opinion was issued by the Office of the Auditor General on the 2016-17 consolidated financial statements regarding the change in Independent Electricity System Operator's accounting for the "market accounts".

CONFIDENTIAL - For Internal
Discussion Purposes Only

Accounting for Net Pension Assets of Jointly Sponsored Pension Plans

- Ontario Public Service Employee's Union Pension Plan (OPSEUPP) and Ontario Teachers' Pension Plan (OTPP) are jointly sponsored pension plans (JSPPs) where the Government of Ontario is a co-sponsor.
- The plans are funded on a 50/50 basis, co-managed by the sponsors, and decisions regarding benefits and contributions require negotiation and agreement between them.
  - On June 12, 2017, the co-sponsors of OTPP (Ontario Teachers Federation and the Government) announced a 1.1% reduction in contributions effective January 1, 2018
- Under PSAB standards, an asset arises when the government's total contributions to a plan, including interest earned thereon, are greater than the pension expense recognized since the start of the plan.
- Since 2001-02, the Province's share of pension assets reflected on the audited consolidated financial statements of the Province has been based on a policy considered to be consistent with PSAB standards related to accounting for retirement benefits. The standards have not changed since their issuance in 2001.
- In 2016, the government passed a time-limited regulation to require the full write-off of the net assets of both of these plans for the 2015-16 Public Accounts.

CONFIDENTIAL - For Internal Discussion Purposes Only

Pension Accounting

- Based on professional staff's interpretation of PSAB standards, the government believes that pension assets for OPSEUPP and OTPP should be reported in order to fairly present the Province's financial position.
- The Province has shared control over the pension plan and the existing agreements in place between the sponsors support the recognition of the pension asset.
- The professional staff does not believe that the Government has the right to withdraw any surplus from the plan, and has supported the value of the pension asset solely on the basis of being able to reduce contributions in the future.
- The Province has recorded the pension assets for OTPP and OPSEUPP in its 2016-17 consolidated financial statements and has restated the 2015-16 consolidated financial statements to recognize the pension assets.
- With respect to the Healthcare of Ontario Pension Plan (HOOPP) and Colleges of Applied Arts and Technology Pension Plan (CAATPP), based on the difference in governance structure between these plans and OTPP and OPSEUPP, the Province has recorded a valuation allowance for CAATPP in the year (amount is not material). The HOOPP plan is not in a net asset position for accounting purposes at March 31, 2017.

CONFIDENTIAL - For Internal
Discussion Purposes Only

Pension Accounting

- The professional staff's interpretation of PSAB standards is supported by its own research and analysis as well as:
  - The report of the Pension Asset Expert Advisory Panel (https://www.ontario.ca/page/pension-asset-expert-advisory-panel-report) released on February 13, 2017 stating that the Government should record an asset for its share of the surplus reported in the accounting valuations for each plan and that no valuation allowance is required.
  - An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the OTPP, a summary of which is included in Appendix A. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions.
  - Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan.
- A qualified opinion was issued by the Office of the Auditor General on the 2016-17 consolidated financial statements regarding the Province's accounting for the net pension assets of OTPP and OPSEUPP.

CONFIDENTIAL - For Internal Discussion Purposes Only

Appendix A – Deloitte Summary of Accounting Opinion Issued on Pension Accounting

Deloitte was engaged to provide a report ("Deloitte Report") on the application of accounting standards by the Ontario Treasury Board Secretariat. Our report, which was issued on October 2, 2016, was prepared under professional standards for such reports set out by CPA Canada.

The subject of this report was the application of Public Sector Accounting Standards (PSAS), as established by CPA Canada, in the recognition of a pension asset in the Province of Ontario's financial statements. Pension accounting is subject to professional judgement and interpretation, and involves significant accounting estimates. The Deloitte Report focused on a specific aspect of this complex area as it relates to the Province of Ontario's accounting for the Ontario Teachers' Pension Plan (OTPP).

OTPP is a pension plan that is jointly sponsored by the Ontario government (or the Province) and the Ontario Teachers' Federation (OTF). Based on the Province's application of PSAS, OTPP is in a plan surplus position. We accepted this aspect of the Province's application of PSAS as a matter of fact in developing our report.

The Deloitte Report addressed the question of whether it was possible to record a pension asset related to the plan surplus in the Province's financial statements, given that the plan is jointly sponsored. We concluded that, based on the information provided to us by the Province and our professional judgement, that it was permissible under PSAS to record a pension plan asset, even though the Province's ability to benefit from any plan surplus, through future contribution reductions for example, would need to be negotiated with and agreed between the Province and OTF.

It is to be noted that even if a pension asset is recorded, PSAS would also require that consideration should be given to limiting the recorded amount of this pension asset to an amount that would be less than the calculated amount of the pension surplus. The Deloitte Report did not express a view on whether any limit to the recorded amount of the asset is needed in the case of the Province's accounting for the pension asset related to OTPP. Therefore, our report did not express a view on the amount of the pension asset that should be recorded in the Province's financial statements as at March 31, 2016 or at any other date.

Heather I am missing some of your team – could you forward to anyone you think is appropriate to this meeting.

The names were taken from the last invite. Please let us know if you are attending in person – we will order in some lunch and I will pre-register you with the OPP

Here is a draft document from PwC for review at the meeting. We are looking to engage OAG staff in late November and these are the section to finalize to ensure we have a good plan for PRRT revenue recognition

There are still some outstanding questions regarding how the cap and trade system works. If possible, if MOECC could provide answers to questions in the document in advance of the meeting that would be ideal.

Let me know if you have any questions

Thanks

Ian

Hi Lucy. In briefings now and firming up timing on key actions to try to get to signoff on the Public Accts for early nest week, if possible.
Cindy and I will be working on a position paper and will need your help, likely over the weekend as there will likely be a desire to review it on Sat pm or Sunday so it can be shared with the AG on late Sun/Monday. Hoping that's OK with you? N

Attachment 1: Govt Partnerships and JDPP to DT.docx

Hi Lucy.

One of our staff have prepared the following analysis of PSAB's guidance on the government partnership standard and sec. 3250's reference to joint defined benefit plans.

I think you'll find it of interest.

Nadine

Govt Partnerships and JDPP to DT.pdf

Comparison of the definition of a government partnership and a joint defined benefit plan

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, paragraph PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined pension plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined pension plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;	Consistent in concept with the definition of a GP focusing on investments in the partnership while the definition of a JDBP focuses on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and	Consistent in concept with the wording in the GP definition being more general.

	partnership on an ongoing basis; and	to the level of benefits and contributions on an ongoing basis; and	
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

In addition to the wording being consistent, the concepts in the definitions of a government partnership and of a joint defined pension plan are similar.

While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a

general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.

As Section PS 3250 was introduced into the PSA Handbook after Section PS 3060, the PSAB would have had a few options on approval of Section PS 3250. The PSAB would have been aware of the interaction between the two standards as demonstrated by the similarity in the GP and JDBP definitions. PSAB could have as a consequential amendment:

a. Scoped out JDBP from Section PS 3060 if the requirements in Section PS 3250 were more specific or alternatively in conflict with those in Section PS 3060; or
b. Explicitly list JDBP in Section PS 3060 as a type of government partnership.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method in Section PS 3060.

Listing specific types of government partnerships in Section PS 3060 would not be typical as users of the PSA Handbook would question why certain types of GP have been mentioned while others were not. The standard is meant to be more principle based.

Based on the actions of PSAB, it would suggest the Board felt both the general and specific standards in both Section PS 3060 and PS 3250 respectively were applicable for a JDBP.

Hi Cindy and Mark,

We have issued our final invoice today, and I am attaching a soft copy of it here for your convenience. This invoice covers the period to the conclusion of our contact, at 30 September 2017. You will note that the sum of all of our invoices (approx. $268k) has come in under the overall budget for the contract (approx. $299k).

Cindy, as you and I discussed last month, I believe there is a need and an opportunity to further improve pension reporting by the province. In particular, we discussed the work around assumption setting processes and documentation. This is the most important and strategic piece, but I think there is also further work that needs to be done on variance reconciliation and reporting, improvements how actuarial information is obtained and used, and further work related to OPEB plans.

Most of this work is continuation of the work we've been doing so far, and we would be available to continue supporting you in this regard. I recall that you were going to set up a meeting with Nancy Kennedy – please let me know if that still makes sense.

Confidentiality Agreement - Signed by Uros Karadzic.pdf

CONFIDENTIALITY AGREEMENT

Confidentiality Agreement

During and following the term of the Agreement between **Ernst & Young LLP** (the "Vendor") and Her Majesty the Queen in right of Ontario as represented by the **Treasury Board Secretariat** and during and following the term of each Statement of Work entered into by the Vendor and pursuant to the Agreement (collectively, the "Agreements"), the undersigned agrees with the Vendor to keep confidential and secure all Confidential Information to which the undersigned may have access to in the course of the performance of services pursuant to any of the Agreements (including requests for services) or otherwise in connection with any of the Agreements (including requests for services). "Confidential Information" means all information of the Ontario Public Service and of the Client's subcontractors at any tier of subcontracting that is confidential by its nature or in the circumstances in which it is received, including all confidential information in the custody or control of the Ontario Public Service, regardless of whether it is identified as confidential or not, and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge, possession or control of the Vendor in connection with any of the Agreements. "Ontario Public Service" means the ministries and other administrative units of Her Majesty the Queen in right of Ontario ("Ontario") over which ministers of Ontario preside, and for the purposes of this Confidentiality Agreement, includes Ontario and Ontario's agencies, boards, commissions and Crown corporations, offices of an officer of the Legislative Assembly or of the Ontario Legislature and Listed Entities, and "**OPS**" has the same meaning.

The undersigned acknowledges that the Client is bound to maintain custody of or control over information, material and records, however recorded, within the meaning of the *Freedom of Information and Protection of Privacy Act* ("FIPPA"). The undersigned agrees to comply with the privacy provisions of the Agreements in the course of providing services pursuant to the Agreements.

The undersigned shall not directly or indirectly disclose, destroy, exploit or use any Confidential Information except for the purpose of performing services pursuant to the Agreements. The undersigned shall not copy any Confidential Information, in whole or in part, unless copying is essential for the performance of services pursuant to the Agreements. On each copy, the undersigned must reproduce all notices that appear on the original.

The undersigned acknowledges that the Vendor is obliged to implement and maintain measures to ensure the security and integrity of Confidential Information and to protect it against loss, alteration and destruction and against access by unauthorized persons, and to select, implement, use and maintain the most appropriate products, tools, measures and procedures to do so. The undersigned covenants and agrees to adhere to all of the measures instituted by the Vendor.

The undersigned agrees to return all Confidential Information, including all copies and portions thereof, to the Vendor or to the Client with no copy kept by the undersigned as soon as the need to possess them ends, at the request of the Client, and in any event, prior to concluding the performance of services pursuant to the applicable Agreements.

RE: RFS-TBS-OTB-OPCD-22

The Ministry is pleased to advise that you are the selected proponent pursuant to the above-noted procurement process.

Enclosed please find two (2) copies of the Agreement for your signature. Please return one copy of the executed Agreement within five (5) business days of receipt of this notice:

Please be advised that this notice of selection letter should not be construed as permission from the Ministry to begin the work detailed in the Agreement. The Ministry will not be responsible or liable for any expenses related to the Deliverables, and the selected proponent is not to accept work requests prior to the execution of the Agreement by the Ministry. Work may begin pursuant to the Agreement when:

(a) the Agreement signed by both parties is returned to the selected proponent, and

(b) written permission is expressly given to the Supplier by the Ministry Representative to begin work under the Agreement.

.../2

If you have any questions concerning this process, please feel free to contact me at 416-325-8027.

Sincerely,

Mark Donaldson
Director, Accounting Policy and Financial Reporting Branch
Office of the Provincial Controller Division

FORM OF STATEMENT OF WORK – OPS ENTITY

Statement of Work for Management Consulting Services

This statement of Work No. **RFS-TBS-OTB-OPCD-22** made in **duplicate and effective December 11, 2017 ending on June 15, 2019.**

Ernst & Young LLP (the "vendor" or "EY") and her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of June 16, 2014 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* – The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term of provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* – The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price* - C$75,000.00 does not include HST.

4. *Project Start Date* – December 11, 2017

5. *Project End Date* – June 15, 2019

6. *Scope of Services and Deliverables* – The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

    - Working with management of the Office of the Provincial Controller's Accounting Policy and Financial Reporting Branch (APFRB), the provider will provide actuarial/accounting services related to the following possible areas:
        - Review the economic assumptions (i.e. management best estimates) used for the accounting valuations of the pension plans and non-pension benefits reported by the Province.
        - Review the actual and forecast numbers prepared by APFR staffs for the Province's various pension and non-pension benefits, including assessing the reasonableness

and completeness of assumptions used by APFRB staff in the models, including any sensitivity analysis as required.
    - From time to time provide recommendations, if any on improvements in the pension and non-pension benefits accounting models.
    - Perform ceiling test requirements in accordance with PS3250.50 to PS3250.59 for all sole sponsor or joint sponsor pension plans that are in an accrued benefit asset position.
    - Provide advice on any accounting issues related to pension and non-pension benefits, as required.
    - Participate in discussions with internal and external stakeholders, as required.

- The Vendor will participate in meetings as necessary to support the engagement objectives.

7. *Ownership and Licenses* – Attachment D of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* – The structure of Ernst & Young's working relationship with OPCD is vital to the success of their engagement. The Project Lead that will handle OPCD work is Uros Karadzic. Ernst & Yong's communication strategy will be centered on periodic project update meetings, the frequency of which will be determined by the OPCD and Ernst & Young.

9. *Work Location* – All meetings will be within Greater Toronto.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:30 a.m. to 4:30 p.m. Monday to Friday inclusive.

    If required by the Client, the Vendor must provide Services outside of the normal working hours and/or non-Business days. The Vendor will not be entitled to charge more than the Fixed Price or Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Billing and Payment Process* – The Vendor shall provide the Client with quarterly billing statements that outline the per diem charges no later than 10 Business Days after the end of each quarter.

    Billing statements should include all billing information as set out in the Master Agreement.

13. Names of Roles of Vendor's Personnel:

Name of Individual	**Level**
Uros Karadzic	Senior Consultant/Project Lead
Christina Chan	Intermediate Consultant/Project Analyst

14. *Invoices* – Invoices for payment of any charges under this Statement of Work shall be sent to:

    Client: Treasury Board Secretariat
    Office of the Provincial Controller
    Accounting Policy and Financial Reporting Branch
    Mark Donaldson
    Director, Accounting and Policy Reporting
    Tel: 416 325 8027
    E mail: mark.donaldson@ontario.ca

15. *Knowledge Transfer* – The Vendor will work closely with the Client to ensure knowledge transfer to the Client's designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* – The Vendor shall destroy all information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Indemnity* – the indemnity set out in the Master Agreement applies to this assignment.

18. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	Treasury Board Secretariat
Client Representative:	Mark Donaldson
Telephone Number:	416 325 8027
E-mail:	mark.donaldson@ontario.ca

19. *Vendor Representative and Receipt of Notices*

Tax Declaration Form - Signed by Alan Smith.pdf

Appendix D – Tax Compliance Declaration Form

The Ontario Government expects all suppliers to meet their Ontario tax obligations on a timely basis. In this regard, proponents are advised that their Ontario tax obligations, if any, must be in good standing in order to be considered for a contract award (see Section 3.2.3 of the RFP). In order to be considered for a contract award, the proponent must submit the following tax compliance status statement and the following consent to disclosure:

Declaration

I/WE hereby certify that **Ernst & Young LLP** (the "Proponent") at the time of submitting its proposal, is in full compliance with all applicable Ontario tax statutes, whether administered by the Treasury Board Secretariat or by the Canada Revenue Agency, and that, in particular, all returns required to be filed have been filed and all taxes due and payable under those statutes have been paid or satisfactory arrangements for their payment have been made and maintained; or the Proponent will take all necessary steps prior to being considered for contract award in order to be in full compliance with all applicable Ontario tax statutes.

(Please check applicable box)

The Proponent ☐ is / ☐ is not a corporation subject to Ontario corporate tax under the *Taxation Act, 2007* (Ontario).

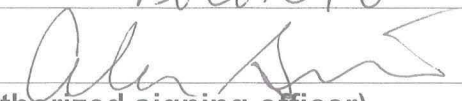
(Please insert Proponent's Business Number) _____

Consent to Disclosure

The Proponent consents to the Ministry of Finance releasing the taxpayer information to the Ministry of Finance as necessary for the purpose of verifying the Proponent's compliance with Ontario tax statutes.

The Proponent consents to the Ministry of Finance releasing taxpayer information to the Requesting Ministry as necessary for the purpose of verifying the Proponent's compliance with Ontario tax statutes.

Dated at Toronto this 5th day of December 20 17.



(Authorized signing officer)

ALAN SMITH CFO

(Print Name) **(Title)**

I have authority to bind the Proponent.

THIS MASTER AGREEMENT FOR MANAGEMENT CONSULTING SERVICES is made in duplicate as of June 16, 2014.

BETWEEN:

HER MAJESTY THE QUEEN in right of Ontario
as represented by the Minister of Government Services

AND:

«Proponent_Name»

(referred to as the "Vendor")

In consideration of their respective agreements set out below, the parties agree as follows:

ARTICLE 1. DEFINITIONS

1.1 Definitions

In this Master Agreement and in each Statement of Work, these words and expressions have these meanings:

"**Attachment**" means an attachment to this Master Agreement listed in Section 2.14 (Attachments).

"**Authority**" means any government authority, agency, body or department, whether federal, provincial or municipal, having or claiming jurisdiction over this Master Agreement or the Statement of Work; and "Authorities" means all such authorities, agencies, bodies and departments.

"**Business Day**" means any working day, Monday to Friday inclusive, excluding statutory and other Ontario provincial government holidays, namely: New Year's Day; Family Day; Good Friday; Easter Monday; Victoria Day; Canada Day; Civic Holiday; Labour Day; Thanksgiving Day; Remembrance Day; Christmas Day; Boxing Day and any day which the government of the Province of Ontario has elected to be closed for business.

"**Change Order**" means, in respect of a Statement of Work, a written amendment executed by the Parties, which specifies the changes agreed, as further described in Section 11.2 (Change Orders).

"**Client**" means, in respect of a request for services or a Statement of Work:

(a) Ontario, as represented by a ministry of Ontario over which a minister of the Crown, as appointed by the Lieutenant Governor under the Executive Council Act, R.S.O. 1990, c. E.25, presides, or any combination of such ministries, if that ministry or combination of ministries has or have entered into the request for service or Statement of Work on behalf of Ontario; and

(b) the OPS Entity, if that OPS Entity has entered into the request for service or Statement of Work.

"**Client Representative**" means, in respect of a Statement of Work, one of the individuals designated as the Client Representative or the Backup Client Representative in the Statement of Work or, if not designated in it, any other individual designated as such pursuant to Section 2.9.

"**Client Work Information**" means (a) all audio and video recordings, data, databases, designs, documents, drawings, images, information, materials, methodologies, plans, procedures, processes, products, records, reports, specifications, Technical Information, techniques, templates, and working papers, recorded in any form and on any media, and all other assets, materials, recorded information, and products of any kind, in all forms and however recorded; that are created, developed, generated, prepared or produced by the Client or by one or more of the Personnel of the Client; and (b) any contribution made by one or more of the Personnel of the Client to any Joint Work Material.

"**Client Work Invention**" means: (a) any Invention conceived, or conceived and developed, solely or jointly by one or more of the Personnel of the Client; and (b) any contribution made by one or more of the Personnel of the Client to any Joint Work Invention.

"**Confidential Vendor Information**" means:

(a) in connection with this Master Agreement, all information of the Vendor and its Subcontractors that is confidential by its nature or in the circumstances in which it is received and is identified as confidential or as a trade secret and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge or possession of Ontario in connection with this Master Agreement but, for certainty, excluding all information of the Vendor and its Subcontractors which comes into the knowledge, possession or control of Ontario in connection with any request for services issued pursuant to this Master Agreement or in connection with any Statement of Work;

(b) in connection with any request for services issued pursuant to this Master Agreement, all information of the Vendor and its Subcontractors that is confidential by its nature or in the circumstances in which it is received and is identified as confidential or as a trade secret and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge, possession or control of the Issuer or any contractor or subcontractor at any tier of the Issuer in connection with the request for services; or

(c) in connection with any Statement of Work, all information of the Vendor and its Personnel that is confidential by its nature or in the circumstances in which it is received and is identified as confidential or as a trade secret and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge, possession or control of the Client or its Personnel in connection with the Statement of Work;

including: (a) information relating to designs, drawings, flowcharts, Intellectual Property Rights, Inventions, patterns, plans, procedures, processes, reports, schematics, specifications, templates, and working papers; and (b) electronic data, other than Ontario Data, stored or processed by the Vendor; but Confidential Vendor Information shall not include: (c) Confidential Work Information; (d) information that ceases to benefit from protection as confidential information or as a trade secret under legislation or at law as a result of Ontario's or the OPS Entity's use or disclosure of Deliverables for any purpose whatsoever that is not expressly excluded by the Statement of Work; (e) information that is or becomes generally available to the public without fault or breach by Ontario or the OPS Entity, but only after that information becomes generally available to the public; (f) information that Ontario or the OPS Entity can demonstrate to have been rightfully obtained by it, without any obligation of confidence of any kind, from a third party who had the right to transfer or disclose it to Ontario or the OPS Entity free of any obligation of confidence; (g) information that Ontario or the OPS Entity can demonstrate to have been rightfully known to it or in its possession, free of any obligation of confidence, when disclosed; (h) information that is independently developed by Ontario or the OPS Entity without the use of any Confidential Vendor Information; (i) Vendor Evaluation Information; or (j) the Statement of Work document and its contents.

"**Conflict of Interest**" includes, but is not limited to, any situation or circumstance where: (a) in relation to the RFP process, the proponent has an unfair advantage or engages in conduct, directly or indirectly, that may give it an unfair advantage, including (i) having, or having access to, information in the preparation of its Proposal that is confidential to Ontario or OPS Entities and not available to other proponents; (ii) communicating with any person with a view to influencing preferred treatment in the RFP process, including the giving of a benefit of any kind, by or on behalf of the proponent to anyone employed by, or otherwise connected with, Ontario or OPS Entities; or (iii) engaging in conduct that compromises, or could be seen to compromise, the integrity of the open and competitive RFP process and render that process non-competitive and unfair; or (b) in relation to the performance of its contractual obligations in a contract with Ontario or the OPS Entity, the Vendor's and its Personnel's other commitments, relationships or financial interests (i) could, or could be seen to, exercise an improper influence over the objective, unbiased and impartial exercise of its independent judgement; or (ii) could or could be seen to compromise, impair or be incompatible with the effective performance of its contractual obligations.

"**Deliverables**" means anything and everything, in all forms and however recorded, that has been or will be created, developed, generated, prepared or produced in the performance of Services, or delivered or provided at any time during the Project Term or following the termination of the Statement of Work, by the Vendor (or its directors, officers, Personnel, agents, partners, affiliates, volunteers or Subcontractors or others for whom it is responsible at law) as a result of the Statement of Work, as may be more fully described in the Statement of Work (including: (a) all assets, audio and video recordings, databases, designs, documents, drawings, images, know-how, materials, methodologies, plans, procedures, processes, products, records, reports, specifications, techniques, Technical Information, templates, and working papers, of any kind; (b) data and information (whether or not contained in or on any database or electronic information storage system or media); (c) data collected as part of the Services; (d) all contributions made by one or more of the Personnel of the Vendor to any Joint Work Material; (e) all Vendor Materials; and (f) all Confidential Work Information). "Deliverables" include all developments and modifications to the foregoing developed or produced by the Vendor (or its Personnel, Subcontractors or others for whom it is responsible at law) from time to time under the Statement of Work, and copies of the above.

"**Effective Date**" means, as to this Master Agreement, the date first specified above.

"**Encumbrance**" means any encumbrance of any kind whatsoever, and includes an assignment, charge, hypotec, hypothecation, lien, mortgage, pledge, security interest, trust or deemed trust (whether contractual, statutory or otherwise arising), or other right or claim of others.

"**Executive Council**" means the council of that name comprising persons appointed by the Lieutenant Governor pursuant to the Executive Council Act R.S.O. 1990, c. E.25, as amended or replaced from time to time.

"**FIPPA**" means the Freedom of Information and Protection of Privacy Act, R.S.O. 1990, c. F.31, as amended or replaced from time to time.

"**Fiscal Year**" means the period running from April 1 in one calendar year to and including March 31 in the next calendar year.

"**Fixed Price**" means, in respect of particular Services performed and/or particular Deliverables provided and subject to Article 13 (Limits on Charges under Statements of Work) of the Master Agreement, the amount set out in the Statement of Work which the Vendor may charge for particular Services performed and/or particular Deliverables provided, which amount is fixed and not subject to change unless otherwise agreed to in a Change Order. For certainty, the "Fixed Price", as it relates to the particular Services performed and/or Deliverables provided, includes all labour and material costs, insurance costs, carriage and transportation costs, and other overhead, including any fees or other charges required by law; but excludes: (i) all applicable duties and taxes (including Harmonized Sales Tax (HST); (ii) all travel and accommodation expenses; and (iii) amounts that are charged on a Per Diem Rate basis.

"**Indemnified Parties**" means each of the following and their directors, officers, advisors, agents, appointees and employees: (i) Ontario; (ii) the members of the Executive Council; (iii) officers of the Legislative Assembly and officers of the Ontario Legislature, and their respective offices; and (iv) the OPS Entities.

"**Insolvency Event**" means, in respect of any Person: the making of an assignment by such Person for the benefit of its creditors; the failure of such Person to pay its debts generally as they become due; the filing or commencement of a petition or other proceeding in respect of such Person under any bankruptcy, reorganization, moratorium, arrangement of debt or insolvency law; the appointment of a receiver, receiver and manager, or interim receiver in respect of such Person or any material part of its assets or business; the declaration of bankruptcy or insolvency of such Person; the acknowledgement (in writing or otherwise) by such Person of its insolvency or inability to pay its debts generally as they become due; the suspension of business by such Person; the making by such Person of any proposal, arrangement or compromise with its creditors under the Bankruptcy and Insolvency Act (Canada), any other statute, or otherwise; or the taking of any action for the purposes of any of the foregoing.

"**Intellectual Property Rights**" means any intellectual or industrial property rights protected or protectable under the laws of Canada, any foreign country, or any political subdivision of any country, including any intellectual

property rights protected by legislation (such as legislation governing copyrights, industrial designs, integrated circuit topographies, patents or trademarks) or by common law (such as confidential information and trade secrets); and at any time in the future, with respect to any licence to exercise Intellectual Property Rights, includes any intellectual or industrial property rights protected or protectable at such time under the laws of Canada, any foreign country, or any political subdivision of any country.

"**Invention**" means any new and useful art, process, machine, manufacture or composition of matter, or any new and useful improvement to any of them, whether or not patentable.

"**Issuer**" means, in respect of a request for services referred to in: (a) the definition of "Confidential Vendor Information" in Article 1 (Definitions); (b) subsection 28.1(b) (Confidentiality - Request for Services); or (c) subsection 28.2(b) (Restrictions on Copying – Request for Services Process); the Client that issues the request for services.

"**Joint Work Invention**" means any Invention conceived, or conceived and developed, by one or more of the Personnel of the Vendor in the performance of Services with one or more of the Personnel of the Client.

"**Joint Work Material**" means anything and everything in all forms and however recorded that is created, developed, generated, prepared or produced by one or more of the Personnel of the Vendor in the performance of Services with one or more of the Personnel of the Client; but does not include any Joint Work Inventions. The foregoing includes all audio and video recordings, data, databases, designs, documents, drawings, images, information, materials, methodologies, plans, procedures, processes, products, records, reports, specifications, Technical Information, techniques, templates, and working papers, of any kind; but does not include Inventions.

"**Losses**" means liabilities, losses, costs, damages and expenses (including legal, expert and consulting fees).

"**Master Agreement**" means this Master Agreement for Management Consulting Services, together with all Attachments and all agreements amending or supplementing this Master Agreement.

"**Master Agreement Expiry Date**" means June 15, 2017 (unless extended in accordance with Section 6.1).

"Maximum Price" means the maximum total amount, in Canadian funds, as set out in the Statement of Work, that the Vendor may charge the Client under that Statement of Work, including:

(a) all Fixed Price amounts;

(b) all amounts for Work performed on a Per Diem Rate basis;

(c) all applicable duties and taxes (including Harmonized Sales Tax (HST)); and

(d) all travel and accommodation expenses.

"**MGS**" means the Ministry of Government Services.

"**MGS Representative**" means one of the individuals designated as the MGS Representative or the Backup MGS Representative in Section 2.9, and any other individual designated as such pursuant to Section 2.9.

"**Minister (Client)**" means: (i) where the Client is a ministry of Ontario that has entered into the Statement of Work on behalf of Ontario, the minister that presides over the ministry, or any other person authorized to act on behalf of that minister; or (ii) where the Client is an OPS Entity, the individual with authority to enter into contracts on behalf of the OPS Entity, or any other person authorized to act on behalf of that person. For certainty, Minister (Client) may mean the Minister (MGS) where the Statement of Work is entered into by MGS on behalf of Ontario.

"**Minister (MGS)**" means the Minister of Government Services, or any other person authorized to act on behalf of the Minister of Government Services.

"**Moral Rights**" has the same meaning as in the Copyright Act, R.S.C. 1985, c. C-42, as amended or replaced from time to time, and includes comparable rights in applicable jurisdictions.

"**Ontario**" means Her Majesty the Queen in right of Ontario.

"**Ontario Data**" means: (1) all data (including all information whether or not Personal Information, and whether or not contained in or on any database or electronic information storage system or media owned by or in the custody or control of the Client and, if the Client is an institution that is subject to FIPPA, recorded in any Record) of any kind and in any form, provided by Ontario or the OPS Entity, to the Vendor to enable the Vendor to perform the Services or otherwise owned by or in the custody or control of Ontario or the OPS Entity; (2) all Personal Information collected by the Vendor as part of the Services; and (3) all such data that are created, developed, generated, prepared or produced as a result of any compilation (whether combined or compiled with other data or not) or developments or modifications to the data described above, but where the Vendor's data are combined or compiled with Ontario Data, excluding the Vendor's data that are proprietary to the Vendor immediately prior to the Project Start Date or are proprietary to the Vendor but are not first created or produced in the performance of Services.

"**Ontario Government Insignia**" means the visual identity of the Government of Ontario and any Ontario government design, domain name, geographical indication, insignia, logo, official mark or other designation, indication, symbol or trademark, including any developments and modifications of them.

"**Ontario Materials**" means, in respect of a Statement of Work: (a) all audio and video recordings, data, databases, designs, documents, drawings, images, information, materials, methodologies, plans, procedures, processes, products, records, reports, specifications, techniques, Technical Information, templates, and working papers, recorded in any form and on any media, that are: (i) proprietary to Ontario or the OPS Entity, and provided to the Vendor to enable the Vendor to perform the Services; or (ii) created, developed, generated, prepared or produced by the Client or by one or more of the personnel of the Client (including any contribution made by one or more personnel of the Client to any Joint Work Material); and all such materials that are created, developed, generated, prepared or produced as a result of any developments or modifications to the material described in this subparagraph (a); (b) all second stage selection documents issued by Ontario or the OPS Entity; (c) all materials described in the Statement of Work as remaining the property of Ontario or the OPS Entity; and (d) all Third-Party Ontario Materials.

"**Ontario Public Service**" means the ministries and other administrative units of Ontario over which ministers of Ontario preside, and for the purposes of this Master Agreement, request for services issued pursuant to this Master Agreement and each Statement of Work includes its agencies, boards, commissions and Crown corporations, offices of an officer of the Legislative Assembly or of the Ontario Legislature, and OPS Entities, and "OPS" has the same meaning.

"**OPS Confidential Information**" means all information of the Ontario Public Service and of the Client's Subcontractors that is confidential by its nature or in the circumstances in which it is received, including all confidential information in the custody or control of the OPS, regardless of whether it is identified as confidential or not, and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge, possession or control of the Vendor or its Subcontractors in connection with this Master Agreement, a request for services issued pursuant to this Master Agreement or a Statement of Work, including: (a) information relating to designs, drawings, flowcharts, Intellectual Property Rights, Inventions, patterns, plans, procedures, processes, reports, schematics, Technical Information, templates, and working papers; (b) electronic data stored or processed by the OPS; (c) all Confidential Work Information; (d) new information derived at any time from any such information whether created by the OPS, the Vendor or any third party; and (e) information that the OPS is obliged, or has the discretion, not to disclose under provincial or federal legislation; but OPS Confidential Information shall not include information that: (f) is or becomes generally available to the public without fault or breach by the Vendor, but only after that information becomes generally available to the public; (g) the Vendor can demonstrate to have been rightfully obtained by the Vendor, without any obligation of confidence of any kind, from a third party who had the right to transfer or disclose it to the Vendor free of any obligation of confidence; (h) the Vendor can demonstrate to have been rightfully known to or in the possession of the Vendor, free of any obligation of confidence, when disclosed; or (i) is independently developed by the Vendor without the use of any OPS Confidential Information.

"**OPS Entity**" means: (a) an advisory, adjudicative, regulatory (including those with governing boards) or operational services agency of the Province of Ontario; or (b) an entity designated by MGS as an OPS Entity, which designation may be amended from time to time at the sole discretion of MGS.

"**Party**" in respect of this Master Agreement, means Ontario or the Vendor, and "Parties" means both of them; but in respect of a Statement of Work, means: (i) Ontario, if the Statement of Work is entered into by a ministry or any combination of ministries; or (ii) the OPS Entity, if the Statement of Work is entered into by an OPS Entity; or the Vendor, and "Parties" means both of them.

"Per Diem Rate" means, in respect of a Role in a Statement of Work and subject to Article 13 (Limits on Charges under Statements of Work) of the Master Agreement, an amount set out in a Change Order to the Statement of Work, which the Vendor may charge for Services performed by an individual in a Role on one calendar day, which includes all labour and material costs, insurance costs, carriage and transportation costs, and other overhead, including any fees or other charges required by law; but excludes: (i) all applicable duties and taxes (including Harmonized Sales Tax (HST)); and (ii) all travel and accommodation expenses.

"**Performance Management Process**" means the process used by Ontario to evaluate and rate the performance of the Vendor and other vendors.

"**Permitted OPS Assignee**" means: (a) any OPS Entity; (b) any office of an officer of the Legislative Assembly or of the Ontario Legislature; (c) any Provincially Funded Organization; and (d) any non-governmental entity, where assignment to such non-governmental entity is necessitated by alternative service delivery, backward or forward integration, outsourcing, privatization, partnering, procurement endeavours, or similar activity.

"**Person**" includes if the context allows, an individual, company, corporation, limited liability company, limited liability partnership, partnership, unincorporated association, government or government agency, authority or entity however designated or constituted and includes successors to the foregoing.

"**Personal Information**" at all times, has the same definition as in subsection 2(1) of FIPPA, which, at the date first written above, is recorded information about an identifiable individual, and includes all such information obtained by the Vendor under or created by the Vendor pursuant to this Master Agreement or the Statement of Work.

"**Personal Knowledge**", in connection with any Personnel, means concepts, ideas or know-how acquired by the individual that are not retained in any electronic, optical, printed, written or other recorded form, which relate to information technology and are of a generic technical nature, and not specific to the operation and activities of Ontario or the OPS Entity, that amount to no more than an enhancement of that individual's personal knowledge, skill or expertise.

"**Personnel**" means (a) collectively, in the case of the Vendor, individuals who provide services to the Vendor or any of its Subcontractors in connection with a Statement of Work, whether as employees or independent contractors, and individuals who are assigned by the Vendor to perform Services pursuant to a Statement of Work; and (b) collectively, in the case of the Client, individuals who provide services to the Client or any of its Subcontractors, whether as employees or independent contractors, but excludes all individuals described under (a).

"**Privacy Provisions**" means, collectively, Article 27 (Privacy) and the provisions, if any, set out in the Statement of Work that relate to (a) the collection, use, disclosure or transfer of personal information; (b) compliance with FIPPA; (c) compliance with the Personal Information Protection and Electronic Documents Act, S.C. 2000, c.5, as amended or replaced from time to time; and (d) compliance with any other legislation that would address the management of personal information or other privacy issues.

"**Proceeding**" means any action, claim, demand, lawsuit, or other proceeding.

"**Project Start Date**" means, in respect of a Statement of Work, the Project Start Date set out in the Statement of Work. For certainty, a Project Start Date cannot be a date that is earlier than the Effective Date of this Master Agreement.

"**Project End Date**" means, in respect of a Statement of Work, the Project End Date set out in the Statement of Work, subject to termination under Section 6.2 (Term of Statement of Work).

"**Project Term**" means, in respect of a Statement of Work, the term of such Statement of Work commencing on the Project Start Date and continuing in effect until the Project End Date, unless otherwise terminated in accordance with this Master Agreement or the Statement of Work.

"**Proposal**" means all of the documentation submitted by the Vendor in response to the RFP, including any clarifications provided by the Vendor at the request of MGS.

"**Proprietary Vendor Materials**" means all audio and video recordings, data, databases, designs, documents, drawings, images, information, materials, methodologies, plans, procedures, processes, products, records, reports, specifications, techniques, and templates, and any other recorded information in any form or on any medium, that are proprietary to the Vendor immediately prior to the Effective Date or are proprietary to the Vendor but are not first created or produced in the Performance of Work, and that are incorporated into, provided or used in conjunction with any Deliverables or that are used by the Vendor to provide the Services.

"**Provincially Funded Organization**" means: (a) any public sector entity of the Province of Ontario; or (b) any other entity designated by MGS as a Provincially Funded Organization, which designation may be amended from time to time at the sole discretion of MGS; but excludes (i) Ontario, as represented by a ministry of Ontario over which a minister of the Crown, as appointed by the Lieutenant Governor under the Executive Council Act, R.S.O. 1990, c. E.25, presides, or any combination of such ministries; and (ii) OPS Entities.

"**Provincially Funded Organization Notice**" shall have the meaning ascribed to the capitalized term in Section 4.3.

"**Provincially Funded Organization Agreement**" means an agreement between the Vendor and a Provincially Funded Organization as defined in Section 4.1.

"**Record**" means any recorded information, including any Personal Information, in any form: (a) provided by Ontario to the Vendor, or provided by the Vendor to Ontario, for the purposes of this Master Agreement; (b) provided by Ontario or the OPS Entity to the Vendor, or provided by the Vendor to Ontario or the OPS Entity, for the purposes of the Statement of Work; or (c) created by the Vendor in the performance of the Statement of Work; and shall exclude any "Records" described in the Statement of Work as not being in the custody or control of MGS or the Client.

"**Requirements of Law**" mean all applicable requirements, laws, statutes, codes, acts, ordinances, orders, decrees, injunctions, by-laws, rules, regulations, official plans, permits, licences, authorisations, directions of, and agreements with, all Authorities that now or at any time hereafter may be applicable to this Master Agreement, the Statement of Work, the Vendor, Ontario, the OPS Entity, the Services, or the Deliverables, or any part of them.

"**RFP**" means the Request for Proposals dated December 4, 2013 for Management Consulting Services, reference number OSS-00426611 issued by Ontario, as represented by the Minister (MGS), and any addenda to it.

"**Role**" means one role set out in Attachment A, restricted to one experience level in one service category for that role as set out in Attachment A.

"**Security Clearance Checks**" has the meaning set out in Article 10.

"**Services**" means all services and work to be provided or performed pursuant to a Statement of Work and includes everything that is necessary to be done, supplied or delivered by: (a) the Vendor; (b) the Vendor's Personnel; (c) the Vendor's Subcontractors; and (d) those for whom the Vendor is responsible.

"**Statement of Work**" means a contract for the performance of Services constituted by a document substantially in the form of Attachment B (Form of Statement of Work - Ministries) or Attachment C (Form of Statement of

Work – OPS Entity), as applicable, entered into by the Parties pursuant to this Master Agreement, which incorporates by reference the terms of this Master Agreement, and which identifies the Client, the Vendor, the Services and the other information set out in that Attachment. A "Statement of Work" includes all Change Orders made to it.

"**Subcontractor**" means, in the case of each Party, any contractor of that Party or any of its subcontractors at any tier of subcontracting.

"**Technical Information**" means recorded information of a technical nature as it relates to management consulting in any form and on any media, including any designs, drawings, know-how, methods, methodologies, patterns, plans, procedures, processes, schematics, specifications, techniques, templates, and working papers, but does not include data, databases, documentation, Inventions or software.

"**Term**" means: (a) in respect of this Master Agreement, the period of time commencing on the Effective Date and ending on the earlier of: (i) the Master Agreement Expiry Date; or (ii) the date of termination of this Master Agreement if it is terminated in accordance with its terms; or (b) in respect of a Statement of Work, the Project Term.

"**Third-Party Ontario Materials**" means any audio and video recordings, data, databases, designs, documents, drawings, images, information, materials, methodologies, plans, procedures, processes, products, records, reports, specifications, techniques, Technical Information, templates, and working papers, and any other recorded information in any form and on any media, and any components of the Ontario Materials, that are not proprietary to Ontario or the OPS Entity; and that are licensed by Ontario or the OPS Entity from any third parties; but only to the extent that they are protected by Intellectual Property Rights or are not to be disclosed pursuant to obligations of confidentiality.

"**Third-Party Vendor Materials**" means all audio and video recordings, data, databases, designs, documents, drawings, images, information, materials, methodologies, plans, procedures, processes, products, records, reports, specifications, techniques, and templates, and any other recorded information in any form or on any medium, that are not proprietary to the Vendor; that are licensed by the Vendor from any third parties and that are not to be assigned, sold or transferred to the Client; that are not first created or produced in the performance of Work; and that are incorporated into, provided or used in conjunction with the Deliverables or are used by the Vendor to provide Services.

"**Vendor Evaluation Information**" means any information about the Vendor in respect of the quality, timeliness in the delivery of Services and other qualitative measures of the Vendor and any of its Personnel and of any Work performed by the Vendor and any of its Personnel.

"**Vendor Materials**" means, in respect of a Statement of Work, all Proprietary Vendor Materials and all Third-Party Vendor Materials. For certainty, "Vendor Materials" excludes all Joint Work Inventions, Joint Work Material, Ontario Data, Ontario Materials, Vendor Work Inventions, and Vendor Work Information (and if Attachment D applies, Non-Technical Work and Other Work Inventions).

"**Vendor Representative**" means one of the individuals designated as the Vendor Representative or the Backup Vendor Representative in Section 2.9, and any other individual designated as such pursuant to Section 2.9.

"**VOR Anniversary Date**" means the 16th day of June of each calendar year.

"**Work**" means work performed under, or as a result of, the Statement of Work.

"**WSIA**" means the Workplace Safety and Insurance Act, 1997, S.O. 1997, c.16, Sch. A., as amended or replaced from time to time.

"**WSIB**" means Workplace Safety and Insurance Board of Ontario.

ARTICLE 2. INTERPRETATION

2.1 Interpretation

In this Master Agreement and each Statement of Work, unless it is otherwise clear from the context, the following terms shall have the following meanings:

(a) "**development and modification**" includes enhancement, improvement, and revision; "developments and modifications" includes all of these terms in the plural; and, "**development or modification**" and "**developments or modifications**" includes, and "**develop and modify**", "**develop or modify**" and "**developed or modified**" have corresponding meanings.

(b) "**including**" means "including without limitation" and "**includes**" means "includes without limitation"; the use of the word "including" or "includes" is not intended to limit any statement that precedes it to the items immediately following it.

2.2 No Indemnities from Ontario or OPS Entities

Despite anything else in: (i) this Master Agreement; (ii) any Statement of Work; or (iii) any document referenced in a Statement of Work relating to the Deliverables or Services; any express or implied reference to Ontario or any OPS Entity providing an indemnity or any other form of indebtedness or contingent liability that would directly or indirectly increase the indebtedness or contingent liabilities of Ontario or any OPS Entity, whether at the time of execution of this Master Agreement or any Statement of Work or at any time during the Term of this Master Agreement or the Project Term of any Statement of Work, shall be void and of no legal effect.

2.3 Entire Agreement

This Master Agreement embodies the entire agreement between the Parties with regard to its subject matter and supersedes any prior understanding or agreement, collateral, written or otherwise, related to the subject matter of this Master Agreement that exists between the Parties at the date of execution of this Master Agreement. Subject to the terms and conditions of this Master Agreement, each Statement of Work embodies the entire agreement between the Parties with regard to the provision of the Services subject to the Statement of Work and supersedes any prior understanding or agreement, collateral, written or otherwise, related to the subject matter of the Statement of Work that exists between the Parties at the date of execution of the Statement of Work.

2.4 Amendments

Any changes to this Master Agreement shall only be made by written amendment signed by the Minister (MGS) and the Vendor, except where this Master Agreement expressly provides for a deemed amendment. Any changes to a Statement of Work shall only be made by written amendment signed by the Minister (Client) and the Vendor, except where this Master Agreement expressly provides for a deemed amendment. No changes shall be effective or shall be carried out in the absence of such an amendment.

2.5 Severability

If any term or condition of this Master Agreement or any Statement of Work, or the application thereof to the Parties or circumstances, is to any extent invalid or unenforceable, the remainder of this Master Agreement and the Statement of Work, as the case may be, and the application of such term or condition to the Parties or circumstances other than those to which it is held invalid or unenforceable, shall not be affected by it.

2.6 Conflict in Documents

In the event of a conflict or inconsistency in any provisions in this Master Agreement, the RFP and the Proposal, or any of them, this Master Agreement shall govern over the RFP and the Proposal; and the RFP shall govern over the Proposal. In the event of any conflict or inconsistency between the terms and conditions of this Master

Agreement and a Statement of Work or a Change Order, or any other document issued to put into effect the terms and conditions of the Statement of Work, this Master Agreement shall prevail.

2.7 Headings

The division of this Master Agreement into Articles, Sections and subsections and the insertion of headings are for convenience of reference only and shall not affect the construction or interpretation of this Master Agreement or any Statement of Work. The Article and Section headings in this Master Agreement are not intended to be full or accurate descriptions of the text to which they refer. References in this Master Agreement to an Article, Section, subsection or Attachment refer to the applicable Article, Section, subsection or Attachment of this Master Agreement unless otherwise stated.

2.8 Force Majeure

No Party shall be liable for damages caused by delay or failure to perform its obligations under a Statement of Work where such delay or failure is caused by an event beyond its reasonable control. The Parties agree that an event shall not be considered beyond one's reasonable control if a reasonable business person applying due diligence in the same or similar circumstances under the same or similar obligations as the provisions of the Statement of Work would have put in place contingency plans to either materially mitigate or negate the effects of such event. Without limiting the generality of the foregoing, the Parties agree that force majeure events shall include acts of God, natural disasters, acts of war, riots, plagues, epidemics, insurrection and terrorism but shall not include shortages or delays relating to supplies or services. If a Party seeks to excuse itself from its obligations under the Statement of Work due to a force majeure event, that Party shall immediately notify the other Party of the delay or non-performance, the reason for such delay or non-performance and the anticipated period of delay or non-performance. If the anticipated or actual delay or non-performance exceeds fifteen (15) Business Days, the other Party may immediately terminate the Statement of Work by giving notice of termination and such termination shall be in addition to the other rights and remedies of the terminating Party under the Statement of Work, at law or in equity.

2.9 Notices by Prescribed Means

Notices shall be in writing and shall be delivered by postage-prepaid envelope, e-mail, or personal delivery as follows:

(a) Notices to MGS shall be addressed to the attention of an individual designated as the MGS Representative at:

Ministry of Government Services
Supply Chain Ontario
Enterprise Procurement Branch
222 Jarvis Street, 8th Floor
Toronto, ON M7A 0B6

(b) Notices to the Vendor shall be addressed to the attention of an individual designated as the Vendor Representative at:

«Proponent_Name»
«Address_1_UnitStreet_Street_Name_P_»
«Address_2_City_Province__Postal_Code»

(c) Notices to the Client shall be addressed to the attention of an individual designated as the Client Representative in the Statement of Work at the address designated for service in the Statement of Work.

Notices by postage-prepaid envelope shall be deemed to have been given on the fifth Business Day after mailing. Notices by personal delivery or e-mail shall be deemed to have been given on the first Business Day after receipt by the other Party (except as provided for in Section 9.4). In the event of a

postal disruption, notices must be given by personal delivery or e-mail. Unless the Parties expressly agree in writing to additional methods of notice, notices may only be provided by the methods contemplated in this Section.

MGS Representative: Title: E-Mail:	**Wes Lapish** **Director, Enterprise Procurement Branch** **Wes.Lapish@Ontario.ca**
Backup MGS Representative: Title: E-Mail:	**Eric Smith** **Manager, Services Procurement; Enterprise Procurement Branch** **Eric.T.Smith@Ontario.ca**
Vendor Representative: E-Mail:	**«Contact_Name»** **«Email»**

Each Party may change its address or designated representative for receipt of notices by providing notice to the other Party.

2.10 Governing Law

This Master Agreement and each Statement of Work shall be governed by the laws in effect in the Province of Ontario and the applicable federal laws of Canada. The Parties irrevocably and unconditionally submit to the non-exclusive jurisdiction of the courts of the Province of Ontario and all courts competent to hear appeals from them. The Parties agree that the United Nations Convention on Contracts for the International Sale of Goods does not apply to this Master Agreement or to any Statement of Work and is strictly excluded.

2.11 Currency

All amounts set out in this Master Agreement and any Statement of Work and all payments shall be in Canadian funds.

2.12 Rights and Remedies

The rights and remedies of the Parties under this Master Agreement and under each Statement of Work are cumulative, and are in addition to and not in substitution for any rights or remedies provided at law or in equity, and shall not merge upon termination of this Master Agreement or of any Statement of Work.

2.13 No Waiver

No provision of this Master Agreement or any Statement of Work shall be deemed waived, amended, or modified by either Party unless such waiver, amendment, or modification is in writing and signed by the Party against whom it is sought to enforce the waiver, amendment, or modification.

2.14 Attachments

The following attachments form part of this Master Agreement:

(a) Attachment A to Master Agreement – Service Categories and Roles

(b) Attachment B to Master Agreement – Form of Statement of Work - Ministries

(c) Attachment C to Master Agreement – Form of Statement of Work - OPS Entity

(d) Attachment D to Master Agreement – Vendor/Client Ownership Provisions

(e) Attachment E to Master Agreement – Client Ownership Provisions

(f) Attachment F to Master Agreement – Assignment of Copyright

(g) Attachment G to Master Agreement – Waiver of Moral Rights

(h) Attachment H to Master Agreement – Confidentiality Agreement

(i) Attachment I to Master Agreement – Invention Disclosure Form

(j) Attachment J to Master Agreement – Provincially Funded Organization Acknowledgement

ARTICLE 3. SCOPE

3.1 General

This Master Agreement sets out terms and conditions applicable to the acquisition and performance of Services pursuant to the RFP.

3.2 Acquisition of Services

Each Client may, pursuant to the terms and conditions of this Master Agreement, acquire Services based on the role(s) corresponding to the service category(s) specified in Attachment A at any time prior to the Master Agreement Expiry Date, but only by entering into a Statement of Work. Services shall be performed only pursuant to a Statement of Work. It shall be a term of each Statement of Work that the Vendor agrees to provide, subject to the terms of this Master Agreement and the applicable Statement of Work, all of the Services that fall within the scope of each Statement of Work.

3.3 Statements of Work

Each Statement of Work shall include the terms and conditions of this Master Agreement by reference and shall constitute a separate contract from every other Statement of Work. No term or condition set out in any Statement of Work shall have any effect upon any other Statement of Work. Each Statement of Work shall be governed by all of the terms and conditions of this Master Agreement and such additional terms and conditions as may be set out in the Statement of Work that are not inconsistent with the terms of this Master Agreement.

3.4 No Obligation to Enter into any Statement of Work

Neither Ontario nor any OPS Entity is under any obligation to enter into any Statement of Work with the Vendor.

3.5 Work Volumes; Non-Exclusivity

The Vendor acknowledges and agrees that Ontario makes no representation, warranty, guarantee or other agreement regarding the volume of services to be acquired from the Vendor pursuant to this Master Agreement. The Vendor acknowledges that it enters into this Master Agreement and each Statement of Work on a non-exclusive basis. Ontario and each OPS Entity reserves the right to contract with other parties, regardless of whether such other party was selected within or outside a process initiated by a request for proposals, for the same or similar services as those provided by the Vendor and reserves the right to obtain the same or similar services internally.

3.6 Exclusions

Under a Statement of Work, the Vendor and the Vendor's Personnel shall not:

(a) develop or modify any computing programming code or software programs; or

(b) unless otherwise agreed to by the Client in the Statement of Work pursuant to Section 21.1 (Request for Consent) (if Attachment D applies to the Statement of Work) or Section 19.1

(Request for Consent) (if Attachment E applies to the Statement of Work), provide to the Client or incorporate into any Deliverables any Vendor Materials.

3.7 No Restrictive Material

Without limiting any other provisions of this Master Agreement or the Statement of Work, the Vendor shall not provide or incorporate (or permit those for whom it is responsible, including its Subcontractors and Personnel to incorporate) into any Deliverables, or request a Client to consent to the Vendor providing or incorporating into any Deliverables, and shall not use or permit the use in the provision of the Services, any Restrictive Material. In this Article, "Restrictive Material" means:

(a) any art, process, machine, manufacture or composition of matter, or any improvement in any of the foregoing; or

(b) any recorded information of any nature in any form, including any assets, audio and video recordings, data, databases, designs, documents, drawings, images, information, know-how, materials, methodologies, plans, procedures, processes, products, records, reports, specifications, techniques, Technical Information, templates or working papers, including any modification to any of the foregoing;

that would:

(i) in any way restrict the ability to exercise the Intellectual Property Rights or permissions granted under this Master Agreement or any Statement of Work;

(ii) prevent the Vendor from licensing the Deliverables on the terms and conditions of this Master Agreement or any Statement of Work;

(iii) interfere with the rights granted under the Statement of Work resulting from incompatibility between the terms and conditions applicable to components of the Deliverables;

(iv) violate any licences that apply to any part of the Deliverables when the Deliverable is used in accordance with this Master Agreement or the Statement of Work; or

(v) prevent the Client at any time from entering into any contract with any contractor other than the Vendor for the development or modification or other use of the Deliverables.

ARTICLE 4. PROVINCIALLY FUNDED ORGANIZATIONS

4.1 Provincially Funded Organization Agreements

If the Vendor wishes to provide products and services to Provincially Funded Organizations, the Vendor may only do so under a separate agreement with a Provincially Funded Organization. If the Vendor receives a request from any Provincially Funded Organization to supply products and services to the Provincially Funded Organization that are the same as the Deliverables and the Services, the Vendor shall: (a) prior to engaging in negotiations with that Provincially Funded Organization, provide the Provincially Funded Organization with a copy of the acknowledgement as attached as Attachment J to this Master Agreement ("**Provincially Funded Organization Notice**"); and (b) subject to the Vendor's compliance with subsection (a) above, use commercially reasonable efforts to negotiate with that Provincially Funded Organization for the purpose of entering into a mutually agreeable agreement for the supply to the Provincially Funded Organization of products and services that are the same as the Deliverables and the Services ("**Provincially Funded Organization Agreement**") based on the same or similar terms (including price and the length of the term) of this Master Agreement.

The Vendor agrees that the Vendor and the Provincially Funded Organization remain solely responsible for negotiating the terms and conditions (including all business, legal and other terms as may be necessary or desirable for the Vendor and the Provincially Funded Organization) of the Provincially Funded Organization

Agreement and for any resulting or related relationships and agreements between the Vendor and the Provincially Funded Organization.

4.2 Status of Provincially Funded Organizations

Provincially Funded Organizations cannot enter into any Statement of Work or any other subordinate agreement to this Master Agreement to acquire any Deliverables or Services or any other products and services under this Master Agreement.

4.3 Ontario Not Liable for Vendor's Relationship with Provincially Funded Organizations

The Vendor acknowledges and agrees as follows:

(a) Ontario does not endorse, recommend or approve the suitability of: (i) any Provincially Funded Organization as a customer of the Vendor; and (ii) the terms and conditions of this Master Agreement (or any subordinate agreement under this Master Agreement) as a basis for, in whole or in part, any Provincially Funded Organization Agreement or any other resulting or related relationships or agreements between the Vendor and any Provincially Funded Organization. The Vendor is solely responsible for conducting its own independent assessment (including obtaining its own professional advice as may be necessary and appropriate in the Vendor's specific circumstances) to determine the suitability of the above.

(b) Ontario makes no representation, assurance, warranty, or guarantee: (i) that any Provincially Funded Organizations will acquire products or services from or consider the products or services of the Vendor; or (ii) of the value or volume of products or services that may or will be ordered, if any, by any or all Provincially Funded Organizations.

(c) Ontario will not, in respect of any Provincially Funded Organization Agreement or any resulting or related relationships or agreements between the Vendor and any Provincially Funded Organization: (i) be or be deemed to be a party to, or a guarantor of any obligations or liability of any party under, any Provincially Funded Organization Agreements or any such relationships or agreements; or (ii) be responsible or liable to the Vendor or any third party for any costs, obligations, liabilities or covenants of the Provincially Funded Organization, and nothing in any agreement between the Vendor and any Provincially Funded Organization shall have the effect of imposing or resulting in the imposition of any costs, obligations, liabilities or covenants on Ontario.

(d) The Vendor shall not, in relation to or under any Provincially Funded Organization Agreement or under any resulting or related relationships or agreements between the Vendor and any Provincially Funded Organization, bring any Proceedings against Ontario or any of its Personnel or any Indemnified Party as a result of: (i) any act, error or omission of the parties to the Provincially Funded Organization Agreement; or (ii) any act, error or omission of Ontario or any of its Personnel.

(e) The Vendor is solely responsible for its own contract administration with each Provincially Funded Organization and shall not direct any issues that may arise with any Provincially Funded Organization to Ontario.

(f) For the purposes of any Provincially Funded Organization Agreement, the Vendor acknowledges that Provincially Funded Organizations have no power or authority to bind Ontario or to assume or create any obligation or responsibility, express or implied, on behalf of Ontario.

(g) Despite any provision in this Master Agreement to the contrary, the Vendor shall be responsible for any and all Losses suffered by any Indemnified Party arising out of or in connection with any Provincially Funded Organization Agreement or any breach by the Vendor of this Article 4 (Provincially Funded Organizations).

4.4 Disclosure of Information

(a) Ontario may, from time to time and at its sole discretion, inform any or all Provincially Funded Organizations of: (i) the Vendor's status as a vendor of record; (ii) the products and services of the Vendor that are available to Ontario under this Master Agreement; and (iii) the Vendor's obligation under this Section 4.4 and under Section 4.1. In addition, Ontario and any OPS Entity may disclose, and the Vendor consents to the disclosure, to Provincially Funded Organizations of this Master Agreement or any part of it (including pricing), as amended. For certainty, the Vendor agrees that neither this Master Agreement or any part of it is considered Confidential Vendor Information and no notice to or further consent of the Vendor is required prior to disclosure to any Provincially Funded Organization.

(b) If the Vendor is requested by a Provincially Funded Organization to do so, the Vendor shall provide to that Provincially Funded Organization the following documents and information: (i) the RFP and other related procurement documents that were publicly issued; and (ii) the Vendor's proposal in response to the RFP, but only to the extent that it does not include OPS Confidential Information.

(c) The Vendor agrees to provide to Ontario, at Ontario's request, data and information regarding Provincially Funded Organization access to and acquisition of products and services from the Vendor.

(d) The Vendor consents to Ontario receiving data and information from a Provincially Funded Organization of such Provincially Funded Organization's request for access to and acquisition of products and services from the Vendor.

ARTICLE 5. LEGAL RELATIONSHIPS AMONGST THE PARTIES & THIRD PARTIES

5.1 Vendor and its Personnel Not an Agent, Employee or Partner

The Vendor shall have no power or authority to bind Ontario or any OPS Entity or to assume or create any obligation or responsibility, express or implied, on behalf of Ontario or any OPS Entity. The Vendor shall not hold out itself, or any of its Personnel, as an agent, employee or partner of Ontario or of any OPS Entity. Nothing in this Master Agreement or any Statement of Work shall have the effect of creating an agency, employment or partnership relationship between Ontario or any OPS Entity and the Vendor (or any of the Vendor's directors, officers, Personnel, agents, partners, affiliates, volunteers or Subcontractors), or constitute an appointment under the Public Service of Ontario Act, 2006, S.O. 2006, Chapter 35, as amended. The Vendor is solely responsible for all legally required employer and employee contributions and deductions, compensation and benefits for itself and its Personnel.

5.2 Responsibility of Vendor

The Vendor agrees that it is liable for the acts and omissions of its and of its Subcontractors' directors, officers, Personnel, agents, partners, affiliates, and volunteers. The Vendor shall advise these individuals and entities of its obligations under this Master Agreement and under the Statement of Work and, without limiting the generality of the foregoing, shall take appropriate action to ensure compliance with (a) this Master Agreement and the Statement of Work generally, (b) the requirements of Article 26 (OPS Confidential Information), and (c) the Privacy Provisions. Ontario and the OPS Entities shall have no liability (vicarious or otherwise) for any acts or omissions of the Vendor's and its Subcontractors' directors, officers, Personnel, agents, partners, affiliates, volunteers or Subcontractors. This Section is in addition to any and all of the Vendor's liabilities under this Master Agreement, each Statement of Work and under the general application of law. This Section shall survive the termination or expiry of this Master Agreement and every Statement of Work.

5.3 Subcontracting or Assignment

The Vendor shall not subcontract or assign the whole or any part of this Master Agreement without the prior written consent of the Minister (MGS). Such consent shall be in the sole discretion of the Minister (MGS) and

subject to the terms and conditions that may be imposed by the Minister (MGS). The Vendor shall not subcontract or assign the whole or any part of any Statement of Work or any monies due under it without the prior written consent of the Minister (Client). Such consent shall be in the sole discretion of the Minister (Client) and subject to the terms and conditions that may be imposed by the Minister (Client). Without limiting the generality of the conditions which the Minister (Client) may require prior to consenting to the Vendor's use of a Subcontractor, every contract entered into by the Vendor with a Subcontractor shall adopt all of the terms and conditions of this Master Agreement and the Statement of Work as far as applicable to those parts of the Services provided by the Subcontractor. Nothing in this Master Agreement or any Statement of Work shall create a contractual relationship between any Subcontractor or its employees and Ontario or any OPS Entity.

5.4 Assignment of Statement of Work by the Client

Provided that the Vendor has received prior written notice of the Client's intent to assign: (a) where the Client is Ontario, the Minister (Client) may assign without the consent of the Vendor all or any part of a Statement of Work to any OPS Entity, any office of an officer of the Legislative Assembly or of the Ontario Legislature, any Provincially Funded Organization, or where such assignment is necessitated by outsourcing, privatizing, partnering or similar activity, to a non-governmental entity; and (b) where the Client is an OPS Entity, the Minister (Client) may assign without the consent of the Vendor all or any part of a Statement of Work to Ontario, or where such assignment is necessitated by outsourcing, privatizing, partnering or similar activity, to a non-governmental entity.

5.5 Duty to Disclose Change of Control

If the Vendor undergoes a change in control, the Vendor shall disclose such change in control to the MGS Representative within fourteen (14) calendar days of such change in control and shall comply with any reasonable terms and conditions subsequently prescribed by MGS resulting from the disclosure.

5.6 Conflict of Interest

The Vendor shall, and shall require each of its Personnel to: (a) avoid any Conflict of Interest in the performance of its contractual obligations; (b) disclose to MGS and the Client without delay any actual or potential Conflict of Interest that arises during the performance of its contractual obligations; and (c) comply with any requirements prescribed by MGS or the Client to resolve any Conflict of Interest. In addition to all other contractual rights or rights available at law or in equity, the Minister (MGS) may, at its sole discretion, immediately terminate this Master Agreement, and the Minister (Client) may, at its sole discretion, immediately terminate any or all Statements of Work, upon giving notice to the Vendor where (i) the Vendor fails to disclose an actual or potential Conflict of Interest; (ii) the Vendor fails to comply with any requirements prescribed by MGS or the Client, as the case may be, to resolve a Conflict of Interest; or (iii) the Vendor's Conflict of Interest cannot be resolved. This Section shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

5.7 Binding Nature

This Master Agreement and each Statement of Work is binding upon, and enures to the benefit of, the Parties and their respective successors and permitted assigns.

ARTICLE 6. TERM

6.1 Term of Master Agreement

This Master Agreement shall be in effect from and including the Effective Date and shall remain in force until and including the Master Agreement Expiry Date, unless terminated earlier in accordance with the terms of this Master Agreement or unless extended by the Minister (MGS), in its sole discretion, on the same terms and conditions (excluding any option to further extend this Master Agreement during the extension period) for an additional period of twelve months by written notice from MGS to the Vendor given not less than sixty (60) days prior to the Master Agreement Expiry Date.

6.2 Term of Statement of Work

The Project Term with respect to a Statement of Work shall commence on the applicable Project Start Date, and shall continue until the Project End Date, unless terminated earlier in accordance with the terms of this Master Agreement or the Statement of Work. Except as provided for in Section 6.3, a Project End Date may only be extended by a Change Order.

For certainty, a Project End Date in a Statement of Work can be a date that is up to twelve months past the end of the Term of the Master Agreement. Despite anything to the contrary in any Statement of Work or any Change Order, any Statement of Work, which is in effect on the last day of the twelve-month period commencing immediately after the end of the Term of the Master Agreement, shall terminate on that day.

6.3 Extension of Project End Dates Due to Labour Disruption

If there is a labour disruption (e.g. a lawful or unlawful strike or a lock-out) or threatened labour disruption by Crown employees, the Client may notify the Vendor of the Client's intent to, among other things, extend the Project End Date. In such notice, the Client shall specify the anticipated time period of the impact or potential impact of the labour disruption or threatened labour disruption ("**Anticipated Disruption Period**"). Upon such notice being provided to the Vendor, the Project End Date and any dates set out in the Statement of Work which specify when obligations must be met (including any milestone dates, payment dates, etc.) shall be deemed to be amended to a later date that is equal to the number of days of the Anticipated Disruption Period, as set out in the Client's notice. If any of such amended date(s) falls on a non-Business Day, the Project End Date shall be deemed to be the next Business Day. The Client may revise any such Anticipated Disruption Period at any time and from time to time prior to the end of the Anticipated Disruption Period.

If the Anticipated Disruption Period exceeds fifty (50) consecutive Business Days, the Vendor may terminate the Statement of Work at any time effective after the fiftieth (50^{th}) Business Day by giving notice no less than five (5) Business Days prior to the Vendor's intended date of termination. If a Statement of Work is terminated by the Vendor pursuant to this Section 6.3 (Extension of Project End Dates Due to Labour Disruption), the Client shall be liable to the Vendor only for payment for Services properly performed and Deliverables delivered to and accepted by the Client up to and including the effective date of the termination, unless the Client and the Vendor agree otherwise in an agreement signed by both parties that expressly references this Section 6.3 (Extension of Project End Dates Due to Labour Disruption). For certainty, if a Statement of Work provides that payment will be due and owing upon the meeting of a specified milestone (such as, for example, delivery and/or acceptance of a specified Deliverable) and the effective date of the termination of the Statement of Work passes prior to the specified milestone being met, the Client is not liable to the Vendor for payment for Services performed and/or Deliverables delivered and/or accepted in relation to that specified milestone, unless the Client and the Vendor agree otherwise in an agreement signed by both parties that expressly references this Section 6.3 (Extension of Project End Dates Due to Labour Disruption). Termination shall not relieve the Vendor of its warranties and other responsibilities relating to the accepted Deliverables, the Services performed or money paid, or of its obligations upon termination of the Statement of Work. In addition to its other rights of hold back, the Client may hold back payment or set off against any payments owed if the Vendor fails to comply with its obligations on termination. The provisions of this Section 6.3 (Extension of Project End Dates Due to Labour Disruptions) shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 7. SECOND STAGE SELECTION PROCESS

7.1 Requests for Services

Any Client may issue a written request for services to the Vendor and to other vendors selected pursuant to the RFP, setting out a brief description of the services required, the timeframes, and any other requirements.

7.2 Proposals

If the Vendor wishes to respond to a request for services issued to the Vendor, it shall prepare, at no cost, a written proposal delivered to the Client setting out the list and description of the Deliverables, a list of the Roles (including experience levels) required, the names and resumes of the Personnel that it proposes to assign to each of the Roles, its proposed pricing, and the estimated duration of each position required to achieve completion of the proposed services within the timeframe specified in the request for services. The Vendor shall

comply with the submission requirements and other requirements in the request for services. The Vendor shall ensure that each individual proposed by the Vendor is qualified for the proposed Role. The Vendor shall provide the Client or its representatives with the opportunity to interview its proposed Personnel, at no cost. If the Vendor receives a request for services but does not intend to submit a proposal, it shall notify the Client that it will not do so.

The Client shall have the right in its absolute discretion to disqualify the Vendor, or reject all or any part of its proposal: (i) if the same individual is proposed by the Vendor and any other vendor; (ii) if an individual is proposed by the Vendor that Ontario or any OPS Entity determines is not suitable based on information provided by references, based on past performance on previous contracts or previous employment with the OPS, or based on Security Clearance Checks; or (iii) if any information provided by the Vendor is materially inaccurate or the Vendor makes a material misrepresentation or omission; and this right is in addition to any other express rights or any other rights which may be implied in the circumstances. Neither Ontario nor any OPS Entity shall be liable for any expenses, costs, losses or any direct or indirect damages incurred or suffered by the Vendor or any third party resulting from exercising any of its express or implied rights under this Section.

ARTICLE 8. PERFORMANCE BY VENDOR

8.1 Performance

Under each Statement of Work, the Vendor shall diligently carry out and complete the Services in accordance with the Statement of Work and Requirements of Law, and the Vendor shall:

(a) provide any and all labour, supplies, equipment and other goods or services that are necessary and can reasonably be understood or inferred to be included within the scope of the Statement of Work or customarily furnished by Persons providing services of the type provided under the Statement of Work in similar situations in the Province of Ontario; and

(b) adhere to commonly accepted norms of ethical business practices, including establishing, and ensuring adherence to, precautions to prevent its employees or agents from providing or offering gifts or hospitality of greater than nominal value to any person acting on behalf of or employed by the Client.

8.2 Use and Access Restrictions

The Vendor acknowledges that unless it obtains specific written preauthorization from the Client, any access to or use of OPS property, technology or information that is not necessary for the performance of its contractual obligations under a Statement of Work is strictly prohibited. The Vendor further acknowledges that Ontario and, if the Client is an OPS Entity, the OPS Entity, may monitor the Vendor to ensure compliance with this Section. This Section is in addition to and shall not limit any other obligation or restriction placed upon the Vendor.

8.3 Completion of Services

If any of the Services or Deliverables provided is not in accordance with the requirements of the Statement of Work and is not to the satisfaction of the Client, the Client may reject it or may issue a rectification notice to the Vendor setting out the manner and time-frame for rectification. Within seven (7) Business Days of receipt of a rectification notice, the Vendor shall either comply with that rectification notice at its own expense or provide a rectification plan satisfactory to the Client. If the Vendor fails to either comply with that rectification notice or provide a rectification plan that is satisfactory to the Client, the Client may immediately:

(a) accept all or any part of the Services or Deliverables (even if of diminished value) provided to the Client by the date specified by the Client, but the Client shall be liable to the Vendor only for payment for Services properly performed and Deliverables delivered to and accepted by the Client;

(b) terminate the Statement of Work; or

(c) do both (a) and (b) above.

If the Vendor has been given a prior rectification notice, the same subsequent type of non-compliance by the Vendor shall allow the Client to immediately terminate the Statement of Work.

8.4 Performance Management Process

The Vendor agrees to participate in, and comply with the terms of, the Performance Management Process. The Vendor acknowledges that the Performance Management Process may be changed from time to time by Ontario at Ontario's sole discretion. Without limiting the foregoing, the Vendor acknowledges and agrees:

(a) to adhere to any guidelines and processes issued in respect of the Performance Management Process;

(b) to respond to requests from MGS or a Client for information or feedback arising out of or about the Performance Management Process (including responding to Vendor Evaluation Information), within the time frame specified in the request (or in the absence of a time frame, within a reasonable period of time);

(c) to meet with MGS or the Client, whether remotely or in person, at no charge to MGS or the Client, to discuss performance and other evaluations (including Vendor Evaluation Information) or any other issues arising out of or about the Performance Management Process;

(d) that performance ratings, performance feedback and other information about the Vendor and its Personnel gathered or obtained through the Performance Management Process (including Vendor Evaluation Information) may be made available to the OPS (including OPS Entities), as well as Provincially Funded Organizations;

(e) in addition to and without limiting any provision, statutory or otherwise, that protects employees or other personnel of Ontario or any OPS Entity from actions or proceedings for damages, the Vendor agrees that no action or proceeding for damages may be brought against any Personnel of Ontario or of any OPS Entity for any acts done in good faith in connection with the Performance Management Process (including any evaluation of the Vendor by any such Personnel) or for any alleged neglect or default in the execution in good faith of such Personnel's duty as it relates to the Performance Management Process; and

(f) that performance ratings and performance and other evaluations prepared or obtained through the Performance Management Process (including Vendor Evaluation Information) may be used by Ontario or OPS Entities under this VOR arrangement or any other vendor of record arrangement, as well as in other procurements, whether or not related to this VOR arrangement.

ARTICLE 9. PERSONNEL

9.1 Personnel Qualifications

The Vendor shall provide qualified Personnel under each Statement of Work. The Vendor shall not permit any individual to perform any Services in any Role if the individual does not have the experience level specified in the Statement of Work for that Role, or does not have the qualifications for that Role (other than the experience levels) as set out in Attachment A.

9.2 Performance by Named Individuals Only

The Parties agree that only those individuals named in a Statement of Work shall perform the Services on behalf of the Vendor. The Parties agree that each Statement of Work shall specify the Role for each named individual. The Vendor shall use commercially reasonable efforts to maintain continuity under a Statement of Work by using the same Personnel to perform the Services throughout the Project Term. The Vendor shall not

replace or substitute any of the individuals named in the Statement of Work without the prior written approval of the Client, which may not be arbitrarily or unreasonably withheld.

9.3 Replacement of Personnel

If the Client, in its sole discretion, deems any of the Vendor's Personnel to be inappropriate, the Client may require the Vendor to replace such Personnel. The Vendor shall immediately, upon receipt of the Client's request, remove any individual from performing any Services under the Statement of Work. The Vendor shall submit to the Client the name and resume of a suitable replacement for each of the Personnel deemed inappropriate by the Client. The Vendor shall provide the Client with the opportunity to interview its proposed Personnel, at no cost to the Client. The Vendor agrees that any proposed replacement Personnel must be qualified in the same Role and must possess similar or greater qualifications than the individual being replaced, and that the Client's approval may, at the Client's discretion, be subject to Article 10 (Security Clearance Checks). The Vendor shall not charge the Client more for the replacement under the Statement of Work, even if the replacement Personnel holds a more senior position or has more experience than the individual being replaced. If the Vendor fails to propose any replacement Personnel within three (3) Business Days, or proposes replacement Personnel who the Client deems, in its sole discretion, to be inappropriate or not available in a timely manner, the Minister (Client) may immediately terminate the Statement of Work by giving notice of termination and such termination shall be in addition to the other rights and remedies under the Statement of Work, at law or in equity. Neither Ontario nor any OPS Entity shall have any liability to the Vendor or any of its Personnel arising out of or in connection with such termination of the Statement of Work or with any replacement or request for replacement of any Personnel.

9.4 Substitution or Replacement Prior to or Shortly After Project Start Date

(a) If:

(i) prior to the Project Start Date, the Vendor notifies the Client of its intent to replace or substitute any individual named in a Statement of Work; or

(ii) on or within five (5) Business Days after the Project Start Date, the Vendor notifies the Client of its intent to replace or substitute any individual named in a Statement of Work within ten (10) Business Days after the Project Start Date;

the Client may, at its sole discretion, immediately terminate the Statement of Work by giving notice of termination and such termination shall be in addition to the other rights and remedies under the Statement of Work, at law or in equity. For certainty, the Client is not obligated to consider the replacement or substitute offered by the Vendor, or any individual proposed by the Vendor but not selected by the Client during the Second Stage Selection process for the Statement of Work, before exercising the right to terminate under this section.

(b) Termination under this Section 9.4 shall be in writing ("Termination Email Notice") and may be delivered via e-mail to the Vendor's representative identified in the Statement of Work or to the individual designated as the Vendor Representative in Section 2.9(b). The Termination E-mail Notice is considered delivered to the Vendor one (1) hour after it was sent.

(c) Payment, if any, for any Services performed or Deliverables delivered and accepted prior to the effective date of termination of the Statement of Work when terminated under this Section 9.4 shall be made in accordance with Section 36.4 (Payment to Vendor Upon Termination) of this Master Agreement.

ARTICLE 10. SECURITY CLEARANCE CHECKS

10.1 Definition

For the purposes of this Master Agreement, the following capitalized terms mean:

"**Company Level Check**" is a security screening check, which requires checks to be conducted on all directors and officers of the company, regardless of whether they will have direct involvement in the work associated with the procurement which was deemed to require security screening. In order to be issued a company level clearance, all directors and officers of the company and the Company Security Officer (CSO) must consent to security screening and obtain clearances. Company-level screening checks are conducted only where the security risk assessment indicates the necessity.

"**Company Security Officer**" is a person who holds that standing in the Contractor Security Screening Program. A Company Security Officer (or CSO) plays an administrative role in the security screening process on behalf of his or her company and must hold a valid security clearance issued by the Employee Relations Division of MGS (ERD, MGS) prior to performing that role. The CSO is responsible for the verification of identity for workers requiring screening for contracted work, where required.

"**Criminal Record Check**" is a search of the Canadian Police Information Centre (CPIC) database maintained by the RCMP, using an individual's name, date of birth and any other information necessary to verify identity, for information about the individual relating to:

- Convictions under the offense provisions of federal statutes recorded in the CPIC system;
- Records of discharges (absolute and conditional) which have not been removed from the CPIC system, in accordance with the *Criminal Records Act (Canada)*. Note: Information about absolute discharges will not be collected after one (1) year from the date of disposition. Information about conditional discharges will not be collected after three (3) years from the date of disposition;
- Charges that have been laid but are not resolved (unresolved charges) under the offense provisions of federal statutes; and
- Records of judicial orders in effect (e.g. warrants) that are related to federal offence charges or convictions.

"**Driver's Record Check**" is conducted where driving is a requirement for the contract where a valid driver's licence is required. It involves a check of provincial databases for information regarding driving history using the individual's driver licence number. This check provides a three year history of *Highway Traffic Act (Ontario)* and *Criminal Code* of Canada convictions and any current suspensions, along with the driver's current listed address and licence status.

"**General Level Security Screening Check**" requires the individual to obtain a Criminal Record Check (see the definition for Criminal Record Check for additional information). A general level security screening check may also include a Driver's Record Check, and/or an Out-of-Country Police Certificate (US and/or international), where required.

"**Other/Enhanced Level Security Screening Check**" is a higher level check that is required when the duties or tasks establish a risk level greater than can be addressed through a General Level Security Screening Check. Other/Enhanced level security screening checks include one or more of the following check types in addition to the General Level Security Screening Check: fingerprint-based criminal record check, personal history investigation, local police records check, family interview and/or financial background check.

"**Out-of-Country Driver's Record Check (US and/or International)**" is when the individual has lived outside Canada for more than six (6) months within the last five (5) years, an out of country driver records check from the jurisdiction(s) in which they have resided is required. This check includes information such as current suspensions, along with the driver's current listed address and licence status. Driver's record check is conducted where driving is a requirement for a Statement of Work where a valid driver's licence is required. If the certificate is not in French or English, the individual is to provide an English translation along with the original certificate.

"**Out of Country Police Certificate (US/International)**" is a summary of an individual's criminal record or a declaration of the absence of any criminal record from a law enforcement agency in another country outside of Canada. Police certificates are different in each state/country and may be called police clearance certificates, good conduct certificates, judicial record extracts, etc. Where an individual has lived outside of Canada for more than six (6) months within the last five (5) years, an out-of-country police certificate from the jurisdiction(s) in which they resided is required. If the certificate is not in French or English, the individual is to provide an English translation along with the original certificate.

"**Security Screening Check**" is the process conducted by the Vendor to gather information on designated persons for submission to the Client in order to obtain a Security Clearance and includes all of the following:

1. A written declaration by an individual disclosing any unresolved charges and previous convictions under the offence provisions of federal statutes, including but not limited to the *Criminal Code (Canada)*, for which a pardon under the *Criminal Records Act (Canada)* has not been granted;

2. a General Level Security Screening Check; and

3. Other/Enhanced Level Security Screening Check (if required, as determined by the Client or ERD, MGS).

"**Security Clearance**" means a decision made by ERD, MGS following receipt of the Security Screening Check documents that will permit the person being cleared to engage in the performance of the services.

10.2 Security Screening Check

(a) Security Clearances are not provided in perpetuity and are subject to revocation by MGS or the Client at its sole discretion at any time. Security Screening Checks shall be renewed at the intervals as may be specified by ERD, MGS.

(b) On notification from MGS, the Vendor shall, prior to entering into a Statement of Work or otherwise during the Term, provide to the ERD, MGS, completed Security Screening Checks for all persons engaged in the performance of the services who are either not cleared or for whom a renewal is required. All documents shall be provided through the Vendor's designated Company Security Officer.

(c) All Security Screening Checks shall be provided in form and content acceptable to the ERD, MGS and shall include all required consents.

(d) If a person or company has been deemed by the Ministry to require a Security Clearance they shall not engage in the performance of the services unless they have been provided a Security Clearance by the ERD, MGS.

10.3 Changes

(a) During the Term of this Master Agreement or a Statement of Work, or an agreement arising from it, the Vendor shall report to the ERD, MGS, within five Business Days thereof, any change to:

(i) any information provided as part of a Security Screening Check process;

(ii) employees, agents and subcontractors or, where a Company Level Check is required, partners, directors, officers and shareholders, who are or will be engaged in providing the security screening documents or engaged in the performance of the services.

(b) The ERD, MGS shall assess the above information and may instruct the Vendor to comply with any instructions arising which may include requests for provision of information to amend existing Security Clearances or provide for new Security Clearances.

10.4 Default under Agreement

During the Term of this Master Agreement and any Statement of Work, the Vendor shall be in default under this Master Agreement and the applicable Statement of Work if they fail to comply with the requirements of this Article.

ARTICLE 11. CHANGE MANAGEMENT

11.1 Change Requests and Impact Assessments

A Client may request a change to a Statement of Work by submitting to the Vendor a written change request reasonably detailing the scope and priority of the desired changes. The Vendor shall promptly evaluate each change requested by the Client. The Vendor shall promptly provide the Client with a written impact assessment which addresses relevant factors, including the implications for Roles, Personnel, deadlines, milestones, costs and any other terms and conditions of the Statement of Work. Such evaluation and assessment by the Vendor shall be made without charge to the Client. If the Vendor does not have sufficient resources to perform any requested changes in accordance with any time limits set out in the change request, the Vendor shall promptly notify the Client.

11.2 Change Orders

Each Change Order must contain:

(a) an effective date;

(b) a description of any additional Services to be performed or Deliverables to be provided, the names of the Vendor's Personnel necessary to perform such additional Services, and specifying the Role (including the experience level) for each named individual, and the availability of such Personnel over the relevant time period;

(c) a description of any Services, Roles or named individuals deleted from the Statement of Work, if applicable;

(d) a description of any other changes to the performance required of either Party, if applicable;

(e) a statement of the impact of the changes on the Services, Deliverables, deadlines, milestones, costs or other requirements of the Statement of Work;

(f) any new Maximum Price or Project End Date, if applicable;

(g) any new Fixed Price, if applicable;

(h) the Per Diem Rate for each additional Role, if applicable; and

(i) signatures of the duly authorized signing officers of each Party.

11.3 Changes to Milestones

If there is any change to the ability of the Vendor to meet an applicable milestone set out in the Statement of Work, the Vendor shall promptly notify the Client. Any changes to the applicable milestone set out in the Statement of Work and any terms and conditions of the Statement of Work resulting from the change must be effected by a Change Order.

11.4 Pricing for Requested Changes

(a) *Changes Impacting Fixed Price* - Where the change request results in an increase or a reduction to a Fixed Price, the Client and the Vendor shall negotiate: (i) the amount of the additional charge or reduction to the Fixed Price resulting from the change request, if

applicable; and (ii) the change to the Maximum Price under that Statement of Work resulting from the change request, if applicable. The increase or decrease to the Fixed Price and/or Maximum Price shall be set out in the Change Order.

Where the Client and the Vendor are unable to agree to a fixed amount of the increase to a Fixed Price resulting from a change request, the Vendor agrees that, at the Client's option, the Client may require that the Work be performed by the Vendor under the change request on a Per Diem Rate basis in accordance with subsection (b) (Per Diem Rate for Change Requests) of this Section 11.4.

(b) *Per Diem Rate for Change Requests* - Where a Per Diem Rate stated in the Statement of Work applies to a Role (at the same experience level) contemplated in the change request, the Per Diem Rate applicable to the change request shall be the Per Diem Rate for that Role as set out in the Statement of Work, or any lesser Per Diem Rate agreed to by the Client and the Vendor. Where Per Diem Rates stated in the Statement of Work do not apply to a Role (at the same experience level) contemplated in the change request, the Per Diem Rate for each individual in such Role may be negotiated between the Client and the Vendor within a reasonable period of time, provided that the Per Diem Rate complies with the provisions of the Master Agreement and this Section 11.4.

(c) *Changes Impacting Work Done on a Per Diem Rate Basis* - Where the change request results in a change impacting Work being done on a Per Diem Rate basis, the Client and the Vendor shall negotiate the change to the Maximum Price under the Statement of Work resulting from the change request. Where the change request results in the addition of a Role, the Per Diem Rate for that Role shall be determined in accordance with subsection (b) (Per Diem Rate for Change Requests) of this Section 11.4.

11.5 No Payment Without Executed Change Order

No change request shall be implemented or incorporated as part of a Statement of Work unless and until a Change Order has been executed by both the Minister (Client) and the Vendor. Under no circumstances will the Vendor be entitled to payment for any goods or services provided pursuant to a change request that have not been described in a Change Order.

ARTICLE 12. REPORTS

12.1 Monthly Usage Reports

The Vendor shall prepare a usage report (referred to in this Article as a "Usage Report") for each calendar month for: (a) every Statement of Work (including any extension to a Statement of Work) and every Change Order entered into by the Vendor pursuant to this Master Agreement; and (b) the value and volume of all services acquired by Provincially Funded Organizations from the Vendor under Provincially Funded Organization Agreements that are the same as the Services under this Master Agreement. If no Statements of Work or Change Orders are entered into during a calendar month, the Vendor shall submit a NIL report. In each Usage Report, the Vendor shall set out the name of the Vendor, the month and year covered, and all other information described below in this Article. The Vendor shall provide each Usage Report to the MGS Representative within ten (10) Business Days of the end of the applicable month.

12.2 Contents of Usage Report

In each Usage Report, the Vendor shall include the following information: (1) in respect of each Statement of Work in effect during the applicable calendar month: (a) vendor of record (VOR) number; (b) ministry/cluster/OPS Entity; (c) branch; (d) contract signing date; (e) contact information (name, e-mail address, phone) of the ministry or OPS Entity for which the Statement of Work is being performed; (f) Statement of Work number; (g) description of Services; (h) purchase order number (optional additional information field for Vendor); (i) Project Start Date; (j) Project End Date (or anticipated completion date of project); (k) consultants' roles; (l) Service Category in which consultants are working; (m) estimated cost (contract value); (n) contract extension

information; and (o) such other information as MGS may require; and (2) the value and volume of all services acquired by Provincially Funded Organizations from the Vendor under Provincially Funded Organization Agreements that are the same as the Services under this Master Agreement. The Vendor shall include the total dollar amount of all Statements of Work issued during that month (excluding Harmonized Sales Tax) to all Clients, and any other information that is reasonably requested by MGS. Any extension or change to a Statement of Work, including dollar amount, must be reported during the month that extensions or changes took place.

12.3 Format of Usage Report

The Usage Form must be provided in the form available for downloading as an Excel file from: http://www.doingbusiness.mgs.gov.on.ca/mbs/psb/vordb.nsf/english/home_page?openDocument&login, or from such other web address as MGS may notify the Vendor. The Vendor shall send each Usage Report by electronic mail to the MGS Representative at the email address stipulated by notice from MGS to the Vendor.

12.4 Costs

The Vendor shall be solely responsible for all costs associated with establishing, preparing, supporting and producing each Usage Report and all other reports covered by this Article.

12.5 Other Documentation

The Vendor shall provide the MGS Representative from time to time with any other documentation that the MGS Representative requests or which is required by this Master Agreement.

ARTICLE 13. LIMITS ON CHARGES UNDER STATEMENTS OF WORK

13.1 Charges under a Statement of Work

The amount that can be charged under a Statement of Work shall be set out in the Statement of Work.

13.2 Charges on a Fixed Price Basis

If the Statement of Work specifies a charge on a Fixed Price basis, the Vendor shall not charge more than the Fixed Price, even if the Work requires additional time to complete that would otherwise have brought the cost to the Client to an amount in excess of the Fixed Price specified in the Statement of Work. Any amount charged in excess of the Fixed Price shall be deemed to be an overpayment.

The Client shall pay such portion of the Fixed Price in accordance with the payment schedule set out in the Statement of Work.

13.3 Charges on a Per Diem Rate Basis

If the Statement of Work specifies a charge on a Per Diem Rate basis, the following shall apply to that portion of the Statement of Work that is charged on a Per Diem Rate basis:

(a) *Charges for Services Performed During One Day* - The Vendor shall not be paid more than the applicable Per Diem Rate for Services performed by an individual in a Role on one calendar day.

The Vendor shall invoice the Client for the actual number of hours worked in one calendar day where the Services performed by the individual under a Statement of Work totals less than 7.25 hours in a Role for a calendar day. The Vendor shall invoice the Client for no more than the applicable Per Diem Rate where an individual in a Role has performed Services totalling 7.25 hours or more in one calendar day. For example, if an individual works 8 hours in a Role on one calendar day, the Vendor shall not be paid overtime for the time worked in excess of 7.25 hours. If an individual works less than 7.25 hours in a Role on a calendar day, the Vendor's

charge for the individual's Services in that Role on that calendar day shall be pro-rated against the applicable Per Diem Rate. For example, if an individual works 6 hours in a Role on one calendar day, the applicable Per Diem Rate shall be pro-rated by dividing it by 7.25 and multiplying it by 6. Any amount paid in excess of the pro-rated amount is deemed to be an overpayment.

(b) *Per Diem Rates and Experience Levels* - Under a Statement of Work, the Per Diem Rate for a Role shall not increase as a result of an individual gaining experience in performing that Role under that Statement of Work. In respect of a Statement of Work, the experience level of each individual shall be deemed to be fixed for the Assignment Term upon entering into the Statement of Work.

(c) *Separate Timesheet* - The Vendor shall maintain a timesheet for the Work performed on a Per Diem Rate basis that is separate from the timesheet for Work performed on a Fixed Price basis.

13.4 Travel, Meal and Accommodation Expenses

The Client is not responsible for any travel or accommodation expenses incurred by the Vendor that are not pre-approved in writing by the Client and charged in accordance with Management Board of Cabinet's Travel, Meal and Hospitality Expenses Directive, as may be amended or replaced from time to time. Accommodation arrangements may only be made with those facilities listed in the Ontario government's Accommodations Directory, as may be amended or replaced from time to time. The Vendor shall list travel and accommodation expenses as separate line items on its invoices, and shall support all such expenses with receipts.

The Client is not responsible for and the Vendor shall not charge for any meal, hospitality or incidental expenses incurred by the Vendor.

13.5 Maximum Prices

If the Statement of Work specifies a Maximum Price, the Vendor shall not invoice the Client for more than the applicable Maximum Price. Any amount paid in excess of a Maximum Price is deemed to be an overpayment.

13.6 Overpayments

The Vendor agrees to repay any overpayment immediately upon demand by the Client.

13.7 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 14. PAYMENT FOR PERFORMANCE

14.1 Payment Subject to Limits

Subject to Article 13 (Limits on Charges Under Statement of Work), the provisions of this Article, and the Vendor's compliance with the provisions of this Master Agreement and the Statement of Work, the Client shall pay the Vendor for Services and/or Deliverables provided as set out in the Statement of Work. Services and/or Deliverables may not be pre-paid.

14.2 Billing and Payment Process

Unless the Vendor and the Client expressly set out an alternative billing and payment process in the Statement of Work, the following process shall govern:

(a) the Vendor shall provide the Client with a billing statement in accordance with the payment schedule set out in the Statement of Work and that billing statement shall include:

(i) the reference number assigned to the Statement of Work by the Client;

(ii) a brief description of the Deliverables and Services provided for the period covered by the billing statement;

(iii) the amount payable under the Statement of Work, and the amount of applicable taxes (such as HST), if payable by the Client, identified as separate items;

(iv) a brief description of the event giving rise to the amount payable (such as, for example, identifying the particular milestone that was successfully completed); and

(v) any travel and accommodation expenses, identified as separate items, that are pre-approved in accordance with Section 13.4 (Travel, Meal and Accommodation Expenses) of the Master Agreement;

(b) if the Statement of Work also specifies particular charges on a Per Diem Rate basis, the Vendor shall also provide the Client with a monthly billing statement that applies to charges on a Per Diem Rate basis no later than ten (10) Business Days after the end of each month and that billing statement shall include:

(i) the reference number assigned to the Statement of Work by the Client;

(ii) a brief description of the Services provided on a Per Diem Rate basis for the relevant month;

(iii) the Per Diem Rate applicable to each Role, and the amount of applicable taxes (such as HST), if payable by the Client, identified as separate items;

(iv) the total billable time worked by each individual in each Role; and

(v) any travel and accommodation expenses, identified as separate items, that are pre-approved in accordance with Section 13.4 (Travel, Meal and Accommodation Expenses) of the Master Agreement;

(c) the Client shall approve or reject each billing statement within fifteen (15) Business Days of its receipt. If the Client rejects the billing statement, it shall so advise the Vendor promptly in writing and the Vendor shall provide additional information as required by the Client to substantiate the billing statement; and

(d) each billing statement is subject to approval of the Client before any payment is released. Payment shall be made within thirty (30) Business Days of such approval.

14.3 Certification of Acceptance

Payment of invoices under the Statement of Work is subject to acceptance in accordance with the process set out in Section 8.3 (Completion of Services) of this Master Agreement.

14.4 Holdback

If, in the opinion of the Client acting reasonably, the Vendor has failed to complete any Services, or deliver any Deliverables, by any applicable completion, delivery or milestone date set out in the Statement of Work (including any Change Order) or established by mutual agreement pursuant to the Statement of Work, the Client may hold back up to 15 percent of the Maximum Price for the Statement of Work until the Vendor completes such Services, or delivers such Deliverables, as the case may be. The holdback will be released no more than 45 calendar days after completion of such Services or delivery of such Deliverables, as the case may be. The Client may specify additional holdback rights in a Statement of Work.

14.5 No Expenses or Additional Charges

There shall be no other charges payable by the Client to the Vendor under any Statement of Work other than (a) the amount(s) expressly set out in the Statement of Work or Change Order, (b) the harmonized sales tax (HST) if the provision of Deliverables and Services is subject to it, and (c) any travel and accommodation expenses pre-approved in accordance with Section 13.4 (Travel, Meal and Accommodation Expenses).

14.6 Payment of Taxes and Duties

The Vendor shall pay or charge and remit, as required, all applicable taxes, including excise taxes incurred by or on the Vendor's behalf with respect to the Statement of Work.

14.7 Withholding Tax

The Client shall withhold any applicable withholding tax from amounts due and owing to the Vendor under the Statement of Work and shall remit it to the appropriate government in accordance with applicable tax laws.

14.8 Interest on Late Payment

In no event shall payment be in arrears prior to the expiry of 45 Business Days after delivery of an invoice that conforms to the requirements of the Statement of Work and the expiry of 45 Business Days after the date that the invoice is due and payable. If a payment is in arrears through no fault of the Vendor, the interest charged by the Vendor, if any, for any late payment is subject to required approvals under the Financial Administration Act, R.S.O. c. F-12 and shall not exceed the pre-judgment interest rate established under subsection 127(2) of the Courts of Justice Act, R.S.O. 1990, C45, in effect on the date that the payment went into arrears.

14.9 Document Retention and Audit

During and for seven (7) years after the Term of each Statement of Work, the Vendor shall, at its cost (a) maintain all necessary records to substantiate (i) all charges and payments under each Statement of Work and (ii) that the Services were provided in accordance with each Statement of Work and with Requirements of Law; and (b) permit and assist MGS and each Client in conducting audits of the operations of the Vendor to verify (i) and (ii) above. MGS or a Client shall provide the Vendor with at least ten (10) Business Days prior notice of its requirement for such audit.

14.10 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 15. INTELLECTUAL PROPERTY OWNERSHIP AND LICENSING

15.1 General

Attachment D (Vendor/Client Ownership Provisions) or Attachment E (Client Ownership Provisions), but not both, shall apply to each Statement of Work. If the Statement of Work specifies that Attachment D applies to the Statement of Work, then Attachment E does not apply to the Statement of Work. If the Statement of Work specifies that Attachment E applies to the Statement of Work, then Attachment D does not apply to the Statement of Work.

15.2 Default Vendor Ownership Model

If the Statement of Work is silent about whether Attachment D (Vendor/Client Ownership Provisions) or Attachment E (Client Ownership Provisions) applies to it, then the provisions of Attachment D (Vendor/Client Ownership Provisions) shall apply to the Statement of Work.

[See Attachment D (Vendor/Client Ownership Provisions) and Attachment E (Client Ownership Provisions) for Article 16 to Article 25]

ARTICLE 26 OPS CONFIDENTIAL INFORMATION

26.1 Confidentiality

During and following the Term of this Master Agreement and the Project Term of each Statement of Work, the Vendor shall keep all OPS Confidential Information confidential. The Vendor shall keep all OPS Confidential Information secure and shall provide or return OPS Confidential Information to the Client on demand and, in any event, shall provide or return all OPS Confidential Information to the Client before the termination or expiry of the Statement of Work, with no copy or portion kept by the Vendor in any form or on any media. The Vendor shall limit the disclosure of OPS Confidential Information to only those of its directors, officers, Personnel, agents, partners, affiliates, volunteers or Subcontractors who have been specifically authorized to have such disclosure and who have a need to know it in order to respond to a request for service pursuant to this Master Agreement or to perform the Services under the Statement of Work. The Vendor agrees that the Vendor, its directors, officers, Personnel, agents, partners, affiliates, volunteers or Subcontractors shall not directly or indirectly disclose, destroy, exploit or use any OPS Confidential Information (except in order to respond to a request for services pursuant to this Master Agreement or to perform the Services, or except if required by order of a court or tribunal), without first obtaining:

(a) the written consent of the Client, and

(b) in respect of any OPS Confidential Information about any third party, the written consent of such third party.

26.2 Restrictions on Copying

The Vendor shall not copy any OPS Confidential Information, in whole or in part, unless necessary or materially advantageous for the performance of the Services. On each copy made by the Vendor, the Vendor must reproduce all notices which appear on the original.

26.3 Injunctive and Other Relief

The Vendor acknowledges that breach of any provisions of this Article may cause irreparable harm to Ontario, the OPS Entity or any third party to whom Ontario or the OPS Entity owes a duty of confidence, and that the injury to Ontario, the OPS Entity or any third party, may be difficult to calculate and inadequately compensable in damages. The Vendor agrees that Ontario and the OPS Entity and any third party to whom Ontario or the OPS Entity owes a duty of confidence are each entitled to obtain injunctive relief (without proving any damage sustained by it or by any third party) and any other remedy for any actual or potential breach of the provisions of this Article.

26.4 Notice and Protective Order

If the Vendor or any of its directors, officers, Personnel, agents, partners, affiliates, volunteers or Subcontractors become legally compelled to disclose any OPS Confidential Information, the Vendor will provide Ontario or the OPS Entity, as appropriate, with prompt notice to that effect to allow Ontario or the OPS Entity to seek one or more protective orders or other appropriate remedies to prevent or limit such disclosure, and it shall co-operate with Ontario and/or the OPS Entity and their respective legal counsel to the fullest extent. If such protective orders or other remedies are not obtained, the Vendor will disclose only that portion of OPS Confidential Information which the Vendor is legally compelled to disclose, only to such person or persons to which the Vendor is legally compelled to disclose, and the Vendor shall provide notice to each such recipient, in co-operation with legal counsel for Ontario and/or the OPS Entity, that such OPS Confidential Information is confidential and subject to non-disclosure on terms and conditions substantially similar to and not materially less protective than those in this Master Agreement, and not materially less protective than any more protective terms and conditions set out the Statement of Work, and, if possible, shall obtain each recipient's written agreement to receive and use such OPS Confidential Information subject to those terms and conditions.

26.5 Vendor's Directors, Officers, Personnel, Agents, Partners, Affiliates, Volunteers and Subcontractors

The Vendor shall advise its directors, officers, Personnel, agents, partners, affiliates, volunteers and Subcontractors of the requirements of this Article and take appropriate action to ensure their compliance with its terms. In addition to any other liabilities of the Vendor pursuant to this Master Agreement or the Statement of Work or otherwise at law or in equity, the Vendor shall be liable for any and all liability, losses, costs, damages, expenses (including all reasonable legal, expert and consultant fees, and reasonable disbursements), causes of action, and Proceedings arising from any non-compliance with this Article by the Vendor's directors, officers, Personnel, agents, partners, affiliates, volunteers and Subcontractors. The Vendor understands and agrees that, prior to allowing any of them to perform any Services under a Statement of Work, the Vendor shall cause its directors, officers, Personnel, agents, partners, affiliates, volunteers and Subcontractors to execute a confidentiality agreement in the form set out in Attachment H and the Vendor shall deliver it to the Client.

26.6 Conflict with Privacy Provisions

If a conflict or inconsistency arises between any provision in this Article and the Privacy Provisions, the Privacy Provisions shall govern.

26.7 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 27 PRIVACY

27.1 Default Privacy Provisions

FIPPA applies to and governs all Records and may require the disclosure of such Records to third parties.

Unless the Parties expressly set out alternative privacy provisions in the Statement of Work, the following provisions shall govern:

The Vendor agrees:

(a) to keep Records secure;

(b) to provide Records to Ontario or the OPS Entities within seven (7) calendar days of being directed to do so by Ontario or the OPS Entity for any reason including an access request or privacy issue;

(c) not to access any Personal Information unless Ontario or the OPS Entity determines, in its sole discretion, that access is permitted under FIPPA and is necessary in order to provide the Services;

(d) not to directly or indirectly use, collect, disclose or destroy any Personal Information for any purposes that are not authorized by Ontario or the OPS Entity;

(e) to ensure the security and integrity of Personal Information and keep it in a physically secure and separate location safe from loss, alteration, destruction or intermingling with other records and databases and to implement, use and maintain the most appropriate products, tools, measures and procedures to do so;

(f) to restrict access to Personal Information to those of its directors, officers, Personnel, agents, partners, affiliates, volunteers or Subcontractors who have a need to know it for the purpose of providing the Services and who have been specifically authorized by the MGS Representative or the Client Representative to have such access for the purpose of providing the Services;

(g) to implement other specific security measures that in the reasonable opinion of Ontario or the OPS Entity would improve the adequacy and effectiveness of the Vendor's measures to ensure the security and integrity of Personal Information and Records generally;

(h) that any confidential information supplied to Ontario or the OPS Entity may be disclosed by Ontario or the OPS Entity where it is obligated to do so under FIPPA, by an order of a court or tribunal or pursuant to a legal proceeding; and

(i) any provision set out above that is not expressly replaced in a Statement of Work with an alternative provision shall remain in full force and effect.

27.2 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 28 CONFIDENTIAL VENDOR INFORMATION

28.1 Confidentiality

(a) Confidentiality - Master Agreement - During and following the Term of this Master Agreement, Ontario shall keep confidential all Confidential Vendor Information that comes into the knowledge or possession of Ontario under this Master Agreement, subject to: (i) the Privacy Provisions; and (ii) any right of Ontario under this Master Agreement to disclose. Ontario agrees to limit the disclosure of Confidential Vendor Information which comes into the knowledge or possession of Ontario under this Master Agreement to only: (1) those of its advisors, personnel and subcontractors, (2) those OPS Entities, offices of officers of the Legislative Assembly or of the Ontario Legislature, and Provincially Funded Organizations, and their respective advisors, staff and subcontractors, and (3) those members of the Executive Council of Ontario, and their advisors, staff and subcontractors; who have a need to know it and who have been specifically authorized to have such disclosure. Ontario agrees that: (A) it and its advisors, personnel and subcontractors, (B) those OPS Entities, offices of officers of the Legislative Assembly or of the Ontario Legislature, and Provincially Funded Organizations, and their respective advisors, staff and subcontractors; and (C) those members of the Executive Council of Ontario, and their advisors, staff and subcontractors; shall not directly or indirectly disclose, destroy, exploit or use any Confidential Vendor Information (except to enable Ontario to exercise its rights under this Master Agreement or any Statement of Work, or except if required by order of a court or tribunal), without first obtaining:

(i) the written consent of the Vendor, and

(ii) in respect of any Confidential Vendor Information about any third party, the written consent of such third party.

(b) Confidentiality - Request for Services - In connection with a request for services issued pursuant to this Master Agreement, the Issuer shall keep confidential, in accordance with the terms and conditions of the request for services, all Confidential Vendor Information that comes into the knowledge, possession or control of the Issuer or any contractor or subcontractor at any tier of the Issuer.

(c) Confidentiality - Statements of Work – During and following the Term of each Statement of Work entered into by the Client, the Client shall keep confidential all Confidential Vendor Information that comes into the knowledge, possession or control of the Client or its Subcontractors in connection with the Statement of Work, subject to: (i) the Privacy Provision; or (ii) any right of the Client under the Statement of Work, to disclose. The Client agrees to limit the disclosure of Confidential Vendor Information which comes into the knowledge or possession of the Client in connection with the Statement of Work to only: (1) those of its

advisors, personnel and subcontractors, (2) Ontario and those of its advisors, personnel and subcontractors; (3) those OPS Entities, offices of officers of the Legislative Assembly or of the Ontario Legislature, and Provincially Funded Organizations, and their respective advisors, staff and subcontractors, and (4) those members of the Executive Council of Ontario, and their advisors, staff and subcontractors; who have a need to know it and who have been specifically authorized to have such disclosure. The Client agrees that: (A) it and its advisors, personnel and subcontractors, (B) Ontario and those of its advisors, personnel and subcontractors; (C) those OPS Entities, offices of officers of the Legislative Assembly or of the Ontario Legislature, and Provincially Funded Organizations, and their respective advisors, staff and subcontractors; and (D) those members of the Executive Council of Ontario, and their advisors, staff and subcontractors; shall not directly or indirectly disclose, destroy, exploit or use any Confidential Vendor Information (except to enable the Client to exercise its rights under this Master Agreement or any Statement of Work, or except if required by order of a court or tribunal), without first obtaining:

(i) the written consent of the Vendor, and

(ii) in respect of any Confidential Vendor Information about any third party, the written consent of such third party.

For certainty and without limiting the exclusion of the Statement of Work itself as part of the definition of "Confidential Vendor Information", the Statement of Work is not considered the confidential or proprietary information of the Vendor and it and its contents may be publicly disclosed without notice and without the prior consent of the Vendor.

(d) Limitation - Despite anything to the contrary in this Master Agreement, the Vendor and Ontario agree that: (i) Ontario shall have no obligation to control, and no liability to the Vendor for failure to control, any Confidential Vendor Information that is received by, or is in the knowledge, possession or control of, any OPS Entity, or any contractor or subcontractor at any tier of any OPS Entity: (A) in connection with any request for service issued by any OPS Entity; or (B) under any Statement of Work; and (ii) for certainty, Ontario shall have no obligation or liability to the Vendor for any breach of this Article 28 (Confidential Vendor Information) to the extent that Ontario does not have knowledge or possession of the relevant Confidential Vendor Information prior to the breach.

28.2 Restrictions on Copying

(a) Restrictions on Copying - Master Agreement - Ontario shall not copy, in whole or in part, any Confidential Vendor Information that comes into the knowledge or possession of Ontario under this Master Agreement, unless necessary or materially advantageous to enable Ontario to exercise its rights under this Master Agreement. On each copy made by Ontario, Ontario must reproduce all notices which appear on the original.

(b) Restrictions on Copying – Request for Services Process - In connection with a request for services issued pursuant to this Master Agreement, the Issuer shall not copy, in whole or in part, any Confidential Vendor Information that comes into the knowledge, possession or control of the Issuer unless necessary or materially advantageous to enable the Issuer to exercise its rights in accordance with the terms and conditions of the request for services. On each copy made by the Issuer, the Issuer must reproduce all notices which appear on the original.

(c) Restrictions on Copying - Statements of Work - The Client shall not copy, in whole or in part, any Confidential Vendor Information that comes into the knowledge, possession or control of the Client in connection with any Statement of Work entered into by the Client unless necessary or materially advantageous to enable the Client to exercise its rights under any Statement of Work entered into by the Client. On each copy made by the Client, the Client must reproduce all notices which appear on the original.

28.3 Declaratory Order and Other Relief

Ontario acknowledges, and it is a term of each Statement of Work that the Client acknowledges, that breach of any provisions of this Article may cause irreparable harm to the Vendor or to any third party to whom the Vendor owes a duty of confidence, and that the injury to the Vendor or to any third party may be difficult to calculate and inadequately compensable in damages. Ontario agrees, and it is a term of each Statement of Work that the Client agrees, that the Vendor is entitled to obtain an order declaratory of the rights of the Parties (without proving any damage sustained by it or by any third party) or any other remedy available at law against any actual or potential breach of the provisions of this Article.

28.4 Conflict with Privacy Provisions

If a conflict or an inconsistency arises between any provision in this Article and the Privacy Provisions, the Privacy Provisions shall govern.

28.5 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 29 REPRESENTATIONS, WARRANTIES AND COVENANTS AS TO THIS MASTER AGREEMENT

29.1 Representations and Warranties of the Vendor

The Vendor makes the following representations and warranties to Ontario as of the date of execution of this Master Agreement, and acknowledges that Ontario is relying upon them:

(a) the Vendor is duly incorporated, or, if a partnership, formed, and validly subsisting under the laws of its governing jurisdiction with full power, right and authority to enter into this Master Agreement, and to perform its obligations under this Master Agreement;

(b) the individual executing this Master Agreement on behalf of the Vendor is duly authorized to do so;

(c) this Master Agreement constitutes a legal, valid and binding agreement of the Vendor enforceable in accordance with its terms;

(d) there is no agreement with any other Person which would in any way interfere with the rights of Ontario under this Master Agreement; and

(e) to the extent that any right, title or interest in or to any Deliverables or Intellectual Property Rights vests in Ontario, upon such vesting all such rights, title and interest will be transferred to Ontario free and clear of any Encumbrances.

Throughout the Term of this Master Agreement, the Vendor covenants to take any actions required to ensure that the foregoing representations and warranties continue to be true and covenants not to take any actions that would cause any of the foregoing representations and warranties not to be true, and acknowledges that Ontario and OPS Entities are relying upon such covenants.

29.2 Representations and Warranties of Ontario

Ontario makes the following representations and warranties to the Vendor as of the date of execution of this Master Agreement, and acknowledges that the Vendor is relying upon them:

(a) the execution and delivery of this Master Agreement has been duly authorized; and

(b) this Master Agreement constitutes a legal, valid and binding agreement of Ontario enforceable in accordance with its terms.

29.3 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work

ARTICLE 30 REPRESENTATIONS, WARRANTIES AND COVENANTS AS TO STATEMENTS OF WORK

30.1 Representations and Warranties of the Vendor

In addition to any representations and warranties of the Vendor made under a Statement of Work, the Vendor makes the following representations and warranties to the Client as of the date of execution of each Statement of Work, and acknowledges that the Client is relying upon them:

(a) the Vendor is duly incorporated or, if a partnership, formed, and validly subsisting under the laws of its governing jurisdiction with full power, right and authority to enter into the Statement of Work, and to perform its obligations under the Statement of Work;

(b) the execution, delivery and performance of the Statement of Work by the Vendor have been duly authorized;

(c) the Statement of Work constitutes a legal, valid and binding agreement of the Vendor enforceable in accordance with its terms;

(d) there is no agreement with any other Person which would in any way interfere with the rights of the Client (and, in the case of a Client that is an OPS Entity to which Section 25.1 of Attachment D or Section 17.1 of Attachment E applies, also the rights of Ontario) under the Statement of Work;

(e) all Services will be performed: (i) in a professional and competent manner by persons qualified and skilled in their occupations; and (ii) in accordance with, and not in violation of, Requirements of Law;

(f) the Vendor:

(i) has entered into a written agreement, or will have entered into a written agreement prior to the performance of any Services under the Statement of Work, with each of its employees performing Services under the Statement of Work, or has established and published employee policies binding on its employees performing Services under the Statement of Work; or

(ii) has entered into a written agreement, or will enter into a written agreement prior to the performance of any Services under the Statement of Work, with each of its Subcontractors performing Services under the Statement of Work;

which contains the following minimum terms: (1) the employee or Subcontractor, as applicable, irrevocably assigns to the Vendor, to the extent necessary for the Vendor to grant, assign, transfer or otherwise convey to the Client the rights, title or interests in and to the Deliverables in accordance with the terms of this Master Agreement and the Statement of Work, all of its Intellectual Property Rights to work created, developed, generated, prepared or produced in the course of employment or performing its obligations under a contract with the Vendor, as applicable; (2) the employee or Subcontractor, as applicable, irrevocably waives its Moral Rights in favour of the Vendor and the Vendor's assignees in and to any work created by the employee or Subcontractor in the course of employment or performing its obligations under a contract with the Vendor, as applicable; (3) terms and conditions that protect the confidentiality

of the Vendor's confidential information, including any confidential information of the Vendor's customers, on terms that are no less protective as the confidentiality obligations set out in this Master Agreement; and (4) the employee or Subcontractor agrees to promptly do any and all acts and cause to be executed and deliver to the Vendor any and all assignments, documents and instruments relating to the Deliverables, which the Vendor may request at any time or from time to time;

(g) the Vendor has not entered into any arrangement which would in any way restrict the Client's ability (and, in the case of a Client that is an OPS Entity to which Section 25.1 of Attachment D or Section 17.1 of Attachment E applies, also Ontario's ability) to exercise the Intellectual Property Rights granted under the Statement of Work;

(h) there are no claims made or Proceedings pending or anticipated relating to the ownership of the Deliverables or any part of the Deliverables;

(i) the Vendor has, or shall obtain, all the rights for it to grant all of the rights and licences that it grants under the Statement of Work;

(j) neither the Deliverables nor the Services shall, to the best of Vendor's knowledge, in any way infringe or violate any Intellectual Property Rights or any other right of any third party including any patents or patent applications;

(k) the right, title or interest in or to any Deliverables or any Intellectual Property Rights that vests in the Client (but, in the case of a Client that is an OPS Entity to which Section 25.1 of Attachment D or Section 17.1 of Attachment E applies, that vest in Ontario) in accordance with the terms of this Master Agreement and/or the Statement of Work will, upon such vesting, be transferred to the Client (but, in the case of a Client is an OPS Entity to which Section 25.1 of Attachment D or Section 17.1 of Attachment E applies, be transferred to Ontario), free and clear of any Encumbrances;

(l) the Vendor has not entered into any agreement or arrangement that would restrict a Subcontractor from licensing or selling to the Client (and, in the case of a Client that is an OPS Entity to which Section 25.1 of Attachment D or Section 17.1 of Attachment E applies, also licensing and selling to Ontario) goods or services relating to the Deliverables on the usual commercial basis and at market prices, for the purpose of installing, integrating, operating, using, maintaining, supporting, developing or modifying any of the Deliverables;

(m) the Vendor shall not provide or incorporate (or permit those for whom it is responsible, including its Subcontractors and Personnel to provide or incorporate) into any Deliverables, or request the Client to consent to the Vendor providing or incorporating into any Deliverables, and shall not use or permit the use in the provision of the Services, any Restrictive Material; and

(n) the media containing any Deliverables shall be new and free from defects in manufacture, materials, and design, and shall function properly under ordinary use for 90 days after receipt.

Throughout the Project Term of each Statement of Work, the Vendor covenants to take any actions required to ensure that the foregoing representations and warranties continue to be true and covenants not to take any actions that would cause any of the foregoing representations and warranties not to be true, and acknowledges that the Client is relying upon such covenants.

30.2 Representations and Warranties of the Client

It is a term of each Statement of Work that the Client makes the following representations and warranties to the Vendor as of the date of execution of each Statement of Work, and acknowledges that the Vendor is relying upon them:

(a) the execution and delivery of the Statement of Work has been duly authorized; and

(b) the Statement of Work constitutes a legal, valid and binding agreement of the Client enforceable in accordance with its terms.

30.3 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work

ARTICLE 31 INDEMNIFICATION

31.1 IP Indemnification

Despite the limitations of liability set out in Article 33 (Limitation of Liability), and except for any liability arising pursuant to the indemnity provided for in Section 31.3 (Confidentiality and Privacy Indemnification), the Vendor shall indemnify and hold harmless the Indemnified Parties from and against all Losses and Proceedings, by whomever made, sustained, incurred, brought or prosecuted, for any actual or possible infringement, inducement of infringement, misappropriation or violation of any Intellectual Property Rights or infringement of any Moral Rights arising out of or in connection with:

(a) the Deliverables (including the provision, use or disposal of the Deliverables) or the Services (including the provision or performance of the Services);

(b) the failure of the Vendor, its Subcontractors or the Vendor's Personnel to perform the Vendor's obligations pursuant to Section 18.4 (Waiver of Moral Rights); or

(c) the exercise of any rights, licences or permissions under a Statement of Work by any Indemnified Parties or by any persons authorized in or under the Statement of Work to exercise any such rights, licences or permissions.

If anything in subsection (a) or (c) above or resulting from the failure described in subsection (b) above is held, or is likely, in the reasonable opinion of the Client, to be held to constitute an infringement, inducement of infringement, misappropriation or violation of any Intellectual Property Rights or an infringement of any Moral Rights, or anything in subsection (a) or (c) above or resulting from the failure described in subsection (b) above is enjoined or threatened to be enjoined or held or threatened to be held improper by way of declaration, then without prejudice to any other rights and remedies as may be available to any of the Indemnified Parties under this Master Agreement or Statement of Work, or at law or in equity, the Vendor shall also, at its expense, either:

(1) obtain the rights, licences, permissions and waivers as are necessary so that such Deliverables, Services, or exercise of rights, licences or permissions, becomes non-infringing; or

(2) replace or modify the Deliverables or the Services so that the infringing portion no longer infringes (without any loss of quality or functionality) to the Client's satisfaction;

and shall make every reasonable effort to correct the situation with minimal effect upon the operations of the Client. If neither of the foregoing alternatives is reasonably available, the Minister (MGS) may terminate this Master Agreement and the Minister (Client) may terminate all or any part of the Statement of Work without further obligation or liability to the Vendor and, without prejudice to any other rights and remedies as may be available to any of the Indemnified Parties under this Master Agreement or the Statement of Work, or at law or in equity, the Vendor shall refund to the Client all amounts paid with respect to such Services or anything supplied that infringes.

31.2 Client Modification

With respect to a Statement of Work, the Vendor shall not have any liability to the Indemnified Parties under Section 31.1 (IP Indemnification) to the extent that any infringement or violation of any Intellectual Property Rights, other than Moral Rights, is caused by further development or modification made by the Client not

authorized by the Vendor to the Newly-Created Materials, Vendor Materials incorporated into any Deliverables, Vendor Work Inventions or Vendor Work Information.

31.3 Confidentiality and Privacy Indemnification

Despite the limitations of liability set out in Article 33 (Limitation of Liability), the Vendor shall indemnify and hold harmless the Indemnified Parties from and against all Losses and Proceedings, by whomever made, sustained, incurred, brought or prosecuted arising out of or in connection with a breach by the Vendor of: (a) its obligations under Article 26 (OPS Confidential Information); or (b) the Privacy Provisions.

31.4 Other Indemnification

Except for any liability arising pursuant to the indemnities provided for in Section 21.3 (Indemnity) (if Attachment E applies to the Statement of Work), 23.3 (Indemnity) (if Attachment D applies to the Statement of Work), 31.1 (IP Indemnification) or 31.3 (Confidentiality and Privacy Indemnification) and subject to the limitation of liability set out in Article 33 (Limitation of Liability), the Vendor shall indemnify and hold harmless the Indemnified Parties from and against all Losses and by whomever made, sustained, brought or prosecuted, arising out of or in connection with anything done or omitted to be done by the Vendor, its Subcontractors or the Vendor's Personnel in the course of the performance of the Vendor's obligations under this Master Agreement or the Statement of Work or otherwise in connection with this Master Agreement or the Statement of Work.

31.5 Notice

The Client shall notify the Vendor in writing of the commencement of any Proceeding referred to in Section 21.3 (Indemnity) (if Attachment E applies to the Statement of Work), 23.3 (Indemnity) (if Attachment D applies to the Statement of Work), 31.1 (IP Indemnification), 31.3 (Confidentiality and Privacy Indemnification), or 31.4 (Other Indemnification).

31.6 Defence

The Vendor shall, at its expense, to the extent requested by the Attorney General of Ontario, participate in or conduct the defence of any Proceedings against any Indemnified Parties referred to in Section 21.3 (Indemnity) (if Attachment E applies to the Statement of Work), 23.3 (Indemnity) (if Attachment D applies to the Statement of Work), 31.1 (IP Indemnification), 31.3 (Confidentiality and Privacy Indemnification), or 31.4 (Other Indemnification), and any negotiations for their settlement. Ontario may elect to participate in or conduct the defence of any such Proceedings by notifying the Vendor in writing of such election without prejudice to any other rights or remedies of Ontario under this Master Agreement or the Statement of Work, at law or in equity. Each party participating in the defence shall do so by actively participating with the other's counsel. No settlement shall be entered into by the Vendor unless it has obtained the prior written approval of the Attorney General of Ontario.

If the Vendor is requested by the Attorney General of Ontario to participate in or conduct the defence of any such Proceedings, Ontario agrees to co-operate with and assist the Vendor to the fullest extent possible in the Proceedings and any related settlement negotiations. If Ontario conducts the defence of any such Proceedings, the Vendor agrees to co-operate with and assist Ontario to the fullest extent possible in the Proceedings and any related settlement negotiations.

Subject to any rights and obligations of the Attorney General of Ontario, any Statement of Work that is entered into by a Client that is an OPS Entity may specify obligations that are the same as or similar to those set out above in this Section 31.6, in respect of the defence of any Proceedings against the Client and its officers, directors, advisors, agents, appointees and employees. If a Statement of Work of that kind is silent, the provisions of this Section shall apply to it, except that – and subject to any rights and obligations of the Attorney General of Ontario – "Attorney General of Ontario" shall be replaced by "Client", and "Ontario" shall be replaced by "the Client".

31.7 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 32 INSURANCE

32.1 General

Without limiting any other provision in this Article, the Vendor shall, at its own expense, put in effect with insurers having a secure A.M. Best rating of B+ or greater, or the equivalent, all the necessary and appropriate insurance that a prudent business person would acquire in like circumstances. The Vendor shall maintain such insurance throughout the Term of this Master Agreement and if the Project Term of a Statement of Work extends beyond this Master Agreement Expiry Date, until the Project End Date.

32.2 Commercial General Liability Insurance

The insurance required by Section 32.1 (General) shall include commercial general liability insurance on an occurrence basis to an inclusive limit not less than two million Canadian dollars (C$2,000,000.00) per occurrence of property damage, bodily injury (including death) or personal injury, and which provides the following minimum coverage:

(a) the Indemnified Parties as additional insureds with respect to any liability arising in the course of the performance of the Vendor's obligations under this Master Agreement and each Statement of Work or arising otherwise in connection with this Master Agreement or any Statement of Work;

(b) cross liability;

(c) a contractual liability coverage endorsement;

(d) a products and completed operations endorsement;

(e) a non-owned automobile coverage with blanket contractual endorsement;

(f) an employer's liability coverage endorsement, if the Vendor is not subject to the WSIA; and

(g) 30 days written notice to Ontario of cancellation, material change or termination.

Additional required coverage or endorsements may be set out in a Statement of Work for that Statement of Work.

32.3 Errors and Omissions Liability Insurance

The insurance required by Section 32.1 (General) shall include errors and omissions liability insurance, insuring liability for errors and omissions in the provision of the Deliverables and/or the performance of or failure to perform the Services, in the amount of not less than two million Canadian dollars (C$2,000,000.00) per claim and in the annual aggregate.

Additional required coverage may be set out in a Statement of Work for that Statement of Work.

32.4 Proof of Insurance

Before the Vendor signs the first Statement of Work under this Master Agreement, the Vendor shall provide to the MGS Representative proof of the insurance required by Sections 32.2 (Commercial General Liability Insurance) and 32.3 (Errors and Omissions Liability Insurance) in the form of valid certificates of insurance that reference this Master Agreement and confirm the coverage set out in this Article. The Vendor shall provide

renewal replacements to the MGS Representative on or before any subsequent policy renewals. Each certificate of insurance and renewal replacement must reference this Master Agreement by name, date and the full legal name of the Parties. Upon the request of the MGS Representative, a copy of each policy shall be made available to the MGS Representative.

32.5 Subcontractors

The Vendor shall ensure that each of its Subcontractors obtains all the necessary and appropriate insurance that a prudent person in the business of the Subcontractor would maintain and that the Indemnified Parties are named as additional insured with respect to any liability arising in the course of performance of the Subcontractor's obligations under the subcontract for the provision of the Deliverables.

32.6 Proof of WSIA Coverage

If the Vendor is subject to the WSIA, it shall submit a valid WSIB clearance certificate of WSIA coverage to the MGS Representative before the Vendor signs the first Statement of Work under this Master Agreement. In addition, the Vendor shall, from time to time at the request of the MGS Representative, provide additional WSIB clearance certificates. The Vendor covenants and agrees to pay when due, and to ensure that each of its Subcontractors pays when due, all amounts required to be paid by it and by its Subcontractors, from time to time during the Term of this Master Agreement and the Project Term of each Statement of Work, under the WSIA, failing which the Client shall have the right, in addition to and not in substitution for any other right it may have pursuant to the Statement of Work or otherwise at law or in equity, to pay to the WSIB any amount due pursuant to the WSIA and unpaid by the Vendor or its Subcontractors and to deduct such amount from any amount due and owing from time to time to the Vendor pursuant to the Statement of Work together with all costs incurred by the Client in connection therewith.

ARTICLE 33 LIMITATION OF LIABILITY

33.1 Categories of Damages

For the purposes of this Article, direct damages are those damages that fall within the scope of subsection (a) or (b) below, or both:

(a) damages that arise naturally from the breach of the Master Agreement or a Statement of Work or that are reasonably contemplated at the time the Parties enter into this Master Agreement or the Statement of Work as being the probable consequences of breach of this Master Agreement or the Statement of Work, but exclude those damages that, in order to be reasonably contemplated, require knowledge of special circumstances, which are not known to both Parties at the time the Parties enter into this Master Agreement or the Statement of Work;

(b) damages that are reasonably foreseeable as being the probable consequences of a tort that falls within the scope of this Master Agreement or a Statement of Work, subject to any express limitation or negation of the tort duty, or of the right to sue in tort, set out in this Master Agreement or the Statement of Work.

For the purposes of this Article, all damages of any type whatsoever that fall within the scope of this Master Agreement or the Statement of Work, which are not direct damages, are categorized as indirect damages.

33.2 Vendor's Liability for Damages

Subject to Section 33.3 (Vendor's Liability for Property Damage, Bodily Injury (Including Death) or Personal Injury) and Section 33.4 (Exception – Vendor Liability) for which there are no limits on the liability of the Vendor, if circumstances arise where Ontario or the OPS Entity is entitled to recover from the Vendor damages arising in the course of the performance of the Vendor's obligations under a Statement of Work or arising otherwise in connection with the Statement of Work, the Vendor's aggregate liability to Ontario and the OPS Entity for direct damages under the Statement of Work, shall not exceed:

(a) $250,000.00, if the Maximum Price in the Statement of Work is $250,000.00 or less (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work is $250,000.00 or less); or

(b) $750,000.00, if the Maximum Price in the Statement of Work is $750,000.00 or less but more than $250,000.00 (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work is $750,000.00 or less but more than $250,000.00); or

(c) $2,000,000.00, if the Maximum Price in the Statement of Work is $2,000,000.00 or less but more than $750,000.00 (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work is $2,000,000.00 or less but more than $750,000.00); or

(d) $5,000,000.00, if the Maximum Price in the Statement of Work is $5,000,000.00 or less but more than $2,000,000.00 (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work is $5,000,000.00 or less, but more than $2,000,000.00); or

(e) the greater of the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work, if the Maximum Price in the Statement of Work exceeds $5,000,000.00 (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work exceeds $5,000,000.00).

Subject to Section 33.3 (Vendor's Liability for Property Damage, Bodily Injury (Including Death) or Personal Injury) and Section 33.4 (Exception (Vendor Liability)), the Vendor shall have no liability for indirect damages in respect of the Statement of Work. The Statement of Work may expressly provide that this limitation shall not in any way restrict or limit any indemnities set out in the Statement of Work.

33.3 Vendor's Liability for Property Damage, Bodily Injury (including Death) or Personal Injury

The limitation of liability in Section 33.2 (Vendor's Liability for Damages) shall not apply in respect of damages for any property damage, bodily injury (including death) or personal injury.

33.4 Exception (Vendor Liability)

The limitation of liability in Section 33.2 (Vendor's Liability for Damages) shall not apply where Ontario or the OPS Entity would be entitled to recover from the Vendor under (a) Sections 21.3 (Indemnity) (if Attachment E applies to the Statement of Work), 23.3 (if Attachment D applies to the Statement of Work), 31.1 (IP Indemnification), and 31.3 (Confidentiality and Privacy Indemnification) or any express exceptions in this Master Agreement to Section 33.2 (Vendor's Liability for Damages); (b) any indemnity in the Statement of Work for breach or misappropriation of Intellectual Property Rights, breach of confidentiality or breach of privacy provisions; or (c) any indemnity in the Statement of Work where the Statement of Work expressly provides that the indemnity is not subject to, restricted by or limited by any limitation of liability.

33.5 Ontario and OPS Entities' Liability for Damages

Subject to Section 33.6 (Ontario and OPS Entities' Liability for Property Damage, Bodily Injury (including Death) or Personal Injury) and Section 33.7 (Exception (Ontario and OPS Entities' Liability)) for which there are no limits on the liability of Ontario and the OPS Entity, if circumstances arise where the Vendor is entitled to recover damages from Ontario or the OPS Entity in connection with a Statement of Work, the aggregate liability of Ontario and the OPS Entity to the Vendor for direct damages under the Statement of Work shall not exceed:

(a) $250,000.00, if the Maximum Price in the Statement of Work is $250,000.00 or less (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may

charge the Client or the Client must pay the Vendor under the Statement of Work is $250,000.00 or less); or

(b) $750,000.00, if the Maximum Price in the Statement of Work is $750,000.00 or less but more than $250,000.00 (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work is $750,000.00 or less, but more than $250,000.00); or

(c) $2,000,000.00, if the Maximum Price in the Statement of Work is $2,000,000.00 or less but more than $750,000.00 (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work is $2,000,000.00 or less, but more than $750,000.00); or

(d) $5,000,000.00, if the Maximum Price in the Statement of Work is $5,000,000.00 or less but more than $2,000,000.00 (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work is $5,000,000.00 or less, but more than $2,000,000.00); or

(e) the greater of the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work, if the Maximum Price in the Statement of Work exceeds $5,000,000.00 (or if the Maximum Price is not specified in the Statement of Work but the amount the Vendor may charge the Client or the Client must pay the Vendor under the Statement of Work exceeds $5,000,000.00).

Subject to Section 33.6 (Ontario and OPS Entities' Liability for Property Damage, Bodily Injury (Including Death) or Personal Injury) and Section 33.7 (Exception (Ontario and OPS Entities' Liability)), Ontario and the OPS Entity shall have no liability for indirect damages in respect of the Statement of Work.

33.6 Ontario and OPS Entities' Liability for Property Damage, Bodily Injury (including Death) or Personal Injury

The limitation of liability in Section 33.5 (Ontario and OPS Entities' Liability for Damages) shall not apply in respect of damages for any property damage, bodily injury (including death) or personal injury.

33.7 Exception (Ontario and OPS Entities' Liability)

The limitation of liability in Section 33.5 (Ontario and OPS Entities' Liability for Damages) shall not apply where the Vendor is entitled to recover damages from Ontario or the OPS Entity (a) arising from use, infringement, inducement of infringement or violation of any Intellectual Property Rights or infringement of any Moral Rights in connection with the Statement of Work; or (b) based upon, occasioned by or attributable to breach of Article 28 (Confidential Vendor Information) in connection with the Statement of Work.

33.8 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 34 SUSPENSION

34.1 Suspension

The Minister (MGS), at its discretion, acting reasonably, may temporarily remove the Vendor immediately from the list of qualified vendors of record to which the Vendor was added pursuant to the RFP. For certainty and without limiting the generality of the foregoing, the Minister (MGS) may temporarily remove the Vendor from the list of qualified vendors of record immediately upon the occurrence of the following circumstances:

(a) the Vendor fails to comply with any of the terms of this Master Agreement or of any Statement of Work;

(b) the Vendor is in default under Article 10 (Security Clearance Checks);

(c) any Insolvency Event occurs with respect to the Vendor;

(d) the Vendor breaches any provision in Article 26 (OPS Confidential Information) or any Privacy Provisions;

(e) the Vendor breaches Section 5.6 (Conflict of Interest) or any other conflict of interest provisions applicable to this Master Agreement or any Statement of Work;

(f) the Vendor subcontracts for the provision of part or all of the Services or sells, assigns or transfers its interest in this Master Agreement, a Statement of Work, or any of its obligations under them to any third Person without the prior written approval of the Minister (MGS) or the Minister (Client), as appropriate, except as expressly contemplated and permitted by Section 5.3 (Subcontracting or Assignment);

(g) the Vendor, prior to or after executing this Master Agreement or any Statement of Work, makes a material misrepresentation or omission or provides materially inaccurate information to Ontario or the OPS Entity;

(h) the Vendor undergoes a change in control which, in the sole opinion of Ontario, adversely affects the Vendor's ability to satisfy some or all of its obligations under this Master Agreement or any Statement of Work;

(i) the Vendor undergoes a change in control which, in the sole opinion of the Client, adversely affects the Vendor's ability to satisfy some or all of its obligations under a Statement of Work;

(j) the Vendor is subject to suspension under the Performance Management Process; or

(k) the Vendor, on multiple occasions during the Term of the Master Agreement, replaces or substitutes Personnel prior to or shortly after the Project Start Date of Statements of Work.

34.2 Effect of Suspension

When removed from the list of qualified vendors of record, the Vendor:

(a) is not eligible to receive requests for services or other similar notices from Clients of work under the VOR arrangement nor to be awarded a Statement of Work;

(b) if requested by MGS, shall promptly return all OPS Confidential Information, Records, Personal Information, Ontario Data and Ontario Materials to the Client;

(c) if requested by MGS, shall provide MGS with a report detailing (i) the current state of the provision of the Services by the Vendor at the date of suspension for all current Statements of Work; and (ii) any other information requested by MGS pertaining to the provision of the Services and the performance of current Statements of Work;

(d) if requested by the MGS or the Client, shall comply with its obligations under Section 18.3 (Assignee and Form of Copyright Assignment) and 18.4 (Waiver of Moral Rights);

(e) if requested by MGS or the Client, shall execute such document required to give effect to the suspension; and

(f) shall comply with any other reasonable instructions provided by MGS.

The Minister (MGS) may, at its sole discretion, (i) set a fixed time-period during which the Vendor shall remain removed from the list of qualified vendors of record, (ii) impose conditions that the Vendor must meet in order to be reinstated onto the list of qualified vendors of record, or (iii) both. For certainty, temporary removal of the Vendor from the list of qualified vendors of record does not relieve the Vendor of any of its obligations under this Master Agreement or under each Statement of Work.

ARTICLE 35 TERMINATION OF MASTER AGREEMENT

35.1 Termination of Master Agreement by the Minister (MGS)

The Minister (MGS) may terminate this Master Agreement immediately upon written notice to the Vendor if any of the following events of default occurs:

(a) the Vendor fails to comply with any of the terms of this Master Agreement or of any Statement of Work if that failure continues unremedied for ten (10) Business Days or more after written notice of that failure is given by the Minister (MGS) to the Vendor;

(b) the Vendor is in default under Article 10 (Security Clearance Checks);

(c) any Insolvency Event occurs with respect to the Vendor;

(d) the Vendor breaches any provision in Article 26 (OPS Confidential Information) or any Privacy Provisions;

(e) the Vendor breaches Section 5.6 (Conflict of Interest) or any other conflict of interest provisions applicable to a Statement of Work;

(f) the Vendor subcontracts for the provision of part or all of the Services or sells, assigns or transfers its interest in this Master Agreement or any of its obligations under it to any third Person without the prior written approval of the Minister (MGS) except as expressly contemplated and permitted by Section 5.3 (Subcontracting or Assignment);

(g) the Vendor, prior to or after executing this Master Agreement, makes a material misrepresentation or omission or provides materially inaccurate information to Ontario;

(h) the Vendor undergoes a change in control which, in the sole opinion of Ontario, adversely affects the Vendor's ability to satisfy some or all of its obligations under this Master Agreement or any Statement of Work; or

(i) this Master Agreement is subject to termination under the Performance Management Process.

Any termination of this Master Agreement under this Section is without prejudice to Ontario's right to exercise or pursue any other remedies that may be available to Ontario under this Master Agreement, at law or in equity. All such other remedies shall survive any termination of this Master Agreement and remain in full force and effect thereafter.

35.2 Termination of Master Agreement for Convenience

The Minister (MGS) reserves the right to terminate this Master Agreement at any time, without cause and without penalty, upon sixty (60) calendar days prior written notice to the Vendor.

35.3 Termination of Master Agreement by Vendor on VOR Anniversary Date

The Vendor may, upon providing written notice to the MGS Representative no less than fifteen (15) Business Days prior to a VOR Anniversary Date, terminate this Master Agreement (but not any Statement of Work) effective as at that VOR Anniversary Date. For certainty, termination of this Master Agreement in accordance

with this Section 35.3 does not relieve the Vendor of any of its obligations under this Master Agreement or under each Statement of Work.

35.4 Effect of Expiry or Termination of Master Agreement

Upon termination of this Master Agreement, MGS will remove the Vendor from the list of qualified vendors of record to which the Vendor was added pursuant to the RFP. Despite the expiry or other termination of this Master Agreement for any reason, the terms and conditions of this Master Agreement shall continue to apply to, and shall remain in full force and effect in respect of, each Statement of Work then in effect.

35.5 Obligations on Termination of Master Agreement

Upon termination of this Master Agreement, the Vendor shall, in addition to its other obligations under this Master Agreement and at law:

(a) provide the MGS Representative with a report detailing (i) the current state of the provision of Services by the Vendor under all Statements of Work entered into at any time by the Vendor, up to and including at the date of termination, and (ii) any other information requested by MGS pertaining to the provision of the Services and performance of such Statements of Work;

(b) execute such documentation as may be required by MGS to give effect to the termination of this Master Agreement; and

(c) comply with any other reasonable instructions provided by MGS, including but not limited to instructions for facilitating the transfer of its obligations to another Person.

35.6 Debriefing

Upon the request of MGS following the expiry or earlier termination of this Master Agreement, the Vendor shall attend a debriefing session conducted by MGS where the Vendor will provide MGS with its conclusions and observations about the implementation of this Master Agreement in order to provide MGS with feedback for structuring contracts for similar services in the future.

35.7 Express Rights in Addition to Other Rights

The express rights of termination in this Master Agreement are in addition to and shall in no way limit any rights or remedies of Ontario under this Master Agreement, at law or in equity.

35.8 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 36 TERMINATION OF STATEMENTS OF WORK

36.1 Termination by Minister (Client)

The Minister (Client) may terminate a Statement of Work immediately upon written notice to the Vendor if any of the following events of default occurs:

(a) the Vendor fails to comply with any of the terms of the Statement of Work if that failure continues unremedied for ten (10) Business Days or more after written notice of that failure is given by the Minister (Client) to the Vendor;

(b) the Vendor is in default under Article 10 (Security Clearance Checks);

(c) any Insolvency Event occurs with respect to the Vendor;

(d) the Vendor breaches any provision in Article 26 (OPS Confidential Information) or any Privacy Provisions;

(e) the Vendor breaches Section 5.6 (Conflict of Interest) or any other conflict of interest provisions applicable to a Statement of Work;

(f) the Vendor subcontracts for the provision of part or all of the Services or sells, assigns or transfers its interest in the Statement of Work or any of its obligations under it to any third Person without the prior written approval of the Minister (Client) except as expressly contemplated and permitted by Section 5.3 (Subcontracting or Assignment);

(g) the Vendor, prior to or after executing the Statement of Work, makes a material misrepresentation or omission or provides materially inaccurate information to the Client;

(h) the Vendor undergoes a change in control which, in the sole opinion of the Client, adversely affects the Vendor's ability to satisfy some or all of its obligations under the Statement of Work;

(i) the Client exercises its termination right under Section 8.3 (Completion of Services); or

(j) the Client exercises its termination right under Section 9.4 (Substitution or Replacement Prior to or Shortly After Project Start Date)

Any termination of a Statement of Work under this Section is without prejudice to the Client's right to exercise or pursue any other remedies that may be available to the Client under the Statement of Work, at law or in equity. All such other remedies shall survive any termination of the Statement of Work and remain in full force and effect thereafter.

36.2 Termination for Non-Appropriation of Moneys

This Section only applies to Statements of Work to which Section 11.3 of the Financial Administration Act applies. If the Statement of Work extends into a Fiscal Year subsequent to its execution, continuation of the Statement of Work is conditional upon an appropriation of moneys by the Ontario Legislature sufficient to satisfy payments due under the Statement of Work. If such moneys are not available as a result of: (a) non-appropriation by the Ontario Legislature for the Fiscal Year in which payment becomes due; and (b) the payment being neither charged nor chargeable to an appropriation of the Ontario Legislature for a previous Fiscal Year, the Minister (Client) may terminate the Statement of Work upon giving notice to the Vendor. Termination shall become effective on the date of the beginning of the first Fiscal Year for which funds have not been appropriated.

36.3 Termination for Convenience

The Minister (Client) reserves the right to terminate any Statement of Work at any time, without cause and without penalty, upon 30 calendar days prior written notice to the Vendor, or such other number of days as may be expressly prescribed in the Statement of Work.

36.4 Payment of Vendor Upon Termination

If a Statement of Work is terminated pursuant to Section 36.2 (Termination for Non-Appropriation of Moneys) or 36.3 (Termination for Convenience), the Client shall be liable to the Vendor only for payment for Services properly performed and Deliverables delivered to and accepted by the Client up to and including the effective date of the termination, unless the Client and the Vendor agree otherwise in the Statement of Work. For certainty, if a Statement of Work provides that payment will be due and owing upon the meeting of a specified milestone (such as, for example, delivery and/or acceptance of a specified Deliverable) and the effective date of the termination of the Statement of Work passes prior to the specified milestone being met, the Client is not liable to the Vendor for payment for Services performed and/or Deliverables delivered and/or accepted in relation to that specified milestone, unless the Client and the Vendor agree otherwise in the Statement of Work. Termination shall not relieve the Vendor of its warranties and other responsibilities relating to the

accepted Deliverables, the Services performed or money paid. In addition to its other rights of hold back, the Client may hold back payment or set off against any payments owed if the Vendor fails to comply with its obligations on termination.

36.5 Obligations on Termination

Upon termination of a Statement of Work, the Vendor shall, in addition to its other obligations under the Statement of Work and at law:

(a) promptly return all OPS Confidential Information, Records, Personal Information, Ontario Data and Ontario Materials to the Client;

(b) provide the Client with a report detailing (i) the current state of the provision of the Services by the Vendor at the date of termination, and (ii) any other information requested by the Client pertaining to the provision of the Services and performance of the Statement of Work;

(c) comply with its obligations under Section 18.3 (Assignee and Form of Copyright Assignment) and 18.4 (Waiver of Moral Rights);

(d) execute such documentation as may be required by the Client to give effect to the termination of the Statement of Work; and

(e) comply with any other reasonable instructions provided by the Client, including but not limited to instructions for facilitating the transfer of its obligations to another Person.

36.6 Express Rights in Addition to Other Rights

The express rights of termination that apply to a Statement of Work are in addition to and shall in no way limit any rights or remedies of the Client under the Statement of Work, at law or in equity.

36.7 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 37 GENERAL

37.1 Promotion Restrictions - Master Agreement

Any publicity or publications related to this Master Agreement shall be at the sole discretion of MGS. Ontario may, in its sole discretion, acknowledge any Services provided by the Vendor in any such publicity or publication. The Vendor shall not make use of its association with Ontario in relation to this Master Agreement without the prior written consent of MGS. Without limiting the generality of this Section, the Vendor shall not at any time directly or indirectly communicate with the media in relation to this Master Agreement unless it has first obtained the express written authorization to do so by MGS.

37.2 Promotion Restrictions

Statements of Work - Any publicity or publications related to a Statement of Work shall be at the sole discretion of the Client. The Client may, in its sole discretion, acknowledge any Services provided by the Vendor in any such publicity or publication. The Vendor shall not make use of its association with the Client in relation to a Statement of Work without the prior written consent of the Client. Without limiting the generality of this Section, the Vendor shall not, among other things, at any time directly or indirectly communicate with the media in relation to a Statement of Work unless it has first obtained the express written authorization to do so by the Client.

37.3 Disclosure to the OPS

Despite anything to the contrary in this Master Agreement or any Statement of Work, the Vendor consents to the disclosure, and the provision of a copy, of this Master Agreement, each Statement of Work and Change Order (including any amendments to any of them and any related or resulting documents), and of data about the acquisition of Deliverables and Services pursuant to each Statement of Work, at any time and from time to time to the OPS and to the members of the Executive Council of Ontario and their advisors and staff.

37.4 Accessibility Requirements

The Vendor's delivery of the Deliverables shall comply with all applicable requirements, specifications and standards for accessibility established in accordance with the Ontario Human Rights Code (HRC) R.S.O. 1990, CHAPTER H.19, the Ontarians with Disabilities Act, S.O. 2001, CHAPTER 32, and the Accessibility for Ontarians with Disabilities Act, 2005, S.O. 2005 c. 11, any regulations made thereto and any direction from MGS or the Client.

ATTACHMENT D TO MASTER AGREEMENT – VENDOR / CLIENT OWNERSHIP PROVISIONS

1.2 In respect of each Statement of Work to which this Attachment D applies, these words and expressions have these meanings:

"**Competitive Commercialization**" means exploitation of Intellectual Property Rights in Vendor Work Inventions or Vendor Work Information for any commercial advantage in competition with the Vendor with the effect of making a net monetary gain, but does not include: (a) any exploitation by or on behalf of the Client or its sublicensees for the purposes permitted under this Master Agreement or the Statement of Work where the good or service developed or produced through such exploitation is for use by the Client, its sublicensees, Ontario, OPS Entities, offices of an officer of the Legislative Assembly or of the Ontario Legislature, Provincially Funded Organizations, or the public, including any dissemination or distribution in connection with such exploitation, or (b) any dissemination or distribution by or on behalf of the Client or its sublicensees for the purposes permitted under this Master Agreement or the Statement of Work.

"**Confidential Work Information**" means all information that (a) is confidential by its nature or in the circumstances in which it is conceived, developed or produced, and (b) is conceived, developed or produced by one or more of the Personnel of the Vendor in the performance of Work whether with one or more of the Personnel of the Client or not. "Confidential Work Information" includes all Joint Work Inventions, Joint Work Material, Other Work Inventions and Non-Technical Work.

"**Non-Technical Work**" means all Deliverables other than the Vendor Work Inventions, the Vendor Work Information, the Confidential Work Information, the Joint Work Inventions, the Joint Work Material, and the Other Work Inventions. "Non-Technical Work" does not include the Vendor Materials.

"**Other Work Invention**" means any Invention conceived, or conceived and developed, solely or jointly by one or more of the Personnel of the Vendor in the performance of Work, but excludes any Joint Work Invention and any Vendor Work Invention.

"**Vendor Work Information**" means all Technical Information developed or produced by the Vendor or its Subcontractors in the performance of Work under a Statement of Work, but excludes any contribution made by one or more of the Personnel of the Vendor to any Joint Work Material; and also excludes all Client Work Information.

"**Vendor Work Invention**" means any Invention conceived, or conceived and developed, solely or jointly by one or more of the Personnel of the Vendor or its Subcontractor in the course of developing or producing Vendor Work Information, but excludes any Joint Work Invention.

"**Vendor Work Product**" means all Deliverables that are created, developed, generated, prepared or produced by one or more of the Personnel of the Vendor in the performance of Work, including all Joint Work Material and Non-Technical Work.

"**Work Patent Application**" means a patent application on a Vendor Work Invention filed by or on behalf of the Vendor or any of its assignees, related entities or Subcontractors or any of their advisors, agents or Personnel, in Canada or in any other country or international patent office.

ARTICLE 16. LICENCE TO RIGHTS IN VENDOR WORK INVENTIONS AND VENDOR WORK INFORMATION

16.1 Licence to Client

It is a provision of each Statement of Work that the Vendor hereby grants to the Client a non-exclusive, perpetual, irrevocable, world-wide, fully paid-up, royalty-free licence to exercise all Intellectual Property Rights and every other right, title and interest in the Vendor Work Inventions and Vendor Work Information, and under each patent issued as a result of a Work Patent Application, in any way and for any purpose whatsoever except Competitive Commercialization, and to have or permit others to do so. Solely by way of example, the licence granted to the Client above includes the right to use, reproduce, produce any translation, and improve, and

includes the right to sublicense to Ontario, OPS Entities, offices of an officer of the Legislative Assembly or of the Ontario Legislature, Provincially Funded Organizations, other governments and their agencies, and other public bodies.

The licence rights to the Vendor Work Inventions and Vendor Work Information shall arise immediately, as and when they, or any part of them, are conceived, created, developed or modified, generated, prepared or produced. The licence set out in this Section is non-transferable by the Client except that: (1) if the Client is Ontario, the Client may transfer the licence to a Permitted OPS Assignee; and (2) if the Client is an OPS Entity, the Client may transfer the licence to Ontario or, where such transfer is necessitated by outsourcing, privatizing, partnering or similar activity, to a non-governmental entity.

16.2 Third-Party Contractors

The Vendor acknowledges that, at any time, the Client may wish to enter into contracts with one or more third parties, whether by a competitive process or not, to exercise the licence set out in Section 16.1. Solely by way of example, such contracts may be with non-governmental entities for the adaptation, audit, communication, correction, development, enhancement, improvement, inspection, modification, operation, overhaul, recording, reproduction, revision, storage, support, translation or use of any or all of the Vendor Work Inventions and Vendor Work Information. Without restricting Section 16.1, the Vendor agrees that the Client's licence in Section 16.1 includes the right to disclose the Vendor Work Inventions and Vendor Work Information to such third parties, including actual and potential proponents for such contracts, and to sublicense or otherwise authorize the use of the Vendor Work Inventions and Vendor Work Information by any third parties engaged by the Client solely to carry out any such contracts. The Client shall require actual and potential proponents and such third parties not to use or disclose any Vendor Work Inventions or Vendor Work Information except as may be necessary to bid for or to carry out any such contracts or except if required by order of a court or tribunal.

16.3 Title to Improvements and Modifications

All Intellectual Property Rights arising from any further development or modification of the Vendor Work Inventions and Vendor Work Information that is conceived, developed, effected or first reduced to practice by or for the Client in the exercise of the licence set out in Section 16.1 shall vest in the Client, or as the Client directs, and shall not vest in the Vendor, its Personnel or Subcontractors except pursuant to a subsequent written contract.

16.4 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work

ARTICLE 17. OWNERSHIP OF RIGHTS

17.1 Vendor's Ownership of Rights in Vendor Work Inventions and Vendor Work Information

Without affecting any Intellectual Property Rights or other interests in or to Ontario Data, and subject to Article 16, Section 17.2, Section 17.6, Article 18, Article 19, Article 24, all Intellectual Property Rights in the Vendor Work Inventions and Vendor Work Information shall immediately, as and when they come into existence, vest in and remain the property of the Vendor. The Client shall not have any right in or to the Vendor's Intellectual Property Rights in the Vendor Work Inventions and Vendor Work Information except any right that may be granted in writing by the Vendor.

17.2 Pre-Existing Intellectual Property Rights

All Intellectual Property Rights existing immediately prior to the Project Start Date, and all rights to Inventions first conceived, developed or reduced to practice prior to such date, shall be retained by each Party and each third party that owned such rights immediately prior to such date.

17.3 Disclosure to Client

The Vendor shall promptly report and fully disclose in writing to the Client all Confidential Work Information, Joint Work Inventions, Joint Work Material, Vendor Work Inventions, Vendor Work Information, Non-Technical Work, Other Work Inventions, and all contributions made by the Personnel of the Vendor to any Joint Work Inventions, including copies of all written disclosures submitted to the Vendor pertaining to them. The Vendor's disclosure shall include a description of the specific components in sufficient detail to permit the Client to clearly identify such components and to distinguish them from the Vendor Materials and the Ontario Materials. Disclosure of Vendor Work Inventions, Other Work Inventions and Joint Work Inventions shall be on the form set out in Attachment I. In any event, the Vendor shall make such disclosure not later than the time of completion of the Services or such earlier time as the Client or the Statement of Work may require.

17.4 Audit Rights

During the Project Term and for seven (7) years following the termination or expiry of each Statement of Work, the Client shall have the right to examine and make copies of all records and supporting data of the Vendor which the Client reasonably deems pertinent to the identification of Confidential Work Information, Joint Work Material, Vendor Work Inventions, Vendor Work Information, Non-Technical Work, Other Work Inventions, or any contribution made by one or more of the Personnel of the Vendor to any Joint Work Invention, upon reasonable notice and with no more than minimal disruption to the Vendor's ongoing operations, and the Vendor shall, at its own cost, retain and maintain in an organised, accessible mode, all such records and supporting data for such period.

17.5 Ownership of Tangible Materials

Regardless of the ownership of any Intellectual Property Rights in any Deliverables, the Client shall own, and have unrestricted ownership rights in, all tangible materials as and when delivered by the Vendor to the Client in connection with the Statement of Work. The Vendor hereby irrevocably assigns, sells and transfers, and it shall be a term of the Statement of Work that the Vendor irrevocably assigns, sells and transfers, all right, title and interest in and to such tangible materials to the Client at no additional cost as and when delivered. The Vendor shall, at its own expense, promptly do any and all acts and cause to be executed and deliver to the Client any and all assignments, documents and instruments that the Client may reasonably request at any time or from time to time to carry out the intent of this Section.

17.6 Vendor Trademarks and Designations

Despite any other provisions of this Master Agreement, nothing in this Master Agreement or in a Statement of Work or the performance of the Statement of Work shall grant to the Client any right, title, interest or licence in or to the names, trade names, logos, trade dress, or other trademarks or designations of the Vendor, its Subcontractors or third-party licensors, except as expressly stated in the Statement of Work.

17.7 IP Notices

Except to the extent the Vendor is required to convey to the Client all of the Intellectual Property Rights in the Vendor Work Inventions and the Vendor Work Information in accordance with Section 18.1, the Client shall not, without the prior written consent of the Vendor which shall not be unreasonably withheld, remove any intellectual property notices of the Vendor or of the Vendor's Subcontractors on any Vendor Work Information.

17.8 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 18. ASSIGNMENT TO ONTARIO AND OPS ENTITIES

18.1 Assignment on Default

If the Minister (Client) terminates a Statement of Work in whole or in part for default, or if

(a) the Vendor fails to complete the Services,

(b) the Vendor fails to deliver all of the Vendor Work Information to the Client,

(c) the Vendor Work Information do not meet the criteria as described in the Statement of Work, or

(d) the Vendor fails to disclose all of the Vendor Work Inventions, Vendor Work Information, Non-Technical Work, Other Work Inventions, and contributions made by any Personnel of the Vendor to any Joint Work Invention, in accordance with Section 17.3,

the Client may, by notice to the Vendor, require the Vendor to convey to the Client all of the Intellectual Property Rights in the Vendor Work Inventions and Vendor Work Information, including each patent issued as a result of a Work Patent Application or, in the case of a notice based on failure to disclose, all of the Intellectual Property Rights in the Vendor Work Inventions and Vendor Work Information not disclosed including each patent issued as a result of a Work Patent Application on a Vendor Work Invention not disclosed, if such failure to disclose is not cured by the Vendor within ninety (90) days after notice by the Client. In the case of any notice under this Section, the rights to be conveyed shall include the Intellectual Property Rights in any Vendor Work Inventions and Vendor Work Information that have vested or are to vest in a Subcontractor.

18.2 Assignment by Personnel, Subcontractors and Others

To give effect to Section 18.1, to the extent that any right, title or interest or any Intellectual Property Rights in or to any Vendor Work Inventions and Vendor Work Information vest, by operation of law or otherwise, in any of the Vendor's directors, officers, Personnel, advisors, agents, partners, affiliates, volunteers, Subcontractors, suppliers or others for whom the Vendor is responsible at law, the Vendor shall cause each of them to assign and transfer to the Client at no cost all of such right, title and interest and all of such Intellectual Property Rights other than any Intellectual Property Rights or interests in Intellectual Property Rights that came into existence prior to the Project Start Date.

18.3 Assignee and Form of Copyright Assignment

Written assignments of any Intellectual Property Rights pursuant to a Statement of Work: (a) to Ontario shall be to "Her Majesty the Queen in right of Ontario", but written assignments of any copyright shall be to the "Queen's Printer for Ontario" in the form set out in Attachment F, or in such form that is satisfactory to the Client where the assignor is not a corporation; and (b) to the OPS Entity shall be in the name of the OPS Entity and, where the Intellectual Property Right is copyright, the written assignment of copyright shall be in the form set out in Attachment F, or in such form that is satisfactory to the Client where the assignor is not a corporation. At the completion of the Services under each Statement of Work or upon the termination of the Statement of Work, the Vendor shall provide to the Client an original, executed assignment of copyright in the form set out in Attachment F, as modified as necessary as set out above.

18.4 Waiver of Moral Rights

The Vendor acknowledges and agrees that all Moral Rights with respect to the Deliverables under each applicable Statement of Work shall be waived irrevocably and without restriction by each of its Personnel in favour of Her Majesty the Queen in right of Ontario and all of its ministries, other administrative units over which ministers of Ontario preside, including its agencies, boards, commissions and Crown corporations, all offices of the officers of the Legislative Assembly or of the Ontario Legislature, OPS Entities, and all sublicenses and assignees, and all persons authorized at any time to use the Deliverables. At the completion of the Services under each Statement of Work or upon the termination of the Statement of Work, the Vendor shall obtain from

each of its Personnel an original, executed waiver of Moral Rights in the form attached as Attachment G (Waiver of Moral Rights Form) and shall deliver such waiver to the Client upon request of the Client.

18.5 Invention Disclosure

Prior to allowing any Person to perform Services under the Statement of Work, the Vendor shall, by written agreement, require such Person to agree,

(a) to promptly report and fully disclose in writing to the Vendor each Vendor Work Invention, Joint Work Invention and Other Work Invention, identifying those concepts or ideas thought to be new, useful and unobvious, and indicating whether they are thought to be an improvement on prior art or capable of commercial exploitation; and

(b) upon request, during and after employment, to execute all assignments, documents and instruments necessary or advantageous to file patent applications on Vendor Work Inventions, Joint Work Inventions and Other Work Inventions and to establish Vendor's rights in the Vendor Work Inventions and the Client's rights in the Joint Work Inventions and Other Work Inventions.

18.6 Intellectual Property Rights Applications

To give effect to Section 18.1, the Vendor shall, at the Client's expense, give the Client all reasonable assistance in the preparation and the prosecution of any applications or registrations in any jurisdiction for or of any Intellectual Property Rights on or arising out of the Vendor Work Inventions and Vendor Work Information, including the assistance of the inventors in the case of patent applications on any Vendor Work Inventions.

18.7 Further Assurances

The Vendor shall, at its own expense, promptly do any and all acts and cause to be executed and deliver to the Client any and all assignments, documents and instruments relating to the Intellectual Property Rights in the Vendor Work Inventions and Vendor Work Information, which the Client may reasonably request at any time or from time to time to carry out the intent of this Article.

18.8 Power of Attorney

If the Client is unable for any reason whatsoever to secure the Vendor's signature to any document assigning, perfecting, recording or acknowledging the ownership of any Vendor Work Inventions, Vendor Work Information or patent pursuant to Section 18.1, the Vendor hereby irrevocably designates and appoints the Client and its duly authorized officers as its attorneys-in-fact, with full power of substitution, to act for and on behalf of and instead of the Vendor to execute and file any such document and to do all lawfully permitted acts to further the purposes of this Section with the same legal force and effect as if executed by the Vendor.

18.9 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 19. TRANSFERS AND LICENCES BY VENDOR

19.1 Restrictions Before Completion and Disclosure

In respect of a Statement of Work, until the Vendor completes the Services and discloses all of the Vendor Work Inventions and Vendor Work Information in accordance with Section 17.3, the Vendor and its Personnel and Subcontractors shall not, without the prior written permission of the Client, assign, sell, or otherwise transfer title to the Intellectual Property Rights in any Vendor Work Inventions and Vendor Work Information.

19.2 Obligations and Restrictions

In any assignment, sale, transfer or licence of Intellectual Property Rights in Vendor Work Inventions and Vendor Work Information by the Vendor except a sale or licence for end use of a product based on Vendor Work Inventions and Vendor Work Information, the Vendor shall ensure that the other party is aware of and agrees to comply with all of the Vendor's obligations to the Client in relation to Intellectual Property Rights and any restrictions set out in this Master Agreement or any applicable Statement of Work on the use or disposition of Intellectual Property Rights, including the obligation to impose the same obligations and restrictions on any subsequent assignee, purchaser, transferee or licensee.

19.3 Notification

The Vendor shall promptly notify the Client of the name, address and other pertinent information in regard to any such assignee, purchaser, transferee or licensee, and shall ensure that such party is required to do the same with regard to any subsequent assignee, purchaser, transferee or licensee.

19.4 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 20. NOTIFICATION OF WORK PATENT APPLICATIONS AND ISSUED PATENTS

20.1 Notification of Work Patent Applications

The Vendor will notify the Client Representative in writing, in accordance with Section 2.9 (Notices by Prescribed Means), of each Work Patent Application within one month after the Work Patent Application is filed. The notification to the Client Representative shall:

(a) include the filing date, serial number and title of the Work Patent Application;

(b) include a copy of the Work Patent Application (including an English-language version if filed in a language other than English) and all official papers relating to the Work Patent Application;

(c) identify each inventor;

(d) provide particulars of the Statement of Work and specify that the Invention was made in the performance of work under the Statement of Work; and

(e) specify whether any manuscript describing the Invention has been submitted for publication and, if so, provide particulars of its publication or acceptance for publication as known when notified.

20.2 Notification of Resulting Patents

The Vendor will notify the Client Representative in writing, in accordance with Section 2.9 (Notices by Prescribed Means), of the patent number and issue date for each patent issued as a result of a Work Patent Application, within one month after the issuance of the patent.

20.3 Disclosure

The Vendor agrees that, eighteen (18) months after the filing date of a Work Patent Application, the Client may reproduce and disclose all documents furnished pursuant to this Article in connection with such Work Patent Application.

20.4 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 21. VENDOR MATERIALS

21.1 Request for Consent

The Parties acknowledge that from time to time, the Vendor may wish to incorporate Vendor Materials into the Deliverables. Prior to incorporating any Vendor Materials into any Deliverables, the Vendor shall:

(a) fully disclose to the Client in writing all Vendor Materials that the Vendor proposes to incorporate, which shall include a description of the specific components in sufficient detail to permit the Client to clearly identify and to distinguish them from the Vendor Work Product, Non-Technical Work and the Ontario Materials; and

(b) obtain the Client's prior written consent to such incorporation or use, which consent shall be in the sole discretion of the Client and subject to the terms and conditions as agreed to by the Client as set out in the Statement of Work or Change Order.

21.2 Subcontractors

If any applicable Intellectual Property Rights are owned by a Subcontractor or are licensed to the Subcontractor by a related person, the Vendor shall either obtain a licence from that Subcontractor that permits compliance with Sections 21.4, 22.1 and 22.2 or arrange for the Subcontractor to convey directly to the Client the same rights by execution of the form provided for that purpose by the Client, in which case the Vendor shall deliver that form to the Client, duly completed and executed by the Subcontractor, no later than the time of disclosure to the Client of those Vendor Materials.

21.3 Ownership of Vendor Materials

As between the Client and the Vendor, the Vendor shall have and continue to retain all right, title and interest, including all Intellectual Property Rights, in and to all Vendor Materials, except as otherwise set out in this Master Agreement or the Statement of Work. The Client shall not acquire by virtue of this Master Agreement or the Statement of Work any right, title or interest, including any Intellectual Property Rights, in or to any Vendor Materials, except as otherwise set out in this Master Agreement or the Statement of Work.

21.4 Licence to Vendor Materials Incorporated into Any Vendor Work Product

It is a provision of each Statement of Work that the Vendor hereby grants to the Client a non-exclusive, perpetual, irrevocable, world-wide, fully paid-up, royalty-free licence to exercise all Intellectual Property Rights in the Vendor Materials that are incorporated into any Vendor Work Product in any way and for any purpose whatsoever except Restricted Commercialization, and to have or permit others to do so. Solely by way of example, the licence granted to the Client above includes the right to use, reproduce, produce any translation, improve, and disclose, and includes the right to sublicense Ontario (including any and all of its ministries), OPS Entities, offices of an officer of the Legislative Assembly or of the Ontario Legislature, Provincially Funded Organizations, other governments and their agencies and other public bodies.

In this Section 21.4, "Restricted Commercialization" means exploitation of Intellectual Property Rights in Vendor Materials for any commercial advantage in competition with the Vendor with the effect of making a net monetary gain, but does not include: (a) any exploitation by or on behalf of the Client or its sublicensees for the purposes permitted under this Master Agreement or the Statement of Work where the good or service developed or produced through such exploitation is for use by the Client, its sublicensees, Ontario, OPS Entities, offices of an officer of the Legislative Assembly or of the Ontario Legislature, the Provincially Funded Organizations, or the public, including any dissemination or distribution in connection with such exploitation, or (b) any dissemination

or distribution by or on behalf of the Client or its sublicensees for the purposes permitted under this Master Agreement or the Statement of Work.

The licence rights to the Vendor Materials that are incorporated into any Vendor Work Product shall arise immediately, as and when the Vendor Materials, or any part of them, are incorporated into the Vendor Work Product. The licence set out in this Section is non-transferable by the Client except that: (1) if the Client is Ontario, the Client may transfer the licence to a Permitted OPS Assignee; and (2) if the Client is an OPS Entity, the Client may transfer the licence to Ontario.

21.5 Vendor Materials and Third-Party Contractors

The Vendor acknowledges that the Client may wish to enter into contracts with one or more third parties in respect of the licence rights set out in Section 21.4, whether by a competitive process or not. Without restricting the generality of Section 21.4, the Vendor agrees that the licence granted in relation to the Intellectual Property Rights in the Vendor Materials includes the right to disclose the Vendor Materials to such third parties, including actual and potential proponents for such contracts, and to sublicense or otherwise authorize any such third parties engaged to do anything solely on behalf of the Client that the Client may do with the Vendor Materials and the Intellectual Property Rights in the Vendor Materials. Subject to Section 21.4, the Client shall require actual and potential proponents and such third parties not to use or disclose any confidential Vendor Materials except as may be necessary to bid for or to carry out any such contracts or except if required by order of a court or tribunal.

21.6 Title to Improvements and Modifications to Vendor Materials

All Intellectual Property Rights arising from any further development or modification of the Vendor Materials that is conceived, developed, effected or first reduced to practice by or for the Client in the exercise of any licence set out in Section 21.4 shall vest in the Client or as the Client directs, and shall not vest in the Vendor, its Personnel or Subcontractors except pursuant to a subsequent written contract executed by the Client and the Vendor, its Personnel or Subcontractors, as the case may be.

21.7 IP Notices on Vendor Materials

The Client shall not, without the prior written consent of the Vendor, which shall not be unreasonably withheld, remove any intellectual property notices of the Vendor or the Vendor's Subcontractors on any Vendor Materials.

21.8 Third-Party Vendor Materials Incorporated into the Deliverables

In the case of any Third-Party Vendor Materials that are incorporated into the Deliverables, the Client shall be entitled, at its option, to assume from the Vendor all of its rights to such Third-Party Vendor Materials under any licence and other agreements, and the Vendor shall ensure that any such agreements permitting their assignment and transfer to the Client or as the Client directs, and that such assignment and transfer shall be at no charge to the Client but the Client shall be responsible for any ongoing licence or other payments required to be made to any third parties under any such agreements. If such agreement is not acceptable to the Client, the Vendor will use commercially reasonable efforts to facilitate the Client's pursuit of an acceptable agreement with the relevant third party.

21.9 Third-Party Vendor Materials Used Non-Exclusively

In the case of any Third-Party Vendor Materials that are used in connection with the Services performed for the Client but are also used by the Vendor in connection with services provided by it to others or for the internal purposes of the Vendor not connected with this Master Agreement, upon request by the Client, the Vendor shall assist the Client to acquire a licence to such materials or to acquire from some other person a licence to materials that are functionally/substantively equivalent to such materials. Such licence shall contain terms and conditions as are reasonably acceptable to the Client to enable the Client to obtain or to use the Third-Party Vendor Materials or replacements therefor. The Client shall be responsible for any fees payable to the third-party licensor after such acquisition.

21.10 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 22. SPECIFIC THIRD-PARTY SUBLICENSEES AND LICENCE ISSUES

22.1 Provincially Funded Organizations

Without restricting Sections 16.1 or 21.4, the Vendor agrees that licence rights granted under a Statement of Work in relation to the Intellectual Property Rights in the Vendor Work Inventions, and Vendor Work Information, and in the Vendor Materials that are incorporated into any Vendor Work Product, include the right to disclose the Vendor Work Inventions, Vendor Work Information and such Vendor Materials to any Provincially Funded Organizations, and to sublicense or otherwise authorize the Provincially Funded Organization to exercise the licence rights granted under the Statement of Work. Such disclosure of Vendor Work Inventions and Vendor Work Information shall be limited and subject to obligations of confidentiality.

22.2 Third-Party Non-Governmental Entities

Without restricting Sections 16.1, 16.2, 21.4 or 21.5, the Vendor agrees that the licence rights under a Statement of Work in relation to the Intellectual Property Rights in the Vendor Work Inventions and Vendor Work Information, and in the Vendor Materials that are incorporated into any Vendor Work Product, include the right to disclose the Vendor Work Inventions, Vendor Work Information and such Vendor Materials to any third-party non-governmental entities that provide services to or on behalf of the Client as a result of alternative service delivery, backward or forward integration, outsourcing, privatization, partnering, procurement endeavours or similar activity, and to sublicense or otherwise authorize such third-party non-governmental entities to exercise the licence rights granted under the Statement of Work to the extent that they are exercised for or on behalf of the Client. The Client may disclose the Vendor Materials incorporated into any Joint Work Material or Non-Technical Work without restriction to any such third-party non-governmental entities. The Client shall require such third-party non-governmental entities not to use or disclose any Confidential Vendor Materials incorporated into the Vendor Work Inventions or Vendor Work Information, except as may be necessary to provide services as contemplated in this Section.

22.3 Scope of Rights to Inventions and Patents

To the extent necessary for the Client to exercise any licence granted under the Statement of Work, it is a provision of each Statement of Work that the Vendor hereby grants to the Client a licence under any patent now held or later obtained by the Vendor. Such patent licence shall be co-extensive and co-terminus with such licence. Nothing contained in this Master Agreement or any Statement of Work shall be deemed to grant to the Vendor any rights with respect to any Joint Work Invention, Client Work Invention or Other Work Invention. Subject to the foregoing, nothing contained in this Article shall be deemed to grant to the Client any rights with respect to any Invention other than Vendor Work Inventions or with respect to any patent other than a patent issued as a result of a Work Patent Application.

22.4 General

Without limiting any of Sections 16.1, 16.2, 21.4 or 21.5, Ontario's rights under Article 16, Article 21 and this Article:

(a) apply despite any terms to the contrary in any click-wrap licence, documentation, invoice, shrink-wrap licence, Technical Information, web site, or in any other terms or licence attached to or delivered by the Vendor with any Deliverables, except to the extent that the Client has agreed in writing pursuant to subsection (b) of Section 21.1;

(b) include the right to reproduce and use Vendor Work Inventions, Vendor Work Information, and Vendor Materials incorporated into any Vendor Work Product, and any developed or modified

form of them, on any and all computer systems owned, leased or operated by Ontario or the OPS (including OPS Entities) anywhere in the world at any time; and

(c) are in addition to and not in lieu of its rights under any other provisions of this Master Agreement or the Statement of Work.

22.5 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 23. PERSONAL KNOWLEDGE, SKILL AND EXPERTISE

23.1 Personal Knowledge, Skill and Expertise

Each Party understands and agrees that each of the Personnel of the other Party, in connection with the performance of this Master Agreement and a Statement of Work, may acquire Personal Knowledge. Subject to Article 26, Article 28, the Privacy Provisions and any other statute under which Ontario or the OPS Entity has the discretion or obligation not to disclose any records or other information, the use by such Personnel of the other Party of such Personal Knowledge in the ordinary course of their employment with the other Party (including its subsidiaries, its parent, or other subsidiaries of its parent, in the case of the Vendor; and including Ontario, OPS Entities, offices of an officer of the Legislative Assembly or of the Ontario Legislature, or Provincially Funded Organizations, in the case of Ontario or the OPS Entity; and its Subcontractors) does not breach the Statement of Work provided, however, that nothing in this Section grants to any Personnel the right to obtain a patent in respect of any such Personal Knowledge.

23.2 Employee Mobility

Each Party agrees that the other Party's receipt of confidential information as contemplated by a Statement of Work will not create any obligation in any way limiting or restricting the transfer of Personnel within the other Party's organization.

23.3 Indemnity

Despite the limitations of liability set out in Article 33 (Limitation of Liability), the Vendor shall indemnify and hold harmless the Indemnified Parties from and against all Losses and Proceedings, by whomever made, sustained, incurred, brought or prosecuted, arising out of, or in connection with the use of any Personal Knowledge by the Vendor's Personnel.

23.4 Scope

Nothing in this Article grants or waives any Intellectual Property Rights of either Party or any other person.

23.5 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 24. PROPERTY OF ONTARIO AND THE OPS ENTITIES

24.1 Ownership of Ontario Materials and Ontario Data

The Vendor acknowledges that Ontario, OPS Entities and their respective Subcontractors and third-party licensors shall have and continue to retain all right, title and interest, including all Intellectual Property Rights, in and to all Ontario Materials and Ontario Data, all assets acquired or held by Ontario or the OPS Entity prior to the Project Start Date or during the Project Term of each Statement of Work, and all assets provided by Ontario or the OPS Entity to the Vendor in connection with each Statement of Work. The Vendor shall not acquire by

virtue of this Master Agreement, or any Statement of Work, any right, title or interest, including any Intellectual Property Rights, in or to any Ontario Materials and Ontario Data.

24.2 Ownership of Third-Party Ontario Materials

Nothing in this Master Agreement or any Statement of Work or the performance of any Statement of Work shall grant to the Vendor any right, title or interest in or to any Third-Party Ontario Materials. To the extent any right, title or interest in or to any Third-Party Ontario Materials vests, by operation of law or otherwise, in the Vendor (or its Personnel, Subcontractors or others for whom it is responsible at law), the Vendor shall, and hereby does, irrevocably assign, sell and transfer to the Client at no cost all of its right, title and interest in and to all such Third-Party Ontario Materials, and the same shall be deemed to form part of the Ontario Materials.

24.3 Works of Joint Authorship

Subject to Section 17.2 and Section 21.3, if any Vendor Work Product is a work of joint authorship, the copyright in the work of joint authorship shall immediately, as soon as it comes into existence, vest in the Client, and the Vendor and its Subcontractors shall have no right, title or interest in or to it.

24.4 Proscribed Intellectual Property Rights Registrations

The Vendor shall not file any application, and shall not contest any application filed by Ontario or any OPS Entity, in any jurisdiction for the registration of any Intellectual Property Rights arising out of any Ontario Materials, Client Work Information, Client Work Inventions, Joint Work Inventions, Joint Work Material, Non-Technical Work, or Other Work Inventions whether or not such Intellectual Property Rights depend or would depend upon any pre-existing Intellectual Property Rights.

24.5 Collective Works and Compilations

Despite any other provision in this Master Agreement or the Statement of Work, if any Vendor Work Product is a collective work or a compilation:

(a) the Client shall retain its right, title and interest in and to its contribution to such collective work or compilation;

(b) ownership of all right, title and interest in and to the Vendor's and its Subcontractors' contributions to such collective work or compilation shall be governed by Section 17.1; and

(c) the copyright in such collective work or compilation shall immediately, as soon as it comes into existence, vest in the Client, and the Vendor and its Subcontractors shall have no right, title or interest in or to it.

24.6 Client Work Inventions and Client Work Information

The Client retains all of its Intellectual Property Rights and all of its right, title, and interest throughout the world to each Client Work Invention and to all Client Work Information.

24.7 Intellectual Property Rights to Ontario Materials

To the extent any Intellectual Property Rights or any other right, title or interest in or to any Ontario Materials vests, by operation of law or otherwise, in the Vendor (or its directors, officers, Personnel, agents, partners, affiliates, volunteers or Subcontractors or others for whom it is responsible at law), the Vendor shall, and hereby does, irrevocably assign, sell and transfer to the Client at no cost all of its Intellectual Property Rights and other right, title and interest in or to all such Ontario Materials.

24.8 Ontario Government Insignia

Nothing in this Master Agreement or any Statement of Work or the performance of any Statement of Work shall grant to the Vendor any right, title or interest in or to any Ontario Government Insignia. The Vendor shall not use any Ontario Government Insignia except where required to perform the Services, and only if it has received the express prior written authority of Ontario to do so.

24.9 Ownership of Rights in Confidential Work Information, Joint Work Inventions, Joint Work Material, Non-Technical Work and Other Work Inventions

Subject to Section 17.2 and Section 17.6, all Intellectual Property Rights in any Confidential Work Information, Joint Work Inventions, Joint Work Material, Non-Technical Work, and Other Work Inventions, shall immediately, as and when they come into existence, vest in and remain the property of the Client. The Vendor shall have no right in or to any such Intellectual Property Rights in the Confidential Work Information, Joint Work Inventions, Joint Work Material, Non-Technical Work and Other Work Inventions, except any right that may be granted in writing by the Client. The Vendor hereby irrevocably assigns, sells and transfers to the Client for no additional consideration: (a) all Intellectual Property Rights and all right, title and interest throughout the world in and to the Confidential Work Information, Joint Work Material, Non-Technical Work, Other Work Inventions, and contributions made by any Personnel of the Vendor to any Joint Work Inventions, other than (i) any Intellectual Property Rights or interests in Intellectual Property Rights that came into existence prior to the Project Start Date, and (ii) any Intellectual Property Rights or interests in Intellectual Property Rights in and to such Confidential Work Information, Joint Work Inventions, Joint Work Material, Non-Technical Work, and Other Work Inventions, assigned, sold and transferred to the Client by the Personnel of the Vendor; and (b) all of the Vendor's right, title and interest in and to each copyright referred to in Section 24.3 and subsection 24.5 (b).

24.10 Assignment by Personnel, Subcontractors and Others

To the extent that any right, title or interest or any Intellectual Property Rights in or to any Confidential Work Information, Joint Work Material, Non-Technical Work, Other Work Inventions or contributions made by any Personnel of the Vendor to any Joint Work Inventions, vest, by operation of law or otherwise, in any of the Vendor's advisors, agents, Personnel, Subcontractors, suppliers or others for whom the Vendor is responsible at law, the Vendor shall cause each of them to assign and transfer to the Client at no cost all of such right, title and interest and all of such Intellectual Property Rights other than any Intellectual Property Rights or interests in Intellectual Property Rights that came into existence prior to the Project Start Date.

24.11 Intellectual Property Rights Applications

The Vendor shall, at the Client's expense, give the Client all reasonable assistance in the preparation and the prosecution of any applications or registrations in any jurisdiction for or of any Intellectual Property Rights on or arising out of any Joint Work Inventions, Joint Work Material, Non-Technical Work, and Other Work Inventions, including the assistance of the inventors in the case of patent applications on any Joint Work Inventions and Other Work Inventions.

24.12 Further Assurances

The Vendor shall, at its own expense, promptly do any and all acts and cause to be executed and deliver to the Client any and all assignments, documents and instruments relating to the Intellectual Property Rights in the Confidential Work Information, Joint Work Inventions, Joint Work Material, Non-Technical Work, and Other Work Inventions, which Ontario or the OPS Entity may reasonably request at any time or from time to time to carry out the intent of this Article.

24.13 Power of Attorney

If the Client is unable for any reason whatsoever to secure the Vendor's signature to any document assigning, perfecting, recording or acknowledging the Client's ownership of any Confidential Work Information, Joint Work Inventions, Joint Work Material, Non-Technical Work, or Other Work Inventions, the Vendor hereby irrevocably designates and appoints the Client and its duly authorized officers as its attorneys-in-fact, with full power of

substitution, to act for and on behalf of and instead of the Vendor to execute and file any such document and to do all lawfully permitted acts to further the purposes of this Section with the same legal force and effect as if executed by the Vendor.

24.14 Intellectual Property Notice

The Vendor shall incorporate the following intellectual property notice on all Confidential Work Information, Joint Work Material, Non-Technical Work, Other Work Inventions and contributions made by any Personnel of the Vendor to any Joint Work Inventions, in all forms and however recorded:

(a) where the Client is Ontario, or where the Client is an OPS Entity to which Section 25.1 of this Attachment D applies:

Intellectual Property Notice

© Queen's Printer for Ontario, [Instructions: insert year of publication.].

Her Majesty the Queen in right of Ontario holds intellectual property rights, including rights of confidentiality, in this [Instructions: select one or more, as applicable: documentation / information / material / software].

(b) where the Client is an OPS Entity (except where Section 25.1 of this Attachment D applies):

Intellectual Property Notice

© [Instructions: Insert name of the OPS Entity], [Instructions: insert year of publication.].

[Instructions: Insert name of the OPS Entity] holds intellectual property rights, including rights of confidentiality, in this [Instructions: select one or more, as applicable: documentation / information / material / software].

24.15 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 25. OPS ENTITIES NOT CAPABLE OF HOLDING INTELLECTUAL PROPERTY RIGHTS

25.1 OPS Entities Not Capable of Holding Intellectual Property Rights

Despite any provision in the Master Agreement or any Statement of Work to the contrary, if an OPS Entity is not capable under its constituting instrument to hold Intellectual Property Rights, in respect to each Statement of Work entered into by a Client that is such an OPS Entity, Ontario and the Vendor agree that: (a) any Intellectual Property Rights assigned, sold or transferred to, owned or retained by, or otherwise conveyed to, such OPS Entity as the "Client" under the Statement of Work shall be deemed to be assigned, sold or transferred to, owned or retained by, or otherwise conveyed to, Ontario; (b) any licences granted to such OPS Entity as the "Client" under the Statement of Work shall, in addition to being granted to such OPS Entity, be granted separately to Ontario, subject to the same rights, benefits, obligations and restrictions, except that Ontario may also exercise the licence rights on behalf of such OPS Entity and to have and permit others to do so; and (c) the provisions of this Master Agreement shall apply with the necessary changes to reflect the intention of this Section.

ATTACHMENT E TO MASTER AGREEMENT – CLIENT OWNERSHIP PROVISIONS

1.2 In respect of each Statement of Work to which this Attachment E applies, these words and expressions have these meanings:

"**Confidential Work Information**" means all information that (a) is confidential by its nature or in the circumstances in which it is conceived, developed or produced, and (b) is conceived, developed or produced by one or more of the Personnel of the Vendor in the performance of Work, whether with one or more of the Personnel of the Client or not. "Confidential Work Information" includes all Joint Work Material, Joint Work Inventions and Vendor Work Inventions.

"**Newly-Created Materials**" means the Deliverables (including all components of the Deliverables), but excluding the Vendor Materials.

"**Restricted Commercialization**" means exploitation of Intellectual Property Rights in Vendor Materials, which are incorporated into the Deliverables, for any commercial advantage in competition with the Vendor with the effect of making a net monetary gain, but does not include: (a) any exploitation by or on behalf of the Client or its sublicensees for the purposes permitted under this Master Agreement or the Statement of Work where the good or service developed or produced through such exploitation is for use by the Client, its sublicensees, Ontario, OPS Entities, offices of an officer of the Legislative Assembly or of the Ontario Legislature, Provincially Funded Organizations, or the public, including any dissemination or distribution in connection with such exploitation, or (b) any dissemination or distribution by or on behalf of the Client or its sublicensees for the purposes permitted under this Master Agreement or the Statement of Work.

"**Vendor Work Information**" means: (a) Technical Information, developed or produced by the Vendor or its Subcontractors in the performance of Work under a Statement of Work, developed or produced by the Vendor or its Subcontractors in the performance of Work under that Statement of Work; and (b) any contribution made by one or more of the Personnel of the Vendor to any Joint Work Material; but excludes all Client Work Information.

"**Vendor Work Invention**" means: (a) any Invention conceived, or conceived and developed, solely or jointly by one or more of the Personnel of the Vendor in the performance of Work; and (b) any contribution made by one or more of the Personnel of the Vendor to any Joint Work Invention.

ARTICLE 16. OWNERSHIP OF RIGHTS

16.1 Ownership of Rights in Newly-Created Materials and Inventions

Without affecting any Intellectual Property Rights or other interests in or to Ontario Data, and subject to Section 16.2 and Section 16.5, all Intellectual Property Rights in:

(a) the Newly-Created Materials; and

(b) Vendor Work Inventions and Joint Work Inventions;

shall immediately, as and when they come into existence, vest in and remain the property of the Client. The Vendor shall have no right in or to any such Intellectual Property Rights in the Newly-Created Materials, Vendor Work Inventions and Joint Work Inventions, except any right that may be granted in writing by the Client.

16.2 Pre-Existing Intellectual Property Rights

All Intellectual Property Rights existing immediately prior to the Project Start Date, and all rights to Inventions first conceived, developed or reduced to practice prior to such date, shall be retained by each Party and each third party that owned such rights immediately prior to such date.

16.3 Intellectual Property Notice

The Vendor shall incorporate the following intellectual property notice on all Newly-Created Materials, in all forms and however recorded:

(a) where the Client is Ontario, or where the Client is an OPS Entity to which Section 17.1 of this Attachment E applies:

> **Intellectual Property Notice**
>
> © Queen's Printer for Ontario, [Instructions: insert year of publication.].
>
> Her Majesty the Queen in right of Ontario holds intellectual property rights, including rights of confidentiality, in this [Instructions: select one or more, as applicable: documentation / information / material / software].

(b) where the Client is an OPS Entity (except where Section 17.1 of this Attachment E applies):

> **Intellectual Property Notice**
>
> © [Instructions: Insert name of the OPS Entity], [Instructions: insert year of publication.].
>
> [Instructions: Insert name of the OPS Entity] holds intellectual property rights, including rights of confidentiality, in this [Instructions: select one or more, as applicable: documentation / information / material / software].

16.4 Ownership of Tangible Materials

The Client shall own, and have unrestricted ownership rights in, all tangible materials as and when delivered by the Vendor to the Client in connection with the Statement of Work. The Vendor hereby irrevocably assigns, sells and transfers, and it shall be a term of the Statement of Work that the Vendor irrevocably assigns, sells and transfers, all right, title and interest in and to such tangible materials to the Client at no additional cost as and when delivered. The Vendor shall, at its own expense, promptly do any and all acts and cause to be executed and deliver to the Client any and all assignments, documents and instruments that the Client may reasonably request at any time or from time to time to carry out the intent of this Section.

16.5 Vendor Trademarks and Designations

Despite any other provisions of this Master Agreement, nothing in this Master Agreement or in a Statement of Work or the performance of the Statement of Work shall grant to the Client any right, title, interest or licence in or to the names, trade names, logos, trade dress, or other trademarks or designations of the Vendor, its Subcontractors or third-party licensors, except as expressly stated in the Statement of Work.

16.6 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 17. OPS ENTITIES NOT CAPABLE OF HOLDING INTELLECTUAL PROPERTY RIGHTS

17.1 OPS Entities Not Capable of Holding Intellectual Property Rights

Despite any provision in the Master Agreement or any Statement of Work to the contrary, if an OPS Entity is not capable under its constituting instrument to hold Intellectual Property Rights, in respect to each Statement of Work entered into by a Client that is such an OPS Entity, Ontario and the Vendor agree that: (a) any Intellectual Property Rights assigned, sold or transferred to, owned or retained by, or otherwise conveyed to, such OPS

Entity as the "Client" under the Statement of Work shall be deemed to be assigned, sold or transferred to, owned or retained by, or otherwise conveyed to, Ontario; (b) any licences granted to such OPS Entity as the "Client" under the Statement of Work shall, in addition to be granted to such OPS Entity, be granted separately to Ontario, subject to the same rights, benefits, obligations and restrictions, except that Ontario may also exercise the licence rights on behalf of such OPS Entity and to have or permit others to do so; and (c) the provisions of this Master Agreement shall apply with the necessary changes to reflect the intention of this Section.

ARTICLE 18. ASSIGNMENTS OF RIGHTS TO NEWLY-CREATED MATERIALS AND INVENTIONS

18.1 Assignment

The Vendor hereby irrevocably assigns, sells and transfers to the Client, and it shall be a term of each Statement of Work that the Vendor irrevocably assigns, sells and transfers to the Client, for no additional consideration:

(a) all Intellectual Property Rights and all right, title and interest throughout the world in and to:

(i) the Newly-Created Materials; and

(ii) Vendor Work Inventions and Joint Work Inventions; and

(b) all of the Vendor's right, title and interest in and to each copyright referred to in Section 22.3 and Section 22.5.

18.2 Assignment by Personnel, Subcontractors and Others

To the extent that any right, title or interest or any Intellectual Property Rights in or to any Newly-Created Materials, Vendor Work Inventions and Joint Work Inventions or in or to any copyright referred to in Section 22.3 or subsection 22.5, vest, by operation of law or otherwise, in any of the Vendor's directors, officers, Personnel, advisors, agents, partners, affiliates, volunteers, Subcontractors, suppliers, or others for whom the Vendor is responsible at law, the Vendor shall cause each of them to assign and transfer to the Client at no cost all of such right, title and interest and all of such Intellectual Property Rights.

18.3 Assignee and Form of Copyright Assignment

Written assignments of any Intellectual Property Rights: (a) to Ontario shall be to "Her Majesty the Queen in right of Ontario", but written assignments of any copyright shall be to the "Queen's Printer for Ontario" in the form set out in Attachment F, and in such form that is satisfactory to the Client where the assignor is not a corporation; or (b) to the OPS Entity shall be in the name of the OPS Entity and, where the Intellectual Property Right is copyright, the written assignment of copyright shall be in the form set out in Attachment F, or in such form that is satisfactory to the Client where the assignor is not a corporation. At the completion of the Services under each Statement of Work or upon the termination of the Statement of Work, the Vendor shall provide to the Client an original, executed assignment of copyright in the form set out in Attachment F, as modified if necessary as set out above.

18.4 Waiver of Moral Rights

The Vendor acknowledges and agrees that all Moral Rights with respect to the Deliverables under each applicable Statement of Work shall be waived irrevocably and without restriction by each of its Personnel in favour of Her Majesty the Queen in right of Ontario and all of its ministries and other administrative units over which ministers of Ontario preside, including its agencies, boards, commissions, and Crown corporations, all offices of the officers of the Legislative Assembly or of the Ontario Legislature, OPS Entities, and all sublicensees and assignees, and all persons authorized at any time to use the Deliverables. At the completion of the Services under each Statement of Work or upon the termination of the Statement of Work, the Vendor shall obtain from each of its Personnel an original, executed waiver of Moral Rights in the form attached as

Attachment G (Waiver of Moral Rights Form) and shall deliver such waiver to the Client upon the request of the Client.

18.5 Invention Disclosure

Prior to allowing any Person to perform Services under the Statement of Work, the Vendor shall, by written agreement, require such Person to agree,

(a) to promptly report and fully disclose in writing to the Vendor each Vendor Work Invention and Joint Work Invention, identifying those concepts or ideas thought to be new, useful and unobvious, and indicating whether they are thought to be an improvement on prior art or capable of commercial exploitation; and

(b) upon request, during and after employment, to execute all assignments, documents and instruments necessary or advantageous to file patent applications on Vendor Work Inventions and Joint Work Inventions and to establish the Client's rights in the Vendor Work Inventions and Joint Work Inventions.

18.6 Disclosure to Client

The Vendor shall promptly report and fully disclose in writing to the Client all Deliverables, as well as all Vendor Work Inventions and Joint Work Inventions. The Vendor's disclosure shall include a description of the specific components of the Deliverables (including all Newly Created Materials (including all Confidential Work Information, Joint Work Materials, Vendor Work Information), Vendor Materials and Ontario Materials) and all contributions made by the Personnel of the Vendor to any Vendor Work Inventions and Joint Work Inventions, including copies of all written disclosures submitted to the Vendor pertaining to them, in sufficient detail to permit the Client to clearly identify each such component and to distinguish them from the other components. Disclosure of Joint Work Inventions and Vendor Work Inventions shall be on the form set out in Attachment I. In any event, the Vendor shall make such disclosure not later than the time of completion of the Services or such earlier time as the Client or the Statement of Work may require.

18.7 Audit Rights

During the Project Term and for seven (7) years following the termination or expiry of each Statement of Work, the Client shall have the right to examine and make copies of all records and supporting data of the Vendor which the Client reasonably deems pertinent to the identification of each component of the Deliverables (including all Newly Created Materials (including all Confidential Work Information, Joint Work Materials, Vendor Work Information), Vendor Materials and Ontario Materials) and all contributions made by the Personnel of the Vendor to any Vendor Work Inventions and Joint Work Inventions, upon reasonable notice and with no more than minimal disruption to the Vendor's ongoing operations, and the Vendor shall, at its own cost, retain and maintain in an organised, accessible mode, all such records and supporting data for such period.

18.8 Intellectual Property Rights Applications

The Vendor shall, at the Client's expense, give the Client all reasonable assistance in the preparation and the prosecution of any applications or registrations in any jurisdiction for or of any Intellectual Property Rights on or arising out of the Newly Created Materials, including Joint Work Inventions and Vendor Work Inventions, including the assistance of the inventors in the case of patent applications on any Vendor Work Inventions and Joint Work Inventions.

18.9 Further Assurances

The Vendor shall, at its own expense, promptly do any and all acts and cause to be executed and deliver to the Client any and all assignments, documents and instruments relating to the Intellectual Property Rights in the Newly-Created Materials, Joint Work Inventions and Vendor Work Inventions, which the Client may reasonably request at any time or from time to time to carry out the intent of this Article and Article 16.

18.10 Power of Attorney

If the Client is unable for any reason whatsoever to secure the Vendor's signature to any document assigning, perfecting, recording or acknowledging the Client's ownership of any Newly-Created Materials (including copyright in Joint Work Materials and collective works), Joint Work Inventions, or Vendor Work Inventions, the Vendor hereby irrevocably designates and appoints the Client and its duly authorized officers as its attorneys-in-fact, with full power of substitution, to act for and on behalf of and instead of the Vendor to execute and file any such document and to do all lawfully permitted acts to further the purposes of this Section with the same legal force and effect as if executed by the Vendor.

18.11 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 19. VENDOR MATERIALS

19.1 Request for Consent

The Parties acknowledge that from time to time, the Vendor may wish to incorporate Vendor Materials into the Deliverables .Prior to incorporating any Vendor Materials into any Deliverables, the Vendor shall:

(a) fully disclose to the Client in writing all Vendor Materials that the Vendor proposes to incorporate, which shall include a description of the specific components in sufficient detail to permit the Client to clearly identify and to distinguish them from the Newly-Created Materials and the Ontario Materials; and

(b) obtain the Client's prior written consent to such incorporation or use, which consent shall be in the sole discretion of the Client and subject to the terms and conditions as agreed to by the Client as set out in the Statement of Work or Change Order.

19.2 Subcontractors

If any applicable Intellectual Property Rights are owned by a Subcontractor or are licensed to the Subcontractor by a related person, the Vendor shall either obtain a licence from that Subcontractor that permits compliance with Sections 19.4, 20.1 and 20.2 or arrange for the Subcontractor to convey directly to the Client the same rights by execution of the form provided for that purpose by the Client, in which case the Vendor shall deliver that form to the Client, duly completed and executed by the Subcontractor, no later than the time of disclosure to the Client of those Vendor Materials.

19.3 Ownership of Vendor Materials

As between the Client and the Vendor, the Vendor shall have and continue to retain all right, title and interest, including all Intellectual Property Rights, in and to all Vendor Materials, except as otherwise set out in this Master Agreement or the Statement of Work. The Client shall not acquire by virtue of this Master Agreement or the Statement of Work any right, title or interest, including any Intellectual Property Rights, in or to any Vendor Materials, except as otherwise set out in the Statement of Work or this Master Agreement.

19.4 Licence to Vendor Materials Incorporated into Deliverables

It is a provision of each Statement of Work that the Vendor hereby grants to the Client a non-exclusive, perpetual, irrevocable, world-wide, fully paid-up, royalty-free licence to exercise all Intellectual Property Rights in the Vendor Materials that are incorporated into any Deliverables, in any way and for any purpose whatsoever except Restricted Commercialization, and to have or permit others to do so. Solely by way of example, the licence granted to the Client above includes the right to use, reproduce, produce any translation, improve, and disclose, and includes the right to sublicense Ontario, OPS Entities, any office of an officer of the Legislative

Assembly or of the Ontario Legislature, Provincially Funded Organizations, other governments and their agencies and other public bodies.

The licence set out in this Section is non-transferable by the Client except that: (1) if the Client is Ontario, the Client may transfer the licence to a Permitted OPS Assignee; and (2) if the Client is an OPS Entity, the Client may transfer the licence to Ontario or where such transfer is necessitated by outsourcing, privatizing, partnering or similar activity, to a non-governmental entity.

19.5 Vendor Materials and Third-Party Contractors

The Vendor acknowledges that the Client may wish to enter into contracts with one or more third parties in respect of the licence rights set out in Section 19.4, whether by a competitive process or not. Without restricting the generality of Section 19.4, the Vendor agrees that the licence granted in relation to the Intellectual Property Rights in the Vendor Materials includes the right to disclose the Vendor Materials to such third parties and to any actual and potential proponents for such contracts, and to sublicense or otherwise authorize any such third parties engaged to do anything solely on behalf of the Client that the Client may do with the Vendor Materials and the Intellectual Property Rights in the Vendor Materials. The Client shall require actual and potential proponents and such third parties not to use or disclose any confidential Vendor Materials incorporated into the Deliverables except as may be necessary to bid for or to carry out any such contracts or except if required by order of a court or tribunal.

19.6 Title to Improvements and Modifications to Vendor Materials

All Intellectual Property Rights arising from any further development or modification of the Vendor Materials that is conceived, developed, effected or first reduced to practice by or for the Client in the exercise of any licence set out in Section 19.4 shall vest in the Client, or as the Client directs, and shall not vest in the Vendor, its Personnel or Subcontractors except pursuant to a subsequent written contract executed by the Client and the Vendor, its Personnel or Subcontractors, as the case may be.

19.7 Vendor Material IP Notice

The Client shall not, without the prior written consent of the Vendor which shall not be unreasonably withheld, remove any intellectual property notices of the Vendor or of the Vendor's Subcontractors on any Vendor Materials.

19.8 Third-Party Vendor Materials Incorporated into the Deliverables

In the case of any Third-Party Vendor Materials that are incorporated into the Deliverables, the Client shall be entitled, at its option, to assume from the Vendor all of its rights to such Third-Party Vendor Materials under any licence and other agreements, and the Vendor shall ensure that any such agreements permitting their assignment and transfer to the Client or as the Client directs, and that such assignment and transfer shall be at no charge to the Client but the Client shall be responsible for any ongoing licence or other payments required to be made to any third parties under any such agreements. If such agreement is not acceptable to the Client, the Vendor will use commercially reasonable efforts to facilitate the Client's pursuit of an acceptable agreement with the relevant third party.

19.9 Third-Party Vendor Materials Used Non-Exclusively

In the case of any Third-Party Vendor Materials that are used in connection with the Services performed for the Client but are also used by the Vendor in connection with services provided by it to others or for the internal purposes of the Vendor not connected with this Master Agreement, upon request by the Client, the Vendor shall assist the Client to acquire a licence to such materials or to acquire from some other person a licence to materials that are functionally/substantively equivalent to such materials. Such licence shall contain terms and conditions as are reasonably acceptable to the Client to enable the Client to obtain or to use the Third-Party Vendor Materials or replacements therefor. The Client shall be responsible for any fees payable to the third-party licensor after such acquisition.

19.10 General

Without limiting any of Sections 19.4 or 19.5, Ontario's rights under this Article:

(a) apply despite any terms to the contrary in any click-wrap licence, documentation (including technical manuals or technical specifications), invoice, shrink-wrap licence, Technical Information, web site, or in any other terms or licence attached to or delivered by the Vendor with any Deliverables, except to the extent that the Client has agreed in writing pursuant to subsection (b) of Section 19.1;

(b) include the right to reproduce and use Vendor Materials incorporated into any Deliverables, and any developed or modified form of them, on any and all computer systems owned, leased or operated by Ontario or the OPS (including OPS Entities) anywhere in the world at any time; and

(c) are in addition to and not in lieu of its rights under any other provisions of this Master Agreement or the Statement of Work.

19.11 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 20. SPECIFIC THIRD-PARTY SUBLICENSEES

20.1 Provincially Funded Organizations

Without restricting Section 19.4, the Vendor agrees that the Client's licence rights under a Statement of Work in relation to the Intellectual Property Rights in the Vendor Materials incorporated into any Deliverables include the right to disclose such Vendor Materials to any Provincially Funded Organizations, and to sublicense or otherwise authorize the Provincially Funded Organization to exercise the licence rights granted under the Statement of Work. Such disclosure of Vendor Materials incorporated into any Deliverables shall be limited and subject to obligations of confidentiality.

20.2 Third-Party Non-Governmental Entities

Without restricting Sections 19.4 and 19.5, the Vendor agrees that the Client's licence rights under a Statement of Work in relation to the Intellectual Property Rights in the Vendor Materials incorporated into any Deliverables include the right to disclose such Vendor Materials to any third-party non-governmental entities that provide services to or on behalf of the Client as a result of alternative service delivery, backward or forward integration, outsourcing, privatization, partnering, procurement endeavours or similar activity, and to sublicense or otherwise authorize such third-party non-governmental entities to exercise the licence rights granted to the Client under the Statement of Work to the extent that they are exercised for or on behalf of the Client. The Client shall require such third-party non-governmental entities not to use or disclose any confidential Vendor Materials incorporated into the Deliverables except as may be necessary to provide services to or on behalf of the Client as contemplated in this Section.

20.3 Patent Licences

To the extent necessary for the Client to exercise any licence granted under a Statement of Work, it is a provision of each Statement of Work that the Vendor hereby grants to the Client a licence under any patent now held or later obtained by the Vendor (or a sub-licence under any patent now held or later obtained by its Subcontractors). Such patent licence shall be co-extensive and co-terminus with such licence. Nothing contained in this Article or in Article 16 shall be deemed to grant to the Vendor any rights with respect to any Inventions, including any Vendor Work Inventions, Joint Work Inventions, and Client Work Inventions.

20.4 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 21. PERSONAL KNOWLEDGE, SKILL AND EXPERTISE, AND GENERIC CONCEPTS, IDEAS AND KNOW-HOW

21.1 Personal Knowledge, Skill and Expertise

Each Party understands and agrees that each of the Personnel of the other Party, in connection with the performance of this Master Agreement or a Statement of Work, may acquire Personal Knowledge. Subject to Article 26, Article 28, the Privacy Provisions and any other statute under which Ontario or the OPS Entity has the discretion or obligation not to disclose any records or other information, the use by such Personnel of the other Party of such Personal Knowledge in the ordinary course of their employment with the other Party (including its subsidiaries, its parent, or other subsidiaries of its parent, in the case of the Vendor; and including Ontario, OPS Entities, offices of an officer of the Legislative Assembly or of the Ontario Legislature, or Provincially Funded Organizations, in the case of Ontario or the OPS Entity; and its Subcontractors) does not breach the Statement of Work provided, however, that nothing in this Section grants to any Personnel the right to obtain a patent in respect of any such Personal Knowledge.

21.2 Employee Mobility

Each Party agrees that the other Party's receipt of confidential information as contemplated by a Statement of Work will not create any obligation in any way limiting or restricting the transfer of Personnel within the other Party's organization.

21.3 Indemnity

Despite the limitations of liability set out in Article 33 (Limitation of Liability), the Vendor shall indemnify and hold harmless the Indemnified Parties from and against all Losses and Proceedings, by whomever made, sustained, incurred, brought or prosecuted, arising out of, or in connection with the use by the Vendor's Personnel of any Personal Knowledge referred to in Section 21.1 (Personal Knowledge, Skill and Expertise) or any concepts, ideas or know-how referred to in Section 21.4 (Use of Generic Concepts, Ideas, or Know-How by Vendor).

21.4 Use of Generic Concepts, Ideas, or Know-How by Vendor

Subject to Article 26 and the Privacy Provisions and any other statute under which Ontario or the OPS Entity has the discretion or obligation not to disclose any records or other information, Ontario and the OPS Entity each acknowledges that the Vendor shall be entitled on a non-exclusive, non-transferable, perpetual, world-wide, irrevocable, fully-paid up, royalty-free basis to use in its business, and for purposes of developing and incorporating into other works and licensing such works to others, any concepts, ideas or know-how, whether patented (or patentable) or not, that are developed or created by the Vendor in the course of providing the Services, and that are not retained by the Vendor in any electronic, optical, printed, written or other recorded form, but only to the extent they are of a generic technical nature and are not specific to the operation and activities of Ontario or the OPS Entity, and only to the extent that they are not protected by the Intellectual Property Rights of any third party, and provided, however, that the rights of the Vendor under this Section do not include the right to obtain a patent in respect of any such concepts, ideas or know-how. The rights of the Vendor under this Section do not include the right to disclose personnel information, financial information, statistical information, business plans or processes, pre-existing code, documentation or any other such information or intellectual property of the OPS.

21.5 Scope

Nothing in this Article grants or waives any Intellectual Property Rights of either Party or any other person.

21.6 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ARTICLE 22. PROPERTY OF ONTARIO AND THE OPS ENTITIES

22.1 Ownership of Ontario Materials and Ontario Data

The Vendor acknowledges that Ontario, the OPS Entity and their respective Subcontractors and third-party licensors shall have and continue to retain all right, title and interest, including all Intellectual Property Rights, in and to all Ontario Materials and Ontario Data, all assets acquired or held by Ontario or the OPS Entity prior to the Project Start Date or during the Project Term of each Statement of Work, and all assets provided by Ontario or the OPS Entity to the Vendor in connection with each Statement of Work. The Vendor shall not acquire by virtue of this Master Agreement, or any Statement of Work, any right, title or interest, including any Intellectual Property Rights, in or to any Ontario Materials and Ontario Data.

22.2 Ownership of Third-Party Ontario Materials

Nothing in this Master Agreement or any Statement of Work or the performance of any Statement of Work shall grant to the Vendor any right, title or interest in or to any Third-Party Ontario Materials. To the extent any right, title or interest in or to any Third-Party Ontario Materials vests, by operation of law or otherwise, in the Vendor (or its Personnel, Subcontractors or others for whom it is responsible at law), the Vendor shall, and hereby does, irrevocably assign and transfer to the Client at no cost all of its right, title and interest in and to all such Third-Party Ontario Materials, and the same shall be deemed to form part of the Ontario Materials.

22.3 Works of Joint Authorship

Subject to Section 16.2 and Section 19.3, if any Newly-Created Materials or any portion thereof (such as the Joint Work Material) is a work of joint authorship, the copyright in the work of joint authorship shall immediately, as soon as it comes into existence, vest in the Client, and the Vendor and its Subcontractors shall have no right, title or interest in or to it.

22.4 Proscribed Intellectual Property Rights Registrations

The Vendor shall not file any application, and shall not contest any application filed by Ontario or any OPS Entity, in any jurisdiction for the registration of any Intellectual Property Rights arising out of any Newly-Created Materials (including any Client Work Information, Vendor Work Information and Joint Work Materials), Ontario Materials, Client Work Inventions, Vendor Work Inventions or Joint Work Inventions, whether or not such Intellectual Property Rights depend or would depend upon any pre-existing Intellectual Property Rights.

22.5 Collective Works and Compilations

Despite any other provision in this Master Agreement or the Statement of Work, if any Newly-Created Materials or any portion thereof is a collective work or a compilation:

(a) the Client shall retain its right, title and interest in and to its contribution to such collective work or compilation;

(b) ownership of all right, title and interest in and to the Vendor's and its Subcontractors' contributions to such collective work or compilation shall be governed by Section 16.1; and

(c) the copyright in such collective work or compilation shall immediately, as soon as it comes into existence, vest in the Client, and the Vendor and its Subcontractors shall have no right, title or interest in or to it.

22.6 Client Work Inventions and Client Work Information

The Client retains all of its Intellectual Property Rights and all of its right, title, and interest throughout the world to each Client Work Invention and to all Client Work Information.

22.7 Intellectual Property Rights to Ontario Materials

To the extent any Intellectual Property Rights or any other right, title or interest in or to any Ontario Materials vests, by operation of law or otherwise, in the Vendor (or its directors, officers, Personnel, agents, partners, affiliates, volunteers or Subcontractors or others for whom it is responsible at law), the Vendor shall, and hereby does, irrevocably assign, sell and transfer to the Client at no cost all of its Intellectual Property Rights and other right, title and interest in or to all such Ontario Materials.

22.8 Ontario Government Insignia

Nothing in this Master Agreement or any Statement of Work or the performance of any Statement of Work shall grant to the Vendor any right, title or interest in or to any Ontario Government Insignia. The Vendor shall not use any Ontario Government Insignia except where required to perform the Services, and only if it has received the express prior written authority of Ontario to do so.

22.9 Survival

The provisions of this Article shall survive the termination or expiry of this Master Agreement and of every Statement of Work.

ATTACHMENT F TO MASTER AGREEMENT - ASSIGNMENT OF COPYRIGHT

NOTE: THIS NOTE AND ALL INSTRUCTIONS CONTAINED IN THIS DOCUMENT ARE INTENDED ONLY AS GUIDES AND SHOULD BE DELETED.

A. Form of Assignment of Copyright – Ministries and Certain OPS Entities

[Instructions: The template below is to be used by: (1) a ministry; or (2) any OPS Entity to which Section 25.1 of Attachment D or Section 17.1 of Attachment E applies. At least one fully completed and signed assignment of copyright under each Statement of Work must be signed by the Vendor upon the completion of the performance of all Services and delivery of all Deliverables under the Statement of Work. The Vendor must submit it promptly to the Client Representative.]

ASSIGNMENT OF COPYRIGHT

THIS ASSIGNMENT is made in duplicate as of **[Instructions: insert date]**.

Ontario and **[Instructions: Insert legal name of the Vendor]** (the "Vendor") entered into a Master Agreement for Management Consulting Services, dated **[Insert Date]**, reference number OSS-0042661 (the "Master Agreement"), pursuant to a Request for Proposals for Management Consulting Services issued by the Minister of Government Services. All terms with initial capital letters used in this Assignment of Copyright without definition shall have the meaning ascribed to them in the Master Agreement.

In consideration of **[Instructions: If a ministry entered into the Statement of Work on behalf of Ontario, insert "Her Majesty the Queen in right of Ontario as represented by", and identify the minister that signed the Statement of Work on behalf of Ontario; insert "the Minister of" and name the applicable ministry, and in the case of the Ministry of the Attorney General, insert "the Attorney General". If an OPS Entity to which Section 25.1 of Attachment D or Section 17.1 of Attachment E applies entered into the Statement of Work, set out the appropriate name of the OPS Entity here.]** entering, pursuant to the Master Agreement, into an agreement with the undersigned, entitled **[Instructions: insert title of the Statement of Work]**, dated **[Instructions: insert date]**, 20**[Instructions: complete year]**, reference number **[Instructions: insert reference number]** (the "Statement of Work"), the undersigned agreed to assign and now does assign and transfer unto the Queen's Printer for Ontario: (a) each and every copyright and interest in copyright in Canada and throughout the known universe in and to: (i) if Attachment D (Vendor/Client Ownership Provisions) applies to the Statement of Work, Confidential Work Information, Joint Work Materials, Joint Work Inventions, Non-Technical Work and Other Work Inventions and, where the Statement of Work is terminated in accordance with Section 18.1 (Assignment on Default), Vendor Work Inventions and Vendor Work Information; or (ii) if Attachment E (Client Ownership Provisions) applies to the Statement of Work, Newly Created Materials, Joint Work Inventions and Vendor Work Inventions; and (b) all of the Vendor's right, title and interest in and to each copyright referred to in: (i) if Attachment D applies to the Statement of Work, Section 24.3 (Works of Joint Authorship) and subsection 24.5(c) (Collective Works and Compilations) of the Master Agreement; or (ii) if Attachment E (Client Ownership) applies to the Statement of Work, Section 22.3 (Works of Joint Authorship) and subsection 22.5(c) (Collective Works and Compilations) of the Master Agreement.

Without limiting the generality of the foregoing and for certainty, the foregoing and the documents that record the Inventions, include, but are not limited to: **[Instructions: Identify each applicable component of the Deliverable listed in above (a) or (b) above based on whether Attachment D or Attachment E applies and document that records the applicable Joint Work Inventions, Other Work Inventions and Vendor Work Inventions.]**

ATTACHMENT G TO MASTER AGREEMENT – WAIVER OF MORAL RIGHTS

NOTE: THIS NOTE AND ALL INSTRUCTIONS CONTAINED IN THIS DOCUMENT ARE INTENDED ONLY AS GUIDES AND SHOULD BE DELETED.

WAIVER OF MORAL RIGHTS

THIS WAIVER OF MORAL RIGHTS is made in duplicate.

Her Majesty the Queen in right of Ontario as represented by the Minister of Government Services and **[Instructions: Insert legal name of the Vendor.]** (the "Vendor") entered into a Master Agreement for Management Consulting Services, dated **[insert date]**, reference number OSS-00426611 (the "Master Agreement").

Pursuant to the Master Agreement, **[Instructions: If a ministry entered into the Statement of Work on behalf of Ontario, insert "Her Majesty the Queen in right of Ontario as represented by", and identify the minister that signed the Statement of Work on behalf of Ontario; insert "the Minister of" and name the applicable ministry, and in the case of the Ministry of the Attorney General, insert "the Attorney General". If an OPS Entity entered into the Statement of Work, set out the appropriate name of the OPS Entity here.]** (the "Client") and the Vendor entered into a statement of work dated **[Instructions: insert date]**, reference number **[Instructions: insert reference number]** (the "Statement of Work").

The Vendor agreed to cause each and every individual who is assigned by the Vendor to perform services for the Client, pursuant to the Statement of Work, to execute this Waiver of Moral Rights.

I, **[Instructions: insert the full legal name of the individual.]**, an author of any or all of the Deliverables, as this term is defined in the Master Agreement, hereby expressly, irrevocably and without restriction, waive all my Moral Rights with respect to all Deliverables in favour of Her Majesty the Queen in right of Ontario and all of its ministries and other administrative units over which ministers of Ontario preside, including without limitation Ontario and Ontario's agencies, boards, commissions, and Crown corporations, offices of an officer of the Legislative Assembly or of the Ontario Legislature, the OPS Entities, and all sublicensees and assignees, and all persons authorized at any time to use the Deliverables.

In this Waiver of Moral Rights, "Moral Rights" has the same meaning as in the Copyright Act, R.S.C. 1985, c. C-42, as amended or replaced from time to time, and includes comparable rights in applicable jurisdictions, and includes without limitation the right of attribution of authorship, the right to restrain any distortion, mutilation or other modification of any work and the right to prohibit any use of any work in association with a product, service, cause or institution that may be prejudicial to my honour or reputation.

IN WITNESS WHEREOF I have executed this Waiver of Moral Rights.

ATTACHMENT H TO MASTER AGREEMENT - CONFIDENTIALITY AGREEMENT

NOTE: THIS NOTE AND ALL INSTRUCTIONS CONTAINED IN THIS DOCUMENT ARE INTENDED ONLY AS GUIDES AND SHOULD BE DELETED.

Confidentiality Agreement

During and following the term of the Master Agreement for Management Consulting Services effective **[insert effective date]** between **[Instructions: insert name of Vendor.]** (the "Vendor") and Her Majesty the Queen in right of Ontario as represented by the Minister of Government Services, (the "Master Agreement") and during and following the term of each Statement of Work entered into by the Vendor and **[Instructions: If a ministry entered into the Statement of Work on behalf of Ontario, insert "Her Majesty the Queen in right of Ontario as represented by", and identify the minister that signed the Statement of Work on behalf of Ontario; insert "the Minister of" and name the applicable ministry, and in the case of the Ministry of the Attorney General, insert "the Attorney General". If an OPS Entity entered into the Statement of Work, set out the appropriate name of the OPS Entity here.]** (the "Client") pursuant to the Master Agreement (collectively, the "Agreements"), the undersigned agrees with the Vendor to keep confidential and secure all Confidential Information to which the undersigned may have access to in the course of the performance of services pursuant to any of the Agreements (including requests for services) or otherwise in connection with any of the Agreements (including requests for services). "Confidential Information" means all information of the Ontario Public Service and of the Client's subcontractors at any tier of subcontracting that is confidential by its nature or in the circumstances in which it is received, including all confidential information in the custody or control of the Ontario Public Service, regardless of whether it is identified as confidential or not, and whether recorded or not, and however fixed, stored, expressed or embodied, which comes into the knowledge, possession or control of the Vendor in connection with any of the Agreements. "Ontario Public Service" means the ministries and other administrative units of Her Majesty the Queen in right of Ontario ("Ontario") over which ministers of Ontario preside, and for the purposes of this Confidentiality Agreement, includes Ontario and Ontario's agencies, boards, commissions and Crown corporations, offices of an officer of the Legislative Assembly or of the Ontario Legislature and OPS Entities, and "**OPS**" has the same meaning.

The undersigned acknowledges that the Client is bound to maintain custody of or control over information, material and records, however recorded, within the meaning of the Freedom of Information and Protection of Privacy Act ("FIPPA"). The undersigned agrees to comply with the privacy provisions of the Agreements in the course of providing services pursuant to the Agreements.

The undersigned shall not directly or indirectly disclose, destroy, exploit or use any Confidential Information except for the purpose of performing services pursuant to the Agreements. The undersigned shall not copy any Confidential Information, in whole or in part, unless copying is essential for the performance of services pursuant to the Agreements. On each copy, the undersigned must reproduce all notices that appear on the original.

The undersigned acknowledges that the Vendor is obliged to implement and maintain measures to ensure the security and integrity of Confidential Information and to protect it against loss, alteration and destruction and against access by unauthorized persons, and to select, implement, use and maintain the most appropriate products, tools, measures and procedures to do so. The undersigned covenants and agrees to adhere to all of the measures instituted by the Vendor.

The undersigned agrees to return all Confidential Information, including all copies and portions thereof, to the Vendor or to the Client with no copy kept by the undersigned as soon as the need to possess them ends, at the request of the Client, and in any event, prior to concluding the performance of services pursuant to the applicable Agreements.

ATTACHMENT J TO MASTER AGREEMENT-PROVINCIALLY FUNDED ORGANIZATION NOTICE

[INSTRUCTION TO VENDOR: PRIOR TO responding to requests from a Provincially Funded Organization, forward a copy of this document to the Provincially Funded Organization. Aside from inserting the information in the applicable fields below, this Provincially Funded Organization Notice may not be amended.]

BACKGROUND INFORMATION:

- Ontario has established various vendor of record arrangements (each a "**VOR Arrangement**") for selected qualified vendors (each a "**Vendor**") to supply certain products or services, or both, (the **"Deliverable"**) to Ontario.

- Vendors under most VOR Arrangements are required, subject to the terms of their agreement with Ontario under the applicable VOR Arrangement (each an "**Ontario Agreement**"), to consider requests from you (if you are a "Provincially Funded Organization", as defined in the applicable Ontario Agreement) to make Deliverables available to you for purchase.

- In order for a Vendor to consider requests from you, the Vendor must first provide you with this Provincially Funded Organization Notice ("**Notice**").

- If you continue with your request after being provided with this Notice, you will be deemed to have acknowledged and agreed to the terms set out in this Notice.

TERMS

1. Your Status in Relation to Ontario Agreements. You are not a party to any Ontario Agreement and you cannot acquire any Deliverables as a "Client" under any Ontario Agreement. If you wish to acquire products and services from a Vendor, you must enter into a separate agreement with the Vendor ("**Provincially Funded Organization Agreement**").

2. Provincially Funded Organization Agreement. Although Ontario is providing you with access to Vendors listed on VOR Arrangements, you remain solely responsible for negotiating the terms and conditions of your Provincially Funded Organization Agreement with each Vendor, including the responsibility for ensuring that each of your Provincially Funded Organization Agreements contains business, legal or other terms and conditions as may be necessary or desirable for you.

3. Procurement Processes. You are solely responsible for ensuring that the selection of any Vendor and the procurements made under any of your Provincially Funded Organization Agreements comply with any and all procurement rules, regulations, obligations and processes to which you are subject. Any differences between the terms and conditions of an Ontario Agreement and the terms and conditions of your Provincially Funded Organization Agreement may affect whether the selection of the Vendor and the procurements made under your Provincially Funded Organization Agreement meet the procurement rules, regulations, obligations or processes to which you are subject.

4. Ontario Not Liable for Your Relationship with Vendors.

   - Ontario does not endorse, recommend or approve the suitability of: (i) any Vendor as a supplier to you; (ii) the procurement process used to establish any VOR Arrangement as meeting the procurement rules, regulations, obligations and processes to which you are subject; (iii) the ordering process established for any VOR Arrangement as meeting the procurement rules, regulations, obligations and processes to which you are subject; and (iv) the terms and conditions of any Ontario Agreement as a basis for, in whole or in part, any Provincially Funded Organization Agreement or any other resulting or related relationships or agreements between you and any Vendor. You are solely responsible for conducting your own independent assessment (including obtaining your own professional advice (which may include legal and business advice) as may be necessary and appropriate in your specific circumstances) to determine the suitability of the above.

Please note that legal and other professional advice provided to Ontario with respect to the establishment of its VOR Arrangements and its Ontario Agreements was solely for the benefit of Ontario to take into account Ontario's specific legal and other concerns, and may not be applicable to or appropriate for, and may not address any of your concerns or the concerns of any other third party. Legal counsel for Ontario recommends that you obtain independent legal representation and receive independent legal advice, as well as other required independent professional advice, prior to executing any document or entering into any contract or agreement with, or acquiring any products or services from, a Vendor.

- Ontario makes no representation, assurance, warranty, or guarantee: (i) that a Vendor will enter into a Provincially Funded Organization Agreement with you; or (ii) of the quality, value or volume of products or services that may or will be sold, if any, to you.

- Ontario will not: (i) be or be deemed to be a party to, or a guarantor of any obligations or liability of any party under, any Provincially Funded Organization Agreement or any resulting or related relationship or agreement between you and any Vendor; or (ii) be responsible or liable to you for, and nothing in any agreement between you and any Vendor will have the effect of imposing or resulting in the imposition of, any costs, obligation, liability or covenant on Ontario for any matter arising under or in connection with: the VOR Arrangement; any Deliverable; the Ontario Agreement or any related documentation; any access to the VOR Arrangement or the Ontario Agreement or related documentation; any Provincially Funded Organization Agreement; any act, error or omission of the Vendor (including the provision or non-provision of any Deliverables or other products or services by the Vendor); or this Notice.

- You will not, in relation to or under any Provincially Funded Organization Agreement or under any resulting or related relationship or agreement between you and any Vendor, bring any cause of action, action, claim, demand or lawsuit against Ontario or any of its personnel as a result of: (i) any act, error or omission of the parties to any Provincially Funded Organization Agreement; or (ii) any act, error or omission of Ontario or any of its personnel.

- Any obligations, costs or liability arising under or in connection with any Provincially Funded Organization Agreement or any resulting or related relationships or agreements between you and the Vendor will remain with you and the Vendor.

- You are solely responsible for your own contract administration with the Vendor and will not direct any issues that may arise with the Vendor to Ontario.

- For the purposes of any Provincially Funded Organization Agreement, you have no power or authority to bind Ontario or to assume or create any obligation or responsibility, express or implied, on behalf of Ontario.

5. Data and Documentation. You will provide to Ontario, at Ontario's request, any data and documentation about your acquisition of products and services from the Vendor.

6. Access to VOR Arrangements, Vendor/Ontario Agreements and Deliverables. It is Ontario's intention that, if you choose to access any VOR Arrangement, you will do so only to acquire products or services for your operational needs. Ontario, in its sole discretion, may delay, restrict or choose to not renew access by you to information regarding any VOR Arrangement, any Ontario Agreement and any products and services provided by the suppliers to Ontario on any VOR Arrangement.

7. Restrictions to Becoming a Supplier to Ontario. If you choose to access the Ministry of Government Services' enterprise-wide VOR Arrangements, you are advised that, in some circumstances, you may be restricted or ineligible to submit a bid to become a supplier to Ontario under future procurement opportunities.

8. Confidentiality. You acknowledge that information of a confidential nature to Ontario or the Vendor, regardless of whether it is identified as confidential or not ("**Confidential Information**") may come into your

knowledge, possession or control. You will: (a) keep all Confidential Information confidential and secure; (b) limit the disclosure of Confidential Information to only those of your directors, officers, employees, agents, partners, affiliates, volunteers or subcontractors who have a need to know it for the purpose of acquiring or considering the acquisition of products and services from a Vendor (the "**Purpose**") and who have been specifically authorized to have such disclosure; (c) not directly or indirectly disclose, destroy, exploit or use any Confidential Information (except for the Purpose, or except if required by order of a court or tribunal), without first obtaining: (i) the written consent of the Ministry of Government Services ("**MGS**"); and (ii) in respect of any Confidential Information about the Vendor or any other third-party, the written consent of the Vendor and any such other third-party; and (d) return all Confidential Information to MGS on demand, with no copy or portion kept by you. You will not copy any Confidential Information, in whole or in part, unless copying is essential for the Purpose. On each copy made by you, you will reproduce all notices which appear on the original.

Attachment 1: Cap and Trade accounting implications - memorandum to file v4 November 3 DRAFT CLEAN.docx
Attachment 2: Cap and Trade accounting implications - memorandum to file v4 November 3 DRAFT.docx

---

Please see attached a revised version of the Cap and Trade memo taking into account the points that came up in the last MOECC meeting and our discussions on our last update call. There is a clean version and also one in tracked changes to the last version that I circulated.

As mentioned on the update call there is one significant area to do with the Escrow accounts that is pending more information that I am hoping will be in the legal analysis to be provided by the MOECC. I would lean towards the second option drafted in terms of what makes intuitive sense, but legal rights and control seem very relevant to consider in coming to a final conclusion.

We have our meeting scheduled for 10-11am. I plan to be there in person.
For my part I am planning that the meeting would be to discuss comments on the memo - any additional considerations or where you might challenge or have concerns with the preliminary conclusions, and also to confirm our next steps. Please let me know if there are other items you would like to add to the agenda so we can prepare accordingly.

Regards,
Lucy

Cap and Trade accounting implications - memorandum to file v4 November 3 DRAFT CLEAN.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations

Commented [LD1]: O/S – MOECC was to provide comments on accuracy of background terminology .

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction (after the distribution of free EAs). The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances.

5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

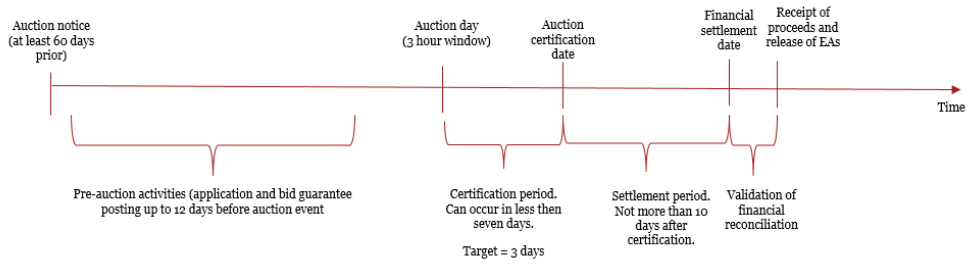
Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts.

[o/s is to determine if there is an insolvency risk prior to the auction period; if there is, has the Province effectively guaranteed the return of the bid collateral if the escrow holder became insolvent]

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall. There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that provinces that do not have either a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. Therefore actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix A

PS 1000, Financial statement concepts

PS 1200, Financial statement presentation

PS 3210, Assets

PS 3450, Financial instruments

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation and sales of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants (see Part 5). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation are not recognized as assets, whether sold at auction or issued as free allowances.

d) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify

the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On settlement date:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

Dr Cost of sales (expected to be nil cost)

Cr Inventory held-for-sale (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) <u>On creation and sales of free and auctioned EAs</u>:

EAs are created to be sold to participants. These sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. Therefore despite being intangible in nature, the EAs also meet the definition of inventories held-for-sale and could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount.

EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities). PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view was ultimately rejected because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

Commented [LD2]: O/S Subject to Summary of legal opinion obtained by MOECC. Not yet seen.

[EITHER]

An asset is recognized by the province as cash is received into a participant's escrow "sub-account".

Any Escrowed cash amounts held in participants sub-accounts are still held for the benefit of the Minister as they are sub-accounts of the Province's escrow account and are only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead. Therefore any escrowed cash amounts are similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. It is noted that based on amounts of bid guarantees posted in cash in other WCI jurisdictions it is not expected that these amounts would be material. Any cash posted as bid guarantees would be considered to be restricted cash as it is held in a separate account and is not available for general use by the government.

Any LOC or LOG amounts received into a participant's sub-account are not assets as they are in the form of a commitment but do not represent either cash or the contractual right to receive cash.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date. This view is supported because the certification process by the Province is considered substantive - the jurisdiction reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Therefore there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. The sale of the EAs is accounted for using "settlement

date" accounting in respect of revenue recognition (See discussion on revenue recognition in Section 5 for further analysis).

Once cash has been transferred into a participant's sub-account it is an asset of the Province as it is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the settlement completion date as this is a matter of time and the settlement process. Therefore during the settlement process, as cash payments are received from participants and deposited into the participant's escrow settlement account or an LOC/LOG is drawn upon and deposited these would be recognized as cash. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue. After the certification date any cash recognized for successful bid participants would not be considered to be restricted cash as it is no longer required to be returned to the bidder and is no longer externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) prior to either cash deposit or settlement of the LOC/LOG would not be recognized as an asset of the Province under settlement date accounting. While there is a contract between the participant and the province from the certification date neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract. Amounts receivable would only be recognized if the EAs had been delivered prior to receipt of payment. However the settlement process arrangements mean that this does not occur. As there is no amount receivable there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash". The revenue implications of settlement date and delivery of EAs are discussed in Section 5.

[OR]

An asset is recognized by the province as cash is transferred to the jurisdiction's escrow settlement account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids, or if their bids are successful and therefore whether the Province has any rights to the escrow proceeds prior to the auction being held. Rather the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. [NTD – to confirm]

Commented [LD3]: To confirm nature of the Escrow sub-accounts
Based on legal analysis?

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date. This view is supported because the certification process by the Province is

considered substantive - the jurisdiction reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Therefore there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. The sale of the EAs is accounted for using "settlement date" accounting in respect of revenue recognition (See discussion on revenue recognition in Section 5 for further analysis).

Once cash has been transferred from participant's sub-account to the jurisdiction's escrow account it is an asset of the Province as it is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the settlement completion date which is a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue. Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) prior to either cash deposit or settlement of the LOC/LOG would not be recognized as an asset of the Province under settlement date accounting. While there is a contract between the participant and the province neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract. Amounts receivable would only be recognized if the EAs had been delivered prior to receipt of payment. However the settlement process arrangements mean that this does not occur. As there is no amount receivable there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 5 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Alternative positions considered and rejected:

[Update with rejected view from above – e.g. participant sub-account recognition vs not on bid guarantee date]

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 5 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement create a derivative that needs to be recognized as a contract exists from the certification date to the settlement date for the Province to sell the specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy

objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs. This alternative view would be consistent with a view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 4 below.

It was considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. Therefore the right to receive an EA is also not an asset. The Province does not control how many EAs may be received back that can be re-sold (i.e. those remitted for increased compliance obligations) and so any recognition of an asset for the right to receive back was recognized for all EAs, would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not appropriate accounting.

e) Failure of participant to pay increased compliance obligation:

The Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations. As participants can settle their obligations with EAs (including those from a future compliance period) and EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (c) above there is no asset of the Province until a participant has not settled with EAs and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognized the receivable would be recognized at the amount expected to be received at the time of initial recognition. This would take into account the expected settlement of the receivable. For example, some or part of the amount might be settled by the a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not

settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation.

4. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance

PS 1000, Financial statement concepts

PS 3200, Liabilities

PS 3300, Contingent liabilities

PS 3310, Loan guarantees

PS 3450, Financial instruments

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liability for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: There may be an implicit loan guarantee by the Province to the extent that there are funds held in escrow for the participants that are not recognized as assets of the Province, but for which the Province may have a duty to repay to the participants in the case of insolvency issues at the escrow agent. Absent any specific information to the contrary regarding DB's solvency it would usually be considered not likely that the Province would have to pay any amounts in respect of the escrow proceeds and no accrual would be made. To the extent such implicit guarantees exist over the balance sheet date disclosures of the implicit loan guarantee should be made, if material.

[NTD – position to be confirmed based on discussion of insolvency risk with DB accounts. I'm not sure there is, but if it is considered to be "public money" prior or post auction then the Province might have a duty to repay it.]

Analysis

a) Financial liabilities: Under the cap and trade legislation the Province will issue a certain number of EAs under the program (the cap) and, as EAs are financial assets, being inventory held-for-sale (see Section 3 (a) above) this is an obligation to deliver financial assets. However the obligation, such that it exists (see also (b) below), is not a contractual obligation with the participants, as it is brought about through the cap and trade legislation and regulations not individual contracts with participants.

Once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them in a manner that results in a sacrifice of economic benefits. Under the legislation, the EAs can only be redeemed to settle a participant's compliance obligation under the legislation and cannot be redeemed for cash or any other financial asset, or exchanged for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach and recognizes a liability for the obligation to repatriate or redeem the EAs for their emissions value to the participant (Dr Cash (auction EAs) or Dr Expense (free EAs) and Cr Liability for Emissions Notes for market price), along with a right to receive EAs from participants to settle the EA obligation as emissions occur (Dr Receivable, Cr Revenue). This accounting has the benefit of being most symmetrical with the common accounting methods used by participants under other Frameworks such as IFRS.

Our understanding is that New Zealand took this view, in part, because their EAs (NZUs) are interchangeable with "Kyoto AAU's" (International units), which may create an obligation for New Zealand to accept Kyoto AAUs for NZUs under terms that could be unfavourable. However, this view was rejected as based on the cap and trade program applied by Ontario the obligation to repatriate or redeem the Emissions Notes does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected:

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 5 below.

c) Loan guarantees and contingent liabilities: To the extent that escrow amounts are recognized on the Province's balance sheet there would be a corresponding liability already recognized in respect of the requirement to return the participants deposit or in respect of deferred revenue. However to the extent that participants have submitted cash bid guarantees in Escrow that are not recognized in the Public Accounts of the Province there may an implied guarantee to the participants that their financial assurance will be returned to them if the auction does not run or they are not successful. [TBD – To be supported by facts, if any, which indicate the Province may be liable for the return of amounts held in escrow if DB goes insolvent and does not return the escrowed amounts to participants. If it is concluded that there is no implicit guarantee or contingent liability because the Province cannot be liable for the return of the escrowed amounts, the facts will support that position.]

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts.

5. Revenue recognition under the cap and trade program as sponsoring government

This section is divided into three sub-sections. The first examines whether the transactions being accounted for are exchange (reciprocal) or non-exchange (non-reciprocal) transactions. The second considers what performance obligations exist. The third section looks at the pattern and timing of revenue recognition for the performance obligations identified.

Sale of EAs as exchange or non-exchange transactions

Relevant guidance - See Appendix A for details.

PS 3510, Tax revenue (definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles (non-authoritative due process document)

Preliminary position –The sale of EAs are exchange transactions.

Analysis:

The auctioning of the EAs is meets the definition of an "exchange transaction" in PS 3510 as participants receive an asset (an EA) and gives approximately equal value in exchange. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see Section 3 (a) above).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

The analysis above is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the PSAS Revenue Statement of principles, as the EAs are considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. The Province's right to payment from a participant arises from the auction process and not

solely from legislation. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no or reduced inflows to the Province.

Alternative positions considered and rejected: An alternative view is that the cap and trade legislation forces mandatory participants to purchase EAs in order to settle a legislative obligation. Participants *must* obtain EAs in order to meet their compliance obligations which are created by legislation, and initially EAs are only available from the Province. Therefore, in substance the purchase of EAs equates to a pre-paid "tax" on emissions, and therefore there is a non-reciprocal transaction as participants do not get anything of economic benefit in exchange, but rather have an outflow of cash to the Province that they previously did not have to pay prior to the cap and trade legislation. This view was rejected for the reasons given in support of "exchange transactions" above as the nature of the cap and trade program and the auction mechanisms are designed to create a carbon market, and under this system EAs become a "good" that has economic value. Therefore the characterization of the sale of EAs as non-exchange transaction would not be consistent with the substance of the cap and trade program.

Revenue recognition for sale of EAs (Exchange transactions)

Relevant guidance - See Appendix A for details.

PS 1000, Financial statement concepts

PS 1150, Generally accepted accounting principles

Other GAAP accounting frameworks

Preliminary position: Revenue is recognized for the sale of EAs on the auction date as there are no further substantive performance obligations by the Province.

Analysis:

a) What is the performance obligation? A performance obligation is defined in IFRS 15/ASC 606 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the PSAS Revenue Statement of Principles which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". This analysis has applied the IFRS concept, as permitted under PS 1150. In both IFRS 15/ASC 606 and the PSAS Revenue Statement of Principles, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the standard auction process. The completion of the auction bid process creates the enforceable right of the province to payment and the obligation to credit the EA to the participant, as well as creating the right of the participant to the EA and the obligation to pay the Province. The auction mechanisms are published and standardized such that each participant understands the enforceable rights and obligations that are entered into when an auction occurs.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix A for definition of "distinct goods and services")

Based on the above analysis, a contract is created when a participant successfully bids at auction, the Province has only one distinct performance obligation to each successful bidder under this contract, which is the delivery of the EAs.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 4 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore Ontario has no obligation to redeem an EA that arises from the original exchange transaction and therefore there is no performance obligation that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the sale of EAs. Finally, it is noted that there is no legislative provisions for the termination of the program, and there are no contractual provisions embedded in the EAs

that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written of implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15/ASC 606 the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400 or IAS 18 there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the PSAS Revenue Statement of Principles proposes a "control" model similar to IFRS 15/ASC 606, so this approach has been applied in the analysis. Under IFRS 15/ASC 606 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

   IFRS 15/ASC 606 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the PSAS Revenue Statement of Principles and have been considered in this analysis. See IFRS 15.38 in Appendix A. The indicators have been assessed as follows:

   Present right to payment – As noted in Section 3 above, there is considered to be a contract from the auction certification date, and payment must be received by the Province prior to the financial settlement date.

   Legal title to the asset – Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs. Participants can only trade or use the EAs when they are credited to the participants account. This occurs after the settlement process is completed.

   The entity has transferred physical possession of the asset – This indicator is not relevant as EAs do not have physical form.

   The customer has significant risks and rewards of ownership of the asset – The participant has significant risks and rewards of ownership of the asset from the date of transfer to their CITSS account, which is the settlement date of the contract. The participant can decide what to do with the EA – sell it, keep it or use it to settle a compliance obligation - from the date of the transfer into the participant's account. Therefore the participant has access to the rights inherent in the EA only after it has been transferred to their account.

   The customer has accepted the asset – There are no customer acceptance clauses. While the auction process is subject to certification this is not performed by the participant, but rather by the Province.

   Based on the balance of the indicators above it can be concluded that there is support for recognizing revenue on a "point in time" basis on the date when the EAs are transferred to the participant.

   Alternatives considered and rejected:

   Certification date: It was considered whether revenue should be recognized at a point in time when the contract to purchase/sell the EAs is agreed upon i.e. the auction certification date (if substantive) or the auction date if certification is not substantive. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset", and it could be argued that the delayed delivery of the EAs is only because of the financial settlement process to ensure payment is received and does not indicate that control has not passed earlier. This view was ultimately rejected because of the lack of legal title to the EAs (as they are not "property")

and the intangible nature of the EAs means that control cannot be evidenced as passing earlier until the EAs are credited to the participants account.

Trade date accounting: It was considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

Restrictions on Greenhouse Gas Reduction Account

Relevant guidance – See Appendix A for details

PS 3100, Restricted assets and revenues

PSG-4, Funds and reserves

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets"

in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted.

6. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

7. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

8. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

9. Implementation risks and audit considerations

Appendix A – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35-.37. PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not defined under PSAS. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and OS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049). After the adoption of PS 3450, which is currently effective for the Province for fiscal 2020, financial assets may be designated into the "fair value" category but only if they are managed and evaluated on a fair value basis in accordance with a risk management or investment strategy or they contain embedded derivatives.

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3200 does not contain measurement guidance for liabilities. Other standards such as PS 3250, *Retirement benefits* and PS 3260, *Liability for contaminated sites* use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate).

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - “Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations.”

PS 3100.04 (a) - “External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used.”

PS 3100.11 - “Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified.”

PS 3100.27-.28 - Designated assets – “...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises....”

Cap and Trade accounting implications - memorandum to file v4 November 3 DRAFT.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations

Commented [LD1]: O/S – MOECC was to provide comments on accuracy of background terminology .

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (~~mandatory~~ capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations ~~T~~there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many ~~MOECC determines how many~~ EAs of each vintage will be available at each auction (after the distribution of free EAs).~~, and how many of each "the vintage" of the EAs is available.~~ The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". ~~, but m~~More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances. 5% of EAs are

held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province ~~(and a market monitor, for WCI auctions)~~ reviews the results for compliance with the ~~Province's~~ regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). ~~regulations.~~ When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and ~~, in which case~~ the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and ~~payment has been received~~ the EAs are transferred to the respective participant CITSS accounts. ~~[Question for MOECC – up to the date of auction can a registered participant remove themselves from the auction and get back their cash/LOC or are they locked in until after the auction date?]~~

[o/s is to determine if there is an insolvency risk prior to the auction period; if there is, has the Province effectively guaranteed the return of the bid collateral if the escrow holder became insolvent]

Auction timeline illustration

Free allowances

C~~Mandatory and c~~apped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

Formatted: Font: Italic

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs ~~available~~ issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are ~~cancelled~~retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "~~credits for early action~~early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall. There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). ~~Any p~~Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund

costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that provinces that do not have either a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. Therefore actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix A

PS 1000, Financial statement concepts

PS 1200, Financial statement presentation

PS 3210, Assets

PS 3450, Financial instruments

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation and sales of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not ~~cancelled~~ retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

~~b) [NTD preliminary conclusions subject to change, based on further understanding of escrow accounts, whether "delivery of EAs" is substantive, importance of certification date vs auction date and subject to discussion with TBS.]~~

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the ~~date of the auction.~~transfer of funds into the Province's escrow settlement account.

   ~~On the auction date, a receivable is recognized by the Province for the sale of EAs.~~ After auction certification cash from successful bidders is transferred to the Province's escrow settlement account,

Formatted: Indent: Hanging: 0.96 cm, Numbered + Level: 1 + Numbering Style: a, b, c, … + Start at: 1 + Alignment: Left + Aligned at: 0.79 cm + Indent at: 1.43 cm

resulting in recognition of an asset (cash). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants ~~A corresponding amount is recognized in Revenue~~ (see Part 5). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation are not recognized as assets, whether sold at auction or issued as free allowances.

d) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

~~*On auction date*~~*As payment from successful bidders is received and placed into Ontario Settlement account:*

Dr ~~Receivable~~ Cash (~~from successful participants/~~in Escrow~~ed amounts~~)

Cr Deferred Revenue

~~Dr Cost of sales (expected to be nil cost)~~

~~Cr Inventory held-for-sale (expected to be nil cost)~~

On settlement date:

Dr ~~Cash~~Deferred revenue

Cr ~~Receivable~~ Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)~~(from successful participants/Escrowed amounts)~~

Dr Cost of sales (expected to be nil cost)

Cr Inventory held-for-sale (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) On creation and sales of free and auctioned EAs:

EAs are created to be sold to participants. These sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. Therefore despite being intangible in nature, the EAs also meet the definition of inventories held-for-sale and could be given accounting

Formatted: Indent: First line: 1.27 cm

Formatted: Indent: Left: 1.27 cm, First line: 1.27 cm

Formatted: Indent: First line: 1.27 cm

recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount.

EAs that are returned to the government and not ~~cancelled~~ retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities). PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

~~It is noted that upon the adoption of PS 3450 in fiscal 2020, inventories held-for-sale would be in scope of PS 3450 as they are classified as financial assets under PS 1201 (currently PS 1200). PS 3450 requires financial assets other than equity instruments that are quoted in an active market to be measured at amortized cost, net of any allowance for recovery. While EAs may be considered to trade in an active market, if an active market develops, EAs are not equity instruments and therefore will not be required to be measured at fair value.~~

~~Under PS 3450 financial assets can be designated as measured at fair value when they are part of a portfolio of instruments that is managed at fair value or contain an embedded derivative. It is unlikely that the Province would be considered to manage newly created EAs on a fair value basis and there have not been any embedded derivatives identified in the EAs. Therefore EAs held as inventory must be measured at cost.~~

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view was ultimately rejected because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and ~~lead~~ provide an opportunity ~~to~~for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

[EITHER]

An asset is recognized by the province as cash is received into a participant's escrow "sub-account".

Any Escrowed cash amounts held in participants sub-accounts are still held for the benefit of the Minister as they are sub-accounts of the Province's escrow account and are only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid

Commented [LD2]: O/S Subject to Summary of legal opinion obtained by MOECC. Not yet seen.

Formatted: No underline

guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead. Therefore any escrowed cash amounts are similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. It is noted that based on amounts of bid guarantees posted in cash in other WCI jurisdictions it is not expected that these amounts would be material. Any cash posted as bid guarantees would be considered to be restricted cash as it is held in a separate account and is not available for general use by the government.

Any LOC or LOG amounts received into a participant's sub-account are not assets as they are in the form of a commitment but do not represent either cash or the contractual right to receive cash.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date. This view is supported because the certification process by the Province is considered substantive - the jurisdiction reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Therefore there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. The sale of the EAs is accounted for using "settlement date" accounting in respect of revenue recognition (See discussion on revenue recognition in Section 5 for further analysis).

Once cash has been transferred into a participant's sub-account it is an asset of the Province as it is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the settlement completion date as this is a matter of time and the settlement process. Therefore during the settlement process, as cash payments are received from participants and deposited into the participant's escrow settlement account or an LOC/LOG is drawn upon and deposited these would be recognized as cash. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue. After the certification date any cash recognized for successful bid participants would not be considered to be restricted cash as it is no longer required to be returned to the bidder and is no longer externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) prior to either cash deposit or settlement of the LOC/LOG would not be recognized as an asset of the Province under settlement date accounting. While there is a contract between the participant and the province from the certification date neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract. Amounts receivable would only be recognized if the EAs had been delivered prior to receipt of payment. However the settlement process arrangements mean that this does not occur. As there is no amount receivable there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank

account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash". The revenue implications of settlement date and delivery of EAs are discussed in Section 5.

[OR]

~~b)~~ An asset is recognized by the province as cash is transferred to the jurisdiction's escrow settlement account.

Prior to the auction process, the Province does not control the cash ~~proceeds~~or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party ~~(DB)~~ in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids, or if their bids are successful and therefore whether the Province has any rights to the escrow proceeds prior to the auction being held. Rather the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. ~~[NTD – Add additional support if bidders can retract bid guarantees prior to auction date.]~~ If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. [NTD – to confirm]

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date. This view is supported because the certification process by the Province is considered substantive - the jurisdiction reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Therefore there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. The sale of the EAs is accounted for using "settlement date" accounting in respect of revenue recognition (See discussion on revenue recognition in Section 5 for further analysis).

Once cash has been transferred from participant's sub-account to the jurisdiction's escrow account it is an asset of the Province as it is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the settlement completion date which is a matter of time. Therefore during the settlement process, as cash payments are received from participants and deposited into the jurisdiction's escrow account or an LOC/LOG is drawn upon and deposited these would be recognized as cash. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue. Any cash recognized for successful bid participants would not be considered to be restricted cash as it is not required to be returned to the bidder and is not externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) prior to either cash deposit or settlement of the LOC/LOG would not be recognized as an asset of the Province under settlement date accounting. While there is a contract between the participant and the province neither

Commented [LD3]: To confirm nature of the Escrow sub-accounts
Based on legal analysis?

Formatted: Normal, Indent: Left: 1.9 cm

party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract. Amounts receivable would only be recognized if the EAs had been delivered prior to receipt of payment. However the settlement process arrangements mean that this does not occur. As there is no amount receivable there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash" as the GGRA account is only internally restricted. (See Section 5 for the discussion on the GGRA account restrictions and other revenue implications at settlement date.)

Formatted: Indent: Left: 1.9 cm, Don't add space between paragraphs of the same style

~~From the auction date there is a contract between the Province and the purchasers of EAs. While the Province has not yet credited EAs to the recipient's account, the process of crediting EAs is considered not to be substantive as EAs are not in physical form and the Province controls the recording of EAs in the participants' accounts. Rather, the legal and contractual rights of the EAs are obtained by a purchaser on the auction date. In addition, the participant has also substantially performed under the contract as payment has already been made either through a cash bid guarantee or by the submission of an adequate LOC or LOG. The Province would recognize this as a receivable to the extent that the cash has not been received from Deutsche Bank.~~

~~This position is also analogous to "trade date" accounting which is required by PS 3450.A16 for financial assets traded on a recognized exchange in regular way purchases and sales. While the initial auction of EAs is not on a recognized exchange, they are financial assets and they are auctioned into a market place on a regular basis and give rise to a fixed price commitment between the participant and the government, therefore an analogy to the trade date requirement may be appropriate.~~

Alternative positions considered and rejected:

[Update with rejected view from above – e.g. participant sub-account recognition vs not on bid guarantee date]

Formatted: Highlight

Formatted: Highlight

~~Three alternative views were considered for asset recognition – 1) at the posting of bid guarantees; 2) on settlement date; and 3) on auction certification date.~~

~~*Posting of bid guarantees:* For this option, escrow amounts meet definition of an asset when the participant posts a bid guarantee in cash. Under this view it is argued that the Province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders, therefore effectively controlling the escrowed amounts. The cash held in escrow is therefore held on behalf of the Province (an asset) with a corresponding liability to either return the cash or EAs. This view was rejected as the use of escrow~~

~~accounts, as opposed to deposits lodged directly with the Province, sets out the relevant terms as to how and when escrow proceeds are released and therefore the Province does not have discretion to direct the funds as they wish. As the Province has not yet delivered any EAs they do not have a right to the amounts in escrow, and nor do they have legal title. Therefore, the Province does not have any substantive mechanisms of control over the escrow accounts.~~

Trade date accounting: An alternative view is that recognition of the sale of the EAs should be on a "trade-date" accounting basis. See Section 5 on revenue recognition for discussion on accounting for the sale of the EAs on the trade date and why this view was ultimately rejected. The implications for asset recognition under trade date accounting is that, as the sale is recognized on the trade date not the settlement date, a receivable for the entire proceeds of the auctioned EAs would be recognized on the trade date. Receivables recognized would be subject to impairment considerations, although the bid guarantees would mean a valuation allowance would not be required.

Under trade date accounting it would be determined on what the date is there a fixed price commitment which is the date at which a receivable is recognized. If the certification process is considered to be a substantive process that is undertaken by the Province then there would not be a fixed price commitment until the certification date. If the certification process is not considered to be substantive and the Province is committed to the amounts, prices and bid participants that are shown by the auction algorithm and auction report then this would indicate the auction date is the trade date. As trade date accounting has been rejected this issue has not been considered further.

c) Recognition of a derivative

When the province adopts PS 3450 it will need to consider whether the arrangement create a derivative that needs to be recognized as a contract exists from the certification date to the settlement date for the Province to sell the specified number of EAs for the specified price to the successful bid participant. While EAs are financial assets for the purposes of PS 1200/PS1201 it could be argued that they are "non-financial items" because they are inventories held for sale (not in scope of PS 3450) and are not contractual rights to receive cash. PS 3450 scopes out contracts to buy non-financial items from being derivatives when they are made in accordance with the entities normal sale or usage requirements and when those contracts cannot be settled net in cash or another financial instrument. Auction contracts to buy and sell EAs cannot be settled net – they can only be settled gross by exchanging cash for the EAs. Therefore no derivative will be recognized in respect of the contract.

~~*On settlement date:* It could be considered that the contract is wholly unperformed until the Province has received the cash released from escrow (or other cash payment from participants) as this cash must be received before the EAs are credited to participant accounts. Under this view an asset and revenue is only recorded once cash has been received. This view was rejected as the bid guarantee and escrow process means it is only a matter of time before the funds are received by the Province and therefore this is not substantive enough to preclude asset recognition as the Province controls a right to cash from the date of auction under the cap and trade auction mechanism.~~

~~*On auction certification date:* It could be considered was that the certification date is the point for asset recognition as prior to this the auction may not have been valid. This was rejected because the certification date is only to confirm compliance and does not change the date that the contractual arrangements between the Province and the participant for the sale of EAs was made. However, if the certification process rejected certain sales or the auction as a whole, this would be an adjusting~~

Formatted: Underline

Formatted: Indent: Left: 2.06 cm

Formatted: Indent: Left: 2.06 cm, No bullets or numbering

~~subsequent event that would be considered in determining whether assets/revenue from the auction process should be recognized.~~

~~c)~~d) EAs in circulation:

Once sold EAs in circulation do not represent assets to the Province. The EAs are economic resources as participants ascribe value to them. It may also be argued that the Province controls EAs as it can deny or regulate access to EAs by participants through regulation (PS 3210.16). However, the Province will not obtain any economic future benefits from the existence of EAs in circulation. PS 3210.12 distinguishes between the benefit the public receives and the economic benefit that a public sector entity receives through provision of goods or services, increase in cash inflows or reduction in cash outflow; only the latter resulting in future economic benefits that give rise to an asset. While the Province has a right to receive EAs in the future to settle compliance obligations, those EAs are ~~cancelled~~ retired after receipt and never result in an inflow of cash (or reduction in cash outflows) for the Province. Under certain circumstances EAs may be received that are not retired, for example those received as part of a 3 for 1 increased compliance obligation. However, when the EAs are issued the Province cannot expect that any participants will be subject to the 3 for 1 increased compliance obligation and in fact the objective of the cap and trade program is to incentivize participants to purchase their required EAs on the market or reduce emissions and so to avoid the burden of the 3 for 1 increased compliance obligation. Therefore the Province has no basis for expecting future benefits in the form of EAs that will not be retired and can be resold. The EAs do not enhance the government's provision of goods or services as the EAs do not, by themselves, reduce emissions. While EAs exist to further a policy objective of the Province, the benefits of the policy (reduced climate change impact and lower pollution) is a benefit to the Province of Ontario as a whole, not specifically to the government of Ontario.

Alternative positions considered and rejected: An alternative view would be recognize EAs in circulation as an asset based on the Province's right to receive the EAs. This alternative view would be consistent with a view that the Province has a liability for EAs in circulation (similar to currency in circulation) and therefore the receipt of the EAs does represent a future economic benefit because it results in the extinguishment of a recognized liability by the Province. This view was rejected because liability accounting for EAs in circulation is rejected as noted in Section 4 below.

It was considered whether the right to receive EAs gives future economic benefits because the EAs are recognized as assets by participants under their accounting frameworks (e.g. IFRS) and therefore the Province has a right to recall an asset. However this view was rejected because while EAs are assets for participants as they can be used to reduce a recognized obligation, they are not assets for the Province as they do not give the Province access to future economic benefits through the provision of goods or services, future cash inflows or reduction of future cash outflows for the reasons noted above. Therefore the right to receive an EA is also not an asset. The Province does not control how many EAs may be received back that can be re-sold (i.e. those remitted for increased compliance obligations) and so any recognition of an asset for the right to receive back was recognized for all EAs, would result in a write-off to expense when EAs are remitted for a regular compliance obligation and then ~~cancelled~~retired. This expense would not reflect the economic substance as there has been no outflow of economic resources by the Province at the point the EAs are returned and is therefore not appropriate accounting.

~~d)~~e) Failure of participant to pay increased compliance obligation:

The Province does not recognize a right to receive cash for increased compliance obligations until the expiry of the notice period because prior to this point participants, not the Province, control whether they have sufficient EAs to meet their compliance obligations or increased compliance obligations. As participants can settle their obligations with EAs (including those from a future compliance period) ~~that~~ and EAs do not enhance or create expected economic future benefits for the government for the reasons noted in part (c) above there is no asset of the Province until ~~. It is only when~~ a participant has not settled with EAs ~~that~~ and under legislation the Province has a right to demand cash as settlement of the compliance obligation (i.e. to levy a cash penalty for non-compliance with the program). The right to demand cash represents a right to future economic benefits (cash flows) and is an asset, regardless of how the Province ultimately agrees to settle the obligation with the participant.

Measurement of the receivable: There is no specific guidance in PSAS on the recognition of receivables of fines or penalties as they are scoped out of PS 3510, *Tax revenues.* However, it would be consistent with PS 3510 and other standard to recognized the receivable would be recognized at the amount expected to be received at the time of initial recognition. This would take into account the expected settlement of the receivable. For example, some or part of the amount might be settled by the a reduction in the free allowances that would otherwise be due to a participant in future years. Settlement in this manner does not result in a direct inflow of economic benefits for the Province (the benefits are indirect in that more EAs would be available for auction sale) and so would reduce the amount expected to be received.

Alternative positions considered and rejected: It was considered whether the ultimate right for the Province to demand cash in settlement of an increased compliance obligation indicated that the EAs in circulation give rise to future economic benefits because the right to receive EAs *might* ultimately end up being settled in cash. However, this view was rejected as it is only when a participant has chosen not settled with EAs that the Province has a right to demand cash as settlement of the compliance obligation.

4. Identification of liabilities relating to the cap and trade program (excluding deferred revenue) as sponsoring government

Relevant guidance

PS 1000, Financial statement concepts

PS 3200, Liabilities

PS 3300, Contingent liabilities

PS 3310, Loan guarantees

PS 3450, Financial instruments

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to liabilities under Public Sector Accounting Standards.

a) Financial liabilities: There are no attributes of the cap and trade program that result in financial liability for the Province.

b) Other liabilities: There are no attributes of the cap and trade program that result in another type of liability for the Province.

c) Loan guarantees and contingent liabilities: ~~**EITHER** There may be an implicit loan guarantee by the Province in respect of the funds held in escrow for the participants prior to the auction date and up to the date of settlement.~~ There may be an implicit loan guarantee by the Province to the extent that there are funds held in escrow for the participants that are not recognized as assets of the Province, but for which the Province may have a duty to repay to the participants in the case of insolvency issues at the escrow agent. Absent any specific information to the contrary regarding DB's solvency it would usually be considered not likely that the Province would have to pay any amounts in respect of the escrow proceeds and no accrual would be made. To the extent ~~that there are escrowed proceeds held over a balance sheet date~~such implicit guarantees exist over the balance sheet date disclosures of the implicit loan guarantee should be made, if material.

~~**OR** There are no contingent liabilities or loan guarantees by the Province in respect of the funds held in escrow for the participants either prior to the auction date or between the auction date and settlement date.~~

[NTD – position to be confirmed based on discussion of insolvency risk with DB accounts. I'm not sure there is, but if it is considered to be "public money" prior or post auction then the Province might have a duty to repay it.]

Analysis

a) Financial liabilities: Under the cap and trade legislation the Province will issue a certain number of EAs under the program (the cap) and, as EAs are financial assets, being inventory held-for-sale (see Section 3 (a) above) this is an obligation to deliver financial assets. However the obligation, such that it exists (see also (b) below), is not a contractual obligation with the participants, as it is brought about through the cap and trade legislation and regulations not individual contracts with participants.

Once the EAs are issued and in circulation there is no contractual obligation of the Province to redeem them in a manner that results in a sacrifice of economic benefits. Under the legislation, the EAs can only be redeemed to settle a participant's compliance obligation under the legislation and cannot be redeemed for cash or any other financial asset, or exchanged for other financial instruments. For example, if EAs are not required to be remitted by a participant for a compliance period it can be rolled forward for use in a future compliance period, rather than being redeemed for cash or another EA.

After Ontario links with the WCI it was considered if there is an obligation of Ontario to exchange Ontario EAs for those of other jurisdictions, or accept other EAs in lieu of Ontario EAs on terms that might be unfavourable to the Province. No such obligation appears to exist as there is one market for all jurisdictions in the WCI and once issued there is no way to determine whether an EA is an "Ontario" EA or that of another jurisdiction as all EAs are contractually identical. If a market participant has purchased an EA that was issued as an allocation from California or Quebec and redeems it for an Ontario compliance obligation this does not create any obligation for Ontario to "settle" or return that EA to the originating jurisdiction.

It was considered whether there is any contractual obligation to repurchase the issued EAs or return the purchase price of auctioned EAs in contingent circumstances, such as the termination of the cap and trade program or bankruptcy of a participant. Based on the legislation and regulations there are no terms of the EAs that permit the participant to "put back" the EA to the Province, or require the Province to recall EAs for cash. Rather, Section 70 (3) of the Act specifically notes that the Crown is not obligated to make any payments in respect of ~~cancelled~~ retired or removed EAs. The current legislation does not foresee any mechanisms to terminate the program and therefore no current contractual obligation to redeem EAs exists under the terms of the EAs. If the program were to be terminated in the future the settlement of outstanding EAs would be the subject of future legislation and therefore no past event has yet occurred that creates an obligation in the event of termination.

Alternative positions considered and rejected: New Zealand has adopted an accounting policy of accounting for EAs in circulation similar to "currency in circulation", also known as the "Emission Notes" approach and recognizes a liability for the obligation to repatriate or redeem the EAs for their emissions value to the participant (Dr Cash (auction EAs) or Dr Expense (free EAs) and Cr Liability for Emissions Notes for market price), along with a right to receive EAs from participants to settle the EA obligation as emissions occur (Dr Receivable, Cr Revenue). This accounting has the benefit of being most symmetrical with the common accounting methods used by participants under other Frameworks such as IFRS.

Our understanding is that New Zealand took this view, in part, because their EAs (NZUs) are interchangeable with "Kyoto AAU's" (International units), which may create an obligation for New Zealand to accept Kyoto AAUs for NZUs under terms that could be unfavourable. However, this view was rejected as based on the cap and trade program applied by Ontario the obligation to repatriate or redeem the Emissions Notes does not result in an outflow or sacrifice of future economic benefits as there are no circumstances when the Province must pay cash or other financial assets to settle the obligation to take back EAs for a participant's compliance obligation. Therefore the presentation of an obligation to redeem EAs would not reflect the substance of the arrangements, as the terms of the EAs do not meet the definition of a liability.

b) Other liabilities: There is no liability under PS 3200 for the future issuance of EAs that are predominantly sold through the auction process as these are reciprocal transactions at the market price. The requirement to issue EAs at an auction price does not result in an outflow of economic benefits to the Province, because the Province receives fair value at the time of issuance.

In respect of the EAs that are given away as free allowances, there could be considered to be a constructive obligation to ~~deliver~~ transfer "goods" (being the free EAs) in total or to specific participants. The delivery of free EAs is ~~Ultimately however, the delivery of free EAs is~~ a transition mechanism and is non-reciprocal (as opposed to the sale of EAs which is a reciprocal transaction). The transfer of EAs is not technically in scope of PS 3410 because EAs are neither monetary assets (as they are not claims to future cash flows that are fixed or determinable in amounts and timing by contract or other arrangements – PS 3410 GLOSSARY) nor are they tangible capital assets as they are not tangible in nature. However the principles in PS 3410 can be applied to determine whether there is an obligation to deliver free EAs. Under PS 3410 a transferring government has a liability (and expense) for a transfer when the transfer is authorized and all eligibility criteria have been met. The ability to receive free EAs is dependent on the participant registering each year to be eligible to receive the EAs. To the extent that that a capped emitter has registered to get free EAs and the number of EAs that it will receive can be determined under the regulations without continuing discretion from the MOECC to adjust the number then there should be a liability and expense amount recognized for the obligation to issue free EAs. It is noted however, that PS 3410 does not provide guidance on measurement of that

liability and expense. As the obligation is to be settled only in the delivery of the free EAs, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material at any time.

~~and is at the discretion of the Province, rather than a contractual or constructive obligation to the participants, as the Province retains discretion over the issuance of free EAs. [To confirm with MOECC – may have to switch to the alternative view if MOECC not comfortable with the idea there is no obligation to issue free EAs.]~~

After the issue of free EAs or auction of other EAs, there is no legal or constructive or obligation to make payments or otherwise have an outflow of economic benefits in respect of issued EAs. As the cap and trade program is new, there have been no past practices established by which the Province settles outstanding EAs in cash or by transfer of other economic resources. There are no exchange mechanisms to exchange some EAs for others or to settle them in cash outlined in legislation.

Alternative positions considered and rejected: ~~It could be argued that there is a constructive (rather than contractual) obligation to deliver free allowances to certain participants, due to actions and communications of the Province that have raised valid expectations for specific participants that they will receive free allowances in order to meet their compliance obligations. The obligation would be settled when free allowances are issued. However, even if this view is taken, the best estimate of the amount to settle the obligation by the Province is the cost of the EAs, which is a nominal amount. Therefore, the obligation cannot be material.~~

It was considered whether the Act creates a broader obligation of the Province to reduce greenhouse gas emissions in Ontario in a manner that requires the outflow of economic benefits. Aside from the administration of the cap and trade system, the Act does not require specific actions to be taken by the Province that would result in an outflow of future economic benefits that the Province does not have the discretion to avoid. The question of whether the responsibility to spend auction proceeds on initiatives that are reasonably likely to reduce or support the reduction of greenhouse gases creates a liability as discussed in Section 5 below.

c) Loan guarantees and contingent liabilities: To the extent that escrow amounts are recognized on the Province's balance sheet there would be a corresponding liability already recognized in respect of the requirement to return the participants deposit or in respect of deferred revenue. However to the extent that participants have submitted cash bid guarantees in Escrow that are not recognized in the Public Accounts of the Province there may an implied guarantee to the participants that their financial assurance will be returned to them if the auction does not run or they are not successful. [TBD – To be supported by facts, if ~~any, that~~any, which indicate the Province may be liable for the return of amounts held in escrow if DB goes insolvent and does not return the escrowed amounts to participants. If it is concluded that there is no implicit guarantee or contingent liability because the Province cannot be liable for the return of the escrowed amounts, the facts will support that position.]

Alternative positions considered and rejected: No alternative views considered, based on the understanding of the specific arrangements regarding the escrow accounts.

5. *Revenue recognition under the cap and trade program as sponsoring government*

This section is divided into three sub-sections. The first examines whether the transactions being accounted for are exchange (reciprocal) or non-exchange (non-reciprocal) transactions. The second considers what performance obligations exist. The third section looks at the pattern and timing of revenue recognition for the performance obligations identified.

Sale of EAs as exchange or non-exchange transactions

Relevant guidance - See Appendix A for details.

PS 3510, Tax revenue (definition of exchange and non-exchange transactions)

PSAS Revenue Statement of Principles (non-authoritative due process document)

Preliminary position –The sale of EAs are exchange transactions.

Analysis:

The auctioning of the EAs is meets the definition of an "exchange transaction" in PS 3510 as participants receive an asset (an EA) and gives approximately equal value in exchange. This is supported by the following facts

- The province has delivered an asset in exchange for cash. The EAs are assets/economic resources prior to the sale as they are held-for-sale inventory assets prior to the auction (see Section 3 (a) above).
- Purchasers of EAs have obtained an asset in exchange for cash. Purchasers can include market participants and unlike mandatory or voluntary participants, market participants are not subject to compliance obligations. They are purchasing the EAs because EAs are a resource that can be sold or traded on the marketplace. Mandatory and Voluntary participant also do not have to keep their EAs but can sell and trade them on the market speculatively. Participants recognize EAs as assets in their financial statements (typically as intangible assets under IFRS).
- The participant purchases EAs by giving up cash that is approximately equal in value to the EA as, by definition, the "fair value" of an EA is what a market participant is prepared to pay in an unforced transaction, and the auction process is a mechanism to assist in identifying the fair value of the EAs.
- Once Ontario has linked with the WCI, then mandatory and voluntary participants who create emissions in Ontario could obtain some or all their EAs from California, Quebec or other market participants. There is no direct link between the amount of Ontario-based emissions and the amount of proceeds obtained by the Province; emissions in Ontario could exceed (or be less than) the number of EAs issued by Ontario. Therefore the characterization as a tax on emissions does not hold as there is no consistent basis on which this "tax" is calculated.
- The program is not created under tax legislation and is not legally a tax.

The analysis above is consistent with the proposed definitions of "exchange transactions" and "unilateral transactions" in the PSAS Revenue Statement of principles, as the EAs are considered to be a good or service that is provided in exchange for consideration, rather than a receipt of payment without a direct transfer of economic resources to the payor. The Province's right to payment from a participant arises from the auction process and not solely from legislation. For example, for any auction there may be no participants or not all EAs may be sold. In these cases, some EAs are not transferred to participants and there are no or reduced inflows to the Province.

Alternative positions considered and rejected: An alternative view is that the cap and trade legislation forces mandatory participants to purchase EAs in order to settle a legislative obligation. Participants *must* obtain EAs in order to meet their compliance obligations which are created by legislation, and initially EAs are only available

from the Province. Therefore, in substance the purchase of EAs equates to a pre-paid "tax" on emissions, and therefore there is a non-reciprocal transaction as participants do not get anything of economic benefit in exchange, but rather have an outflow of cash to the Province that they previously did not have to pay prior to the cap and trade legislation. This view was rejected for the reasons given in support of "exchange transactions" above as the nature of the cap and trade program and the auction mechanisms are designed to create a carbon market, and under this system EAs become a "good" that has economic value. Therefore the characterization of the sale of EAs as non-exchange transaction would not be consistent with the substance of the cap and trade program.

Revenue recognition for sale of EAs (Exchange transactions)

Relevant guidance - See Appendix A for details.

PS 1000, Financial statement concepts

PS 1150, Generally accepted accounting principles

Other GAAP accounting frameworks

Preliminary position: Revenue is recognized for the sale of EAs on the auction date as there are no further substantive performance obligations by the Province.

Analysis:

a) What is the performance obligation? A performance obligation is defined in IFRS 15/ASC 606 a promise in a contract with a customer to transfer a distinct good or service (or bundle of distinct goods or services) or a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. This is similar to the proposed definition of performance obligation in the PSAS Revenue Statement of Principles which defines a performance obligation as an "enforceable promise to provide goods or services to a payor as a result of exchange transactions". This analysis has applied the IFRS concept, as permitted under PS 1150. In both IFRS 15/ASC 606 and the PSAS Revenue Statement of Principles, performance obligations are identified by reference to a contract – which is an agreement that creates enforceable rights and obligations. A contract does not have to be a formal written bilateral agreement, as long as both parties have an understanding of each party's respective enforceable rights and obligations. In this situation the good or service is the EA that is credited to a participant as a result of the standard auction process. The completion of the auction bid process creates the enforceable right of the province to payment and the obligation to credit the EA to the participant, as well as creating the right of the participant to the EA and the obligation to pay the Province. The auction mechanisms are published and standardized such that each participant understands the enforceable rights and obligations that are entered into when an auction occurs.

   Each EA is "distinct" in that the customer (purchaser) can benefit from each EA individually by selling, trading or using those EAs as the customer sees fit, including using those EAs to sell to other participants in the WCI or to settle compliance obligations in other WCI jurisdictions (once linked), and does not need other goods or services to benefit from the EA and the EA is not combined with other goods and services. A purchaser can only purchase an EA if they are a registered participant, however, becoming a registered participant is available to voluntary participants and market participants and therefore is considered to be readily available to all customers. (See IFRS 15.27 in Appendix A for definition of "distinct goods and services")

   Based on the above analysis, a contract is created when a participant successfully bids at auction, the Province has only one distinct performance obligation to each successful bidder under this contract, which is the delivery of the EAs.

Alternative positions considered and rejected: It was considered whether the item delivered to participants in the exchange transaction was a program of carbon (greenhouse gas) reduction rather than the delivery of an EA itself. This was rejected because the individual participants may or may not benefit from a reduction in carbon in Ontario and may or may not benefit in proportion to the cost of the EAs. Further, when Ontario links with the WCI, the participants may not even be located in Ontario. While the province may have promised the public of Ontario and other parties that they will reduce carbon emissions in Ontario to meet emissions targets, this should be separately analysed as to whether it has created a constructive obligation for Ontario to take actions and incur costs to meet this promise (See analysis in 4 (b) above). This is separate from the obligation in the exchange transaction with participants in respect of the purchase of EAs.

It was also considered whether the performance obligations to participants is both to issue the EA in the auction process, and also a stand-ready promise to redeem the EA in the future to settle a compliance obligation. In other words an EA is an intangible "right" that has been issued that province is obligated to redeem. Under this view, some or all of the proceeds from the auction would not be earned as revenue until the Province redeems the EA. This view was rejected because the obligation to redeem the EA as settlement of a participant's compliance obligation is an obligation that arises when a participant emits pollution and does not arise from the sale of the EAs. For example, Ontario sells 10,000,000 EAs in a compliance period. However total emissions from Ontario participants are only 100,000 tonnes. Ontario does not have an obligation to redeem all of the 10,000,000 EAs that were sold. Rather, Ontario ~~has an obligation to redeem only~~accepts the 100,000 EAs that are submitted by the participants who emitted the 100,000 tonnes of emissions as settlement of their compliance obligations. Therefore ~~this obligation to redeem~~Ontario has no obligation to redeem an EA that ~~cannot arise~~arises from the original exchange transaction and ~~is therefore~~therefore there is ~~not~~no ~~a~~ performance obligation ~~of that transaction~~that exists once the EAs have been sold. Similarly, when Ontario has linked to the WCI as Ontario is only obliged to take back EAs in respect of emissions from Ontario participants. There is no obligation to take back EAs sold to participants in other jurisdictions or to market participants, and likewise there is an obligation to redeem EAs submitted by Ontario participants, even when these were purchased from another WCI jurisdiction or another participant.

It was also considered whether the Province has an obligation to continue to provide the cap and trade program and/or a marketplace where participants can buy and sell EAs, on the basis that participants purchasing EAs are doing so on the understanding that they will be able to buy and sell EAs as well as to remit them for compliance obligations (if necessary). For example, if the termination of the cap and trade program would result in an obligation of the Province to return the sale proceeds to the holders of EAs that had been sold at auction this could indicate that there is an ongoing performance obligation that has not been fulfilled as the amounts must be refunded in the event of termination of the program. Under the Act, the Director establishes one or more accounts for registered participants for the purpose of allowing the participant to purchase, sell, trade and otherwise deal with emission allowances and credits. However, these are established and maintained in accordance with regulation for any registered participants, regardless of whether they purchase EAs in the auction process. Therefore the responsibility of creating and maintaining these accounts is a requirement and responsibility to registered participants under the Act and not a performance obligation to the purchasers or holders of EAs. The Act permits the trading of EAs between registered participants, but it does not create a provincially controlled market place for these trades. Registered participants may have an *expectation* of the Province continuing the cap and trade program and may make decisions based on this expectation, but this expectation exists in all registered participants including those that receive free allowances, rather than being a performance obligation that arises from the sale of EAs. Finally, it is noted that there is no legislative provisions for the termination of the program, and there are no contractual provisions embedded in the EAs that give the participants the right to receive cash in respect of outstanding EAs upon termination of the program. As such, there is no evidence of a written of implied contractual performance obligation to continue the program that is part of the sale of EA exchange transaction.

b) When is the performance obligation satisfied? There are a number of models used in practice for determining when a performance obligation is satisfied. Under IFRS 15/ASC 606 the performance obligations are satisfied as control of the good or service passes to the customer, regardless of whether the performance obligation is a good or a service. Under other standards such as ASPE Section 3400 or IAS 18 there are different criteria for "goods" or "services" and generally revenue is recognized as risks and rewards of ownership are transferred (for goods) or services are provided (for services). Both would be acceptable ways to approach the timing of revenue recognition for exchange transactions under current public sector accounting standards. However, the PSAS Revenue Statement of Principles proposes a "control" model similar to IFRS 15/ASC 606, so this approach has been applied in the analysis. Under IFRS 15/ASC 606 an "over time" approach is permitted only in specific circumstances (see IFRS 15.35 in Appendix A). In the case of the EAs the customer does not simultaneously receive and consume the benefits of the EA, the EAs do not create or enhance an asset that the customer controls and there is no additional asset that does not have an alternative use that is created by the province to fulfil the contract. Therefore the performance obligation will be satisfied at a point in time.

IFRS 15/ASC 606 provides indicators of when a point-in-time obligation has been satisfied. These are also included in the PSAS Revenue Statement of Principles and have been considered in this analysis. See IFRS 15.38 in Appendix A. The indicators have been assessed as follows:

Present right to payment – As noted in Section 3 above, there is considered to be a contract from the auction certification date, and payment must be received by the Province prior to the financial settlement date. ~~present right to payment at the auction date.~~

Legal title to the asset – Legally EAs are not "property" under the legislation and therefore the concept of legal title does not technically apply to EAs. ~~Legal title is transferred when~~ Participants can only trade or use the ~~the~~ EAs when they are credited to the participants account. This occurs after the ~~auction certification and~~ settlement process is completed. ~~[MOECC implementation group to confirm when legal title transfers is this analysis correct?]~~

The entity has transferred physical possession of the asset – This indicator is not relevant as EAs do not have physical form.

The customer has significant risks and rewards of ownership of the asset – The participant has significant risks and rewards of ownership of the asset from the ~~auction~~ date of transfer to their CITSS account, which is the settlement date of the contract. ~~If the price of EAs increases after the auction date, the customer can benefit from this increase by selling the EA. Similarly if the price decreases after the auction date, the customer bears this decrease in value.~~ The participant can decide what to do with the EA – sell it, keep it or use it to settle a compliance obligation - from the date of the ~~auction~~transfer into the participant's account. Therefore the participant has access to the rights inherent in the EA only after it has been transferred to their account. ~~While EAs are credited to a participants account only after auction certification and settlement process are completed, these are administrative processes that do not substantively change the risks and rewards of ownership of the EAs.~~

The customer has accepted the asset – There are no customer acceptance clauses. While the auction process is subject to certification this is not performed by the participant, but rather by the Province.

Based on the balance of the indicators above it can be concluded that there is support for recognizing revenue on a "point in time" basis on the ~~auction date~~date when the EAs are transferred to the participant.

Alternatives considered and rejected:

Certification date: It was considered whether revenue should be recognized at a point in time when the contract to purchase/sell the EAs ~~are~~ is agreed upon i.e. the auction certification date (if substantive) or the

Formatted: Underline

auction date if certification is not substantive. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset", and it could be argued that the delayed delivery of the EAs is only because of the financial settlement process to ensure payment is received and does not indicate that control has not passed earlier. This view was ultimately rejected because of the lack of legal title to the EAs (as they are not "property") and the intangible nature of the EAs means that control cannot be evidenced as passing earlier until the EAs are credited to the participants account.

Trade date accounting: It was considered whether "trade date accounting", as required by PS 3450 for regular way purchases and sales, could be applied to the purchase and sale of EAs. Trade date accounting is accepted for financial instruments to avoid having to recognize a derivative that be created for the period of time between when the fixed price commitment is entered into and it is settled because of the presence of an underlying variable that is not specific to either party. "Regular way" purchases and sales are those that are settled in the regular settlement cycle required for that particular investment. The time of that settlement varies depending on the type of instrument and jurisdiction. There could be an argument that the period between certification date and financial settlement date is the regular settlement cycle required for EAs, and therefore trade date accounting could be applied, which would result in the recognition of revenue (gains) on the sale of the EA on the trade date and not on the settlement date when the EA is actually transferred. However, this view was rejected for the following reasons:

- EAs are not sold through a "recognized exchange or securities market" but through the Province's auction process. While there is anticipated to be a market that develops for trades of EAs it will not be a "recognized exchange" under the Ontario Securities Act.
- As the sale is not on a "recognized exchange or securities market" there is not a customary period to settlement date (e.g. three days for equities, two days for forex swaps). Rather the period between the certification date and final settlement can vary depending on how long it takes for participants to provide cash, the LOCs/LOGs to be drawn upon and the final reconciliation to be approved. Further if the "trade date was considered to be the auction date and not the certification date this would extend the period further and make it more variable as the certification period can vary from 3 – 7 days.
- Trade date accounting is an exception to the usual rules of recognition for executory contracts and/or derivatives. As an exception it should not be extended by analogy to other situations such as EAs which are out of scope of PS 3450 as they are classified as inventories held for sale.

~~credited to the participant account (legal title to the asset has transferred). This was rejected as the delay between the auction date and crediting the participant account is to confirm the settlement of the auction payment and that the auction was carried out legally and in accordance with the regulations. IFRS 15.38 (b) notes that "If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset". Therefore, limited weight was placed on the fact that the participant's accounts are not credited until some time after the auction.~~

Restrictions on Greenhouse Gas Reduction Account

Preliminary position: The requirement to place the auction proceeds into a Greenhouse Gas Reduction Account is an internal restriction and does not lead to a liability on the statement of financial position.

Analysis:

The legislative requirement to establish the GGRA within the Public Accounts and record the proceeds from the distribution of EAs is found only in the Act, which is legislation of the Province and not of another government. There are no other agreements with other governments or other external parties that restrict the use of the proceeds from the distribution of EAs. Therefore, there are considered to be no external restrictions and the requirements of PS 3100.11 to defer revenue until the resources are spent on the purpose or purpose specified do not apply.

Instead, the GGRA is an internally established reserve of the Province. The reserve is supported by assets that have been formally designated by the Province for specific uses and therefore meet the definition of "designated assets" in PS 3100, as this designation could be readily changed by amending the Act. Disclosure of designated assets may occur in the notes to the financial statements, but cannot occur on the statement of financial position. Similarly, PSG-4 permits reserves supported by designated assets to be disclosed in the notes, but not in the statement of financial position.

Alternative positions considered and rejected: It was considered whether there was an implied external restriction on the proceeds from the auction process, as when the participants purchase EAs they know that, by legislation, the funds are to be placed in the GGRA and spent on eligible programs. This view was rejected because the participants are purchasing the EAs in an exchange transaction (See discussion on "Sale of EAs as exchange or non-exchange transactions above). If the Province were to change the legislation regarding the use of the auction proceeds, the participants would still continue to purchase the EAs that they require or choose to purchase to meet their compliance obligations or to trade in the marketplace. As such, there is no evidence that the participants intend for there to be an external restriction on the proceeds.

It was also considered whether Ontario's commitments to other governments and parties, such as commitments to the WCI, create external restrictions on the use of auction proceeds for specific greenhouse gas reduction purposes. No external restrictions have been noted. [~~NTD – to confirm that all interested parties agree with this statement~~]

6. Financial statement presentation and disclosure considerations

- Financial statement disclosure consideration
- Other disclosures outside of the financial statements

7. Accounting for Emission Allowances held by government organizations

- Organizations that are consolidated into the Province's financial statements (hospitals, colleges etc.)
- GBEs that are accounted for using the modified equity method (IFRS) and prepare stand-alone financial statements under US GAAP

8. Anticipated fiscal impact over planning horizon

- Impact on balanced budget legislation

9. Implementation risks and audit considerations

Appendix A – Technical guidance

Definition and nature of Assets

The definition of an "Asset" is currently set out in PS 1000.35-.37. PS 3210, *Assets* is effective from April 1, 2017, which expands on this definition. In light of the timing and multi-year nature of the cap and trade program PS 3210 is considered relevant.

PS 3210 defines assets as "economic resources controlled by a public sector entity as a result of past transactions or events and from which future economic benefits are expected to be obtained". Assets have three essential characteristics:

a) They embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows.

b) The public sector entity can control the economic resource and access to the future economic benefits.

c) The transaction or event giving rise to the public sector entity's control has already occurred.

(PS 3210.03-.04)

Assets may be classified as financial assets or non-financial assets. A financial asset is an asset that can be used to discharge existing liabilities or finance future operations and is not for consumption in the normal course of operations (PS 1000.39). Examples of financial assets include cash, receivables and inventories held-for-sale. A non-financial asset is an asset that is acquired, constructed or developed and does not normally provide resources to discharge existing liabilities, but instead is normally employed to deliver government services, consumed in the normal course of operations and is not for sale in the normal course of operations (PS 1000.42). Examples of non-financial assets include tangible capital assets, supplies inventory or prepaid expenses.

Inventories are not defined under PSAS. Other frameworks such as IFRS define inventories as assets that are held-for-sale in the ordinary course of business, used in the process or production for sales in the ordinary course of business or are consumed in the production process or rendering of services. This definition is consistent with the PSAS terminology of inventories held-for-sale and inventories held for consumption or use (consumed in the production process or rendering of services).

Intangible assets may meet the definition of an asset under PS 1000 and OS 3210. However, in the absence of appropriate public sector recognition and measurement criteria for intangible assets, no intangible assets are recognized in government financial statements (PS 1000.58). There is no definition provided for "intangible asset" in PSAS, although PS 4230 (applicable only to NPOs) does define Intangible Properties as "capital assets that lack physical substance". Other frameworks such as IFRS define Intangible Assets more broadly as "an identifiable non-monetary asset without physical substance".

Measurement of Assets

There is no specific guidance in PSAS on the initial recognition amounts for inventories. PS 1000.60 notes that generally financial statements are prepared on the "historical cost basis" being the cash or cash equivalents paid or received or the fair value ascribed to them when [the transactions] took place. Inventories held-for-sale are financial assets. Subsequent to initial recognition inventories are measured at their recoverable amount, net of any valuation allowance (PS 1200.049). After the adoption of PS 3450, which is currently effective for the Province for fiscal 2020, financial assets may be designated into the "fair value" category but only if they are managed and evaluated on a fair value basis in accordance with a risk management or investment strategy or they contain embedded derivatives.

Definition and nature of liability

The definition of a "Liability" is currently set out in PS 1000.44-.45 and PS 3200, *Liabilities* which expands on this definition.

PS 3200 defines liabilities as "present obligations of a government to others arising from past transactions or events, the settlement of which is expected to result in the future sacrifice of economic benefits". Liabilities have three essential characteristics:

a) They embody a duty or responsibility to others, leaving a government little or no discretion to avoid settlement of the obligation;

b) The duty or responsibility to others entails settlement by future transfer or use of assets, provision of goods or services, or other form of economic settlement at a specified or determinable date, on occurrence of a specified event or on demand;

c) The transactions or events obligating the government have already occurred.

(PS 3200.05)

PS 3200 states that discretion can be removed by an entity's own actions when this creates a constructive obligation to others. For a constructive obligation to exist the government must accept responsibility for the obligation, create a valid expectation among others and have no realistic obligation but to settle the obligation. This can arise from past practice, established policies, cabinet minutes, orders-in-council, ministerial orders, approved plans, ministerial letters and legislation.

PS 3200 states that the obligation to sacrifice economic benefits must be to a third party, and that entity exists at the financial statement date. The timing of the sacrifice of economic benefits must also be specified.

PS 3200 does not contain measurement guidance for liabilities. Other standards such as PS 3250, *Retirement benefits* and PS 3260, *Liability for contaminated sites* use a measurement model of the best estimate of the "cost" or cash outflows to settle the liability (discounted where appropriate).

PS 3450 includes a definition of financial liabilities as "contractual obligations to deliver cash or another financial asset to another entity; or to exchange financial instruments with another entity under conditions that are potentially unfavourable to a government". While PS 3450, *Financial instruments* is not mandatorily effective for the Province until fiscal 2020, given the long term nature of the cap and trade program, it has been considered in the analysis. Under PS 3450 there is no guidance on initial measurement of financial liabilities – typically transaction price is used, although fair value may be appropriate in some circumstances. Subsequently, financial liabilities are measured at amortized cost, unless they are eligible to be designated at fair value.

PSAS also contains guidance on loan guarantees (PS 3310), which are a form of contingent liability (PS 3300). Loan guarantees, as with other contingent liabilities, are accounted for as a liability when a loss is likely and the amount can be reasonably estimated.

Exchange transactions and non-exchange transactions

PS 3510.07 – (a) *Exchange transactions* are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

(b) *Non-exchange transactions* are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

PSAS Revenue Statement of Principles –

.026 "Exchange transactions are transactions where goods or services are provided for consideration. These transactions create performance obligations for a public sector entity arising directly from a payment or promise of consideration by a payor"

.032 "Unilateral revenues increase the economic resources of a public sector entity without a direct transfer of economic resources to the payor. The right to the economic resources is attributable to legislation grounded on a constitutional authority, or delegated constitutional authority, and an event entitling the public sector entity to recognize revenue".

Definition of revenue

PS 1000.46 - "Revenues, including gains, are increases in economic resources, either by way of increases of assets or decreases of liabilities, resulting from the operations, transactions and events of the accounting period." Revenues are distinguished from gains because gains arise from peripheral or incidental transactions and events affecting a government.

Revenue recognition

PS 1000.59 - "Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting.... Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied."

PS 1150 - When there is no primary source of PSAS that addresses an issue a government uses professional judgement to develop an appropriate accounting policy that is consistent with the primary sources of GAAP and PS 1000. Additional sources can be referred to which include pronouncements of other standard setters (such as IPSASB, GASB, FASAB in the public sector or FASB, IASB or AcSB for private sector equivalents). Exposure drafts and other due process documents may also be considered, although care should be taken when using such documents as they may change before finalization.

The table below various approaches to revenue recognition taken by other standard setters and the pronouncements that could be taken into account in developing an accounting policy.

Source	Standard reference	Revenue recognition model for sale of goods
Public sector standard setters		
IPSASB	IPSAS 9 – Revenue from exchange transactions	As risks and rewards are transferred; no continuing managerial involvement or control; revenue can be reliably measured; probable economic benefit will flow; costs incurred can be measured reliably.
GASB	Principles covered in 1600, Basis of accounting. Some specific issues covered in other standards.	Revenue from exchange transactions generally should be recognized when an exchange, in the ordinary course of operations, is effected unless the circumstances are such that the collection of the exchange price is not reasonably assured.
PSAB	Statement of principles, Revenue (Exposure draft, standard not finalized)	Revenue is recognized as a performance obligation is satisfied. Based on principles of IFRS 15.
Private sector standard setters		
IASB	IAS 18	Same as IPSAS 9
	IFRS 15 (effective 2018)	Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expected to be entitled in exchange for those goods or services
FASB	ASC 605	As risks and rewards are transferred; no continuing managerial involvement or control; reasonable assurance of the measurement of consideration. Specifically, there must be persuasive evidence of an arrangement, delivery has occurred or services have been rendered and the sellers price is fixed or determinable
	ASC 606 (effective 2018)	Same as IFRS 15
AcSB – Part II (ASPE)	Section 3400, Revenue	Same as ASC 605

IFRS 15.27 - A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); and

(b) the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract).

IFRS 15.35 - An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (see paragraphs B3–B4);

(b) the entity's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or

(c) the entity's performance does not create an asset with an alternative use to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37).

IFRS 15. 38 - If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset — if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.

(b) The customer has legal title to the asset — legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer's failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the customer's physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset — the customer's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Restricted assets and designated assets

PS 3100 applies to funds and reserves that are externally restricted, PSG-4 applies to funds and reserves that are not externally restricted.

PSG-4.3 - .4 - Some funds and reserves are supported by assets. These may meet the definition of designated assets set out in PS 3100.04 (c). PS 3100.30 requires that when a government chooses to provide information about designated assets it does so in the notes and not on the statement of financial position.

PSG- 4.7 - “Therefore, when a government chooses to provide information about any funds or reserve, it does so only in the notes and schedules and not on the statement of financial position. The creation of, addition to or deduction from funds and reserves does not create a revenue or expense, and would therefore not be reported on the statement of operations.”

PS 3100.04 (a) - “External restrictions are stipulations imposed by an agreement with an external party, or through legislation of another government that specify the purpose or purposes for which resources are to be used.”

PS 3100.11 - “Externally restricted inflows should be recognized as revenue in a government's financial statements in the period in which the resources are used for the purpose or purposes specified. An externally restricted inflow received before this criterion has been met should be reported as a liability until the resources are used for the purpose or purposes specified.”

PS 3100.27-.28 - Designated assets – “...Assets may be designated for a specific purpose as a result of government legislation, by-law or resolution that limits the use of assets to specified purposes. Designated assets are distinct from restricted assets. Unlike restricted assets, governments can readily change the legislation, by-law or resolution and use the designated assets for another purpose if the need arises....”

---

Please see attached a revised version of the Cap and Trade memo taking into account the points that came up in the last MOECC meeting and our discussions on our last update call. There is a clean version and also one in tracked changes to the last version that I circulated.

As mentioned on the update call there is one significant area to do with the Escrow accounts that is pending more information that I am hoping will be in the legal analysis to be provided by the MOECC. I would lean towards the second option drafted in terms of what makes intuitive sense, but legal rights and control seem very relevant to consider in coming to a final conclusion.

We have our meeting scheduled for 10-11am. I plan to be there in person.
For my part I am planning that the meeting would be to discuss comments on the memo - any additional considerations or where you might challenge or have concerns with the preliminary conclusions, and also to confirm our next steps. Please let me know if there are other items you would like to add to the agenda so we can prepare accordingly.

Regards,
Lucy

Cap and Trade accounting implications - memorandum to file v4 November 3 DRAFT CLEAN.pdf

Cap and trade accounting implications memorandum to file – proposed outline

1. Executive summary

2. Background and outline of cap and trade legislation and regulations

Commented [LD1]: O/S – MOECC was to provide comments on accuracy of background terminology .

The *Climate Change Mitigation and Low-Carbon Economic Act, 2016* (the "Act") was recently enacted that establishes, amongst other things, a framework for a cap and trade program for the Province of Ontario (the "Province" or "Ontario"). Two regulations, Ontario regulation 144.16 and Ontario regulation 143.16 (together "the Regulations") have been passed under the Act.

Only registered participants to the program (mandatory participants, voluntary participants and market participants) can purchase, hold, sell or trade emission allowances (EAs). Mandatory participants are those that are mandated to participate in the program. Voluntary participants are those that are not mandatory participants but choose to participate in the program for a compliance period. (Voluntary participants may opt out of future compliance periods if they do not meet the criteria to be a mandatory participant for that period). Together mandatory and voluntary participants are referred to as "capped participants" or "capped emitters". Market participants are those that do not have compliance obligations but choose to participate in the program so they can hold, sell and trade EAs.

EAs can be obtained in the following ways:

- Purchased at auctions at the auction price.
- Distribution as a free allowance (capped participants only).
- Acquired from other participants in a market trade.

EAs are held in holding accounts that are maintained in the "CITTS" system, which records participant accounts and trades between participants. CITSS is a web-based tool that facilitates participation in the cap and trade program and is administered by the Western Climate Initiative, Inc (WCI Inc) on behalf of participating jurisdictions. Market trades are reported to the MOECC and the MOECC monitors the participant's accounts for compliance with regulations, such as holding levels are within holding limits. If holding limits are exceeded and not remedied within 5 days, the Minister of the Environment and Climate Change (the "Minister") has the ability to remove the excess allowances for no compensation that could then be re-sold at future auctions. However, our understanding is that the systems should not allow sales over the individual limits to be processed so examples of this should be very limited in practice.

Auction process: In accordance with the Regulations there are four auctions a year. EAs are sold at auction classified by "vintage". The Regulations set out how many EAs are created for each vintage and how many EAs of each vintage will be available at each auction (after the distribution of free EAs). The vintage of an EA determines which compliance period the EA can be submitted for. For example, in 2017 the auctions will be for the "2017" vintage and some for the "2020 vintage". More than one "vintage" may be sold in any one auction. The first auction will be held March 2017. There is a floor price for each auction. Not all the allowances available at a particular auction may be sold, in which case unsold allowances may be offered at a future auction under some circumstances.

5% of EAs are held back as a strategic reserve that may be sold at a later date for a higher value, not through the auction process. Only capped emitters may purchase from the reserve. The strategic reserve accumulates over time.

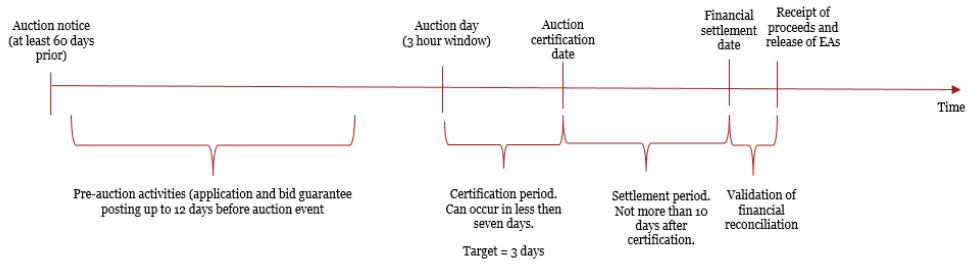
Prior to the auction registered participants must post a bid guarantee. This may be in the form of an irrevocable letter of credit (LOC), letter of guarantee (LOG) or cash, both of which are held in escrow by Deutsche Bank (DB) in the participant's sub-account under the jurisdiction's Escrow account. The Province's escrow account is in the name of WCI, Inc for the benefit of the Ontario Minister of the Environment and Climate Change. The bid guarantee may be posted up to 60 days before the auction, and must exceed the total amount of bids that will be submitted by the participant in the auction.

At the auction the participants place bids for the number of EAs they will purchase at any price point. At the end of the three-hour auction window the auction administrator runs the auction algorithm through a predetermined auction settlement calculation to provide the auction result report indicating the set of successful participants and the number of allowances they won at the auction settlement price.

After the auction, the Province reviews the results for compliance with the regulatory requirements over the auction process and to obtain the required internal jurisdiction approvals. These steps include reviewing the auction results provided by the auction platform, analyzing bid data in detail and reviewing and accepting the auction report submitted by the market monitor (a third party contractor called Monitoring Analytics). When the results of the auction are confirmed (the "certification date") the results are published on the jurisdiction's website, invoices made available to participants and the process of settlement begins. If a participant is successful in the auction then the participant is invoiced for the amounts due for the EAs purchased. If the participant submitted a cash bid guarantee this cash amount is used to settle the invoices by the amounts being transferred from the participant's sub-account into Ontario's escrow settlement account. If an LOC or LOG was used, the participant can pay separately within 7 days into their sub-account, which is then transferred to Ontario's escrow settlement account and the LOC is dissolved or returned. Alternatively if the participant does not submit cash payment within 7 days the invoice is settled by calling on the LOC or LOG. Once all the payments have been received from participants and transferred to Ontario's escrow settlement accounting and Ontario's staff have confirmed that the amount in the escrow account match payments due from auction participants, then the escrowed amounts are transferred to the GGRA bank account and the EAs are transferred to the respective participant CITSS accounts.

[o/s is to determine if there is an insolvency risk prior to the auction period; if there is, has the Province effectively guaranteed the return of the bid collateral if the escrow holder became insolvent]

Auction timeline illustration



Free allowances

Capped emitters may receive free allowances. To receive free allowances the participant must apply each year. The amounts of these are determined by the Minister using formulas applied to the entity specific situation of the participant and are expected to diminish over time as transition to the cap and trade program is completed and inter-provincial "leakage" declines (leakage is where carbon producers move economic activities to a jurisdiction with no or low carbon pricing). Once issued, these EAs are identical to those sold at auction and may be held or traded by participants.

Emissions Compliance

The program operates within 3-year compliance periods (with the first period being a 4-year period). The first compliance period runs from January 1, 2017 – December 31, 2020. EAs are linked to a specific compliance period. For example, EAs with 2021-2023 vintages cannot be used to meet normal emissions obligations under the program for the 2017-2020 compliance period (although they can be used to settle increased compliance obligations). However, EAs from earlier vintages can be carried forward to meet obligations in future compliance periods. EAs do not expire. Participants may purchase EAs from other participants in market trades to be able to meet their obligations. Market trades are negotiated between participants and are then reported to the MOECC, who ensures that the agreed upon EAs or credits are transferred between the participants CITSS accounts. The number of EAs issued for the compliance period is capped by regulation. Therefore if total emissions from all participants are significantly lower than the cap, it should be easy for participants to obtain the necessary EAs in the marketplace at an inexpensive price. Unused EAs for the compliance period can be carried forward and used in future compliance periods. If the total emissions from all participants exceed the cap then there will not be sufficient EAs available for all participants to meet their compliance obligations and the price of any available EAs will increase. The market mechanism allows those participants who can most cheaply reduce their emissions an incentive to do so in order to either sell excess EAs to other participants at a higher price or to save the need to purchase a high priced EA to meet their obligations.

At the end of the compliance period mandatory and voluntary participants report their attributed carbon emissions (greenhouse gas emissions must be quantified, reported and verified) for the compliance period and ensure they have transferred sufficient EAs or credits (see below) from their holding accounts into their compliance accounts. At the compliance "true-up" deadline (by November 2021 for the first compliance period), EAs and offset credits (see below) are removed in a number equal to the participant's obligations under the Regulations (1 EA per 1 tonne of emissions). If a participant does not have sufficient EAs in their account at the true-up date then there is a shortfall. In addition to the EAs required to fulfil the shortfall, the obligation increases on a 3-1 basis; for each EA required to cover the shortfall the participant is required to acquire and submit an additional 3 EAs (the "increased compliance obligation"). This increased compliance obligation may be settled with EAs from future vintages (e.g. 2021 vintages may be used to settle the increased compliance obligation for the 2017-2020 period, however, they cannot be used to settle the original compliance obligation or shortfall).

Due to the increased compliance obligation mechanism if a participant does not expect to have sufficient EAs in their compliance accounts at the true-up deadline there is an incentive for participants to either reduce their emissions over the compliance period or to purchase additional EAs (of vintages valid for the compliance period) in the market prior to the true-up deadline; the market price of which would be expected to increase due to demand exceeding supply.

The EAs that are remitted to the MOECC for a compliance period are retired. They are not re-sold. The exception to this is EAs that are remitted as part of the increased compliance obligation may be re-sold at auction. The purpose of the exception is so that the overall number of available EAs for future compliance periods is not reduced because of the failure of participants to comply at the true-up date.

A participant has a certain period of time (30 days after a notice of a shortfall is issued) to acquire and remit sufficient EAs to meet their compliance obligation, including additional compliance obligations for shortfalls. If they fail to remedy the shortfall, the Director can issue an order that the outstanding obligation be settled in cash to the Ministry of Finance, based on the settlement price from the most recent auction.

The removal of EAs from a participant's account is without payment to the participant. Specifically Section 70 (3) of the Act states that "No amount is payable by the Crown with respect to any action taken by the Minister or Director under this Act, or by any person acting on their behalf, including any action relating to the removal of emission allowances and credits from a participant's cap and trade accounts".

Credits and offsets

Other than EAs, entities may also obtain "early reduction credits" or "offset credits" in certain circumstances. These credits are also tracked by participant and can be used in place of EAs to settle a compliance obligation. Credits can also be sold or purchased by participants on the market. There are limits on how much of a compliance obligation can be settled with credits as opposed to EAs. As emissions can be settled by either EAs or credits and offsets, the creation of credits or offsets essentially increases the total "cap" amount of emissions under the cap and trade program for the compliance period.

Linking to the Western Climate Initiative (WCI)

It is anticipated that Ontario will link to the WCI in 2018. The WCI currently includes Quebec and California. When linked to the WCI, there will be one market for EAs – all participants from participating jurisdictions can buy, sell, hold and trade EAs with other participants. There is one auction process for all participating jurisdictions, with proceeds from the auction being allocated on a pro-rata basis. For example, each jurisdiction determines the number of EAs that they will put up for auction in that vintage based on their cap for the compliance period. This results in a total amount of EAs available of which, say 30% are part of the Ontario emissions cap, 15% for Quebec and 55% for California. The proceeds of the auction would be split 30:15:55 between the participating jurisdictions, regardless of which participants purchase the EAs. If not all the EAs are sold, the sales are attributed on these same rations and unsold EAs from the jurisdiction may be sold at future auctions under certain conditions. EAs are not attributed back to a jurisdiction of issuance and can be used to settle a compliance obligation in any of the participating jurisdictions. For example, an Ontario participant must ensure there are an adequate number of EAs or credits in their compliance account to meet their compliance obligation based on their emissions. It does not matter whether they purchased the EAs at auction or from a California or Quebec participant. The effect is that Ontario participants may produce emissions that exceed the Ontario cap for any compliance period, but this excess would be offset by reductions in Quebec or California below their caps, thus reducing emissions overall. There is no mechanism by which Ontario transfers or receives cash, financial assets or EAs between jurisdictions. There is no requirement to redeem EAs issued in other jurisdictions by issuing cash or other "Ontario" EAs as all EAs are interchangeable once issued.

Termination of the program

The program does not have a termination date. There is nothing in the current legislation that outlines how the cap and trade program might be terminated. The program could only be terminated through a change in the legislation. We are not aware of any terms in the arrangements with the WCI that would specify how a withdrawal from the WCI might be undertaken.

Greenhouse Gas Reduction Account

The Act establishes an account with the Public Accounts of Ontario called the Greenhouse Gas Reduction Account (GGRA). Other than limited exceptions, proceeds from the distribution of EAs are included in this account. Amounts of fees, penalties and the settlement of increased compliance obligations in cash are also included in the GGRA. The funds in the GGRA may be used for initiatives that are reasonably likely to reduce, or support the reduction of, greenhouse gases. Such uses include the research and development of new technologies or processes, innovation, education and training, and informing the public. The amounts in the GGRA may also be used to fund costs of administration and enforcement of the Act. Annually, the Minister will issue a public notice regarding the evaluation of initiatives funded by the GGRA. In addition an annual report will be prepared describing the activities of the GGRA. Eligible costs that were incurred by the Crown on or after November 1, 2015 may be reimbursed from the GGRA, even if they were incurred prior to the Act coming into force.

Federal actions to reduce carbon emissions

In October 2016 the federal government announced that provinces that do not have either a carbon pricing mechanism will be subject to a federal benchmark "floor price" for carbon in 2018. Ontario's cap and trade program means that it will not be subject to the federal carbon floor price as the Ontario targets are in excess of the targets imposed by the federal government. Therefore actions by the federal government are not expected to have an impact on Ontario's cap and trade program. This must be monitored as subsequent federal actions and/or changes to Ontario's cap and trade program in response to the federal government actions may have accounting impacts.

3. Identification of assets relating to the cap and trade program as sponsoring government

Summary of relevant guidance – See Appendix A

PS 1000, Financial statement concepts

PS 1200, Financial statement presentation

PS 3210, Assets

PS 3450, Financial instruments

Preliminary positions

We considered whether any attributes of the cap and trade program give rise to assets under Public Sector Accounting Standards.

a) On creation and sales of free and auctioned EAs: EAs that are created by the government, including EAs held in the strategic reserve, are inventories held-for-sale. EAs that have been remitted to the government as payment for increased compliance obligations or because of breaches of holding limits and are available for re-sale at auctions are also inventories held-for-sale.

   Inventories held-for-sale are measured at cost. Newly created EAs do not cost anything to create and are measured at a nominal amount. EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits will be measured at the cost to re-acquire them (also a nominal amount).

b) Escrow proceeds held for auctions: Escrow proceeds received for bid guarantees are not recorded by the Province prior to the transfer of funds into the Province's escrow settlement account.

   After auction certification cash from successful bidders is transferred to the Province's escrow settlement account, resulting in recognition of an asset (cash). A corresponding amount is recognized as deferred revenue until the contract is settled by the transfer of EAs to the participants (see Part 5). On settlement EAs held in inventory are removed from inventory and included in Cost of Sales, although these are expected to be at nominal amounts and so this entry would not be material.

c) EAs in circulation: EAs in circulation or the right to receive back EAs in circulation are not recognized as assets, whether sold at auction or issued as free allowances.

d) Failure of participant to pay increased compliance obligation: The right to demand payment in lieu of EAs for an increased compliance obligation is recognized after the time period that a participant has to rectify

the shortfall by remitting EAs as expired, e.g. on the deadline specified in a notice issued under Section 14 (8) of the participant's outstanding obligations.

The above can be summarized in the following journal entries:

On creation of EAs:

Dr Inventory held-for-sale (expected to be nil cost)

Cr Cash (expected to be nil cost)

As payment from successful bidders is received and placed into Ontario Settlement account:

Dr Cash (in Escrow)

Cr Deferred Revenue

On settlement date:

Dr Deferred revenue

Cr Revenue

Dr Cash (GGRA account)

Cr Cash (in Escrow)

Dr Cost of sales (expected to be nil cost)

Cr Inventory held-for-sale (expected to be nil cost)

On expiration of deadline for rectifying increased compliance shortfall by remitting EAs:

Dr Receivable

Cr Revenue

Analysis

a) <u>On creation and sales of free and auctioned EAs</u>:

EAs are created to be sold to participants. These sales occur on a regular basis and generate revenues in the ordinary course of running the cap and trade program. Therefore despite being intangible in nature, the EAs also meet the definition of inventories held-for-sale and could be given accounting recognition as an asset. Consistent with current policies of the Province, inventories held-for-sale are measured at the lower of cost or recoverable amount.

EAs that are returned to the government and not retired due to increased compliance obligations or breaches of holding limits are measured at their cost, which is expected to be a nominal amount as no cash or other financial asset is paid to acquire them, and no liability is derecognized in respect of the receipt of these (see Section 4 on recognition of liabilities). PSAS does not provide further guidance on what is included in "cost" for inventory. Following the guidance for tangible capital assets that are constructed would result in only direct costs of creation and directly attributable overhead costs being included. The definition of "cost" for inventories in under other frameworks such as IFRS or ASPE includes both direct costs and a systematic allocation of fixed and variable production overheads. As the EAs are intangible in nature it is not expected that any production overheads would be incurred. General overheads (such as general management) are not allocated to inventory.

Alternative positions considered and rejected: EAs are intangible (without a physical substance) in nature and many participant's accounting framework include them as intangible assets. As the EAs are internally generated and intangible there is an alternative view that they should not be recognized on the books of the Province prior to sale, given the lack of a PSAS definition of what is included the reference to "Intangible Assets" in PS 1000.58. This view was ultimately rejected because the intent of creating the EAs is for re-sale and not for use as a capital asset that is used in the provision of services, for administrative purposes, for production of goods or for the maintenance, repair, development or construction of other assets. The rationale for scoping out "intangible assets" in PS 1000.58 is because there is no recognition and measurement criteria for intangibles. However there is guidance on how to account for inventories held-for-sale, which can be applied. The selected approach of treating EAs as inventory held-for-sale may create an additional accountability of the number of EAs created and provide an opportunity for additional disclosures in the financial statements that would enhance transparency. As the cost is always expected to be nil or nominal because of the nature of the EAs, the accounting for EAs on creation is expected to be immaterial to the financial statements.

b) Escrow proceeds held for auctions:

Commented [LD2]: O/S Subject to Summary of legal opinion obtained by MOECC. Not yet seen.

[EITHER]

An asset is recognized by the province as cash is received into a participant's escrow "sub-account".

Any Escrowed cash amounts held in participants sub-accounts are still held for the benefit of the Minister as they are sub-accounts of the Province's escrow account and are only released upon the completion and settlement of the auction, which is under the control of the Minister through the certification and settlement process. For example, the province requires participants to place bid guarantees and can control whether an auction goes ahead and therefore when the proceeds are released back to unsuccessful bidders. A bidder cannot retract their posted financial assurance until after an auction has gone ahead. Therefore any escrowed cash amounts are similar to customer deposits received in advance that should be recognized on the Province's balance sheet, offset by a liability to return those deposits, which will be settled either through a refund of the cash in escrow or through the deposit of EAs in the participant's CITSS account. It is noted that based on amounts of bid guarantees posted in cash in other WCI jurisdictions it is not expected that these amounts would be material. Any cash posted as bid guarantees would be considered to be restricted cash as it is held in a separate account and is not available for general use by the government.

Any LOC or LOG amounts received into a participant's sub-account are not assets as they are in the form of a commitment but do not represent either cash or the contractual right to receive cash.

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date. This view is supported because the certification process by the Province is considered substantive - the jurisdiction reviews the results, analyses the bid data in detail and reviews and accepts the auction report. The jurisdiction could reject the auction report if the auction has not proceeded in accordance with regulatory requirements and internal jurisdiction approvals must be obtained. Auction results are not fully published until certification has been completed and therefore the participants do not know if they are successful until certification. Therefore there are no additional accounting implications of the auction date.

Once certification has occurred there is a contract between a successful bid participant and the Province and the settlement process begins. The sale of the EAs is accounted for using "settlement

date" accounting in respect of revenue recognition (See discussion on revenue recognition in Section 5 for further analysis).

Once cash has been transferred into a participant's sub-account it is an asset of the Province as it is held for the Province's benefit, notwithstanding that it is not transferred to the Province's own GGRA bank account until the settlement completion date as this is a matter of time and the settlement process. Therefore during the settlement process, as cash payments are received from participants and deposited into the participant's escrow settlement account or an LOC/LOG is drawn upon and deposited these would be recognized as cash. As the EAs have not been delivered to the participant the corresponding side of the entry would be to deferred revenue. After the certification date any cash recognized for successful bid participants would not be considered to be restricted cash as it is no longer required to be returned to the bidder and is no longer externally restricted.

Amounts receivable from participants (i.e. those bid guarantees covered by LOC/LOGs) prior to either cash deposit or settlement of the LOC/LOG would not be recognized as an asset of the Province under settlement date accounting. While there is a contract between the participant and the province from the certification date neither party has executed on the contract prior to cash being received into Escrow, and therefore it remains an executory contract. Amounts receivable would only be recognized if the EAs had been delivered prior to receipt of payment. However the settlement process arrangements mean that this does not occur. As there is no amount receivable there is no need to consider any provision for impairment of those receivables.

Note that the cash held in escrow will usually be classified as cash because it is expected to meet the definition of cash and cash equivalents in PS Section 1200.97. The time that the cash is expected to be in the Ontario Settlement account is not more than 20 days, therefore the escrow cash is a "short term highly liquid" amount of cash that is subject to an insignificant risk of changes in value. PSAS considers that anything less than three months might be "short term". However, if there were significant concerns about the amount and timing of cash transfers from the settlement account to the GGRA bank account, for example because of concerns about the Escrow Agent's financial stability, the definition of "cash and cash equivalents" might not be met. In this case the amounts would be recorded as a receivable from the Escrow Agent and the need for a valuation allowance would be considered.

By settlement date all the cash proceeds from the auction would be transferred from the participant's sub-accounts and deposited into the Province's Escrow account. On the settlement date, the Escrowed cash is transferred to the Province's GGRA bank account which would result in a reclassification of the restricted cash to "cash". The revenue implications of settlement date and delivery of EAs are discussed in Section 5.

[OR]

An asset is recognized by the province as cash is transferred to the jurisdiction's escrow settlement account. Prior to the auction process, the Province does not control the cash or LOC/LOGs held in the participant's escrow sub-account and therefore cannot recognize them as assets. The proceeds are held by a third party in a sub-account that identifies the participant and legal title and control is not with the Province. The Province does not control whether or how much a participant bids, or if their bids are successful and therefore whether the Province has any rights to the escrow proceeds prior to the auction being held. Rather the participant controls whether the escrow proceeds will be used to purchase EAs or will be returned to the entity. If no auction occurs for any reason then the Province does not have any right to the escrowed cash amounts in the sub-account. [NTD – to confirm]

Commented [LD3]: To confirm nature of the Escrow sub-accounts
Based on legal analysis?

On the auction date participants place their bids and indicate what amounts they stand ready to transact at. However, until auction certification date the Province has not accepted the bids and therefore there is no contract for the sale and purchase of EAs on the auction date. This occurs only on the certification date. This view is supported because the certification process by the Province is
