Question (impt).rtf

From: Petsche, Nadine (TBS) []
To: 'Colley, Matthew (CA - Toronto) (mcolley@deloitte.ca)' [mcolley@deloitte.ca]; Colavecchia, Pina (CA - Toronto) (pcolavecchia@deloitte.ca) [pcolavecchia@deloitte.ca]
Subject: Question (impt)
Date: Monday, December 05, 2016 09:58:22

Matt/Pina,

Cindy has asked if any research was done on how other jurisdictions are accounting for their multi-employer plans. Please advise as we will be discussing our status of analysis this afternoon with the Panel. If by chance we have not, can we do some research please.

Thanks.

Nadine

Question from pension panel.rtf

From: lucy.durocher@ca.pwc.com [lucy.durocher@ca.pwc.com]
To: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]
CC: Tam, Nelson (TBS) [Nelson.Tam@ontario.ca]
Subject: Question from pension panel
Date: Sunday, March 12, 2017 17:09:56

Hi Nadine,

For the Supplemental Report for the Panel, I had a quick drafting question that I would like to confirm with you.

- In your memos on HOOPP accounting, it includes the calculation of the province's portion of the pension liability as "Province's portion as at March 31, 2016 of the pension liability is 39.1% which is calculated as 85% (the % of members in HOOPP from hospitals consolidated in the public accounts) of 56% (the portion of contributions to HOOPP made by the employers)" with similar language used for CAATPP.
Please confirm that the basis of "% members in HOOPP *from* hospitals consolidated in the public accounts" is the same as "% members in HOOPP *employed by* hospitals consolidated in the public accounts". I would like to confirm that "from" is not a broader calculation (e.g. including retirees or some other metric.)

Regards,
Lucy

Subject: Re: A couple of questions

Hi Nadine,

Sorry we've missed each other's calls. I was picking up my daughter. I am available on my cell until 7:45pm if you want to chat re: 7600 reports. I would think the panel is OK because 7600 applies to "public accountants" that provide written or oral advice on the application of accounting principles to specific transactions. If the panel is not acting as "public accountants" then I don't think their conclusions could be seen as an opinion on the application of accounting principles, but that said, I don't know the composition or the terms of reference of the panel to be able to say definitively. However non-public accountants would not be expected to apply GAAS, and any recommendations they made would be considered in that light. (Although I would think that they would also be careful in how they phrase their recommendations anyway).

In respect of the first question. It's a good question. I don't think that it aligns with my understanding either. My interpretation of the language used is that the Actuarial benefit liability is the Fair value of plan

assets - full actuarial valuation (including all actuarial gains and losses), and the add back of the unamortized losses gets to the "accounting number" of $202.7M asset. This is the accrued benefit asset. However, under the standard the losses would be subtracted again to get to the "Adjusted benefit asset" being the $248.3 liability. Obviously no valuation allowance would be required against a liability. There is no VA required against the accrued benefit asset if the asset exists only because of unamortized losses. This is because over time that asset will be "realized" through the amortization of the losses and bring down the position of the plan to a liability position over time.

As the phrases "Accrued benefit asset" and "adjusted benefit asset" are not used in the slides it is hard to be certain that this is what is meant in the slides. However I think the standard is quite clear in 3250.054 that the valuation allowance is the excess of the adjusted benefit asset over the expected future benefit (in this case $nil). So if somehow they got to a position where the adjusted benefit asset is $202.7 asset the VA would make sense. It is difficult to see how the adjusted benefit asset could be $202.7 asset though based on the fact that they are adding back and not subtracting unamortized losses to get there.

Hi Lucy.
Just forwarding a couple of docs regarding the NB situation. Having a bit of difficulty following the last slide of the second attachment and how the calculation aligns with my understanding of how the adjusted benefit asset should be computed. (you'll note that the calc begins with a liability vs. asset).

Also, wondering if we can chat regarding the nature of a 7600 Report, just to confirm whether the work being undertaken by the Panel could ever be categorized as such. I don't think so, but would appreciate a chat.

I saw that you called earlier. Talk to you soon.

Hi, Nadine. We will have some alternate wording for this to propose to you. But before we do, I'm wondering if it would be possible to see the comment that it is responding to? Or to get an understanding of the key points raised in that comment? Please let me know. If it's easier to just talk about it, we can have a call.

The summary itself is in for final review as is the wording for the limitations around the opinion to be given to the panel.

Regards,

Kerry

Good morning!

Just forwarding the most current wording for your review and feedback. Please advise of any concerns. Thanks.

Nadine

During the course of the Public Accounts audit, the Auditor General was provided with analysis and support on the province's interpretation of public sector accounting standards to the Province's jointly sponsored pension plans. This information included an external accounting opinion that addressed issues related to the requirement for a legally enforceable right to reduce contributions (which supported the Province's interpretation) and considerations on incorporating the impact of legal uncertainty in estimating the valuation of the net pension assets.

To: Petsche, Nadine (TBS); Colley, Matthew (CA - Toronto); Jesty, Paula (CA - Toronto)
Subject: RE: Advisory

Hi, Nadine. I'd like to understand the context a bit better. Will this commentary go in a public document? We will need to have the context before responding.

With respect to the actual wording, I don't think it's true to say that our report supported your accounting treatment. You recorded an asset of around $10 billion and we declined to provide a view on the amount of the asset. So this description goes beyond the scope of our report and we would not agree to it as worded below.

Regards,

Kerry

Matt/Paula/Kerry,

We are currently drafting our responses to the AG's Chapter 2 of her Annual Report. Below is an extract that refers to your opinion. It is a generic reference which I understand from discussions is OK. Please confirm.

Nadine

During the course of the audit of the Public Accounts of Ontario 2015-16, the Province shared background and analysis on interpretation of public sector accounting standards to the Province's jointly sponsored pension plans, including an accounting opinion from an external public accounting firm which addressed questions regarding legally enforceability of the Province's right to recognize a pension asset under PS 3250 and the impact of uncertainty with regards to assessing the government's expectations of future benefit from a pension asset.

Kerry,

I have made a minor edit, as the response is from management's perspective. nadine

During the course of the Public Accounts audit, the Auditor General was provided with analysis and support on the province's interpretation of public sector accounting

standards to the Province's jointly sponsored pension plans. This information included an external accounting opinion related to the Province's accounting for one of its jointly sponsored pension plans under Public Sector Accounting Standards (PSAS). Based on the facts surrounding this particular jointly sponsored pension plan, the opinion expressed the view that the recognition of a pension plan asset is permissible under PSAS, which supported the Province's interpretation on the question of recognition. The opinion did not address the measurement of that plan asset.

Good morning!

Just forwarding the most current wording for your review and feedback. Please advise of any concerns. Thanks.

Nadine

During the course of the Public Accounts audit, the Auditor General was provided with analysis and support on the province's interpretation of public sector accounting standards to the Province's jointly sponsored pension plans. This information included an external accounting opinion that addressed issues related to the requirement for a legally enforceable right to reduce contributions (which supported the Province's interpretation) and considerations on incorporating the impact of legal uncertainty in estimating the valuation of the net pension assets.

Hi, Nadine. I'd like to understand the context a bit better. Will this commentary go in a public document? We will need to have the context before responding.

With respect to the actual wording, I don't think it's true to say that our report supported your accounting treatment. You recorded an asset of around $10 billion and we declined to provide a view on the amount of the asset. So this description goes beyond the scope of our report and we would not agree to it as worded below.

Regards,

Kerry

Matt/Paula/Kerry,

We are currently drafting our responses to the AG's Chapter 2 of her Annual Report. Below is an extract that refers to your opinion. It is a generic reference which I understand from discussions is OK. Please confirm.

Nadine

During the course of the audit of the Public Accounts of Ontario 2015-16, the Province shared background and analysis on interpretation of public sector accounting standards to the Province's jointly sponsored pension plans, including an accounting opinion from an external public accounting firm which addressed questions regarding legally enforceability of the Province's right to recognize a pension asset under PS 3250 and the impact of uncertainty with regards to assessing the government's expectations of future benefit from a pension asset.

Hi, Nadine. Below is the wording that we would be comfortable with for the report. Please let me know if you would like to discuss.

During the course of the Public Accounts audit, the Auditor General was provided with analysis and support on the province's interpretation of public sector accounting standards to the Province's jointly sponsored pension plans. This information included an external accounting opinion related to the Province's accounting for one of its jointly sponsored pension plans under Public Sector Accounting Standards (PSAS). Based on the facts surrounding this particular jointly sponsored pension plan, the opinion expressed the view that the recognition of a pension plan asset is permissible under PSAS. However, the measurement of that plan asset was outside the scope of the opinion.

Subject: RE: Advisory (revised wording related to accounting opinion)

Good morning!

Just forwarding the most current wording for your review and feedback. Please advise of any concerns. Thanks.

Nadine

During the course of the Public Accounts audit, the Auditor General was provided with analysis and support on the province's interpretation of public sector accounting standards to the Province's jointly sponsored pension plans. This information included an external accounting opinion that addressed issues related to the requirement for a legally enforceable right to reduce contributions (which supported the Province's interpretation) and considerations on incorporating the impact of legal uncertainty in estimating the valuation of the net pension assets.

Hi, Nadine. I'd like to understand the context a bit better. Will this commentary go in a public document? We will need to have the context before responding.

With respect to the actual wording, I don't think it's true to say that our report supported your accounting treatment. You recorded an asset of around $10 billion and we declined to provide a view on the amount of the asset. So this description goes beyond the scope of our report and we would not agree to it as worded below.

Regards,

Kerry

Matt/Paula/Kerry,

We are currently drafting our responses to the AG's Chapter 2 of her Annual Report. Below is an extract that refers to your opinion. It is a generic reference which I understand from discussions is OK. Please confirm.

Nadine

During the course of the audit of the Public Accounts of Ontario 2015-16, the Province shared background and analysis on interpretation of public sector accounting standards to the Province's jointly sponsored pension plans, including an accounting opinion from an external public accounting firm which addressed questions regarding legally

enforceability of the Province's right to recognize a pension asset under PS 3250 and the impact of uncertainty with regards to assessing the government's expectations of future benefit from a pension asset.

Hi Lucy.

The AG has told us that she has sought an external opinion, but she says it is her protocol not to disclose the firm that she has engaged. In this regard, the firm has also not participated in any discussions with us on this topic.

Hope this helps.

Nadine

Hi Lucy.
Further to our discussion, below is an outline of the work we discussed. The work relates to the jointly sponsored pension plans (OTPP and OPSEUPP) as reported in the Province's consolidated financial statements.
I'll look forward to hearing back from you.
Best regards,
Nadine
416 562 9509

The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following

- Taking into account public sector accounting principles, advice and guidance on complex accounting and reporting matters related to accounting for pensions on the Province's consolidated financial statements.
- The Vendor will participate in meetings as necessary to support the engagement objectives:

- Working with management of OPCD's Accounting Policy and Financial Reporting Branch (APFR), the provider of complex accounting services related to the following possible areas:
- Develop discussion and analysis material
- Develop draft input/briefing materials/option papers
- Provide accounting advice and guidance related to the accounting for pensions on the Province's financial statements
- Participate in discussions with internal and external stakeholders, as required

As part of this engagement, the consultant(s) would be expected to provide professional accounting expertise in assessing actuarial assessments for specified plans in relation to applying the ceiling test to the accrued pension benefit assets in accordance with PS3250 (3250.050 to PS3250.059).

Thanks Nadine,

Thinking back to yesterday's conversation with the AG, part of the concern was around the audit evidence that has been provided to support that the asset will be recovered. It seemed at one point during the meeting that she might have been able to get to how approximately $8B will be recovered. Maybe you could think about how you could articulate to them how the evidence you have provided or summarize to them how the evidence you provided supports the asset. I am just thinking if there are ways that it could be framed to help get them more comfortable about the audit evidence they have.

Regarding the statement of facts, we did send a communication last night to the AG thanking her for her time yesterday and asking if she could confirm whether they believe them to be accurate and complete, and more formally notifying her that we are engaged to provide an accounting opinion. For the time being we have removed the facts around the impact of restoring inflation indexation, but we have indicated that this assertion made by management will likely be factored into our opinion.

Thanks

Matt

Uros.

I had a chance to speak with Cindy and she would actually like for the most recently proposed wording to be included in your report. Sorry for the confusion on our end.

That can work as well, I'm comfortable with either approach. Just let us know what you prefer and if you'd like us to update our documents with the caveat below please let us know and we will do that.

Subject: RE: Asset Ceiling Reports

Wondering if we could leave the reports as they are and OPCD add the caveat in an email to the AG's office re: the impact of any adjustment. I'm assuming nothing coming out of the adjustment work will impact the conclusion on the asset ceiling test.

Thanks Uros.

The wording looks fine to me. We were planning to update the reports after the adjs are finalized. Would it be fair to refer to the current version of the report as 'draft' and note that it will be revised once the process is complete?

Copying Cindy on this response as well, as she may have additional advice.

Thanks.

Nadine

Subject: RE: Asset Ceiling Reports

Hi Nadine,

Shayan is still sick today, so Christina and I will make this change.

Would something to this effect be suitable: "The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments."

If you have any suggested changes, or particular additional caveats you'd like included,

please let me know.

16 May 2017

Ontario Teacher's Pension Plan - DRAFT
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

This document provides the results of our analysis and recommendations to OPCD management regarding the recognition of an accrued benefit asset for OTPP as at 31 March 2017. The purpose of this document is to support OPCD in forming its opinion on appropriate accounting related to OTPP in the Province's financial statements. This document does not constitute an accounting opinion and should be used as such. This document is intended for OPCD's use only. Please inform us in writing if you would like to share this document more broadly.

The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments. This document should therefore be considered a draft that will be finalized subsequent to the conclusion of the year-end adjustment review.

As at 31 March 2017, prior to considering the possible need for a valuation allowance, OPCD determined the following:

- Plan's accrued benefit asset is $26.9B (obligation of $123.8, market related-value of asset of $169.8B, unamortized actuarial gain of $19.1B)
- The Province's portion (50%) of the accrued benefit asset is $12.3B[1]

Since our analysis determined that a valuation allowance is not required at 31 March 2017, it would appear appropriate to report the Province's portion of the accrued benefit asset of $12.3B for its respective portion of the Plan.

[1] Reflects specific downward net adjustment of $1.2B by OPCD to the Province's portion of the Plan for the Province's financial statements

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS. The Plan is jointly sponsored by the Province, through the Minister of Education, and the Ontario Teachers' Federation ("OTF"), representing the employees.
- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors under the Teacher's Pension Act ("Act").
- Funding valuations must be filed at least once every three years. The Funding Management Policy ("FMP") provides the joint sponsors a framework of priorities in determining how the surplus/deficiency should be addressed. If there is a surplus/deficiency on a preliminary funding valuation basis, the joint sponsors must negotiate and agree to changes in future contribution levels and/or benefit levels to result in an actuarially balanced valuation. An actuarial valuation in this context, is considered balanced if the value of future contributions to the Plan equals to the value of future benefits from the Plan.
- Both contribution level and benefit levels are to be negotiated and the FMP does not specify any minimum contribution requirement. If the value of future contributions is greater than needed to pay the benefits, then the joint sponsors can agree to reduce contributions or increase benefits, while maintaining the concept of 50/50 sharing of costs between the two joint sponsors.
- Changes to contribution levels and benefit levels must reflect the sharing principle in that each joint sponsor is responsible for their share of deficit or entitled to their share of surplus.
- The Act or the Plan documents do not prohibit contribution holidays (i.e. surpluses belonging to the joint sponsors may be applied to reduce contributions).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (the use of this earlier measurement date is permitted under PSAS 3250.039). We do not anticipate that the conclusion would be different at 31 March 2017
- Assumed inflation protection for post-2009 service will be provided at 100% of the assumed inflation rate
- Valuation discount rate: 6.00%
- Inflation rate: 2.00%
- Salary escalation rate: 2.00% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS 3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

The Province has an equal share (50%) in the costs and risks of the OTPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs"*.

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. Based on Ontario case law and the Ontario Pension Benefits Act ("PBA"), it is difficult to establish the right of a plan sponsor to withdraw surplus. For purposes of determining the expected future benefit, our assumption is that the Province does not have a right to surplus withdrawal. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Funding Management Policy sets out an agreed upon framework of priorities for the sponsors in jointly determining how any funding surpluses can be utilized. The sponsors may negotiate lower contributions or an increase in benefits. There is no minimum level of contribution requirements set out by the Plan and contributions levels are negotiated. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$175.6B
Market-related value of assets ("MVRA")	$(169.8)B
Actuarial gains/losses not recognized due to smoothing	$5.8B
Unamortized actuarial gains/(losses), on MRVA basis	$19.1B
Unamortized actuarial gains/(losses), on MVA basis	$24.9B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$175.6B
Obligation	$(123.8)B
Plan surplus	$51.8B
Unamortized losses	$0.0B
Adjusted benefit asset (PS 3250.053)	$51.8B

The adjusted benefit asset for the Plan is $51.8B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

Mercer's accounting results letter determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $3.1B
- The total present value of expected future accruals is $100.1B as at 31 December 2016

Mercer also noted the present value of expected future accruals has been calculated on an open group basis using a perpetuity approach (i.e. the current number of active employees), by projecting the current service cost with the assumed salary scale and discounting with interest. This is in line with PSAS requirements.

We have validated Mercer's calculation of the total present value of expected future accruals of $100.1B. We have estimated the present value of the Plan's expected future accruals to be approximately $95B, based on the current number of active employees and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)
- Discount rate of 6.00%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $3.1B / (0.06-0.0275) = $95B.

We note that our estimate is approximately $5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuaries to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no minimum fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no minimum contribution that the Province is required to make, regardless of any surplus. The sponsors of the Plan can agree to any level of

contribution through negotiation that leads to an actuarially balanced funding valuation. The Plan's funding level has an impact on the contribution rates, i.e. they are made with consideration for the Plan's funding surplus. In other words, if the Plan is overfunded, the joint sponsors can agree to reduce contributions, or even take a full contribution holiday. Therefore, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS. It is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OTPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OTPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan). This interpretation is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Plan surplus that can be withdrawn

As discussed in Section 2, we have assumed no Plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$100.1B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	0.0B
Expected future benefit (PS 3250.056)	$100.1B

The Plan's expected future benefit is $100.1B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$51.8B
Plan's expected future benefit (PS 3250.056)	$100.1B
Valuation allowance (PS 3250.054) [max (0, $51.8B – 100.1B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$26.9B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B

Accordingly, the Province's portion of the Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B
Province's portion of the accrued benefit asset (50%) [PS3250.050 x 50%]	13.5B
Other Province specific adjustment made by OPCD	(1.2)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$12.3B

Based on the results of the analysis above, OPCD may draw the conclusion that an accrued benefit asset of $12.3B (without any asset impairment) could be recognized for the Province's financial reporting under PSAB.

While the analysis in this document has been prepared independently, the conclusions overall are consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Appendix
Information Provided

Our analysis is based on the following information we received:

- Actuarial valuation report for OTPP as at 1 January 2016 prepared by Mercer for funding purposes
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re; Ontario Teachers' Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- Teachers' Pension Act
- OTPP Funding Management Policy
- Letter Re: Accounting results as at 31 March 2017 prepared by Mercer
- Pension Asset Expert Advisory Panel report

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

OPSEUPP Recognition of accrued benefit asset (EY 16 May 2017) - draft.pdf

Ontario Public Service Employees' Union Pension Plan - DRAFT
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Public Service Employees' Union Pension Plan ("OPSEUPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

This document provides the results of our analysis and recommendations to OPCD management regarding the recognition of an accrued benefit asset for OPSEUPP as at 31 March 2017. The purpose of this document is to support OPCD in forming its opinion on appropriate accounting related to OPSEUPP in the Province's financial statements. This document does not constitute an accounting opinion and should not be used as such. This document is intended for OPCD's use only. Please inform us in writing if you would like to share this document more broadly.

The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments. This document should therefore be considered a draft that will be finalized subsequent to the conclusion of the year-end adjustment review.

As at 31 March 2017, prior to considering the possible need for a valuation allowance, OPCD determined the following:

- Plan's accrued benefit asset is $1.95B (obligation of $16.60B, market related-value of asset of $18.51B, unamortized actuarial loss of $0.04B)
- The Province's portion (50%) of the accrued benefit asset is $0.61B[1]. This amount does not reflect any adjustment for the differential use of the Rate Stabilization Fund ("RSF") by the joint sponsors discussed later in this document.

Since our analysis determined that a valuation allowance is not required at 31 March 2017, it would appear appropriate to report the Province's portion of the accrued benefit asset of $0.65B ($0.61B, adjusted for the estimated differential use of the RSF) for its respective portion of the Plan.

[1] Reflects specific downward net adjustment of $0.37B by OPCD to the Province's portion of the Plan for the Province's financial statements

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS.
- The Plan is jointly sponsored by the Province, represented by the Chair of the Management Board of Cabinet, and the Ontario Public Service Employees' Union ("OPSEU"), representing the employees.
- Funding valuations must be filed at least once every three years.
- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors in accordance with the plan text and sponsorship agreement:
  - Employers match the contributions of the members.
  - Any emerging actuarial gains and losses are to be shared equally between the sponsors.
  - Any surplus is to be shared equally between the joint sponsors under the current arrangement (the proportion may be collectively bargained).
  - Any deficit is to be funded by the joint sponsors and required contributions will increase in equal amounts.
- The Plan has established a Rate Stabilization Fund ("RSF"), as the sum of past unspent surpluses which were evenly allocated between the joint sponsors. Each sponsor may decide, without the other joint sponsor's consent, the use of its portion of the surplus.
- As at 31 December 2014, the date of the most recently completed funding valuation, the Province's RSF balance was $0.1B and the OPSEU's RSF balance was $0.01B. This means that the OPSEU joint sponsor has historically used $0.09B more surplus than the Province.
- While the joint sponsors established a trust ("OPTrust"), the Board of Trustees is responsible for the administration of the Plan and the investment of the assets. Decisions related to amendments to the trust agreement, plan text, and sponsorship agreement (e.g. contribution level, benefit to be provided) are the responsibility of the joint sponsors.
- The funding policy provides the joint sponsors a recommended framework for addressing the priorities for surplus use and deficit funding.
- The Plan documents explicitly state that no surplus shall be paid out of the fund to either sponsors.
- Contribution holiday does not constitute a surplus withdrawal according to the sponsorship agreement. Furthermore, the sponsorship agreement permits contribution holiday (i.e. sponsors may use their respective RSF to meet any additional contribution requirements).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")

- The measurement of assets and obligations are as at 31 December 2016 (the use of this earlier measurement date is permitted under PSAS 3250.039). We do not anticipate that the conclusion would be different at 31 March 2017
- Valuation discount rate: 5.90%
- Inflation rate: 2.00%
- Salary escalation rate: 1.75% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS 3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

Under the current arrangement, the Province has an equal share (50%) in the costs and risks of the OPSEUPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and the employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province. A further adjustment may need to be made to account for differential use of RSF by each of the joint sponsors. The need for RSF adjustment was also noted in the Pension Asset Expert Advisory Panel report.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs"*.

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. The Plan text explicitly prohibits any surplus withdrawal by both joint sponsors. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Province may use its portion of the RSF for contribution reduction without any restriction and does not require consent by the other sponsor. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$18.90B
Market-related value of assets ("MVRA")	$(18.51)B
Actuarial gains/(losses) not recognized due to smoothing	$0.39B
Unamortized actuarial gains/(losses), on MRVA basis	$(0.04)B
Unamortized actuarial gains/(losses), on MVA basis	$0.35B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$18.90B
Obligation	$(16.60)B
Plan surplus	$2.30B
Unamortized losses	$0.00B
Adjusted benefit asset (PS 3250.053)	$2.30B

The adjusted benefit asset for the Plan is $2.30B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

According to the accounting results letter provided by OPTrust, the Plan's actuary (Willis Towers Watson, "WTW") has determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $0.39B
- The total present value of expected future accruals is $13.88B as at 31 December 2016

The letter indicates that the present value of expected future accruals has been calculated on an open group basis (i.e. the current number of active employees). This is in line with PSAS requirements.

We have validated the actuary's calculation of the total present value of expected future accruals of $13.88B. We have estimated the present value of the Plan's expected future accruals to be approximately $12.38B, on an open group basis using a perpetuity approach (i.e. the current number of active employees) and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)
- Discount rate of 5.90%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $0.39B / (0.059-0.0275) = $12.38B.

We note that our estimate is approximately $1.5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuary to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no minimum fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no minimum contributions that the Province is required to make, regardless of any surplus. Moreover, since there is no restriction on the sponsor's use of its RSF, the contribution can be reduced to zero for the sponsors without each other's consent. The sponsorship agreement explicitly explains that a contribution holiday can be taken when there

is a surplus. Therefore, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS. It is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OPSEUPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OPSEUPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan). This interpretation is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Plan surplus that can be withdrawn

No plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$13.88B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	0.0B
Expected future benefit (PS 3250.056)	$13.88B

The Plan's expected future benefit is $13.88B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$2.30B
Plan's expected future benefit (PS 3250.056)	$13.88B
Valuation allowance (PS 3250.054) [max (0, $2.30B – 13.88B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$1.95B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$1.95B

Based on the RSF allocation as at 31 December 2014, the most recent funding valuation date, OPSEU has utilized their RSF $0.09B more than the Province:

OPSEU's RSF balance at 31 December 2014	$0.01B
Province's RSF balance at 31 December 2014	0.10B
Adjustment for the differential use of RSF by the joint sponsors	$0.09B

In other words, the Province has $0.09B more of unused RSF than OPSEU at 31 December 2014.

Accordingly, the Province's portion of the Plan's accrued benefit asset, adjusted for the relative position of the sponsors' RSFs and net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$1.95B
Adjustment for the differential use of RSF by the joint sponsors	(0.09)B
Plan's accrued benefit asset to be divided equally between the joint sponsors	1.86B
Province's portion of the accrued benefit asset to be divided evenly (50% x 1.86B)	0.93B
Province's unused RSF in excess of OPSEU's RSF	0.09B
Other Province specific adjustment made by OPCD	(0.37)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$0.65B

Based on the results of the analysis above, OPCD may conclude that an accrued benefit asset of $0.65B could be recognized for the Province's financial reporting under PSAS. This asset is after an adjustment for the differential use of RSF by the joint sponsors. No asset impairment is required.

While the analysis in this document has been prepared independently, the conclusions overall are consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Appendix
Information Provided

Our analysis is based on the following information we received:

- Province's financial reporting information under PSAS as at 31 March 2017, prepared by OPCD
- Actuarial Information for the OPESU Pension Plan provided by OPSEU Pension Trust (related to 2016 year-end financial information, including to actuarial calculations performed by Willis Towers Watson)
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re: OPESU Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- OPSEUPP actuarial valuation funding report as at 31 December 2014 by Willis Towers Watson
- OPSEU actuarial gain or loss allocation history (up to 31 December 2014)
- OPSEUPP plan text
- The Sponsorship Agreement for OPESUPP
- Ontario Public Service Employees' Union Pension Act
- OPTrust Funding Policy: Board-Approved Policy
- Pension Asset Expert Advisory Panel report

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement

benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Subject: RE: Asset Ceiling Reports

Wondering if we could leave the reports as they are and OPCD add the caveat in an email to the AG's office re: the impact of any adjustment. I'm assuming nothing coming out of the adjustment work will impact the conclusion on the asset ceiling test.

Subject: RE: Asset Ceiling Reports

Thanks Uros.

The wording looks fine to me. We were planning to update the reports after the adjs are finalized. Would it be fair to refer to the current version of the report as 'draft' and note that it will be revised once the process is complete?

Copying Cindy on this response as well, as she may have additional advice.

Thanks.

Nadine

Subject: RE: Asset Ceiling Reports

Hi Nadine,

Shayan is still sick today, so Christina and I will make this change.

Would something to this effect be suitable: "The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments."

If you have any suggested changes, or particular additional caveats you'd like included,

please let me know.

Subject: Asset Ceiling Reports

Shayan,

Cindy would like to share the results of the Asset Ceiling analysis with the OAG prior to completion of the work related to pension adjustments. We would like to include appropriate language/caveat regarding pending adjs and plan to update once complete.

Can you please insert the appropriate caveat in the draft report and resend.

Thanks in advance.

Nadine

Ontario Teacher's Pension Plan - DRAFT
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

This document provides the results of our analysis and recommendations to OPCD management regarding the recognition of an accrued benefit asset for OTPP as at 31 March 2017. The purpose of this document is to support OPCD in forming its opinion on appropriate accounting related to OTPP in the Province's financial statements. This document does not constitute an accounting opinion and should be used as such. This document is intended for OPCD's use only. Please inform us in writing if you would like to share this document more broadly.

The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments. This document should therefore be considered a draft that will be finalized subsequent to the conclusion of the year-end adjustment review.

As at 31 March 2017, prior to considering the possible need for a valuation allowance, OPCD determined the following:

- Plan's accrued benefit asset is $26.9B (obligation of $123.8, market related-value of asset of $169.8B, unamortized actuarial gain of $19.1B)
- The Province's portion (50%) of the accrued benefit asset is $12.3B[1]

Since our analysis determined that a valuation allowance is not required at 31 March 2017, it would appear appropriate to report the Province's portion of the accrued benefit asset of $12.3B for its respective portion of the Plan.

[1] Reflects specific downward net adjustment of $1.2B by OPCD to the Province's portion of the Plan for the Province's financial statements

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS. The Plan is jointly sponsored by the Province, through the Minister of Education, and the Ontario Teachers' Federation ("OTF"), representing the employees.
- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors under the Teacher's Pension Act ("Act").
- Funding valuations must be filed at least once every three years. The Funding Management Policy ("FMP") provides the joint sponsors a framework of priorities in determining how the surplus/deficiency should be addressed. If there is a surplus/deficiency on a preliminary funding valuation basis, the joint sponsors must negotiate and agree to changes in future contribution levels and/or benefit levels to result in an actuarially balanced valuation. An actuarial valuation in this context, is considered balanced if the value of future contributions to the Plan equals to the value of future benefits from the Plan.
- Both contribution level and benefit levels are to be negotiated and the FMP does not specify any minimum contribution requirement. If the value of future contributions is greater than needed to pay the benefits, then the joint sponsors can agree to reduce contributions or increase benefits, while maintaining the concept of 50/50 sharing of costs between the two joint sponsors.
- Changes to contribution levels and benefit levels must reflect the sharing principle in that each joint sponsor is responsible for their share of deficit or entitled to their share of surplus.
- The Act or the Plan documents do not prohibit contribution holidays (i.e. surpluses belonging to the joint sponsors may be applied to reduce contributions).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (the use of this earlier measurement date is permitted under PSAS 3250.039). We do not anticipate that the conclusion would be different at 31 March 2017
- Assumed inflation protection for post-2009 service will be provided at 100% of the assumed inflation rate
- Valuation discount rate: 6.00%
- Inflation rate: 2.00%
- Salary escalation rate: 2.00% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS 3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

The Province has an equal share (50%) in the costs and risks of the OTPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs"*.

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. Based on Ontario case law and the Ontario Pension Benefits Act ("PBA"), it is difficult to establish the right of a plan sponsor to withdraw surplus. For purposes of determining the expected future benefit, our assumption is that the Province does not have a right to surplus withdrawal. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Funding Management Policy sets out an agreed upon framework of priorities for the sponsors in jointly determining how any funding surpluses can be utilized. The sponsors may negotiate lower contributions or an increase in benefits. There is no minimum level of contribution requirements set out by the Plan and contributions levels are negotiated. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$175.6B
Market-related value of assets ("MVRA")	$(169.8)B
Actuarial gains/losses not recognized due to smoothing	$5.8B
Unamortized actuarial gains/(losses), on MRVA basis	$19.1B
Unamortized actuarial gains/(losses), on MVA basis	$24.9B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$175.6B
Obligation	$(123.8)B
Plan surplus	$51.8B
Unamortized losses	$0.0B
Adjusted benefit asset (PS 3250.053)	$51.8B

The adjusted benefit asset for the Plan is $51.8B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

Mercer's accounting results letter determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $3.1B
- The total present value of expected future accruals is $100.1B as at 31 December 2016

Mercer also noted the present value of expected future accruals has been calculated on an open group basis using a perpetuity approach (i.e. the current number of active employees), by projecting the current service cost with the assumed salary scale and discounting with interest. This is in line with PSAS requirements.

We have validated Mercer's calculation of the total present value of expected future accruals of $100.1B. We have estimated the present value of the Plan's expected future accruals to be approximately $95B, based on the current number of active employees and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)
- Discount rate of 6.00%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $3.1B / (0.06-0.0275) = $95B.

We note that our estimate is approximately $5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuaries to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no minimum fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no minimum contribution that the Province is required to make, regardless of any surplus. The sponsors of the Plan can agree to any level of

contribution through negotiation that leads to an actuarially balanced funding valuation. The Plan's funding level has an impact on the contribution rates, i.e. they are made with consideration for the Plan's funding surplus. In other words, if the Plan is overfunded, the joint sponsors can agree to reduce contributions, or even take a full contribution holiday. Therefore, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS. It is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OTPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OTPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan). This interpretation is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Plan surplus that can be withdrawn

As discussed in Section 2, we have assumed no Plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$100.1B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	0.0B
Expected future benefit (PS 3250.056)	$100.1B

The Plan's expected future benefit is $100.1B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$51.8B
Plan's expected future benefit (PS 3250.056)	$100.1B
Valuation allowance (PS 3250.054) [max (0, $51.8B – 100.1B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$26.9B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B

Accordingly, the Province's portion of the Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B
Province's portion of the accrued benefit asset (50%) [PS3250.050 x 50%]	13.5B
Other Province specific adjustment made by OPCD	(1.2)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$12.3B

Based on the results of the analysis above, OPCD may draw the conclusion that an accrued benefit asset of $12.3B (without any asset impairment) could be recognized for the Province's financial reporting under PSAB.

While the analysis in this document has been prepared independently, the conclusions overall are consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Appendix
Information Provided

Our analysis is based on the following information we received:

- Actuarial valuation report for OTPP as at 1 January 2016 prepared by Mercer for funding purposes
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re; Ontario Teachers' Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- Teachers' Pension Act
- OTPP Funding Management Policy
- Letter Re: Accounting results as at 31 March 2017 prepared by Mercer
- Pension Asset Expert Advisory Panel report

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Ontario Public Service Employees' Union Pension Plan - DRAFT
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Public Service Employees' Union Pension Plan ("OPSEUPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

This document provides the results of our analysis and recommendations to OPCD management regarding the recognition of an accrued benefit asset for OPSEUPP as at 31 March 2017. The purpose of this document is to support OPCD in forming its opinion on appropriate accounting related to OPSEUPP in the Province's financial statements. This document does not constitute an accounting opinion and should not be used as such. This document is intended for OPCD's use only. Please inform us in writing if you would like to share this document more broadly.

The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments. This document should therefore be considered a draft that will be finalized subsequent to the conclusion of the year-end adjustment review.

As at 31 March 2017, prior to considering the possible need for a valuation allowance, OPCD determined the following:

- Plan's accrued benefit asset is $1.95B (obligation of $16.60B, market related-value of asset of $18.51B, unamortized actuarial loss of $0.04B)
- The Province's portion (50%) of the accrued benefit asset is $0.61B[1]. This amount does not reflect any adjustment for the differential use of the Rate Stabilization Fund ("RSF") by the joint sponsors discussed later in this document.

Since our analysis determined that a valuation allowance is not required at 31 March 2017, it would appear appropriate to report the Province's portion of the accrued benefit asset of $0.65B ($0.61B, adjusted for the estimated differential use of the RSF) for its respective portion of the Plan.

[1] Reflects specific downward net adjustment of $0.37B by OPCD to the Province's portion of the Plan for the Province's financial statements

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS.
- The Plan is jointly sponsored by the Province, represented by the Chair of the Management Board of Cabinet, and the Ontario Public Service Employees' Union ("OPSEU"), representing the employees.
- Funding valuations must be filed at least once every three years.
- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors in accordance with the plan text and sponsorship agreement:
  - Employers match the contributions of the members.
  - Any emerging actuarial gains and losses are to be shared equally between the sponsors.
  - Any surplus is to be shared equally between the joint sponsors under the current arrangement (the proportion may be collectively bargained).
  - Any deficit is to be funded by the joint sponsors and required contributions will increase in equal amounts.
- The Plan has established a Rate Stabilization Fund ("RSF"), as the sum of past unspent surpluses which were evenly allocated between the joint sponsors. Each sponsor may decide, without the other joint sponsor's consent, the use of its portion of the surplus.
- As at 31 December 2014, the date of the most recently completed funding valuation, the Province's RSF balance was $0.1B and the OPSEU's RSF balance was $0.01B. This means that the OPSEU joint sponsor has historically used $0.09B more surplus than the Province.
- While the joint sponsors established a trust ("OPTrust"), the Board of Trustees is responsible for the administration of the Plan and the investment of the assets. Decisions related to amendments to the trust agreement, plan text, and sponsorship agreement (e.g. contribution level, benefit to be provided) are the responsibility of the joint sponsors.
- The funding policy provides the joint sponsors a recommended framework for addressing the priorities for surplus use and deficit funding.
- The Plan documents explicitly state that no surplus shall be paid out of the fund to either sponsors.
- Contribution holiday does not constitute a surplus withdrawal according to the sponsorship agreement. Furthermore, the sponsorship agreement permits contribution holiday (i.e. sponsors may use their respective RSF to meet any additional contribution requirements).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")

- The measurement of assets and obligations are as at 31 December 2016 (the use of this earlier measurement date is permitted under PSAS 3250.039). We do not anticipate that the conclusion would be different at 31 March 2017
- Valuation discount rate: 5.90%
- Inflation rate: 2.00%
- Salary escalation rate: 1.75% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS 3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

Under the current arrangement, the Province has an equal share (50%) in the costs and risks of the OPSEUPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and the employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province. A further adjustment may need to be made to account for differential use of RSF by each of the joint sponsors. The need for RSF adjustment was also noted in the Pension Asset Expert Advisory Panel report.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs"*.

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. The Plan text explicitly prohibits any surplus withdrawal by both joint sponsors. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Province may use its portion of the RSF for contribution reduction without any restriction and does not require consent by the other sponsor. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$18.90B
Market-related value of assets ("MVRA")	$(18.51)B
Actuarial gains/(losses) not recognized due to smoothing	$0.39B
Unamortized actuarial gains/(losses), on MRVA basis	$(0.04)B
Unamortized actuarial gains/(losses), on MVA basis	$0.35B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$18.90B
Obligation	$(16.60)B
Plan surplus	$2.30B
Unamortized losses	$0.00B
Adjusted benefit asset (PS 3250.053)	$2.30B

The adjusted benefit asset for the Plan is $2.30B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

According to the accounting results letter provided by OPTrust, the Plan's actuary (Willis Towers Watson, "WTW") has determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $0.39B
- The total present value of expected future accruals is $13.88B as at 31 December 2016

The letter indicates that the present value of expected future accruals has been calculated on an open group basis (i.e. the current number of active employees). This is in line with PSAS requirements.

We have validated the actuary's calculation of the total present value of expected future accruals of $13.88B. We have estimated the present value of the Plan's expected future accruals to be approximately $12.38B, on an open group basis using a perpetuity approach (i.e. the current number of active employees) and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)
- Discount rate of 5.90%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $0.39B / (0.059-0.0275) = $12.38B.

We note that our estimate is approximately $1.5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuary to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no minimum fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no minimum contributions that the Province is required to make, regardless of any surplus. Moreover, since there is no restriction on the sponsor's use of its RSF, the contribution can be reduced to zero for the sponsors without each other's consent. The sponsorship agreement explicitly explains that a contribution holiday can be taken when there

is a surplus. Therefore, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS. It is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OPSEUPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OPSEUPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan). This interpretation is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Plan surplus that can be withdrawn

No plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$13.88B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	0.0B
Expected future benefit (PS 3250.056)	$13.88B

The Plan's expected future benefit is $13.88B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$2.30B
Plan's expected future benefit (PS 3250.056)	$13.88B
Valuation allowance (PS 3250.054) [max (0, $2.30B – 13.88B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$1.95B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$1.95B

Based on the RSF allocation as at 31 December 2014, the most recent funding valuation date, OPSEU has utilized their RSF $0.09B more than the Province:

OPSEU's RSF balance at 31 December 2014	$0.01B
Province's RSF balance at 31 December 2014	0.10B
Adjustment for the differential use of RSF by the joint sponsors	$0.09B

In other words, the Province has $0.09B more of unused RSF than OPSEU at 31 December 2014.

Accordingly, the Province's portion of the Plan's accrued benefit asset, adjusted for the relative position of the sponsors' RSFs and net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$1.95B
Adjustment for the differential use of RSF by the joint sponsors	(0.09)B
Plan's accrued benefit asset to be divided equally between the joint sponsors	1.86B
Province's portion of the accrued benefit asset to be divided evenly (50% x 1.86B)	0.93B
Province's unused RSF in excess of OPSEU's RSF	0.09B
Other Province specific adjustment made by OPCD	(0.37)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$0.65B

Based on the results of the analysis above, OPCD may conclude that an accrued benefit asset of $0.65B could be recognized for the Province's financial reporting under PSAS. This asset is after an adjustment for the differential use of RSF by the joint sponsors. No asset impairment is required.

While the analysis in this document has been prepared independently, the conclusions overall are consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Appendix
Information Provided

Our analysis is based on the following information we received:

- Province's financial reporting information under PSAS as at 31 March 2017, prepared by OPCD
- Actuarial Information for the OPESU Pension Plan provided by OPSEU Pension Trust (related to 2016 year-end financial information, including to actuarial calculations performed by Willis Towers Watson)
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re: OPESU Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- OPSEUPP actuarial valuation funding report as at 31 December 2014 by Willis Towers Watson
- OPSEU actuarial gain or loss allocation history (up to 31 December 2014)
- OPSEUPP plan text
- The Sponsorship Agreement for OPESUPP
- Ontario Public Service Employees' Union Pension Act
- OPTrust Funding Policy: Board-Approved Policy
- Pension Asset Expert Advisory Panel report

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement

benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Uros.

I had a chance to speak with Cindy and she would actually like for the most recently proposed wording to be included in your report. Sorry for the confusion on our end.

Wondering if we could leave the reports as they are and OPCD add the caveat in an email to the AG's office re: the impact of any adjustment. I'm assuming nothing coming out of the adjustment work will impact the conclusion on the asset ceiling test.

Thanks Uros.

The wording looks fine to me. We were planning to update the reports after the adjs are finalized. Would it be fair to refer to the current version of the report as 'draft' and note that it will be revised once the process is complete?

Copying Cindy on this response as well, as she may have additional advice.

Thanks.

Hi Nadine,

Shayan is still sick today, so Christina and I will make this change.

Would something to this effect be suitable: “The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments.”

If you have any suggested changes, or particular additional caveats you’d like included, please let me know.

Thanks Uros.

The wording looks fine to me. We were planning to update the reports after the adjs are finalized. Would it be fair to refer to the current version of the report as 'draft' and note that it will be revised once the process is complete?

Copying Cindy on this response as well, as she may have additional advice.

Thanks.

Nadine

Subject: RE: Asset Ceiling Reports

Hi Nadine,

Shayan is still sick today, so Christina and I will make this change.

Would something to this effect be suitable: "The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments."

If you have any suggested changes, or particular additional caveats you'd like included, please let me know.

Subject: Asset Ceiling Reports

Shayan,

Cindy would like to share the results of the Asset Ceiling analysis with the OAG prior to completion of the work related to pension adjustments. We would like to include appropriate language/caveat regarding pending adjs and plan to update once complete.

Can you please insert the appropriate caveat in the draft report and resend.

Thanks in advance.

Hi Nadine,

Yes, the intention is to keep the DRAFT stamp on the reports until the adjustments are finalized. To make that additionally clear, I suggest adding a sentence to the disclaimer below so that it reads as follows:

“The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments. This document should therefore be considered a draft that will be finalized subsequent to the conclusion of the year-end adjustment review.”

Subject: RE: Asset Ceiling Reports

Hi Nadine,

Shayan is still sick today, so Christina and I will make this change.

Would something to this effect be suitable: "The year-end adjustments shown in this document are based on the current existing approach to determining such adjustments. We understand that this approach is being reviewed, and to the extent there are changes implemented, they may affect the adjustments shown in this document. These changes, if any, will not affect the substance of the asset ceiling tests outside of these year-end adjustments."

If you have any suggested changes, or particular additional caveats you'd like included, please let me know.

Shayan,

Cindy would like to share the results of the Asset Ceiling analysis with the OAG prior to completion of the work related to pension adjustments. We would like to include appropriate language/caveat regarding pending adjs and plan to update once complete.

Can you please insert the appropriate caveat in the draft report and resend.

Thanks in advance.

Nadine

Wondering if we could leave the reports as they are and OPCD add the caveat in an email to the AG's office re: the impact of any adjustment. I'm assuming nothing coming out of the adjustment work will impact the conclusion on the asset ceiling test.

Cindy

Thanks Uros.

The wording looks fine to me. We were planning to update the reports after the adjs are finalized. Would it be fair to refer to the current version of the report as 'draft' and note that it will be revised once the process is complete?

Copying Cindy on this response as well, as she may have additional advice.

Thanks.

Importance: High

Hi Christina,

Thank you for your note.

In addition to the analysis that you and Shayan performed for the ELHT in late March under PS3250 and PS3255, Cindy and Nadine would also like to do some additional analysis under PS3200 (as a follow up to Cindy's briefing).

As you suggested, can you please help to set up a call with Suzie, Blake, and Lee Ann to have a further discussion on this?

Please let me know a time that works for you. On our side, I will also invite EDU to be part of the discussion.

Thanks,

Alicia

Subject: RE: Benefit Trust Accounting - employees on LTD

Hi Alicia, Nadine,

The fact that the funding remains the same in the event of disability does not mean a liability does not exist. The current benefits provided to active members are in exchange for services rendered and are therefore a current cost with no associated liability. However, once an individual goes on LTD, they are no longer providing a service and an obligation in respect of the total employer cost to providing benefits during the expected period of disability must be recorded under PS3255. We would expect the actuaries to take into consideration the expected length of disability, current (i.e. portion of fixed contributions relating to LTD members) and anticipated future costs over period of disability and discount these to the measurement date.

In our earlier discussions and draft paper, we noted that we did not believe there is a liability under PS3250/3255 existed in respect of active employees. Please confirm if you would like us to contact Blake Langill and Suize Gignac to consider whether a liability (outside of PS3250/3255) for the ELHTs may need to be reported? I don't believe we were ever requested to do so, but wanted to ensure we are on the same page.

Regards,

Christina

To: Sun, Alicia (TBS)

Cc: Yeung, Anthony (EDU); Yang, Andrew Dehai (EDU); Di Pasquale, Romina (EDU)

Subject: Benefit Trust Accounting - employees on LTD

Hi Alicia,

We recently had a question from one of the school boards on the proposed accounting treatment of employees on long term disability (LTD).

Q - The funding that flows from school boards to the trust is a fixed amount based on 2014-15 financial statement information plus prescribed percentage increases. If an active employee goes on LTD, the amount of funding to the trust does not change. If more or less employees join the plan, the amount of funding does not change. Due to this, the actuaries are not clear how to value the liability related to the LTD since it is not based on a "per person" amount; it is a fixed amount for the board. How would the LTD liability be valued now that the funding is now fixed? Even though an person will go on LTD and receive benefits, this doesn't mean that the boards' funding to the Trust will increase. How would the liability get adjusted?

Is this a question you could pass on to your consultants for review?

Thanks,

Elizabeth

RE_ CD Howe Notes Apr 25.docx.rtf

From: Petsche, Nadine (TBS) []
To: Colley, Matthew (CA - Toronto) [mcolley@deloitte.ca]
Subject: RE: CD Howe Notes Apr 25.docx
Date: Wednesday, April 26, 2017 06:59:05

Thanks Matt.

Any suggestion that preparers sign off on accounting treatment that does not fairly present, but which is rather intended to support political objectives of 'balancing the budget', is also concerning.

Take care,

Nadine

From: Colley, Matthew (CA - Toronto) [mailto:mcolley@deloitte.ca]
Sent: April-26-17 1:02 AM
To: Petsche, Nadine (TBS)
Subject: CD Howe Notes Apr 25.docx

Hi Nadine,

Here are some suggested edits – I thought there was some value in calling out the facts that were mis-representative of the pension issue in one place vs the other issues around conduct that were noted.

There is one other issue that was present today in tone, but not as hard as what the tone was last year – she is undermining public company audits by implying that her opinions are more independent because she is not paid directly for her opinion. I know this was mentioned in our big meeting with her back in September, but this time it was more around firms issuing audit opinions. I know this isn't quite relevant to your situation, but as an employee of a public accounting firm, I can't help but be upset that she thinks that we are somehow less independent. It is troubling for the profession that a CPA would think that about her peers.

Kind regards,

Matt

I have tried to reach the AG by phone this morning. I have also sent a written request for her to confirm that she has nothing to add in terms of facts or information that we should consider. We are getting the final draft of the opinion ready. I am considering what my position will be on issuing if I don't receive the written confirmation that there is nothing to add.

Although it's not relevant to my opinion, I'd also like to understand what to expect from your end. But that's probably best discussed.

Hi Cindy,

Yes I did look at these calculations with Martin. In Tab 1, the assets would be 125% of the obligation in year 2025 which would cause contribution reductions. Martin did the calculations out until the impact on the present value was insignificant, basically noting that you would have to consistently withdraw on your surplus to always just keep under the CRA limit.

The second tab has a three year delay when the contribution reduction takes effect because the going concern valuation (which I believe is the valuation that is used to assess Income Tax excess surplus) also projects future benefits and contributions for current employees and factors into the surplus/deficit a notion of services not yet rendered. Martin found that this created a $12B deficit which he think could delay the attainment of excess surplus for 2-3 years.

Hope this helps,

Matt

Hey Matt – did you have a conversation with Martin on these calcs. I'm not sure how to interpret how long it would be until contribution reductions would have to kick in. It looks like 2025 in the first tab and 2029 in the second tab – is that right?

Re_ A couple of questions.rtf

From: lucy.durocher@ca.pwc.com [lucy.durocher@ca.pwc.com]
To: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]
Subject: Re: A couple of questions
Date: Thursday, December 01, 2016 20:11:05

Hi Nadine,

Sorry we've missed each other's calls. I was picking up my daughter. I am available on my cell until 7:45pm if you want to chat re: 7600 reports. I would think the panel is OK because 7600 applies to "public accountants" that provide written or oral advice on the application of accounting principles to specific transactions. If the panel is not acting as "public accountants" then I don't think their conclusions could be seen as an opinion on the application of accounting principles, but that said, I don't know the composition or the terms of reference of the panel to be able to say definitively. However non-public accountants would not be expected to apply GAAS, and any recommendations they made would be considered in that light. (Although I would think that they would also be careful in how they phrase their recommendations anyway).

In respect of the first question. It's a good question. I don't think that it aligns with my understanding either. My interpretation of the language used is that the Actuarial benefit liability is the Fair value of plan assets - full actuarial valuation (including all actuarial gains and losses), and the add back of the unamortized losses gets to the "accounting number" of $202.7M asset. This is the accrued benefit asset. However, under the standard the losses would be subtracted again to get to the "Adjusted benefit asset" being the $248.3 liability. Obviously no valuation allowance would be required against a liability. There is no VA required against the accrued benefit asset if the asset exists only because of unamortized losses. This is because over time that asset will be "realized" through the amortization of the losses and bring down the position of the plan to a liability position over time.

As the phrases "Accrued benefit asset" and "adjusted benefit asset" are not used in the slides it is hard to be certain that this is what is meant in the slides. However I think the standard is quite clear in 3250.054 that the valuation allowance is the excess of the adjusted benefit asset over the expected future benefit (in this case $nil). So if somehow they got to a position where the adjusted benefit asset is $202.7 asset the VA would make sense. It is difficult to see how the adjusted benefit asset could be $202.7 asset though based on the fact that they are adding back and not subtracting unamortized losses to get there.

Hi Lucy.
Just forwarding a couple of docs regarding the NB situation. Having a bit of difficulty following the last slide of the second attachment and how the calculation aligns with my understanding of how the adjusted benefit asset should be computed. (you'll note that the calc begins with a liability vs. asset).

Also, wondering if we can chat regarding the nature of a 7600 Report, just to confirm whether the work being undertaken by the Panel could ever be categorized as such. I don't think so, but would appreciate a chat.

I saw that you called earlier. Talk to you soon.

To: Danyluk, Kerry (CA - Toronto) [kdanyluk@deloitte.ca]
Subject: Re: Advisory (revised wording related to accounting opinion)
Date: Monday, November 07, 2016 11:39:04

Thanks Kerry. We can't share the AG's report, and I am on the road, but I will try to get you the extract with the AG's recommendation. We need to sent the AG our wording tomorrow am, so a response back by end of Dat on the draft extract provided would be good. N

Hi, Nadine. We will have some alternate wording for this to propose to you. But before we do, I'm wondering if it would be possible to see the comment that it is responding to? Or to get an understanding of the key points raised in that comment? Please let me know. If it's easier to just talk about it, we can have a call.

The summary itself is in for final review as is the wording for the limitations around the opinion to be given to the panel.

Regards,

Kerry

Good morning!

Just forwarding the most current wording for your review and feedback. Please advise of any concerns. Thanks.

Nadine

During the course of the Public Accounts audit, the Auditor General was provided with analysis and support on the province's interpretation of public sector accounting standards to the Province's jointly sponsored pension plans. This information included an external accounting opinion that addressed issues related to the requirement for a legally enforceable right to reduce contributions (which supported the Province's interpretation) and considerations on incorporating the impact of legal uncertainty in estimating the valuation of the net pension assets.

Hi, Nadine. I'd like to understand the context a bit better. Will this commentary go in a public document? We will need to have the context before responding.

With respect to the actual wording, I don't think it's true to say that our report supported your accounting treatment. You recorded an asset of around $10 billion and we declined to provide a view on the amount of the asset. So this description goes beyond the scope of our report and we would not agree to it as worded below.

Regards,

Kerry

Matt/Paula/Kerry,

We are currently drafting our responses to the AG's Chapter 2 of her Annual Report. Below is an extract that refers to your opinion. It is a generic reference which I understand from discussions is OK. Please confirm.

Nadine

During the course of the audit of the Public Accounts of Ontario 2015-16, the Province shared background and analysis on interpretation of public sector accounting standards to the Province's jointly sponsored pension plans, including an accounting opinion from an external public accounting firm which addressed questions regarding legally enforceability of the Province's right to recognize a pension asset under PS 3250 and the impact of uncertainty with regards to assessing the government's expectations of future benefit from a pension asset.

I think the documentation and the answers we've provided about yesterday's announcement provide the answer Deloitte is looking for.

Our restoration of CIP in line w fmp procedures results in a decrease to our future

contributions.

You can point to the document that Cindy shared from the public website to indicate everytime CIP restoration above 50 percent has happened over the last few years.

Do you think that will help?

Subject: Analysis of how surplus could reduce future contributions

Hi Cindy and Nadine,

Have you performed an analysis that shows how, through the mechanics of the FMP

and with regard to the position of the entity at the year end, how the Province could realize the surplus through reducing its contributions?

Based on the key funding decisions from 1990 onwards it appears that there was a contribution reduction in 1993, 1996, 1998 but then nothing since then (although this appears to be due to the fact that we were in a funding shortfall position until 2012). So why is there an expectation that this asset will be recovered through future contribution reductions and what roadblocks stand in the way of this?

This might warrant a discussion rather than a response, and apologies for the tone, but we are asking the questions to strengthen the communication of the analysis that has been given to date.

Thanks

Matt

Subject: As discussed

Hi Lucy.
Further to our discussion, below is an outline of the work we discussed. The work relates to the jointly sponsored pension plans (OTPP and OPSEUPP) as reported in the Province's consolidated financial statements.
I'll look forward to hearing back from you.
Best regards,
Nadine
416 562 9509

The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following

- □□□□ Taking into account public sector accounting principles, advice and guidance on complex accounting and reporting matters related to accounting for pensions on the Province's consolidated financial statements.
- □□□□ The Vendor will participate in meetings as necessary to support the engagement objectives:

- □□□□ Working with management of OPCD's Accounting Policy and Financial Reporting Branch (APFR), the provider of complex accounting services related to the following possible areas:

- □ □ □ □ Develop discussion and analysis material
- □ □ □ □ Develop draft input/briefing materials/option papers
- □ □ □ □ Provide accounting advice and guidance related to the accounting for pensions on the Province's financial statements
- □ □ □ □ Participate in discussions with internal and external stakeholders, as required

As part of this engagement, the consultant(s) would be expected to provide professional accounting expertise in assessing actuarial assessments for specified plans in relation to applying the ceiling test to the accrued pension benefit assets in accordance with PS3250 (3250.050 to PS3250.059).

This e-mail is intended only for the person to whom it is addressed (the "addressee") and may contain confidential and/or privileged material. Any review, retransmission, dissemination or other use that a person other than the addressee makes of this communication is prohibited and any reliance or decisions made based on it, are the responsibility of such person. We accept no responsibility for any loss or damages suffered by any person other than the addressee as a result of decisions made or actions taken based on this communication or otherwise. To: Petsche, Nadine (TBS)
Subject: Call on Wednesday

Hi Nadine,

I am so sorry to have to do this, but can we reschedule our call from Wednesday to later in the week? Unfortunately my computer has essentially crashed and I cannot work in Word or several other applications. Due to my travel schedule I can only get it fixed on Wednesday morning, and so I won't be able to have anything in a reasonable shape to circulate to you and Cindy in advance. Would you be able to reschedule to Friday? I can do any time on Friday except 12-2pm.

Apologies for this once again--- technology is a double edged sword.

Regards,
Lucy

Hi Nadine,

I can't make the 1:30 invitation you sent. I am travelling this afternoon and will be tackling airport security around then!

I can do a call later in the day, say between 5:30 and 7pm.
Or I can do a call earlier this morning before 12pm.

Tomorrow I am at a conference, but I could step out in the morning for a call.

Let me know what works best for you.

Lucy

RE_ Deck outline.rtf

From: Petsche, Nadine (TBS) []
To: lucy.durocher@ca.pwc.com [lucy.durocher@ca.pwc.com]
Subject: RE: Deck outline
Date: Friday, October 28, 2016 12:21:02

Lucy,

What would you think about moving the AG's position to the end of the paper and the deck? I think that there is a risk to presenting the AG's position first in the paper (and deck) and taking a defensive stance. I think another way to approach it would be to provide an overview of PSAS, and the Province's interpretation and application thereof, and lastly present the position of the AG (which doesn't necessarily tie back to any of the requirements or application that would have already been addressed)?

Subject: Deck outline

Hi Lucy.
Jim has drafted an outline for a preliminary briefing deck, based on the previous version of the position paper. Attached are my suggested edits which I have not yet shared with him.
I was thinking that it might be worthwhile to also get your comments so that he could revise the content more efficiently (once transferred to a pp format, track changes will be more challenging).
Hoping that you have some time to reflect and provide feedback on the outline.
Would like to provide him feedback by tomorrow, if possible.
Thanks in advance.

Subject: Deck outline

Hi Lucy.
Jim has drafted an outline for a preliminary briefing deck, based on the previous version of the position paper. Attached are my suggested edits which I have not yet shared with him.
I was thinking that it might be worthwhile to also get your comments so that he could

revise the content more efficiently (once transferred to a pp format, track changes will be more challenging).
Hoping that you have some time to reflect and provide feedback on the outline.
Would like to provide him feedback by tomorrow, if possible.
Thanks in advance.

Subject: Draft Memo For Your Review - Assessment of HOOPP Letter (dated April 28th)

Hi Christina/Shayan,

As you may recall that HOOPP provided a letter (dated April 28th) to the Province indicating a change in indexation change for expected terminated members. Please see Appendix 1 for the original HOOPP letter.

We did an analysis based on your initial feedback and some consultation with our Pension Policy group. Please see attached a draft memo for your review.

Please provide comments.

We can have a brief discussion on this topic tomorrow if you wish.

Thanks,

Alicia

Subject: Re: Draft Pension Asset Position Paper Oct 22 np to ld with responses np2_cvnp v2.docx

Hi Nadine,

I know it's not ideal from a version control perspective, but I took a "fresh read" of the paper and had a number of other suggestions for clarity of language and also for ordering as there was some repetition of ideas in places. I think the paper is looking quite good now though.

Please see attached a revised version of the document I send around yesterday. Please use this one in terms of whether comments have been addressed and additional comments. We can discuss on Monday.

Jim - I have noted some sections of the partners agreement that I think would be useful to add into the appendix and left a comment for this. I am hoping that you would be able to summarize them and add them into the appendix in the same manner as the current references.

Thanks
Lucy

Subject: Re: Draft input to position paper (background)

Hi Nadine,

Thanks for sharing this. I have not read it in detail yet, but I will before our call tomorrow.

I attach my thoughts for the elements that I have been working on. As I read the background I will consider how to integrate/add as well. I did not attempt to do that yet as I thought it better to circulate this first in advance of our call tomorrow.

I believe we are talking at 10am. I asked Shyrose for conference call details, but if I don't hear back, I will assume it is the normal conference call number that we used last week and dial into that.

Regards,
Lucy

Lucy,

Just had a quick glance. As you review the other section of the draft paper, I think you'll find some overlap with the work you have done. That said, perhaps your table summarizing the diffs between funding and accounting approaches could serve as a good appendix to the paper, to supplement the narrative referenced already.

Looking forward to our discussion, and still hoping that we'll be able to pull together a draft of the paper for end of day. Thanks. N

Hi Nadine and Bharat,

We have some of the items we need for our work on the asset ceiling for OTPP and OPSEUPP.

Could we also request the following additional items?

1) Actuarial funding valuation reports for each plan

2) Any calculations or supporting documentation related to the asset ceiling determination

3) Funding policy statement

Thanks,

Shayan

Subject: EY review of ceiling tests on OTPP and OPSEUPP

Bharat,

Just wanted to let you know that Shayan and Christina of EY will be planning to come to our offices on Monday afternoon to start their work on the asset ceiling test for OTPP and OPSEUPP.

They will use John Psinas' old office as they did last time.

Shayan will send a listing of required files this afternoon. Hoping we'll be able to collect all of the necessary info for them to start their work. Please note that they won't be using our system, so the details will need to be provided in a USB.

Thanks.

Nadine

Subject: Employee Life and Health Trusts (ELHTs) - accounting treatment

Hi Nadine,

As requested, we have prepared the attached document discussing the following topics:

1) Accounting treatment related to the provisions of the ELHTs under PSAB 3250/3255 (and the associated risks to the school boards)

2) Comparison of the ELHTs with Shared Risk Pension Plans

Both Shayan and I will be at Queen's Park tomorrow. Let us know if you have any comments. We are available if you would like to discuss prior to our meeting on Wednesday.

Regards,

Christina

Subject: Expert Panel -- Pension Issue

Hi Mr. Gold,

Scott Thompson passed along the message that you would be interested in assisting with the expert panel the Province is setting up to review the accounting for pension assets. We are now in the process of identifying candidates for the panel.

We have drafted the terms of reference for the panel, which I've attached.

Would you please review these, let me know whether you have any questions and confirm back that you continue to be interested. We can then set up a time for a conversation (assuming you are still interested!)

Hi Kerry.
Thanks for your response. Yes, I did know that Matt is away on vacation and he had mentioned that you would be the contact during his absence, which is why I sent the note.
Pina did reach out to me yesterday and I will plan to chat with her today on the work to be done on the other plans.
With regards to the opinion, great to hear that work is underway. There is a desire to attend firm up the release so that we are ready when the Panel commences its work. I think that a call would be helpful to discuss status on the opinion considerations. I've cc'd Cindy's admin assistant on this response so that she can help to set up a call.
Thanks again.
Nadine

Hi, Nadine. I think you knew that Matt is away this week on vacation? However, I believe that he has organized someone on his team to get in touch with you about the other pension analysis. Maybe she has already done so?

Regarding the question of permission for the opinion, I am still working through that question and what caveats we might want to put on it.

Please let me know if you wish to discuss.

Kerry

Hi Kerry.

I'm just following up on a couple of items that I talked to Matt about last week...
1) permission to share the accounting opinion with the Pension Asset Expert Advisory Panel -. Please confirm if such permission is granted and advise of any related considerations with regards to such sharing.
2). Extended pension analysis for OPSEUPP, HOOPP, CAATPP. As discussed with Matt, we are expediting acctg analysis for the remaining 3 plans wrt accounting for plan assets on the Province's books. Matt had indicated that staff would be assigned, and we assume that work is underway or to be started shortly. Completed analysis is considered important as input to the Panel. We would like to touch base on status and next steps (note; we have not yet received any requests for infoirmation).
Please let me know when you might be a available to discuss.
Thanks.
Nadine

Date: Monday, November 07, 2016 15:26:11

Hi Pina.
Unfortunately, we don't have any notes (that we could find) on the plans outlining the reason for the accounting decisions originally made by OPCD. Applying a similar lens as was applied to the OTPP plan, the ask is to provide accounting advice on how to treat a net pension asset on the Province's consolidated financial statements (so would have to address the 2 questions in the accounting opinion, but in relation to the OPSEUPP in particular).

Subject: Format for plan analysis

Pina,
In the interest of expediting the analysis and documentation related to the other plans, I think it might make more sense to just build on the information note format that was provided for OPSEUPP. We (OPCD) will just leverage the key elements of the analysis in developing the supplement to the OTPP position paper. Your thoughts? N

Sent: October-23-16 10:21 PM
To: Petsche, Nadine (TBS)
Subject: RE: Fw: Flowchart for Minister Sousa

Yes. As the gains get recognized the "accounting" amounts get lower - towards the blue section, which extends the AcSB and makes it higher (ironically, increasing the valuation allowance needed to offset the increased benefit recognized).

See below where the amount recognized in the financial statements is moved down to the actuarial calculation level. The accrued benefit asset is now larger.
The definition of the AcBA in the standard is based on the amount "recognized"in the financial statements - i.e. excluding all unamortized gains or losses. However as slide 3 shows when these are unamortized losses the AcBA does not really represent the underlying plan surplus so the unamortized losses are backed out to get the AdBA.

Lucy

Subject: RE: Fw: Flowchart for Minister Sousa

Thanks Lucy.
I understand that the ABO is being reported at a higher amount because of unamortized gains which is the source of my confusion…if the 'gains' were recognized, then the ABO would be a lower amount and the AcBA would actually be higher? Again, it's likely just me thinking too much. Perhaps the standard requires that the unamortized gains be added to the ABO, and eliminated for purpose of measuring the asset component, for conservatism sake (minimizes the amount of the resulting AcBA)? n

From: lucy.durocher@ca.pwc.com [mailto:lucy.durocher@ca.pwc.com]
Sent: October-23-16 10:07 PM
To: Petsche, Nadine (TBS)
Subject: RE: Fw: Flowchart for Minister Sousa

Hi Nadine,

I had to think about this a bit, so I hope I got it right.

The idea is that the ABO is a liability. So the higher the bar, the higher the liability. This is different than the asset when the higher the bar, the higher the asset - hence why the difference between the two represents the "surplus".

So in the first slide, there are actuarial gains because the actuarial valuation is lower than it is measured at in the financial statements because there have been changes in actuarial assumptions that have not yet been amortized. In other words in previous years the actuarial valuation was higher, but was revised downwards, creating actuarial gains. As these have not yet been amortized into the income statement the liability is actually being measured in the financial statements at an amount higher than the actuarial valuation.

The opposite is true for the asset column, but it's a bit more intuitive to follow. The plan asset are now worth the higher amount, but the financial statement measurement has not yet caught up with that.

On slide three there are losses because the actuarial amounts are higher than the financial statement amounts for the liability, and the fair value amounts are lower than the financial statement amounts for the assets.

I have added in some lines and labels on slides 2 and 3 that I think might help a bit.

Subject: RE: Fw: Flowchart for Minister Sousa

Hi Nadine,

Thank you for your edits. I think the AdBA/AcBA suggestion is great. I was not sure how to handle that one, but I think these acronyms work well. I have made some additional edits to conform all the references to these, and to further clarify some of the language.

I think your clarifications are helpful and make sense. I have turned the fonts back to

black for consistency.

Please see attached for revised.

Lucy

Lucy,
Thanks so much for this. I've had a chance to review in further detail and I have a few comments/observations:

- Please see the sections with red font. Just wondering if something is missing or could be clarified. For sake of clarity, thinking that terms of AcBA and AdBA might help reduce some confusion caused by ABA vs ABAJ Please see my suggested edits to confirm if appropriate.
- Last slide is great. I've inserted some modified description wording. Would be appreciated if you could review to see if you are ok with the wording.

Thanks again.
Nadine

Subject: Re: Fw: Flowchart for Minister Sousa

Hi Nadine,

That was very helpful.

The "flow chart" was a bit tricky to put in a neat box because of the complex numbers and ideas that are involved. Please see in the attached power point there are two "flow charts" to show the impact on the statement of operations for two scenarios - funding of contributions over the current service cost - the 2015/2016 situation and an economic downtown (decrease in plan assets) - the 2008 situation. I used the numbers provided for the 2015 situation. I did not have the 2008 ones readily to hand.

However to explain the concepts in the flowcharts, I thought it might be helpful for the panel to have a visual explanation of how the various components of the pension plan are measured, how the ABA and adjusted benefit asset are calculated and therefore how the valuation allowance is calculated - assuming a full valuation is provided against the ABA/adjusted benefit asset. I included an additional 3 slides to illustrate these concepts i) for actuarial gains (the current situation) ii) for actuarial losses (the presumed 2008 situation) and 3) to illustrate how the changes in the valuation allowance flow through to the statement of operations/deficit.

I hope the Minister will find this helpful.

Hi Nadine -- I put together some slides explaining the numbers re: the pension issue. How are things going with the flowchart? Depending where things are, you may want to use the same numbers if you are using numbers.

Please send an update as we need to get this to the MO for tomorrow morning -- thanks,

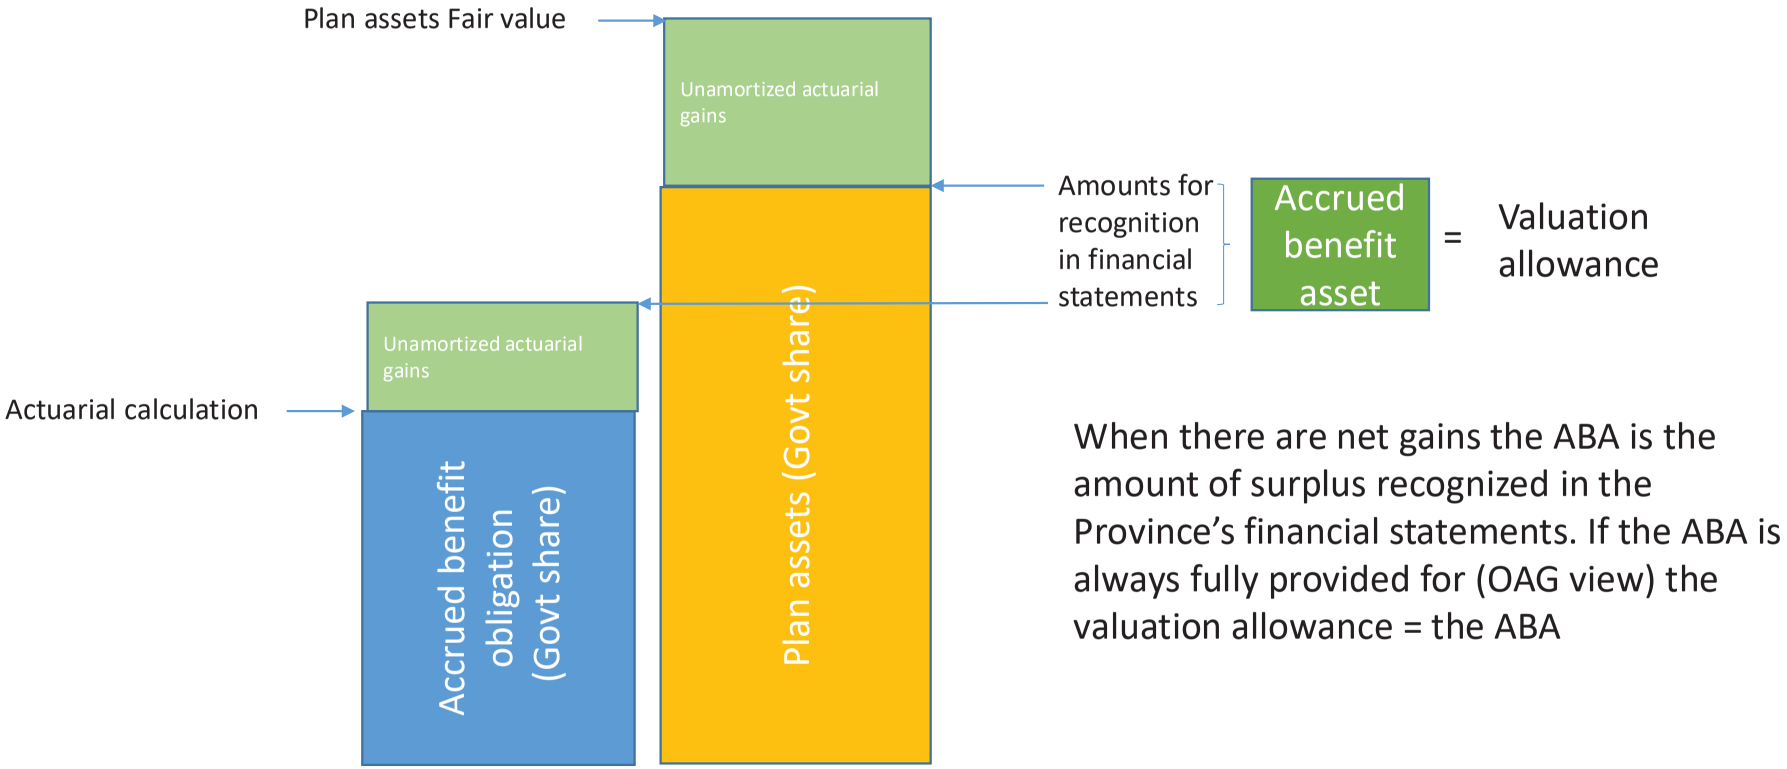
Impact of a Valuation Allowance on Pension Assetsnp2.pdf

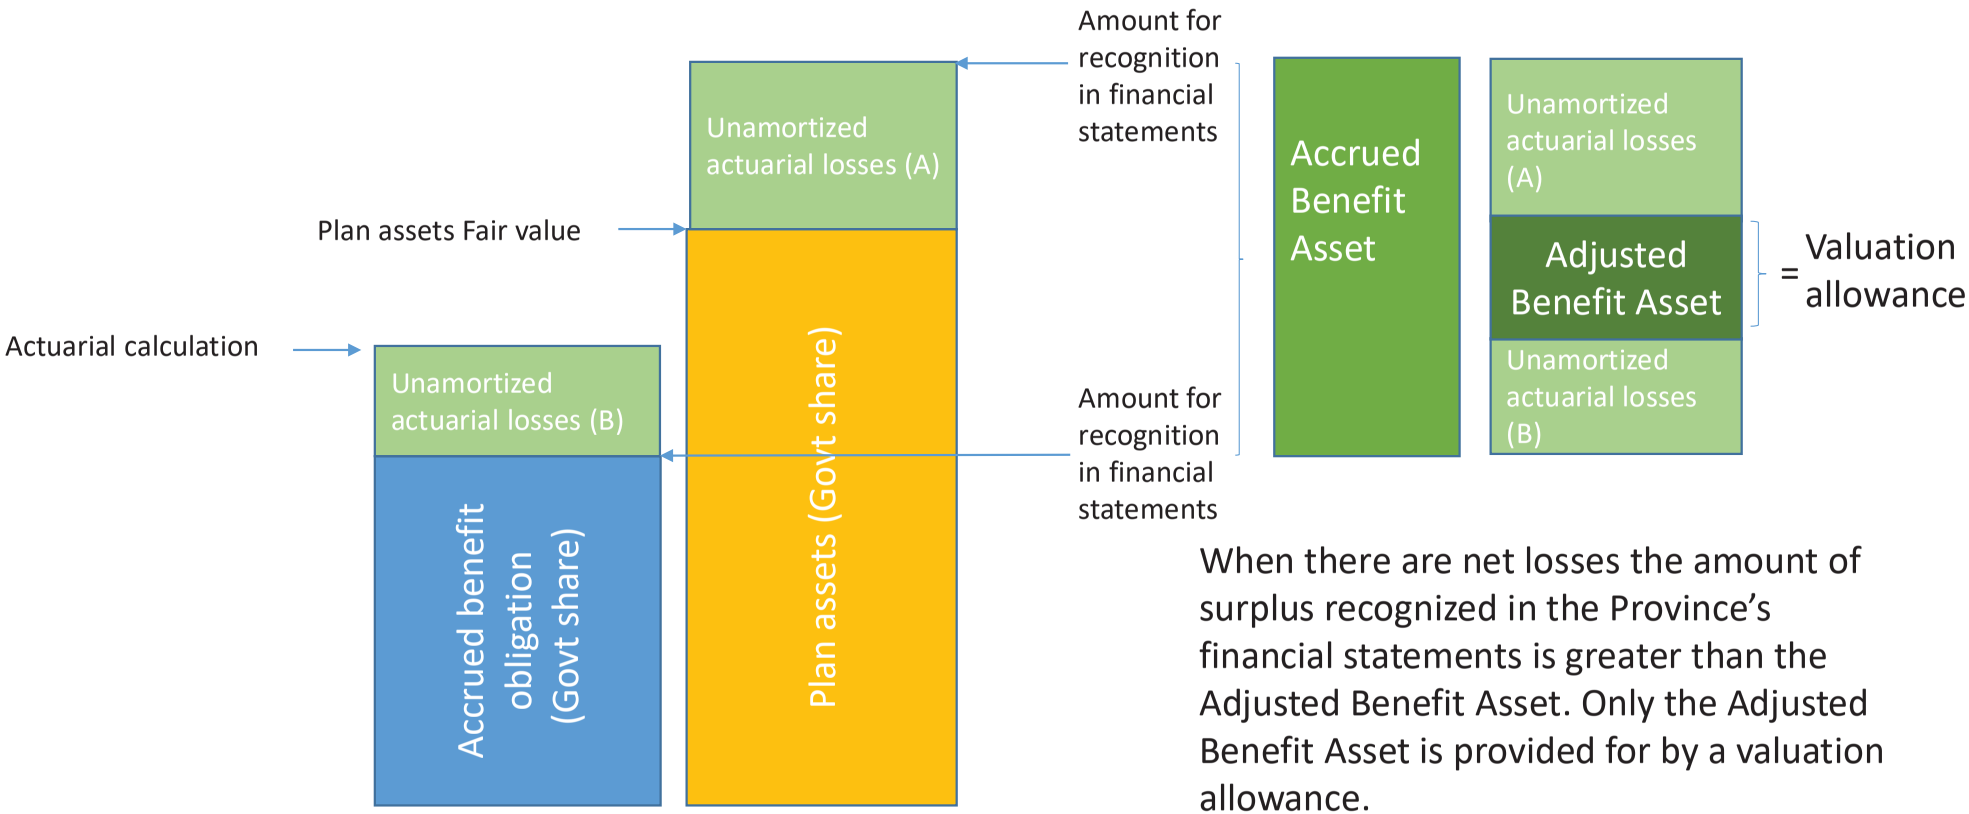
Impact of a Valuation Allowance on Pension Assets

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



When there are net gains the ABA is the amount of surplus recognized in the Province's financial statements. If the ABA is always fully provided for (OAG view) the valuation allowance = the ABA

An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses

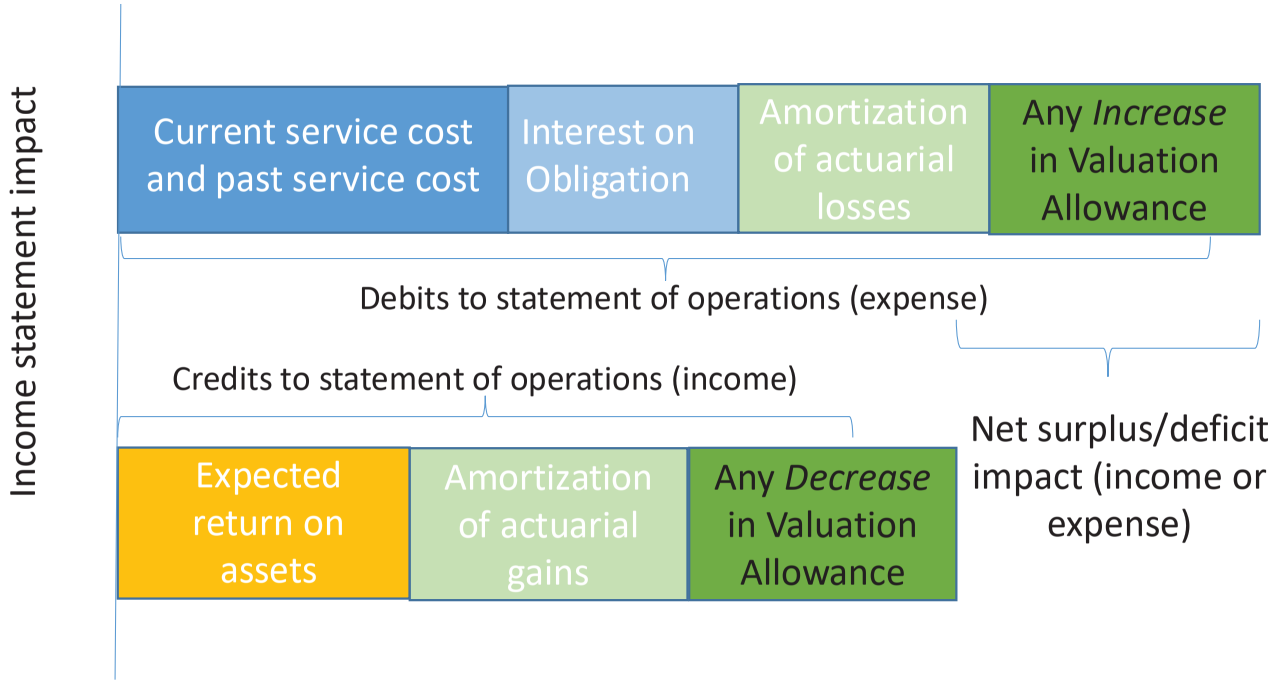


When there are net losses the amount of surplus recognized in the Province's financial statements is greater than the Adjusted Benefit Asset. Only the Adjusted Benefit Asset is provided for by a valuation allowance.

Components of Expense

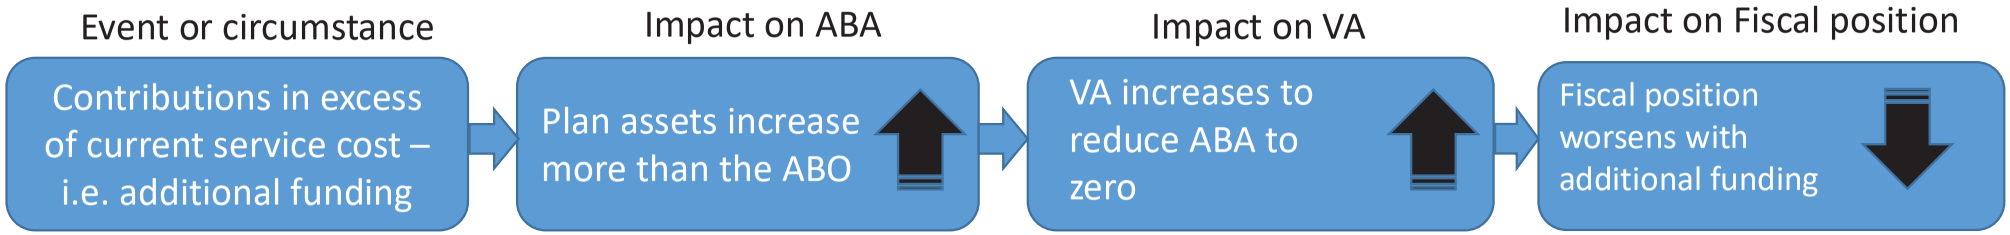
The *change in* the valuation allowance flows directly through the statement of operations.

The change in valuation allowance = the change in the AcBA



Changes in the Accrued Benefit Asset

Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]



2015-2016 example:
Contributions of $1,812M exceeded other elements of pension expense by $1,514M

2015-2016 example:
Additional contributions increase plan assets. AcBA increases by $1,514M

2015-2016 example:
AcBA increase of $1,514M results in an increase to the VA of $1,514M

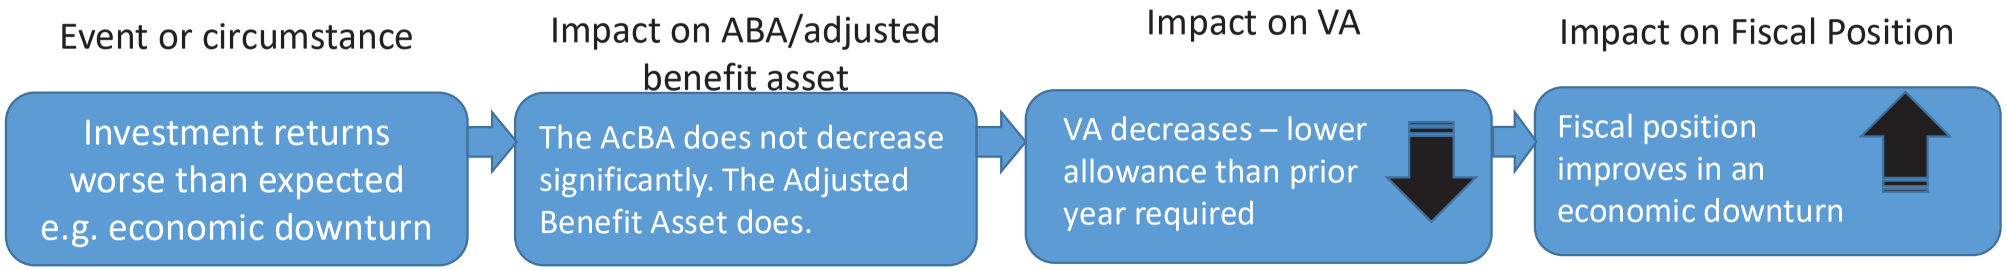
2015-2016 example:
Deficit increases by $1,514M.

The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

Changes in the Accrued Benefit Asset

Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]



Plan assets fair values significantly lower in one year.
Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.

The AcBA is based on the higher, smoothed plan assets and does not change. However the actuarial losses are subtracted from the AdBA to give a smaller adjusted benefit asset than the AcBA

Prior year allowance was based on AcBA. Current year is based on because only the adjusted benefit asset is provided against. The adjusted benefit asset is smaller than the ABA because of the increase in unamortized losses.

Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. The increased actuarial losses would only impact in future years.

A similar impact would have been noted in 2008 if the OAG's position was reflected in the financial statements for that year.

[1] Impact of change, all other elements being held constant.

Subject: Re: Internal Doc for your review/consideration

Thank you. I think this is a critical part of the analysis.

In respect of the SOW, I discussed the issue with our internal groups. Under Section 7600 of Canadian GAAS, any accounting opinion must contain "restriction of use" language in the opinion, which does restrict the use of the report and the reliance that third parties can place on it. However the standard notes that notwithstanding this restriction, the report can be shared with the incumbent auditor, so sharing with the OAG is definitely permissible, but publication of the report to third parties will be of limited use because they cannot rely or use the report. I understand that in similar situations we permit references to the report, but generally not the reproduction of the report publicly because of the restriction of use.

Based on this, I have suggested amended language in the SOW (in tracked changes from the last version you sent me), that also captured the concerns about what the OAG would do with the report once it has been shared. Please let me know if this is acceptable to you and your legal department, and then we can finalize. All the other edits suggested by you in the last version were accepted.

Hi Lucy.
One of our staff have prepared the following analysis of PSAB's guidance on the government partnership standard and sec. 3250's reference to joint defined benefit plans.
I think you'll find it of interest.

Thanks Shayan.

To assist with transition of the actuarial support services file, it would be helpful if you could send a summary by tomorrow reflecting the various activities for which services have been provided to date, as well as planned activities through to the end of the contract term (as discussed).

Thanks again for all of your help on our pension file. It has been a pleasure to work with you, Christina and Uros.

Best regards,

Nadine

Subject: Re: fyi

Hi Nadine,

I have a couple of specific additional questions that I did not think needed to be asked to the broader group as they relate to specific parts of the information that you have sent me. I think these relate to Deloitte calculations. I thought I would start with you so you were in the loop as to my questions, but you may need to ask Deloitte to follow up on these - I think they are actuarial questions, rather than accounting questions, so I did not ask Matt Colley when I spoke to him earlier.

- In the binder, section 4, there was a document called "Deloitte responses to OAG follow up questions, which included a calculation supporting the OTTP expected future benefit calculations. It looks like it was originally prepared in Excel. For clarity this is the calculation that shows the adjusted benefit asset as $10.1, the perpetuity of employer service cost - accounting as $44.6 and the minimum employer funding requirement as $15.3

- For the minimum employer funding requirements, the table shows that it is 10 years of the estimated contributions under the plan that are discounted to support the $15.3M as minimum funding contributions. Why is 10 years used?
- The reference indicates that the amounts of estimated contributions are based on the funding valuation of "scheduled contributions" (Pages 15 and 16), My read of the agreement is that these scheduled contributions are based on the estimate of pensionable earnings x the appropriate rate (11.5%/13.1%) which is consistent with Schedule 1 of the plan, and are not based on minimum funding contributions that are required by the pension regulator to fund a deficit. Can this be confirmed.
- The contribution levels under Schedule 1 cannot exceed those that would be permitted under the Income Tax Act, which limited deductions for contributions that are made when a plan has a certain level of funding surplus. Have the Income tax limits been considered in projecting forward the estimated minimum funding contributions that are required under Schedule 1?

In essence I am assessing whether the minimum contributions make sense - there could be an argument that, under schedule 1, the employer contributions at the base level of 10.4%/12% would continue in perpetuity until schedule 1 is changed by the partners. This would obviously change the outcome of the expected future benefit calculation, and, in a worse case, could eliminate all the expected future benefit.

- I did have talk to Deloitte earlier to touch base with them. They have indicated that they have circulated a statement of facts to you and your group for comment. It would be helpful if I could see this, when you are ready to share it, to ensure that all facts that I think will be pertinent to our analysis are included so we are all working off the same fact pattern.
-

Lucy

Subject: RE: impact of suggested pension adjustments

Hi Nadine,

We have left you a voice message earlier today related to your request below. As mentioned, we thought the spreadsheets used yesterday are more suitable for facilitating our discussions, and may not be the best stand-alone tools/summary for the analysis we performed.

As such, we have prepared the attached, which compares the current adjustments for OPCD for OTPP, OPSEUPP, and PSPP against our suggestions.

We didn't include CAATPP and HOOPP as the balance sheet positions would be nil after valuation allowance for these plans. We would also note that their adjustments (e.g. "difference in contributions") are similar to those of OPSEUPP and much smaller in amount. The attached does not reflect any adjustment for OPSEUPP related to the adjustment for the differential use of RSF by the joint sponsors, as demonstrated in the draft OPSEUPP asset ceiling test documentation.

Also attached is an e-mail we provided earlier this week discussing the key year-end

adjustment items.

Shayan will not be available for the remainder of the day. Feel free to contact me if you require any additional information.

Have a great long weekend!

Regards,

Christina

Subject: impact of suggested pension adjustments

Hi Shayan.

I understand that you reviewed the quantitative impact of the identified adjustments during your discussion with APFR staff earlier today. It would be helpful if you could forward a soft copy of your analysis.

Thanks in advance.

Nadine

Hi Lucy.
Jim has drafted an outline for a preliminary briefing deck, based on the previous version of the position paper. Attached are my suggested edits which I have not yet shared with him.
I was thinking that it might be worthwhile to also get your comments so that he could revise the content more efficiently (once transferred to a pp format, track changes will be more challenging).
Hoping that you have some time to reflect and provide feedback on the outline.
Would like to provide him feedback by tomorrow, if possible.
Thanks in advance.

Deck outline (JK) - OTPP Pension Asset Oct 27np ld.pdf

Accounting by the Province of Ontario for the Ontario Teachers' Pension Plan

Preamble

Analysis is specific to OTPP

Constating documents are different than for other pension plans in Ontario and in other provinces

Issue being considered

The Province followed the same accounting for OTPP for the prior 14 years during which the pension accounting standard (Section PS 3250) was the same

In relation to the 2015-16 public accounts for the Province of Ontario, the OAG disagreed with the Province's accounting for OTPP and OPSEUPP

The OAG disagrees that the surplus in OTPP is a reportable~~n~~ asset to the Province on the basis that:

- ~~as~~ there is no~~t~~ ~~a~~ legally enforceable right to the asset~~s~~
- ~~and~~ no agreement is in place at March 31, 2016 with the Ontario Teachers' Federation (OTF) to reduce future contributions

Formatted: List Paragraph, Bulleted + Level: 1 + Aligned at: 0.63 cm + Indent at: 1.27 cm

Reporting in the 2015-16 Public Accounts

Formatted: Font: Bold

The Province disagrees with the AG's interpretation of PSAB standards.

The Province believes their share of the plan accounting surplus should be recognized as an asset. The Province ~~intended~~expects to benefit from the reported pension assets through reduced contributions and has performed the requested pension asset ceiling test to confirm that the Province's estimated asset value is not impaired.

For purposes of the 2015/16 Public Accounts, the Province regulated the accounting treatment for pension assets for the jointly sponsored pension plans (OTPP and OPSEUPP) to reflect the Auditor General's interpretation of PSAB. Since Management does not agree with the AG's interpretation of PSAB as related to the jointly sponsored pension plans, ~~T~~the regulation was necessary to achieve the AG's accounting treatment and to allow management to sign off on the Statement of Responsibility ~~(since Management does not agree with the AG's interpretation of PSAB as related to the jointly sponsored pension plans)~~.

~~Regulated accounting for the 2015-16 public accounts does not reflect the Province's view of pension accounting under PSAS~~

Overview of OTPP

A jointly sponsored pension plan as defined in the Pension Benefits Act. The OTPP meets this definition.

The sponsors are the Province of Ontario and the OTF.

The sponsors are jointly responsible for decision making, share in ~~making~~ contributions, and collectively address any plan funding surplus/deficit (at least every 3 years)

The plan administrator is an independent board of directors and follows the direction of the co-sponsors on all key decisions, which includes plan structure, level of plan benefits, contribution rates, funding levels and contingency reserves and changes to the plan documents. ~~(not able to make any decisions w.r.t. contribution rates, uses of surpluses, etc.)~~

(INSERT SLIDE EXPLAINING PSAB STANDARDS AND COMPUTATION OF NET PENSION ASSET?)

PSAB options for recognition of pension asset were benefits to be realized through surplus withdrawal/contribution reductions…

Prior accounting for OTPP by the Province

Since 2001-2002, the Province has recorded its portion (50%) of the pension asset of OTPP in accordance with Section PS 3250

With regards to expected future benefit of the surplus, the Province would not expect to withdraw any surplus, but through reduced future contributions

-→ review history of use of surpluses for OTPP

~~Section PS 3250 is a primary source of GAAP which specifically addresses recognition and measurement of pension plans in government financial statements; compliance with PSAS requires following Section PS 3250 where applicable~~

~~Section PS 3250 was issued in 2001; there have not been consequential changes to the standard since its introduction~~

Question 1 – Recognition of a pension asset

First we address why the surplus of OTPP is an asset to the Province

Applicability of Section PS 3250 to OTPP

What is a JDBP?

~~Section PS 3250 specifically addresses the accounting for pension plans in government financial statements~~ Primary source of gaap

Shared control

Commented [LD1]: I agree this would be helpful, to summarize the model high level (Plan assets – ABO – umamortized actuarial gains/losses) to provide some context to the question.

Perhaps also shown 100% Plan numbers and then 50% plan numbers?

Commented [LD2]: For slide presentation consider whether this should be combined with "reporting in the 2015-2016 Public Accounts" because there seems to be significant overlap.
Point of this is to state Province's accounting, not necessarily explain how or why.
I would keep this before the slide explaining PSAB standards.

Commented [LD3]: What is the context – to provide factual back ground (OK to leave here) or to support the position (perhaps better in either recognition or measurement section then).

Formatted: Strikethrough

Commented [LD4]: This is covered on "issues being considered slide" as states that PS 3250 has been the same for 14 years. No need to repeat here.

Commented [LD5]: Are these highlight the three areas that will be discussed and then a slide on each?

Missing a slide on "Primary source of GAAP"

~~Section PS 3250 defines different types of pension plans; OTPP qualifies as a joint defined benefit plan (JDBP) as the sponsors share control over the plan (share in decisions relating to administration, levels of benefits and contributions)~~

Definition of JDBP

XX

Primary sources of GAAP

PS 3250 provides clear guidance that a JDBP is accounted for using PS 3250 and therefore is the primary source of GAAP that must be applied.

Other standards in PSAS including the Financial Statements Concepts should be referred to if PS 3250 does not provide specific guidance for a circumstance.

Concept of shared control and asset recognition

Section PS 3250 requires the government to account for its portion (as there is shared control) of a JDBP following the accounting requirements for a defined benefit plan within PS 3250; no distinction is made as to whether the plan is in a surplus or deficit position. In a JDBP the risks and rewards of a plan are equitably shared, so the Province's portion of the plan includes its share of any asset as well as its share of any liability

The Financial Statement Concepts definition of an asset includes "control" over an economic resource. Despite the conceptual framework not directly addressing "Shared control" ~~is not addressed in the definition of an asset in the conceptual framework of PSAS; the definition requires "control" over an economic resource~~it is included in other standards in PSAS, for example relating to government partnerships (Section PS 3060) which existed prior to PS 3250

~~Section PS 3250 was not revised when the existing conceptual framework was developed~~

~~The concept of shared control is included in other standards in PSAS for example relating to government partnerships (Section PS 3060) which existed prior to PS 3250~~

Conclusion on recognition

Section PS 3250 on its own is sufficient to assess ~~addresses~~ the accounting for OTPP by the Province

OTPP is appropriately classified as a JDBP under Section PS 3250

Section PS 3250 requires recognition by the Province of 50% of the plan assets of OTPP

Formatted: Strikethrough

Formatted: Font: Not Bold

Formatted: Font: Not Bold

Formatted: Strikethrough

Unilateral c~~C~~ontrol is not necessary for asset recognition (~~e.g.~~ as also seen with government partnerships); ~~,~~ shared control is appropriate for a JDBP

Uncertainty relating to OTPP's pension surplus relates to measurement, not uncertainty regarding expected future benefits for the Province

Question 2 – Measurement of a pension asset

Second we address how to measure the pension asset of OTPP in the Province's financial statements

Yes- slide above would explain measurement

Reference to valuations of pension asset ceiling having been done and results (different assumptions w.r.t. 50% benefits from contribution reductions vs. benefits, etc)

Guidance in Section PS 3250 on measurement

Only the portion of the pension surplus for which expected future benefits are to be realized by the government is to be recognized as an asset

A valuation allowance is to be recorded when a government is not entitled to benefit fully from the pension asset. The allowance is measured as the ~~for any~~ excess of the adjusted benefit asset~~s~~ over the expected future benefit as defined by the standard (referred to as the asset ceiling test)

~~A government may~~Expected future benefits may arise ~~from the pension surplus~~ by either withdrawing the surplus from the plan or by taking a contribution holiday

Guidance on measurement as applicable to OTPP

The Province expects future benefits from OTPP's plan surplus to be realized through reduced future contributions, not withdrawals

Expectations of benefitting from the surplus are based on:

1. The Teachers' Pension Act requires equal contributions from the Province and from plan members of OTPP;
2. The history of surplus utilization for OTPP demonstrates sharing of the financial benefit between sponsors;
3. No sponsor of OTPP can unilaterally utilize the plan's surplus; and
4. If the sponsors of OTPP cannot agree on how to utilize the pension surplus, the matter can be submitted to arbitration.

The Province considers that the uncertainties around how and when to utilize the surplus do not result in an inability or lack of entitlement to utilize the surplus

Calculating the limit on the carrying amount of an accrued benefit asset (asset ceiling test)

Commented [LD6]: I would add the requirements to negotiate every three years here
Is there more from the paper that we can highlight regarding entitlement to negogiate?
This is a key section and perhaps need a little more support.

Section PS 3250 indicates the expected future benefit to be recorded by the government is the sum of:

a. The present value of its expected future accrual for service for the current number of active employees less the present value of minimum contributions the government is required to make regardless of any surplus; plus
b. The amount of the plan surplus that can be withdrawn in accordance with the existing plan and any laws and regulations.

The next slides will consider this calculation relative to the Province's 50% share of OTPP

Through withdrawal of the surplus (Part b of the asset ceiling test)

The Province does not consider there to expected future benefit available through withdrawal of any plan surplus.

Section PS 3250 ~~requires~~ specifies that an amount for the~~the~~ to withdrawal of surplus is only included when~~expected future benefit include amounts to which~~ a government has a legally enforceable right of withdrawal. ~~; the concept of legal enforceability is included in PS 3250 but relative only to the withdrawal of a surplus~~

In accordance with the Funding Management Policy for OTPP, the parties must negotiate ~~a side agreement must be reached by the sponsors~~ in order for a withdrawal of the surplus to happen, therefore ~~.~~

~~As~~ the Province does not have a signed~~de~~ agreement with OTF regarding the withdrawal of the surplus. ~~, there is no legally enforceable right of withdrawal, and there is no expected future benefit for the Province under part bwith reference to a withdrawal of surplus; however,~~

~~as stated above, the Province expects to benefit through future contribution reductions, not surplus withdrawals.~~

Through reducing future contributions (Part a of the asset ceiling test)

While Section PS 3250 states that legal enforceability is required to include an amount for a withdrawal of the plan surplus it does not include a similar requirement in respect of the ability to benefit through future contribution reductions. The Province has an expectation that they will benefit fully from the asset by exercising their current rights under the plan arrangements to negotiate the use of surpluses in the form of contribution holidays.

The present value of its expected future accrual for service is typically calculated based on the Province's share (50% for OTPP) of the current service cost reported in the most recent actuarial valuation taken into perpetuity

Commented [np7]: This wording is not right. Need to position properly.

Commented [np8]: Insert reference to FSCO?

There is ~~no~~ very limited guidance in PSAS on determining the present value of minimum contributions the government is required to make regardless of any surplus; professional judgement is required. The Province engaged consultants to calculate this value for OTPP considering different assumptions on future minimum contributions. The key scenarios consider include

-

For purposes of OTPP in the 2015-16 public accounts, 11 years was used by the Province reflecting management's best estimate of the number of future years for which current minimum contributions are to be made until the Income Tax Act limits are reached

Based on the Province's best estimate calculation of the expected future benefit, no valuation allowance was ~~recorded~~ deemed necessary in relation to the pension asset of OTPP at March 31, 2016

Other guidance in PSAS on measurement

Section PS 2130 provides guidance on dealing with measurement uncertainty

Measurement uncertainty in pension plan accounting exists for example in the estimation of the valuation allowance and in the determination of the discount rate (which is often management's best estimate of the rate of return on plan assets)

Historical rates of return on plan assets have supported the past discount rates used by the Province in relation to OTPP

Comparability of Ontario's accounting for JDBPs to other Provinces

Provinces such as British Columbia and New Brunswick do not report assets for their provincial joint sponsored pension plans or alternatively provide a valuation allowance to reduce the pension asset balance to nil

The difference in accounting versus the Province of Ontario (for OTPP) results from these other provinces not having any ~~right~~ access to the pension surpluses unlike in Ontario

Conclusion on measurement

The Province's position is that the attributes of the JDBP arrangements for OTPP entitle the Province to access its portion of the plan surplus through the right to negotiate its use of the Province's benefit through future reduced contributions

Significant professional judgement and estimation is involved in determining the valuation allowance under Section PS 3250; the Province has applied reasonable estimates

Based on the result of modelling performed in relation to the asset ceiling test, the Province concluded that no valuation allowance was ~~concluded to be appropriate by the Province~~necessary to the pension asset that would have otherwise be reported on the Province's books as at March 31, 2016.

Commented [np9]: Need to insert reference to the 3 year mandated negotiation timeline and/or when plan is in funding surplus position.

Commented [LD10]: Suggest bullet pointing the main scenarios

Formatted: List Paragraph, Bulleted + Level: 1 + Aligned at: 0.63 cm + Indent at: 1.27 cm

Commented [LD11]: In the context of the slide deck, not sure what the point of this slide is. Point needs to be emphasized. Is the point
a) To highlight disclosure requirements of measurement uncertainty (acknowledging disclosures in Public Accounts) or
b)To indicate where there is measurement uncertainty in the number e.g. discount rates, plan assets, assumptions on future funding surpluses etc.
I was not clear on what this slide was adding, to the overall conclusions, albeit that it is a separate section in the position paper.

---

Hi Nadine,

I know it's not ideal from a version control perspective, but I took a "fresh read" of the paper and had a number of other suggestions for clarity of language and also for ordering as there was some repetition of ideas in places. I think the paper is looking quite good now though.

Please see attached a revised version of the document I send around yesterday. Please use this one in terms of whether comments have been addressed and additional comments. We can discuss on Monday.

Jim - I have noted some sections of the partners agreement that I think would be useful to add into the appendix and left a comment for this. I am hoping that you would be able to summarize them and add them into the appendix in the same manner as the current references.

Thanks
Lucy

Draft Pension Asset Position Paper Oct 22 np to ld with responses np2_cvnp v2_PwC REVISIONS 2.pdf

Position paper for Ontario Teachers' Pension Plan

Preamble

This document addresses the accounting for pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

~~A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.~~

Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP. This position paper addresses the analysis for OTPP.~~-~~ A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.

As described in PSAS, a pension asset arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the asset balance (~~or~~ plan surplus for accounting purposes) in OTPP is an asset to the province and it is ~~suitable~~ appropriate to reflect it in the financial results in accordance with PSAS. The Province has also concluded that no valuation allowance is required against the asset.

The OAG disagrees with this position. The OAG has indicated that because the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and in the absence of that right, because the Province does not have an agreement in place with the Ontario Teachers' Federation (OTF) with respect to how the surplus would be utilized ~~such that it would provide a benefit to the Province~~, the recognition of a pension asset in the Public Accounts is not appropriate.

Ontario had followed the same pension accounting treatment for all of the past 14 years. This had been accepted by the current Auditor General for the last two years and by the three previous Auditors

Commented [LD1]: o/s for administrative items.

1)Check references to standards are consistent. We use a mix of Section PS XX, PS XX, paragraph xx or .0xx in different ways. Doesn't matter which way it is, but should be consistent.
2) Should check appendices are appropriately referenced. Consider re-ordering appendices and references to order that they are mentioned in the paper.

Commented [LD2]: Is this the OAG's view or a statement of fact. It reads as if there is a statement of fact that the province does not have an agreement in place that would provide benefit to the province. This is not consistent with the Province's position.
Suggestion "such that is would provide a benefit to the province" is removed – whether the current arrangements provide a benefit or not is subject to the further analysis.
If this is left in, it should be made clear that this is the OAG's view rather than a factual statement of the arrangements.

DRAFT

Generals. There has been no change to the relevant PSAS (i.e. RETIREMENT BENEFIT, Section PS 3250) over the past 14 years.

A regulation was filed to allow the public service to sign-off on the impact of the OAG's view on accounting for pension assets in Ontario's 2015-16 financial statements. The regulation is time-limited and legislates the accounting for pension assets of its two jointly-sponsored pension plans (OTPP and OPSEUPP) for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's accounting, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to reflect the Auditor General's interpretation of PSAS. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt.

Background

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1.

The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the Ontario Teachers' Federation represented by its Executive (the "OTF") (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
a. It provides defined benefits.
b. The defined benefits are contributory benefits.
c. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
d. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. The OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for the OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners' Agreement (FMP);
f) The Ontario Teachers' Pension Plan; and
g) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to the OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5] The Province is also permitted to make additional contributions in respect of a

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).
[5] TPA, subsection 5(3).

Commented [LD3]: What is this referring to and how it is different from the "Plan Text" referred to in (c) above?

Commented [CV4]: Let's discuss this next section – its new to me – was it in one of the legal opinions?

Yes, per the Osler September 20, 2016 letter – pages 7 and 8 – included in this section as we discuss that OTPP qualifies as a JSPP

Also – I'm confused by the footnotes below – 3. And 4. And then 2.3.4.?

The characteristics of a JSPP in footnote 1 includes 4 parts which were the first series of 1, 2, 3 and 4 – I have changed to a, b, c and d

Commented [CV5]: Does this have any impact on the JSPP status of the plan

I believe it is consistent with the characteristics of a JSPP- characteristic c

LD – I think there are a number of ways to interpret this clause It could be argued that the clause is there to ensure that there is sufficient money from a liquidity perspective. This does not necessarily negate the broader agreement to share on an equitable basis – i.e. it's not clear if this injection by the Province would be balanced by the OTF in some other form – one might argue that the rest of the arrangement (partner's agreement) would require it to.
The TPA does require that the assets of the pension fund should be maintained at a level that is reasonably sufficient to meet the liabilities. Therefore, if this requirement has been met then the requirements of subsection 5(3) would only be for liquidity/short term in nature and not for long term funding.

I can see how one might also argue that it indicates that residual risk is with the Province – for example, does this clause kick in when the pension plan has no more active members and runs out of assets to pay for the liabilities then is the Province on the hook. Again – the rest of the Plan's terms would indicate that this should not happen, While "should not" might not be the same as "cannot" it could be countered that the majority of the funding risk is not with the province, because the other requirements in the Partners' Agreement require shared funding.
However this would likely be a matter of interpreting the arrangement as a whole.

I don't know what the original thinking by mgt/OAG was when this was agreed upon to be a JDBP, but the above would be my guess as to how it was considered.

DRAFT

solvency deficiency[6] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the ~~FMP~~Partner's Agreement requires the Sponsors to negotiate and agree upon decisions relating to surplus or deficit utilization, which currently is outlined in the FMP. ~~Currently, the Sponsors are required to mutually agree upon how any plan deficits are to be addressed.~~ [8] ~~While not binding upon the Sponsors,~~ Tthe FMP indicates that deficits (or surpluses) may be addressed through increases (decreases) to the contribution rates, lowering (increasing) the amount of indexation and/or other decreases (increases) in benefits. While not binding upon the Sponsors, as the Sponsors can change the FMP at any time, any changes are required to have the mutual consent of both Sponsors.

Commented [LD6]: Have reworked these paragraphs for clarity.

Commented [CV7]: Not sure what we are referring re: the use of also

Section 3.11 of the FMP discusses options available to the partners to eliminate any deficit in the plan (i.e. change benefits, contributions, or both)

~~Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the FMP requires the Sponsors to negotiate and agree upon decisions relating to surplus utilization.~~ Accordingly, the Sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the Sponsors are included in appendix E. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental

[6] TPA, subsection 5(7).
[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/101791209401-l5e47lc2b-23f1-44e6-b5cld22e3e50dbc3lHow+ Contribution+Rates*HaverEvolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20lo versus l0.4yo/l2Vo, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.
[8] See, for example, Section 3.09 and 3.11 of the FMP.

legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, under the FMP the Sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the Sponsors to agree upon the manner in which surplus is to be utilized, neither Sponsor has a legally enforceable right to unilaterally utilize surplus in the OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What the Province does have, however, is a right to negotiate with the OTF the use of funding surpluses that may arise under the plan.

4. ~~When n~~Negotiations on the use of the surplus occur as ~~laid~~ specified~~out~~ in the Partners' Agreement. The Partner's Agreement requires that any actuarial funding valuation submitted to the pension regulators must be "actuarially balanced" (Section 57 of the Partners' Agreement). This must occur at least once every three years, but can occur every year if the partners agree. If a preliminary funding

valuation shows a funding surplus or deficit then the joint sponsors must negotiate how this surplus or deficit is to be resolved prior to filing the funding valuation.

Accounting for OTPP by the Province

Since fiscal year 2001-2002, the Province has recorded a pension asset for OTPP on the Statement of Financial Position. A pension asset has arisen because the government's share (50%) of the total contributions to OTPP plus ~~the actual~~ recognized investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense. The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

Commented [LD8]: Not all investment returns are actually recognized because of the deferral provisions.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. RETIREMENT BENEFITS, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. Since the Province adopted the standard, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the prior 14 years is reflected in Appendix F. Unqualified audit reports have been received for each of the years from the OAG on the Public Accounts. The pension accounting adopted by the Province for OTPP since 2001 had been implicitly accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

Commented [LD9]: This paragraph is important, but seems disconnected from the previous section. Have suggested it is moved to the beginning of the section, which also refers to "since 2001".

With regards to any comparisons between surplus or deficit amounts reported in the Province's financial statements verses the OTPP's financial statements or funding reports, it is important to acknowledge the different objectives of funding and accounting for a pension plan which are also explicitly addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*

> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.*

Paragraph PS 3250.051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: "Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…"

OTPP's most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website. The Province's relative portion of this surplus would be $6.6 billion. The OTPP's public financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015, for which the Province's portion would be a deficit of $900 million. The following background helps to clarify the reasons for these different results. OTPP's financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook ("Part IV"), which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the net surplus or deficit for funding purposes. Accounting for employee future benefits requires the use of assumptions and methodologies to calculate both the obligation incurred to date and the value of the assets already set aside to meet those obligations. Accounting frameworks differ in standards that must be applied in determining appropriate assumptions and methodologies. Further, the assumptions and methodologies used in developing a "funding valuation" on a going concern basis may also differ from those required by accounting standards. These differences result in a number of different valuations for the same plan, depending on the purpose of the valuation and can be affected by certain choices made between acceptable options within each framework. A summary of the main differences between the methodologies used to calculate a going concern funding valuation, OTPP's accounting valuation and the Province's accounting valuation is shown in Appendix I.

Specifically, the discount rate used to value the obligations of the plan has a significant impact on the overall position of the plan. A lower discount rate results in a higher liability and a higher discount rate results in a lower liability, all else being equal. Put another way, a higher estimate of the time-value of money makes the promises made today that will be paid out in the future cheaper. OTPP uses a discount rate based on corporate/government bond rates in its financial statements, as permitted by Part IV. The Province uses a discount rate based on the expected asset return, as permitted by PSAS. The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds. Both ~~the~~ a ~~PSAS accepted~~ discount rate based on

the expected asset return and ~~the IFRS required discount rate of~~ one based on corporate/government bonds are "best estimate" rates~~;~~. t~~T~~hey must both be based on management's best estimate of the applicable discount rate. In both cases the estimates must be supportable. The difference results not from one being more "right" or "wrong" relative to the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.

~~The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds.~~ Typically the funding discount rate used for the funding valuation falls between the bond discount rate and the expected asset return, but it differs in that it does not purport to be the "best estimate" of the discount rate, ~~but~~ rather it is designed to indicate the contributions that are required to fund the promised benefits~~,~~ with an additional conservative margin for adverse deviations. Note that over the long term the difference between funding valuations and accounting valuations would diminish as the impact of the discount rate unwinds and the asset valuation methods converge.

In practice, the discount rates used in the financial statements of government sponsored and joint defined benefit pension plans prepared under Part IV of the CPA Canada Handbook (Section 4600) use diverse methodologies. For example, in Alberta 7 plans prepare their financial statements under Part IV with reference to IFRS (same framework as OTPP). Of these none use a government bond discount rate and all use a discount rate calculated with some reference to a rate of return on invested assets, which may include factors for expenses, diversification and rebalancing. The analysis of a number of government sponsored plans is included as Appendix ~~[~~G~~]~~. The analysis demonstrates that a significant number of government sponsored plans use a discount rate aligned to an asset investment return rather than a bond discount rate. OTPP is in the minority of plans that choose to use the rate required by IFRS, resulting in a lower discount rate and higher liability.

The above analysis ~~discusses~~ explains ~~the~~ how ~~impact of~~ different discount rates impact ~~on~~ the net surplus/deficit reported on OTPP's financial statements, OTPP funding reports and the Province's financial statements. The fact that OTPP reports a deficit on its financial statements, or that the 50% of the net surplus reported by OTPP for funding purposes is lower than the surplus reported on the government's financial statements under PSAB standards is of no consequence or relevance to this analysis.

To further clarify, that there is a deficit reported in the OTPP financial statements while the Province of Ontario calculates a surplus under PSAS requirements does not mean that there is no accounting surplus and therefore no reportable asset for the Province. In fact, if the OTPP had chosen (as an acceptable accounting policy choice) to ~~would have accepted~~use a discount rate more consistent with its counterparts in other jurisdictions (see Appendix G) ~~that would also be acceptable under the Part IV~~

DRAFT

framework as an accounting policy choice such as (e.g. a discount rate based on an asset return which would be closer to that used by the Province), it would eliminate much of the existing differences between the reported net surplus/deficit amounts between the OTPP statements and the Province's share of OTPP reported for accounting purposes in the Public Accounts.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. RETIREMENT BENEFITS, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. Since the Province adopted the standard, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the prior 14 years is reflected in Appendix FUnqualified audit reports have been received for each of the years from the OAG on the Public Accounts. The pension accounting adopted by the Province for OTPP since 2001 had been implicitly accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

RETIREMENT BENEFITS, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. Since the Province adopted the standard, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the prior 14 years is reflected in Appendix F.

Although OPCD has not been able to substantiate decisions made at the time that the Province implemented PS 3250 in 2001, it is assumed that the Controller's Office and the Office of the Auditor General would have engaged in more specific and detailed discussions related to the interpretation and application of the standard with regards to the joint sponsored pension plan at the time. The presumed outcome of those discussions would have supported the Province's share of the surplus being reported on the Province's books based on the shared control over the plan as evidence by the constating documents. It is uncertain whether the need to perform asset ceiling tests on a regular, on-going basis was discussed at the time and there is no evidence of any having been performed previously. The pension accounting adopted by the Province for OTPP since 2001 had been implicitly accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

History regarding the PSA standards

As mentioned, the financial statements for the Province have been prepared consistently since PS 3250 was first implemented and such interpretations were accepted by the Office of the Auditor since that time.

Commented [LD10]: This paragraph is important, but seems disconnected from the previous section. Have suggested it is moved to the beginning of the section, which also refers to "since 2001".

Commented [LD11]: Seems repetitive to the previous paragraphs if on a standlone basis, so have suggested moving.

Commented [CV12]: Not sure this is necessary – let's discuss

LUCY/JIM – please see CV, or consider rewording.

LD - I agree that it may be hard to presume anything about previous discussions if there was a different controller and a different AG at the time and there is not documentary record supporting the decisions made.

Under the standard, I think it is relatively clear that consideration of the limit on the asset ceiling tests should be made whenever there is an AcBA, (which is not to speak to the method or depth of that analysis) but suggesting that there is no evidence of anyone doing this is perhaps is not helpful.

Commented [LD13]: Seems repetitive to the previous paragraphs if on a standlone basis, so have suggested moving.

Commented [LD14]: Seems repetitive to previous paragraph.

Completeness of PS 3250 in assessing appropriate accounting for pension assets

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES, Section PS 1150 prescribes that, in developing and applying accounting policies, all primary sources of GAAP should be applied (paragraph PS 1150.04). Primary sources of GAAP are Sections PS 1200-PS 3510, Public Sector Guidelines and appendices and illustrative material to those pronouncements. Only when there are no primary sources of GAAP that relate to the transactions or events under consideration, or more specific guidance is needed (paragraph PS 1150.05), does an entity consider other primary sources of GAAP dealing with similar issues and also the concepts described in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 (issued January 2003). Section PS 1000 is not, however, a "primary source of GAAP" under the PSA Handbook.

Commented [CV15]: Let's include references to paragraphs when we are referring to the Handbook

Added a couple of references.

The primary sources of GAAP specific to the accounting for pension assets is RETIREMENT BENEFITS, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, Section PS 3250 which was based on Accounting Statement No. 5).

Other primary sources of GAAP that deal with similar issues might also be considered where additional interpretation or guidance may be required. For the issues dealt with in this paper - recognition and measurement of a joint defined benefit plan - this could include standards that relate to ~~joint~~ shared control, as OTPP is a joint defined benefit plan, standards that relate to the definition of an asset and standards that relate to measurement uncertainty:

- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015, effective from April 1, 2017)
- MEASUREMENT UNCERTAINTY, Section PS 2130 (issued in April 2005)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception of ASSETS, PS 3210 which is more recent and will be effective in for periods beginning on or after April 1, 2017. Section PS 3210 provides additional guidance on the various components of the existing asset definition found in Section PS 1000; it does not change the definition.

Accounting Analysis

Question 1 – ~~Recognition~~ Classification of a pension asset

The analysis below addresses whether the Province's share of the pension surplus in OTPP, calculated in accordance with PSA standards under PS 3250, represents a reportable asset to the Province of Ontario in the Public Accounts.

Standards in the PSA Handbook

DRAFT

The focus of the following analysis is on the accounting requirements in RETIREMENT BENEFITS, Section PS 3250 as this standard is a primary source of GAAP which specifically addresses the accounting for pension assets. The following highlights some key concepts and guidance contained in this standard.

RETIREMENT BENEFIT, Section PS 3250 – Purpose and Scope

The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250, paragraph .003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

RETIREMENT BENEFITS, Section PS 3250 – Types of pension plans

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

DRAFT

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Additional guidance on identifying Joint Defined Benefit Plans (JDBPs) is in PS 3250 paragraphs .79 to .80 which similarly highlight the importance of both shared control and shared risks and rewards in a JDBP:

.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

It should be noted that the definition of a Joint Defined Benefit Plan under Section 3250 is not the same as the definition of a JSPP under the PBA, although there are some overlapping concepts between the two. A JDBP is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other

Commented [CV16]: How does the requirement for the Province to make contributions when there are insufficient assets impact OTPP being classified as a JDBP? – page 4 of this memo

Jim/Lucy

Paragraph 3.09 of the FMP discusses options available to the partners to eliminate any deficit in the plan (i.e. change benefits, contributions, or both). It does not indicate the government solely is responsible. Therefore no impact on the JDBP classification.

LD – see above response to earlier comment on page 4. I'm happy to draft some language along these lines if management confirm that this is their interpretation of the clause – i.e. it is a short term liquidity provision, not a long term funding obligation.
While this determination does not appear to have been challenged by the OAG, we may want to address it for the benefit of the Panel.

matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. The Province has concluded that OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. The OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees (addressed in paragraph 8 of the Partners' Agreement for example);

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example).

~~There is no uncertainty regarding the joint control of OTPP shared by the Province of Ontario and the Ontario Teachers Federation.~~ The TPA, the Partners' Agreement and the plan text collectively set out this shared control and that the Province of Ontario has an equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting ~~based~~ ~~on~~ the definition of a joint defined benefit plan.

~~As noted above, t~~The classification of OTPP as a JDBP for accounting purposes [and a JSPP under the PBA] by the Office of the Provincial Controller has been consistent since 2001 and had been consistently ~~and~~ accepted without question ~~accepted~~ by the Office of the Auditor General, including throughout the 2015/16 Public Accounts.

Commented [CV17]: Is there a legal determination as well – e.g. impact on solvency funding?

Jim/Lucy?

LD – I think there is a distinction between the handbook definition and the regulatory definition, although there is a lot of overlap in the concepts.

Have suggested an edit clarifying that this is for accounting purposes.
We could also add in that it is a JSPP under the PBA (regulatory purposes). I don't think it's necessary, but have added in in [] for consideration.

I'm not sure I understand the concern re solvency funding – is there something else we should be adding in here?

Question 2 – Recognition of a pension asset for ~~RETIREMENT BENEFITS, Section PS 3250 – Accounting for~~ a JDBP

RETIREMENT BENEFITS, Section PS 3250 paragraphs .081 to .082 provide guidance on the accounting for a JDBP in the financial statements of the government sponsor. As OTPP meets the definition of a JDBP for the reasons noted above, the relevant guidance for the Province for purposes of reporting retirement benefits in the Public Accounts includes:

> *.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]*

> *.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.*

Section PS 3250.81 clearly states that "The government should account for its portion of the plan in accordance with the standards for defined benefit plans". It is clear from this that only the government's portion of the plan is included in the government's financial statements consistent with the requirements of Section PS 3250 (recognition) and the measurement of that portion is based on the requirements of Section PS 3250 (measurement). It is also then clear that the requirements of the standard for recognition and measurement, including the Limit of the Carrying Amount of an Accrued Benefit Asset guidance, are designed to be applied to a ~~joint~~ shared control situation and not only to situations where there is unilateral control. If it was intended that no pension asset could be recognized because the asset was subject to ~~joint~~ shared control and not unilateral control paragraph .081 would have made this clear. This paper discusses the ~~two elements of recognition and~~question of measurement separately in Question 3.

The balance sheet recognition guidance for retirement benefits is stated in Section PS 3250.016 to .017:

> *.016 The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date. [SEPT. 2001]*
>
> *.017 The components of the retirement benefit liability are:*
>
> *(a) accrued benefit obligation including the effects of plan amendments, settlements and curtailments;*
>
> *(b) plan assets, if any; and*
>
> *(c) unamortized actuarial gains and losses.*

As the OTPP is a funded plan there are plan assets that are recognized as part of the retirement benefit liability. When plan assets and the net impact of unamortized actuarial gains and losses exceed the accrued benefit obligation then there is an "Accrued benefit asset" (ABA). An ABA is defined in Section PS 3250 as follows:

> GLOSSARY - *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

Accordingly, the portion of the government's plan to be recognized includes their share of the accrued benefit obligation and also their share of the plan assets. In the case of the Province's portion of OTPP there is no uncertainty regarding the *existence* of an ABA for the government's portion of the plan~~,~~; the ABA is calculated by reference to ~~based on the best estimate assumptions used in measuring the~~ accrued benefit obligation and plan assets, both determined based on the best estimate assumptions and the methodologies required by~~, measured in accordance~~ with Section PS 3250 ~~guidance~~ for these items. As noted above an ABA is defined as the ~~government's~~ sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance). For a jointly sponsored plan, this is the government's accumulated cash contributions less the ~~sum of the~~ government's share of the current and prior years' benefit expenses that are attributable to the government under the joint defined benefit plan. The Province's portion of OTPP resulted in an ABA of $10.1 billion as at March 31, 2016. There is no uncertainty regarding the occurrence of the cash contributions made (~~including~~ and the interest earned thereon) measured in accordance with Section PS 3250 and the existence of the government's obligation. As Paragraph 3250.80 *requires* a government to account for its portion of the plan in accordance with the standards for defined benefit plans, this would include the recognition of any asset that meets the definition of an ABA under the standard.

Further, Section PS 3250 paragraph 3250.50 refers to the presentation of the ABA; this amount is presented in the financial statements, net of any valuation allowance. This indicates that an ABA should be recognized in the financial statements, but measured in reference to the limit on the carrying amount of the asset - essentially a measurement requirement rather than a recognition requirement, as the limit could result in an ABA ~~could be~~being measured at anything from $nil to its full amount. Note that the *measurement* of any net asset is subject to guidance in Section PS 3250 paragraphs .50-.59 and is discussed later in this paper.

To recognize only their share of the liability and not their share of the plan assets, or to recognize only a net liability (accrued benefit obligation exceeds plan assets) but never a net asset (when plan assets exceeds the accrued benefit obligation, subject to the valuation allowance guidance discussed in the Measurement section below), would indicate that the Province does not share equitably in the risks and rewards of the OTPP because they bear only the risk of increased liabilities without being able to bear any rewards of investment returns on the plan assets and under this interpretation the plan would not therefore be a joint defined benefit plan.

Concept of Shared Control and Asset Recognition

Included in the definition of a JDBP is the concept of shared control. Points (c) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of Shared Control resulting in a recognition of an asset could on the surface appear to conflict with the definition of an asset under FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210, as part of the definition of an asset under PS 1000 would suggest that the government

must control the economic resource and access to the future economic benefits. Since shared control does not equate to control, there is a need to consider whether the recognition of any asset under PS 3250 is appropriate where there is only shared control.

The Province's position is that PSAS does not preclude asset recognition for assets under shared control and specifically for plan assets of joint defined benefit plans for the following reasons:

- As discussed above GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity. Section PS 3250 is a primary source of GAAP for dealing specifically with joint defined benefit plans and, as noted above, requires the government to account for their portion of the plan – both the accrued benefit obligation and plan assets in accordance with Section PS 3250. ~~Section PS 3250 was developed by PSAB considering the current conceptual framework in the PSA Handbook.~~ As such, reference to Section PS 3250 is sufficient to indicate that the recognition criteria are met for joint defined benefit plan assets, no further source of PSAS guidance need be considered.

- Similarly, if other primary sources of GAAP are considered then it is relevant to consider GOVERNMENT PARTNERSHIPS, Section PS 3060 which also includes the concept of shared control. Under Section PS 3060, ~~joint~~ shared control is sufficient for asset recognition.

- The concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. With the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that PSAB did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

- The Province's reporting of a pension asset for the JDBP is therefore consistent with these primary sources of GAAP, ~~-~~subject to measurement guidance including impairment considerations.

The similarities between the definitions of a JDBP and a government partnership under PSAS are demonstrated in Appendix B to this paper, and further support PS 3060 as being a relevant primary source of GAAP dealing with similar circumstances, should it be considered necessary to go outside of the requirements of Section PS 3250 to look for further clarification and guidance on recognition.

Commented [CV18]: We use both joint control and shared control in this section – is there a reason to distinguish – would rather use shared control since that is what is used in 3250 and 3060

Changed to shared control

Commented [CV19]: Should we also note that this section was developed by the standard setters with the current conceptual framework in place, which included a definition of an asset.

I have added a sentence

LD – Not sure this is correct. PS 3250 was issued in September 2001. However Section 1000 was not issued until January 2003. Therefore it was not actually in place when Section 1000 was initially included in the handbook.
This timing is reflected in the discussion in the third bullet point below.
Suggest deleting the sentence.

Formatted: Space After: 10 pt

Under Section PS 3060 a critical condition for a Government partnership is shared control. Section PS 3060 explicitly acknowledges that under shared control "none of the partners is in a position to exercise unilateral control over the government partnership" (PS 3060.20), yet the accounting model required by Section PS 3060 for non- GBPs[9] is that of proportionate consolidation which is the recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership. Joint defined benefit plans are excluded from the scope of Section PS 3060 on the basis that control is shared with employees rather than with a party outside of the reporting entity (3060.06 footnote 3). This reason indicates that such plans are excluded because of a closer relationship between the government and the other party than normally exists for government partnerships. Even when an independent third party shares control, Section PS 3060 still requires the recognition of a share in an asset subject to ~~joint~~ shared control, indicating that the PSAS framework does not require unilateral control in order to support asset recognition when there is ~~joint~~ shared control. It would not be appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3060 for proportionate consolidation, and similarly it is not appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3250 to account for the government's portion of a joint defined benefit plan.

Commented [CV20]: I don't agree that this is what footnote 3 says – this is the discussion we are having a discussion with PSAB on ***

Lucy - consider edits

LD – Happy to redraft when I understand Cindy's point of view on the footnote/outcome of discussions with PSAB. Not sure how to redraft this currently.

Commented [CV21]: We may need to rework this ***
Lucy - consider edits

Concept of Contingent Asset

CONTINGENT ASSETS, Section PS 3320, provides guidance on the disclosure of contingent assets in a government's financial statements. It characterizes a contingent asset as one where there is uncertainty as to the existence of an asset (Section PS 3320.04). It is the Province's position that the existence of the pension asset is not uncertain – there is an accrued benefit asset calculated in accordance with Section PS 3250 as noted above that is based on past transactions, being the impact of cumulative contributions and benefit expense. There is no uncertainty regarding that there is shared control of the plan (and shared control is sufficient to result in asset recognition for the reasons noted above). Finally, the Province can support expected future benefits in a broad sense as any OTPP surplus must be shared in an "equitable manner" under the terms of the arrangement, and this is enabled through the ability to negotiate the utilization of the surplus including the ability to prevent the utilization of the surplus in a manner that does not benefit the Province. This expectation is further supported by past history of surplus utilization. The method, extent and timing of which the Province will obtain the expected future benefits (contributions reductions vs increase in benefits) is not certain. However PS section 3320 also states~~paragraph .07 indicates~~ "The mere fact that an estimate of an amount is involved (measurement uncertainty) does not, in and of itself, constitute the type of uncertainty that characterizes a contingent asset. For example, even though there may be measurement uncertainty related to income tax receivable, there is nothing uncertain about the fact that this asset exists. Any uncertainty is related solely to the amount thereof~~.~~" (Section PS 3320.07). Based on past history of surplus utilization for OTPP and based on the constating documents, expected future benefits for the Government are present. The

[9] Government business partnerships (GBPs) are accounted for under the modified equity method rather than proportionate consolidation.

DRAFT

uncertainty as with many types of assets relates to measurement uncertainty which will be discussed below.

Conclusion on recognition

Therefore the Province has concluded that PSAS permits the recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets must be subject to unilateral control. The Province's share of OTPP's pension surplus meets the definition of an Accrued Benefit Asset under Section PS 3250. The measurement of that accrued benefit asset is determined by reference to the guidance in PS 3250 regarding the Limit on the Carrying Amount of an Accrued Benefit Asset, which is discussed in Question 2 of this position paper.

Question ~~32~~ – Measurement of a pension asset

For an asset to be recognized it must be reliably measureable (paragraph PS 1000.55). Section PS paragraphs 3250.050 to .059 address how to measure a pension asset. This is a two-step process. Firstly the accrued plan obligation (a Credit) and the plan assets (a Debit) are measured in accordance with the standard, and adjusted for any unamortized actuarial gains or losses (a Debit for gains not yet realized, a Credit for losses not yet realized). This measurement results in a retirement benefit liability when it is a net liability (a Credit) amount or an accrued benefit asset when it is a net asset (a Debit) amount. When the resulting amount is an asset, the standard requires a second step to test that the asset is not impaired. It should be noted that impairment testing in some form is required for all assets recognized under PSAS standards except those carried at fair value, although the methodology of impairment tests will vary depending on the nature of the asset.~~"When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit."~~ The amount that is tested is the "adjusted benefit asset". When there are net unamortized gains the ABA is equal to the adjusted benefit asset. When there are net unamortized losses the ABA is reduced by those net unamortized losses to calculate the adjusted benefit asset. A graphical illustration of the calculation of the Accrued Benefit Asset (AcBA) and the Adjusted Benefit Asset (AdBA) are shown in appendix J. Section PS 3250 ~~P~~paragraphs .052 to .059 go on to explain what the standard means by expected future benefit and how a government may benefit from the ABA or adjusted benefit asset. Note that for OTPP ~~for purposes of Section PS 3250.053 the Province has determined that no pension valuation adjustment is necessary and as such that~~ the accrued benefit asset equals the adjusted benefit asset as there are net~~(due to~~ unamortized actuarial gains. ~~exceeding unamortized actuarial~~

Commented [CV22]: We need to deal with all of the counter arguments that have been raised – e.g. contingent asset

I have added a paragraph above - can we say more?

LD – I think the added paragraph is helpful to emphasize that the concept here is measurement uncertainty and not contingent asset world.
I find it hard to add in more about contingent assets because I think the argument is that that PS 3320 is not relevant guidance (because PS 3250 is), rather than trying to argue using the wording of PS 3320, which is a going to be difficult.

LD2 – I had another go and trying to articulate what I believe is management's position on the contingent asset argument. Please see edits to the paragraph.

Commented [CV23]: Please reference

Added

Commented [CV24]: I think we need to put this is context – measurement is a two step process. The measurement of the asset is determined by the balance of 3250 (e.g. measurement of the plan assets, measurement of the pension obligation, etc. etc. and then there is a second measurement requirement when a plan is in an asset position – in paragraphs 50 to 59.

I've been trying to explain it as a see-saw – you record your share of the net obligations or net asset and when you get into a net asset position, there is an additional step that is required re: valuation.

Lucy - please consider rewording integrate illustration

LD – updated.
LD 2 – revised wording to highlight credits and debits as I think this may be more helpful then negatives/positives, although perhaps not for non-accountants.

Commented [LD25]: Is this helpful to include as an appendix to help explain these concepts?

Commented [CV26]: Are we going to reference the various models run?

See table 1 on page 27 updated by Pauline.

LD - Reference deleted here because the point here is just to state that AcBA = AdBA for the province. Table 1 is relevant when discussing the conclusions on the calculations, later on when the method of calculation has been discussed.

Note that the conclusion on the pension valuation adjustment is a separate conclusion from the adjusted benefit asset fact. I think we deal with it later, so no need to reference it here or would be repetitive.

~~losses) (Refer to Table 1 later in this document for a "Summary of Asset Ceiling Models performed for OTPP".~~

Section PS 3250.50-.59 are included here for completeness and ease of reference:

Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)

.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

~~Note that for purposes of Section PS 3250.053 the Province has determined that no pension valuation adjustment is necessary and as such that the accrued benefit asset equals the adjusted benefit asset (due to unamortized actuarial gains exceeding unamortized actuarial losses) (Refer to Table 1 later in this document for a "Summary of Asset Ceiling Models performed for OTPP".~~

Paragraph .052 states that a government may benefit from an ABA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions. This~~It~~ is an explanatory paragraph on how a government may benefit from an ~~accrued benefit asset~~ABA and why a valuation allowance may be needed, rather than detailing the test to be applied. Part of this

justification is to note that that an ABA may be impaired when "the government is not entitled to benefit from [the ABA] fully". Examples of when a government may not be entitled to benefit from the ABA fully are given, such as a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

Section PS 3250.059 gives additional guidance on when an entity is not entitled to a surplus withdrawal: "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal". This

~~The Province's expected future benefits to the surplus is intended to be through reduced future contributions, and not through withdrawal of pension surplus. As such, PS 3250.059 is not considered relevant to the analysis when performing the asset ceiling test.~~ PS 3250.059 introduces the concept of a legally enforceable right but only in the context of a government's ~~reduction of future contributions~~withdrawal of surplus and not in the context of contribution holidays. If the standard setters had intended legal enforceability to be the test throughout the standard, they would not have raised it only in the context of a withdrawal of surplus, but as a more fundamental notion in the guidance on expected future benefit.

It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to shared control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays. When considering the ability to realize expected future benefits under Section PS 3250.052, the Province's legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability which is not explicitly required by the standard to support recognition and measurement of JDBP pension assets. Specifically, the amount of pension asset that gets recorded needs to take into account considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a pension asset in the Public Accounts. Pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the

DRAFT

term used to describe the cap in the asset ceiling test is "expected- future benefit". Expected does not equate to certainty (Section PS 1000.056).

~~The Province's expected future benefits to the surplus is intended to be through reduced future contributions, and not through withdrawal of pension surplus. As such, PS 3250.059 is not considered relevant to the analysis when performing the asset ceiling test.~~

~~It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to joint control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays or withdraw surplus.~~ Under the Plan and Partners' Agreement, if funding surpluses occur the partners are required to negotiate the use of the funding surplus (at least once every three years) and the Province is entitled to negotiate a reduction in contributions in respect of its share of the surplus. Under the Partners' Agreement any funding surplus must be dealt with so that the funding valuation becomes actuarially balanced. *In other words when there is a funding surplus over a certain range the "status quo" cannot be maintained, the surplus must be reduced by a combination of reductions in contributions, increases in benefits or withdrawals of surplus*. This is confirmed by the Partners' Agreement Section 57 that requires an actuarially balanced valuation to be prepared at least once every three years, allowing for a contingency reserve, combined with the FMP which sets out the framework for determining when a surplus or deficit outside of agreed upon ranges are met and action must be taken. While the Province might choose to accept an increase in member benefits rather than to reduce funding, any such decision is at the Province's discretion since the OTF cannot force the Province to increase benefits instead of reducing contributions. In other words it is at the Province's discretion whether to address the actuarial balancing requirements by allowing its portion of the surplus to be utilized through increased benefits. The OTF equally has the right to not agree to reduced contributions from the Province, but they do not have the right to force an inequitable sharing of the surplus. Therefore, the Province is entitled to negotiate their share of the JDBP ~~and take~~which may include taking contribution holidays in future negotiations and can effectively use their power in negotiations to benefit from the ABA. The joint partners do have the ability to renegotiate all aspects of the partners' agreement including the FMP. However all changes require the agreement of both parties and as such the Province can veto any changes to the agreement. Note that while the negotiations are based on funding surplus amounts rather than accounting surplus amounts, any differences would be captured in the mechanics of the calculation of the expected future benefit rather than precluding an ability to benefit from any of the accounting surplus.

Further, paragraph PS 3250.055 indicates "The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Many generally accepted accounting frameworks use "expected" in a number of

Commented [LD30]: I'm concerned about repetition of the discussion of .059 and whether it flows in a sensible manner, but want to take a fresh read before trying to suggest edits.

LD 2 – deleted as is repetition of the points made in the paragraph above, which also includes wording along the Deloitte lines.

Commented [CV31]: I think we need more analysis on this – understanding the reason for .59 in setting a higher hurdle for withdrawing assets from the plan – there is content in the Deloitte opinion on this.

Wording added from DT letter

Commented [CV32]: Can't they choose to leave the surplus in the plan? CRA cap.

LD – I don't think they can, absent a change to the partnership agreement. Ultimately the partners can agree to change anything, but under the current terms of the partnership agreement and the FMP it does not seem that they can.

Commented [CV33]: Are we sure – what are we referring to in making this statement? Assuming the FMP – can we reference. Also, its possible that the FMP could be changed, but that would require the consent of both parties – e.g. the Province can control that the FMP will not change.

Lucy

LD – reference added

Commented [CV34]: Isn't is also true that the OTF could block the province from reducing contributions?

Legal? Jim to follow up with Legal.

LD – yes, the OTF can block the province from reducing contributions, but they cannot block the province from negotiating an "equitable" sharing of the surplus.

DRAFT

principles and is typically used in the probabilistic sense – something is expected when it is probable at some level, it does not equate to certainty. The Province has an expectation that they will benefit fully from the ABA by exercising their current rights under the plan arrangements to negotiate the use of current and future surpluses in the form of contribution holidays. This position is supported by the review of the constating documents and past history of negotiations that indicate:

1. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) to exceed the amount of contributions paid by or on behalf of active members in respect of credited service for the year (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.
2. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix ~~G~~H for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the Sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.
3. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right[10]), and the requirement to negotiate and agree (or in the absence of agreement, arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.
4. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan. Under the plan, contributions are generally borne equally by the Province and the employees. Employees benefit economically from both an increase in benefits and from a reduction of contributions. The Province benefits economically directly from a reduction in contributions. This makes it reasonable that at least some contribution reductions would be agreed to by the joint sponsors as a highly unequal weighting towards increases in benefits would not balance the interests of taxpayers and teachers therefore may be unlikely to be a reasonable outcome of "good faith" negotiations between the Province and the OTF.

[10] The OTF Call Right is a one-time arrangement intended to compensate Plan members for absorbing 100% (rather than 50%) of funding shortfalls arising the government initiated Freeze period. Part of a previously agreed upon arrangement to ensure equitable sharing of the risks and rewards over the long term of the plan, it is not a general unilateral right to utilize future surpluses beyond the recovery of the specific funding shortfalls.

Commented [CV35]: We need to explain this
Lucy

LD- have added a footnote. As I don't think it really affects the accounting outcome either way and if anything only supports the longer term sharing of surpluses, I think it is sufficient.

Commented [CV36]: Not sure its an equal opportunity to benefit – more of an equal opportunity to direct **how** the sponsors benefit

LD - Osler's opinion page 17 states "In any event, based on the plan documentation, both parties will have an equal opportunity to benefit from surplus utilization through the negotiation process".

I think that softer language of only directing how the sponsors benefit and not that they have access to the benefit weakens the arguments significantly by taking it one step back.
It's a difference between saying they can negotiate the use of their share of the surplus (equal opportunity to benefit) and saying they can negotiate how the sponsors share the benefit, which is a bit different.

Commented [CV37]: Balance between who – taxpayers and teachers?
LD - Yes

Commented [CV38]: I think we need to include the concept of the Province indirectly benefiting from benefit increases re: taking a view of total compensation tha the Province pays and the interpretation from one of the firms in IAS 19

LD – to discuss. Per an earlier discussion with Alex (I think) they do not negotiate pensions vs salaries.
Ultimately I'm not sure that it is helpful because if you argue that using the surplus to increase past (or future) benefits is an equally valid benefit to the Province it's harder to argue why they would negotiate contributions in the future rather than increased benefits. As an increase in past benefits does not result in "expected future benefit" I struggle with this helping to support the Limit calculation.

Formatted: English (United States)

This is further supported by the historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses, should also be considered. As previously discussed in respect of conditional indexing, a decrease in benefits by the employees were offset by an increase in payments by the Province. Similarly as the sponsors agreed to restore indexation, this increase in benefits resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.98B for the 2015 change, and $1.68B for the 2014 change). This demonstrates that historically and over the long term an equitable sharing of the deficits and surpluses has resulted in changes in the Province's contributions, even when there are decreases or increases to benefits for employees.

Commented [CV39]: Not sure this is previously discussed – please check – if not, I think this needs to be explained in more detail

LD – Should this be added to Appendix H and then a reference made to that from here? Appendix H seems to be discusses this relevant point, but only goes up to 2003, not sure why.
For Jim to add?

5. In the event that the Sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, the matter can be submitted to an arbitration board of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

   As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Commented [NP40]: Jim – please check and insert reference to mediation if a first step.

The FMP does not specifically discuss mediation.

~~Further to the discussion in Section PS 3250.052 regarding entitlement to benefits, PS 3250.059 provides further guidance where such benefits are expected to be realized through an entitlement to withdraw surplus. "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal." PS 3250.59 is clear that expected future benefit available from surplus~~

Commented [LD41]: This is a repetition of an earlier paragraph.

DRAFT

~~withdrawal can only be asserted where the government has a current legally enforceable right to withdraw assets from the Plan. Section PS 3250.59 introduces the concept of a legally enforceable right, however it does so solely in the context of a government's future withdrawal of a Plan surplus, and not in the context of a government's reduction of future contributions. Had PSAB intended legal enforceability to be the test, they would have included that notion throughout the guidance (for example in paragraph .052), instead of only raising it in the context of a withdrawal of surplus.~~

~~The Province would not envision realizing any expected benefits through a withdrawal of surplus, but rather through contribution reductions or holidays. As such, from the Province's perspective, PS 3250.059 which deals with the situation of surplus withdrawals is not considered pertinent to the pension asset recognition or measurement analysis.~~

Commented [LD42]: Suggest deleting also. If we don't think it is pertinent then we should not include a whole section on "withdrawal of surplus" on the next page.
I am suggesting leaving in the withdrawal of surplus discussion for completeness and removing this pargraph, but an alternative approach would be to leave in this paragraph and delete the entire "Through withdrawal of the surplus" section.

Based on the above analysis, the Province believes that the uncertainties around how and when to utilize a surplus in the OTPP do not result in an inability or lack of entitlement to utilize the surplus in accordance with Section PS 3250.52.

Calculating the limit on the carrying amount of an accrued benefit asset

Section PS 3250.53 to .58 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in PS3250.055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where actual realization of the benefit would be reflected in a reduction in future contributions. A valuation allowance is recorded against the Pension Asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test under PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as ~~that expected future benefit is~~ defined in paragraph ~~.~~56.

Therefore in accordance with Section PS 3250.56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Each of these is discussed separately.

DRAFT

Through withdrawal of the surplus (Section PS 3250.056 (b))

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, paragraph 3250.059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

The TPA for OTPP does not specify a method for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

Commented [CV43]: Does or does not?

Does not – it is done through the funding management policy

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution. The Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

The Province's position is that there is no amount of expected future benefit included in respect of withdrawable plan surplus.

DRAFT

Through reducing future contributions (Section PS 3250.056 (a))

PS 3250.56(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per PS 3250.81 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the Pension Asset value to be recorded in the accounts. For example, if the Pension Asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the Pension Asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. It is therefore relatively straightforward and is typically calculated based on the Province's share of the current service cost reported in the actuarial valuation taken into perpetuity unless there is evidence to indicate the workforce will significant diminish over time (for example a closed plan).

The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in this second part of the calculation. Note that consistent with the calculation of the expected future accruals for service, no amounts are considered for employee contributions as these relate to the OTF's portion of the plan. The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (3250.56(a)). ~~There is no guidance on the meaning of minimum contributions for purposes of this calculation in PS 3250.~~

There is no further guidance in S 3250 as to how the calculation of minimum required contributions~~is calculation~~ should be performed and what restrictions or parameters should be factored into this calculation. Typically for defined benefit plans minimum contributions include those that are required by the pension regulator to be made for funding. However, minimum contributions regardless of any surplus, may be required by plan text, legislation or other agreements with employees. For OTPP a key element of judgment is determining what contributions are required by the current plan arrangements "regardless of any surplus".

Formatted: Normal, Right: 0.1 cm, Space Before: 3.3 pt, Line spacing: single, Font Alignment: Auto

Determining the number of years of contributions to include should involve an assessment of the facts and circumstances of the plan and should consider uncertainty. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the contractual agreements between the Sponsors that provide for the sharing of risks and benefits and specifically in respect of assessing the minimum contributions required by the plan agreements the following:

- One view of minimum contributions might be that the agreed upon level of contributions are the minimum contributions until they are altered in the plan text. As this can only happen with agreement from OTF it cannot be assumed that changes will be made and therefore that the contribution formula as stated in the current agreements will continue in perpetuity. This view provides the most conservative view of minimum payments. However as the current contribution amounts are greater than the government's share of the annual current service cost for the existing workforce this indicates that continued contributions at this rate will result in ever increasing surpluses. Extrapolating the surpluses, at a certain point other requirements that are currently incorporated into the plan text, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan will apply to reduce the contributions. The effect of these caps on contributions would have to be estimated but cannot be ignored as they form part of the current contribution arrangements. Modelling could be performed to develop expectations as to when these CRA limits could be expected to be reached assuming no changes in the contribution levels. As is the most conservative view (highest minimum contributions) the impact of this has been considered, as discussed below.
- An alternative view of the minimum contributions required by the plan is that there is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'. On this basis it could be argued that any agreed upon contribution levels are mandatory for only a three year period, after which the contributions must be renegotiated to stay the same, increase or decrease, such that the stated contribution level in the plan text constitute minimum payments for only three years. It should be noted that the plan text requires an actuarially balanced funding valuation, so to the extent that a funding deficit currently existed a contribution holiday (contributions lower than the annual cost of the plan) could not be negotiated. However because the funding situation at the time of future negotiations is not known it could be argued that no amount is a fixed "minimum contribution" in this context, because all of the contribution amount is subject to future changes in funding and negotiation by the joint sponsors.
- Other views of what the minimum contributions are would fall between these two views, such as that the current funding level is set to ensure that there is no funding deficit over a 11 year period and after that changes in contributions would be negotiated. This view has been used in calculating the actuarial calculation of the asset ceiling as noted in the table below.
- Another consideration might be the specific framework within the Funding Management Plan for OTPP which contemplates specified funding zones and expectations regarding possible

DRAFT

contribution reductions by the sponsors. Informed stochastic modelling would be necessary to estimate when the different funding zones will be reached and probability of contribution reductions may be increased.

- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to use some of the funding surplus to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change, $1.98B for the 2015 change, and $1.68B for the 2014 change).

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (PS 2130.03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in PS 2130.13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

As part of the 2015/16 Public Accounts audit, the Office of the Provincial Controller engaged external consultants to conduct asset ceiling tests to assess the requirement for a valuation allowance against the $10.1 billion of net pension assets reported by the Province for OTPP . The results of those reports are summarized here:

Commented [CV44]: Let think about how best to summarize the various modelling done – can we put the results in one table and then talk about each?

Also – I think we're missing the results of the modelling that was done assuming 50% of the surplus was used to improve benefits and 50% to reduce contributions until the CRA limit is reached – at which point only contributions are reduced.

Pauline has added the results of various models

Table 1: Summary of Asset Ceiling Models performed for OTPP

Model Assumptions	Expected Future Benefit or Asset Ceiling ($ Billions)	Results
1. No minimum employer contributions are required regardless of any surplus.	$44.6	There is no minimum employer contribution under the plan/legislation that is required even if a surplus is present. This view leads to no reduction in the expected future benefit (EFB) where no minimum percentage of contributions exist in the plan

		provisions.
2. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of the current funding report. Contribution requirements are $1.7B per year for 2015, 2016 and 2017.	$41.2	The minimum contribution requirement applies to the current period of the valuation report and until a new report is completed. EFB is reduced by 2 years of $1.7B.
3. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of contribution requirement (i.e. 10 years through 2026) not just for the period of the current funding report.	$29.3	Uses a period to 2026 (11 year horizon) based on the funding report special contribution requirement. The EFB at March 31, 2016 is reduced by $15.3B in minimum funding requirement.
4. The surplus is never used until the time it reaches the Income Tax Act (ITA) threshold. Once attained, the excess surplus is used at 50% for employees and 50% for the Province to reduce contributions in the following years.	$23.2	Assumes the Government uses 50% of the surplus above the ITA surplus threshold for a contribution holiday and the employees use the other 50%. ITA limit for surplus is attained at end of 2025, leading to forced contribution reductions from year 2026. EFB is reduced by minimum employer funding requirements of $21.4B as at March 31, 2016
5. Every year, 50% of new surplus is applied to improve member benefits and the remaining 50% of the new surplus is retained and continues to accrue. Once the ITA threshold is attained, the excess surplus is used 50%-50% to reduce contributions by employees and Government.	$12.9	ITA limit for surplus is attained at the end of 2041. As surplus used at 50% before to improve employee benefits, once ITA limit is attained, forced contribution reduction from year 2042. EFB is reduced by minimum employer funding requirement of $37.7B.

Note: Models above made no assumption on any value of the surplus withdrawal.

DRAFT

~~The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (3250.56(a)). There is no guidance on the meaning of minimum contributions for purposes of this calculation in PS 3250.~~

Under the Partners' Agreement, the parties are mandated to negotiate benefits and contributions every three years as a minimum and if agreement is not reached, it is reasonable to expect that a change in contributions might occur rather than the 'status quo' being retained.

For purposes of the OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

In addition to the above calculations, the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan should also be considered. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that no valuation allowance is required.

The determination of the minimum contribution levels required as input to the calculation of the expected future benefit involves significant judgements, estimation and assumptions about future funding surplus levels. These judgements, estimates and assumptions should be made on a consistent basis with best estimates used in developing the accrued benefit obligations and plan asset amounts. Regardless of the need to apply judgements, estimates and assumptions for the calculation, this does not imply that no asset can be recognized or that it cannot be reliably measured. In fact, pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". From the Province's perspective, 'expected' does not equate to 'certainty'.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (3250.42) and each key assumption must be based on the government's best estimate of those future events that have

DRAFT

an effect on the accrued benefit obligation (3250.41). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. 3250.57 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on Plan Assets, which is one of the acceptable references suggested on PS 3250.44.

The OAG and the Government differ regarding whether it needs to be "expected" that the Government will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in paragraph .059. The Government considers that it needs to be expected that future economic benefits are to be obtained as reflected in the definition of an asset in Section PS 1000 and as reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to use a plan surplus.

Other guidance in the PSA Handbook on measurement

~~Furthermore~~ MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe would be a useful addition to the current year financial statements. PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by experience of similar transactions and, in some cases, reports from independent experts. Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.*
>
> *.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.*

Commented [CV45]: We have some content from 3120 above – should we consolidate?

Jim/Lucy to consider.

LD – I had viewed the content on 3210 as being part of the "recognition discussion" whereas here we are only talking about additional guidance to answer the measurement question, so I was not sure that consolidation would work in a logical manner because they are two separate sections of the paper. I'm open to alternative suggestions though.

The estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is an acceptable alternative under PSAB and consistent with rates followed by other senior Canadian governments. Historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets reported in the Public Accounts.

Impact of valuation allowance

The current AG's view challenges previous interpretations of the Provincial Controller and former Auditor Generals regarding the interpretation and application of PS 3250 to those JDBPs where the government is a joint sponsor. The impact of the OAG's view is that no pension accounting surplus should be recognized in the Province's Public Accounts for JDBPs until the joint sponsor agrees to a change in the plan text for the Province to provide for unilateral authority to access surplus or reduce future contributions to enters into an agreement by year-end enabling the government to take a contribution holiday. In the absence of meeting either the criteria set out by the AG, any ABA would therefore be fully provided for through a valuation allowance, impacting each year's statement of operations by the amount by which the asset would otherwise increase in value. These results are counterintuitive with pension expense being higher in years in which increased funding is made and also higher when poor investment returns create actuarial losses that have not yet been amortized into the statement of operations. These examples are illustrated in Appendix J. ~~requirements are higher and assets are therefore increasing or when greater investments returns are recorded. In contrast, under the AG's view, the Province's annual surplus/deficit would reflect a gain (income) in years when there are less than expected investment returns. **NTD – statements to be supplement by the visual aid requested by the Minister]**~~

Commented [CV46]: Need to flush this out – the situation where there is income generated is where there ends up being a net actuarial loss – I don't think that just having income less than that expected would necessarily create income.

LD – have clarified and included the slide deck as an appendix to illustrate

For information purposes, refer to Appendix D for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting compared with following the Province's interpretation of the PSAS. Of particular note is the impact in 2008 when the deficit would have be lower by $3 billion in a year when pension asset values fell significantly because of the financial crisis.

Comparability of Ontario accounting for JDBPs to other Provinces

DRAFT

Included in Appendix C is a legal opinion prepared by lawyers, Koskie Minsky, comparing access to the pension surplus of OTPP relative to JDBPs in British Columbia. The Province of British Columbia does not report a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

Quebec, Nova Scotia, Manitoba and New Brunswick also have pension plans that are in a net accrued benefit asset position before valuation allowance. In New Brunswick, the target benefit pension plans are governed by an Agreement and Declaration of Trust which restricts the province's access to the plan assets. As a result, the Province of New Brunswick records the value of plan net assets as nil. Any info on SK or QC? (seem to recall mention of these at some point as well)

Commented [CV47]: Is this taken from the KM opinion?

No, from BC Controllership's response email.

Commented [LD48]: This sentence is accurate, but I don't believe the New Brunswick plans are joint defined benefit plans. I think it would be helpful to be clear on this point as they are not as comparable as, say, the BC plans because of this.

Commented [CV49]: Pauline should now have a full review of the other senior governments in Canada.

Added for New Brunswick. Still following-up on SK, Manitoba and Quebec

Conclusion on measurement

As discussed, there is significant professional judgement and estimation in determining how to measure the valuation allowance under Section PS 3250, including the determination of the minimum contributions required by the current plan arrangements. It is the Province's position that the attributes of the joint defined benefit plan arrangements for the OTPP entitle the Province to access its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surplus through reduced contributions.

The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of those models to date no valuation allowance appears to be required and the OTPP pension assets should continue to be recorded on the books of the Province.

DRAFT

Appendix A – Guidance in the PSA Handbook - FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210

Guidance in FINANCIAL STATEMENT CONCEPTS, Section PS 1000

.35 **Assets** are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

.36 Assets have three essential characteristics:

(a) they embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows;

(b) the public sector entity can control the economic resource and access to the future economic benefits; and

(c) the transaction or event giving rise to the public sector entity's control has already occurred. [Former paragraph PS 1000.36 retained in Archived Pronouncements.]

.37 An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph. Thus, for example, an item does not qualify as an asset of a government if the item involves:

(a) no future economic benefit;

(b) future economic benefit, but the government cannot obtain it; or

(c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred.

(paragraph PS 1000.38 deleted) [Former paragraph PS 1000.38 retained in Archived Pronouncements.]

~~.39 **Financial assets** are assets that could be used to discharge existing liabilities or finance future operations and are not for consumption in the normal course of operations.~~

~~.40 A financial asset is any asset that is:~~

~~(a) cash;~~

~~(b) a realizable asset that is convertible to cash;~~

~~(c) a contractual right to receive cash or another financial asset from another party;~~

~~(d) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government;~~

~~(e) an equity instrument of another entity;~~

~~(f) an investment in a government business enterprise or government business partnership;~~

~~(g) a financial claim on an outside organization or individual; or~~

~~(h) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph PS 1201.055. [Former paragraph PS 1000.40 retained in Archived Pronouncements.]~~

Commented [LD50]: Consider if it is relevant to include the paragraphs on financial vs non-financial assets. I don't think it is as it does not impact the analysis, so suggest they can be deleted.

~~inventories of supplies.~~

~~.42 **Non-financial assets** are acquired, constructed or developed assets that do not normally provide resources to discharge existing liabilities, but instead:~~

~~(a) are normally employed to deliver government services;~~

~~(b) may be consumed in the normal course of operations; and~~

~~(c) are not for sale in the normal course of operations.~~

RECOGNITION

.52 Recognition is the process of including an item in the financial statements of an entity. Recognition consists of the addition of the amount involved into item totals on a financial statement together with a narrative description of the item (for example, receivables, user fees, grants) in a statement. Similar items may be grouped together in the financial statements for the purpose of presentation.

.53 Recognition means inclusion of an item within one or more individual statements and does not mean disclosure in the notes to the financial statements. Notes either provide further details about items recognized in the financial statements, or provide information about items that do not meet the criteria for recognition and thus are not recognized in the financial statements.

.54 The recognition criteria below provide general guidance on when an item is recognized in the financial statements. Whether a particular item is recognized or not will require the application of professional judgment in considering whether the specific circumstances meet the recognition criteria.

.55 The recognition criteria are as follows:

(a) the item has an appropriate basis of measurement, and a reasonable estimate can be made of the amount involved; and

(b) for an item that involves obtaining or giving up future economic benefits, it is expected that such benefits will be obtained or given up.

.56 It is possible that an item will meet the definition of an element but still not be recognized in the financial statements because it is not expected that future economic benefits will be obtained or given up or because a reasonable estimate cannot be made of the amount involved. It may be appropriate to provide information about items that do not meet the recognition criteria in notes to the financial statements. "Expected" is used with its usual general meaning and refers to that which can reasonably be anticipated, contemplated or believed on the basis of available evidence or logic but is neither certain nor proved. The use of the word in the recognition criteria is intended to acknowledge that economic activities occur in an environment characterized by uncertainty. It is not intended to accommodate the recognition of items that do not meet the definition of one of the elements of financial statements. By implication, recognition would, therefore, not be appropriate without the occurrence of a past transaction or economic event that gives rise to an asset, liability, revenue or expense as defined in this Section.

.57 Purchased natural resources and Crown lands are recognized in government financial statements. However, when natural resources and Crown lands have been inherited by the government in right of the Crown and have not been purchased, they are not given accounting recognition as assets in

government financial statements. These items are not recognized as assets because the costs, benefits and economic value of such items cannot be reasonably and verifiably quantified using existing methods. Similarly, art and historic treasures are also not recognized as assets.

.58 In the absence of appropriate public sector recognition and measurement criteria for intangibles, all intangibles, including those that have been purchased, developed, constructed or inherited in right of the Crown, are not recognized as assets in government financial statements. The intangible often called "human capital" that embodies the talent or intellectual capital of government employees is not recognized as an asset under existing accounting principles.

.59 Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting. The accrual basis of accounting recognizes the effect of transactions and events in the period in which the transactions and events occur, regardless of whether there has been a receipt or payment of cash or its equivalent. Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied. Accrual accounting recognizes an asset until the future economic benefit underlying the asset is partly or wholly used or lost.

~~MEASUREMENT~~

~~.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.~~

~~(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.~~

~~(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.~~

~~.61 Present value is the discounted amount of future cash flows expected to be received from an asset or required to settle a liability. Present value is not a basis of measurement, but a valuation technique that may be used within historical cost based or current value models. This technique is used in the government reporting model, for example, to estimate the cost of retirement benefits, when determining the estimated total expenditure for closure and post closure care of a solid waste landfill site, and when determining the "grant portion" of concessionary loans and portfolio investments.~~

~~.62 Government financial statements are prepared on the basis that recognized economic resources used up are measured in financial terms with no adjustments made for the effect of a change in the general purchasing power of the currency during the period. Although a government's performance in the management of its service potential 2 is generally a focus more appropriate to the nature and objectives of government, it cannot entirely be measured in financial terms.~~

~~2. Service potential embodies both the quality of service provided and the efficiency with which it is provided.~~

Commented [LD51]: I'm also not convinced of the need to include the measurement guidance from Section 1000 as I don't think it is particularly pertinent to the discussion.

DRAFT

~~.63 Financial statements are prepared on the assumption that the government is a going concern, meaning it will continue in operation, and will be able to realize assets and discharge liabilities and meet its statutory obligations in the normal course of operations for the foreseeable future.~~

Guidance in ASSETS, Section PS 3210

Economic resources

.06 Economic resources embody value because they enable an entity to meet its objectives, such as the provision of public goods and services, redistribution of wealth, generation of cash inflows or reduction of cash outflows.

.07 To embody value as an economic resource, there must also be some restriction on its availability. For example, the air we breathe generally cannot be an economic resource unless access to it is restricted.

.08 Economic resources can arise from, but are not limited to, the following:

(a) contracts or agreements (for example, accounts receivable and leases);

(b) another government's legislation (for example, transfers receivable);

(c) government's own legislation (for example, taxes, fines and penalties);

(d) voluntary contributions (for example, donations); or

(e) construction and development (for example, roads).

.09 Economic resources can be:

(a) financial in nature (for example, cash, accounts receivable and investments); or

(b) non-financial in nature (for example, tangible capital property, prepaid items and inventories of supplies).

.10 Without an economic resource, future economic benefits cannot be obtained. For example, a fire truck (the economic resource) needs to exist before it can provide fire suppression services (the future economic benefits).

Future economic benefits

.11 The essence of assets are their future economic benefits. Assets embody future economic benefits that allow public sector entities to achieve their objectives. The future economic benefits embodied in assets involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows or to reduce cash outflows.

.12 Often the public is the beneficiary of the goods and services provided by a public sector entity. For example, assets such as fire trucks are used to provide fire suppression services to the public. Hospital buildings and medical equipment are used to provide health care services. Parks, schools and libraries provide recreational, educational and research opportunities to the public. Water treatment plants provide goods, such as potable water. Such assets benefit public sector entities as they assist in achieving the entity's primary objective of providing public goods and services. This benefit is different from the benefit that the public receives.

.13 The future economic benefits embodied in an asset may also be in the form of generating future cash inflows. Cash inflows benefit the public sector entity because cash can be used to purchase or to provide goods and services, redistribute wealth or settle liabilities. Benefits in the form of cash inflows relate to resources, such as loans receivable, inventory for resale and portfolio investments. Also, some

public sector resources generate cash inflows because they have user fees associated with them.

.14 The future economic benefits may also take the form of a capacity to reduce cash outflows. For example, this may be the case when betterment of a tangible capital asset reduces the cost of providing goods and services.

.15 There is a close association between incurring a cost and the generation of an asset. However, not all costs result in a future economic benefit. For example, costs incurred to maintain the current service capacity of an asset do not provide a future economic benefit. Also, a public sector entity may obtain an asset without incurring costs. For example, items that have been donated to the public sector entity may provide that entity with future economic benefits and, hence, satisfy the definition of assets.

Control

.16 A public sector entity controls the economic resource and access to the future economic benefits when it:

(a) can benefit from the economic resource through its capacity to provide goods and services, to provide future cash inflows or to reduce cash outflows;

(b) can deny or regulate access to those benefits by others; and

(c) is exposed to the risks associated with the economic resource.

.17 An entity that controls an economic resource has the ability to benefit from the economic resource. For example, a recipient of a transfer benefits from the transfer as it can use the transfer to provide goods or services.

.18 An entity that controls an economic resource has the ability to deny or regulate access to the future economic benefits associated with the economic resource by others. For example, an entity controlling a bus has the ability to deny or regulate access to the related transportation services.

.19 An entity that controls an economic resource is exposed to the risks associated with the economic resource. For example, the entity may hold an investment, the value of which may decline and result in a loss.

.20 Some economic resources are subject to certain external restrictions that specify the purpose(s) for which resources are to be used. For example, there may be external restrictions imposed on the public sector entity's own assets, as is the case with some sinking fund investments. Such restrictions on the use of an economic resource do not negate the public sector entity's control of the economic resource.

.21 Although control may be seen as applying to an asset as a whole, the concept can also be applied to individual rights related to the asset. For example, a single leased asset embodies different economic benefits. It may give the lessee the right to use the property and the lessor the right to receive rents and any residual value. Thus, both parties may have assets corresponding to their respective rights.

.22 Control of an economic resource and of access to the future economic benefits are essential characteristics of an asset, whereas possession or ownership is not. For example, a public sector entity may control the economic resource and access to the future economic benefits through a capital lease arrangement yet not own the economic resource.

.23 A public sector entity's ability to regulate an economic resource does not, in and of itself, constitute control of an asset. A public sector entity may establish the regulatory environment in an

industry or sector within which organizations operate and impose conditions or sanctions on their operations. For example, a pollution control authority may have the ability to close down the operations of entities that are not complying with environmental regulations. However, this power does not constitute control because the pollution control authority's interest extends only to the regulatory use of the economic resources and does not include the ability to control access to the future economic benefits.

.24 A public sector entity may act as trustee when it administers trusts on behalf of the beneficiaries specified in the agreement or statute. As trustee, the public sector entity merely administers the assets, following the terms and conditions set out in the agreement. It does not control the asset because it does not have access to the future economic benefits. Those benefits flow to the beneficiaries.

DRAFT

Appendix B - Definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, paragraph PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the	Consistent in concept with the definition of a GP focusing on investments in the partnership and the

		non-government sponsor;	definition of a JDBP focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

In addition to consistent wording, the concepts in the definitions of a government partnership and a joint defined pension plan are similar.

While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

DRAFT

Appendix C – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners'

Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan ("PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

DRAFT

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[11] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[11] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

DRAFT

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

We trust that these comments have been of assistance to you. Should you have any questions in regard to them, please do not hesitate to contact the undersigned.

Appendix E – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the Pension Benefits Act, appointing the OTTP Board, and defining the role of the Board. By contrast, section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the Sponsors to the OTPP have the authority to utilize ongoing surpluses. The process governing the use of ongoing surpluses by the Sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every

Commented [LD54]: JIM
Can you also insert references to Sections 10 and section 57.
Also to Section 58 to 60 that are relevant.
Section 19 requires a valuation to be prepared every three years.
This is also important.

DRAFT

three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the Sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the Sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the Sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the Sponsors on his or her views on the positions of the partners and provide a recommendation to the Sponsors. If the Sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

We note that the mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the Sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the Sponsors do not agree to file the valuation, then the Sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the Sponsors' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Funding Management Policy (FMP)
The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and

DRAFT

how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.
The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:
i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).
ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).
iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Sponsors are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both Sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the Sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the Sponsors mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Appendix G - Comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP [Tables are to be updated]

Review of Discount Rates Across Jurisdictions

- In the inter-jurisdictional review of all funded provincial sponsored or joint sponsored plans which also have stand-alone plan financial statements:
  - the Ontario Teachers' Pension Plan (OTPP) is the only plan were the discount rate used in the plan's financial statements is more than 50 basis points below the discount rate used by the province.
  - OTPP stand-alone financial statements use the market rate of Provincial bonds.

- All other plans' financial statements (i.e. 23 plans across jurisdictions) use the long-term rate of return as the discount. The discount rate used by the plans' are lower than 50 basis points or less than the provinces' discount rate or at times higher than the provincial rate.

1

Plan's discount rate is lower than the provincial rate by more than 50 bps

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate
Ontario				
Ontario Teachers' Pension Plan (OTPP)	6.25%	LT return on plan assets	3.25%	Market rate of Provincial Bonds

2

Plan's discount rate is lower by 50 bps or less (or higher than the provincial rate)

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate

Appendix ~~H~~G – History of Surplus Utilization for OTPP

Commented [LD55]: Two Appendix G's

The history of OTPP surplus utilization from the time the OTPP became a jointly sponsored pension plans to the date that the FMP was established (in March 2003) demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to reduce the value of remaining	$0

DRAFT

			special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion		

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the Sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

DRAFT

Appendix ~~H~~ I – Summary of different valuation methodologies for pension valuations

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

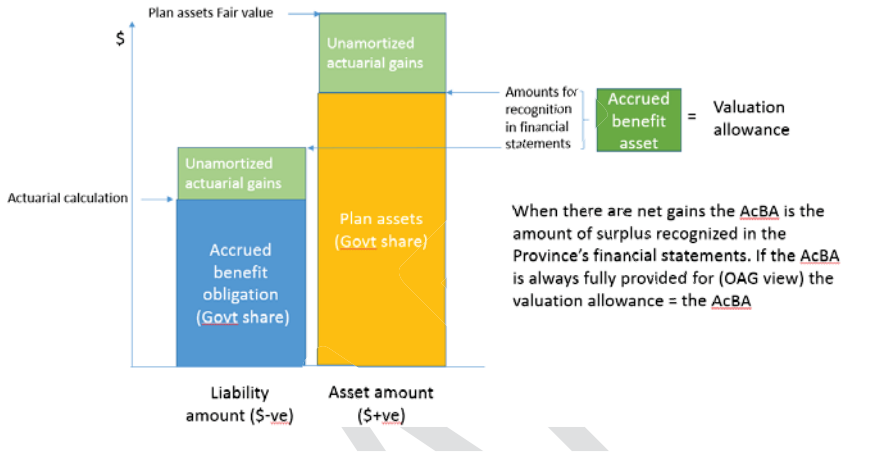
Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits and pension obligations.	Measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered.
Actuarial cost method	*[To confirm – not clear from the valuation report]*	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values [To confirm the approach taken in OTPP funding valuation]	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	Market -related values, which are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied consistently. The Province uses adjusted market values for some classes of assets in certain plans.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate.	In measuring a pension obligation amount, the defined benefit obligation amount determined by the	Not specified. However two methods are specifically acknowledged – a)

	For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR Reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work To confirm the approach taken in OTPP funding valuation]	plan's sponsor may be (but is not required to be) used. Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. Part I (IAS 19) requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario.	discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing.[12] The Province of Ontario uses a discount rate for OTPP determined by reference to plan asset earnings.
Underlying population data	All valuation methodologies should use consistent underlying data of the population covered by the plan		
Inflation rate	All valuation methodologies should treat inflation in a consistent manner and use a consistent inflation assumption (best estimate). [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Demographic assumptions	All valuation methodologies should use a consistent demographic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Other economic assumptions	All valuation methodologies should use a consistent other economic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		

[12] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

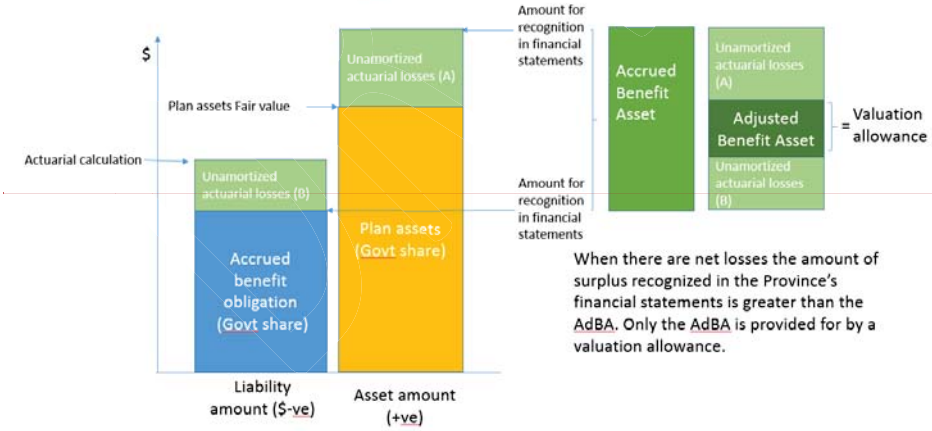
Appendix J – Impact of a Valuation Allowance on Pension Assets

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



When there are net gains the AcBA is the amount of surplus recognized in the Province's financial statements. If the AcBA is always fully provided for (OAG view) the valuation allowance = the AcBA

An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses

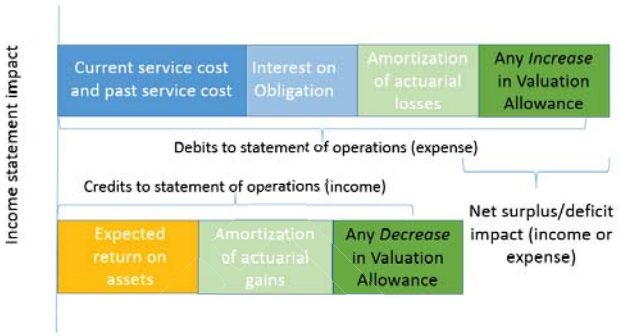


When there are net losses the amount of surplus recognized in the Province's financial statements is greater than the AdBA. Only the AdBA is provided for by a valuation allowance.

Components of Expense

The *change in* the valuation allowance flows directly through the statement of operations.

The change in valuation allowance = the change in the AcBA (or AdBA if applicable)



Changes in the Accrued Benefit Asset

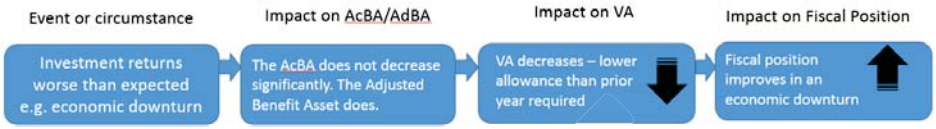
Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]

Event or circumstance	Impact on ABA	Impact on VA	Impact on Fiscal position
Contributions in excess of current service cost – i.e. additional funding	Plan assets increase more than the ABO ↑	VA increases to reduce ABA to zero ↑	Fiscal position worsens with additional funding ↓
2015-2016 example: Contributions of $1,812M exceeded other elements of pension expense by $1,514M	2015-2016 example: Additional contributions increase plan assets. AcBA increases by $1,514M	2015-2016 example: AcBA increase of $1,514M results in an increase to the VA of $1,514M	2015-2016 example: Deficit increases by $1,514M. The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

Changes in the Accrued Benefit Asset

Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA or AdBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]



Plan assets fair values significantly lower in one year.
Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.

The AcBA is based on the higher, smoothed value of plan assets and does not change significantly. However the actuarial losses are subtracted from the AcBA to calculate an AdBA, which is smaller than the AcBA.

Prior year allowance was based on AcBA (no net amortized actuarial losses). Current year is based on AdBA because there are unamortized actuarial losses. The AdBA is smaller than the AcBA because of the increase in unamortized losses. Therefore the VA is reduced correspondingly.

Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. The increased actuarial losses would only impact the statement of operations in future years.

A similar impact would have been noted in 2008 if the OAG's position was reflected in the financial statements for that year.

[1] Impact of change, all other elements being held constant.

Hi Nadine,

I have some suggested edits made to the attached and have also added responses into the comments where I thought my input was appropriate to explain the edits or explain no edits in some cases.

I also want to take a "clean" read of this later to make sure it flows.

In respect to the footnote 3 in 3060, it might be better to have a quick call to discuss how best to approach this.

Regards,
Lucy

---

Lucy,

As discussed, attached is the updated version of the paper reflecting additional edits from staff (track changes). Some additional work being done on interjurisdictional analysis that will follow.
Please let us know if you would like to discuss, and feel free to get in touch with Jim directly.

Subject: Re: Draft Position Paper

Hi Nadine,

Please see attached the revised position paper. I attach a tracked changes for reference (although I moved lots of paragraphs around so it looks like more red ink then it really is). I also attach a clean version for ease of reading and as I assume that Cindy would read a clean version. I thought you might want to take a look before passing on to Cindy, but let me know if you would like me to forward the clean version to Cindy directly.

In respect of the outstanding questions from the differences between the various valuations. I have left highlighted comments in the appendix for where these should be resolved. Specifically they include:

- In respect of the funding valuation for OTTP - What is the actuarial cost method used? The valuation report indicates that it might diverge from those required by regulation and applies that required by the TPA, but it is not clear to me what the basis for this is - whether it is the projected benefit method pro rated on services or another method.
- In respect of the funding valuation for OTTP - What was the asset valuation methods actually used? Was it a combination of all of the methods listed (depending on class of asset) or some other approach.
- In respect of the funding valuation for OTTP - What was the "best estimate" approach used in the going concern funding valuation before an adjustment for adverse deviations - Can it be confirmed as being an asset return amount or was it based on fixed income investments.
- In respect of the funding valuation and OTTP financial statements - Were the best estimates for other assumptions consistent with those used by the Province in their pension surplus calculations under PSAS. If the same "Management" is making the assumptions one would expect them to be the same. However, if different management is making those judgements then the actual estimates could be different - for example if the OTPP board determines the inflation rate for use in the OTTP financial statements and the funding valuation but the Province separately determines the inflation rate used in their PSAS calculations.

Please let me know if you have any questions. I will work on the "visual aid" of the impacts of the asset valuation this weekend.

Hi Nadine,

The paper is coming together, but it is taking a bit longer then I expected. I'd like to work on it a bit more this evening, so "end of day" today seems a bit ambitious. Would you rather than I send you what I have at end of day (5pm) for you to circulate for initial comments from Cindy or send it later, say tomorrow morning.

Let me know.

Attachment 1: PWC SOW Pensions Accounting Opinion 20160915.docx
Attachment 2: PWC SOW Pensions Accounting Opinion 20160915 Compare .docx

---

Hi Nadine,

Please see attached draft SOW for my comments (Clean and compare version to the one Shyrose sent over.

I did a couple of questions on the SOW

- I'm not sure what "General Consultant, Level 2" and "Service Category 2" means in terms of your expectations. Based on the cap and trade SOW I believe that partners are equivalent to a "level 2" so I have left as is, but any guidance on this would be helpful.
- Names and Roles of Vendor Personnel - For an accounting opinion there will be a number of internal levels of review in addition to the technical analysis (a quality review partner and review by our Chief Accountant). Should I list the names of the partners expected to do the internal review as well, although they will not be directly involved in the reading of the source documentation and analysis. I have currently listed them. (Note the quality review partner is still TBC based on availability).
- I changes some of the references to the Master agreement to be consistent with that in our Cap and Trade SOW as I assume it is the same master agreement as for that arrangement. Please confirm. These are highlighted in the "compare" document

- In terms of making of the document available to public, we do usually request that consent is obtained from us when making use or referring to the opinion publicly. This is because it is an opinion, and we would be associated with any document that includes our report. We have certain responsibilities under the current association rules in the CPA Canada Handbook - Assurance. Therefore I am proposing the following language, which just requests that you obtain our consent before referencing our opinion, so we can ensure that the context is appropriate to the work that we performed.

The Client agrees to seek and obtain our written consent before including our accounting opinion (if applicable) or referring to us in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent.

- Please note I put in a maximum amount of $60,000 - I do not think that it will be this amount (or likely anywhere close), but as it is uncertain how many hours will be required and whether it will be an opinion or not, I left it with ample room. Please let me know if you would like it reduced and what your suggested cap would be.

- Please note the acknowledgements and agreements are consistent with those in the cap and trade agreement, amended where appropriate for these circumstances.

Please let me know whether this is satisfactory to you or if you have any questions on the edits. I have received the information from Shyrose and will start work this weekend, assuming the terms of the SOW

are agreed.

PWC SOW Pensions Accounting Opinion 20160915.pdf

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective September 16, 2016.

PricewaterhouseCoopers LLP (the "Vendor" or "PwC") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client" or the "Province") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of March 22, 2016 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

Commented [LD1]: I do not have quick access to the copy of the Master Agreement. Per the Cap and Trade SOW this was March 22, 2016, so I am assuming it would be the same date for purposes of this SOW. Please confirm.

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$60,000.00, excluding HST.

4. *Project Start Date:* September 16, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide accounting advice (the "accounting advisory services") regarding the acceptability of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards. The accounting advice may include:

   - Review of background information, position papers developed by the Client or third parties that have been engaged by the Client to draft accounting positions on accounting for the recognition and measurement of pension assets for jointly-sponsored pension plans, and other supporting information.
   - Provide written or oral comments on draft position papers as provided by the Client with respect to the application of Canadian Public Sector Accounting Standards.
   - Participation in discussions with internal and external stakeholders and other parties as directed by the Client.

   During the course of this project, the Client will provide to PwC a written statement of all relevant facts and assumptions, and a description of the circumstances and the nature of

any relevant disagreements with the Client's auditor; and the Client's auditor will confirm to us in writing that the information the Client has provided to PwC is complete and consistent with their knowledge of the facts and circumstances of the specific transaction.

If requested to by the Client during the course of the project, the Vendor shall provide an accounting opinion (the "accounting opinion"), prepared in accordance with Section 7600, *Reports on the application of accounting principles* of the CPA Canada Handbook – Assurance ("Section 7600"), regarding the appropriateness of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards.

Vendor may be required to participate in meetings with the Client and other stakeholders, and to support the Client with respect to the Vendor's accounting advice or accounting opinion (if applicable), including discussions with the Office of the Auditor General.

The Client agrees that any accounting advisory services are solely for the information and use of the Client. Subject to the obligations in Article 27 (Privacy) of the Master Agreement the Client agrees that any written work product of PwC, other than an accounting opinion prepared in accordance with Section 7600, will not be made available to any other persons or entities. However the Client may provide access to PwC's observations to the Client's independent auditors solely for their informational purposes. The Client agrees to seek and obtain our written consent before including our accounting opinion (if applicable) or referring to us in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent.

Acknowledgements and agreements

The Client acknowledges and agrees to the following:

a. The performance of the accounting advisory services does not constitute an engagement to provide audit, compilation, review or attest services in accordance with professional standards issued by the Chartered Professional Accountants of Canada ("CPA Canada") and, therefore, PwC will not express an opinion or any other form of assurance with respect to the accounting advisory services.
b. The accounting advisory services and accounting opinion (if applicable) to be provided do not include the delivery of any verbal or written advice on the application of accounting principles to a hypothetical transaction.
c. This engagement cannot be relied on to disclose internal control deficiencies, errors or fraud, should they exist.
d. PwC has no responsibility for updating the accounting advisory services or accounting opinion or for performing any additional services, except as agreed to in writing with the Client.
e. The Client's purpose for engaging PwC to perform the accounting advisory services is to supplement management's own technical accounting resources in performing accounting analysis and to assist management in making its determination as to the application of accounting principles and not to obtain an opinion from PwC as to such application, unless an accounting opinion is requested by the Client.
f. The Client shall be solely responsible for, among other things: (a) making all management decisions and performing all management functions; (b) designating one or more individuals who possess suitable skill, knowledge and/or

experience, preferably within senior management to oversee the accounting advisory services (c) evaluating the adequacy and results of the accounting advisory services; (d) accepting responsibility for the results of the accounting advisory services; and (e) establishing and maintaining internal controls, including, without limitation, monitoring ongoing activities.

g. All management decisions and final conclusions reached in connection with the accounting advisory services will be the responsibility of the Client. PwC will not perform any management functions, make management decisions, or perform in a capacity equivalent to that of an employee of the Client.
h. PwC has no responsibility related to the Client's accounting or disclosure conclusions, whether or not such conclusions of the Client are related to the accounting advisory services and PwC has no responsibility for any disagreements between the Client and its independent auditor related to the Client's accounting.
i. The Client will be solely responsible for all decisions regarding the accounting treatment of any item or transaction and acknowledges that the accounting advisory services do not include the recording of any amounts in the Client's books or records. All amounts derived from the performance of the accounting advisory services will be reviewed and approved by, and will be the responsibility of, the Client's management.
j. The nature, scope and design of the accounting advisory services and the accounting opinion are solely the responsibility of the Client. PwC will rely, without independent verification, on the facts, information and assumptions provided by the Client. PwC will make no representation nor provide any assurance with respect to the adequacy of the services for the Client's purposes. Furthermore, PwC has no responsibility to advise the Client of other procedures that might be performed.
k. The Client will be solely responsible for providing accurate and complete information requested by PwC. PwC has no responsibility for the accuracy or completeness of the information provided by or on behalf of the client.
l. PwC's accounting and technical assistance will be based on the existing public sector generally accepted accounting principles. Should those generally accepted accounting principles be amended, superseded or revised in any manner, PwC's advice might change. PwC has no responsibility to inform the Client of any changes in generally accepted accounting principles that may occur after the completion of the engagement or any other oral or written work product prepared hereunder that would impact PwC's advice on the appropriate application of generally accepted accounting principles or to update its recommendations or any other oral or written work produce to take any such changes into account.
m. This engagement does not create a relationship between PwC and any person or party other than the Client. This engagement is not intended for the express of implied benefit of any third party.
n. The Client will identify an appropriate individual to serve as the project manager, including overseeing the accounting advisory services.

7. *Ownership and Licences* - **Attachment D** of the Master Agreement forms a part of this Statement of Work.

Commented [LD2]: I do not have quick access to the copy of the Master Agreement. Per the Cap and Trade SOW this was attachment D, so I am assuming it would be the same attachment for purposes of this SOW. Please confirm.

8. *Communications and Reporting* - The structure of Vendor's working relationship with OPCD is vital to the success of their engagement. Vendor's main point of contact will be Lucy Durocher who is the engagement leader.

9. *Work Location* - All meetings will be within the Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive. If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Charges On Per Diem Rate Basis*– The Vendor and the Client agree that Work performed under this Statement of Work will be charged on a Per Diem Rate basis. The Per Diem Rate will vary, based on the nature of the final deliverable, as follows:

Nature of final deliverable	Per Diem Rate	Service Category	Estimated hours	Per Diem Rate
Accounting Advisory	General Consultant, Level 2	Service Category 2	20-25	$390
Accounting Opinion	General Consultant, Level 2	Service Category 2	30-35	$990

13. *Billing and Payment Process* – The Vendor shall invoice the Client in accordance with the requirements of the Master Agreement. Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Individual's Legal Name	Individual's Role and Experience Level	Service Category	Per Diem Rate
Lucy Durocher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Martin Boucher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Sean Cable (TBC)	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"
Michael Walke	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"

14. **Invoices** - Invoices for payment of any charges under this Statement of Work shall be sent to:

Client:	Treasury Board Secretariat, Office of the Provincial Controller Division
Branch:	Accounting Policy and Financial Reporting
Representative:	Nadine Petsche
Title:	Director, Accounting Policy and Financial Reporting
Phone number:	416-325-8027
Email:	Nadine.petsche@ontario.ca

15. *Knowledge Transfer:* The Vendor will work closely with the Client to ensure knowledge transfer to the Clients designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* - The Vendor shall destroy all Confidential information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards

requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	**Treasury Board Secretariat**
Client Representative:	**Nadine Petsche**
Telephone number:	**416-325-8027**
E-mail:	**Nadine.petsche@ontario.ca**

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective ~~[insert date].~~September 16, 2016.

PricewaterhouseCoopers LLP (the "Vendor" or "PwC") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client~~"~~)" or the "Province") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of ~~June 16, 2014~~ March 22, 2016 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

Commented [LD1]: I do not have quick access to the copy of the Master Agreement. Per the Cap and Trade SOW this was March 22, 2016, so I am assuming it would be the same date for purposes of this SOW. Please confirm.

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$~~xx~~060,000.00, excluding HST.

4. *Project Start Date:* September ~~15~~16, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide ~~an accounting opinion~~accounting advice (the "accounting advisory services") regarding the acceptability of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards. The accounting advice may include:

   - Review of background information, position papers developed by the Client or third parties that have been engaged by the Client to draft accounting positions on accounting for the recognition and measurement of pension assets for jointly-sponsored pension plans, and other supporting information.
   - Provide written or oral comments on draft position papers as provided by the Client with respect to the application of Canadian Public Sector Accounting Standards.
   - Participation in discussions with internal and external stakeholders and other parties as directed by the Client.

During the course of this project, the Client will provide to PwC a written statement of all relevant facts and assumptions, and a description of the circumstances and the nature of any relevant disagreements with the Client's auditor; and the Client's auditor will confirm to us in writing that the information the Client has provided to PwC is complete and consistent with their knowledge of the facts and circumstances of the specific transaction.

If requested to by the Client during the course of the project, the Vendor shall provide an accounting opinion (the "accounting opinion"), prepared in accordance with Section 7600, *Reports on the application of accounting principles* of the CPA Canada Handbook – Assurance ("Section 7600"), regarding the appropriateness of the Province's accounting treatment and measurement of pension assets for jointly-sponsored ~~pensions~~pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards.

Vendor may be required to participate in meetings with the Client and other stakeholders, and to support the Client with respect to the Vendor's accounting advice or accounting opinion~~,~~ (if applicable), including discussions with the Office of the Auditor General.

~~Vendor~~The Client agrees that ~~the~~any accounting advisory services are solely for the information and use of the Client. Subject to the obligations in Article 27 (Privacy) of the Master Agreement the Client agrees that any written work product of PwC, other than an accounting opinion ~~or a summary of it~~prepared in accordance with Section 7600, will not be made available to any other persons or entities. However the Client may ~~be disclosed by Ontario to the public,~~provide access to PwC's observations to the Client's independent auditors solely for their informational purposes. The Client agrees to seek and obtain our written consent before including our accounting opinion (if applicable) or referring to us in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent.
~~[insert other services/deliverables required.~~

Acknowledgements and ~~any terms~~agreements

The Client acknowledges and ~~conditions in respect~~ agrees to the following:

a. The performance of the accounting advisory services does not constitute an engagement to provide audit, compilation, review or attest services in accordance with professional standards issued by the Chartered Professional Accountants of Canada ("CPA Canada") and, therefore, PwC will not express an opinion~~.~~ or any other form of assurance with respect to the accounting advisory services.

b. The accounting advisory services and accounting opinion (if applicable) to be provided do not include the delivery of any verbal or written advice on the application of accounting principles to a hypothetical transaction.
c. This engagement cannot be relied on to disclose internal control deficiencies, errors or fraud, should they exist.
d. PwC has no responsibility for updating the accounting advisory services or accounting opinion or for performing any additional services, except as agreed to in writing with the Client.
e. The Client's purpose for engaging PwC to perform the accounting advisory services is to supplement management's own technical accounting resources in performing accounting analysis and to assist management in making its determination as to the application of accounting principles and not to obtain an

opinion from PwC as to such application, unless an accounting opinion is requested by the Client.

f. The Client shall be solely responsible for, among other things: (a) making all management decisions and performing all management functions; (b) designating one or more individuals who possess suitable skill, knowledge and/or experience, preferably within senior management to oversee the accounting advisory services (c) evaluating the adequacy and results of the accounting advisory services; (d) accepting responsibility for the results of the accounting advisory services; and (e) establishing and maintaining internal controls, including, without limitation, monitoring ongoing activities.

g. All management decisions and final conclusions reached in connection with the accounting advisory services will be the responsibility of the Client. PwC will not perform any management functions, make management decisions, or perform in a capacity equivalent to that of an employee of the Client.

h. PwC has no responsibility related to the Client's accounting or disclosure conclusions, whether or not such conclusions of the Client are related to the accounting advisory services and PwC has no responsibility for any disagreements between the Client and its independent auditor related to the Client's accounting.

i. The Client will be solely responsible for all decisions regarding the accounting treatment of any item or transaction and acknowledges that the accounting advisory services do not include the recording of any amounts in the Client's books or records. All amounts derived from the performance of the accounting advisory services will be reviewed and approved by, and will be the responsibility of, the Client's management.

j. The nature, scope and design of the accounting advisory services and the accounting opinion are solely the responsibility of the Client. PwC will rely, without independent verification, on the facts, information and assumptions provided by the Client. PwC will make no representation nor provide any assurance with respect to the adequacy of the services for the Client's purposes. Furthermore, PwC has no responsibility to advise the Client of other procedures that might be performed.

k. The Client will be solely responsible for providing accurate and complete information requested by PwC. PwC has no responsibility for the accuracy or completeness of the information provided by or on behalf of the client.

l. PwC's accounting and technical assistance will be based on the existing public sector generally accepted accounting principles. Should those generally accepted accounting principles be amended, superseded or revised in any manner, PwC's advice might change. PwC has no responsibility to inform the Client of any changes in generally accepted accounting principles that may occur after the completion of the engagement or any other oral or written work product prepared hereunder that would impact PwC's advice on the appropriate application of generally accepted accounting principles or to update its recommendations or any other oral or written work produce to take any such changes into account.

m. This engagement does not create a relationship between PwC and any person or party other than the Client. This engagement is not intended for the express of implied benefit of any third party.

n. The Client will identify an appropriate individual to serve as the project manager, including overseeing the accounting advisory services.

7. *Ownership and Licences* - **Attachment ~~E~~ D** of the Master Agreement forms a part of this Statement of Work.

Commented [LD2]: I do not have quick access to the copy of the Master Agreement. Per the Cap and Trade SOW this was attachment D, so I am assuming it would be the same attachment for purposes of this SOW. Please confirm.

8. *Communications and Reporting* - The structure of Vendor's working relationship with OPCD is vital to the success of their engagement. Vendor's main point of contact will be [insert name],Lucy Durocher who is the [insert title].engagement leader.

9. *Work Location* - All meetings will be within the Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive. If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. [*Charges On Per Diem Rate Basis*– The Vendor and the Client agree that Work performed under this Statement of Work will be charged on a Per Diem Rate basis.] [TBD]. The Per Diem Rate will vary, based on the nature of the final deliverable, as follows:

Formatted: Not Highlight

Nature of final deliverable	Per Diem Rate	Service Category	Estimated hours	Per Diem Rate
Accounting Advisory	General Consultant, Level 2	Service Category 2	20-25	$390
Accounting Opinion	General Consultant, Level 2	Service Category 2	30-35	$990

13. *Billing and Payment Process* – The Vendor shall invoice the Client in accordance with the requirements of the Master Agreement. Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Individual's Legal Name	Individual's Role and Experience Level	Service Category	Per Diem Rate [TBD]

Hi Nadine,

I am on vacation this week. I think it would be better to defer until you have had a chance to review.

Hi Nadine,

I've just submitted my timesheet to Nelson for the Expert Panel work. I believe we are now done, although my understanding is that the official mandate only ends on 31st.

I'm in all-day PSAB Taskforce meetings until Thursday, but following that please let me know if you're now comfortable with me joining Shayan and Christina.

Hi Lucy.
Sorry I had to leave before the meeting was over. I had another external meeting I had to get to which started at 12:15.
With regards to your note below, the Panel discussion went very well. The position paper and accompanying deck provide some very useful background and perspective on the complex accounting considerations, as well as background info on ON plans and comparative plans.
The Panel was very inquisitive and I believe we were able to answer most of their questions. A number of presenters were asked to address the Panel as well to share additional details on the plans and how they work.

Please feel free to send the invoice.
Thanks again.
Nadine

Hi Nadine,

I didn't get a chance to catch up with you after our meeting yesterday - I think everyone had other things to get to. I wanted to ask you how the pension panel presentation went on Friday?

Michael has mentioned that the SOW for the panel is being worked on - I am connecting with him on this.

In the meanwhile, it seems it would be a good time to send you an invoice for the rest of the work performed on the memo and slide deck for the panel. We currently have a WIP balance of $14,097, based on the agreed upon hourly rates. If you agree, I can get my assistant to draft up an invoice.

Re_ FW_ Position Paper and Slide Deck.rtf

From: lucy.durocher@ca.pwc.com [lucy.durocher@ca.pwc.com]
To: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]
Subject: Re: FW: Position Paper and Slide Deck
Date: Tuesday, November 15, 2016 16:36:18
Attachment 1: ATT00001.jpg
Attachment 2: OTPP Pension Accounting Deck - November 14 2016 - PwC suggested edits.pptx
Attachment 3: Impact of a Valuation Allowance on Pension Assets v3.pptx
Attachment 4: Draft Pension Asset Position Paper November 14 PwC.docx

---

Hi Nadine,

In regards to Friday, - my items are items 2 and 3 on the PSA discussion group agenda, so I should be finished by 12:00pm and can join the panel in the afternoon between 12:30 and 5pm, if that would be desirable.

Slide deck - I have inputted the following suggestions into the deck but kept the font red for ease of identification.

Slide 3 - I think it might be helpful to include the word "unilateral". Perhaps "There is no legally enforceable right to unilaterally access the asset" would be better. This is actually the phrase used by the AG in her letter of September 13, 2016 so I think captures the OAGs views appropriately.

Slide 22 - I don't think the ITA limits the level of surplus, but rather, "In addition, the Income Tax Act imposes limits on the level of contributions that may be made to a pension plan that has an "excess surplus" (as defined by the ITA)"

Additional comments:

Slide 13 - Second bullet point - I found this paragraph a bit confusing as to the point it is trying to make. My suggestions are below. I have not updated the deck for this, pending whether you agree.

- The Financial Statement Concepts definition of an asset references “control” over an economic resource in Section PS 1000 and does not address “shared control”, which is relevant to the situation of a joint defined benefit plan, in respect of asset recognition. However, the term is included in other PSAB standards, for example relating to government partnerships (Section PS 3060 requires proportionate consolidation which is the recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership). Section PS 3060 existed prior to the introduction of Section PS 3250 into the PSAB standards, indicating that an asset subject

to shared control with another party can be recognized in the financial statements.

Appendix 1 - there is a total for the OTF, but not a total for the Ontario government. The position paper has $9.3bn as a total, so I have taken the liberty to add it to the slide deck as I think it was omitted in error
- It's not clear why 1990 is included as it is a deficit and not a surplus and the numbers aren't included in the $9.3bn total but other years when there was a deficit (e.g. 2003 onwards) are not shown. Is there a reason for including 1990 specifically? Perhaps it should be indicated why?

Appendix 4 - there is an asterisk by OTPP Filed Discount rate, but not clear what it references to. Should it be clearer in this appendix that "OTPP filed discount rate" relates to that used in OTPP's financial statements prepared using Part IV and that the "Province Economic Assumption for Nominal Return" relates to that used in the Province's financial statements prepared using PSAB in relation to the OTPP plan.

Position paper:

I have updated the pictures. For reference, the pictures are done in power point and I just used a "snipping tool" to copy them into the paper. I attach the PPT deck for reference also.

Here is the revised position paper - I have added in couple of comments - relatively minor. I think it is looking in really good shape.

Hi Lucy.

Can you please review the attached and help out with the diagrams. Thanks. Nadine

Briefing:
Accounting by the Province of Ontario for the Ontario Teachers' Pension Plan

DRAFT – For Discussion Purposes Only

Overview

Content	Slide
Issue (background)	3
Background	4-7
Question 1 – Classification of a pension asset	8-11
Question 2 – Recognition of a pension asset for a JDBP	12-15
Question 3 – Measurement of a pension asset	16-26

Appendices	Slide
Appendix 1: History of Surplus Utilization for OTPP	28
Appendix 2: Comparison of key measurements of the Province over the prior 10 years	29 -32
Appendix 3: Surplus Zones	33
Appendix 4: OTPP funding vs. accounting discount rates and actual performance	34
Appendix 5: Summary results of Ceiling Test for OTPP (various scenarios)	35
Appendix 6: Discount Rates used by other Senior Canadian Governments and Pension Plans	36

Issue (background)

- The Province had accounted for the Ontario Teachers' Pension Plan (OTPP) for the prior 14 years since adopting the pension accounting standard (RETIREMENT BENEFITS, Section PS 3250) in 2001/02
- In relation to the 2015-16 Public Accounts for the Province of Ontario, the Auditor General of Ontario (AG) challenged the Province's previous accounting for OTPP and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP)
- The AG disagrees that the surplus in OTPP is a reportable asset to the Province on the basis that:
  - there is no legally enforceable right to unilaterally access the asset
  - no agreement was in place at March 31, 2016 with the Ontario Teachers' Federation (OTF) to reduce future contributions
- The following analysis is specific to OTPP; OTPP's constating documents are different than for other pension plans in Ontario and in other provinces

Reporting in the 2015-16 Public Accounts

- The Province disagrees with the Auditor General's interpretation of Public Sector Accounting Board (PSAB) standards
- The Province believes its share of OTPP's accounting surplus should be recognized as an asset. The Province expects to benefit from the reported pension assets through reduced contributions and has performed the requested pension asset ceiling test to confirm that the Province's estimated asset value is not impaired
- For purposes of the 2015/16 Public Accounts, the Province regulated the accounting treatment for pension assets for the jointly sponsored pension plans (OTPP and OPSEUPP) to reflect the Auditor General's (AG's) interpretation of PSAB standards. Since Management does not agree with the AG's interpretation of PSAB standards as related to jointly sponsored pension plans, the regulation was necessary to achieve the AG's accounting treatment and to allow management to sign off on the Statement of Responsibility

Overview of OTPP

- OTPP meets the definition of a jointly sponsored pension plan (JSPP) as defined in the Pension Benefits Act. Sponsors are the Province of Ontario and the OTF
- The sponsors are jointly responsible for decision making, share in contributions, and collectively address any plan funding surplus/deficit (at least every 3 years). While not binding upon the sponsors, as the sponsors can change the Funding Management Policy at any time, any changes are required to have the mutual consent of both sponsors. Accordingly, the sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process
- The plan administrator is an independent board of directors that follows the direction of the co-sponsors on all key decisions, which includes plan structure, level of plan benefits, contribution rates, funding levels and contingency reserves and changes to the plan documents

Prior accounting for OTPP by the Province

- Since 2001-2002, the Province has recorded its portion (50%) of the pension asset of OTPP in accordance with Section PS 3250
- With regards to expected future benefit of the surplus, the Province would not expect to withdraw any surplus, but benefit through reduced future contributions
- The Province and OTF have a history of equally sharing the benefits of surplus utilization as demonstrated from the time OTPP became a JSPP to the date the Funding Management Policy in 2003 was established (included in Appendix 1)
- OTPP's financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook ("Part IV"), which is a different accounting framework than the Province uses for its financial reporting (PSAB standards) and is also a different framework than is used to calculate the net surplus or deficit for funding purposes. Different assumptions are used, for example relating to the discount rate (See Appendix 4)

Primary sources of GAAP

- GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of generally accepted accounting principles (GAAP) that deals with the transactions and events encountered by that entity
- Section PS 3250 provides clear guidance that a joint defined benefit plan is accounted for using Section PS 3250 and therefore is the primary source of GAAP that must be applied
- Other PSAB standards including the Financial Statements Concepts should be referred to if Section PS 3250 does not provide specific guidance for a circumstance

Question 1 – Classification of a pension asset

For accounting purposes, what type of pension plan is OTPP and how should it be classified under Public Sector Accounting Standards (PSAS)?

Section PS 3250 Applicability to OTPP

- Section PS 3250 paragraph .001 states "This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements"
- Obligations for retirement benefits result from a promise by a government to provide these benefits to employees because of retirement in return for their services (Section PS 3250 paragraph .03)
- Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services
- Section PS 3250 on its own is sufficient to assess the accounting for OTPP by the Province

Definition of a JDBP

- The Teachers' Pension Act, the Partners' Agreement and the plan text collectively set out the terms surrounding the sharing of control of OTPP between the Province and OTF. The Province of Ontario has an equitable share of the risks and rewards (surpluses and deficits) of OTPP, thus meeting the definition of a Joint Defined Benefit Plan (JDBP) in PSAS

A joint defined benefit plan is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan (glossary to Section PS 3250).

Conclusion on classification

- The Province has concluded that OTPP meets the definition of a joint defined benefit plan as the Province and Ontario Teachers' Federation are shared sponsors of the plan
- The Teachers' Pension Act, the Partners' Agreement and the plan text for OTPP collectively set out this shared control and equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a joint defined benefit plan in RETIREMENT BENEFITS, Section PS 3250 in PSAS which is a primary source of GAAP

Question 2 – Recognition of a pension asset for a JDBP

As a result of its classification as a joint defined benefit plan, how should the Province of Ontario account for the pension surplus of OTPP in the Public Accounts?

Concept of shared control and asset recognition

- Section PS 3250 requires the government to account for its portion (as there is shared control) of a JDBP following the accounting requirements for a defined benefit plan within Section PS 3250; no distinction is made as to whether the plan is in a surplus or deficit position. In a JDBP the risks and rewards of a plan are equitably shared, so the Province's portion of the plan includes its share of any asset as well as its share of any liability
- Notwithstanding that Section PS 3250 is a primary source of GAAP, the Financial Statement Concepts definition of an asset references "control" over an economic resource in Section PS 1000. Despite the conceptual framework not directly addressing "shared control" which is relevant to the situation of a joint defined benefit plan, the term is included in other PSAB standards, for example relating to government partnerships (Section PS 3060 requires proportionate consolidation which is the recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership). Section PS 3060 existed prior to the introduction of Section PS 3250 into the PSAB standards

Concept of Contingent Asset

- Section PS 3320, provides guidance on the disclosure of contingent assets in a government's financial statements. It characterizes a contingent asset as one where there is uncertainty as to the existence of an asset
- It is the Province's position that the existence of the pension asset is not uncertain – there is an accrued benefit asset calculated in accordance with Section PS 3250 as noted above that is based on past transactions, representing the impact of cumulative contributions and benefit expense
- The Province does however, acknowledge that uncertainty does exist with regards to measurement of the accrued benefit asset and potential impairment thereof

Conclusion on recognition

- Section PS 3250 requires recognition by the Province of 50% of the plan assets of OTPP
- Unilateral control is not necessary for asset recognition (as also seen with government partnerships); shared control is appropriate for a JDBP
- Uncertainty relating to OTPP's pension surplus relates to measurement, not uncertainty regarding expected future benefits for the Province

Question 3 – Measurement of a pension asset

How should the pension asset of OTPP be measured for purposes of reporting in the Public Accounts of the Province of Ontario?

Guidance in Section PS 3250 on measurement

- Section PS 3250 paragraphs .050 to .059 address how to measure a pension asset
- This is a two-step process
- Firstly the accrued plan obligation (a Credit) and the plan asset (a Debit) are measured in accordance with the standard, and adjusted for any unamortized actuarial gains or losses (a Debit for gains not yet realized, a Credit for losses not yet realized). This measurement results in a retirement benefit liability when it is a net liability (a Credit) amount or an accrued benefit asset (AcBA) when it is a net asset (a Debit) amount

Guidance in Section PS 3250 on measurement (continued)

- When the resulting amount is an asset, the standard requires a second step to test for asset impairment. It should be noted that impairment testing in some form is required for all assets recognized under PSAB standards except those carried at fair value, although the methodology of impairment tests will vary depending on the nature of the asset. The amount that is tested is the “adjusted benefit asset”. When there are net unamortized gains the AcBA is equal to the adjusted benefit asset (AdBA). When there are net unamortized losses the AcBA is reduced by those net unamortized losses to calculate the adjusted benefit asset (AdBA)
- The AcBA is then compared to the expected future benefit (referred to as the asset ceiling test). The objective is to limit a government's accrued benefit asset to the amount it can realize in the future. A government may benefit from an AcBA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions (Section PS 3250 paragraph .056)

Government Expectations

- The Province expects future benefits from OTPP's plan surplus to be realized through reduced future contributions, not withdrawals. There is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years as a minimum, and when there is a surplus. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'.
- Expectations of benefitting from the surplus are based on:
  1. The Teachers' Pension Act requires equal contributions from the Province and from plan members of OTPP;
  2. The history of surplus utilization for OTPP demonstrates sharing of the financial benefit between sponsors;
  3. No sponsor of OTPP can unilaterally utilize the plan's surplus; and
  4. If the sponsors of OTPP cannot agree on how to utilize the pension surplus, the matter can be submitted to arbitration.
- The Province considers that the uncertainties around how and when to utilize the surplus do not result in an inability or lack of entitlement to utilize the surplus

Calculating the limit on the carrying amount of an accrued benefit asset (asset ceiling test)

- Calculation of the asset ceiling test involves professional judgement
- Section PS 3250 indicates the expected future benefit to be recorded by the government is the sum of:
  a. The present value of its expected future accrual for service for the current number of active employees less the present value of minimum contributions the government is required to make regardless of any surplus; plus
  b. The amount of the plan surplus that can be withdrawn in accordance with the existing plan and any laws and regulations
- The following slides consider this calculation relative to the Province's 50% share of OTPP

Considerations re: surplus withdrawal (Part b of the asset ceiling test)

- The Province does expect to realize its expected future benefit through withdrawal of any plan surplus
- Section PS 3250 specifies that an amount for withdrawal of surplus is only included when a government has a legally enforceable right of withdrawal
- In accordance with the Funding Management Policy for OTPP, the parties must negotiate in order for a withdrawal of the surplus to happen
- As at March 31, 2016 the Province did not have a signed agreement with OTF regarding withdrawal of the surplus

Considerations re: reduced future contributions (Part a of the asset ceiling test)

- While Section PS 3250 states that legal enforceability is required to report an expected benefit for a withdrawal of the plan surplus, it does not include a similar requirement in respect of the ability to benefit through future contribution reductions.
- The Province expects to benefit fully from the asset by exercising their current rights under the plan arrangements to negotiate the use of surpluses in the form of contribution holidays/reductions. There is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years, or when there is a surplus. The surplus "zone" for OTPP impacts how the pension surplus may be utilized by the Province summarized in Appendix 3
- In addition, the Income Tax Act (ITA) imposes limits on the level of contributions that may be made to a pension plan that has "excess surplus" (as defined by the ITA).
- The present value of its expected future accrual for service is typically calculated based on the Province's share (50% for OTPP) of the current service cost reported in the most recent actuarial valuation, taken into perpetuity

Through reducing future contributions (Part a of the asset ceiling test)(continued)

- There is very limited guidance in PSAB standards on determining the present value of minimum contributions the government is required to make regardless of any surplus; professional judgement is required. The Province engaged consultants to calculate this value for OTPP considering different assumptions on future minimum contributions. The key scenarios considered and results are summarized in Appendix 5.
- For purposes of OTPP in the 2015-16 public accounts, 11 years was used by the Province reflecting management's best estimate of the number of future years for which current minimum contributions are to be made until the Income Tax Act limits are reached
- Based on the Province's best estimate calculation of the expected future benefit and the results of the actuarial valuations performed as part of the pension asset ceiling test, no valuation allowance was deemed necessary in relation to the pension asset of OTPP at March 31, 2016

Other guidance in PSAS on measurement

- Section PS 2130 provides guidance on dealing with measurement uncertainty
- Measurement uncertainty in pension plan accounting exists for example in the estimation of the valuation allowance and in the determination of the discount rate (both in terms of selection of rate under PSAS and in Ontario's case, management's best estimate of the long-term rate of return on plan assets)
- Historical rates of return on plan assets have supported the past discount rates used by the Province in relation to OTPP (see Appendix 4)
- The choice of rate used by the Province (long-term rate of return on plan assets) is consistent with the rate used by other Provinces in Canada for their pension plans (see Appendix 6)
- PSAS acknowledges that the objective of funding and accounting are different (Section PS 3250 paragraphs .008 to .010). Because of the different objectives, the discount rates used will also be different

Accounting for JDBP by other Provinces

- Provinces such as British Columbia, New Brunswick, Manitoba and Nova Scotia do not report assets for their provincial sponsored pension plans or alternatively provide a valuation allowance to reduce the value of a pension asset balance to nil
- The different accounting treatment in the Province of Ontario (for OTPP) reflects the difference circumstances in these other provinces with regards to expected future benefits related to pension surpluses

Conclusion on measurement

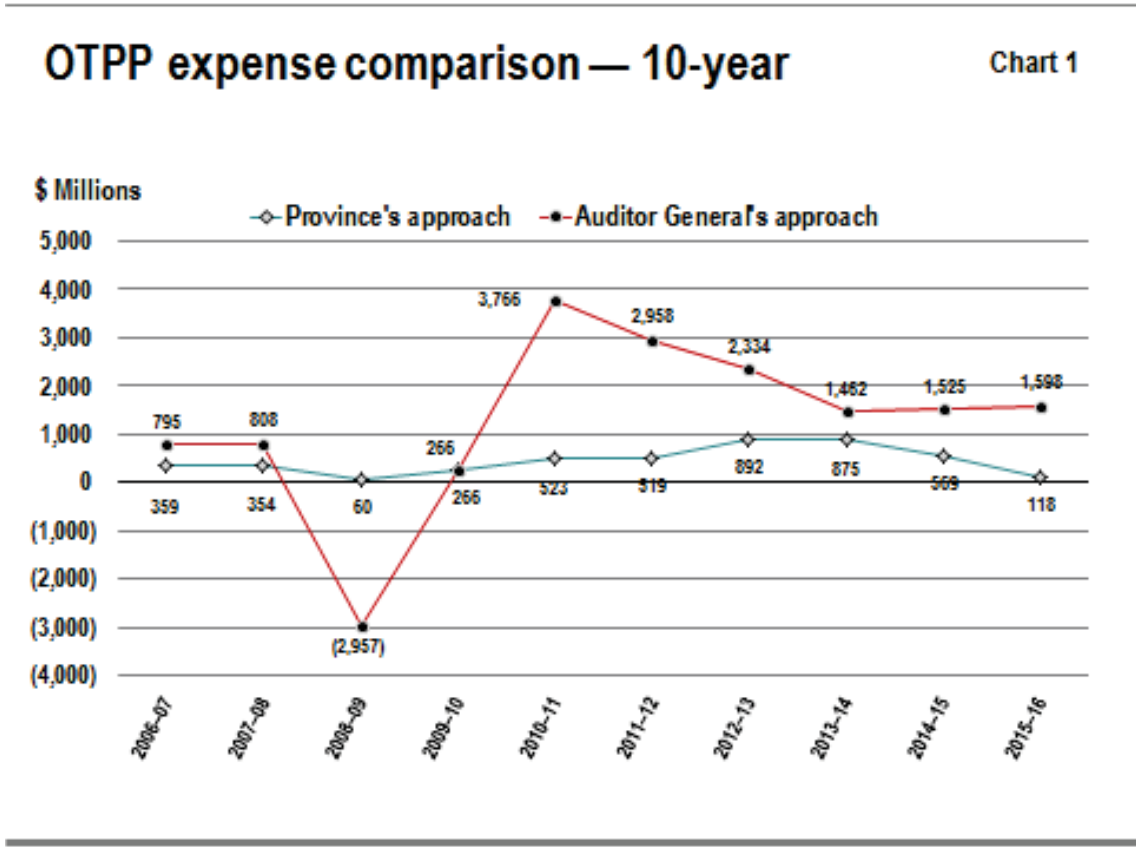
- The Province's position is that the attributes of the JDBP arrangements for OTPP entitle the Province to access its portion of the plan surplus through the right to negotiate its use of the Province's benefit through future reduced contributions
- Significant professional judgement and estimation is involved in determining the valuation allowance under Section PS 3250; the Province has applied reasonable estimates and assumptions
- Based on the result of modelling performed in relation to the asset ceiling test, the Province concluded that no valuation allowance was necessary to the pension asset relating to OTPP that would have otherwise been reported on the Province's books as at March 31, 2016
- Refer to Appendix 2 for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting for OTPP compared with following the Province's interpretation of the PSAS

APPENDICES

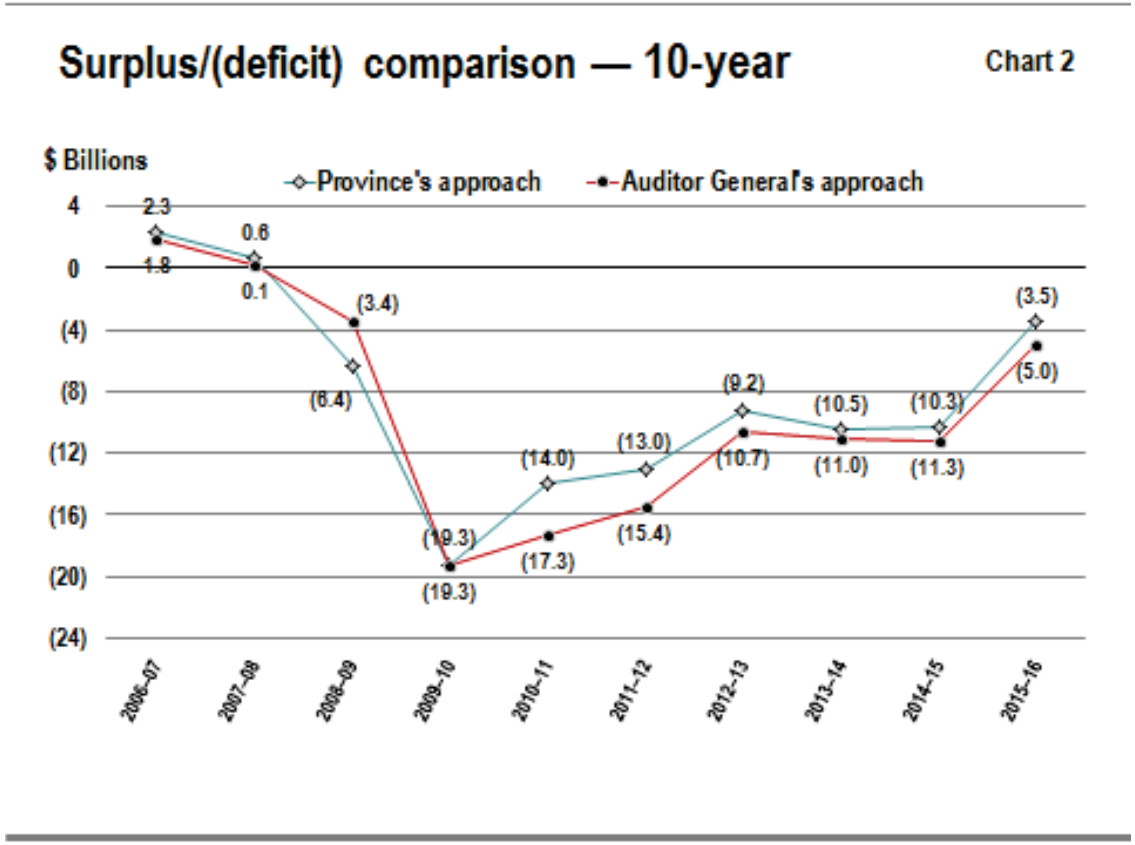
Appendix 1:
History of Surplus Utilization for OTPP

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to reduce the value of remaining special payments	$0
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion	$9.3 Billion	

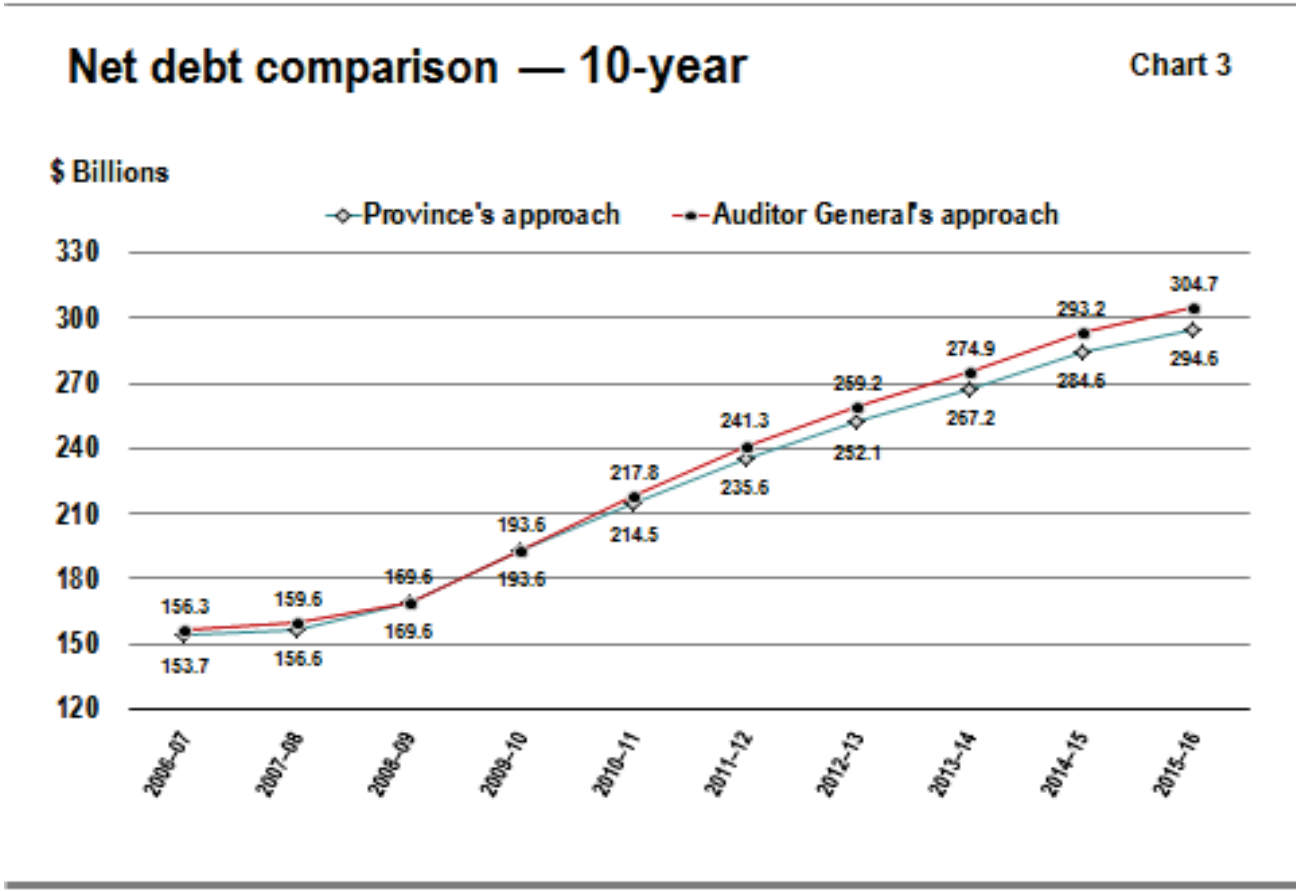
Appendix 2:Comparison of key measurements of the Province over the prior 10 years



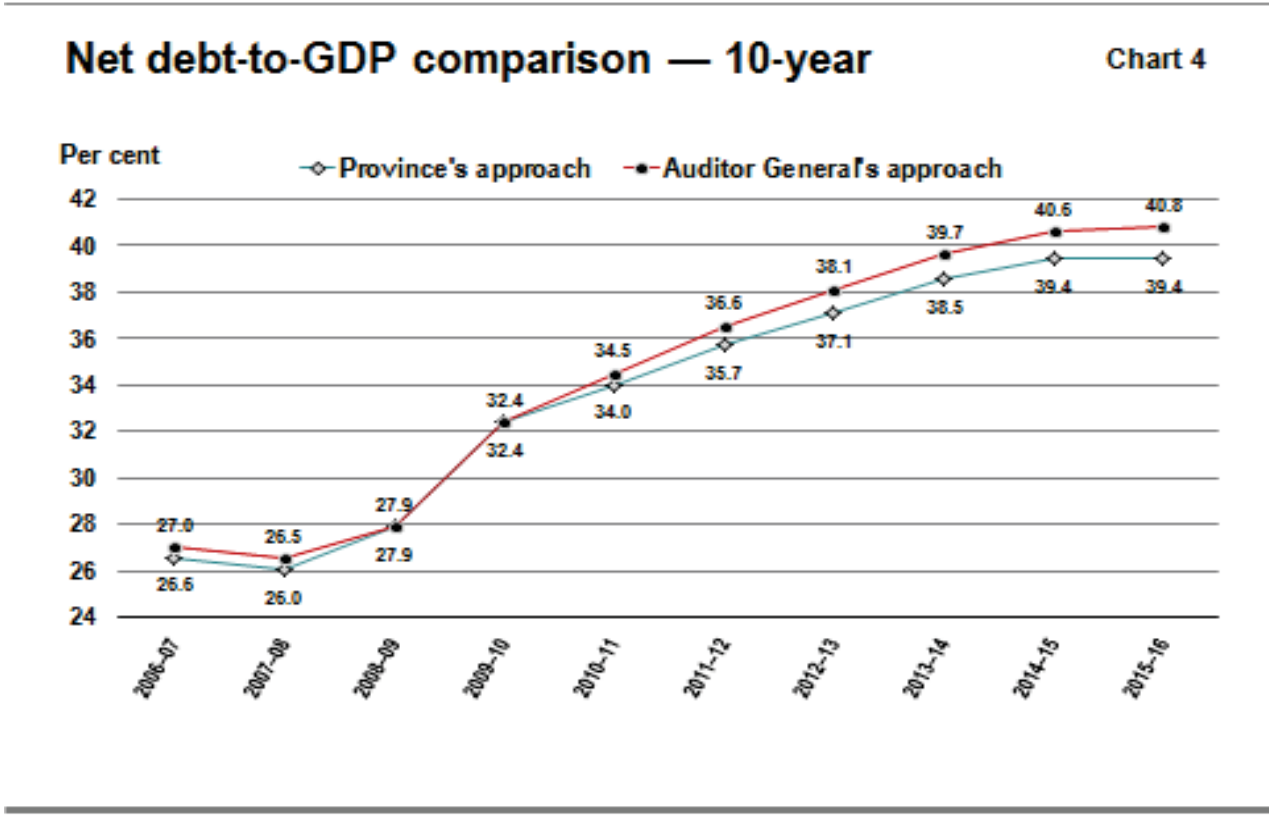
Appendix 2: Comparison of key measurements of the Province over the prior 10 years



Appendix 2: Comparison of key measurements of the Province over the prior 10 years



Appendix 2: Comparison of key measurements of the Province over the prior 10 years



Appendix 3: Surplus Zones

The Plan Documentation (specifically the FMP) and applicable legislation allow for the sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Appendix 4: OTPP funding vs. accounting discount rates and actual performance

Ontario Teacher's Pension Plan Rate Comparison			
	OTPP Annual Performance	OTPP Filed Discount Rate *	Province Economic Assumption for Nominal Return
2005	17.2%	6.48%	7.00%
2006	13.2%		7.00%
2007	4.5%		6.75%
2008	-18.0%	5.65%	6.75%
2009	13.0%	5.00%	6.75%
2010	14.3%		6.75%
2011	11.2%	5.40%	6.75%
2012	13.0%	5.30%	6.75%
2013	10.9%		6.75%
2014	11.8%	4.95%	6.75%
2015	13.0%	4.85%	6.50%
2016	n/a	n/a	6.25%

Appendix 5: Summary of Ceiling Test Results (Various Scenarios)

Model Assumptions	Expected Future Benefit or Asset Ceiling ($ Billions)	Results
1. There is no minimum employer contribution under the plan/legislation that is required if a surplus is present.	$44.6	There is no reduction in the expected future benefit (EFB) as at March 31, 2016.
2. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of the current funding report. Contribution requirements are $1.7B per year for 2015, 2016 and 2017.	$41.2	The minimum contribution requirement applies to the current period of the funding report and until a new report is completed. EFB is reduced for 2 years by $1.7B at March 31, 2016.
3. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of contribution requirement (i.e. 11 years through 2026) not just for the period of the current funding report.	$29.3	Uses a period to 2026 (11 year period) based on the funding report special contribution requirement. The EFB at March 31, 2016 is reduced by $15.3B.
4. The surplus is never used until the time it reaches the Income Tax Act (ITA) threshold. Once attained, the excess surplus is used at 50% for employees and 50% for the Province to reduce contributions in the following years.	$23.2	The ITA surplus limit is reached at the end of 2025, leading to forced contribution reductions from 2026. EFB is reduced by $21.4B at March 31, 2016
5. Every year, 50% of current year surplus is applied to improve member benefits and the remaining 50% of the current year surplus is retained and continues to accrue. Once the ITA threshold is attained, the excess surplus is used 50%-50% to reduce contributions by employees and the Province.	$12.9	The ITA surplus limit is reached at the end of 2041 leading to forced contribution reductions from 2042. EFB is reduced by minimum $31.7B at March 31, 2016.

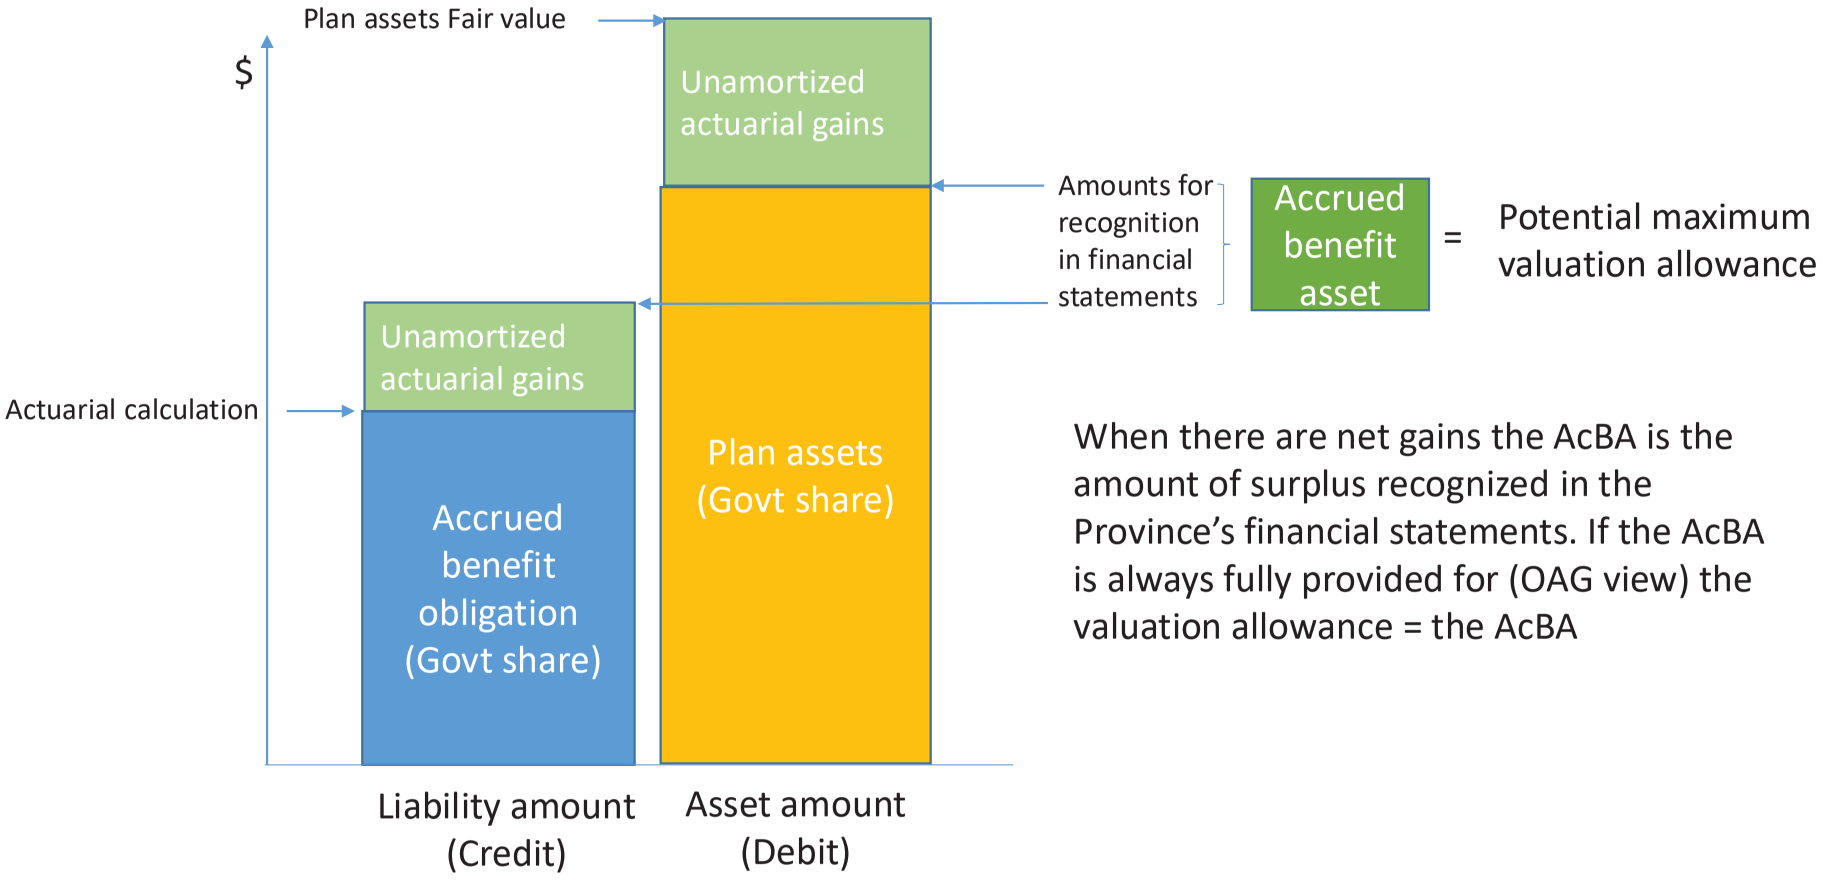
Impact of a Valuation Allowance on Pension Assets v3.pdf

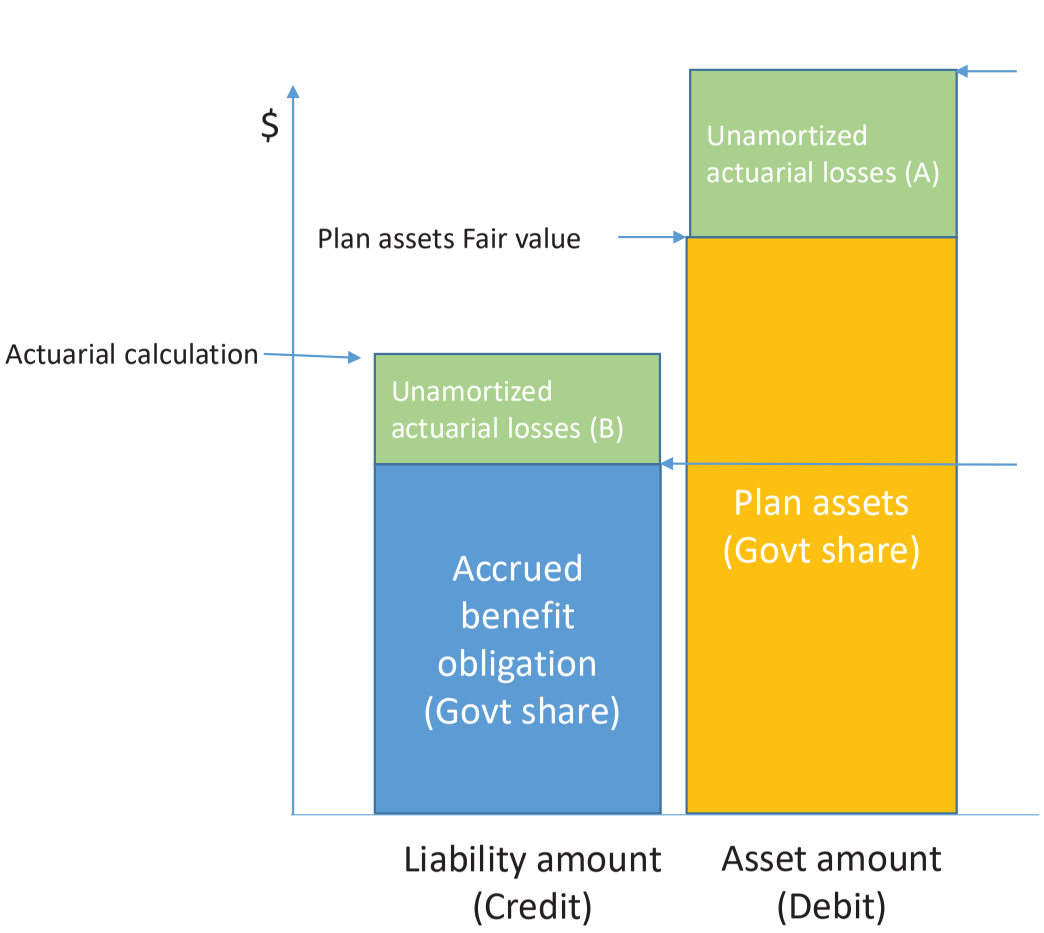
Impact of a Valuation Allowance on Pension Assets

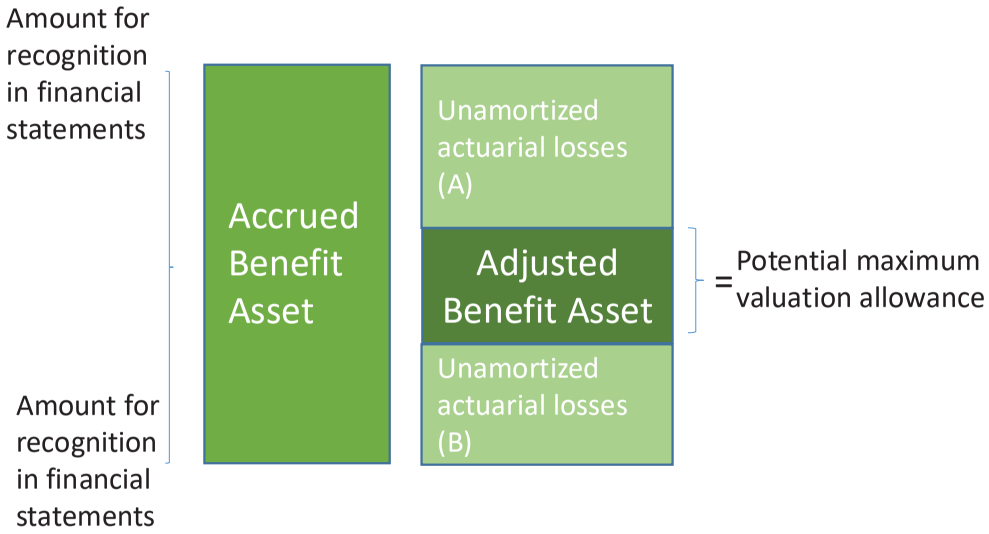
An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



When there are net gains the AcBA is the amount of surplus recognized in the Province's financial statements. If the AcBA is always fully provided for (OAG view) the valuation allowance = the AcBA

An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses



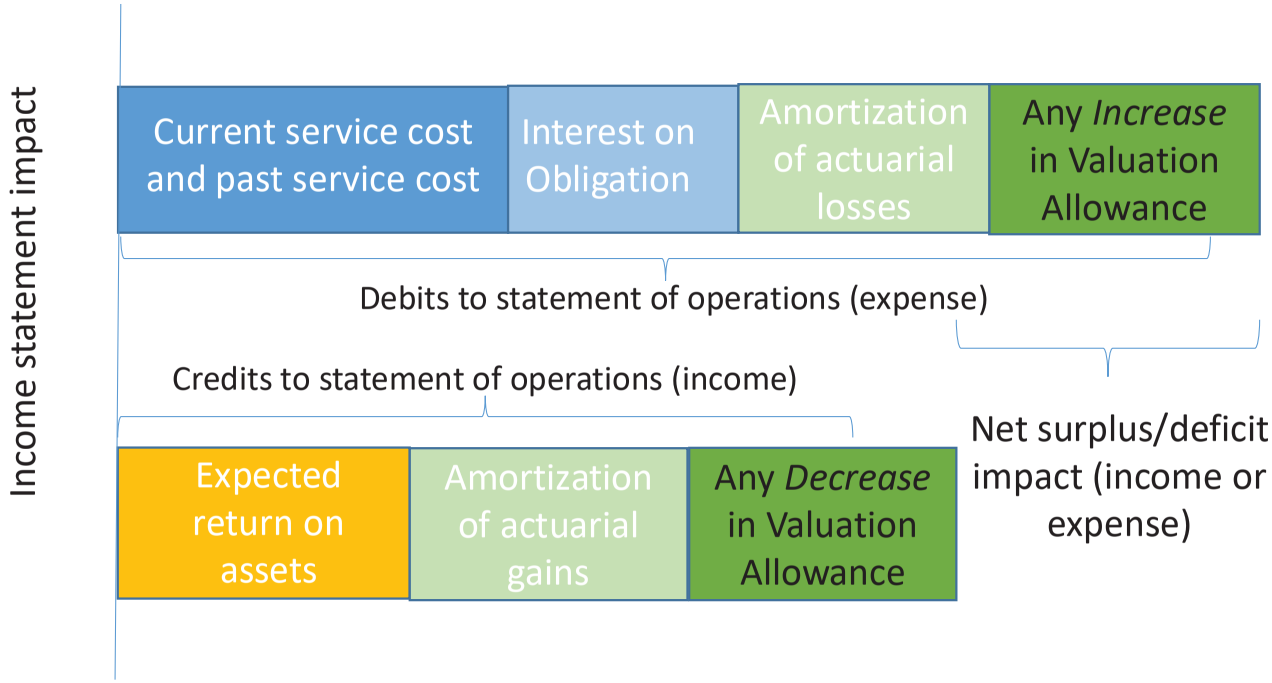


When there are net losses the amount of surplus recognized in the Province's financial statements is greater than the AdBA. Only the AdBA is provided for by a valuation allowance.

Components of Expense

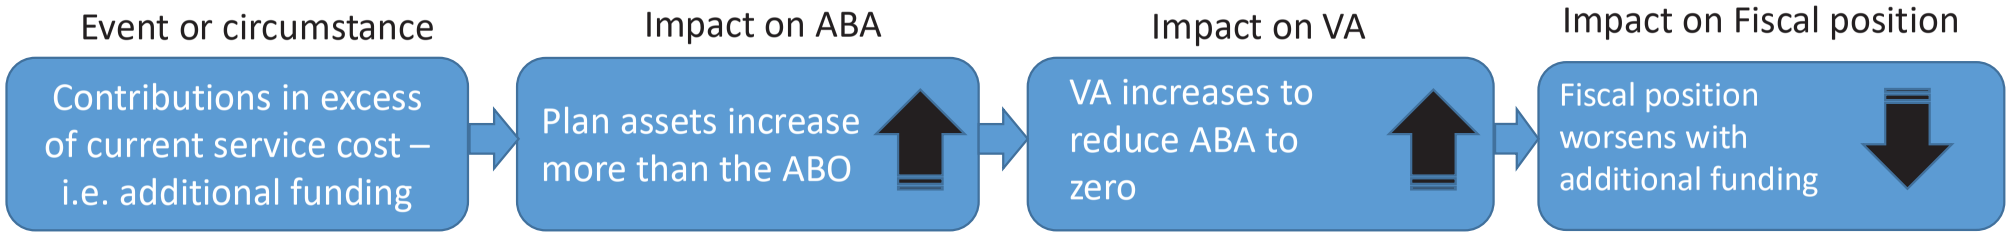
The *change in* the valuation allowance flows directly through the statement of operations.

The change in valuation allowance = the change in the AcBA (or AdBA if applicable)



Changes in the Accrued Benefit Asset

Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]



2015-2016 example:
Contributions of $1,812M exceeded other elements of pension expense by $1,514M

2015-2016 example:
Additional contributions increase plan assets. AcBA increases by $1,514M

2015-2016 example:
AcBA increase of $1,514M results in an increase to the VA of $1,514M

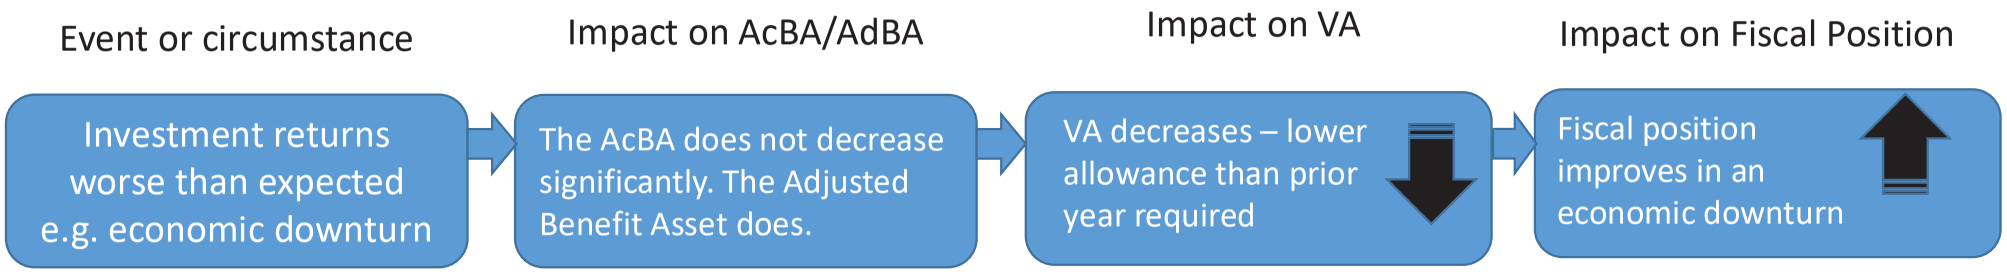
2015-2016 example:
Deficit increases by $1,514M.

The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

Changes in the Accrued Benefit Asset

Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA or AdBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]



Plan assets fair values significantly lower in one year.
Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.

The AcBA is based on the higher, smoothed value of plan assets and does not change significantly. However the actuarial losses are subtracted from the AcBA to calculate an AdBA, which is smaller than the AcBA.

Prior year allowance was based on AcBA (no net amortized actuarial losses). Current year is based on AdBA because there are unamortized actuarial losses. The AdBA is smaller than the AcBA because of the increase in unamortized losses. Therefore the VA is reduced correspondingly.

Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. The increased actuarial losses would only impact the statement of operations in future years.

A similar impact would have been noted in 2008 if the OAG's position was reflected in the financial statements for that year.

[1] Impact of change, all other elements being held constant.

1.0 Preamble

Formatted: Heading 1

This document addresses the accounting for the net pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

2.0 Issue to be considered

Formatted: Heading 1

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed ~~regarding the~~on an appropriate application of Public Sector Accounting Standards (PSAS) to net pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP. This position paper addresses the analysis for OTPP. A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, as well as HOOPP and CAAT.

This position paper addresses the following three questions in relation to the accounting for OTPP:

1. For accounting purposes, what type of pension plan is OTPP (i.e. how should OTPP be classified under Public Sector Accounting Standards (PSAS))?
2. As a result of the classification, how should the Province of Ontario account for the pension surplus of OTPP in the Public Accounts?
3. How should the pension asset of OTPP be measured in the Public Accounts of the Province of Ontario?

3.0 Conclusions

Formatted: Heading 1

The following conclusions were reached regarding each of the above questions:

1. Classification of OTPP - The Province has concluded that OTPP meets the definition of a joint defined benefit plan as the Province and Ontario Teachers' Federation are shared sponsors of the plan. The Teachers' Pension Act, the Partners' Agreement and the plan text for OTPP collectively set out this shared control and equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a joint defined benefit plan in RETIREMENT BENEFITS, Section PS 3250 in PSAS. The classification of OTPP as a joint defined benefit plan for accounting purposes has been consistent since 2001 and had been consistently accepted without question by the OAG, including throughout the 2015/16 Public Accounts.

DRAFT

2. Recognition of a pension asset for a joint defined benefit plan - The Province has concluded that PSAS (Section PS 3250) supports the recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets be subject to unilateral control. S~~,s~~hared control is relevant and appropriate for a situation involving a joint defined benefit plan. The Province's share of OTPP's pension surplus meets the definition of an accrued benefit asset under Section PS 3250~~. Section PS 3250~~ which requires the Province to recognize its portion of the plan (50% for OTPP).
3. Measurement of a pension asset - The Province has concluded that the attributes of the joint defined benefit plan arrangements for the OTPP entitle the Province to access its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surpluses to ~~through~~ reduce ~~d~~ contributions in the future. The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of those models to date no valuation allowance appears to be required and the OTPP pension assets should be recorded on the books of the Province. The Province recognizes ~~there is significant~~that professional judgement must be applied in ~~and estimation in determining how to measure~~deriving an estimate of ~~the~~a potential valuation allowance under Section PS 3250.

4.0 Background Information

Formatted: Heading 1

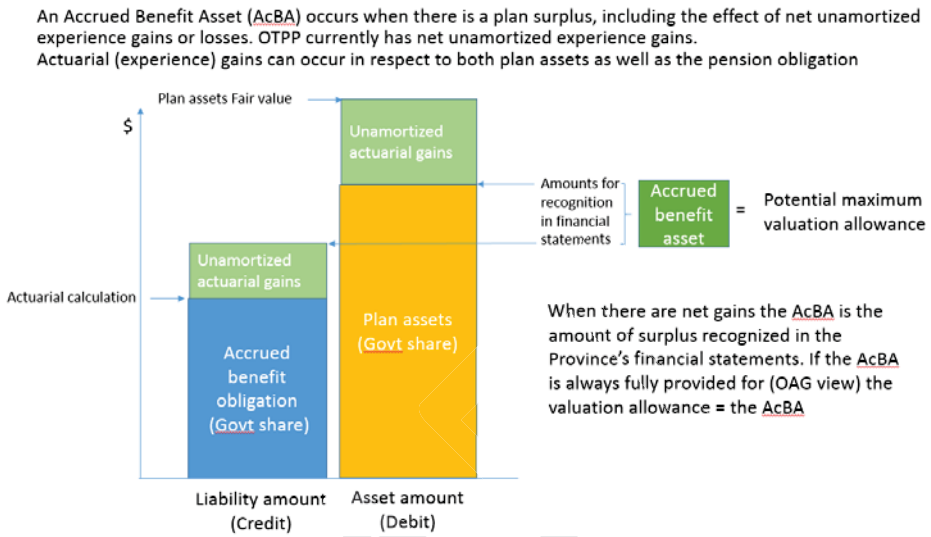
4.1 Accrued benefit asset

As described in PSAS, an accrued benefit asset (net pension asset) arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. An Accrued Benefit Asset (AcBA) includes the effect of net unamortized experience gains or losses. Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation. OTPP currently has net unamortized experience gains. The following illustration reflects the compilation of the net pension asset (accrued benefit asset) reported on the Province's books for the OTPP.

Commented [KJ(1]: Lucy – can we please change the = valuation allowance to 'potential maximum valuation allowance'

DONE

DRAFT



It is important to note that contributions to the plan are based on funding objectives of the plan. In contrast, ~~Benefit~~ benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the net asset balance (plan surplus for accounting purposes) in OTPP is an asset to the Province and it is appropriate to reflect it in the financial results in accordance with PSAS. The Province has also concluded that no valuation allowance under PSAS is required against the asset as at March 31, 2016.

The OAG disagrees with ~~this~~ the Province's position. Specifically, t~~T~~he OAG has indicated that the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and as such that the Province does not control the assets which the OAG interprets PSAS as requiring. Further, the OAG considers the lack of an enforceable agreement at year-end with the Ontario Teachers' Federation (OTF ~~and~~d the joint sponsor of the plan) ~~dictating~~ that would provide for lower contributions in the future as requiring that a full asset valuation allowance be taken against the net asset under PSAS.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. RETIREMENT BENEFITS, Section PS 3250 of the PSA Handbook, addresses the accounting of obligations for employee retirement benefits in government financial statements. Since 2001, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the period is

reflected in Appendix A. Unqualified audit reports have been received for each of the years from the OAG on the Public Accounts. The pension accounting initially adopted by the Province for OTPP had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

In light of the contrasting views on interpretation of PS 3250 to the Province's jointly sponsored pension plans, a regulation was necessary to allow the public service to sign-off on the impact of the OAG's view on accounting for net pension assets in Ontario's 2015-16 financial statements. The regulation is time-limited and legislates the accounting for net pension assets of its two jointly-sponsored pension plans (OTPP and OPSEUPP) for 2015-16 in a manner that is consistent with the ~~fiscal~~ interpretation~~outcome~~ proposed by the Auditor General. The change in accounting treatment for 2015-16 resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the 2015-16 annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's ~~accounting~~interpretation, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to reflect the Auditor General's interpretation of PSAS. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt and would have only been appropriate if the government had agreed with the Auditor General's interpretation of PSAS which would have acknowledged errors in the prior year's comparative results.~~.~~

4.2 ~~Background~~

Formatted: Heading 2

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1. The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the OTF (collectively, the "sponsors").

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
a. It provides defined benefits.
b. The defined benefits are contributory benefits.
c. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
d. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. ~~The~~ OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for ~~the~~ OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners' Agreement (FMP); and
f) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under ~~the~~ OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).

DRAFT

Despite this general principle, under the TPA the Province is required to make additional contributions to ~~the~~ OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5] This clause has been interpreted as a short term solvency protection clause, rather than a clause that transfers substantive residual risk to the Province, as the rest of the arrangement is structured such that the risk of these payments is minimal and the risks of the long term funding of the plan must still be equitably shared. The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under ~~the~~ OTPP). Notwithstanding that subsection 5(1.1) of ~~the~~ OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under ~~the~~ OTPP since ~~the~~ OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Joint governance and cost sharing form two of the core features of ~~the~~ OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the ~~Sponsors~~sponsors. In this regard, the Partner's Agreement requires the ~~Sponsors~~ sponsors to negotiate and agree upon decisions relating to surplus or deficit utilization, which currently is outlined in the FMP. [8] The FMP indicates that deficits (or surpluses) may be addressed through increases (decreases) to the contribution rates, lowering (increasing) the amount of indexation and/or other decreases (increases) in benefits. While not binding upon the ~~Sponsors~~sponsors, as the ~~Sponsors~~ sponsors can change the FMP at any time, any changes are required to have the mutual consent of both ~~Sponsors~~sponsors. Accordingly, the ~~Sponsors~~ sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the ~~Sponsors~~ sponsors are included in appendix B. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the

[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).
[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/10179/20940/-/5e471c2b-23f1-44e6-b5c1d22e3e50dbc3/How+Contribution+Rates+Have+Evolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20% versus 10.4%/12%, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.
[8] See, for example, Section 3.09 and 3.11 of the FMP.

DRAFT

employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the ~~Sponsors~~ sponsors regarding how any surpluses are to be utilized. We note that the ~~Sponsors~~ sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the ~~Sponsors~~ sponsors to utilize surplus in a variety of ways, depending on the funded status of ~~the~~ OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, under the FMP the ~~Sponsors~~ sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the ~~Sponsors~~ sponsors to agree upon the manner in which surplus is to be utilized, neither ~~Sponsor~~ sponsor has a legally enforceable right to unilaterally utilize surplus in ~~the~~ OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What the Province does have, however, is a right to negotiate with the OTF the use of funding surpluses that may arise under the plan.

4. Negotiations on the use of the surplus occur as specified in the Partners' Agreement. The Partner's Agreement requires that any actuarial funding valuation submitted to the pension regulators must be "actuarially balanced" (Section 57 of the Partners' Agreement). This must occur at least once every three years, but can occur every year if the partners agree. If a preliminary funding valuation shows a funding

surplus or deficit then the joint sponsors must negotiate how this surplus or deficit is to be resolved prior to filing the funding valuation.

4.3 Accounting for OTPP by the Province

Formatted: Heading 2

Since fiscal year 2001-2002, the Province has recorded a net pension asset for OTPP on the Statement of Financial Position in accordance with Section PS 3250. A net pension asset has arisen because the government's share (50%) of the total contributions to OTPP plus recognized investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense (see illustrative examples in Appendix J). The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

The various valuations prepared for the OTPP – i.e. those for the Province's public accounts, those for the funding valuation and those for the OTPP stand-alone financial statements, can create confusion when assessing the Province's accounting. Therefore, this next section sets out the differences in those valuations.

With regards to any comparisons between surplus or deficit amounts reported in the Province's financial statements verses ~~the~~ OTPP's financial statements or funding reports, it is important to acknowledge the different objectives of funding and accounting for a pension plan which are also explicitly addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*
>
> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.*

Section PS 3250 paragraph .051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: “Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…”

OTPP’s most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website (https://www.otpp.com/home). The Province’s relative portion of this surplus would be $6.6 billion. ~~The~~ OTPP’s ~~public~~ published stand-alone financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015, for which the Province’s portion would be a deficit of $900 million. The following background helps to clarify the reasons for these different results. OTPP’s financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook (“Part IV”), which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the net surplus or deficit for funding purposes.

Accounting for employee future benefits requires the use of assumptions and methodologies to calculate both the obligation incurred to date and the value of the assets already set aside to meet those obligations. Accounting frameworks differ in standards that must be applied in determining appropriate assumptions and methodologies. Further, the assumptions and methodologies used in developing a “funding valuation” on a going concern basis ~~may~~ also differ from those required by accounting standards. These differences result in a number of different valuations for the same plan, depending on the purpose of the valuation and can be affected by certain choices made between acceptable options within each framework. A summary of the main differences between the methodologies used to calculate a going concern funding valuation, OTPP’s accounting valuation and the Province’s accounting valuation is shown in Appendix D.

Specifically, the discount rate used to value the obligations of the plan has a significant impact on the overall position of the plan. A lower discount rate results in a higher liability and a higher discount rate results in a lower liability, all else being equal. Put another way, a higher estimate of the time-value of money ~~makes~~ results in the value the promises made today that will be paid out in the future cheaper. OTPP uses a discount rate based on corporate/government bond rates in its financial statements, as permitted by Part IV. The Province uses a discount rate based on the expected asset return, as permitted by PSAS. The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds. Both a discount rate based on the expected asset return and one based on corporate/government bonds are “best estimate” rates; they must both be based on management’s best estimate of the applicable discount rate. In both cases the estimates must be supportable. The difference results not from one being more “right” or “wrong” relative to the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.

Typically the funding discount rate used for the funding valuation falls between the bond discount rate and the expected asset return, but it differs in that it does not purport to be the "best estimate" of the discount rate, rather it is designed to indicate the contributions that are required to fund the promised benefits with an additional conservative margin for adverse deviations. Note that over the long term the difference between funding valuations and accounting valuations would diminish as the impact of the discount rate unwinds and the asset valuation methods converge.

In practice, the discount rates used in the financial statements of government sponsored and joint defined benefit pension plans prepared under Part IV of the CPA Canada Handbook (Section 4600) use diverse methodologies. For example, in Alberta there are seven plans which prepare their financial statements under Part IV with reference to IFRS (same framework as OTPP). Of these none use a government bond discount rate and all use a discount rate calculated with some reference to a rate of return on invested assets, which may include factors for expenses, diversification and rebalancing. The analysis of a number of government sponsored plans is included as Appendix E. The analysis demonstrates that in their stand-alone financial statements, a significant number of government sponsored plans use a discount rate aligned to an asset investment return rather than a bond discount rate. OTPP is actually in the minority of plans that choose to use the rate required by IFRS, resulting in a lower discount rate and higher liability for financial reporting purposes.

The above analysis explains how different discount rates impact the net surplus/deficit reported on OTPP's financial statements, OTPP's funding reports and the Province's financial statements. The fact that OTPP reports a deficit on its financial statements, or that the 50% of the net surplus reported by OTPP for funding purposes is lower than the surplus reported on the government's financial statements under ~~PSAB standards~~PSAS ~~is~~ does not impact ~~of no consequence or relevance to~~ the net pension asset amount or pension expense reported by the Province for OTPP.

To further clarify, that there is ~~a~~ deficit reported in ~~the~~ OTPP's stand-alone financial statements while the Province of Ontario calculates a surplus under PSAS requirements does not mean that there is no accounting surplus and therefore no reportable asset for the Province. In fact, **if** ~~the~~ OTPP had chosen (as an acceptable accounting policy choice) to use a discount rate more consistent with its counterparts in other jurisdictions (see Appendix E) such as a discount rate based on an expected asset return which would be closer to that used by the Province, it would eliminate much of the existing difference~~s~~ between the reported net surplus/deficit amounts ~~between~~ in ~~the~~ OTPP's stand-alone financial statements and the Province's share of OTPP reported for accounting purposes in the Province's Public Accounts.

Formatted: Font: Bold

4.4 ~~Sufficiency~~ Applicability of PS 3250 ~~in assessing appropriate accounting for pension assets~~as primary source of GAAP

Formatted: Heading 2

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES, Section PS 1150 prescribes that, in developing and applying accounting policies, all primary sources of GAAP should be applied (Section PS 1150 paragraph .04). Primary sources of GAAP are Sections PS 1201-PS 3510, Public Sector Guidelines and appendices and illustrative material to those pronouncements. Only when there are no primary sources

of generally accepted accounting principles (GAAP) that relate to the transactions or events under consideration, or more specific guidance is needed (Section PS 1150 paragraph .05), does an entity consider other primary sources of GAAP dealing with similar issues and also the concepts described in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 (issued January 2003). Section PS 1000 is not, however, a "primary source of GAAP" under the PSA Handbook.

The primary sources of GAAP specific to the accounting for pension assets is RETIREMENT BENEFITS, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, also titled Section PS 3250 ~~which was based on Accounting Statement No. 5~~).

Other primary sources of GAAP that deal with similar issues might also be considered where additional interpretation or guidance may be required. For the issues dealt with in this paper - recognition and measurement of a joint defined benefit plan - this could include standards that relate to shared control, as OTPP is a joint defined benefit plan, standards that relate to the definition of an asset and standards that relate to measurement uncertainty:

- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015, effective from April 1, 2017)
- CONTINGENT ASSETS, Section 3320 (issued in June 2015, effective from April 1, 2017)
- MEASUREMENT UNCERTAINTY, Section PS 2130 (issued in April 2005)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception of ASSETS, PS 3210 and CONTINGENT ASSETS, Section PS 3320 which ~~is~~ are more recent and will be effective in for periods beginning on or after April 1, 2017. Section PS 3210 provides additional guidance on the various components of the existing asset definition found in Section PS 1000; it does not change the definition.

~~Accounting Analysis~~

Formatted: Heading 1

5.0 Question 1 – Classification of a pension asset

Formatted: Font color: Accent 1

The analysis below addresses whether the Province's share of the pension surplus in OTPP, calculated in accordance with PSA ~~standards~~S under Section PS 3250, represents a reportable asset to the Province of Ontario in the Public Accounts.

5.1 RETIREMENT BENEFITS PSAS 3250 ~~Standards in the PSA Handbook~~

Formatted: Heading 2

The focus of the following analysis is on the accounting requirements in RETIREMENT BENEFITS, Section PS 3250 as this standard is a primary source of GAAP which specifically addresses the accounting for pension assets. The following highlights some key concepts and guidance contained in this standard.

5.1.1 ~~RETIREMENT BENEFIT,~~ Section PS 3250 – Purpose and Scope

Formatted: Heading 3

The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250.003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

5.1.2 ~~RETIREMENT BENEFITS, Section~~ PS 3250 – Types of pension plans

Formatted: Heading 3

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

DRAFT

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Additional guidance on identifying ~~Joint~~ joint ~~Defined~~ defined ~~Benefit~~ benefit ~~Plans~~ plans (JDBPs) is in Section PS 3250 paragraphs .79 to .80 which similarly highlight the importance of both shared control and shared risks and rewards in a JDBP as follows:

.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

It should be noted that the definition of a ~~Joint Defined Benefit Plan~~JDBP under Section PS 3250 is not the same as the definition of a JSPP under the PBA, although there are some overlapping concepts between the two. A JDBP is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits

and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. The Province has concluded that OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. ~~The~~ OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 10(1)3 of the TPA for example).

The TPA, the Partners' Agreement and the plan text collectively set out this shared control and that the Province of Ontario has an equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a ~~joint defined benefit plan~~JDBP.

The classification of OTPP as a JDBP for accounting purposes [and a JSPP under the PBA] by the Office of the Provincial Controller has been consistent since 2001 and had been consistently accepted without question by the ~~Office of the Auditor General~~OAG, including throughout the 2015/16 Public Accounts.

5.2 Conclusion on classification

The Province has concluded that OTPP meets the definition of a joint defined benefit plan as the Province and Ontario Teachers' Federation are shared sponsors of the plan. The Teachers' Pension Act, the Partners' Agreement and the plan text for OTPP collectively set out this shared control and equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a joint defined benefit plan in RETIREMENT BENEFITS, Section PS 3250 in PSAS. The classification of OTPP as a joint defined benefit plan for accounting purposes has been consistent since 2001 and had been consistently accepted without question by the OAG, including throughout the 2015/16 Public Accounts.

Formatted: Heading 1, Line spacing: single, Font Alignment: Auto

6.1 Standards in the PSA Handbook

Formatted: Heading 2, Font Alignment: Auto

RETIREMENT BENEFITS, Section PS 3250 paragraphs .081 to .082 provide guidance on the accounting for a JDBP in the financial statements of the government sponsor. As OTPP meets the definition of a JDBP for the reasons noted above, the relevant guidance for the Province for purposes of reporting retirement benefits in the Public Accounts includes:

> *.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]*
>
> *.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.*

Section PS 3250 paragraph .081 clearly states that "The government should account for its portion of the plan in accordance with the standards for defined benefit plans". It is clear from this that only the government's portion of the plan is included in the government's financial statements consistent with the requirements of Section PS 3250 (recognition) and the measurement of that portion is based on the requirements of Section PS 3250 (measurement). It is also then clear that the requirements of the standard for recognition and measurement, including the Limit of the Carrying Amount of an Accrued Benefit Asset guidance, are designed to be applied to a shared control situation and not only to situations where there is unilateral control. If it was intended that no pension asset could be recognized because the asset was subject to shared control and not unilateral control Section PS 3250 paragraph .081 would have made this clear. This paper discusses the question of measurement separately in Question 3.

The balance sheet recognition guidance for retirement benefits is stated in Section PS 3250 paragraphs .016 to .017:

DRAFT

> *.016 The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date. [SEPT. 2001]*
>
> *.017 The components of the retirement benefit liability are:*
>
> > *(a) accrued benefit obligation including the effects of plan amendments, settlements and curtailments;*
> >
> > *(b) plan assets, if any; and*
> >
> > *(c) unamortized actuarial gains and losses.*

As ~~the~~ OTPP is a funded plan there are plan assets that are recognized as part of the retirement benefit liability. When plan assets and the net impact of unamortized actuarial gains and losses exceed the accrued benefit obligation then there is an "Accrued benefit asset" (ABA). An ABA is defined in Section PS 3250 as follows:

> GLOSSARY - *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

Accordingly, the portion of the government's plan to be recognized includes their share of the accrued benefit obligation and also their share of the plan assets. In the case of the Province's portion of OTPP there is no uncertainty regarding the *existence* of an ABA for the government's portion of the plan; the ABA is calculated by reference to accrued benefit obligation and plan assets, both determined based on the best estimate assumptions and the methodologies required by with Section PS 3250 for these items. As noted above an ABA is defined as the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance). For a jointly sponsored plan, this is the government's accumulated cash contributions less the government's share of the current and prior years' benefit expenses that are attributable to the government under the ~~joint defined benefit plan~~JDBP. The Province's portion of OTPP resulted in an ABA of $10.1 billion as at March 31, 2016. There is no uncertainty regarding the occurrence of the cash contributions made (and the interest earned thereon) measured in accordance with Section PS 3250 and the existence of the government's obligation. As Section PS 3250 paragraph .080 *requires* a government to account for its portion of the plan in accordance with the standards for defined benefit plans, this would include the recognition of any asset that meets the definition of an ABA under the standard.

Further, Section PS 3250 paragraph .050 refers to the presentation of the ABA; this amount is presented in the financial statements, net of any valuation allowance. This indicates that an ABA should be recognized in the financial statements, but measured in reference to the limit on the carrying amount of the asset - essentially a measurement requirement rather than a recognition requirement, as the limit

could result in an ABA being measured at anything from $nil to its full amount. Note that the *measurement* of any net asset is subject to guidance in Section PS 3250 paragraphs .050-.059 and is discussed later in this paper.

To recognize only their share of the liability and not their share of the plan assets, or to recognize only a net liability (when the accrued benefit obligation exceeds plan assets) but never a net asset (when plan assets exceeds the accrued benefit obligation, subject to the valuation allowance guidance discussed in the Measurement section below), would indicate that the Province does not share equitably in the risks and rewards of ~~the~~ OTPP because they bear only the risk of increased liabilities without being able to bear any rewards of investment returns on the plan assets and under this interpretation the plan would not therefore be a ~~joint defined benefit plan~~JDBP.

6.2 Concept of Shared Control and Asset Recognition

Formatted: Heading 2, Line spacing: single, Font Alignment: Auto

Included in the definition of a JDBP is the concept of shared control. Points (b) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of shared control resulting in a recognition of an asset could on the surface appear to conflict with the definition of an asset under FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210, as part of the definition of an asset under Section PS 1000 would suggest that the government must control the economic resource and access to the future economic benefits. Since shared control does not equate to control, there is a need to consider whether the recognition of any asset under PS 3250 is appropriate where there is only shared control.

The Province's position is that PSAS does not preclude asset recognition for assets under shared control and specifically for plan assets of ~~joint defined benefit plan~~JDBPs for the following reasons:

- As discussed above GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity. Section PS 3250 is a primary source of GAAP for dealing specifically with ~~joint defined benefit plan~~JDBPs and, as noted above, requires the government to account for their portion of the plan – both the accrued benefit obligation and plan assets in accordance with Section PS 3250. As such, reference to Section PS 3250 is sufficient to indicate that the recognition criteria are met for ~~joint defined benefit plan~~JDBP assets, no further source of PSAS guidance need be considered.

- Similarly, if other primary sources of GAAP are considered then it is relevant to consider GOVERNMENT PARTNERSHIPS, Section PS 3060 which also includes the concept of shared control. Under Section PS 3060, shared control is sufficient for asset recognition.

- The concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been

a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. With the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that the Public Sector Accounting Board (PSAB) did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

- The Province's reporting of a pension asset for the JDBP is therefore consistent with these primary sources of GAAP, subject to measurement guidance including impairment considerations.

The similarities between the definitions of a JDBP and a government partnership under PSAS are demonstrated in Appendix F to this paper, and further support Section PS 3060 as being a relevant primary source of GAAP dealing with similar circumstances, should it be considered necessary to go outside of the requirements of Section PS 3250 to look for further clarification and guidance on recognition.

Under Section PS 3060 a critical condition for a Government partnership is shared control. Section PS 3060 explicitly acknowledges that under shared control "none of the partners is in a position to exercise unilateral control over the government partnership" (Section PS 3060 paragraph .20), yet the accounting model required by Section PS 3060 for non- GBPs[9] is that of proportionate consolidation which is the recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership. ~~Joint defined benefit plan~~JDBPs (or pension plans in general) are not specifically excluded from the scope of Section PS 3060 (Section PS 3060 paragraph .05 lists a number of exclusions from its scope and pension plans are not noted), however some may interpret that they are excluded from the scope of Section PS 3060 on the basis that control is shared with employees rather than with a party outside of the reporting entity (Section PS 3060 paragraph .06 footnote 3). The Province of Ontario and OTF, which represents employees of the Province (Teachers), share control of OTPP. This interpretation ~~reason~~ indicates that such plans are excluded because of a closer relationship between the government and the other party than normally exists for government partnerships. Even when an independent third party shares control, Section PS 3060 still requires the recognition of a share in an asset subject to shared control, indicating that the PSAS framework does not require unilateral control in order to support asset recognition when there is shared control. It would not be appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3060 for proportionate consolidation, and similarly it is not appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3250 to account for the government's portion of a JDBP~~joint defined benefit plan~~. In other words, Section PS 3250 is a primary source of GAAP and provides sufficient and complete guidance on how to account for assets related to ~~joint defined benefit plan~~JDBPs.

Commented [NP3]: Insert reference/discussion on OTF?

I have added a sentence –not sure what more to add

[9] Government business partnerships (GBPs) are accounted for under the modified equity method rather than proportionate consolidation.

6.3 Concept of Contingent Asset

Formatted: Heading 2

CONTINGENT ASSETS, Section PS 3320, provides guidance on the disclosure of contingent assets in a government's financial statements. It characterizes a contingent asset as one where there is uncertainty as to the existence of an asset (Section PS 3320 paragraph .04). It is the Province's position that the existence of the pension asset is not uncertain – there is an accrued benefit asset calculated in accordance with Section PS 3250 as noted above that is based on past transactions, being the impact of cumulative contributions and benefit expense. The fact that shared control exists with regards to access to the assets of the plan does not create additional uncertainty that would impact asset recognition under PSAS. The Province anticipates that in a broad sense, ~~s~~ any OTPP surplus would be shared in an "equitable manner" under the terms of the arrangement, and this is enabled through the ability to negotiate the utilization of the surplus including the ability to prevent the utilization of the surplus in a manner that does not benefit the Province. This expectation is further supported by past history of surplus utilization (see Appendix G). The method, extent and timing ~~of~~ during which the Province will obtain the expected future benefits (contributions reductions vs increase in benefits) is not certain. However Section PS 3320 also states "The mere fact that an estimate of an amount is involved (measurement uncertainty) does not, in and of itself, constitute the type of uncertainty that characterizes a contingent asset. For example, even though there may be measurement uncertainty related to income tax receivable, there is nothing uncertain about the fact that this asset exists. Any uncertainty is related solely to the amount thereof" (Section PS 3320 paragraph .07). Based on past history of surplus utilization for OTPP and based on the constating documents, expected future benefits for the Government are present. The uncertainty as with many types of assets relates to measurement uncertainty which will be discussed below.

6.4 Conclusion on recognition

Formatted: Heading 2

Therefore the Province has concluded that PSAS ~~permits~~ supports the recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets must be subject to unilateral control. The Province's share of OTPP's pension surplus meets the definition of an Accrued Benefit Asset under Section PS 3250. The measurement of that accrued benefit asset is determined by reference to the guidance in Section PS 3250 regarding the Limit on the Carrying Amount of an Accrued Benefit Asset, ~~which is~~ discussed in Question ~~2~~ 3 of this position paper.

7.0 Question 3 – Measurement of a pension asset

Formatted: Heading 1, Line spacing: single, Font Alignment: Auto

7.1 Standards in the PSA Handbook

Formatted: Heading 2, Right: 0 cm

~~For an asset to be recognized it must be reliably measureable (Section PS 1000.55).~~ Section PS 3250 ~~paragraphs .050 to .059~~ addresses how to measure a pension asset. This is a two-step process for OTPP. Firstly the accrued plan obligation (a Credit) and the plan assets (a Debit) are measured in accordance with the standard, and adjusted for any unamortized actuarial gains or losses (a Debit for gains not yet realized, a Credit for losses not yet realized). This measurement results in a retirement

benefit liability when it is a net liability (a Credit) amount or an accrued benefit asset when it is a net asset (a Debit) amount. When the resulting amount is an asset, the standard requires a second step to test that the asset is not impaired. It should be noted that impairment testing in some form is required for all assets recognized under PSAS standards except those carried at fair value, although the methodology of impairment tests will vary depending on the nature of the asset. The amount that is tested is the "adjusted benefit asset". When there are net unamortized gains the ABA is equal to the adjusted benefit asset. When there are net unamortized losses the ABA is reduced by those net unamortized losses to calculate the adjusted benefit asset. A graphical illustration of the calculation of the Accrued Benefit Asset (AcBA) and the Adjusted Benefit Asset (AdBA) are shown in appendix C. Section PS 3250 paragraphs .052 to .059 go on to explain what the standard means by expected future benefit and how a government may benefit from the ABA or adjusted benefit asset. Note that for OTPP the accrued benefit asset equals the adjusted benefit asset as there are net unamortized actuarial gains.

Section PS 3250 paragraphs .050-.059 are included here for completeness and ease of reference:

> ***Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)***
>
> *.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]*
>
> *.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.*
>
> *.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.*
>
> *.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).*

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in Section PS 3250 paragraph .050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and

its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Section 3250 paragraph .052 states that a government may benefit from an ABA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions. This is an explanatory paragraph on how a government may benefit from an ABA and why a valuation allowance may be needed, rather than detailing the test to be applied. Part of this justification is to note that that an ABA may be impaired when "the government is not entitled to benefit from [the ABA] fully". Examples of when a government may not be entitled to benefit from the ABA fully are given, such as a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

Section PS 3250 paragraph .059 gives additional guidance to apply when an entity contemplates realizing future benefits through a surplus withdrawal: "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal". This introduces the concept of a legally enforceable right but only in the context of a government's withdrawal of surplus and not in the context of contribution holidays. If the standard setters had intended legal enforceability to be the test throughout the standard, they would not have raised it only in the context of a withdrawal of surplus, but as a more fundamental notion in the guidance on expected future benefit. [10]

Formatted: Underline

It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to shared control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Section 3250 paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays. When considering the ability to realize expected future benefits under Section PS 3250 paragraph .052, the Province's legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability which is not explicitly required by the standard to support recognition and measurement of JDBP pension assets. Specifically, the amount of pension asset that gets recorded needs to take into account considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a pension asset in the Public Accounts. Pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the

[10] Per page 10 of the October 2, 2016 dated letter from Deloitte LLP addressed to Ms. Karen Hughes, Associate Deputy Minister, Treasury Board Secretariat

DRAFT

assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". Expected does not equate to certainty or the absence of uncertainty (Section PS 3250~~1000~~ paragraph .056).

Under the Plan and Partners' Agreement, if funding surpluses occur the partners are required to negotiate the use of the funding surplus (at least once every three years) and the Province is entitled to negotiate a reduction in contributions in respect of its share of the surplus. Under the Partners' Agreement any funding surplus must be dealt with (which includes the option of parking the surplus in the contingency reserve) so that the funding valuation becomes actuarially balanced. *In other words when there is a funding surplus over a certain range the "status quo" cannot be maintained, the surplus must be reduced by a combination of reductions in contributions, increases in benefits or withdrawals of surplus*. This is confirmed by the Partners' Agreement Section 57 that requires an actuarially balanced valuation to be prepared at least once every three years, allowing for a contingency reserve, combined with the FMP which sets out the framework for determining when a surplus or deficit outside of agreed upon ranges are met and action must be taken. While the Province might choose to accept an increase in member benefits rather than to reduce funding, any such decision is at the Province's discretion since the OTF cannot force the Province to increase benefits instead of reducing contributions. In other words it is at the Province's discretion whether to address the actuarial balancing requirements by allowing its portion of the surplus to be utilized through increased benefits. The OTF equally has the right to not agree to reduced contributions from the Province, but they do not have the right to force an inequitable sharing of the surplus. Therefore, the Province is entitled to negotiate their share of the JDBP which may include taking contribution holidays in future negotiations and can effectively use their power in negotiations to benefit from the ABA. The joint partners do have the ability to renegotiate all aspects of the partners' agreement including the FMP. However all changes require the agreement of both parties and as such the Province can veto any changes to the agreement. Note that while the negotiations are based on funding surplus amounts rather than accounting surplus amounts, any differences would be captured in the mechanics of the calculation of the expected future benefit rather than precluding an ability to benefit from any of the accounting surplus.

Commented [KJ(4]: Nadine - We have asked Alex Killoch to provide an analysis of the relative strength of the benefits provided under this plan – we should add this in once received (or provide separately if not received in the next few days)

ISPPD has provided benefit provisions for other BPS plans. No further analysis is possible.

Further, Section PS 3250 paragraph .055 indicates "The objective of the standard in Section PS 3250 ~~paragraph~~ .050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Many generally accepted accounting frameworks use "expected" in a number of principles and it is typically used in the probabilistic sense – something is expected when it is probable at some level, it does not equate to certainty. The Province has an expectation that they will benefit fully from the ABA by exercising their current rights under the plan arrangements to negotiate

DRAFT

the use of current and future surpluses in the form of contribution holidays. This position is supported by the review of the constating documents and past history of negotiations that indicate[11]:

1. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) ~~to~~ from exceeding the amount of contributions paid by or on behalf of active members in respect of credited service for the year[12] (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.
2. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the ~~Sponsors~~ sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix G for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the ~~Sponsors~~ sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.
3. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right[13])[14], and the requirement to negotiate and agree (or in the absence of agreement, mediate and/or arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.
4. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement (section 74) may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan. Under the plan, contributions are generally borne equally by the Province and the employees. Employees benefit economically from both an increase in benefits and from a reduction of contributions. The Province benefits economically directly from a reduction in contributions. This makes it reasonable that at least some contribution reductions would be agreed to by the joint sponsors as a highly unequal weighting towards increases in benefits would not balance the interests of taxpayers and teachers therefore may be unlikely to be a reasonable outcome of “good faith” negotiations between the Province and the OTF.

Commented [KJ(5]: Nadine - At one point, I had heard from the lawyers (Len/Paul) that this Call Right was not material – we need to better understand the quantitative impact – Nadine – can you follow up with Len and perhaps Alex as well.

It is not material. To date, no credit has been accrued for OTF as there have been no benefit reductions to date during the freeze period. The freeze will end on December 30, 2017. As the plan has filed the 2016 actuarial valuation report, the next required filing will be in 2019 which is outside of the freeze period. It is unlikely any credit will be accrued before the expiration of the freeze period.

[11] Per pages 3 to 6 of the September 20, 2016 dated letter from Osler, Hoskin & Harcourt LLP addressed to Len Hatzis and Paul Kaufman, Treasury Board Secretariat Legal Services

[12] TPA, subsection 5(1.1)

[13] The OTF Call Right is a one-time arrangement intended to compensate Plan members for absorbing 100% (rather than 50%) of funding shortfalls arising the government initiated Freeze period. Part of a previously agreed upon arrangement to ensure equitable sharing of the risks and rewards over the long term of the plan, it is not a general unilateral right to utilize future surpluses beyond the recovery of the specific funding shortfalls.

[14] FMP, section 6.03

This is further supported by the historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses, and therefore, which should also be considered. ~~As previously discussed!~~ ~~i~~n respect of conditional indexing, ~~a decrease in benefits by the employees~~reduced indexation for current retirees ~~were~~ was~~offset~~ matched by an increase in payments by the Province for the first 50% of the indexation reduction. ~~Similarly a~~As the sponsors agreed to utilize the funding surplus to partially restore indexation, this ~~increase in benefits~~restoration of indexation resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.98B for the 2015 change, and $1.68B for the 2014 change). This demonstrates that historically and over the long term an equitable sharing of the deficits and surpluses has resulted in changes in the Province's contributions, even when there are decreases or increases to benefits for employees.

5. In the event that the ~~Sponsors~~ sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, a mediator may be chosen by agreement of the sponsors (section 77 of the Partners' Agreement). If the sponsors do not accept the report of the mediator, an arbitration board will be appointed (section 84 of the Partners' ~~-~~Agreement). The arbitration board would consist of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

   As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

DRAFT

Based on the above analysis, the Province believes that the uncertainties around how and when to utilize a surplus in the OTPP do not result in an inability or lack of entitlement to utilize the surplus in accordance with Section PS -3250 paragraph .052.

7.2 Calculating the limit on the carrying amount of an accrued benefit asset

Formatted: Heading 2, Line spacing: single, Font Alignment: Auto

Section PS 3250 paragraphs .053 to .058 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in Section PS3250 paragraph .055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where actual realization of the benefit would be reflected in a reduction in future contributions. A valuation allowance is recorded against the pension asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test under Section PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as defined in Section 3250 paragraph .56.

Therefore in accordance with Section PS 3250 paragraph .56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

Each of these is discussed separately.

7.3 ~~Through~~ Considerations re: withdrawal of the surplus (Section PS 3250 paragraph .056 (b))

Formatted: Heading 2, Line spacing: single, Font Alignment: Auto

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, Section 3250 paragraph .059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

The TPA for OTPP does not specify a method for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution. The Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

The Province's position is that there is no amount of expected future benefit included in respect of withdrawable plan surplus.

7.4 Considerations re: ~~Through reducing~~ reduced future contributions (Section PS 3250 paragraph .056 (a))

Formatted: Heading 2, Line spacing: single, Font Alignment: Auto

Section PS 3250 paragraph .056(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the

DRAFT

calculations are done on a 50% basis since the starting point, per Section PS 3250 paragraph.081 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

Section PS 3250 paragraph .055 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the pension asset value to be recorded in the accounts. For example, if the pension asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the pension asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. It is therefore relatively straightforward and is typically calculated based on the Province's share of the current service cost reported in the actuarial valuation taken into perpetuity unless there is evidence to indicate the workforce will significant diminish over time (for example a closed plan).

The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in this second part of the calculation. Note that consistent with the calculation of the expected future accruals for service, no amounts are considered for employee contributions as these relate to the OTF's portion of the plan. The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (Section PS 3250 paragraph .056(a)). There is no further guidance in Section PS 3250 as to how the calculation of minimum required contributions should be performed and what restrictions or parameters should be factored into this calculation. Typically for defined benefit plans minimum contributions include those that are required by the pension regulator to be made for funding. However, minimum contributions regardless of any surplus, may be required by plan text, legislation or other agreements with employees. For OTPP a key element of judgment is determining what contributions are required by the current plan arrangements "regardless of any surplus". The constating agreements for OTPP require that the parties negotiate every 3 years as a minimum, and when there is a funding surplus.

Determining the number of years of contributions to include should involve an assessment of the facts and circumstances of the plan and should consider uncertainty. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the contractual agreements between the ~~Sponsors~~ sponsors that provide for the sharing of risks and benefits and specifically in respect of assessing the minimum contributions required by the

plan agreements (there is no minimum contributions stipulated in the Plan text, legislation or Partners' Agreement) including the following:

- One view of minimum contributions might be that the agreed upon level of contributions are the minimum contributions until they are altered in the plan text. As this can only happen with agreement from OTF it cannot be assumed that changes will be made and therefore that the contribution formula as stated in the current agreements will continue in perpetuity. This view provides the most conservative view of minimum payments. However as the current contribution amounts are greater than the government's share of the annual current service cost for the existing workforce this indicates that continued contributions at this rate will result in ever increasing surpluses. Extrapolating the surpluses, at a certain point other requirements that are currently incorporated into the plan text, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan will apply to reduce the contributions. The effect of these caps on contributions would have to be estimated but cannot be ignored as they form part of the current contribution arrangements. Modelling could be performed to develop expectations as to when these CRA limits could be expected to be reached assuming no changes in the contribution levels. As is the most conservative view (highest minimum contributions) the impact of this has been considered, as discussed below.
- An alternative view of the minimum contributions required by the plan is that there is a contractual obligation ~~unde`r~~under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'. On this basis it could be argued that any agreed upon contribution levels are mandatory for only a three year period, after which the contributions must be renegotiated to stay the same, increase or decrease, such that the stated contribution level in the plan text constitute minimum payments for only three years. It should be noted that the plan text requires an actuarially balanced funding valuation, so to the extent that a funding deficit currently existed a contribution holiday (contributions lower than the annual cost of the plan) could not be negotiated. However because the funding situation at the time of future negotiations is not known it could be argued that no amount is a fixed "minimum contribution" in this context, because all of the contribution amount is subject to future changes in funding and negotiation by the joint sponsors.
- Other views of what the minimum contributions are would fall between these two views, such as that the current funding level is set to ensure that there is no funding deficit over a 11 year period and after that changes in contributions would be negotiated. This view has been used in calculating the actuarial calculation of the asset ceiling as noted in the table below.
- Another consideration might be the specific framework within the Funding Management Plan for OTPP which contemplates specified funding zones and expectations regarding possible contribution reductions by the sponsors. Informed stochastic modelling would be necessary to estimate when the different funding zones will be reached and probability of contribution reductions may be increased.

Formatted: Underline

Commented [KJ(6]: Nadine – can you confirm this understanding is correct based on what Alex said in the meeting today re: contributions reducing to 12% in 2020…

Every valuation will review the funded status and if there is a new deficit, a new special contribution may be established to liquidate the new deficit. If the plan is well funded, the existing special contributions may end sooner than 2026.

DRAFT

- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to use some of the funding surplus to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change, $1.98B for the 2015 change, and $1.68B for the 2014 change).

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (Section PS 2130 paragraph .03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in Section PS 2130 paragraph .13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

As part of the 2015/16 Public Accounts audit, the Office of the Provincial Controller engaged external consultants to conduct asset ceiling tests to assess the requirement for a valuation allowance against the $10.1 billion of net pension assets reported by the Province for OTPP . The results of those reports are summarized in Table 1 below.

DRAFT

Table 1: Summary of Asset Ceiling Models performed for OTPP

Commented [KJ(7]: Nadine - Are the models all available for the panel to review?

I presume yes

Model Assumptions	Expected Future Benefit or Asset Ceiling ($ Billions)	Results
1. There is no minimum employer contribution under the plan/legislation	$44.6	There is no reduction in the expected future benefit (EFB) as at March 31, 2016.

that is required ~~even~~ if a surplus is present.		
2. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of the current funding report. Contribution requirements are $1.7B per year for 2015, 2016 and 2017.	$41.2	The minimum contribution requirement applies to the current period of the funding report and until a new report is completed. EFB is reduced for 2 years by $1.7B at March 31, 2016.
3. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of contribution requirement (i.e. 11 years through 2026) not just for the period of the current funding report.	$29.3	Uses a period to 2026 (11 year period) based on the funding report special contribution requirement. The EFB at March 31, 2016 is reduced by $15.3B.
4. The surplus is never used until the time it reaches the Income Tax Act (ITA) threshold. Once attained, the excess surplus is used at 50% for employees and 50% for the Province to reduce contributions in the following years.	$23.2	The ITA surplus limit is reached at the end of 2025, leading to forced contribution reductions from 2026. EFB is reduced by $21.4B at March 31, 2016
5. Every year, 50% of current year surplus is applied to improve member benefits and the remaining 50% of the current year surplus is retained and continues to accrue. EFB is reduced by minimum $~~37~~31.7B at March 31, 2016.

Commented [KJ(8]: I don't think its EFB as EFB is the net – I think we should use the term "present value of the expected future accruals for service for the current number of active employees"

Commented [KJ(9]: Nadine - See previous comment re: ensuring this is correct based on comments made by Alex Killoch (Nadine was at the meeting)

DRAFT

employees and the Province.		

Note: Models above made no assumption on any value of the surplus withdrawal.

In all 5 models above, the expected future benefit (EFB) for OTPP is greater than the accrued pension asset of OTPP of $10.1 billion, at March 31, 2016. Even under the most conservative model (number 5 above) under which 50% of the current year surplus is applied to improve member benefits while the remaining 50% is retained and continues to accrue a return on assets until the Income Tax Act (IITA) surplus threshold is reached, the EFB of $12.9 billion is greater than the accrued pension asset of $10.1 billion. As such no valuation allowance was required and reported for OTPP as of March 31, 2016.

~~Under the Partners' Agreement, the parties are mandated to negotiate benefits and contributions every three years as a minimum and if agreement is not reached, it is reasonable to expect that a change in contributions might occur rather than the 'status quo' being retained.~~

For purposes of ~~the~~ OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

In addition to the above calculations, the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan should also be considered. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that no valuation allowance is required.

The determination of the minimum contribution levels required as input to the calculation of the expected future benefit involves significant judgements, estimation and assumptions about future funding surplus levels. These judgements, estimates and assumptions should be made on a consistent basis with best estimates used in developing the accrued benefit obligations and plan asset amounts. Regardless of the need to apply judgements, estimates and assumptions for the calculation, this does not imply that no asset can be recognized or that it cannot be reliably measured. In fact, pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions

will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". From the Province's perspective, 'expected' does not equate to 'certainty' or the absence of uncertainty.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (Section PS 3250 paragraph .042) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (Section PS 3250 paragraph .041). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. Section PS 3250 paragraph .057 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on ~~Plan~~ plan ~~Assets~~assets, which is one of the acceptable references suggested on Section PS 3250 paragraph .044.

The OAG and the ~~Government~~ Province differ in their interpretation regarding whether it needs to be "expected" that the ~~Government~~ Province will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in Section PS3250 paragraph .059. The ~~Government~~ Province considers that it needs to be expected that future economic benefits are to be obtained ~~obtained as reflected in the definition of an asset in Section PS 1000 and as~~ reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to ~~use~~ benefit from a plan surplus.

7.5 Other guidance in the PSA Handbook on measurement

Formatted: Heading 2, Line spacing: single, Font Alignment: Auto

MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe would be a useful addition to the ~~current year~~ financial statements. Section PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by*

DRAFT

experience of similar transactions and, in some cases, reports from independent experts. Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.

.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.

The estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the net pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is an acceptable alternative under PSAB and consistent with rates followed by other senior Canadian governments. Actual ~~. Hi~~ historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets reported in the Public Accounts. Appendix J includes a comparison of the OTPP funding rate assumptions, the Provincial discount rate for OTPP and the actual performance of OTPP from 2005 to 2016. Historical rates of return on plan assets have supported the past discount rates used by the Province in relation to OTPP.

Commented [KJ(10]: Nadine – Do we have the history of annual returns for OTPP that we can reference?

7.6 Impact of valuation allowance

Formatted: Heading 2, Right: 0 cm

The current ~~AG's~~ Auditor General's view challenges previous interpretations of the Provincial Controller and former Auditor Generals regarding the interpretation and application of Section PS 3250 to those JDBPs where the government is a joint sponsor. The impact of the OAG's view is that no net pension ~~accounting surplus~~asset should be recognized in the Province's Public Accounts for JDBPs until the joint sponsors agree~~s~~ to a change in the plan text ~~for the Province~~ to provide for unilateral authority to the Province to access surplus or reduce future contributions ~~to~~ or the sponsors enter~~s~~ into an agreement by year-end enabling the government to take a contribution holiday. In the absence of meeting either the criteria set out by the ~~AG~~Auditor General, any ABA would therefore be fully provided for through a valuation allowance, impacting each year's statement of operations by the amount by which the asset would otherwise increase in value. These results are counterintuitive with pension expense being higher in years in which increased funding is made and also higher when poor investment returns create

actuarial losses that have not yet been amortized into the statement of operations. These examples are illustrated in Appendix C.

For information purposes, refer to Appendix H for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting for OTPP compared with following the Province's interpretation of the PSAS. Of particular note is the impact in 2008 when the deficit would have been lower by $3 billion in a year when pension asset values fell significantly because of the financial crisis.

7.7 Comparability of Ontario's accounting ~~for JDBPs to~~ ~~with~~ to other Provinces defined benefit plans

Not all of the jurisdictions noted in this comparative overview have joint defined benefit plans. Furthermore, the specific terms and conditions of any jurisdiction's plans will determine the appropriate accounting under PSAS. This information is provided for reference purposes only and has no direct impact on the Province's accounting treatment for OTPP or other defined benefit plans on the Province's financial reports.

The Province of British Columbia does have a jointly sponsored pension plan. ~~Included in~~ Appendix I provides details from ~~is~~ a legal opinion prepared by lawyers, Koskie Minsky which ~~,~~ ~~comparing~~ compared access to the pension surplus of OTPP relative to JDBPs in British Columbia. The Province of British Columbia does not report a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

The Province of Manitoba has a multi-employer defined benefit plan for their healthcare employees. The Province neither records the net pension liability or the net pension asset on their financial statements as the Province is not a direct sponsor of the plan. The Province of Manitoba appropriately reduces the accrued benefit asset to nil in accordance with Section PS 3250 paragraph .050 as the Province does not expect future benefits from any plan surplus in contrast to OTPP and the Province of Ontario.

The Province of Nova Scotia's Public Service Superannuation Plan transitioned to a joint governance structure in April 1, 2013. Due to the wording of the legislation, the Province has determined it no longer has any residual liability for the plan, and therefore has no entitlements to its assets. The legislation and funding policy alleviated the Province from any responsibility to fund shortfalls or to benefit from fund surpluses. As a result, the Province no longer records a net pension asset or liability in their financial statements. The Province of Nova Scotia therefore appropriately reduces the accrued benefit asset to nil in accordance with Section PS 3250 paragraph .050 as the Province does not expect future benefits from any plan surplus in contrast to OTPP and the Province of Ontario.

Commented [NP11]: Conclusion on comparability with ON JDBP and appropriate PSAS reference to be inserted.

See sentence added

Commented [NP12]: As above.

Similar sentence added

Quebec has two joint sponsored plans: Government and Public Employees Retirement Plan, and Pension Plan Management Plan. These plans are structured such that employee and employer contributions are in separate funds. Currently both of these plans are in net pension liability positions.

In New Brunswick, the target benefit pension plans are governed by an Agreement and Declaration of Trust which restricts the Province's access to the plan assets. On this basis, the Province records the value of the plan net assets as nil when these plans are in a net asset position. These plans are shared risk plans that are governed by a Board of Trustees to which the Province has appointed one-half of the members. The Plans are jointly funded by employees and the Province. These target benefit plans target retirement benefits as opposed to guaranteeing them. Two of the four target benefit plans are in a net asset position, where a full allowance is taken by the Province against the net pension asset. The Province of New Brunswick appropriately reduces the accrued benefit asset to nil in accordance with Section PS 3250 paragraph .050 (there is no specific guidance on target benefit plans in PSAS) as the Province does not expect future benefits from any plan surplus in contrast to OTPP and the Province of Ontario.

~~Therefore,~~As noted above, the constating documents for pension plans in other provinces are different than those of OTPP, therefore caution should be exercised when trying to compare accounting among the jurisdictions, or others. ~~which supports the different accounting by the Province of Ontario for OTPP.~~ ~~Quebec, Nova Scotia, Manitoba and New Brunswick also have pension plans that are in a net accrued benefit asset position before valuation allowance.~~

~~In New Brunswick, the target benefit pension plans are governed by an Agreement and Declaration of Trust which restricts the Province's access to the plan assets. These target benefit plans targets retirement benefits as opposed to guaranteeing it. Two of the four target benefit plans are in net asset position, where a full allowance is taken against the net pension asset.~~

Commented [NP13]: Comment on comparability to ON situation, relevant PSAS.

7.8 Conclusion on measurement

Formatted: Heading 2, Line spacing: single, Font Alignment: Auto

As discussed, there is significant professional judgement and estimation in determining how to measure the valuation allowance under Section PS 3250, including the determination of the minimum contributions required by the current plan arrangements. It is the Province's position that the attributes of the ~~joint defined benefit plan~~JDBP arrangements for the OTPP entitle the Province to access its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surplus through reduced contributions.

The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of ~~those~~ various actuarial assessments for the asset ceiling test ~~models to~~ date ~~no~~, no valuation

allowance appears to be required and the OTPP pension assets should continue to be recorded on the books of the Province.

Appendix B – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Formatted: Heading 1, Font Alignment: Auto

Formatted: Font: Not Bold

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Pension Act and to the Partners' Agreement and Funding Management Policy in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the ~~Teachers' Act~~TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the ~~Sponsors~~ sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the ~~Sponsors~~sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners (sponsors) can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners (sponsors) in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the ~~Pension Benefits Act~~PBA, appointing the OTTP Board, and defining the role of the Board. Section 10 requires that the partners meet and negotiate changes to the plan every three years. Section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the ~~Sponsors~~ sponsors to the OTPP have the authority to utilize ongoing surpluses. Section 19 also requires the Board to prepare a valuation at least every three years to comply with the PBA.

DRAFT

Paragraph 57 requires a valuation prepared for filing with the Superintendent of Financial Services to be actuarially balanced so that the present value of benefits and costs to be paid out of the fund (plus any contingency reserve) be equal to the present value of sponsor contributions. An actuarial valuation for funding purposes of the pension fund shall be prepared by the Board's actuary as at the 1st day of January and filed annually with the Superintendent of Financial Services, unless the partners jointly agree to instruct the Board not to file the valuation. The partners shall establish a committee to deal with accounting matters relating to joint pension plan sponsorship and agree to contact the Public Sector Accounting Board to raise issues of concern to the partners.

Paragraphs 58 to 60 indicate the actions to be taken based on the preliminary results of a valuation prepared for filing with the Financial Services Commission of Ontario. If the valuation indicates a need to increase the contribution rate, the partners need to meet as soon as possible to discuss how to adjust for that need on an equally shared basis. If the valuation indicates the contribution rate can be decreased, the actuarial gain can be applied to reduce the payments required to liquidate any unamortized balance of a solvency deficiency.

The process governing the use of ongoing surpluses by the ~~Sponsors~~ sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the ~~Sponsors~~ sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the ~~Sponsors~~ sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the ~~Sponsors~~ sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the ~~Sponsors~~ sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the ~~Sponsors~~ sponsors on his or her views on the positions of the partners and provide a recommendation to the ~~Sponsors~~sponsors. If the ~~Sponsors~~ sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The

board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented.

Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

The mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the ~~Sponsors~~ sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the ~~Sponsors~~ sponsors do not agree to file the valuation, then the ~~Sponsors~~ sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the ~~Sponsors'~~ sponsors' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Funding Management Policy (FMP)
The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP. The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses: i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)). ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05). iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both. The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are

DRAFT

met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the ~~Sponsors~~ sponsors are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both ~~Sponsors~~sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the ~~Sponsors~~ sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the ~~Sponsors~~ sponsors mutually agree to the contrary, they shall follow the procedures described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong

foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

DRAFT

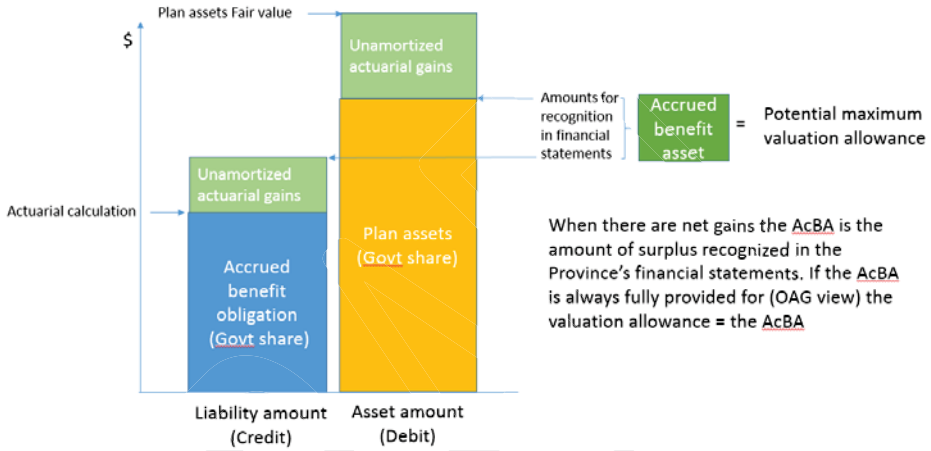
Appendix C – ~~Impact~~ Overview of a Valuation Allowance on Pension Assets

Formatted: Heading 1

Commented [NP15]: Please modify text as above to change = valuation allowance to potential maximum valuation allowance. Also, please change font colour to black.

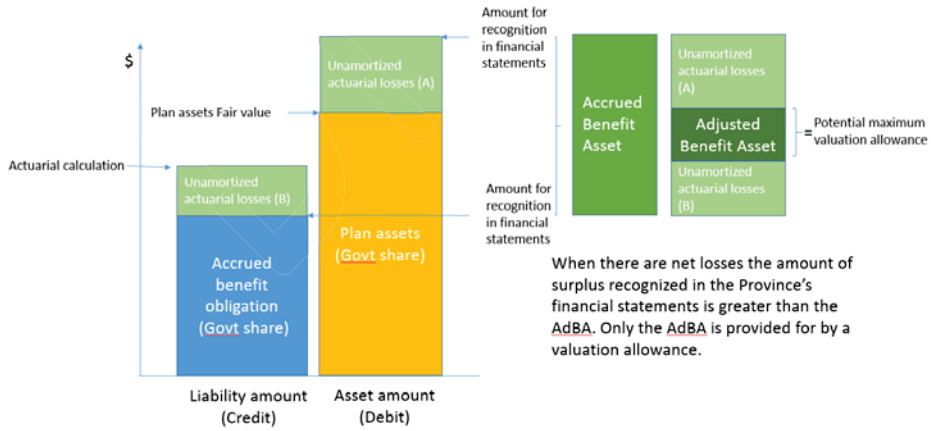
DONE

An Accrued Benefit Asset (AcBA) occurs when there is a plan surplus, including the effect of net unamortized experience gains or losses. OTPP currently has net unamortized experience gains.
Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation



When there are net gains the AcBA is the amount of surplus recognized in the Province's financial statements. If the AcBA is always fully provided for (OAG view) the valuation allowance = the AcBA

An Adjusted Benefit Asset (AdBA) is required when there are unamortized losses

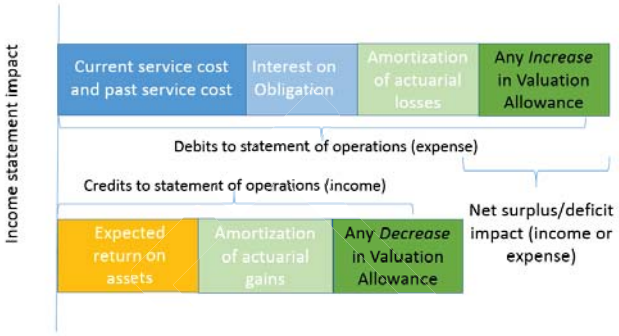


When there are net losses the amount of surplus recognized in the Province's financial statements is greater than the AdBA. Only the AdBA is provided for by a valuation allowance.

Components of Expense

The *change in* the valuation allowance flows directly through the statement of operations.

The change in valuation allowance = the change in the AcBA (or AdBA if applicable)



Changes in the Accrued Benefit Asset

Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA or AdBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]

Event or circumstance	Impact on AcBA/AdBA	Impact on VA	Impact on Fiscal Position
Investment returns worse than expected e.g. economic downturn	The AcBA does not decrease significantly. The Adjusted Benefit Asset does.	VA decreases – lower allowance than prior year required	Fiscal position improves in an economic downturn
Plan assets fair values significantly lower in one year. Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.	The AcBA is based on the higher, smoothed value of plan assets and does not change significantly. However the actuarial losses are subtracted from the AcBA to calculate an AdBA, which is smaller than the AcBA.	Prior year allowance was based on AcBA (no net amortized actuarial losses). Current year is based on AdBA because there are unamortized actuarial losses. The AdBA is smaller than the AcBA because of the increase in unamortized losses. Therefore the VA is reduced correspondingly.	Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. The increased actuarial losses would only impact the statement of operations in future years. A similar impact would have been noted in 2008 if the OAG's position was reflected in the financial statements for that year.

[1] Impact of change, all other elements being held constant.

Changes in the Accrued Benefit Asset

Changes in the AcBA may occur for a number of reasons. Where changes result in an increase in the AcBA without expectation of future benefit, such changes would result in a change in the valuation allowance (VA) to effectively reduce the AcBA to zero. In this situation, the following impacts on the statement of operations would be noted [1]

2015-2016 example:
Contributions of $1,812M exceeded other elements of pension expense by $1,514M

2015-2016 example:
Additional contributions increase plan assets. AcBA increases by $1,514M

2015-2016 example:
AcBA increase of $1,514M results in an increase to the VA of $1,514M

2015-2016 example:
Deficit increases by $1,514M.

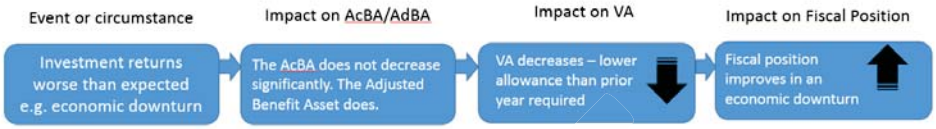
The cash paid for contributions has not resulted in an asset and so is an expense, despite the funding position of the Province's share of the plan has been improved by the additional contributions.

[1] Impact of change, all other elements being held constant.

DRAFT

Changes in the Accrued Benefit Asset

Continuing from the previous slide, where valuation allowances are taken to effectively reduce the value of the AcBA to zero, in the year of a reduction in the value of the AcBA or AdBA, where an economic downturn occurs for example, the following impacts on the statement of operations would be noted [1]



Plan assets fair values significantly lower in one year.
Assuming no net amortized gains/losses in prior year this would create net *unamortized losses* as the use of market related values means the changes in plan assets are smoothed over 5 years.

The AcBA is based on the higher, smoothed value of plan assets and does not change significantly. However the actuarial losses are subtracted from the AcBA to calculate an AdBA, which is smaller than the AcBA.

Prior year allowance was based on AcBA (no net amortized actuarial losses). Current year is based on AdBA because there are unamortized actuarial losses. The AdBA is smaller than the AcBA because of the increase in unamortized losses. Therefore the VA is reduced correspondingly.

Fiscal position will be improved as a reduction in the VA results in a gain in the income statement in that year. The increased actuarial losses would only impact the statement of operations in future years.

A similar impact would have been noted in 2008 if the OAG's position was reflected in the financial statements for that year.

[1] Impact of change, all other elements being held constant.

DRAFT

Appendix D – Summary of different valuation methodologies for pension valuations

Formatted: Heading 1

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits and pension obligations.	Measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered.
Actuarial cost method	*[To confirm – not clear from the valuation report]*	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values [To confirm the approach taken in OTPP funding valuation]	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	Market-related values, which are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied consistently. The Province uses adjusted market values for some classes of assets in certain plans.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate.	In measuring a pension obligation amount, the defined benefit obligation	Not specified. However two methods are specifically

Formatted: Left

Formatted: Left

DRAFT

	For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR Reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work To confirm the approach taken in OTPP funding valuation]	amount determined by the plan's sponsor may be (but is not required to be) used. Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. Part I (IAS 19) requires the use of government bonds when no deep market for high-quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario.	acknowledged – a) discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing.[15] The Province of Ontario uses a discount rate for OTPP determined by reference to plan asset earnings.
Underlying population data	All valuation methodologies should use consistent underlying data of the population covered by the plan		
Inflation rate	All valuation methodologies should treat inflation in a consistent manner and use a consistent inflation assumption (best estimate). [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Demographic assumptions	All valuation methodologies should use a consistent demographic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Other economic assumptions	All valuation methodologies should use a consistent other economic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]

Assumption/ methodology	Funding valuation	Accounting Part IV of the CPA Canada Handbook –	Accounting PSAS – (Province Financial

Formatted Table

[15] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

	(Going concern basis)	(OTPP Financial statements)	statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits and to provide information on the financial position of the plan as of the valuation date on a funding basis in accordance with the Pension Benefits Act, the Income Tax Act as well as generally accepted actuarial practice.	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits, pension obligations and the financial position of the plan as of the valuation date in accordance with Part IV of the CPA Canada Handbook (Part I of the CPA Canada Handbook (i.e. IFRS) is referred to where Part IV is silent).	Measure and report the obligation for employee retirement benefits, attribute the costs of those benefits to the periods in which the related services are rendered and to provide information on the financial position of the plan in accordance with PSAS.
Actuarial cost method	Modified aggregate method (level cost method)	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	PSAS allows choice regarding the valuing of plan assets at market-related value. Market -related values, are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied consistently. The Province has chosen to value OTPP's plan assets by adjusting to market value over a period of 5 years in accordance with PSAS.

DRAFT

	assets with fixed redemption values For funding valuation, the plan uses the actuarial value of assets which are the market value of assets adjusted for investment gains / losses spread over a period of 3 years.		
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate. For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work For the purpose of the funding valuation, the plan uses a discount rate which is based on market related rates averaged over a period of 36 months. The discount rate used in the most recent funding valuation for OTPP as at January 1, 2015	Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. OTPP follows Part I (IAS 19) which requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario. As illustrated in Appendix E, this is inconsistent with other Provincial pension plans in Canada which use as a discount rate, the long-term rate of return on plan	Not specified. However two methods are specifically acknowledged in PSAS – a) discount rates determined by refere to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing. [16] The Province of Ontario uses a discount rate for OTPP determined by reference to the expected long-term return on plan assets. The discount rate used by the Province to account for OTPP in their March 31, 2016 financial statements was 6.25%. This is the long-term rate of return on plan assets which is in accordance

[16] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

	was 4.85%.	assets. The discount rate used by OTPP in their December 31, 2015 financial statements was 3.25%.	with PSAS.
Independent verification		OTPP's financial statements are audited by Deloitte LLP.	The Province's financial statements are audited by the OAG.
Underlying population data	All valuations use consistent underlying data of the population covered by the plan (membership data as at August 30 of the prior year projected to the valuation date is used].		
Inflation rate	All valuations treat inflation in a consistent manner (on a best estimate basis). Best estimate assumptions are derived based on the best estimate of future events. Best estimates of inflation by the Province may be different from those of the OTPP Board, even though they are both best estimate assumptions. In developing its best estimate assumptions, the Province references a broad range of available data, including the best estimate from the OTPP Board.		
Demographic assumptions	Valuations use consistent demographic assumptions (best estimate by the OTPP Board).		Under PSAS, the Province is not required to prescribe demographic assumptions.
Other economic assumptions	The OTPP Board develops its own salary escalation assumption to be used for both the funding and the Board's financial statement valuation. Economic assumptions other than the discount rate, inflation rate and salary assumptions are determined by the Board. These are the same for funding valuation and the Board's financial statement valuation.		The Province prescrib the future salary escalation rates. The Province develops this assumption by referencing the outcome of the most recent collective agreements as well as compensation policies issued from time to time by the government and the historic increases granted.

Commented [LD16]: I don't think I understand what this comment is saying?
PSAS requires demographic assumptions. I'm not sure what is means that the Province is not required to "prescribe" them

Appendix F -– Comparison of dDefinitions of a Joint Defined Benefit Plan and Government Partnership

Formatted: Heading 1

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, ~~paragraph~~ Section PS 3060 paragraph .06. ~~GOVERNMENT PARTNERSHIP,~~ Section PS 3060 was introduced into the Public Sector Accounting (PSA) Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. ~~RETIREMENT BENEFITS,~~ Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;	Consistent in concept with the definition of a GP focusing on investments in the partnership and the

			definition of a JDBP focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

Field Code Changed

Formatted: No underline, Font color: Auto

Formatted: No underline, Font color: Auto

In addition to consistent wording, the concepts in the definitions of a government partnership and a ~~joint defined pension pla~~JDBP~~n~~ are similar.

While similar in concept and wording, the definition of a ~~joint defined pension plan~~JDBP is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including ~~joint defined pension plan~~JDBPs.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

Appendix G – History of Surplus Utilization for OTPP

Formatted: Font: 14 pt, English (Canada)

Formatted: Font: 14 pt, Not Bold, English (Canada)

The history of OTPP surplus utilization from ~~the time the OTPP became a jointly sponsored pension plans~~1990 to the date that the FMP was established (in March 2003) demonstrates a past practice of the ~~Sponsors~~ sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Contributions by teachers increased by 1 percentage point (from 7.9% to 8.9%) effective January 1, 1990 per legislation.~~Increased contributions by 1% to 8.9%~~	Legislated an increase in matching contributions (from 7.9% to 8.9%) effective January 1, 1990 and responsibility to finance the initial unfunded liability through a series of special paymentsAgreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit	$4.6 billion to reduce the value of remaining	$0

DRAFT

		improvements	special payments	
1999	$3.5 billion	N/A	$3.5 billion to reduce the value of remaining special payments	$0
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion	$9.3 Billion	

Commented [NP17]: Check if anything more recent?

See note 2 on page 24
Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the ~~Sponsors~~ sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

DRAFT

Appendix I – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

Formatted: Heading 1 Char, Font: (Default) +Body (Calibri), Not Bold, Font color: Auto

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the

DRAFT

event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan ("PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

DRAFT

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[17] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[17] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

DRAFT

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

DRAFT

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

Thanks for sending that through Cindy. I will take a look at it.

I forgot to ask on the call whether you and Nadine had given any consideration to the impact of scheduling out anticipated (funding) surplus growth assuming that current service cost remains the same in perpetuity and minimum funding requirements are greater than current service cost under the current Schedule 1 contributions. It might take a long time, but eventually there would be a significant build up of surplus such that the cap on contributions in Schedule 1 section 19 (2a) would kick in (i.e. when the income tax act would not cap contributions). As soon as the minimum contributions under the Schedule 1 drops below the current service cost then you can start to recognize a benefit under paragraph 056 (a) calculations. The only question is, depending on the expectations of surplus growth and when the ITA caps kick in, is when does this occur, and how big is the effect. You have until perpetuity to reach the caps, but obviously the further away the cap is reached, then the lower the benefit when discounted back.

I have reached out to find the right contact in the Netherlands. Given the time difference, I am not sure I will know by tomorrow morning, but I will keep you posted on that avenue.

Lucy

Pauline

I did look into your file and seems reasonable vs the previous illustrations that we have exchanged, just one adjustment
You will see in liability sheet I have a line 29 adjustment for other unamortized (this is the transitional asset amortization that goes back to the initial application which is to be included in the test of unamortized losses) this likely affects your 2002 / 2003 valuation allowance.

Also to note is the flaw of the PS3250 that I have highlighted in previous communication :
- In 2008 we did have very bad asset returns and this creates a significant income through reduction of valuation allowance
- In opposite, the years 2010 and 2011 had good returns but you have significant expense through increase of valuation allowance

Objet : Review: Valuation Allowance

Hi Martin,

I mocked up the annual valuation allowance based on our discussion yesterday. We went through it with Cindy this morning and she would like you to take a look at the mock-up to confirm that it is consistent to your understanding. In particular bringing the unamortized gain/loss from market related values to market values. Thank you in advance.

Attachment 1: PWC SOW Pensions Accounting Opinion 20160915 Compare v2 .docx

---

Thank you. I think this is a critical part of the analysis.

In respect of the SOW, I discussed the issue with our internal groups. Under Section 7600 of Canadian GAAS, any accounting opinion must contain "restriction of use" language in the opinion, which does restrict the use of the report and the reliance that third parties can place on it. However the standard notes that notwithstanding this restriction, the report can be shared with the incumbent auditor, so sharing with the OAG is definitely permissible, but publication of the report to third parties will be of limited use because they cannot rely or use the report. I understand that in similar situations we permit references to the report, but generally not the reproduction of the report publicly because of the restriction of use.

Based on this, I have suggested amended language in the SOW (in tracked changes from the last version you sent me), that also captured the concerns about what the OAG would do with the report once it has been shared. Please let me know if this is acceptable to you and your legal department, and then we can finalize. All the other edits suggested by you in the last version were accepted.

PWC SOW Pensions Accounting Opinion 20160915 Compare v2 .pdf

Statement of Work for Management Consulting Services

This Statement of Work no. **OPCD-PWC-01** is made in duplicate and effective September 16, 2016.

PricewaterhouseCoopers LLP (the "Vendor" or "PwC") and Her Majesty the Queen in right of Ontario as represented by the President of the Treasury Board (the "Client" or the "Province") enter into this Statement of Work pursuant to the Master Agreement for Management Consulting Services made as of March 22, 2016 between the Vendor and Her Majesty the Queen in Right of Ontario as represented by the Minister of Government and Consumer Services (such Master Agreement, as from time to time amended, is referred to as the "Master Agreement").

In consideration of their respective agreements set out below, the parties agree as follows:

1. *Structure* - The terms and conditions of the Master Agreement are hereby incorporated by reference in this Statement of Work to the same effect as if fully set out in this Statement of Work. This document and the Master Agreement together comprise a separate Statement of Work between the Vendor and the Client. All capitalized terms used in this Statement of Work without definition have the meanings ascribed to them in the Master Agreement. In the event of any conflict or inconsistency between any term or provision of this Statement of Work and any term or provision of the Master Agreement, the terms and provisions of the Master Agreement shall govern.

2. *Statement of Work* - The Vendor agrees to provide to the Client, and the Client agrees to acquire from the Vendor, the Services and Deliverables described in this Statement of Work upon and subject to the terms of this Statement of Work.

3. *Maximum Price:* C$100,000.00, excluding HST.

4. *Project Start Date:* September 16, 2016.

5. *Project End Date:* December 31, 2016.

6. *Scope of Services and Deliverables* - The Services and Deliverables to be provided by the Vendor under this Statement of Work include the following:

   The Vendor shall provide accounting advice (the "accounting advisory services") regarding the acceptability of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards. The accounting advice may include:

   - Review of background information, position papers developed by the Client or third parties that have been engaged by the Client to draft accounting positions on accounting for the recognition and measurement of pension assets for jointly-sponsored pension plans, and other supporting information.
   - Provide written or oral comments on draft position papers as provided by the Client with respect to the application of Canadian Public Sector Accounting Standards.
   - Participation in discussions with internal and external stakeholders and other parties as directed by the Client.

   During the course of this project, the Client will provide to PwC a written statement of all relevant facts and assumptions, and a description of the circumstances and the nature of any relevant disagreements with the Client's auditor. If an accounting opinion is to be provided, the Client's auditor will confirm to us in writing that the information the Client

has provided to PwC is complete and consistent with their knowledge of the facts and circumstances of the specific transaction.

If requested to by the Client during the course of the project, the Vendor shall provide an accounting opinion (the "accounting opinion"), prepared in accordance with Section 7600, *Reports on the application of accounting principles* of the CPA Canada Handbook – Assurance ("Section 7600"), regarding the appropriateness of the Province's accounting treatment and measurement of pension assets for jointly-sponsored pension plans on the consolidated financial statements of the Province prepared under Public Sector Accounting Standards.

Vendor may be required to participate in meetings with the Client and other stakeholders, and to support the Client with respect to the Vendor's accounting advice or accounting opinion (if applicable), including discussions with the Office of the Auditor General.

The Client agrees that any accounting advisory services are solely for the information and use of the Client. Subject to the obligations in Article 27 (Privacy) of the Master Agreement the Client agrees that any written work product of PwC will not be made available to any other persons or entities. An accounting opinion prepared in accordance with Section 7600 will, in compliance with Canadian GAAS, include restriction of use language identifying the parties to whom use is restricted and a statement that the report is not intended to be and should not b eused by anyone other than the specified parties or for any other purposes. However the Client may provide access to PwC's observations and an accounting opinion prepared under Section 7600 (if applicable) to the Client's independent auditors solely for their informational purposes. The Client agrees to seek and obtain the Vendor's written consent before including our accounting opinion (if applicable) or referring to the Vendor in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent. The Client agrees that prior to providing their independent auditors with any written work product of PwC, including an accounting opinion prepared under Section 7600, the Client will obtain agreement from the independent auditors that the Vendor's report shall not be referred to or included in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public, unless the independent auditors has first sought and obtained the Vendor's written consent.

~~The Client agrees that any accounting advisory services are solely for the information and use of the Client. Subject to the obligations in Article 27 (Privacy) of the Master Agreement the Client agrees that any written work product of PwC, other than an accounting opinion prepared in accordance with Section 7600, will not be made available to any other persons or entities. However the Client may provide access to PwC's observations to the Client's independent auditors solely for their informational purposes. The Client agrees to seek and obtain our written consent before including our accounting opinion (if applicable) or referring to us in any document disclosed to third parties, including disclosure of a summary of the accounting opinion or publication of the opinion in documentation that may be accessible to or intended for the public. The Vendor may, in their own discretion, waive the requirement to obtain written consent. The Vendor acknowledges that the Auditor General at its discretion may include the accounting opinion or refer to PwC LLP in documents disclosed to third parties, or may require the Province to do so, and the vendor agrees that the client is not in breach of this statement of work should this occur.~~

Acknowledgements and agreements

The Client acknowledges and agrees to the following:

a. The performance of the accounting advisory services does not constitute an engagement to provide audit, compilation, review or attest services in accordance with professional standards issued by the Chartered Professional Accountants of Canada ("CPA Canada") and, therefore, PwC will not express an opinion or any other form of assurance with respect to the accounting advisory services.
b. The accounting advisory services and accounting opinion (if applicable) to be provided do not include the delivery of any verbal or written advice on the application of accounting principles to a hypothetical transaction.
c. This engagement cannot be relied on to disclose internal control deficiencies, errors or fraud, should they exist.
d. PwC has no responsibility for updating the accounting advisory services or accounting opinion or for performing any additional services, except as agreed to in writing with the Client.
e. The Client's purpose for engaging PwC to perform the accounting advisory services is to supplement management's own technical accounting resources in performing accounting analysis and to assist management in making its determination as to the application of accounting principles and not to obtain an opinion from PwC as to such application, unless an accounting opinion is requested by the Client.
f. The Client shall be solely responsible for, among other things: (a) making all management decisions and performing all management functions; (b) designating one or more individuals who possess suitable skill, knowledge and/or experience, preferably within senior management to oversee the accounting advisory services (c) evaluating the adequacy and results of the accounting advisory services; (d) accepting responsibility for the results of the accounting advisory services; and (e) establishing and maintaining internal controls, including, without limitation, monitoring ongoing activities.
g. All management decisions and final conclusions reached in connection with the accounting advisory services will be the responsibility of the Client. PwC will not perform any management functions, make management decisions, or perform in a capacity equivalent to that of an employee of the Client.
h. PwC has no responsibility related to the Client's accounting or disclosure conclusions, whether or not such conclusions of the Client are related to the accounting advisory services and PwC has no responsibility for any disagreements between the Client and its independent auditor related to the Client's accounting.
i. The Client will be solely responsible for all decisions regarding the accounting treatment of any item or transaction and acknowledges that the accounting advisory services do not include the recording of any amounts in the Client's books or records. All amounts derived from the performance of the accounting advisory services will be reviewed and approved by, and will be the responsibility of, the Client's management.
j. The nature, scope and design of the accounting advisory services and the accounting opinion are solely the responsibility of the Client. PwC will rely, without independent verification, on the facts, information and assumptions provided by the Client. PwC will make no representation nor provide any assurance with respect to the adequacy of the services for the Client's purposes. Furthermore, PwC has no responsibility to advise the Client of other procedures that might be performed.
k. The Client will be solely responsible for providing accurate and complete information requested by PwC. PwC has no responsibility for the accuracy or completeness of the information provided by or on behalf of the client.

l. PwC's accounting and technical assistance will be based on the existing public sector generally accepted accounting principles. Should those generally accepted accounting principles be amended, superseded or revised in any manner, PwC's advice might change. PwC has no responsibility to inform the Client of any changes in generally accepted accounting principles that may occur after the completion of the engagement or any other oral or written work product prepared hereunder that would impact PwC's advice on the appropriate application of generally accepted accounting principles or to update its recommendations or any other oral or written work produce to take any such changes into account.

m. This engagement does not create a relationship between PwC and any person or party other than the Client. This engagement is not intended for the express of implied benefit of any third party.

n. The Client will identify an appropriate individual to serve as the project manager, including overseeing the accounting advisory services.

7. *Ownership and Licences* - **Attachment D** of the Master Agreement forms a part of this Statement of Work.

8. *Communications and Reporting* - The structure of Vendor's working relationship with OPCD is vital to the success of their engagement. Vendor's main point of contact will be Lucy Durocher who is the engagement leader.

9. *Work Location* - All meetings will be within the Greater Toronto Area.

10. *Working Hours* – The Client's normal working hours are 7.25 hours per day, between 8:15 a.m. to 4:30 p.m. Monday to Friday inclusive. If required by the Client, the Vendor must provide Services outside of the normal working hours and/or on non-Business days. The Vendor will not be entitled to charge more than the Per Diem Rate.

11. *Administrative Services and Supplies* – All administrative services and supplies used by the Vendor to complete the Services will be provided to the Client at no additional charge.

12. *Charges On Per Diem Rate Basis*– The Vendor and the Client agree that Work performed under this Statement of Work will be charged on a Per Diem Rate basis. The Per Diem Rate will vary, based on the nature of the final deliverable, as follows:

Nature of final deliverable	Per Diem Rate	Service Category	Estimated hours	Per Diem Rate
Accounting Advisory	General Consultant, Level 2	Service Category 2	20-25	$390/hour
Accounting Opinion	General Consultant, Level 2	Service Category 2	30-35	$990/hour

13. *Billing and Payment Process* – The Vendor shall invoice the Client in accordance with the requirements of the Master Agreement. Billing statements should include all billing information as set out in the Master Agreement.

13. *Names and Roles of Vendor's Personnel:*

Individual's Legal Name	Individual's Role and Experience Level	Service Category	Per Diem Rate
Lucy Durocher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"
Martin Boucher	General Consultant, Level 2	Service Category 2	See "charges on a per diem rate basis"

Sean Cable (or alternative as agreed to by the Client)	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"
Michael Walke	Quality reviewer, Level 2	Service Category 2	See "charges on a per diem rate basis"

14. **Invoices** - Invoices for payment of any charges under this Statement of Work shall be sent to:

Client:	Treasury Board Secretariat, Office of the Provincial Controller Division
Branch:	Accounting Policy and Financial Reporting
Representative:	Nadine Petsche
Title:	Director, Accounting Policy and Financial Reporting
Phone number:	416-325-8027
Email:	Nadine.petsche@ontario.ca

15. *Knowledge Transfer:* The Vendor will work closely with the Client to ensure knowledge transfer to the Clients designated staff, and as necessary with the Auditor General.

16. *Destruction of Information* - The Vendor shall destroy all Confidential information contained on any media that was provided by the Client or at the direction of the Client, if requested to do so by the Client, except as required to be retained in accordance with professional standards requirements. The Client may choose to witness this destruction. The Vendor shall provide a certificate of destruction to the Client, if requested to do so by the Client.

17. *Client Representative and Receipt of Notices*

Client's address for receipt of notices:	**Treasury Board Secretariat**
Client Representative:	**Nadine Petsche**
Telephone number:	**416-325-8027**
E-mail:	**Nadine.petsche@ontario.ca**

18. *Vendor Representative and Receipt of Notices*

Vendor's address for receipt of notices:	**PricewaterhouseCoopers LLP, PwC Tower, 18 York Street, Suite 2600, Toronto ON M5J 0B2**
Vendor Representative:	**Lucy Durocher**
Telephone number:	**416-869-2311**
E-mail:	**Lucy.durocher@ca.pwc.com**
Backup Vendor Representative:	**Martin Boucher**
Telephone number:	**514-205-5415**
E-mail:	**Martin.boucher@ca.pwc.com**

IN WITNESS WHEREOF the parties hereto have executed this Statement of Work as of the date first above written.

Hi Nadine,

I have a couple of specific additional questions that I did not think needed to be asked to the broader group as they relate to specific parts of the information that you have sent me. I think these relate to Deloitte calculations. I thought I would start with you so you were in the loop as to my questions, but you may need to ask Deloitte to follow up on these - I think they are actuarial questions, rather than accounting questions, so I did not ask Matt Colley when I spoke to him earlier.

- In the binder, section 4, there was a document called "Deloitte responses to OAG follow up questions, which included a calculation supporting the OTTP expected future benefit calculations. It looks like it was originally prepared in Excel. For clarity this is the calculation that shows the adjusted benefit asset as $10.1, the perpetuity of employer service cost - accounting as $44.6 and the minimum employer funding requirement as $15.3

- For the minimum employer funding requirements, the table shows that it is 10 years of the estimated contributions under the plan that are discounted to support the $15.3M as minimum funding contributions. Why is 10 years used?
- The reference indicates that the amounts of estimated contributions are based on the funding valuation of "scheduled contributions" (Pages 15 and 16), My read of the agreement is that these scheduled contributions are based on the estimate of pensionable earnings x the appropriate rate (11.5%/13.1%) which is consistent with Schedule 1 of the plan, and are not based on minimum funding contributions that are required by the pension regulator to fund a deficit. Can this be confirmed.
- The contribution levels under Schedule 1 cannot exceed those that would be permitted under the Income Tax Act, which limited deductions for contributions that are made when a plan has a certain level of funding surplus. Have the Income tax limits been considered in projecting forward the estimated minimum funding contributions that are required under Schedule 1?

In essence I am assessing whether the minimum contributions make sense - there could be an argument that, under schedule 1, the employer contributions at the base level of 10.4%/12% would continue in perpetuity until schedule 1 is changed by the partners. This would obviously change the outcome of the expected future benefit calculation, and, in a worse case, could eliminate all the expected future benefit.

- I did have talk to Deloitte earlier to touch base with them. They have indicated that they have circulated a statement of facts to you and your group for comment. It would be helpful if I could see this, when you are ready to share it, to ensure that all facts that I think will be pertinent to our analysis are included so we are all working off the same fact pattern.
-

Regards,
Lucy

Lucy,
In relation to some of your Q's on the call.

Contribution rates between the employee and employers are always equal, with one exception of 2008, when the OTF made a portion of the employee contribution. See table:

https://www.otpp.com/documents/10179/20940/-/5e471c2b-23f1-44e6-b5c1-d22e3e50dbc3/How+Contribution+Rates+Have+Evolved.pdf

Note: the 1.1% was phased in over 3 years

Year	Up to CPP limit	Above CPP limit	Increase*
2011	10.4%	12.0%	N/A
2012	10.8%	12.4%	0.4%
2013	11.15%	12.75%	0.35%
2014	11.5%	13.1%	0.35%
	Total increase		1.1%

* As a percentage of salary

Hi Nadine,

I will send through some comments/questions later today.

I am available this afternoon (except for a meeting from 3-4) and would be happy to discuss timing and next steps.

Christina and I can be back at Queens Park tomorrow. If you are at the office tomorrow, we could meet in person then.

Regards,

Shayan

Hi Alicia,

I will send you some times that work for our team. I have a few questions for you:

Are there other items that we'll discuss aside from the valuation for LTD's? If not, then the discussion will probably be more actuarial in nature and it may make more sense for myself or Uros to be more involved from the EY side.

Did the school boards reach out to their actuaries/consultants to get input from them? Was EDU in agreement with the view we shared?

Thanks,

Shayan

Hi Shayan/Christina,

Ministry of Education (School Boards, ELHT related) would like to schedule a call with the school board auditors (Deloitte and KPMG in this case) to have a further discussion on the liability for employees on LTD.

EDU would like your counterpart from the accounting side to join the call and lead the discussion with the school boards auditors.

Please let me know whether you can reach out to your colleagues and let me know a time that will work for them.

Thanks,

Alicia

Hi Uros,

The Frost Complex at Queens Park is currently under a lockdown until the release of the Spring budget. We have been asked to work from the EY office until after the release of the Spring budget.

Christina and I are back at the EY office. We will continue to assist OPCD from here and communicate with the OPCD team via phone/e-mail for now.

Subject: NPP comments on draft position paper

Hi Lucy.
Thanks again for your efforts to create the draft paper for review this weekend. You'll find my suggested edits and comments attached. I also shared your original draft with Cindy, but I'm not sure of the status of her review. As we await her comments, I thought it would be best to share my feedback with you directly, and to cc her on my note so that she might add any additional comments to this version if she has not already started her review.
You will see that there is one section in particular, related to the minimum contribution period that I think would benefit from some review and edit. As this is the Province's position paper, I think we can convey a stronger message that downplays any suggestion that there are mandatory minimum payments required into perpetuity.
Thanks again.
Nadine
p.s. the second attachment reflects my edits in your original track changes version, and the first attachment reflects them against your clean version. Draft Pension Asset Position Paper Oct 22 np to ld with responses np2.pdf

Position paper for Ontario Teachers' Pension Plan

Preamble

This document addresses the accounting for pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.

Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP.

As described in PSAS, a pension asset arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

The Province's position is that the asset balance (or plan surplus for accounting purposes) in OTPP and OPSEUPP are an asset to the province and it is suitable to reflect them in the financial results.

The OAG disagrees with this position. The OAG has indicated that because the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and in the absence of that right, because the Province does not have an agreement in place with the Ontario Teachers' Federation (OTF) with respect to how the surplus would be utilized such that it would provide a benefit to the Province, a pension asset in the Public Accounts is not appropriate.

Ontario had followed the same pension accounting treatment for all of the past 14 years. This had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals. There has been no change to the relevant PSAS (i.e. RETIREMENT BENEFIT, Section PS 3250) over the past 14 years.

A regulation was made to allow the public service to sign-off on the impact of the OAG's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province filed a time-limited regulation, which legislates the accounting for pension assets of its two jointly-sponsored

pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's accounting, does not reflect the Province's interpretation of pension accounting under the PSAS.

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to write off the pension assets. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt.

What is being asked of the Expert Advisory Panel

The Expert Advisory Panel is being asked to review and deliver advice and recommendations to the government as to the application of PSAS to Ontario's pension assets. The future accounting by the Government of its pension assets will be guided by the report of the Expert Advisory Panel.

The Expert Advisory Panel 's advice and recommendations to the government will address:

- The requirement regarding control (or shared control) with respect to recognizing a pension asset for a defined benefit plan, as it relates to the pension plans reported by the Province of Ontario, including OTPP, OPSEUPP, HOOPP, and CAAT.
- Appropriate valuation techniques to measure a pension asset that take into consideration future decision making authority by plan sponsors.
- Recommendations to the Employment Benefits Task Force of the Public Sector Accounting Board (PSAB) regarding issues that should be considered in their review of the retirement and post-employment benefits standards.

Background

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1.

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
1. It provides defined benefits.
2. The defined benefits are contributory benefits.

DRAFT

Position paper for Ontario Teachers' Pension Plan

The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the Ontario Teachers' Federation represented by its Executive (the ”OTF") (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. The OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for the OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners Agreement (FMP);
f) The Ontario Teachers' Pension Plan; and
g) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

3. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
4. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to the OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5] The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Currently, the Sponsors are also required to mutually agree upon how any plan deficits are to be addressed. [8] While not binding upon the Sponsors, the FMP indicates that deficits may be addressed through increases to the contribution rates, lowering the amount of indexation and/or other decreases in benefits.

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the FMP requires the Sponsors to negotiate and agree upon decisions relating to surplus utilization. Accordingly, the Sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

DRAFT

[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).
[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at: https://www.otpp.com/documents/101791209401-l5e47lc2b-23f1-44e6-b5cld22e3e50dbc3lHow+ Contribution+Rates*HaverEvolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20lo versus l0.4yo/l2Vo, respectively). It ~~is~~is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.
[8] See, for example, Section 3.09 and 3.11 of the FMP.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the Sponsors are included in appendix E. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, under the FMP the Sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the Sponsors to agree upon the manner in which surplus is to be utilized, neither Sponsor has a legally enforceable right to unilaterally utilize surplus in the OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What

the Province does have, however, is a right to negotiate with the OTF the use of funding surpluses that may arise under the plan.

4. When negotiations occur as laid out in the Partners' Agreement. The Partner's Agreement requires that any actuarial funding valuation submitted to the pension regulators must be "actuarially balanced" (Section 57 of the Partners' Agreement). This must occur at least once every three years, but can occur every year if the partners agree. If a preliminary funding valuation shows a funding surplus or deficit then the joint sponsors must negotiate how this surplus or deficit is resolved prior to filing the funding valuation.

Commented [NP1]: Last part not entirely clear

LD response – suggested changes. Npp - thx

Commented [NP2]: Should the relevant context be discussed…no mandatory minimum contributions (in perpetuity)

LD response – This is background information so I had kept it relatively facts based, rather than interpretive to the standard, which is included later in the paper. More of the interpretation could be brought forward if management feel that it helps the paper. Npp – ok.

Accounting for OTPP by the Province

Since fiscal year 2001-2002, the Province has recorded a pension asset for OTPP on the Statement of Financial Position. A pension asset has arisen because the government's share (50%) of the total contributions to OTPP plus the actual investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense. The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

With regards to any comparisons between asset amounts reported in the Province's financial statements verses the OTPP's financial statements or funding reports, it is important to acknowledge the different objectives of funding and accounting for a pension plan which are also explicitly addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*
>
> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit*

Commented [NP3]: Note: An implicit assumption exists that at the time that the new pension standard was implemented, the Controller's office and the OAG would have reviewed the appropriateness of reflecting an asset based on the constating agreements which have not substantially changed over time. Similarly, the requirement to perform an asset ceiling test would have presumably been considered as part of the initial discussions when implementing the standard. At no time prior to the 2015/16 Public Accounts audit did the OAG raise any concerns regarding the appropriateness of the interpretation of PSAB standards in relation to the jointly sponsored plans, nor the lack of asset ceiling tests. That said, OPCD does acknowledge that an asset ceiling test to validate if the assets are impaired, is prudent and in accordance with PSAB. The results of the test conducted as part of the 2015/16 Public Accounts concluded that no impairment existed and therefore no valuation adjustment was required.

In addition to raising issues with regards to the interpretation and application of PSAB standards to the joint benefit plans, the AG has referenced comparative surplus/deficit results reported by OTPP both for financial reporting and funding purposes.

LD response – Noted – I see the additional paragraph added in this section to reflect the above points.

DRAFT

expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.

Paragraph PS 3250.051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: "Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…"

OTPP's most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website. The Province's relative portion of this surplus would be $6.6 billion. The OTPP's public financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015, for which the Province's portion would be a deficit of $900 million. The following background helps to clarify the reasons for these different results. OTPP's financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook ("Part IV"), which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the net surplus or deficit for funding purposes. Accounting for employee future benefits requires the use of assumptions and methodologies to calculate both the obligation incurred to date and the value of the assets already set aside to meet those obligations. Accounting frameworks differ in standards that must be applied in determining appropriate assumptions and methodologies. Further, the assumptions and methodologies used in developing a "funding valuation" on a going concern basis may also differ from those required by accounting standards. These differences result in a number of different valuations for the same plan, depending on the purpose of the valuation and can be affected by certain choices made between acceptable options within each framework. A summary of the main differences between the methodologies used to calculate a going concern funding valuation, OTPP's accounting valuation and the Province's accounting valuation is shown in Appendix H.

Specifically, the discount rate has a significant impact on the overall position of the plan. A lower discount rate results in a higher liability and a higher discount rate results in a lower liability, all else being equal. Put another way, a higher estimate of the time-value of money makes the promises made today that will be paid out in the future cheaper. Both the PSAS accepted discount rate based on the expected asset return and the IFRS required discount rate of corporate/government bonds are "best estimate" rates. They must both be based on management's best estimate of the applicable discount rate. In both cases the estimates must be supportable. The difference results not from one being more "right" or "wrong" relative to the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.

The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds. Typically the funding discount rate falls between

Commented [NP4]: In fact, experience on OTPP demonstrates that returns have on average continued to exceed management's long term estimates reflected in the discount rate.

Wonder if it would be worthwhile to include the historical results for background. (attached summary of performance to response email)

LD response – Continued experience of returns exceeding the discount rate would indicate that the expected asset returns (and therefore the discount rate) are not actually high enough. These increased returns would come through as actuarial gains, eventually amortized to the income statement. Perhaps I am missing what the point would be of including the historical results? How does it help the arguments?

Npp – comment is with reference to the AG's suggestion that the discount rate used by the Province should actually be lower (match OTPP's used for f/s purposes)…the discount rate used by the province as management's best estimate of return might be argued to be conservative when compared to actual return experience. Not sure if there might be a relevant place to include this observation or not.

the bond discount rate and the expected asset return, but it differs in that it does not purport to be the "best estimate" of the discount rate, but is designed to indicate the contributions that are required to fund the promised benefits, with an additional conservative margin for adverse deviations. Note that over the long term the difference between funding valuations and accounting valuations would diminish as the impact of the discount rate unwinds and the asset valuation methods converge.

In practice, the discount rates used in the financial statements of government sponsored and joint defined benefit pension plans prepared under Part IV of the CPA Canada Handbook (Section 4600) use diverse methodologies. For example, in Alberta 7 plans prepare their financial statements under Part IV with reference to IFRS (same framework as OTPP). Of these none use a government bond discount rate and all use a discount rate calculated with some reference to a rate of return on invested assets, which may include factors for expenses, diversification and rebalancing. The analysis of a number of government sponsored plans is included as Appendix [**G**]. The analysis demonstrates that a significant number of government sponsored plans use a discount rate aligned to an asset investment return rather than a bond discount rate. OTPP is in the minority of plans that choose to use the rate required by IFRS, resulting in a lower discount rate and higher liability.

The above analysis discusses the impact of different discount rates on the net surplus/deficit reported on OTPP's financial statements, OTPP funding reports and the Province's financial statements. The fact that OTPP reports a deficit on its financial statements, or that the net surplus reported by OTPP for funding purposes is lower than the surplus reported on the government's financial statements under PSAB standards is of no consequence or relevance to this analysis.

To further clarify, that that that there is a deficit reported in the OTPP financial statements while the Province of Ontario calculates a surplus under PSAS requirements does not mean that there is no accounting surplus and therefore no reportable asset for the Province. In fact, if the OTPP would have accepted a rate more consistent with its counterparts in other jurisdictions (see Appendix G) that would also be acceptable under the Part IV framework as an accounting policy choice (e.g. a discount rate based on an asset return which would be closer to that used by the Province), it would eliminate much of the existing differences between the reported net surplus/deficit amounts between the OTPP statements and the Province's share of OTPP reported for accounting purposes in the Public Accounts.

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. Unqualified audit reports have been received for each of the years from the OAG on the Public Accounts.

RETIREMENT BENEFIT, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. The Province has followed this standard over the prior 14 years. Over this period of time, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the prior 14 years is reflected in Appendix F.

Although OPCD has not been able to substantiate decisions made at the time that the Province implemented PS 3250 in 2001, it is assumed that the Controller's Office and the Office of the Auditor General would have engaged in more specific and detailed discussions related to the interpretation and application of the standard with regards to the joint sponsored pension plan at the time. The presumed outcome of those discussions would have supported the Province's share of the surplus being reported on the Province's books based on the shared control over the plan as evidence by the constating documents. It is uncertain whether the need to perform asset ceiling tests on a regular, on-going basis was discussed at the time and there is no evidence of any having been performed previously. The pension accounting adopted by the Province for OTPP since 2001 had been implicitly accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

History regarding the PSA standards

As mentioned, the financial statements for the Province have been prepared over the prior 14 years in accordance with the PSA Handbook, reflecting decisions made by the Provincial Controller at the time that PS 3250 was implemented and which were accepted by the Office of the Auditor since that time.

Completeness of PS 3250 in assessing appropriate accounting for pension assets

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES, Section PS 1150 prescribes that, in developing and applying accounting policies, all primary sources of GAAP should be applied. Primary sources of GAAP are Sections PS 1200-PS 3510, Public Sector Guidelines and appendices and illustrative material to those pronouncements. Only when there are no primary sources of GAAP that relate to the transactions or events under consideration, or more specific guidance is needed, does an entity consider other primary sources of GAAP dealing with similar issues and also the concepts described in FINANCIAL STATEMENT CONCEPTS, Section PS 1000. Section PS 1000 is not, however, a "primary source of GAAP" under the PSA Handbook.

The primary sources of GAAP specific to the accounting for pension assets is RETIREMENT BENEFITS, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, Section PS 3250 which was based on Accounting Statement No. 5).

Other primary sources of GAAP that deal with similar issues might also be considered where additional interpretation or guidance may be required. For the issues dealt with in this paper - recognition and measurement of a joint defined benefit plan - this could include standards that relate to joint control, as OTPP is a joint defined benefit plan, standards that relate to the definition of an asset and standards that relate to measurement uncertainty:

- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015, effective from April 1, 2017)
- MEASUREMENT UNCERTAINTY, Section PS 2130 (issued in April 2005)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception of ASSETS, PS 3210 which is more recent and will be effective in for periods beginning on or after April 1, 2017. Section PS 3210 provides additional guidance on the various components of the existing asset definition found in Section PS 1000; it does not change the definition.

Accounting Analysis

Question 1 – Recognition of a pension asset

The analysis below addresses whether the Province's share of the pension surplus in OTPP, calculated in accordance with PSA standards under PS 3250, represents a reportable asset to the Province of Ontario in the Public Accounts.

Standards in the PSA Handbook

The focus of the following analysis is on the accounting requirements in RETIREMENT BENEFIT, Section PS 3250 as this standard is a primary source of GAAP which specifically addresses the accounting for pension assets. The following highlights some key concepts and guidance contained in this standard.

RETIREMENT BENEFIT, Section PS 3250 – Purpose and Scope

The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250, paragraph .003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

RETIREMENT BENEFIT, Section PS 3250 – Types of pension plans

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*
>
> *(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;*
>
> *(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;*
>
> *(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and*
>
> *(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.*
>
> *The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.*

Additional guidance on identifying Joint Defined Benefit Plans (JDBPs) is in PS 3250 paragraphs .79 to .80 which similarly highlight the importance of both shared control and shared risks and rewards in a JDBP:

> *.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.*

DRAFT

> *.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.*

A JDBP is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. The OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees (addressed in paragraph 8 of the Partners' Agreement for example);

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example).

There is no uncertainty regarding the joint control of OTPP shared by the Province of Ontario and the Ontario Teachers Federation. The TPA, the Partners' Agreement and the plan text collectively set out this shared control and that the Province of Ontario has an equitable sharing of the risks and rewards (surpluses and deficits) of the plan based on the definition of a joint defined benefit plan.

As noted above, the classification of OTPP as a JDBP by the Office of the Provincial Controller has been consistent since 2001 and had been consistently and without question accepted by the Office of the Auditor General prior to the 2015/16 Public Accounts.

RETIREMENT BENEFIT, Section PS 3250 – Accounting for a JDBP

RETIREMENT BENEFITS, Section PS 3250 paragraphs .081 to .082 provide guidance on the accounting for a JDBP in the financial statements of the government sponsor. As OTPP meets the definition of a JDBP for the reasons noted above, the relevant guidance for the Province for purposes of reporting retirement benefits in the Public Accounts includes:

> *.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]*
>
> *.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.*

Section PS 3250.81 clearly states that "The government should account for its portion of the plan in accordance with the standards for defined benefit plans". It is clear from this that only the government's portion of the plan is included in the government's financial statements consistent with the requirements of Section PS 3250 (recognition) and the measurement of that portion is based on the requirements of Section PS 3250 (measurement). It is also then clear that the requirements of the standard for recognition and measurement, including the Limit of the Carrying Amount of an Accrued Benefit Asset guidance, are designed to be applied to a joint control situation and not only to situations where there is unilateral control. If it was intended that no pension asset could be recognized because the asset was subject to joint control and not unilateral control paragraph .081 would have made this clear. This paper discusses the two elements of recognition and measurement separately.

Commented [NP5]: Should we point out that the standard does not require unilateral control?

LD response – have added in a sentence to reflect this. Npp - thx

The balance sheet recognition guidance for retirement benefits is stated in Section PS 3250.016 to .017:

> *.016 The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date. [SEPT. 2001]*
>
> *.017 The components of the retirement benefit liability are:*
>
> > *(a) accrued benefit obligation including the effects of plan amendments, settlements and curtailments;*
> >
> > *(b) plan assets, if any; and*
> >
> > *(c) unamortized actuarial gains and losses.*

As the OTPP is a funded plan there are plan assets that are recognized as part of the retirement benefit liability. When plan assets and the impact of unamortized actuarial gains and losses exceed the accrued benefit obligation then there is an "Accrued benefit asset" (ABA). An ABA is defined in Section PS 3250 as follows:

> GLOSSARY - *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

Accordingly, the portion of the government's plan to be recognized includes their share of the accrued benefit obligation and also their share of the plan assets. In the case of the Province's portion of OTPP there is no uncertainty regarding the *existence* of an ABA for the government's portion of the plan, based on the best estimate assumptions used in measuring the accrued benefit obligation and plan assets, measured in accordance with Section PS 3250 guidance for these items. As noted above an ABA is defined as the government's sum of the accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance). For a jointly sponsored plan this is the government's accumulated cash contributions less the sum of the government's share of the current and prior years' benefit expenses that are attributable to the government under the joint defined benefit plan. The Province's portion of OTPP resulted in an ABA of $10.1 billion as at March 31, 2016. There is no uncertainty regarding the occurrence of the cash contributions made (including interest earned thereon) measured in accordance with Section PS 3250 and the existence of the government's obligation. As Paragraph 3250.80 *requires* a government to account for its portion of the plan in accordance with the standards for defined benefit plans, this would include the recognition of any asset that meets the definition of an ABA under the standard.

Further, Section PS 3250 paragraph 3250.50 refers to the presentation of the ABA; this amount is presented in the financial statements, net of any valuation allowance. This indicates that an ABA should be recognized in the financial statements, but measured in reference to the limit on the carrying amount of the asset - essentially a measurement requirement rather than a recognition requirement, as an ABA could be measured at anything from $nil to its full amount. Note that the *measurement* of any net asset is subject to guidance in Section PS 3250 paragraphs .50-.59 and is discussed later in this paper.

To recognize only their share of the liability and not their share of the plan assets, or to recognize only a net liability (accrued benefit obligation exceeds plan assets) but never a net asset (when plan assets exceeds the accrued benefit obligation, subject to the valuation allowance guidance discussed in the Measurement section below), would indicate that the ~~government~~ Province does not share equitably in the risks and rewards of the ~~plan~~ OTPP because they bear only the risk of increased liabilities without being able to bear any ~~the~~ rewards of investment returns on the plan assets and under this interpretation the plan would not therefore be a joint defined benefit plan.

Commented [NP6]: Might be a good place to make reference to relevance of specific terms and conditions of the OTPP arrangement, and lack of comparability with plans in other jurisdictions which may have different terms & conditions.

LD response – I wasn't sure where to put the comparison to other province's section. I am open to it being here or where it is (at the end). If you think it flows better here, then it would be a good place. Npp - some suggested wording edits.

Concept of Shared Control and Asset Recognition

Included in the definition of a JDBP is the concept of shared control. Points (c) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of Shared Control resulting in a recognition of an asset could on the surface appear to conflict with the definition of an asset under FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210, as part of the definition of an asset under PS 1000 would suggest that the government must control the economic resource and access to the future economic benefits. Since joint control does not equate to control, there is a need to consider whether the recognition of any asset under PS 3250 is appropriate where there is only shared control.

The Province's position is that PSAS does not preclude asset recognition for assets under joint control and specifically for plan assets of joint defined benefit plans for the following reasons:

- As discussed above GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity. Section PS 3250 is a primary source of GAAP for dealing specifically with joint defined benefit plans and, as noted above, requires the government to account for their portion of the plan – both the accrued benefit obligation and plan assets in accordance with Section PS 3250. As such, reference to Section PS 3250 is sufficient to indicate that the recognition criteria are met for joint defined benefit plan assets, no further source of PSAS guidance need be considered.

- Similarly, if other primary sources of GAAP are considered then it is relevant to consider GOVERNMENT PARTNERSHIPS, Section PS 3060 which also includes the concept of shared control. Under Section PS 3060, joint control is sufficient for asset recognition.

- The concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. On the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that PSAB did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

Commented [NP7]: Necessary? Perhaps move up to earlier discussion of PS 1000?

LD response – I see your point. I had seen this as being more of a "conclusion" on the share control point as to why it was not inconsistent with the framework, but I think it also works as a bullet point here to emphasize that reference to 3210 and 1000 is difficult to a shared control concept.

Npp – ok.

- The Province's reporting of a pension asset for the JDBP is therefore consistent with these primary sources of GAAP, subject to measurement guidance including impairment considerations.

The similarities between the definitions of a JDBP and a government partnership under PSAS are demonstrated in Appendix B to this paper, and further support PS 3060 as being a relevant primary source of GAAP dealing with similar circumstances, should it be considered necessary to go outside of the requirements of Section PS 3250 to look for further clarification and guidance on recognition.

Under Section PS 3060 a critical condition for a Government partnership is shared control. Section PS 3060 explicitly acknowledges that under shared control "none of the partners is in a position to exercise unilateral control over the government partnership" (PS 3060.20), yet the accounting model required by Section PS 3060 for non- GBPs[9] is that of proportionate consolidation which is the picking up of a pro rata share of assets, liabilities, revenues and expenses of the partnership. Joint defined benefit plans are excluded from the scope of Section PS 3060 on the basis that control is shared with employees rather than with a party outside of the reporting entity (3060.06 footnote 3). This reason indicates that such plans are excluded because of a closer relationship between the government and the other party than normally exists for government partnerships. Even when an independent third party shares control, Section PS 3060 still requires the recognition of a share in an asset subject to joint control, indicating that the PSAS framework does not require unilateral control in order to support asset recognition when there is joint control. It would not be appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3060 for proportionate consolidation, and similarly it is not appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3250 to account for the government's portion of a joint defined benefit plan.

Conclusion on recognition

Therefore the Province has concluded that PSAS permits the conceptual recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets must be subject to unilateral control. The Province's share of OTPP's pension surplus meets the definition of an Accrued Benefit Asset under Section PS 3250. The measurement of that accrued benefit asset is determined by reference to the guidance in PS 3250 regarding the Limit on the Carrying Amount of an Accrued Benefit Asset, which is discussed in Question 2 of this position paper.

[9] Government business partnerships (GBPs) are accounted for under the modified equity method rather than proportionate consolidation.

Question 2 – Measurement of a pension asset

For an asset to be recognized it must be reliably measureable. Section PS paragraphs 3250.050 to .059 address how to measure a pension asset. "When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit." Paragraphs .052 to .059 go on to explain what the standard means by expected future benefit and how a government may benefit from the ABA. Section PS 3250.50-.59 are included here for completeness and ease of reference:

> ***Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)***
>
> *.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]*
>
> *.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.*
>
> *.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.*
>
> *.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).*
>
> *.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.*
>
> *.055 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated*

DRAFT

amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Note that for purposes of Section PS 3250.053 the Province has determined that no pension valuation adjustment is necessary and as such that the accrued benefit asset equals the adjustment benefit asset (due to unamortized actuarial gains exceeding unamortized actuarial losses).

DRAFT

Paragraph .052 states that a government may benefit from an ABA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions. It is an explanatory paragraph on how a government may benefit from an accrued benefit asset and why a valuation allowance may be needed, rather than detailing the test to be applied. Part of this justification is to note that that an ABA may be impaired when "the government is not entitled to benefit from [the ABA] fully". Examples of when a government may not be entitled to benefit from the ABA fully are given, such as a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

The Province's expected future benefits to the surplus is intended to be through reduced future contributions, and not through withdrawal of pension surplus. As such, PS 3250.059 is not considered relevant to the analysis when performing the asset ceiling test. When considering the ability to realize expected future benefits, the Province's legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability which is not explicitly required by the standard to support recognition and measurement of JDBP pension assets. Specifically, the amount of pension asset that gets recorded needs to take into account considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a pension asset in the Public Accounts.

It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to joint control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays or withdraw surplus. Under the Plan and Partners' Agreement, if funding surpluses occur the partners are required to negotiate the use of the funding surplus (at least once every three years) and the Province is entitled to negotiate a reduction in contributions in respect of its share of the surplus. Under the Partners' Agreement any funding surplus must be dealt with so that the funding valuation becomes actuarially balanced. *In other words when there is a funding surplus over a certain range the "status quo" cannot be maintained, the surplus must be reduced by a combination of reductions in contributions, increases in benefits or withdrawals of surplus*. While the Province might choose to accept an increase in member benefits rather than to reduce funding, any such decision is at the Province's discretion since the OTF cannot force the Province to increase benefits instead of reducing contributions. In other words it is at the Province's discretion whether to address the actuarial balancing requirements by allowing its portion of the surplus to be utilized through increased benefits. Therefore, the Province is entitled to negotiate their share of the JDBP and take contribution holidays in future negotiations and can effectively use their power in negotiations to benefit from the ABA. Note that while the negotiations are based on funding surplus amounts rather than accounting surplus amounts any differences would be captured in the mechanics of the calculation of the expected future benefit rather than precluding an ability to benefit from any of

the accounting surplus. ~~, and the measurement of the pension asset reported on the Province's books would not be impacted.~~

Further, paragraph PS 3250.055 indicates "The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Many generally accepted accounting frameworks use "expected" in a number of principles and is typically used in the probabilistic sense – something is expected when it is probable at some level, it does not equate to certainty. ~~nor does it require legal enforceability to be in place at year end.~~ The Province has an expectation that they will benefit fully from the ABA by exercising their current rights under the plan arrangements to negotiate the use of current and future surpluses in the form of contribution holidays. This position is supported by the review of the constating documents and past history of negotiations that indicate:

1. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) to exceed the amount of contributions paid by or on behalf of active members in respect of credited service for the year (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.
2. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix G for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the Sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.
3. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right), and the requirement to negotiate and agree (or in the absence of agreement, arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.
4. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan. Under the plan contributions are generally borne equally by the Province and the employees. Employees benefit economically from both an increase in benefits and from a reduction of contributions. The Province benefits economically directly from a reduction in contributions. This makes it reasonable that at least some contribution reductions would be agreed to by the joint sponsors as a highly unequal weighting towards increases in benefits would not balance the interests of taxpayers and

Commented [NP8]: Lucy – please check

LD response – I'm not sure what you mean. Contribution holidays under the plan are predicated on there being funding surpluses – without a funding surplus it seems unlikely that the Province would be able to negotiate a reduction in contributions. Therefore I could not say whether the measurement of the pension asset reported on the Province's books would not be impacted because it really depends on how you are calculating your minimum contributions and what assumptions you are using. Npp - removed

Commented [NP9]: Lucy – check please

LD response – I've always thought of legal enforceability as relating more to the control or past transaction elements of the definition of an asset rather than the "expected future benefits" part, so while I can't say the additional comment is wrong it seems a bit incongruous to me as the two concepts just don't seem to belong together in my view. Npp - removed

Commented [NP10]: Also supported by positive working history of negotiations on use of surplus in the past, and the 'zones' which also refer to future benefits of reduced contributions on a temporary or permanent basis

LD response – added that both documents and past history support the position.
Npp – ok.

DRAFT

therefore may be unlikely to be a reasonable outcome of "good faith" negotiations between the Province and the OTF.

This is further supported by the historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed in respect of conditional indexing, a decrease in benefits by the employees were offset by an increase in payments by the Province. Similarly as the sponsors agreed to restore indexation, this increase in benefits resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.98 for the 2015 change, and $1.68 for the 2014 change). This demonstrates that historically and over the long term an equitable sharing of the deficits and surpluses has resulted in changes in the Province's contributions, even when there are decreases or increases to benefits for employees.

5. In the event that the Sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, the matter can be submitted to an arbitration board of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

   As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Commented [NP11]: Thought that mediation was the first step, then arbitration?

LD response – this was Jim's wording, so he may be better to ask regarding what he intended to convey.

Npp – Jim is not at all familiar with the agreements. Do you think it would be useful to insert reference to the mediation aspects as an interim measure before arbitration? We could get legal to review wording and edit.

Further to the discussion in Section PS 3250.052 regarding entitlement to benefits, PS 3250.059 provides further guidance where such benefits are expected to be realized through an entitlement to withdraw surplus. "A key factor in determining a government's expected future benefit from a defined

DRAFT

benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal." PS 3250.59 is clear that expected future benefit available from surplus withdrawal can only be asserted where the government has a current legally enforceable right to withdraw assets from the Plan. Section PS 3250.59 introduces the concept of a legally enforceable right, however it does so solely in the context of a government's future withdrawal of a Plan surplus, and not in the context of a government's reduction of future contributions. Had PSAB intended legal enforceability to be the test, they would have included that notion throughout the guidance (for example in paragraph .052), instead of only raising it in the context of a withdrawal of surplus.

The Province would not envision realizing any expected benefits through a withdrawal of surplus, but rather through contribution reductions or holidays. As such, from the Province's perspective, PS 3250.059 which deals with the situation of surplus withdrawals is not considered pertinent to the pension asset recognition or measurement analysis.

Based on the above analysis, the Province believes that the uncertainties around how and when to utilize a surplus in the OTPP do not result in an inability or lack of entitlement to utilize the surplus in accordance with Section PS 3250.52.

Calculating the limit on the carrying amount of an accrued benefit asset

PS 3250.53 to .58 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in PS3250.055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where actual realization of the benefit would be reflected in a reduction in future contributions. A valuation allowance is recorded against the Pension Asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test under PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as that expected future benefit is defined in paragraph .56.

Therefore in accordance with PS 3250.56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

DRAFT

Each of these is discussed separately.

Through withdrawal of the surplus (Section PS 3250.056 (b)

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, paragraph 3250.059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

The TPA for OTPP does not provide for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution, the Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

DRAFT

The Province's position is that there is no amount of expected future benefit included in respect of withdrawable plan surplus as government does not have any intention to realize future benefits through surplus withdrawals..

Through reducing future contributions (Section PS 3250.056 (a))

PS 3250.56(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per PS 3250.81 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the Pension Asset value to be recorded in the accounts. For example, if the Pension Asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the Pension Asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. It is therefore relatively straightforward and is typically calculated based on the Province's share of the current service cost reported in the actuarial valuation taken into perpetuity unless there is evidence to indicate the workforce will significant diminish over time (for example a closed plan).

The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in the determination of future minimum contributions required to be made by the government regardless of any surplus. Note that consistent with the calculation of the expected future accruals for service no amounts are considered for employee contributions as these relate to the OTF's portion of the plan. There is no further guidance in S 3250 as to how this calculation should be performed and what restrictions or parameters should be factored into this calculation.

Commented [NP12]: Include any reference to above statement that only the gov's ½ of the obligation and contributions factor into the calc?

LD response – Stated in the first paragraph of this section, but have added a sentence again to reinforce.

Npp-thx.

Determining the number of years of contributions to include should involve an assessment of the facts and circumstances of the plan and should consider uncertainty. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the contractual agreements between the Sponsors that provide for the sharing of risks

and benefits and specifically in respect of assessing the minimum contributions required by the plan agreements the following:

- One view of minimum contributions might be that the agreed upon level of contributions are the minimum contributions until they are altered in the plan text. As this can only happen with agreement from OTF it cannot be assumed that changes will be made and therefore that the contribution formula as stated in the current agreements will continue in perpetuity. This view provides the most conservative view of minimum payments. However as the current contribution amounts are greater than the government's share of the annual current service cost for the existing workforce this indicates that continued contributions at this rate will result in ever increasing surpluses. Extrapolating the surpluses, at a certain point other requirements that are currently incorporated into the plan text, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan will apply to reduce the contributions. The effect of these caps on contributions would have to be estimated but cannot be ignored as they form part of the current contribution arrangements. Modelling could be performed to develop expectations as to when these CRA limited could be expected to be reached assuming no changes in the contribution levels. As is the most conservative view (highest minimum contributions) the impact of this has been considered, as discussed below.
- An alternative view of the minimum contributions required by the plan is that there is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'. On this basis it could be argued that any agreed upon contribution levels are mandatory for only a three year period, after which the contributions must be renegotiated to stay the same, increase or decrease, such that the stated contribution level in the plan text constitute minimum payments for only three years. It should be noted that the plan text requires an actuarially balanced funding valuation, so to the extent that a funding deficit currently existed a contribution holiday (contributions lower than the annual cost of the plan) could not be negotiated. However because there funding situation at the time of future negotiations is not known it could be argued that no amount is a fixed "minimum contribution" in this context, because all of the contribution amount is subject to future changes in funding and negotiation by the joint sponsors.
- Other views of what the minimum contributions are would fall between these two views, such as that the current funding level is set to ensure that there is no funding deficit over a 11 year period and after that changes in contributions would be negotiated. This view has been used in calculating the actuarial calculation of the asset ceiling as noted in the table below.
- Another consideration might be the specific framework within the Funding Management Plan for OTPP which contemplates specified funding zones and expectations ~~regarding possible~~regarding possible contribution reductions by the sponsors. Informed stochastic modelling would be necessary to estimate when the different funding zones will be reached and probability of contribution reductions may be increased.

Formatted: Not Highlight

Commented [NP13]: I don't think we agree with this. There is a requirement that they negotiate every 3 years…not likely that status quo would remain.

LD response – We could remove this, but I added it in because reference was made to the calculations of the Income Tax caps that kick in when you use this basis, so it seemed relevant to support why those calculations were being referred to. I thought the point of those calculations was to show that even if this view was taken there would still be recognition of a benefit. I think if you are going to refer to these calculations you need to acknowledge this possible interpretation, even while noting that this is not a realistic scenario.
Strategically it's a matter of whether acknowledging this view and then noting why an asset can still be supported is more effective than putting one strong argument for the position over minimum contributions. I think both are valid strategies – Management should decide which way they want to go.

Npp – thx. Agree that it should be included, but was just sensitive to the wording. Will await CV comments.

Commented [NP14]: Where there is a surplus, the parties are also mandated to negotiate. To avoid confusion for the Panel, suggest that this section should be restated.
If some element of this very conservative view is to be included, perhaps as the last item but then dismissed.

Commented [NP15]: When we say that the status quo would not remain, I think that the key point is that there would not be a mandated minimum amount that must be paid. The wording in this section will be very important and would benefit from rephrasing/repositioning. Key here is that we want to make a case for 'no perpetual' stream of minimum contributions.

LD response – good point, have added an extra sentence on this.
Npp – thx.

n

DRAFT

- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to use some of the funding surplus to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change, $1.98 for the 2015 change, and $1.68 for the 2014 change).

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (PS 2130.03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in PS 2130.13, "As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements."

Commented [NP16]: Consideration in gauging reasonability that the Province would ever expect to benefit from reduced contributions.

LD response – I am not sure what this comment means?

Npp – please ignore.

As part of the 2015/16 Public Accounts audit, the Office of the Provincial Controller engaged external experts to conduct asset ceiling tests to assess the requirement for a valuation allowance. The results of those reports are summarized here:

Plan	Asset recorded by Province (in billions)	Asset ceiling computed (in billions) and assumption re: years of contributions	Number of years contributions could be made without resulting in a valuation allowance
OTPP	$ 10.1	$29.3 (based on 11 years of contributions noted in the funding report as the period additional contributions are required)	33

The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (3250.56(a)). There is no guidance on the meaning of minimum contributions for purposes of this calculation in PS 3250.

Commented [NP17]: Moved this comment after the next section.

Under the Partners' Agreement, the parties are mandated to negotiate benefits and contributions every three years as a minimum and if agreement is not reached, it is reasonable to expect that a change in contributions might occur rather than the 'status quo' being retained.

For purposes of the OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

in addition to the above calculations, the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan should also be considered. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that no valuation allowance is required.

Commented [LD18]: This is the bit where it is assumed that contributions are unchanged and therefore minimum contributions are maintained to perpetuity.
This bit would have to be re-worked if the perpetual minimum contributions section was re-worked.

The determination of the ~~the~~ minimum contribution levels required as input to ~~the calculation~~the calculation ~~of the~~of the expected future benefit involves significant judgements, estimation and assumptions about future funding surplus levels. These judgements, estimates and ~~assumptions should~~assumptions should be made on a consistent basis with best estimates used in developing the accrued benefit obligations and plan asset amounts. Regardless of the need to apply judgements, estimates and assumptions for the calculation, this does ~~not imply~~not imply that no asset can be recognized or that it cannot be reliably measured. In fact, pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "~~expected future~~expected future benefit". From the Province's perspective, 'expected' does not equate to 'certainty'.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (3250.42) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (3250.41). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. 3250.57 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that

used to determine the accrued benefit obligation itself. The Province has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on Plan Assets, which is one of the acceptable references suggested on PS 3250.44.

The OAG and the Government differ regarding whether it needs to be "expected" that the Government will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in paragraph .059. The Government considers that it needs to be expected that future economic benefits are to be obtained as reflected in the definition of an asset in Section PS 1000 and as reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to use a plan surplus.

Other guidance in the PSA Handbook on measurement

Furthermore MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe would be a useful addition to the current year financial statements. PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by experience of similar transactions and, in some cases, reports from independent experts. Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.*
>
> *.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.*

We acknowledge that the estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans

Commented [NP19]: Insert reference to past history where actual returns have exceeded this rate?

LD response – see earlier comment.
Npp – if not helpful to insert, no need.

Commented [NP20]: Delete? Already addressed earlier in the paper

LD response – could do. I thought this was acting as a bit of a summary of the positions, but I agree it is repetitive and could be removed.

Npp – if summaries (as above) are to be included, then consistency is impt and ok with leaving.

Commented [NP21]: Addressed anywhere?

LD response – not sure what the concern is?
Npp – please ignore

involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is permissible under PSAB and consistent with rates followed by other senior Canadian governments. Historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets on the Province's books.

Commented [NP22]: Suggest moving some of this discussion earlier in the document – reference to Appendix G above identifies OTPP discount rate as an outlier.

LD response – do the results corroborate the discount rates or exceed the discount rates?

Sorry- forgot to include the attachment. Will include it with the next response for your review and consideration of relevance as a reference in the doc.

Impact of valuation allowance

The current AG's view challenges previous interpretations of the Provincial Controller and former Auditor Generals regarding the interpretation and application of PS 3250 to those JDBPs where the government is a joint sponsor. The impact of the OAG's view is that no pension accounting surplus could ever be recognized in the Province's Public Accounts for JDBPs until the joint sponsor agrees to a change in the plan text for the Province to provide for unilateral authority to access surplus or reduce future contributions to enters into an agreement by year-end enabling the government to take a contribution holiday. Any ABA would therefore be fully provided for through a valuation allowance, impacting each ~~year's statement~~year's statement of operations by the amount by which the asset would otherwise increase in value. These results are counterintuitive with pension expense being higher in years in ~~which funding~~which funding requirements are higher and assets are therefore increasing or when greater investments returns are recorded. In contrast, under the AG's view, the Province's annual surplus/deficit would ~~reflect a~~reflect a gain (income) in years when there are less than expected investment returns. **NTD – statements to be supplement by the visual aid requested by the Minister]**

Commented [NP23]: Consider referencing the appendix here and specific mention of the 2008 result which would have lowered the deficit by $3B.

LD response – Appendix D is referenced in the following paragraph. Have added a sentence here to highlight 2008.

For information purposes, refer to Appendix D for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting compared with following the Province's interpretation of the PSAS. Of particular note is the impact in 2008 when the deficit would have be lower by $3 billion in a year when pension asset values fell significantly because of the financial crisis.

Comparability of Ontario accounting for JDBPs to other Provinces

For your information, included in Appendix C is the legal opinion prepared by lawyers, Koskie Minsky, comparing access to the pension surplus of OTPP relative to JDBPs in British Columbia. The Province of British Columbia does not report a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the

DRAFT

independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

Insert New Brunswick?

Any info on SK or QC? (seem to recall mention of these at some point as well)

Conclusion on measurement

As discussed, there is significant professional judgement and ~~estimation in~~estimation in determining how to measure the valuation allowance under Section PS 3250, including the determination of the minimum contributions required by the current plan arrangements. It is the Province's position that the attributes of the joint defined benefit plan arrangements for the OTPP entitle the Province to access to its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surplus through reduced contributions.

The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of those models to date no valuation allowance appears to be required and the OTPP pension assets should continue to be recorded on the books of the Province.

Commented [NP24]: Can this be clarified? This likely refers to the 33 years noted in the above table. Can we tie it in to clarify.

LD response – This is a summary of the above arguments. I'm not sure what estimates management actually applied in coming up with the support for the valuation allowance (33 years vs 11 years and all the underlying projections), so I'm not sure how best to tie this in.

Npp Management's decision should be documented in this position paper. CV to advise.

DRAFT

Appendix A – Guidance in the PSA Handbook - FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210

Guidance in FINANCIAL STATEMENT CONCEPTS, Section PS 1000
.35 **Assets** are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained. .36 Assets have three essential characteristics: (a) they embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows; (b) the public sector entity can control the economic resource and access to the future economic benefits; and (c) the transaction or event giving rise to the public sector entity's control has already occurred. [Former paragraph PS 1000.36 retained in Archived Pronouncements.] .37 An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph. Thus, for example, an item does not qualify as an asset of a government if the item involves: (a) no future economic benefit; (b) future economic benefit, but the government cannot obtain it; or (c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred. (paragraph PS 1000.38 deleted) [Former paragraph PS 1000.38 retained in Archived Pronouncements.] .39 **Financial assets** are assets that could be used to discharge existing liabilities or finance future operations and are not for consumption in the normal course of operations. .40 A financial asset is any asset that is: (a) cash; (b) a realizable asset that is convertible to cash; (c) a contractual right to receive cash or another financial asset from another party; (d) a contractual right to exchange financial instruments with another party under conditions that are potentially favourable to the government; (e) an equity instrument of another entity; (f) an investment in a government business enterprise or government business partnership; (g) a financial claim on an outside organization or individual; or (h) an inventory or item for sale that meets the criteria in FINANCIAL STATEMENT PRESENTATION, paragraph PS 1201.055. [Former paragraph PS 1000.40 retained in Archived Pronouncements.] .41 Non-financial assets include tangible capital assets, and other assets such as prepaid expenses and

DRAFT

inventories of supplies.

.42 **Non-financial assets** are acquired, constructed or developed assets that do not normally provide resources to discharge existing liabilities, but instead:

(a) are normally employed to deliver government services;

(b) may be consumed in the normal course of operations; and

(c) are not for sale in the normal course of operations.

RECOGNITION

.52 Recognition is the process of including an item in the financial statements of an entity. Recognition consists of the addition of the amount involved into item totals on a financial statement together with a narrative description of the item (for example, receivables, user fees, grants) in a statement. Similar items may be grouped together in the financial statements for the purpose of presentation.

.53 Recognition means inclusion of an item within one or more individual statements and does not mean disclosure in the notes to the financial statements. Notes either provide further details about items recognized in the financial statements, or provide information about items that do not meet the criteria for recognition and thus are not recognized in the financial statements.

.54 The recognition criteria below provide general guidance on when an item is recognized in the financial statements. Whether a particular item is recognized or not will require the application of professional judgment in considering whether the specific circumstances meet the recognition criteria.

.55 The recognition criteria are as follows:

(a) the item has an appropriate basis of measurement, and a reasonable estimate can be made of the amount involved; and

(b) for an item that involves obtaining or giving up future economic benefits, it is expected that such benefits will be obtained or given up.

.56 It is possible that an item will meet the definition of an element but still not be recognized in the financial statements because it is not expected that future economic benefits will be obtained or given up or because a reasonable estimate cannot be made of the amount involved. It may be appropriate to provide information about items that do not meet the recognition criteria in notes to the financial statements. "Expected" is used with its usual general meaning and refers to that which can reasonably be anticipated, contemplated or believed on the basis of available evidence or logic but is neither certain nor proved. The use of the word in the recognition criteria is intended to acknowledge that economic activities occur in an environment characterized by uncertainty. It is not intended to accommodate the recognition of items that do not meet the definition of one of the elements of financial statements. By implication, recognition would, therefore, not be appropriate without the occurrence of a past transaction or economic event that gives rise to an asset, liability, revenue or expense as defined in this Section.

.57 Purchased natural resources and Crown lands are recognized in government financial statements. However, when natural resources and Crown lands have been inherited by the government in right of the Crown and have not been purchased, they are not given accounting recognition as assets in

DRAFT

government financial statements. These items are not recognized as assets because the costs, benefits and economic value of such items cannot be reasonably and verifiably quantified using existing methods. Similarly, art and historic treasures are also not recognized as assets.

.58 In the absence of appropriate public sector recognition and measurement criteria for intangibles, all intangibles, including those that have been purchased, developed, constructed or inherited in right of the Crown, are not recognized as assets in government financial statements. The intangible often called "human capital" that embodies the talent or intellectual capital of government employees is not recognized as an asset under existing accounting principles.

.59 Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting. The accrual basis of accounting recognizes the effect of transactions and events in the period in which the transactions and events occur, regardless of whether there has been a receipt or payment of cash or its equivalent. Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied. Accrual accounting recognizes an asset until the future economic benefit underlying the asset is partly or wholly used or lost.

MEASUREMENT

.60 Measurement is the process of determining the amount at which an item is recognized in the financial statements. There are a number of bases on which an amount can be measured. Government financial statements are, however, prepared primarily using the historical cost basis of measurement, whereby transactions and events are recognized in financial statements at the amount of cash or cash equivalents paid or received or the fair value ascribed to them when they took place. Other bases of measurement are also used, but only in limited circumstances.

(a) Replacement cost is the amount that would be needed currently to acquire an equivalent asset. This may be used, for example, when inventories are valued at the lower of historical cost and replacement cost.

(b) Realizable value is the amount that would be received by selling an asset. This may be used, for example, to value portfolio investments. Market value may be used to estimate realizable value when a market for an asset exists.

.61 Present value is the discounted amount of future cash flows expected to be received from an asset or required to settle a liability. Present value is not a basis of measurement, but a valuation technique that may be used within historical cost-based or current-value models. This technique is used in the government reporting model, for example, to estimate the cost of retirement benefits, when determining the estimated total expenditure for closure and post-closure care of a solid waste landfill site, and when determining the "grant portion" of concessionary loans and portfolio investments.

.62 Government financial statements are prepared on the basis that recognized economic resources used up are measured in financial terms with no adjustments made for the effect of a change in the general purchasing power of the currency during the period. Although a government's performance in the management of its service potential 2 is generally a focus more appropriate to the nature and objectives of government, it cannot entirely be measured in financial terms.

2. Service potential embodies both the quality of service provided and the efficiency with which it is provided.

DRAFT

.63 Financial statements are prepared on the assumption that the government is a going concern, meaning it will continue in operation, and will be able to realize assets and discharge liabilities and meet its statutory obligations in the normal course of operations for the foreseeable future.

Guidance in ASSETS, Section PS 3210

Economic resources

.06 Economic resources embody value because they enable an entity to meet its objectives, such as the provision of public goods and services, redistribution of wealth, generation of cash inflows or reduction of cash outflows.

.07 To embody value as an economic resource, there must also be some restriction on its availability. For example, the air we breathe generally cannot be an economic resource unless access to it is restricted.

.08 Economic resources can arise from, but are not limited to, the following:

(a) contracts or agreements (for example, accounts receivable and leases);

(b) another government's legislation (for example, transfers receivable);

(c) government's own legislation (for example, taxes, fines and penalties);

(d) voluntary contributions (for example, donations); or

(e) construction and development (for example, roads).

.09 Economic resources can be:

(a) financial in nature (for example, cash, accounts receivable and investments); or

(b) non-financial in nature (for example, tangible capital property, prepaid items and inventories of supplies).

.10 Without an economic resource, future economic benefits cannot be obtained. For example, a fire truck (the economic resource) needs to exist before it can provide fire suppression services (the future economic benefits).

Future economic benefits

.11 The essence of assets are their future economic benefits. Assets embody future economic benefits that allow public sector entities to achieve their objectives. The future economic benefits embodied in assets involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows or to reduce cash outflows.

.12 Often the public is the beneficiary of the goods and services provided by a public sector entity. For example, assets such as fire trucks are used to provide fire suppression services to the public. Hospital buildings and medical equipment are used to provide health care services. Parks, schools and libraries provide recreational, educational and research opportunities to the public. Water treatment plants provide goods, such as potable water. Such assets benefit public sector entities as they assist in achieving the entity's primary objective of providing public goods and services. This benefit is different from the benefit that the public receives.

.13 The future economic benefits embodied in an asset may also be in the form of generating future cash inflows. Cash inflows benefit the public sector entity because cash can be used to purchase or to provide goods and services, redistribute wealth or settle liabilities. Benefits in the form of cash inflows relate to resources, such as loans receivable, inventory for resale and portfolio investments. Also, some

public sector resources generate cash inflows because they have user fees associated with them.

.14 The future economic benefits may also take the form of a capacity to reduce cash outflows. For example, this may be the case when betterment of a tangible capital asset reduces the cost of providing goods and services.

.15 There is a close association between incurring a cost and the generation of an asset. However, not all costs result in a future economic benefit. For example, costs incurred to maintain the current service capacity of an asset do not provide a future economic benefit. Also, a public sector entity may obtain an asset without incurring costs. For example, items that have been donated to the public sector entity may provide that entity with future economic benefits and, hence, satisfy the definition of assets.

Control

.16 A public sector entity controls the economic resource and access to the future economic benefits when it:

(a) can benefit from the economic resource through its capacity to provide goods and services, to provide future cash inflows or to reduce cash outflows;

(b) can deny or regulate access to those benefits by others; and

(c) is exposed to the risks associated with the economic resource.

.17 An entity that controls an economic resource has the ability to benefit from the economic resource. For example, a recipient of a transfer benefits from the transfer as it can use the transfer to provide goods or services.

.18 An entity that controls an economic resource has the ability to deny or regulate access to the future economic benefits associated with the economic resource by others. For example, an entity controlling a bus has the ability to deny or regulate access to the related transportation services.

.19 An entity that controls an economic resource is exposed to the risks associated with the economic resource. For example, the entity may hold an investment, the value of which may decline and result in a loss.

.20 Some economic resources are subject to certain external restrictions that specify the purpose(s) for which resources are to be used. For example, there may be external restrictions imposed on the public sector entity's own assets, as is the case with some sinking fund investments. Such restrictions on the use of an economic resource do not negate the public sector entity's control of the economic resource.

.21 Although control may be seen as applying to an asset as a whole, the concept can also be applied to individual rights related to the asset. For example, a single leased asset embodies different economic benefits. It may give the lessee the right to use the property and the lessor the right to receive rents and any residual value. Thus, both parties may have assets corresponding to their respective rights.

.22 Control of an economic resource and of access to the future economic benefits are essential characteristics of an asset, whereas possession or ownership is not. For example, a public sector entity may control the economic resource and access to the future economic benefits through a capital lease arrangement yet not own the economic resource.

.23 A public sector entity's ability to regulate an economic resource does not, in and of itself, constitute control of an asset. A public sector entity may establish the regulatory environment in an

industry or sector within which organizations operate and impose conditions or sanctions on their operations. For example, a pollution control authority may have the ability to close down the operations of entities that are not complying with environmental regulations. However, this power does not constitute control because the pollution control authority's interest extends only to the regulatory use of the economic resources and does not include the ability to control access to the future economic benefits.

.24 A public sector entity may act as trustee when it administers trusts on behalf of the beneficiaries specified in the agreement or statute. As trustee, the public sector entity merely administers the assets, following the terms and conditions set out in the agreement. It does not control the asset because it does not have access to the future economic benefits. Those benefits flow to the beneficiaries.

DRAFT

Appendix B - Definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, paragraph PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the	Consistent in concept with the definition of a GP focusing on investments in the partnership and the

		non-government sponsor;	definition of a JDBP focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	government partnership. Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

In addition to consistent wording, the concepts in the definitions of a government partnership and a joint defined pension plan are similar.

While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

Appendix C – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners'

Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan (''PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

DRAFT

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[10] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[10] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

DRAFT

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

We trust that these comments have been of assistance to you. Should you have any questions in regard to them, please do not hesitate to contact the undersigned.

Appendix E – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the Pension Benefits Act, appointing the OTTP Board, and defining the role of the Board. By contrast, section 19 of the Partners Agreement sets out the ~~responsibilities of~~responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ~~ongoing surpluses~~ongoing ~~either~~surpluses either to ~~improve benefits~~improve benefits or ~~reduce contributions~~reduce contributions. Only the Sponsors to the OTPP have the authority to utilize ongoing surpluses. The process governing the use of ongoing surpluses by the Sponsors is set out in the Partners'

Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the Sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.

If the Sponsors cannot agree on the changes required to the Plan, a mediator is appointed to assist the Sponsors in coming up with an agreement. The mediator is responsible for submitting a report to the Sponsors on his or her views on the positions of the partners and provide a recommendation to the Sponsors. If the Sponsors do not accept the mediator's report, the arbitration process will begin and an arbitration board will be appointed. The board will consist of 3 people, with each partner selecting one representative and two appointees will select the final member who is an umpire. Paragraph 94 of the Partners' Agreement indicates that the report created by the arbitration board will be implemented. Paragraph 92 sets some parameters for the arbitration, including part (c), which sets out that the parameters that the award of the arbitration will provide that the contributions from the Minister and employers be equal to those of the members.

We note that the mediation/arbitration process would not be triggered unless there is an actuarial valuation to be filed with the regulators that requires the Sponsors to agree on how any surplus or deficit is to be addressed. If a valuation is prepared in a year when no filing is required (filings generally only being required every three years), and the Sponsors do not agree to file the valuation, then the Sponsors do not necessarily have to address funding and benefit issues and therefore no negotiations may occur.

In addition to the clauses identified above, the Partners' Agreement has an appendix called the Funding Management Policy which sets out the Sponsors' responsibilities in making funding decisions and surplus allocation regarding the Plan.

Funding Management Policy (FMP)

DRAFT

The FMP is an appendix to the Partners' Agreement that speaks to how the Plan should be funded and how surpluses should be utilized by both parties. The protocol for the use of a surplus under the OTPP is detailed in the FMP adopted by the Ontario Government and OTF as sponsors of the OTPP.
The FMP sets out a complex series of considerations surrounding funding management and the use of any excess of assets over liabilities. The FMP sets out a number of "funding zones", depending on the level of funding in the Plan. The following three are most relevant to addressing surpluses:
i) Restoration zone (Article 3 of the FMP) allows for a surplus to be utilized to "restore" foregone indexation and then to either increase benefits to the "run-rate benefit" level (i.e., the long-term target level) or to lower contributions (or a combination of these two options) (Section 3.06(e)).
ii) Temporary improvement zone (Article 4 of the FMP) is the zone where contributions can be temporarily reduced, a surplus distribution can be made on a temporary basis and/or benefits can be temporarily improved (as long as it does not create a long term cost) (Section 4.05).
iii) Permanent improvement zone is where the Plan is essentially fully funded and has the funding security desired to support permanent changes. Article V (Permanent Improvements) of the FMP provides for permanent actions that can be taken when Plan assets exceed current liabilities by more than 10% of current liabilities. In this regard Section 5.05 provides for actions that can be taken in respect of the amount that assets exceed current liabilities. Such actions can include changes to current benefits, current contributions, or both.

The ability to reduce contributions or increase benefits through the temporary or permanent improvement zone are subject to ensuring that the requirements of 3.06 in the restoration zone are met. Article VIII of the FMP sets out that the parties must agree to any changes arising out of FMP decisions. For filing valuations, if the Sponsors are unable to agree the mediation process set out in the Partners' Agreement, the arbitration process outlined in the Partners' Agreement will be followed. For valuations that are not filed, either party can decide not to negotiate.

The Plan is currently in the Restoration Zone. Contributions to the OTPP currently include a 1.1% special contribution on all earnings and that the Restoration Contribution Reduction under Section 3.06(e) would if agreed to by both Sponsors, permit this special contribution to be eliminated. This special contribution is scheduled to end in 2026.

If the Plan gets to either the temporary improvement zone or the permanent improvement zone, section 4.06 and subsection 5.05(b) of the FMP provides that a benefit improvement can only occur if the Sponsors (the Ontario government and the OTF) have entered into a written agreement governing the manner in which the contribution by the government and other employers may be adjusted to offset any surplus distribution or benefit improvement (temporary or permanent) to be granted.

Section 8.01 of the FMP provides the following:

Section 8.01 Unless the Sponsors mutually agree to the contrary, they shall follow the procedures

described in paragraphs 74 to 100 when determining the plan changes arising from Section 3.07.

The Partners' Agreement and the FMP contain no general arbitration clause governing all disputes relating to the agreement, although Section 14 of the Partners; Agreement provides for the possibility of voluntary arbitration. There has been no instance where the arbitration provisions have been invoked by the parties since the FMP was established. OTPP's internal legal counsel, has indicated that the arbitration provisions in the FMP would be expected to apply to disputes relating to the utilization of surplus under each of these provisions.

Where a matter has been submitted to arbitration, case law has established that the agreement between the parties that is being arbitrated is the fundamental source of subject matters that come within the arbitration board's jurisdiction. The parties are free to design their own procedures, including setting the scope of the arbitration board's jurisdiction and specifying the potential outcomes of the arbitration (subject to certain default appeal rights and mandatory grounds to set aside an award under the Arbitration Act). The arbitration board is empowered to make binding decisions because of the arbitration agreement, including any limitations on that authority. Canadian courts have traditionally granted deference to arbitration awards.

Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, as noted above, under section 92 of the Partners' Agreement, the arbitral award must meet certain mandatory conditions. Among other things, the arbitral award is required to provide that the contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement). The arbitration board does not have discretion to ignore this mandatory provision, although the provision would need to be given effect within the context of the relevant documents and applicable statutes, interpreted as a whole, and other relevant factors, such as past conduct of the parties. As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described above: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Appendix G - Comparison of the discount rates used by Provincial pension plans across Canada relative to the discount rate used by OTPP [Tables are to be updated]

Review of Discount Rates Across Jurisdictions

- In the inter-jurisdictional review of all funded provincial sponsored or joint sponsored plans which also have stand-alone plan financial statements:
  - the Ontario Teachers' Pension Plan (OTPP) is the only plan were the discount rate used in the plan's financial statements is more than 50 basis points below the discount rate used by the province.
  - OTPP stand-alone financial statements use the market rate of Provincial bonds.

- All other plans' financial statements (i.e. 23 plans across jurisdictions) use the long-term rate of return as the discount. The discount rate used by the plans' are lower than 50 basis points or less than the provinces' discount rate or at times higher than the provincial rate.

1

Plan's discount rate is lower than the provincial rate by more than 50 bps

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate
Ontario				
Ontario Teachers' Pension Plan (OTPP)	6.25%	LT return on plan assets	3.25%	Market rate of Provincial Bonds

2

Plan's discount rate is lower by 50 bps or less (or higher than the provincial rate)

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate
Ontario				
Ontario Public Service Employees Union Pension Plan (OPSEUPP)	6.25%	LT return on plan assets	5.75%	LT return on plan assets
Healthcare of Ontario Pension Plan (HOOPP)	5.75%	LT return on plan assets	5.65%	LT return on plan assets plus margin
Colleges of Applied Arts and Technology Pension Plan (CAATPP)	6.00%	LT return on plan assets	5.70%	LT return on plan assets
Ontario Public Service Pension Plan (PSPP)	6.00%	LT return on plan assets	5.95%	LT return on plan assets
Alberta				
Teachers' Post-1992 Pension Plan	7.00%	LT return on plan assets	7.25%	LT return on plan assets
Universities Academic Pension Plan	6.10%	LT return on plan assets	6.25%	LT return on plan assets

3

Plan's discount rate is higher than the provincial rate (or lower by 50 bps or less) (cont'd)

	Provincial Nominal Discount Rate	Basis of Provincial Nominal Discount Rate	Plan's Nominal Discount Rate	Basis of Plan's Nominal Discount Rate

Teachers Pension Plan	6.50%	LT return on plan assets	6.25%	LT return on plan assets

7

DRAFT

Appendix G – History of Surplus Utilization for OTPP

The history of OTPP surplus utilization from the time the OTPP became a jointly sponsored pension plans to the date that the FMP was established (in March 2003) demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the benefits of surplus utilization:

Valuation Date	Surplus/(Deficit)	OTF	Ontario Government	Surplus Remaining
1990	$(7.8 billion) unfunded liability	Increased contributions by 1% to 8.9%	Agreed to make a series of special payments to eliminate the unfunded liability and match increased contributions	Special payments considered an asset bringing the plan to a $0 surplus
1993	$1.5 billion	$325 million to offset social contract days	Eliminated special payments for $1.2 billion saving	$0
1996	$0.7 billion	$0.6 billion for benefit improvements and RCA contributions	N/A	$0.1 billion
1998	$6.8 billion	$2.2 billion for benefit improvements	$4.6 billion to reduce the value of remaining special payments	$0
1999	$3.5 billion	N/A	$3.5 billion to reduce the value of remaining	$0

DRAFT

			special payments	
2001	$6.8 billion	$6.2 billion for benefit improvements	N/A	$0.6 billion
2002	$1.9 billion	Sponsors agreed not to make any changes to benefits or contributions		$1.9 billion
Total		$9.3 Billion		

Although surplus utilization prior to 2003 may not have been 50/50 each time, from 1990 to 2002 the aggregate value obtained by each of the Sponsors was equal. In certain instances where the Province received a disproportionate share of the financial benefits from surplus utilization, a commitment was made to the OTF that they would receive future surplus available for utilization. In 1998, $6.8 billion in surplus was utilized to cause a $2.2 billion benefit improvement and to provide the Province with a $4.6 billion reduction in the value of special payments owed by the Province. As part of this negotiation, the OTF and the Province agreed to allow future surplus to be utilized to eliminate the Province's remaining special payments (which resulted in $3.5 billion surplus being utilized in 1999 to reduce the value of the Province's remaining special payments) and a commitment was made for the next $6.2 billion in surplus to be available to OTF for benefit improvements (such surplus being utilized for benefit improvements in 2001).

DRAFT

Appendix H – Summary of different valuation methodologies for pension valuations

The following table summarizes the main similarities and differences in assumptions and methodologies used for i) OTPP's funding valuation, ii) the financial statements of OTPP, prepared under CPA Canada Handbook – Accounting Part IV and iii) actuarial valuation of the Province's share of OTPP prepared for the province under Public Sector Accounting Standards.

Assumption/ methodology	Funding valuation (Going concern basis)	Accounting Part IV – (OTPP Financial statements)	Accounting PSAS – (Province Financial statements)
Purpose	To inform plan sponsors of the amount that needs to be contributed each year to adequately fund benefits	Financial statements [of pension plans] provide information about the pension plan including net assets available for benefits and pension obligations.	Measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered.
Actuarial cost method	*[To confirm – not clear from the valuation report]*	Projected benefit method prorated on services	
Asset valuation	The actuary should select an asset valuation method that is consistent with the circumstances of the work. The value of assets may be, subject to specific requirements for different types of valuation, any of: • Their market value; • Their market value adjusted to moderate volatility in investment returns; • The present value of their cash flows after the calculation date; and • Their value assuming a constant rate of return to maturity in the case of illiquid assets with fixed redemption values [To confirm the approach taken in OTPP funding valuation]	Fair value for all plan assets. Fair value is determined in accordance with IFRS 13, *Fair value measurement*.	Market -related values, which are defined as either market values or amounts adjusted to market values over a period not to exceed five years, applied consistently. The Province uses adjusted market values for some classes of assets in certain plans.
Discount rate	Best estimate less Margins for adverse deviations and expenses where appropriate.	In measuring a pension obligation amount, the defined benefit obligation amount determined by the	Not specified. However two methods are specifically acknowledged – a)

	For funded plans, the best estimate may be either the expected investment return on the assets of the pension plan at the calculation date and the expected investment policy after that date, OR Reflect the yields on fixed income investments, considering the expected future benefit payments of the pension plan and the circumstances of the work To confirm the approach taken in OTPP funding valuation]	plan's sponsor may be (but is not required to be) used. Part IV notes that guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 Employee Benefits in Part I of the Handbook. Part I (IAS 19) requires the use of government bonds when no deep market for high quality corporate bonds exists. Per their financial statements OTPP uses a discount rate based on bonds issued by the Province of Ontario.	discount rates determined by reference to plan asset earnings and b) discount rates determined by reference to the government's cost of borrowing.[11] The Province of Ontario uses a discount rate for OTPP determined by reference to plan asset earnings.
Underlying population data	All valuation methodologies should use consistent underlying data of the population covered by the plan		
Inflation rate	All valuation methodologies should treat inflation in a consistent manner and use a consistent inflation assumption (best estimate). [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Demographic assumptions	All valuation methodologies should use a consistent demographic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		
Other economic assumptions	All valuation methodologies should use a consistent other economic assumptions (best estimate) in similar ways [To confirm this is actually the case – does the Province rely on the OTPP's Board's judgement or make their own estimates?]		

[11] The Public Sector Accounting Board has formed an Employment Benefits Task Force to examine a number of aspects of the existing Public Sector Accounting Standard dealing with retirement benefits, including consideration of the discount rate. To date there have been no due process documents and no indication as to the direction of the PSAB in respect to discount rates.

TPP rates of return (performance vs discount rates).pdf

Ontario Teacher's Pension Plan
Rate Comparison

	OTPP Annual Performance	OTPP Filed Discount Rate *	Province Economic Assumpition for Nominal Return
2005	17.2%	6.48%	7.00%

Hi Shayan.

Thanks for your note. This afternoon might work for a short chat. Shyrose will find us some time.

Talk soon,

Nadine

Hi Nadine,

I am back at Queens Park today (John Psinas' old office).

If you are available, I'd be happy to have a quick chat to provide you with an update on our work.

Christina and I are both planning to be here tomorrow and Thursday this week.

Regards,

Shayan

Subject: New Brunswick Accounting for Pension Plans

Hi Shayan.

Attached is a copy of a deck presented in late February by New Brunswick's Auditor General to the Accounting Standards Oversight Council. I am sharing this deck as background in reference to potential issues related to the a new Employee Life and Health Trust (ELHT) being established by the Ministry of Education. Slides 17 and 25 are most relevant to the accounting discussion, but the other slides may be of interest as background.

As an observer at AcSOC, I also took notes during the discussion and key aspects impacting the accounting decision for the NB pension plans included:

- *Continued exposure to the province of financing risk, investment risk, benefits driven by formula (not a defined contribution plan)*

- *Fixed target contribution levels that shouldn't be changed, even if surpluses existed (Province had no legal claim to the assets so had to take a full valuation allowance)*

- *In the case of NB's shared risk plans, there was a whole series of events that would have to occur, including a decision by joint trustee board as to what to do with the surplus before the government could do anything with it. As such, the PS 1000 criteria for an asset were not considered to have been met because the past event that would have been need to give value to the asset had not occurred by March 31 year-end.*

If she hasn't already done so, Alicia may approach you about possible assistance to help confirm the appropriate accounting for the ELHT on the province's books. Given reference by our AG to the accounting by NB for its pension plans in the past, I thought that the attached presentation and notes might be helpful background.

Talk soon,

Nadine

To: Petsche, Nadine (TBS); Pomykacz, Rob (MOF)
Cc: allan.shapira@aonhewitt.com; Veinot, Cindy (TBS)
Subject: Re: New Model Output

I talked to Allan last night.

The answer to number 1 is that the rule applies to joint plans.

Number 2 is that the rule applies to the employer only. But under the terms of the plan it would be both parties that need to determine how to to reduce surplus.

There is no rule other than the FMP for dealing with surplus. And Raymond is correct that the plan would never get to the ITA maximum. The otf would never allow it to get through the temp and permanent zones, (and I doubt gov't would either)

Alex

Alex/Rob,

Just wondering what the plan is w.r.t. the questions posed below? Thx. n

From: Raymond, Martin (CA - Montreal) [mailto:maraymond@deloitte.ca]
Sent: September-23-16 4:44 PM
To: Petsche, Nadine (TBS)
Cc: allan.shapira@aonhewitt.com; Killoch, Alex (MOF); Pomykacz, Rob (MOF); Colley, Matthew (CA - Toronto)
Subject: RE: New Model Output

After a discussion with Matthew, find enclosed the following questions that might be needed to review with the use of Income Tax Act excess surplus for contribution reduction.

1- Is the Income Tax Act excess surplus still applicable to a joint plan? I believe it does since the idea is to avoid excess use of pension plans as tax free deferral vehicles and therefore should apply to all types of employer provided pension plans

2- Is the Income Tax Act only requiring the employer to reduce contribution even in a joint plan ? if so, our estimate of using 50% of the excess surplus would move to 100%. However, we have used 50% of the excess surplus as a benefit to the employer knowing that under the plan, the sharing principle would lead to employees and employer reducing both their contributions to meet the requirement of the Income Tax Act

3- Finally, is there a plan provision (I did not see if one applies) that would force the employer to modify the plan benefits and therefore prevent of taking a contribution reduction that is otherwise applicable as per the Income Tax Act. I did not see one, and this is likely to be logic that the plan does not need one since the idea would generally be to deal with surplus through the Temporary and Permanent zones in the sharing of surplus and therefore not getting into the excess surplus position. However, for our illustration we assume that no surplus is used through the Temporary and Permanent zones, considering no agreement and therefore we end up dealing with the excess surplus situation.

Thanks everyone for looking at this so quickly.

One question on #3 – does the math work such that the plan would be in permanent zone when it is estimated to hit the ITA limit? In other words, based on one of the scenarios provided by Martin Raymond, does this mean that based on continued expected returns, one model suggests that the plan would be in the permanent zone in 15 years?

To: Raymond, Martin (CA - Montreal) [maraymond@deloitte.ca]
CC: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]; Colley, Matthew (CA - Toronto) [mcolley@deloitte.ca]; Danyluk, Kerry (CA - Toronto) [kdanyluk@deloitte.ca]
Subject: RE: New Model Output
Date: Sunday, September 25, 2016 09:50:11

Re: the additional modelling, I will try to explain in a bit more detail We have an internal call at 10 am (so in 10 minutes) and then another at noon so maybe we can connect live between those or after the noon update.

As I understand it, both the initial model from August and the ITA model from Friday both assume that benefits will not increase (other than the cost of the benefits that are currently being provided). In other words there will not be a decision by the sponsors to improve the benefits provided

We have been asked to determine the outcome of the pension ceiling test on the assumption that 50% of the surplus is used to improve benefits for the teachers. So instead of assuming that the level of benefits remains constant, we're assuming that for 50% of the surplus, instead of using the surplus to reduce contributions, the sponsors agree the benefits for the teachers will be improved.

I'm not sure how this scenario is modeled, but I think the question would then be how many years of contributions would be made before the asset ceiling would be reached.

I'm testing my understanding of the actuarial model here, but would the service cost in the model increase (e.g. part 1 of 56(a)) as well as the level of contributions required to support the increased benefits (part 2 of 56(a)) ?

Thanks all for your assistance,

Cindy

Subject: Re: New Model Output

Cindy

Will work today but will need review by Matt on the wording

For question 2 - just to clarify your thought - are you saying that 50% of surplus is always used or if the government 50% share always remain unused until this government share reaches 125%

If we always use 50% of the entire surplus you will end up that the 50% government share gets recycled to the employee benefits and you will likely never get to 125% ...

Subject: Re: Next Steps for HOOPP/CAATPP Review

Thanks Christina.
I understand that the paperwork for the increase in contract price is in progress wrt signatures, so work may continue.
It would be helpful if you could confirm when we might expect to receive the revised asset ceiling reports as well, although I realize it wasn't the focus of your discussion. N

Subject: RE: Next Steps for HOOPP/CAATPP Review

Hi Alicia, Patricia,

It was nice connected with your team again. Below is a summary of our call and tentative next steps:

- Shayan will get in touch with Nadine related on budget and approval as we are now over our initial budget.

Model: July

- OTB will confirm the ability in receiving information in format/details which may not have been provided in the past for HOOPP and CAATPP (e.g. contribution breakdown and identifying consolidated/non-consolidated participating employers)

- EY will work on finalizing the model for PSPP, HOOPP, OPPSEUPP, reflecting any potential feedbacks from AG, as well as further enhancing the projection capability

- Discussion related to the ROM merger and treatment

Model: late-July to early-August

- Based on the information which can be received, OTB will decide on the approach in determining the % allocation for the Province (EY can assist as needed)

- EY will work on improvement on the model for both HOOPP and CAATPP (e.g. consistent with changes we have made for the other plans) and reflect year-end adjustment changes as at 1 March 2017

- EY will require approximately a week to finalize the model upon receiving OTB's decision on the % allocation approach

Training:

- OTB will discuss internally and provide EY with guidelines on training focus and topics (e.g. PSAB, pension accounting, use of model etc.)

- please allow for one-two weeks for EY to prepare training material preparation

- target for July/early August, otherwise, early September

Let us know if our understanding is different form yours for any of the above. We will stay in touch and don't hesitate to contact us.

Regards,
Christina

Subject: Next Steps for HOOPP/CAATPP Review

Hi Shayan/Christina,

As you know that due to timing and resource considerations, we didn't revise the HOOPP and CAATPP models for the Public Accounts purpose. As we're wrapping up the consolidated results, I would like to discuss the next steps for HOOPP and CAATPP review.

Here is a summary of high-level points that we want to address:

1. Revising models to be consistent with other pension plans in principle

2. How to determine the provincial portion of the plan assets/liabilities (% based on member count vs. contributions)

3. Considering to include consolidated health agencies in the HOOPP model (currently being accounted as DC outside of the model)

4. How to treat the employer vs. employee contribution differences

5. Impact of ROM pension merger

6. General re-vamp of the current worksheets to improve usability

I understand that you are currently working on the asset ceiling test for teacher's plan and OPSEU plan. I would like to know when would be a good time to start the review process.

Also I have new staff on my team and I would like them to get involved in the pension work in the upcoming budget process. I would like to know whether and when you can provide some training to staff, including myself. I have a lot to catch up.

Thanks,
Alicia

Hi Alicia,

Hope you had a great long weekend!

We have started updating the model for HOOPP and making similar improvements as we have done for the other plans, but certainly will need to address the items you noted below for us to finalize (similarly, for CAATPP). We are happy to assist with training for you and your staff as well.

Nadine – as discussed, we have put the asset ceiling test documents on hold until all numbers are final and signed off by AG.

We think it would be best for us to have a quick call on how to proceed (e.g. timing, prioritizing, training material/area of focus etc.) I would schedule it for an hour to be safe. Let us know when would work best for you:

- Today: any time after 3:30 pm
- Thursday (tomorrow): 10:30 to 11:30, any time after 2:00 pm
- Friday: 10:00 -11:00 am

Thanks,

Christina

Subject: OPSEUPP - RSF balance

Hi Wendy, Pauline,

In order for us to complete our asset ceiling test and the recognition of the accrued asset for OPSEUPP, we will require the following information. Is this something you have already, or may request for?

We would like to know the Rate Stabilization Fund allocation between Ontario and OPSEU, and the amount of the Fund that has been used by each of the sponsor respectively. This is to determine the proportion of the plan's accrued asset that the Province may account for.

Thank you for your assistance.

Regards,

Christina

OPSEU Historical Overview.pdf

Appendix "A" - Historical Overview

The Ontario Public Service Employees Union Pension Plan (the "Plan") was established effective January 1, 1993 as the result of an agreement (the "Sponsorship Agreement") between the Crown in right of Ontario and OPSEU. Pursuant to the Sponsorship Agreement, assets and liabilities in respect of members of the Public Service Pension Plan ("PSPP") who became members of this Plan were transferred from the PSPP to the Plan effective January 1, 1993.

The Transferred Initial Unfunded Liability for the Plan, established at January 1, 1993 in a valuation report prepared by William M. Mercer Limited, was $663 million. The transferable assets disclosed in that same report were established as 32.2% of the total assets of the PSPP.

A. Sponsorship Agreement Regarding Payment of Unfunded Liability and Sharing of Gains

The Sponsorship Agreement lays out the terms for the payment of the Transferred Initial Unfunded Liability determined as at January 1, 1993, the date of the inception of the Plan. It also lays out the manner in which emerging actuarial gains are to be shared between the two sponsors.

The following is a summary of events since the inception of the Plan that relate to the terms of the Sponsorship Agreement:

Initial Valuation as of January 1, 1993

Effective January 1, 1993 a schedule of special payments was established to be paid by the Employer to liquidate the Transferred Initial Unfunded Liability of $663 million over a period of up to 40 years. Over the period April 1, 1994 to March 31, 1997, however, the Sponsorship Agreement specified the following suspensions to Employer required contributions related to the payment of this unfunded liability:

- Employers were not required to make special payments with respect to any actuarial loss or unfunded liability for the period April 1, 1994 to March 31, 1997.
- Over the period April 1, 1994 to March 31, 1995 the Employer contributed reduced amounts in respect of its matching contributions required under the Plan.
- Employer contributions were further reduced in an amount equal to the special payments required to fund Factor 80 benefits by March 31, 1997; this cost was to be borne by the Plan.
- In addition, from April 1, 1994 to March 31, 1997, member contributions were reduced by 1% of salary.

December 31, 1995 Triennial Valuation

A valuation was performed as of December 31, 1995, which was filed with the regulatory authorities. That valuation revealed net actuarial gains totaling $72 million. These were applied directly to reduce the balance of the Transferred Initial Unfunded Liability, which had grown to $782 million from $663 million.

December 31, 1996 Interim Valuation

An interim valuation was performed as of December 31, 1996. That valuation revealed net actuarial gains of $36 million, which were shared equally between the members and the Employer. The Employer's share was used to reduce the amortization period for the payment of the Transferred Initial Unfunded Liability. The members' share was kept in the fund as a reserve.

December 31, 1998 Triennial Valuation

The next valuation was performed as of December 31, 1998, which was filed with the regulatory authorities. That valuation revealed gains over the period 1996 to 1998 inclusive of $1,334 million. These gains were shared equally between the members and the Employer. The members' share was used for benefit improvements, contribution reductions, and a Rate Stabilization Fund of $31 million was left in the fund as a buffer against any future losses that may arise. The Employer share of the gains was used to reduce the balance of the initial unfunded liability to $153 million as of December 31, 1998 and the amortization period to July 2003.

December 31, 1992 Restated Valuation

In accordance with Amendment No. 2 to the Sponsorship Agreement, Buck Consultants prepared the restated 1992 valuation in order to determine the gain or loss attributable to using accurate Plan member data. (The gain or loss is the difference between the net actuarial liabilities in respect of OPSEU Pension Plan members calculated as at December 31, 1992 in a valuation performed by William M. Mercer dated May 28, 1997, and the liabilities from the restated 1992 valuation to be performed by Buck Consultants with purified member data.)

The restated 1992 valuation was completed in March 2002. That valuation revealed a loss in the amount of $98.8 million, including interest to March 31, 2002. (In other words, the net actuarial liabilities determined at December 31, 1992 using purified data were higher than those determined by William M. Mercer.) That loss was paid in full by the Province in April 2002.

December 31, 2001 Triennial Valuation

The December 31, 2001 triennial valuation revealed actuarial gains totaling $867.1 million. In accordance with the Sponsorship Agreement those gains were shared as follows:

1. In accordance with Paragraph 56(a) of the Sponsorship Agreement, gains between the members and the Employer were shared equally until the Transferred Initial Unfunded Liability ("TIUL") was paid off by the Employer's use of its 50% share.

2. Following the application of Paragraph 56(a), 100% of the amount utilized under paragraph 54 was used exclusively for the benefit of the members, in accordance with paragraph 56(b). The amount utilized under paragraph 54 by the Employer to pay down the TIUL was the net actuarial gains for the years 1993 to 1995 (as disclosed in the December 31, 1995 valuation report) plus interest to March 31, 1997 ($72 million + $6 million = $78 million).

3. In accordance with Paragraph 56(c), all remaining gains after application of paragraphs 56(a) and 56(b) were shared equally between the members and the Employer.

The actuarial gains of $867.1 million were thus shared as follows:

	$ 000's		
Sponsorship Agreement Paragraph	Employer Share	Member Share	Total
SA 56(a)	$ 63,415	$ 63,415	$ 126,830
SA 56(b)	0	78,485	78,485
SA 56(c)	330,869	330,869	661,738
Total	$ 394,284	$ 472,769	$ 867,053

In accordance with the Sponsorship Agreement, other agreements between the sponsors and the decisions made by OPSEU at their executive meetings held on September 11-12, 2002 and on January 23, 2003, the gains shown above were allocated as follows:

	$ 000's		
	Employer Share	Member Share	Total
Balance of TIUL	$ 63,415	$ 0	$ 63,415
2002 CBA[(1)]	29,750	5,296	35,046

Total	$ 394,284	$ 472,769	$ 867,053

(1) Described in Sections B.3(c) and (d) below.

December 31, 2003 Valuation

The December 31, 2003 valuation showed an actuarial loss of $255 million. In accordance with Paragraph 56(c) of the Sponsorship Agreement, these losses were shared equally between the members and the Employer. The member and Employer Rate Stabilization Funds were utilized to fund each sponsor's respective share of these losses.

December 31, 2004 Valuation

The December 31, 2004 valuation showed an actuarial loss of $183 million. In accordance with Paragraph 56(c) of the Sponsorship Agreement, these losses were shared equally between the members and the Employer. The member and Employer Rate Stabilization Funds were utilized to fund each sponsor's respective share of these losses.

December 31, 2007 Valuation

The December 31, 2007 valuation showed a surplus of $470 million. In accordance with the Paragraph 56(c) of the Sponsorship Agreement, each sponsor directed that their share of the surplus be allocated to the Rate Stabilization Fund (RSF). Accordingly, the balance of each Sponsor's RSF was increased by $235 million.

B. Benefit Improvements/Plan Amendments

1. Negotiated Improvements

The following benefit improvements were negotiated in collective bargaining agreements between OPSEU and the Government of Ontario in 1996, 1999, 2002 and 2005.

(a) 1996 Collective Bargaining Agreement

(1) Factor 80 Re-Opener. Members laid off between March 28, 1996 and March 27, 1999 who achieved eligibility for Factor 80 benefits before April 1, 1996 could elect to retire under the Factor 80 program with unreduced benefits, even though they had more than 80 points.

(2) Bridge to Unreduced Retirement. Members laid off between March 28, 1996 and March 27, 1999 could continue to accrue pension credits to a maximum of 30 months and such service counted towards early retirement benefit eligibility provided the member made the required contributions to the Plan for the period and could qualify for unreduced retirement within the 30-month period.

(b) 1999 Collective Bargaining Agreement

(1) New Factor 80 and Factor 80 Re-Opener. Any person who is laid off after March 27, 1999 and before April 1, 2002 and who has 80 or more points at the time of lay-off may retire with an unreduced pension.

(2) New Bridge to Unreduced Retirement. Members laid off between March 27, 1999 and December 31, 2001 would continue to accrue pension credits to the date upon which they would have obtained 80 points, provided they continued to contribute during this period. To qualify for this benefit, a laid-off member must meet this 80-point criterion before April 1, 2002.

(c) 2002 Collective Bargaining Agreement

Factor 80 Re-Opener and the Bridge to Unreduced Retirement. These benefits were extended to December 31, 2004. The estimated increase in the net actuarial liability as a result of these extensions was $24.5 million for the Factor 80 Re-Opener and $10.5 million for the Bridge to Unreduced Retirement. The Factor 80 Re-Opener was funded entirely by the Employers and the funding for the Bridge to Unreduced Retirement was shared between the sponsors.

(d) 2005 Collective Bargaining Agreement

Factor 80 Re-Opener. This benefit was extended to December 31, 2008. The estimated increase in the net actuarial liability as a result of this extension was $71.8 million, and was funded entirely by the employers.

2. Utilization of Rate Stabilization Funds

(a) Member RSFs

The Factor 80 retirement benefit was extended from March 31, 2002 to October 31, 2002. The estimated increase in the net actuarial liability as a result of this extension was $36 million as of December 31, 2001. This benefit was funded from the member Rate Stabilization Fund established at the December 31, 1998 triennial valuation.

(b) Employer RSFs

Pursuant to the 2005 Collective Bargaining Agreement, the Factor 80 Re-Opener was extended to December 31, 2008. The estimated increase in the Net Actuarial Liability as a result of this extension was $71.8 million. This benefit was funded from the Employer Rate Stabilization Fund.

3. Utilization and Allocation of Actuarial Gains/Losses

The following is a summary of the utilization of actuarial gains and losses in each of the December 31, 2004, December 31, 2003, December 31, 2001 and December 31, 1998 valuations.

(a) Member Utilization of Actuarial Gains as of December 31, 1998

At OPSEU's Executive Board meeting on August 26, 1999, a motion was passed to utilize the members' share of the actuarial gains accumulated from December 31, 1995 to December 31, 1998 to provide the following benefit improvements and contribution reductions effective December 1, 1999. These benefit improvements utilized $636 million of the members' share of the actuarial gains. The remaining member share of the actuarial gains ($31 million) was left as a Rate Stabilization Fund to offset any future losses that may arise.

(1) The Factor 80 retirement benefit was extended from April 1, 2000 to March 31, 2002. This benefit provides that a member whose age plus service total 80 years prior to April 1, 2002 may elect within 92 days of attaining 80 points to retire and receive an unreduced pension.

(2) The post-retirement survivor benefit under the Plan was increased from 50% to 60% of the member's lifetime pension.

(3) The CPP offset is calculated using the average YMPE over five years instead of the current three years, and is based on 0.675% of the average YMPE instead of 0.7%.

(4) For early reduced retirements occurring during the five-year period beginning December 1, 1999, the 5% per year early retirement reduction from age 65 will be applied from the earliest age at which the member is eligible for an unreduced pension under the permanent retirement provisions of the Plan.

(5) The application of the CPP offset prior to age 65 for members in receipt of a disability pension was eliminated.

(6) Member contributions were reduced by 4% of earnings for 36 months beginning with the pay period that includes December 1, 1999.

With the exception of items (1) and (4), the benefit improvements applied to all active, divested (special deferred) and deferred vested members. Item (1) applied to active and divested members only; item (4) applied to active, divested and deferred members only. In addition, items (2), (3) and (5) also applied to current retirees on a prospective payment basis from December 1, 1999.

(b) Employer Utilization of Actuarial Gains as of December 31, 1998

The Employer applied its share of the actuarial gains to pay down the Transferred Initial Unfunded Liability in accordance with the Sponsorship Agreement.

(c) Member Utilization of Actuarial Gains as of December 31, 2001

The members' share of the actuarial gains accumulated since December 31, 1998 totals $472,769,000. As of December 31, 2001 the following allocations were made:

(1) Pursuant to the 2002 Collective Bargaining Agreement, the Factor 80 Re-Opener and the Bridge to Factor 80 was extended to December 31, 2004. This resulted in a $35 million increase in the net actuarial liability. The portion of the members' share of the actuarial gains used to pay for this increase amounts to $5,296,000.

(2) An amount of $758,000 was allocated towards the Pension Data Purification Project Grievance Settlement between OPSEU and the Province.

(3) At OPSEU's Executive Board meeting on September 11 and 12, 2002, a motion was passed to utilize the members' share of the actuarial gains accumulated since December 31, 1998 to provide the following benefit improvements and contribution reductions. The increase in the net actuarial liability in respect of these amendments has been included in this valuation.

(i) The current Factor 80 retirement benefit has been extended from November 1, 2002 to March 31, 2005. This benefit provides that a member whose age plus service total 80 years prior to April 1, 2005 may elect within 92 days of attaining 80 points to retire and receive an unreduced pension.

(ii) The current "Points-Off" program has been extended from December 1, 2004 to December 31, 2005. Under this program, for reduced early retirements occurring prior to January 1, 2006, the 5% per year early retirement reduction normally applied from age 65 will be applied from the earliest age at which the member is eligible for an unreduced pension under the permanent retirement provisions of the Plan.

(iii) Effective December 1, 2002 the CPP benefit offset is to be based on 0.655% of the average YMPE instead of 0.675%.

(iv) Effective December 1, 2002, where a retired member dies prior to age 65 and leaves a surviving spouse, in addition to receiving 60% of the deceased member's lifetime pension, that spouse will also receive 60% of the member's bridge pension until the month in which the deceased member would have attained age 65, or the death of the spouse if earlier.

(v) For the 36 months beginning with the pay period that includes December 1, 2002, member contributions as a percentage of earnings will be reduced as follows:

- 3% reduction for the first 12-month period;
- 2% reduction for the second 12-month period; and
- 1% reduction for the third 12-month period.

At OPSEU's Executive Board Meeting on January 23, 2003 a motion was passed to extend the benefit improvements (i) to (iv) to divested members.

The temporary benefit improvements (i) and (ii) above apply to active and divested members only. The permanent benefit improvements (iii) and (iv) apply prospectively to all members and pensioners and the contribution reductions in (v) apply to all active members.

The benefit improvements and contribution reductions described in (1) to (3) above utilized $326,479,000 of the members' share of the actuarial gains as of December 31, 2001, leaving remaining gains of $146,290,000. These remaining funds were added to the existing member Rate Stabilization Fund of $2,600,000.

(d) Employer Utilization of Actuarial Gains as of December 31, 2001

The Employer share of the actuarial gains accumulated since December 31, 1998 amounts to $394,284,000. As of December 31, 2001 the following allocations were made:

(1) The amount of $63.4 million was used to pay the balance of the Transferred Initial Unfunded Liability.

(2) The portion of the Employer's share of the actuarial gains used to pay for the extension of the Factor 80 Re-Opener and the Bridge to Factor 80 amounts to $29,750,000, pursuant to the 2002 Collective Bargaining Agreement.

(3) An amount of $3,499,000 was allocated towards the Pension Data Purification Project Grievance Settlement between OPSEU and the Province.

The above allocations of the Employer's share of the gains total $96,664,000 leaving $297,620,000 of gains. In January 2003 the Government advised that the total amount of these remaining gains are to be allocated to a contribution Rate Stabilization Fund.

(e) Allocation of Actuarial Gains/Losses as of December 31, 2003

At OPSEU's Executive Board meeting on January 22, 2004 a motion was passed to reverse the 1% member contribution reduction scheduled for the 12-month period beginning December 1, 2004. This reversal is to become effective January 1, 2005. The resulting gain of $13 million has been allocated to the member Rate Stabilization Fund at December 31, 2003.

The December 31, 2003 valuation showed a loss of $255 million, which represented the deficit under the Plan as of December 31, 2003. The deficit was amortized through total annual payments of $28 million over a period of not more than 15 years. The member and Employer Rate Stabilization Funds were utilized to fund each sponsor's respective share ($14 million) of this deficit.

(f) Allocation of Actuarial Gains/Losses as of December 31, 2004

The December 31, 2004 valuation showed a loss of $183 million, which increased the deficit under the Plan to $428 million. The deficit was amortized through total annual payments of $20 million over a period of not more than 15 years. The member and Employer Rate Stabilization Funds were utilized to fund each sponsor's respective share ($10 million) of this deficit.

(g) Allocation of Actuarial Gains/Losses as of December 31, 2007

The December 31, 2007 valuation showed a net actuarial gain of $841 million , resulting in a surplus of $470 million as of that date. In accordance with the decisions made by the member and Employer sponsors, this surplus was allocated to the member and Employer RSFs. Annual payments from the RSFs to amortize deficits from prior valuations were eliminated and the member and Employer RSFs were each increased $235 million.

OPSEU Actuarial Gain or Loss Allocation History.pdf

A pension plan has actuarial gains or losses each year because the actual events during the year (“experience”) do not exactly match the long-term assumptions previously made. Gains or losses on plan assets occur because the actual investment returns were higher or lower than anticipated. Gains or losses on actuarial liabilities can occur because long-term assumptions (e.g., mortality, salary increases, termination, retirement, economic) were not met. These gains or losses can generally be funded by amortizing over five years and in some cases 15 years. Changes in the Unfunded Actuarial Liability may also be amortized if they are due to changes in actuarial assumptions or methods.

Under the Sponsorship Agreement, no agreement or amendment to the Plan shall provide for or permit any payment of surplus out of the Fund to Ontario, or any employer participating in the Plan. For greater certainty, the use of actuarial gains to offset Employer Contributions and any going concern unfunded liability or solvency deficiency does not constitute the payment of surplus out of the Fund.

In its history, the OPSEU Pension Plan has not reported excess surplus as per section 147.2(2) of the Income Tax Act.

The Employer and Member Stabilization Funds are the remaining employer’s and members' share of the net actuarial gain. These funds are to be used as a buffer against any future actuarial losses that may arise.

Hi Pina.

Can we please get the revised OPSEUPP paper referencing the results of the ceiling test (not details, just reference). We would like to send the final paper to the Panel in advance of their discussion Monday.

With regards to the CAATTPP and HOOPP papers, we think that additional discussion needs to happen on the 'provincial' benefit so those papers will not be shared at this time. Note that for the HOOPP paper, we think that the following reference related to contribution reductions should likely be included for completeness purposes.

14.5 Surplus on an Ongoing Basis

(1) If the actuary determines on an on-going basis that there is a surplus in the trust fund at a triennial valuation date equal to or less than ten percent of actuarial liabilities, the administrator, in consultation with the actuary, shall determine the portion, if any, of the surplus to be used for the purpose of improving benefits or reducing the total annual cost.

If a portion of the surplus is to be used to reduce the total annual cost, the amount of surplus so allocated shall be amortized over a period of 10 years from the date of determination, or over such other period as the administrator shall decide in consultation with the actuary and subject to any requirements of the Pension Benefits Act and the Income Tax Act.

(2) If the actuary determines on an ongoing basis that there is a surplus in the trust fund at a triennial valuation date in excess of ten percent of actuarial liabilities, the administrator shall firstly consider using such surplus for plan improvements. If such excess surplus is not used for plan improvements, the administrator may choose, in consultation with the actuary, to use all or a portion of the excess surplus to reduce the total annual cost. The amount of surplus so allocated shall be amortized over a period of 10 years from the date of determination or over such other period as the administrator may decide in consultation with the actuary subject to any requirements of the Pension Benefits Act and the Income Tax Act.

Thanks.

Nadine

Hi Nadine,

Please find attached the updated paper to incorporate the history of surpluses. We can discuss the ceiling test work and what makes sense to have in this memo on our call this afternoon.

Thank you,

Pina

Matt/Pina,

Please find attached the OPSEUPP paper with comments and suggested edits. It would be helpful to include information on the history of use of surpluses which I believe was provided previously (perhaps as an appendix). In addition, reference to the ceiling test

work that Martin performed should be included.

Thanks. Talk to you soon.

Hi Matt.

I inquired about the OTF f/s and was advised that they would not have audited financial statements relating to the OTPP. The OTF is merely an umbrella organization whose mandate it is to represent all teachers in pension discussions/negotiations.

Subject: OTF Financial Statements

Does the Province have financial statements that are audited for OTF? Would Doreen Lamarche have these?

I am not sure this will lead anywhere, but I just would like to read if there are copies available. I haven't found any online.

Thanks

Matt

Attachment 2: OTPP Recognition of accrued benefit asset (EY 4 April 2017) - v2_TC.pdf

---

Hi Nadine,

Attached is a updated version of the asset ceiling test document for OTPP, addressing your comments. I've also attached a tracked changes version (subsequent to your changes) for your reference.

Further to the request you have shared with us, we believe that the analysis contained in the attached document appropriately responds to it. In particular, the asset ceiling test has been performed in accordance with PSAS for each significant plan. The analysis considers the perpetuity of future service costs and perpetuity of any contributions that are required to be made regardless of any surplus. The asset ceiling test confirms that the asset can be recognized without impairment at 31 March 2017.

Regards,

Christina

Hi Christina and Shayan.

Thanks for sharing the draft analysis on OTPP. I was hoping you might be available for a 15 minute call later today or tomorrow to discuss my comments (attached) and next steps.

Shyrose can help to set up a time to chat.

Thanks.

Nadine

Ontario Teacher's Pension Plan
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

This document provides the results of our analysis and recommendations to OPCD management regarding the recognition of an accrued benefit asset for OTPP as at 31 March 2017. The purpose of this document is to support OPCD in forming its opinion on appropriate accounting related to OTPP in the Province's financial statements. This document does not constitute an accounting opinion and should be used as such. This document is intended for OPCD's use only. Please inform us in writing if you would like to share this document more broadly.

As at 31 March 2017, prior to considering the possible need for a valuation allowance, OPCD determined the following:

- Plan's accrued benefit asset is $26.9B (obligation of $123.8, market related-value of asset of $169.8B, unamortized actuarial gain of $19.1B)
- The Province's portion (50%) of the accrued benefit asset is $12.3B[1]

Since our analysis determined that a valuation allowance is not required at 31 March 2017, it would appear appropriate to report the Province's portion of the accrued benefit asset of $12.3B for its respective portion of the Plan.

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS. The Plan is jointly sponsored by the Province, through the Minister of Education, and the Ontario Teachers' Federation ("OTF"), representing the employees.

[1] Reflects specific downward net adjustment of $1.2B by OPCD to the Province's portion of the Plan for the Province's financial statements

- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors under the Teacher's Pension Act ("Act").
- Funding valuations must be filed at least once every three years. The Funding Management Policy ("FMP") provides the joint sponsors a framework of priorities in determining how the surplus/deficiency should be addressed. If there is a surplus/deficiency on a preliminary funding valuation basis, the joint sponsors must negotiate and agree to changes in future contribution levels and/or benefit levels to result in an actuarially balanced valuation. An actuarial valuation in this context, is considered balanced if the value of future contributions to the Plan equals to the value of future benefits from the Plan.
- Both contribution level and benefit levels are to be negotiated and the FMP does not specify any minimum contribution requirement. If the value of future contributions is greater than needed to pay the benefits, then the joint sponsors can agree to reduce contributions or increase benefits, while maintaining the concept of 50/50 sharing of costs between the two joint sponsors.
- Changes to contribution levels and benefit levels must reflect the sharing principle in that each joint sponsor is responsible for their share of deficit or entitled to their share of surplus.
- The Act or the Plan documents do not prohibit contribution holidays (i.e. surpluses belonging to the joint sponsors may be applied to reduce contributions).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (the use of this earlier measurement date is permitted under PSAS 3250.039). We do not anticipate that the conclusion would be different at 31 March 2017
- Assumed inflation protection for post-2009 service will be provided at 100% of the assumed inflation rate
- Valuation discount rate: 6.00%
- Inflation rate: 2.00%
- Salary escalation rate: 2.00% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS 3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

The Province has an equal share (50%) in the costs and risks of the OTPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs*".

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. Based on Ontario case law and the Ontario Pension Benefits Act ("PBA"), it is difficult to establish the right of a plan sponsor to withdraw surplus. For purposes of determining the expected future benefit, our assumption is that the Province does not have a right to surplus withdrawal. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Funding Management Policy sets out an agreed upon framework of priorities for the sponsors in jointly determining how any funding surpluses can be utilized. The sponsors may negotiate lower contributions or an increase in benefits. There is no minimum level of contribution requirements set out by the Plan and contributions levels are negotiated. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$175.6B
Market-related value of assets ("MVRA")	$(169.8)B
Actuarial gains/losses not recognized due to smoothing	$5.8B
Unamortized actuarial gains/(losses), on MRVA basis	$19.1B
Unamortized actuarial gains/(losses), on MVA basis	$24.9B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$175.6B
Obligation	$(123.8)B
Plan surplus	$51.8B
Unamortized losses	$0.0B
Adjusted benefit asset (PS 3250.053)	$51.8B

The adjusted benefit asset for the Plan is $51.8B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

Mercer's accounting results letter determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $3.1B
- The total present value of expected future accruals is $100.1B as at 31 December 2016

Mercer also noted the present value of expected future accruals has been calculated on an open group basis using a perpetuity approach (i.e. the current number of active employees), by projecting the current service cost with the assumed salary scale and discounting with interest. This is in line with PSAS requirements.

We have validated Mercer's calculation of the total present value of expected future accruals of $100.1B. We have estimated the present value of the Plan's expected future accruals to be approximately $95B, based on the current number of active employees and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)
- Discount rate of 6.00%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $3.1B / (0.06-0.0275) = $95B.

We note that our estimate is approximately $5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuaries to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no minimum fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no minimum contribution that the Province is required to make, regardless of any surplus. The sponsors of the Plan can agree to any level of contribution through negotiation that leads to an actuarially balanced funding valuation. The Plan's funding level has an impact on the contribution rates, i.e. they are made with consideration for the Plan's funding surplus. In other words, if the Plan is overfunded, the joint sponsors can agree to reduce contributions, or even take a full contribution holiday. Therefore, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS. It is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OTPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OTPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan). This interpretation is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Plan surplus that can be withdrawn

As discussed in Section 2, we have assumed no Plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$100.1B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	0.0B
Expected future benefit (PS 3250.056)	$100.1B

The Plan's expected future benefit is $100.1B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$51.8B
Plan's expected future benefit (PS 3250.056)	$100.1B
Valuation allowance (PS 3250.054) [max (0, $51.8B – 100.1B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$26.9B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B

Accordingly, the Province's portion of the Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B
Province's portion of the accrued benefit asset (50%) [PS3250.050 x 50%]	13.5B
Other Province specific adjustment made by OPCD	(1.2)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$12.3B

Based on the results of the analysis above, OPCD may draw the conclusion that an accrued benefit asset of $12.3B (without any asset impairment) could be recognized for the Province's financial reporting under PSAB.

While the analysis in this document has been prepared independently, the conclusions overall are consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Appendix
Information Provided

Our analysis is based on the following information we received:

- Actuarial valuation report for OTPP as at 1 January 2016 prepared by Mercer for funding purposes
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re; Ontario Teachers' Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- Teachers' Pension Act
- OTPP Funding Management Policy
- Letter Re: Accounting results as at 31 March 2017 prepared by Mercer
- Pension Asset Expert Advisory Panel report

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Ontario Teacher's Pension Plan ~~- DRAFT~~
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

This document provides the results of our analysis and recommendations to OPCD management regarding the recognition of an accrued benefit asset for OTPP as at 31 March 2017. The purpose of this document is to support OPCD in forming its opinion on appropriate accounting related to OTPP in the Province's financial statements. This document does not constitute an accounting opinion and should be used as such. This document is intended for OPCD's use only. Please inform us in writing if you would like to share this document more broadly.

As at 31 March 2017, prior to considering the possible need for a valuation allowance, OPCD determined the following~~s~~:

- Plan's accrued benefit asset is $26.9B (obligation of $123.8, market related-value of asset of $169.8B, unamortized actuarial gain of $19.1B)
- The Province's portion (50%) of the accrued benefit asset is $12.3B[1]

Since our analysis determined that a valuation allowance is not required at 31 March 2017, it would appear appropriate to report the Province's portion of the accrued benefit asset of $12.3B for its respective portion of the Plan.

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS. The Plan is jointly sponsored by the Province, through the Minister of Education, and the Ontario Teachers' Federation ("OTF"), representing the employees.

[1] Reflects specific downward net adjustment of $1.2B by OPCD to the Province's portion of the Plan for the Province's financial statements

- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors under the Teacher's Pension Act ("Act").
- Funding valuations must be filed at least once every three years. The Funding Management Policy ("FMP") provides the joint sponsors a framework of priorities in determining how the surplus/deficiency should be addressed. If there is a surplus/deficiency on a preliminary funding valuation basis, the joint sponsors must negotiate and agree to changes in future contribution levels and/or benefit levels to result in an actuarially balanced valuation. An actuarial valuation in this context, is considered balanced if the value of future contributions to the Plan equals to the value of future benefits from the Plan.
- Both contribution level and benefit levels are to be negotiated and the FMP does not specify any minimum contribution requirement. If the value of future contributions is greater than needed to pay the benefits, then the joint sponsors can agree to reduce contributions or increase benefits, while maintaining the concept of 50/50 sharing of costs between the two joint sponsors.
- Changes to contribution levels and benefit levels must reflect the sharing principle in that each joint sponsor is responsible for their share of deficit or entitled to their share of surplus.
- The Act or the Plan documents do not prohibit contribution holidays (i.e. surpluses belonging to the joint sponsors may be applied to reduce contributions).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (the use of this earlier measurement date is permitted under PSAS 3250.039~~)~~). We do not anticipate that the conclusion would be different at 31 March 2017
- Assumed inflation protection for post-2009 service will be provided at 100% of the assumed inflation rate
- Valuation discount rate: 6.00%
- Inflation rate: 2.00%
- Salary escalation rate: 2.00% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS 3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

The Province has an equal share (50%) in the costs and risks of the OTPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs*".

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. Based on Ontario case law and the Ontario Pension Benefits Act ("PBA"), it is difficult to establish the right of a plan sponsor to withdraw surplus. For purposes of determining the expected future benefit, our assumption is that the Province does not have a right to surplus withdrawal. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Funding Management Policy sets out an agreed upon framework of priorities for the sponsors in jointly determining how any funding surpluses can be utilized. The sponsors may negotiate lower contributions or an increase in benefits. There is no minimum level of contribution requirements set out by the Plan and contributions levels are negotiated. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$175.6B
Market-related value of assets ("MVRA")	$(169.8)B
Actuarial gains/losses not recognized due to smoothing	$5.8B
Unamortized actuarial gains/(losses), on MRVA basis	$19.1B
Unamortized actuarial gains/(losses), on MVA basis	$24.9B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$175.6B
Obligation	$(123.8)B
Plan surplus	$51.8B
Unamortized losses	$0.0B
Adjusted benefit asset (PS 3250.053)	$51.8B

The adjusted benefit asset for the Plan is $51.8B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

Mercer's accounting results letter determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $3.1B
- The total present value of expected future accruals is $100.1B as at 31 December 2016

Mercer also noted the present value of expected future accruals has been calculated on an open group basis using a perpetuity approach (i.e. the current number of active employees), by projecting the current service cost with the assumed salary scale and discounting with interest. This is in line with PSAS requirements.

We have validated Mercer's calculation of the total present value of expected future accruals of $100.1B. We have estimated the present value of the Plan's expected future accruals to be approximately $95B, based on the current number of active employees and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)
- Discount rate of 6.00%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $3.1B / (0.06-0.0275) = $95B.

We note that our estimate is approximately $5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuaries to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no minimum fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no ~~contributions~~minimum contribution that the Province is required to make, regardless of any surplus. The sponsors of the Plan can agree to any level of contribution through negotiation that leads to an actuarially balanced funding valuation. The Plan's funding level has an impact on the contribution rates, i.e. they are made with consideration for the Plan's funding surplus. ~~Further~~In other words, if the Plan is overfunded, the joint sponsors can agree to reduce contributions, or even take a full contribution holiday. Therefore, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS. It is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OTPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OTPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan). This interpretation is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Plan surplus that can be withdrawn

As discussed in Section 2, we have assumed no Plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$100.1B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	0.0B
Expected future benefit (PS 3250.056)	$100.1B

The Plan's expected future benefit is $100.1B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$51.8B
Plan's expected future benefit (PS 3250.056)	$100.1B
Valuation allowance (PS 3250.054) [max (0, $51.8B – 100.1B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$26.9B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B

Accordingly, the Province's portion of the Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B
Province's portion of the accrued benefit asset (50%) [PS3250.050 x 50%]	13.5B
Other Province specific adjustment made by OPCD	(1.2)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$12.3B

~~The~~**Based on the results of the analysis above, OPCD may draw the conclusion that an accrued benefit asset of $12.3B (without any asset impairment ~~should~~) could be recognized for the Province's financial reporting under PSAB.**

While the analysis in this document has been prepared independently, the conclusions overall are consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Appendix
Information Provided

Our analysis is based on the following information we received:

- Actuarial valuation report for OTPP as at 1 January 2016 prepared by Mercer for funding purposes
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re; Ontario Teachers' Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- Teachers' Pension Act
- OTPP Funding Management Policy
- Letter Re: Accounting results as at 31 March 2017 prepared by Mercer
- Pension Asset Expert Advisory Panel report

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement

benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Christina,

I do recall reviewing the document now, but I guess we didn't have a chance to regroup. Perhaps we can set up a meeting for next week. ½ hour should suffice. Thanks. N

Subject: RE: OTPP Recognition of accrued benefit asset

Hi Nadine,

Attached is a updated version of the asset ceiling test document for OTPP, addressing your comments. I've also attached a tracked changes version (subsequent to your changes) for your reference.

Further to the request you have shared with us, we believe that the analysis contained in the attached document appropriately responds to it. In particular, the asset ceiling test has been performed in accordance with PSAS for each significant plan. The analysis considers the perpetuity of future service costs and perpetuity of any contributions that are required to be made regardless of any surplus. The asset ceiling test confirms that the asset can be recognized without impairment at 31 March 2017.

Regards,

Christina

Hi Christina and Shayan.

Thanks for sharing the draft analysis on OTPP. I was hoping you might be available for a 15 minute call later today or tomorrow to discuss my comments (attached) and next steps.

Shyrose can help to set up a time to chat.

Thanks.

Nadine

RE_ Opinion.rtf

From: Danyluk, Kerry (CA - Toronto) [kdanyluk@deloitte.ca]
To: Veinot, Cindy (TBS) [Cindy.Veinot@ontario.ca]
Subject: RE: Opinion
Date: Wednesday, September 28, 2016 16:40:06

For example, the AG office continues to believe that the following should be entered into the facts:

"However, we recognize that the significant difference between the discount rate used by OTTP and the discount rate used by the Province has contributed to the issue of a Pension Asset on the Government's financial statements that we are recommending be corrected. Our cross Canada review indicated that this situation is a significant anomaly in Canada"

We had tried to point out that that is not a fact but their viewpoint. There are more of that nature.

Subject: Re: Meeting on employee future benefits
Date: Friday, June 09, 2017 16:50:22
Attachment 1: image001.png

Hi Shayan,

Please see responses from EDU to your questions.

1) Did the school boards reach out to their actuaries/consultants to get input from them?

Yes, boards sought input from their actuaries. Both parties had questions on the implementation, and therefore reached out to the ministry for clarification.

2) Was EDU in agreement with the view we shared?

EDU's opinion was that due to the nature of the funding, there would be no employee future benefit obligation. This was the opinion we articulated at the beginning of the discussions.

Thanks,

Alicia

Hi Shayan,

I believe the discussion will be just about the LTD liability.

I will contact EDU to get answers to your other questions.

Thanks,

Alicia

Subject: RE: Meeting on employee future benefits

Hi Alicia,

I will send you some times that work for our team. I have a few questions for you:

Are there other items that we'll discuss aside from the valuation for LTD's? If not, then the discussion will probably be more actuarial in nature and it may make more sense for myself or Uros to be more involved from the EY side.

Did the school boards reach out to their actuaries/consultants to get input from them? Was EDU in agreement with the view we shared?

Thanks,

Shayan

Hi Shayan/Christina,

Ministry of Education (School Boards, ELHT related) would like to schedule a call with the school board auditors (Deloitte and KPMG in this case) to have a further discussion on the liability for employees on LTD.

EDU would like your counterpart from the accounting side to join the call and lead the discussion with the school boards auditors.

Please let me know whether you can reach out to your colleagues and let me know a time that will work for them.

Thanks,

Alicia

Cindy

Will work today but will need review by Matt on the wording

For question 2 - just to clarify your thought - are you saying that 50% of surplus is always used or if the government 50% share

$6.8 billion preliminary funding surplus used to boost pensions of members who retired after 2009 to the level they would have been at if full inflation protection had been provided each year since they retired. The surplus funds were also used to raise conditional inflation protection for pension credit earned after 2009 to 70% from 60% of the increase in the cost of living.

Both changes go into effect in January 2016. In addition, some surplus funds were reserved to help facilitate stability in contribution and benefit levels should a future funding valuation show a decline in assets or increase in

pension costs.

Subject: Re: OTTP question

The plan itself "aims"at 100% but it is not automatic, it is conditional

But the 100% notion remains through the surplus that may come up

Also the 50/50 concept remains for the situation when not 100% is provided

So if in a year we provide less than 100% - ex it represents 1B of missing indexation- the government contributes 1B. This is the share of employee missing a benefit and employer contributing

When surplus generates, it is first used to restore benefit

So if benefits are restored and 100% is provided in the year, the government does not contribute for that part of contributon

However recently it has been situation of retirees not getting full 100% and employer contributing the "foregone inflation"

Subject: Re: OTTP question

Was just writing you the answer at the same time ...

The use of surplus within the agreement goes first to "restore indexation" on the post 2009 service to 100% and to maintain this % to increase the assumption for future indexation on that post 2009 service

So part of the amount you have in your document ended up increasing the pension benefits for the piece of indexing that was not provided yet to 100% for retirees post 2009 on their post 2009 service and part of the amount was attached to increasing conditional indexing to 70% which is an assumption of how we would index in the future the pension for post 2009 service - that piece is more a "reserved amount" because it is still conditional indexing for the future.

So no share goes to the government for contribution reduction since the 1st use is restoration

This is why we mentioned that in the accounting valuation, you do have an assumption that benefits are already 100% indexed for that post 2009 service, hence the rest is not going 1st to restoration since the assumption already takes it to full restoration

Let me know if you need more info on this or if this is clear enough.

Regards

This is the indirect effect I agree
But this is less seen as a "saving" but rather a cost not incurred
But you are right that without the surplus being used to restore indexation and increase the % for future years this would end up in more employer contributions - along with less employee benefits being paid

From: Raymond, Martin (CA - Montreal) [maraymond@deloitte.ca]
To: Veinot, Cindy (TBS) [Cindy.Veinot@ontario.ca]
CC: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]; Colley, Matthew (CA - Toronto) [mcolley@deloitte.ca]
Subject: Re: OTTP question
Date: Monday, September 12, 2016 09:48:00

The plan itself "aims"at 100% but it is not automatic, it is conditional
But the 100% notion remains through the surplus that may come up
Also the 50/50 concept remains for the situation when not 100% is provided

So if in a year we provide less than 100% - ex it represents 1B of missing indexation- the government contributes 1B. This is the share of employee missing a benefit and employer contributing

When surplus generates, it is first used to restore benefit

So if benefits are restored and 100% is provided in the year, the government does not contribute for that part of contributon

However recently it has been situation of retirees not getting full 100% and employer contributing the "foregone inflation"

Thanks,

My understanding if that the Province makes a “share the pain” payment if full indexation is not provided (e.g. to keep things equal when the employees give up some inflation indexation, the Province makes a payment in an equal amount). So wouldn’t restoring indexation stop the need of the Province to make this payment?

Subject: Re: OTTP question

Was just writing you the answer at the same time ...

The use of surplus within the agreement goes first to "restore indexation" on the post 2009 service to 100% and to maintain this % to increase the assumption for future indexation on that post 2009 service

So part of the amount you have in your document ended up increasing the pension benefits for the piece of indexing that was not provided yet to 100% for retirees post 2009 on their post 2009 service and part of the amount was attached to increasing conditional indexing to 70% which is an assumption of how we would index in the future the pension for post 2009 service - that piece is more a "reserved amount" because it is still conditional indexing for the future.

So no share goes to the government for contribution reduction since the 1st use is restoration

This is why we mentioned that in the accounting valuation, you do have an assumption that benefits are already 100% indexed for that post 2009 service, hence the rest is not going 1st to restoration since the assumption already takes it to full restoration

Let me know if you need more info on this or if this is clear enough.

Regards

Subject: Re: minister request

I'm not aware of any resources that are ready made for this.

I would think that a visual presentation using " building blocks" might work well. Similar to how appendix a of 3250 shows the components of the accrued benefit asset, valuation allowance and amortized gains visually.
However I would think you could do something comparing the ABO to the plan assets to show the difference as a surplus (being the ABA) and then show that in year 1 the ABA would be fully provided for = hit to statement of operations.
Then I would suggest showing what happens in different circumstances. For example if contributions are greater than increase liability then this increases plan assets, increases ABA and also increases the valuation allowance required. Therefore excess cash funding = expense.
Then you could show that if plan assets decrease because of poor investment returns this reduces plan assets, decreases ABA and therefore decreases the valuation allowance = a gain.
You might also show how if benefits increase this decreases ABA, decreases valuation allowance and results In a gain, all else being equal.

It would be a simplification to assume no umamortized actuarial gains/losses. There would change the extent of the swings (smoothing effect) in any one period but over several years would have the same effect.
I don't know if that makes sense to you.
I could try to draft up what I am picturing in my head but not until Sunday and that might be late, but I'm happy to look over anything your team can make a start on.

Lucy,

The minister has asked for a flow chart to help explain to the public in easy to follow presentation (flowchart?) how the AG's approach to determining pension expense impacts the fiscal plan. Specifically, he would like to be able to explain how a pension surplus becomes a pension expense because of the AG's different interpretation.

Apparently this is an urgent request that we have to complete by end of weekend. Wondering if you have any ideas or can help? Maybe you have something off the shelf? Not great odds I guess.

Thanks.

Nadine

Thanks Nadine for sending all the documents through.

It's a lot to go through, but I am sure it will be helpful in forming a view.

Subject: miscellanous (Pension Asset Ceiling)

Hi Lucy.
Just sending along additional items related to the pension file.

1) Notes below regarding Province's perspective (see below), including an overview attachment
2) Copy of the AG's issues note reflecting her position
3) Copy of government partnership guidance (PS 3060)which may have applicability to JSPPs like the situation involving OTF

I think that will be all for now w.r.t. materials. Thanks. Nadine

From the Province's perspective…

The Province continues to believe that the assets are appropriately stated in accordance with PSAB for the following reasons:

- The assets result from the excess of the contributions and asset returns over the projected benefit obligations. Given there have been no issues raised with respect to either the contributions or the asset returns, our analysis focuses on the impact of the projected benefit obligation.
- The project benefit obligation has been estimated using a discount rate based on the expected return on assets as permitted by PSAB (see paragraph .44 below). That method has been consistently applied by the Province since at least 2000.

- OTPP also used a discount rate based on the expected return on assets until 1999, at which point it changed its policy to use a rate based on high yield corporate bonds. We have attached the OTPP's year 2000 financial statements for ease of reference.

PS3250

.042 *Actuarial assumptions should be based on the government's best estimates of expected long-term experience and short-term forecasts.* [SEPT. 2001]

.043 One commonly used approach that meets this standard is the use of streamed rate assumptions. Under the streamed rate approach, the short-term forecast of fund asset earnings, for example, would reflect the rates of return that assets currently held in the fund will earn until their maturity. As those assets mature, assumptions about their expected earnings on reinvestment would move to the expected long-term rate. Similarly, there would be streamed rate assumptions for salary increases.

.020 The retirement benefits interest expense is the net of:

(a) the interest cost on the accrued benefit obligation determined by applying the discount rate determined at the beginning of the period in accordance with paragraph PS 3250.044 to the average value of the accrued benefit obligation for the period; and

(b) the expected return on plan assets for a defined benefit plan, determined by applying the assumed rate of return on plan assets to the average market-related value of assets for the period.

.044 The actuarial assumptions underlying the valuation of the retirement benefit liability and expense would be internally consistent. For example, **when a government determines its discount rates by reference to its plan asset earnings, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the short-term forecast of rates of return on assets currently held in the fund**. When a government determines its discount rates by reference to its cost of borrowing, the assumptions used to determine the short-term forecast incorporated in the discount rates would be consistent with the specific rates of interest and the periods committed to by the government on the amounts borrowed.

- Though 3250.044 indicates one option is to use discount rates by reference to the cost of borrowing, based on our jurisdictional scan of the other provinces' financial statements, we have not found any jurisdictions that use the government borrowing rate to value their pension obligations for plans that are funded by plan assets.
- We have included our analysis for your reference.

OTTP

OTTP prepares its financial statements in accordance with Part IV of the CPA Handbook. Section 4600 in part IV provides guidance on accounting for investments and pension obligations. For all other items, a pension plan chooses to follow IFRS or ASPE. OTTP has chosen to follow IFRS.

For the recording of the pension obligation, the guidance in Section 4600 is as follows:

22 *A pension plan shall measure the pension obligation required by paragraph 4600.12(g) in accordance with paragraph 4600.05(v). For this purpose,* ***a pension plan may measure the pension obligation at the defined benefit obligation amount determined by the plan's sponsor.***
.23 Guidance on determining the defined benefit obligation can be found in EMPLOYEE FUTURE BENEFITS, Section 3462, in Part II of the Handbook, and in IAS 19 *Employee Benefits* in Part I of the Handbook.

4600.12(g) is the requirement to distinguish the pension obligation in the statement of financial position and 4600.05(v) is the definition of a pension obligation of a defined benefit pension plan, which states the following, "A

pension obligation of a defined benefit pension plan is the actuarial present value of accrued pension benefits determined by applying best estimate assumptions and the projected benefit method prorated on services."

As noted, pension plans have a considerable amount of choice in determining how to account for their pension obligations – the amount as determined by the plan sponsor, using the guidance in ASPE, or using the guidance in IFRS.

OTTP has chosen to use the guidance in IFRS (IAS 19) and includes the following in its financial statements (December 2015 year end):

"The discount rate is based on market rates, as at the valuation date, of bonds issued by the Province of Ontario, which have characteristics similar to the Plan's liabilities. The discount rate was determined by applying a weighted average discount rate that reflects the estimated timing and amount of benefit payments. The inflation rate is the geometric difference between the yield on Government of Canada long-term nominal bonds and Government of Canada real-return bonds. The salary escalation rate incorporates the inflation rate assumption and long-term expectation of growth in real wages".

We have included the guidance in from IAS 19 below for comparison:

IAS 19

83 The rate used to discount post-employment benefit obligations (both funded and unfunded) shall be determined by reference to market yields at the end of the reporting period on high quality corporate bonds. For currencies for which there is no deep market in such high quality corporate bonds, the market yields (at the end of the reporting period) on government bonds denominated in that currency shall be used. The currency and term of the corporate bonds or government bonds shall be consistent with the currency and estimated term of the post-employment benefit obligations.

86 In some cases, there may be no deep market in bonds with a sufficiently long maturity to match the estimated maturity of all the benefit payments. In such cases, an entity uses current market rates of the appropriate term to discount shorter-term payments, and estimates the discount rate for longer maturities by extrapolating current market rates along the yield curve. The total present value of a defined benefit obligation is unlikely to be particularly sensitive to the discount rate applied to the portion of benefits that is payable beyond the final maturity of the available corporate or government bonds.

- OTTP is an outlier in using a discount rate based on the guidance in IAS 19 based on our review of the stand-alone financial statements of the provincially sponsored plans. We have attached our preliminary analysis (see above).

- With regards to any perception that the reported asset might be "fictitious", we point out that the funding valuations completed by OTTP and submitted to FSCO have also demonstrate that the plan is overfunded. Based on the guidance provided to the members of the plan on the OTTP's website, the surplus in the plan at March 31, 2016 (at 100%) is $13.1 billion. The difference between the $10 billion asset and the 50% of the $13.1 billion, or $6.5 billion is primarily based on the discount rate used. The preparation of the funding valuation is based on prescribed requirement and is not an accounting valuation. Nonetheless, it speaks to the fact that the plan, on a funding basis, has a surplus.

In summary, we don't believe that an adjustment is warranted to the reported pension asset on the CFS on the basis that:

- The discount rates used to value the projected benefit obligation are consistent with the requirements of PSAB.

- The AG has reviewed the discount rate each year and based on the understanding of those involved in the

current year and historically, has never raised a concern with the rates used.

- The asset recorded on the pension's books is not fictitious and is supported by the OTPP's own calculations and public disclosures.[attachment "image001.png" deleted by Lucy Durocher/CA/ABAS/PwC] [attachment "image002.png" deleted by Lucy Durocher/CA/ABAS/PwC] [attachment "Financial Statements 2000.pdf" deleted by Lucy Durocher/CA/ABAS/PwC] [attachment "Pension Discount Rate Analysis for AG.xlsx" deleted by Lucy Durocher/CA/ABAS/PwC] [attachment "Summary (overview) to pwc sept 16.docx" deleted by Lucy Durocher/CA/ABAS/PwC] [attachment "Scanned from a Xerox multifunction device.pdf" deleted by Lucy Durocher/CA/ABAS/PwC]

Subject: PSAB Accounting Discussion Group and Pension-related matters

Hi Matt.

It would be good if we could touch base on the upcoming PSAB ADG agenda as well as the pension related SOW.

With respect to the ADG, I understand that there will be a couple of items on the agenda for the November 18th meeting which may relate to/impact Ontario's financial reporting. Specifically, the ADG is expected to address whether an investment holdco could be accounted for as a GBE, as well as the determination of shared control.

I was told that both of these items arose from discussions among the large firms. I was hoping that you might be able to confirm your understanding that these items will be addressed at the November 18th ADG, and also that you might be able to share a copy of the ADG submissions for each of these items at your earliest convenience.

On pension-related matters, would like to touch base on next steps. As you know, the original SOW contemplated additional work by Deloitte beyond the initial assessments done by Martin. In light of the current Panel initiative, we would like to start some of the incremental work now.

Unfortunately, my schedule is pretty hectic, but Shyrose can help to find some time for us to chat on these two items. Talk to you soon.

Nadine

Hi Mark,

The spring as indeed arrived, and I hope you are getting some time to enjoy it.

Thank you for checking on the letters and the request to share it with the AG's office. While I do not anticipate that sharing of the letters with the AG's office will be an issue, would it be ok if I provided the final confirmation after all the letters are issued to you?

In terms of outstanding items, we are waiting for OPSEUPP's final position to complete our analysis.

Subject: Pension Asset - additional advice

Hi Uros – hope all is well. Spring has finally arrived!

In reviewing our 2017-18 Audit Plan with the AG, the following request has been made:

· Request the asset ceiling test to be performed for each significant pension plan with an accrued benefit asset using the perpetuity assumption for both service costs and contributions.

Cindy has asked me to reach out to you and ask for the "additional advice" letter that was provided last year (see attached) w.r.t. the asset ceiling calculation. We would then appreciate your confirmation that we may share this letter with the Auditor General's office as it pertains to our 2017-18 audit.

If you require something more formal for this request, please let me know.

Happy to discuss,

Thanks.

Subject: Pension Asset Expert Panel

Hi Lucy,

As you may have seen, the Province is setting up an expert panel to review the pension asset issue. We would like to include an actuary on the panel, from outside the accounting firms (so as not to conflict another firm as the panel may well engage someone). Would you be able to ask your internal actuarial contacts if they have any recommendations for someone from one of the actuarial firms who has a high level of expertise in JSPPs. It could be someone who has recently retired.

Thanks,

Cindy

Attachment 2: Checklist of procedures (DRAFT).xlsx

Hi Nadine,

Here is a draft checklist with the procedures to be performed to prepare the figures to be reported in respect of the plans.

This documents the steps to be taken and suggested checks to be conducted. We note that this checklist is general and depending on the specific circumstances or situations, additional items may need to be added. However, I hope it is still helpful for the documentation of your processes/controls.

A potential project where we can add value would be to update the spreadsheets used to better facilitate these steps and reduce the risk of errors. This is included in our project list as one of the “Next week and after” projects.

Let me know if you have any questions or wish to discuss.

Regards,

Shayan

image001.pdf

Checklist of procedures (DRAFT).pdf

Pension reporting procedures - DRAFT

Inputs

All year-end assumptions are consistent with the basis chosen by OPCD
Contributions are entered correctly, including any split between past service cost (employer/employee) and transfers.
Service cost is consistent with the new basis (as at year-end) for next year's expense (and basis for future year's projection)
Headcount projection is consistent with OPCD's expectation.
Market value of assets is updated to actual amount and not based on projection formula (assuming EROA)
Market asset reconciliation is consistent (i.e. if preliminary MVA was used for prior year-end, should there be any adjustments made when using the source of information provided? Was there any contribution receivable that was included/excluded that would impact the contributions inputs? Should the gain/loss be different?)

Assets reconciliation (on total plan) - Market Value of Assets ("MVA"), Market-Related Value of Assets ("MRVA")

MVA reconciles from prior year based on cash flows, and investment gains and losses
Actual return on MVA should be net of expenses (if EROA assumption is net of expenses)
Calculation of market related value of assets
The difference between actual and expected return on MRVA is appropriately amortized
The inclusion/exclusion of non-investment expenses should be consistent with the EROA assumption
Confirm whether cash flows reflect any receivables and make appropriate balance sheet adjustments
Confirm mid-year (i.e. "average") cash flows consistently used in determining MRVA, consistent with method used in determining the return on assets component included for pension expense
Ensure reasonableness of return on assets considering asset allocation, market benchmarks and consistency with similar plans

Obligation reconciliation (on total plan basis)

Opening position is consistent with prior year-end
Interest on obligation is consistent with interest cost included in expense
Service cost includes portions relating to both joint sponsors
Past service cost and transfers are reconciled separately from current service cost
Benefit payment is consistent with benefit payment under the asset reconciliation
Actuarial gain/loss is appropriate (can be explained by experience, change in assumptions etc.)
Confirm year-end obligation is consistent with the assumptions basis chosen by OPCD
The signs of all components are appropriate; year-end obligation reconciles from the previous year-end obligation considering all components

Expense

Determination of Province's current service cost is consistent with the province's share of the plan, net of any contributions by other agencies (employers' portion)
Current service cost does not include any transfer or past service
Interest cost is consistent with the interest reflected for obligation reconciliation, determined based on beginning of the year discount rate
Expected return on assets is consistent with the beginning of the year assumption
Expected return on assets is consistent with the market-related value of assets calculation
Amortization of unrecognized gains/losses is consistent with the unrecognized gains/losses at beginning of the year and prior streams

New gains/losses arising during the year to be amortized

Obligation actuarial gain/loss to be amortized over EARSL, amount as per "obligation reconciliation". Gain/loss should not include any transfer or past service cost
Any differences in expected MRVA and actual MRVA is amortized (return below/over EROA)
Cash flows used to determine the Expected MRVA should be the same as the actual MRVA reconciliation

Continuity schedule / year-end (100%)

Comparison of opening balance with closing amounts at the prior year-end
Net liability (prior to valuation allowance) reconciles from the previous year-end position (considering employer contributions and expense)
Net liability (prior to valuation allowance) reconciles from the current funded status (considering closing obligation, MRVA, unamortized amounts and adjustments)
Balance test: net liability determined under (2) and (3) are equal

Continuity schedule / year-end (Province) - applies to jointly sponsored plans

Appropriate portion of the Plan is recognized for the province (e.g. 50%)
Reversal of any contribution receivable (by the province) included in the funded position (i.e. MRVA)
Consistency between any adjustment for accumulated contributions made by other agencies (employer portion) vs. the recognition under the "agencies" reporting when consolidated
Application of valuation allowance, if any

Hi Cindy,

Yes, I can certainly attend the call with OPTrust.

For the letter to OTPP, are you thinking some language that would summarize our discussion and ask them to confirm it?

Uros

Hi Uros – a couple of questions for you:

1) I would like to invite you to attend the call with OPTrust re: OPSEU – are you ok with attending that call? It is yet to be scheduled.

2) Could you draft some preliminary language for a letter that we could send to OTPP re: the discussion you had with them on Thursday?

Thanks,

Cindy

Hi Nadine,

You are correct – only those contributions that are required to be made regardless of any surplus would go to reduce the economic benefit available from expected future accruals for service. Given that there are no such requirements for either OTPP or OPSEUPP, the present value of such contributions is nil for both plans.

Examples of contributions that would be required regardless of any surplus are those contributions that cannot be reduced below a certain level even if the plan was overfunded. New Brunswick plans are examples of such plans – they have a minimum contribution floor of 9% that must be made regardless of the funded status of the plan. In other words, even if the plan was in surplus, the contributions could be reduced below 9%. So that contribution of 9%, that must be made regardless of any surplus, would be present-valued and included in the para 56 and 57 calculation. This is the main reason NB had to write down their pension asset. However, in contrast, there are no such minimum contribution floors for OTPP and OPSEUPP – the contributions could be reduced or eliminated if there were excess assets in the plan.

Another example is a set-up where the employer must at least match employee contributions (eg. 4% of pay) but where the employee contributions are not reassessed based on the funded level of the plan. In that case, the employer must contribute at least 4% regardless of any surplus. Again, in the OTPP and OPSEUPP case, there are no such requirements – while generally speaking employer and employees share costs 50/50%, both are subject to increases and reductions depending on the funded status of the plan, with no minimums that would apply regardless of surplus.

For greater clarity, treating any funding contributions as “contributions required regardless of any surplus” would be incorrect, as that would ignore the distinction made in paragraphs 56/57 (otherwise PSAS would simply refer to “contributions”). It would also be inconsistent with Canadian practice where only contributions like those descried in the examples above would normally be taken into account. Finally, it would not align with the Expert Panel conclusions.

Please let me know if this answers your question below.

Thanks Uros.

Since we aren't required to make minimum contributions regardless of surplus, I'm not sure that I understand how a run with perpetual minimum contributions would comply with the requirements of PSAB as noted. Please help me to understand. Thanks in advance. Nadine

.056 A government determines its expected future benefit as the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, **less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus**; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, **less required employee contributions and minimum contributions the government is required to make regardless of any surplus**, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

Good morning, Nadine,

Thank you for sharing this request. The analysis requested is available and it is contained in the two documents we had prepared for you (attached here for your reference). The documents are still draft, since as we discussed they will need to be finalized once the decisions have been made regarding the year-end adjustments.

These documents contain complete PSAB asset ceiling test analysis for OTPP and OPSEUPP respectively. They include the perpetuity assumption for both Service Cost and for Contributions. As noted in the memos (section 3.2 in each of the documents), the present value, in perpetuity, of future service cost was $100.1B for OTPP and $13.88B for OPSEUPP. The present value, in perpetuity, of future contributions that are required to be made regardless of any surplus is Nil for both OTPP and OPSEUPP. The analysis is based on our understanding of PSAS asset ceiling requirements; it is also consistent with how these rules are applied in Canadian practice, and it is consistent with the conclusions of the Expert Panel report.

Regarding the source of OTPP and OPSEUPP contribution requirements, those can be found in the most recently filed actuarial reports for funding purposes. I trust your office has a copy of these for each plan. Please note that these reports, and the overall governance and contribution framework for OTPP and OPSEUPP, do not require either of the plan sponsors to make contributions even in the event that the plan is in a surplus position.

Please let me know if you need any further detail or if you'd like to discuss.

Good morning Shayan.

Further to our recent conversation, can you please confirm that E&Y's asset ceiling analysis for OTPP and OPSEUPP did not include the 'perpetual' analysis as referenced by the OAG in the attached, and the reason therefore.

Also, can you please identify the specific pieces of information that the OAG would need to be able to allow her to complete the additional analysis. We had advised her staff during an audit status meeting last Thursday that they would already have it in their possession, but we will want to include specific reference to the docs in our response to the AG memo.

Thanks in advance.

Nadine

Building a better working world

Nadine Petsche
Director, Accounting Policy and Financial Reporting
Office of the Provincial Controller Division
7 Queen's Park Crescent, 2nd Floor
Toronto ON M7A 1Y7

4 April 2017

Ontario Teacher's Pension Plan
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Teachers' Pension Plan ("OTPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

This document provides the results of our analysis and recommendations to OPCD management regarding the recognition of an accrued benefit asset for OTPP as at 31 March 2017. The purpose of this document is to support OPCD in forming its opinion on appropriate accounting related to OTPP in the Province's financial statements. This document does not constitute an accounting opinion and should be used as such. This document is intended for OPCD's use only. Please inform us in writing if you would like to share this document more broadly.

As at 31 March 2017, prior to considering the possible need for a valuation allowance, OPCD determined the following:

- Plan's accrued benefit asset is $26.9B (obligation of $123.8, market related-value of asset of $169.8B, unamortized actuarial gain of $19.1B)
- The Province's portion (50%) of the accrued benefit asset is $12.3B[1]

Since our analysis determined that a valuation allowance is not required at 31 March 2017, it would appear appropriate to report the Province's portion of the accrued benefit asset of $12.3B for its respective portion of the Plan.

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS. The Plan is jointly sponsored by the Province, through the Minister of Education, and the Ontario Teachers' Federation ("OTF"), representing the employees.

[1] Reflects specific downward net adjustment of $1.2B by OPCD to the Province's portion of the Plan for the Province's financial statements

- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors under the Teacher's Pension Act ("Act").
- Funding valuations must be filed at least once every three years. The Funding Management Policy ("FMP") provides the joint sponsors a framework of priorities in determining how the surplus/deficiency should be addressed. If there is a surplus/deficiency on a preliminary funding valuation basis, the joint sponsors must negotiate and agree to changes in future contribution levels and/or benefit levels to result in an actuarially balanced valuation. An actuarial valuation in this context, is considered balanced if the value of future contributions to the Plan equals to the value of future benefits from the Plan.
- Both contribution level and benefit levels are to be negotiated and the FMP does not specify any minimum contribution requirement. If the value of future contributions is greater than needed to pay the benefits, then the joint sponsors can agree to reduce contributions or increase benefits, while maintaining the concept of 50/50 sharing of costs between the two joint sponsors.
- Changes to contribution levels and benefit levels must reflect the sharing principle in that each joint sponsor is responsible for their share of deficit or entitled to their share of surplus.
- The Act or the Plan documents do not prohibit contribution holidays (i.e. surpluses belonging to the joint sponsors may be applied to reduce contributions).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (the use of this earlier measurement date is permitted under PSAS 3250.039). We do not anticipate that the conclusion would be different at 31 March 2017
- Assumed inflation protection for post-2009 service will be provided at 100% of the assumed inflation rate
- Valuation discount rate: 6.00%
- Inflation rate: 2.00%
- Salary escalation rate: 2.00% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS 3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

The Province has an equal share (50%) in the costs and risks of the OTPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs*".

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. Based on Ontario case law and the Ontario Pension Benefits Act ("PBA"), it is difficult to establish the right of a plan sponsor to withdraw surplus. For purposes of determining the expected future benefit, our assumption is that the Province does not have a right to surplus withdrawal. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Funding Management Policy sets out an agreed upon framework of priorities for the sponsors in jointly determining how any funding surpluses can be utilized. The sponsors may negotiate lower contributions or an increase in benefits. There is no minimum level of contribution requirements set out by the Plan and contributions levels are negotiated. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$175.6B
Market-related value of assets ("MVRA")	$(169.8)B
Actuarial gains/losses not recognized due to smoothing	$5.8B
Unamortized actuarial gains/(losses), on MRVA basis	$19.1B
Unamortized actuarial gains/(losses), on MVA basis	$24.9B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$175.6B
Obligation	$(123.8)B
Plan surplus	$51.8B
Unamortized losses	$0.0B
Adjusted benefit asset (PS 3250.053)	$51.8B

The adjusted benefit asset for the Plan is $51.8B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

Mercer's accounting results letter determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $3.1B
- The total present value of expected future accruals is $100.1B as at 31 December 2016

Mercer also noted the present value of expected future accruals has been calculated on an open group basis using a perpetuity approach (i.e. the current number of active employees), by projecting the current service cost with the assumed salary scale and discounting with interest. This is in line with PSAS requirements.

We have validated Mercer's calculation of the total present value of expected future accruals of $100.1B. We have estimated the present value of the Plan's expected future accruals to be approximately $95B, based on the current number of active employees and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)
- Discount rate of 6.00%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $3.1B / (0.06-0.0275) = $95B.

We note that our estimate is approximately $5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuaries to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no minimum fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no minimum contribution that the Province is required to make, regardless of any surplus. The sponsors of the Plan can agree to any level of contribution through negotiation that leads to an actuarially balanced funding valuation. The Plan's funding level has an impact on the contribution rates, i.e. they are made with consideration for the Plan's funding surplus. In other words, if the Plan is overfunded, the joint sponsors can agree to reduce contributions, or even take a full contribution holiday. Therefore, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS. It is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OTPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OTPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan). This interpretation is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Plan surplus that can be withdrawn

As discussed in Section 2, we have assumed no Plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$100.1B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	0.0B
Expected future benefit (PS 3250.056)	$100.1B

The Plan's expected future benefit is $100.1B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$51.8B
Plan's expected future benefit (PS 3250.056)	$100.1B
Valuation allowance (PS 3250.054) [max (0, $51.8B – 100.1B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$26.9B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B

Accordingly, the Province's portion of the Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$26.9B
Province's portion of the accrued benefit asset (50%) [PS3250.050 x 50%]	13.5B
Other Province specific adjustment made by OPCD	(1.2)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$12.3B

Based on the results of the analysis above, OPCD may draw the conclusion that an accrued benefit asset of $12.3B (without any asset impairment) could be recognized for the Province's financial reporting under PSAB.

While the analysis in this document has been prepared independently, the conclusions overall are consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Information Provided

Our analysis is based on the following information we received:

- Actuarial valuation report for OTPP as at 1 January 2016 prepared by Mercer for funding purposes
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re; Ontario Teachers' Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- Teachers' Pension Act
- OTPP Funding Management Policy
- Letter Re: Accounting results as at 31 March 2017 prepared by Mercer
- Pension Asset Expert Advisory Panel report

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

7 April 2017

Ontario Public Service Employees' Union Pension Plan - DRAFT
Accrued benefit asset recognition

The Office of the Provincial Controller Division ("OPCD") has asked EY to undertake an asset ceiling test to inform OPCD's decision as to whether a valuation allowance is required in relation to the Province's share of the Ontario Public Service Employees' Union Pension Plan ("OPSEUPP", or the "Plan") under the Public Sector Accounting Standards ("PSAS").

This document provides the results of our analysis and recommendations to OPCD management regarding the recognition of an accrued benefit asset for OPSEUPP as at 31 March 2017. The purpose of this document is to support OPCD in forming its opinion on appropriate accounting related to OPSEUPP in the Province's financial statements. This document does not constitute an accounting opinion and should not be used as such. This document is intended for OPCD's use only. Please inform us in writing if you would like to share this document more broadly.

As at 31 March 2017, prior to considering the possible need for a valuation allowance, OPCD determined the following:

- Plan's accrued benefit asset is $1.95B (obligation of $16.60B, market related-value of asset of $18.51B, unamortized actuarial loss of $0.04B)
- The Province's portion (50%) of the accrued benefit asset is $0.61B[1]. This amount does not reflect any adjustment for the differential use of the Rate Stabilization Fund ("RSF") by the joint sponsors discussed later in this document.

Since our analysis determined that a valuation allowance is not required at 31 March 2017, it would appear appropriate to report the Province's portion of the accrued benefit asset of $0.65B ($0.61B, adjusted for the estimated differential use of the RSF) for its respective portion of the Plan.

1 Background Information

1.1 Key characteristics of the Plan

Following key characteristics of the Plan are most relevant to our analysis:

- The Plan is a Joint Defined Benefit Plan ("JDBP") under PSAS.

[1] Reflects specific downward net adjustment of $0.37B by OPCD to the Province's portion of the Plan for the Province's financial statements

- The Plan is jointly sponsored by the Province, represented by the Chair of the Management Board of Cabinet, and the Ontario Public Service Employees' Union ("OPSEU"), representing the employees.
- Funding valuations must be filed at least once every three years.
- The Province's portion of the Plan is 50% of the overall Plan, reflecting the sharing principle between the sponsors in accordance with the plan text and sponsorship agreement:
  - Employers match the contributions of the members.
  - Any emerging actuarial gains and losses are to be shared equally between the sponsors.
  - Any surplus is to be shared equally between the joint sponsors under the current arrangement (the proportion may be collectively bargained).
  - Any deficit is to be funded by the joint sponsors and required contributions will increase in equal amounts.
- The Plan has established a Rate Stabilization Fund ("RSF"), as the sum of past unspent surpluses which were evenly allocated between the joint sponsors. Each sponsor may decide, without the other joint sponsor's consent, the use of its portion of the surplus.
- As at 31 December 2014, the date of the most recently completed funding valuation, the Province's RSF balance was $0.1B and the OPSEU's RSF balance was $0.01B. This means that the OPSEU joint sponsor has historically used $0.09B more surplus than the Province.
- While the joint sponsors established a trust ("OPTrust"), the Board of Trustees is responsible for the administration of the Plan and the investment of the assets. Decisions related to amendments to the trust agreement, plan text, and sponsorship agreement (e.g. contribution level, benefit to be provided) are the responsibility of the joint sponsors.
- The funding policy provides the joint sponsors a recommended framework for addressing the priorities for surplus use and deficit funding.
- The Plan documents explicitly state that no surplus shall be paid out of the fund to either sponsors.
- Contribution holiday does not constitute a surplus withdrawal according to the sponsorship agreement. Furthermore, the sponsorship agreement permits contribution holiday (i.e. sponsors may use their respective RSF to meet any additional contribution requirements).

1.2 Assumptions for financial reporting

The following highlights key assumptions applied for the valuation of the obligation and costs at 31 March 2017 for the purpose of Province's financial statements. The assumptions represent best estimate assumptions, selected by the Province:

- The Province's financial statement year-end reporting is as at 31 March 2017 (the "measurement date")
- The measurement of assets and obligations are as at 31 December 2016 (the use of this earlier measurement date is permitted under PSAS 3250.039). We do not anticipate that the conclusion would be different at 31 March 2017
- Valuation discount rate: 5.90%
- Inflation rate: 2.00%
- Salary escalation rate: 1.75% per annum to 2019 and 2.75% thereafter

2 Considerations for the accrued benefit asset recognition

PSAS contains relevant guidance for recognition of an accrued benefit asset in respect of the Province's share of the Plan at 31 March 2017. We have considered the guidance under PS 3250 relating to recognition of an accrued benefit asset based on an expected future benefit available to the Province, in the context of accounting for a JDBP under PS 3250.

Joint Defined Benefit Plans

PS 3250.081 states "*when a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.*"

Under the current arrangement, the Province has an equal share (50%) in the costs and risks of the OPSEUPP. Both entitlement to any surplus and responsibility for any deficiency are shared equally between the Province and the employee sponsor. The determination of a net asset or liability (and valuation allowance, if applicable) is therefore performed on an aggregate Plan basis, and the Province's portion of that asset/liability is determined subsequently by applying 50% portion to the Province. A further adjustment may need to be made to account for differential use of RSF by each of the joint sponsors. The need for RSF adjustment was also noted in the Pension Asset Expert Advisory Panel report.

Province's ability to benefit from an accrued benefit asset

PS 3250.050 states "*an accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs"*.

PS 3250.052 states "*a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus*".

The Province is only able to recognize an accrued benefit asset to the extent that they are able to derive an expected future benefit from such asset. As per PS 3250.052, an expected future benefit may arise from (i) withdrawal of surplus or (ii) by taking a contribution holiday or receiving a refund of contributions. The Plan text explicitly prohibits any surplus withdrawal by both joint sponsors. However, contribution holidays are permitted by the Ontario PBA and the Plan documents. As such, the Province has access to an expected future benefit through future contribution reductions. The Province may use its portion of the RSF for contribution reduction without any restriction and does not require consent by the other sponsor. Therefore, the joint sponsors can each benefit from their respective portion of plan surplus for accounting purposes.

3 Determination of the accrued benefit asset recognition

This section provides details on the determination of the accrued benefit asset in respect of the Plan. Based on PS 3250.50 to 3250.059 (Limit on the carrying amount on accrued benefit asset), we have estimated the adjusted benefit asset, the expected future benefit, the valuation allowance, and the accrued benefit asset (net of valuation allowance) to be recognized by the Province under PSAS as at 31 March 2017.

3.1 Adjusted benefit asset

PS 3250.053 states "*To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets)*".

Based on the financial information for the Plan as at the measurement date provided by OPCD, we have determined the unamortized actuarial gains/losses for the Plan on a basis using the market value of assets as follows:

Market value of assets ("MVA")	$18.90B
Market-related value of assets ("MVRA")	$(18.51)B
Actuarial gains/(losses) not recognized due to smoothing	$0.39B
Unamortized actuarial gains/(losses), on MRVA basis	$(0.04)B
Unamortized actuarial gains/(losses), on MVA basis	$0.35B

As there is an unamortized actuarial gain (determined on a basis using market value of assets), the adjusted benefit asset is equal to the Plan's surplus position on a market basis:

Market value of assets	$18.90B
Obligation	$(16.60)B
Plan surplus	$2.30B
Unamortized losses	$0.00B
Adjusted benefit asset (PS 3250.053)	$2.30B

The adjusted benefit asset for the Plan is $2.30B.

3.2 Expected future benefit

PS 3250.56 states **"***a government determines its expected future benefit the sum of:*

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) *the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations".*

Present value of the Plan's expected future accruals

PS 3250.57 further states "*A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation…"*

According to the accounting results letter provided by OPTrust, the Plan's actuary (Willis Towers Watson, "WTW") has determined the following using the Province's assumptions for financial reporting under PSAB:

- The 2017 total service cost is $0.39B
- The total present value of expected future accruals is $13.88B as at 31 December 2016

The letter indicates that the present value of expected future accruals has been calculated on an open group basis (i.e. the current number of active employees). This is in line with PSAS requirements.

We have validated the actuary's calculation of the total present value of expected future accruals of $13.88B. We have estimated the present value of the Plan's expected future accruals to be approximately $12.38B, on an open group basis using a perpetuity approach (i.e. the current number of active employees) and the province's assumptions for financial reporting under PSAB as at the measurement date:

- Annual salary increase of 2.75% (ultimate rate)
- Discount rate of 5.90%

Our estimate of the present value of expected future accrual has been determined as follows: 2017 current service cost / (discount rate – ultimate rate of salary increase) = $0.39B / (0.059-0.0275) = $12.38B.

We note that our estimate is approximately $1.5B lower than the amount determined by the actuary. The actuary's result is likely more refined; however, the use of either figure will result in a valuation allowance of nil as the expected benefit exceeds the adjusted benefit asset. Therefore, we have not followed up with the actuary to reconcile this difference.

Minimum contributions the Province is required to make regardless of any surplus

As there is no minimum fixed contribution (as a percentage or dollar amount) requirement which is independent of the Plan's funding status, our interpretation is that there are no minimum contributions that the Province is required to make, regardless of any surplus. Moreover, since there is no restriction on the sponsor's use of its RSF, the contribution can be reduced to zero for the sponsors without each other's consent. The sponsorship agreement explicitly explains that a contribution holiday can be taken when there

is a surplus. Therefore, there is no minimum level of contribution required "regardless of any surplus". This interpretation is consistent with the interpretation we see applied in practice for other Canadian plan sponsors reporting under PSAS. It is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Present value of the required employee contributions

We note that PS 3250.056 is written in the context of a single sponsor Plan while the OPSEUPP is a joint-sponsored Plan. As such, the present value of the required employee contributions for OPSEUPP is nil (i.e. the employee contributions being referenced by PS 3250.056 is in respect to contributions made by employees who are not sponsor of the Plan). This interpretation is also consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Plan surplus that can be withdrawn

No plan surplus can be withdrawn by the joint sponsors.

Expected future benefit

Using the actuary's estimate of the present value of the Plan's expected future accruals, the expected future benefit for the Plan is the present value of the Plan's expected future accruals:

Present value of the Plan's expected future accruals (PS 3250.57)	$13.88B
Present value of the required employee contributions (PS 3250.056a)	(0.0)B
Minimum required contributions regardless of any surplus (PS 3250.056a)	(0.0)B
Plan surplus that can be withdrawn (PS 3250.056b)	0.0B
Expected future benefit (PS 3250.056)	$13.88B

The Plan's expected future benefit is $13.88B.

3.3 Valuation allowance

PS 3250.054 states "*the adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required*".

Per 3.1 and 3.2 of this letter, we have determined that the Plan's expected future benefit exceeds the Plan's adjusted benefit asset:

Plan's adjusted benefit asset (PS 3250.053)	$2.30B
Plan's expected future benefit (PS 3250.056)	$13.88B
Valuation allowance (PS 3250.054) [max (0, $2.30B – 13.88B)]	$0.0B

The Plan's accrued benefit asset is not impaired, and accordingly, no valuation allowance is required.

3.4 Accrued benefit asset recognition

The Plan's accrued benefit asset, net of valuation allowance as at the measurement date is:

Accrued benefit asset	$1.95B
Valuation allowance (PS3250.054)	0.0B
Accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$1.95B

Based on the RSF allocation as at 31 December 2014, the most recent funding valuation date, OPSEU has utilized their RSF $0.09B more than the Province:

OPSEU's RSF balance at 31 December 2014	$0.01B
Province's RSF balance at 31 December 2014	0.10B
Adjustment for the differential use of RSF by the joint sponsors	$0.09B

In other words, the Province has $0.09B more of unused RSF than OPSEU at 31 December 2014.

Accordingly, the Province's portion of the Plan's accrued benefit asset, adjusted for the relative position of the sponsors' RSFs and net of valuation allowance as at the measurement date is:

Plan's accrued benefit asset to be recognized (net of valuation allowance) (PS3250.050)	$1.95B
Adjustment for the differential use of RSF by the joint sponsors	(0.09)B
Plan's accrued benefit asset to be divided equally between the joint sponsors	1.86B
Province's portion of the accrued benefit asset to be divided evenly (50% x 1.86B)	0.93B
Province's unused RSF in excess of OPSEU's RSF	0.09B
Other Province specific adjustment made by OPCD	(0.37)B
Accrued benefit asset to be recognized by the Province (PS3250.050)	$0.65B

Based on the results of the analysis above, OPCD may conclude that an accrued benefit asset of $0.65B could be recognized for the Province's financial reporting under PSAS. This asset is after an adjustment for the differential use of RSF by the joint sponsors. No asset impairment is required.

While the analysis in this document has been prepared independently, the conclusions overall are consistent with the conclusions of the Pension Asset Expert Advisory Panel report.

Appendix
Information Provided

Our analysis is based on the following information we received:

- Province's financial reporting information under PSAS as at 31 March 2017, prepared by OPCD
- Actuarial Information for the OPESU Pension Plan provided by OPSEU Pension Trust (related to 2016 year-end financial information, including to actuarial calculations performed by Willis Towers Watson)
- Analysis of Pension Asset ceiling Accounting Considerations for the Office of the Provincial Controller Division re: OPESU Pension Plan prepared by Deloitte for 31 March 2015 financial reporting
- OPSEUPP actuarial valuation funding report as at 31 December 2014 by Willis Towers Watson
- OPSEU actuarial gain or loss allocation history (up to 31 December 2014)
- OPSEUPP plan text
- The Sponsorship Agreement for OPESUPP
- Ontario Public Service Employees' Union Pension Act
- OPTrust Funding Policy: Board-Approved Policy
- Pension Asset Expert Advisory Panel report

Appendix
Applicable guidance under PS 3250

Measurement date

.39 For a defined benefit plan, the plan assets and the accrued benefit obligation would usually be measured at the date of the financial statements. As a practical matter, an earlier date may be used provided the government adopts this practice consistently from year to year and as long as no significant change relevant to the valuation of the plan occurs between the valuation date and the financial statement date.

Limit on the carrying amount on accrued benefit asset

.50 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs.

.51 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.52 a government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.53 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets.

.54 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired, and, accordingly, no valuation allowance is required.

.55 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.56 A government determines its expected future benefit the sum of:

(a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

(b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.57 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.58 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.59 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Joint defined benefit plans

.79 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.

.80 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the

accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.

.81 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.

.82 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.

Glossary

- *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

  *An **adjusted benefit asset** is an accrued benefit asset less the amount, if any, by which the aggregate of any unamortized actuarial losses exceeds the aggregate of any unamortized actuarial gains.*

- *The **expected future benefit** is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions. A government determines its expected future benefit as the sum of:*

  (a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus;

  (b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

- *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*

  (a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;

  (b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;

  (c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and

  (d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.

  The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement

benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.

Hi Nadine,

We believe our current proposed approach remains appropriate (i.e. reducing the province's portion from 50% to 49%/ 47.7% to reflect non-consolidated participating employers). Generally, we would consider the plans on a going-concern basis for accounting purposes. On such basis, we do not have any reason to assume any of these non-op employers would not make good on their required contributions. Certainly, should any of these employers become insolvent, we would have to revisit and reconsider the percentage adjustments assumed. However, there is no reason to assume these employers would become insolvent on a going concern basis either.

Let us know if you have a different reaction. We can further discuss during our call tomorrow.

Have a great evening.

Regards,

Christina

To: Petsche, Nadine (TBS)

Cc: Hatzis, Len (TBS); Compagnone, Lisa (TBS)

Subject: RE: Public Accounts Related Q's

Nadine, here is an analysis of the potential funding risks for the Crown relating to the participation of non-OPS employers in the OTPP and OPSEUPP. The discussion of the OTPP reflects input from EDU legal and staff who are familiar with the OTPP.

I have kept this high level given the urgency but can elaborate on specific areas as necessary. I haven't included a discussion of the general obligations of employers and members to contribute to Jointly Sponsored Pension Plans under the *Pension Benefits Act* (PBA), or discussed the implications of the exemption from solvency funding requirements under the PBA that I understand both of these plans enjoy, as I understood the focus of your question to be specific to the relationship between the Crown and other employers.

If you require anything further please let us know.

Paul

OTPP:

· The OTPP is governed by the *Teachers' Pension Act* (TPA), the Plan text for the OTPP (the "Plan Text"), a Partners' Agreement between the Minister of Education and the Ontario Teachers' Federation, and a Funding Management Policy ("FMP") that is an appendix to the Partners' Agreement.

· The OTPP is also subject to the *Pension Benefits Act* (“PBA”), under which the OTPP is a Jointly Sponsored Pension Plan (JSPP)

· Under Section 24(1) of the Plan Text, the Minister of Education is required to pay employer contributions in respect of certain active employees. These types of active employees include teachers at school boards and teachers at provincial schools (run by the Ministry of Education and where teachers are the employees of the Provincial Schools Authority).

· However, the Minister is not required to make employer contributions under the Plan Text in respect of some other employers whose employees may participate in the OTPP, including participating private schools.

· Nothing in the Plan Text (or any other applicable OTPP document or statute) expressly requires the Minister of Education to make contributions in place of private schools and other ‘excluded’ employers who have failed to make their own required contributions to the OTPP.

· However, the Crown could be exposed to a funding risk where a private school or similar employer fails to make their contributions in the following ways:

o Subsection 5(3) of the TPA requires the Province to make contributions to the OTPP fund if the assets in the fund are insufficient to make required payments in a particular year

o Private schools and other ‘excluded employers’ not making required payments could impact on the overall funded status of the plan, in turn affecting the ability of the Minister of Education and OTF to access surpluses in accordance with the FMP

OPSEUPP:

· The OPSEUPP is governed by a Sponsorship Agreement dated April 18, 1994, as amended, between Ontario and OPSEU (“Sponsorship Agreement”); a trust agreement dated October 25, 1994, as amended, the OPTrust Plan Text and the *Ontario Public Service Employees' Union Pension Act, 1994*.

· Like the OTPP, the OPSEUPP is also a JSPP under the PBA.

· A list of participating employers for the OPSEUPP is set out below (this information is derived from the OPSEUPP’s most recent audited financial statements, but you may wish to verify it with the TBS Employee Relations Division). A number of

the participating employers that are not part of the Province itself are nevertheless provincial agencies (AGCO, LCBO, OLGC, Public Health Ontario, etc.). The majority of the remaining employers are either public hospitals (that the Province funds) or public sector pension plan administrators. Therefore, the practical risk of a non-OPS employer failing to provide required contributions to the OPSEUPP seems quite low.

· However, in the event that such an employer did fail to make its contributions, and that failure resulted in a deficiency in the OPSEUPP fund, the Province (likely in conjunction with the other employers whose employees are members of the OPSEUPP), and the members would jointly be required to provide further contributions to the fund to address any such deficiency, pursuant to section 58 of the Sponsorship Agreement and section 6.3(5) of the OPTrust Plan Text.

Shayan,

Below is the advice that we received from our legal services branch regarding liabilities for non-OPS employers. I think we should discuss implications to the analysis.

Nadine

From: Kaufman, Paul (TBS) <Paul.Kaufman@ontario.ca>

Sent: Thursday, June 8, 2017 4:09 PM

To: Petsche, Nadine (TBS)

Cc: Hatzis, Len (TBS); Compagnone, Lisa (TBS)

Subject: RE: Public Accounts Related Q's

Nadine, here is an analysis of the potential funding risks for the Crown relating to the participation of non-OPS employers in the OTPP and OPSEUPP. The discussion of the OTPP reflects input from EDU legal and staff who are familiar with the OTPP.

I have kept this high level given the urgency but can elaborate on specific areas as necessary. I haven't included a discussion of the general obligations of employers and

members to contribute to Jointly Sponsored Pension Plans under the *Pension Benefits Act* (PBA), or discussed the implications of the exemption from solvency funding requirements under the PBA that I understand both of these plans enjoy, as I understood the focus of your question to be specific to the relationship between the Crown and other employers.

If you require anything further please let us know.

Paul

OTPP:

· The OTPP is governed by the *Teachers' Pension Act* (TPA), the Plan text for the OTPP (the "Plan Text"), a Partners' Agreement between the Minister of Education and the Ontario Teachers' Federation, and a Funding Management Policy ("FMP") that is an appendix to the Partners' Agreement.

· The OTPP is also subject to the *Pension Benefits Act* ("PBA"), under which the OTPP is a Jointly Sponsored Pension Plan (JSPP)

· Under Section 24(1) of the Plan Text, the Minister of Education is required to pay employer contributions in respect of certain active employees. These types of active employees include teachers at school boards and teachers at provincial schools (run by the Ministry of Education and where teachers are the employees of the Provincial Schools Authority).

· However, the Minister is not required to make employer contributions under the Plan Text in respect of some other employers whose employees may participate in the OTPP, including participating private schools.

· Nothing in the Plan Text (or any other applicable OTPP document or statute) expressly requires the Minister of Education to make contributions in place of private schools and other 'excluded' employers who have failed to make their own required contributions to the OTPP.

· However, the Crown could be exposed to a funding risk where a private school or similar employer fails to make their contributions in the following ways:

o Subsection 5(3) of the TPA requires the Province to make contributions to the OTPP fund if the assets in the fund are insufficient to make required payments in a particular year

o Private schools and other 'excluded employers' not making required payments could impact on the overall funded status of the plan, in turn affecting the ability of the Minister of Education and OTF to access surpluses in accordance with the FMP

OPSEUPP:

· The OPSEUPP is governed by a Sponsorship Agreement dated April 18, 1994, as amended, between Ontario and OPSEU ("Sponsorship Agreement"); a trust agreement dated October 25, 1994, as amended, the OPTrust Plan Text and the *Ontario Public Service Employees' Union Pension Act, 1994*.

· Like the OTPP, the OPSEUPP is also a JSPP under the PBA.

· A list of participating employers for the OPSEUPP is set out below (this information is derived from the OPSEUPP's most recent audited financial statements, but you may wish to verify it with the TBS Employee Relations Division). A number of the participating employers that are not part of the Province itself are nevertheless provincial agencies (AGCO, LCBO, OLGC, Public Health Ontario, etc.). The majority of the remaining employers are either public hospitals (that the Province funds) or public sector pension plan administrators. Therefore, the practical risk of a non-OPS employer failing to provide required contributions to the OPSEUPP seems quite low.

· However, in the event that such an employer did fail to make its contributions, and that failure resulted in a deficiency in the OPSEUPP fund, the Province (likely in conjunction with the other employers whose employees are members of the OPSEUPP), and the members would jointly be required to provide further contributions to the fund to address any such deficiency, pursuant to section 58 of the Sponsorship Agreement and section 6.3(5) of the OPTrust Plan Text.

Hi Nadine,

Shayan is traveling for work to St. John's and his availability is limited for the next couple days. Would a call for tomorrow at 3:30pm work for you? Shayan may be able to dial-in.

Let us know.

Thanks,

Christina

Shayan,

Below is the advice that we received from our legal services branch regarding liabilities for non-OPS employers. I think we should discuss implications to the analysis.

Nadine

From: Kaufman, Paul (TBS) <Paul.Kaufman@ontario.ca>

Sent: Thursday, June 8, 2017 4:09 PM

To: Petsche, Nadine (TBS)

Cc: Hatzis, Len (TBS); Compagnone, Lisa (TBS)

Subject: RE: Public Accounts Related Q's

Nadine, here is an analysis of the potential funding risks for the Crown relating to the participation of non-OPS employers in the OTPP and OPSEUPP. The discussion of the OTPP reflects input from EDU legal and staff who are familiar with the OTPP.

I have kept this high level given the urgency but can elaborate on specific areas as necessary. I haven't included a discussion of the general obligations of employers and members to contribute to Jointly Sponsored Pension Plans under the *Pension Benefits Act* (PBA), or discussed the implications of the exemption from solvency funding requirements under the PBA that I understand both of these plans enjoy, as I understood the focus of your question to be specific to the relationship between the Crown and other employers.

If you require anything further please let us know.

Paul

OTPP:

· The OTPP is governed by the *Teachers' Pension Act* (TPA), the Plan text for the OTPP (the "Plan Text"), a Partners' Agreement between the Minister of Education and the Ontario Teachers' Federation, and a Funding Management Policy ("FMP") that is an appendix to the Partners' Agreement.

· The OTPP is also subject to the *Pension Benefits Act* ("PBA"), under which the

OTPP is a Jointly Sponsored Pension Plan (JSPP)

· Under Section 24(1) of the Plan Text, the Minister of Education is required to pay employer contributions in respect of certain active employees. These types of active employees include teachers at school boards and teachers at provincial schools (run by the Ministry of Education and where teachers are the employees of the Provincial Schools Authority).

· However, the Minister is not required to make employer contributions under the Plan Text in respect of some other employers whose employees may participate in the OTPP, including participating private schools.

· Nothing in the Plan Text (or any other applicable OTPP document or statute) expressly requires the Minister of Education to make contributions in place of private schools and other 'excluded' employers who have failed to make their own required contributions to the OTPP.

· However, the Crown could be exposed to a funding risk where a private school or similar employer fails to make their contributions in the following ways:

o Subsection 5(3) of the TPA requires the Province to make contributions to the OTPP fund if the assets in the fund are insufficient to make required payments in a particular year

o Private schools and other 'excluded employers' not making required payments could impact on the overall funded status of the plan, in turn affecting the ability of the Minister of Education and OTF to access surpluses in accordance with the FMP

OPSEUPP:

· The OPSEUPP is governed by a Sponsorship Agreement dated April 18, 1994, as amended, between Ontario and OPSEU ("Sponsorship Agreement"); a trust agreement dated October 25, 1994, as amended, the OPTrust Plan Text and the *Ontario Public Service Employees' Union Pension Act, 1994*.

· Like the OTPP, the OPSEUPP is also a JSPP under the PBA.

· A list of participating employers for the OPSEUPP is set out below (this information is derived from the OPSEUPP's most recent audited financial statements, but you may wish to verify it with the TBS Employee Relations Division). A number of the participating employers that are not part of the Province itself are nevertheless provincial agencies (AGCO, LCBO, OLGC, Public Health Ontario, etc.). The majority of

the remaining employers are either public hospitals (that the Province funds) or public sector pension plan administrators. Therefore, the practical risk of a non-OPS employer failing to provide required contributions to the OPSEUPP seems quite low.

· However, in the event that such an employer did fail to make its contributions, and that failure resulted in a deficiency in the OPSEUPP fund, the Province (likely in conjunction with the other employers whose employees are members of the OPSEUPP), and the members would jointly be required to provide further contributions to the fund to address any such deficiency, pursuant to section 58 of the Sponsorship Agreement and section 6.3(5) of the OPTrust Plan Text.

From: lucy.durocher@ca.pwc.com [mailto:lucy.durocher@ca.pwc.com]
Sent: January 31, 2017 10:48 AM
To: Petsche, Nadine (TBS)
Subject: Re: Q's

Hi Nadine,

1. I think your response captures the right ideas. It is fair to say that the recent standards were considered as relevant sources of guidance, amongst others, when assessing the appropriate accounting treatment. Is the Chair reviewing these responses? She may have some comments on this one.

2. For context, I believe what they are referring to is that the Panel believes that PS 3250 is applied to the plan, and then the government picks up its share of that accounting, rather than applying PS 3250 to the governments share of the plan. I think this is the "different methodology" they are referencing. I understand that is a slightly different approach to applying the guidance than is set out in the Province's position paper and implied by the AG's comments on the issue.

I hope this helps.
Lucy

Date: 01/30/2017 07:50 PM
Subject: Q's

Lucy,
I've received the following 2 media Q's for which I need to draft a response. Below are some initial thoughts. Any comments/suggestions would be most helpful. N

1. Are you basing your position on an accounting standard that hasn't come into effect yet?

Draft A: The Province appreciates the thoroughness of the Panel in conducting its analysis of the pension asset recognition and measurement issue. The Panel's reference to recent Canadian standard setter guidance, and international standards is absolutely appropriate in this circumstance. Not every possible situation can be addressed by accounting standards. In such cases, it is important to reference the conceptual framework and other standards which may provide guidance. The supplementary sources referenced by the Panel, including PSAB's recent standards on Assets, Contingent Assets and International Accounting Standards have all proven relevant to the issue being considered.

2. The panel used a different methodology from Ontario to arrive at their conclusion. How do the methodologies differ and is the conclusion different?

The findings of the Panel are consistent with the position taken by the government during the 2015-16 Public Accounts and for the previous 14 years. The government has argued that unilateral control was not necessary to report the asset and that there was no impairment to the assets reported on the Province's books. (not sure what the question could be referencing w.r.t. different methodology. Any thoughts?)

RE_ Question (impt).rtf

From: Colley, Matthew (CA - Toronto) [mcolley@deloitte.ca]
To: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]; Colavecchia, Pina (CA - Toronto) [pcolavecchia@deloitte.ca]
Subject: RE: Question (impt)
Date: Monday, December 05, 2016 10:40:00

Hi Nadine,

We did not look at any other jurisdictions in providing the papers to you. We will attempt to do the research, but this may take some time as the plans could be classified just at DB at the public accounts level, while be treated as a multi-employer plan on individual financial statements, so it is more than just reviewing the FS of every province. So I am not sure that we will be able to meet your timeline. We can try, but not guarantee anything. Can you confirm whether you still want us to proceed?

Thanks

Matt

Subject: Question (impt)

Matt/Pina,

Cindy has asked if any research was done on how other jurisdictions are accounting for their multi-employer plans. Please advise as we will be discussing our status of analysis this afternoon with the Panel. If by chance we have not, can we do some research please.

Thanks.

Nadine

RE_ Question (impt).rtf

From: Colley, Matthew (CA - Toronto) [mcolley@deloitte.ca]
To: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]; Colavecchia, Pina (CA - Toronto) [pcolavecchia@deloitte.ca]
Subject: RE: Question (impt)
Date: Monday, December 05, 2016 14:14:38

Hi Nadine,

We did find some examples of multi-employer plans in Alberta and Saskatchewan that are reported as multi-employer plans at the government organization level, but on a consolidated basis are reported as just a defined benefit plan.

In Alberta they have the university plans (universities are consolidated in Alberta) as well as the Alberta Health Service Plans which are reflected as DB plans.

In Saskatchewan, an example would be the Regional Health Authorities which report pensions as multi-employer plans, while consolidated 100% and reflected as a DB plan at the Provincial Account level.

Does this help?

Thanks

Matt

Hi Nelson,

Nadine also posed us the question but seems she didn't have the opportunity to pass on the response.

The 85% refers to active member count from consolidated Hospitals i.e. not including pensioners, as at December 31.

Hope that answers the question.

Thanks,

Patricia

Cc: Tam, Nelson (TBS)
Subject: Question from pension panel

Hi Nadine,

For the Supplemental Report for the Panel, I had a quick drafting question that I would like to confirm with you.

- In your memos on HOOPP accounting, it includes the calculation of the province's portion of the pension liability as "Province's portion as at March 31, 2016 of the pension liability is 39.1% which is calculated as 85% (the % of members in HOOPP from hospitals consolidated in the public accounts) of 56% (the portion of contributions to HOOPP made by the employers)" with similar language used for CAATPP.
Please confirm that the basis of "% members in HOOPP *from* hospitals consolidated in the public accounts" is the same as "% members in HOOPP *employed by* hospitals consolidated in the public accounts". I would like to confirm that "from" is not a broader calculation (e.g. including retirees or some other metric.)

Regards,
Lucy

Thanks Lucy. I am copying Shyrose on this response. I think we would likely just need his name and to get the necessary clearance in place. Shyrose will be in touch if further details are required.
Regards,
Nadine

Subject: Re: Outline of position paper proposed allocations Oct 7.docx

Hi Nadine,

In respect of one of the sections discussing the differences between the funding valuations/OTPP financial statements and the Province's financial statements, I think it would be helpful if I could get our actuary to read through the write up, particularly in respect of the funding valuation differences. Currently the SOW does not list our actuary as someone performing work (to date all my conversations with him have been high level and theoretical). However, I would like to get him added to the SOW as vendor personnel.

Individual's Legal Name
Individual's Role and Experience Level
Service Category
Per Diem Rate

Mario Chassé
General Consultant (Actuarial), Level 2
Service Category 2
See “charges on a per diem rate basis”

I can ask him to sign a confidentiality agreement.
What else should be done to ensure that the SOW reflects that he will be providing some work under the contract?

Thanks,
Lucy

Hi Lucy.
As discussed, the attached version of the paper outline includes proposed section allocations. Please let me know if any of the notes are inconsistent with your understanding.
Thanks and have a wonderful Thanksgiving weekend!

Hi Lucy.... here are a list of good actuaries that are outside of accounting firms:

Andrew Fung - Morneau Shepell - 416-380-2168 - AFung@morneaushepell.com - Andrew used to work at OMERS, so very familiar with JSPP. Before OMERS he was a consultant at another large actuarial firm.

Anne G.S. Soh - OMERS - (416) 369-3133 - asoh@omers.com - Anne is Vice President, Actuarial Services & Plan Actuary at OMERS (an internal actuary of a large JSPP in Ontario)

Phillip Morse - Willis Towers Watson - (416) 960-7113 - philip.morse@willistowerswatson.com - Phillip

is the valuation actuary and senior consultant of a large JSPP

Subject: Pension Asset Expert Panel

Hi Lucy,

As you may have seen, the Province is setting up an expert panel to review the pension asset issue. We would like to include an actuary on the panel, from outside the accounting firms (so as not to conflict another firm as the

panel may well engage someone). Would you be able to ask your internal actuarial contacts if they have any recommendations for someone from one of the actuarial firms who has a high level of expertise in JSPPs. It could be someone who has recently retired.

Thanks,

Cindy

I'm not sure if the approvals will be obtained in time, so I just wanted to make sure that you aren't holding your schedule for Friday afternoon on our account. If the situation looks more positive tomorrow, I'll let you know. Thanks for your flexibility and support.

> **Subject:** Re: FW: Position Paper and Slide Deck
>
> Hi Nadine,
>
> In regards to Friday, - my items are items 2 and 3 on the PSA discussion group agenda, so I should be finished by 12:00pm and can join the panel in the afternoon between 12:30 and 5pm, if that would be desirable.

Slide deck - I have inputted the following suggestions into the deck but kept the font red for ease of identification.

Slide 3 - I think it might be helpful to include the word "unilateral". Perhaps "There is no legally enforceable right to unilaterally access the asset" would be better. This is actually the phrase used by the AG in her letter of September 13, 2016 so I think captures the OAGs views appropriately.

Slide 22 - I don't think the ITA limits the level of surplus, but rather, "In addition, the Income Tax Act imposes limits on the level of contributions that may be made to a pension plan that has an "excess surplus" (as defined by the ITA)"

Additional comments:

Slide 13 - Second bullet point - I found this paragraph a bit confusing as to the point it is trying to make. My suggestions are below. I have not updated the deck for this, pending whether you agree.

§The Financial Statement Concepts definition of an asset references “control” over an economic resource in Section PS 1000 and does not address “shared control”, which is relevant to the situation of a joint defined benefit plan, in respect of asset recognition. However, the term is included in other PSAB standards, for example relating to government partnerships (Section PS 3060 requires proportionate consolidation which is the recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership). Section PS 3060 existed prior to the introduction of Section PS 3250 into the PSAB standards, indicating that an asset subject to shared control with another party can be recognized in the financial statements.

Appendix 1 - there is a total for the OTF, but not a total for the Ontario government. The position paper has $9.3bn as a total, so I have taken the liberty to add it to the slide deck as I think it was omitted in error

- It's not clear why 1990 is included as it is a deficit and not a surplus and the numbers aren't included in the $9.3bn total but other years when there was a deficit (e.g. 2003 onwards) are not shown. Is there a reason for including 1990 specifically? Perhaps it should be indicated why?

Appendix 4 - there is an asterisk by OTPP Filed Discount rate, but not clear what it references to. Should it be clearer in this appendix that "OTPP filed discount rate" relates to that used in OTPP's financial statements prepared using Part IV and that the "Province Economic Assumption for Nominal Return" relates to that used in the Province's financial statements prepared using PSAB in relation to the OTPP plan.

Position paper:

I have updated the pictures. For reference, the pictures are done in power point and I just used a "snipping tool" to copy them into the paper. I attach the PPT deck for reference also.

Here is the revised position paper - I have added in couple of comments - relatively minor. I think it is looking in really good shape.

Re_ Q’s.rtf

From: lucy.durocher@ca.pwc.com [lucy.durocher@ca.pwc.com]
To: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]
Subject: Re: Q's
Date: Tuesday, January 31, 2017 11:47:50

Hi Nadine,

1. I think your response captures the right ideas. It is fair to say that the recent standards were considered as relevant sources of guidance, amongst others, when assessing the appropriate accounting treatment. Is the Chair reviewing these responses? She may have some comments on this one.

2. For context, I believe what they are referring to is that the Panel believes that PS 3250 is applied to the plan, and then the government picks up its share of that accounting, rather than applying PS 3250 to the governments share of the plan. I think this is the "different methodology" they are referencing. I understand that is a slightly different approach to applying the guidance than is set out in the Province's position paper and implied by the AG's comments on the issue.

I hope this helps.
Lucy

Subject: Q's

Lucy,
I've received the following 2 media Q's for which I need to draft a response. Below are some initial thoughts. Any comments/suggestions would be most helpful. N

1. Are you basing your position on an accounting standard that hasn't come into effect yet?

Draft A: The Province appreciates the thoroughness of the Panel in conducting its analysis of the pension asset recognition and measurement issue. The Panel's reference to recent Canadian standard setter guidance, and international standards is absolutely appropriate in this circumstance. Not every possible situation can be addressed by accounting standards. In such cases, it is important to reference the conceptual framework and other standards which may provide guidance. The supplementary sources referenced by the Panel, including PSAB's recent standards on Assets, Contingent Assets and International Accounting Standards have all proven

relevant to the issue being considered.

2. The panel used a different methodology from Ontario to arrive at their conclusion. How do the methodologies differ and is the conclusion different?

The findings of the Panel are consistent with the position taken by the government during the 2015-16 Public Accounts and for the previous 14 years. The government has argued that unilateral control was not necessary to report the asset and that there was no impairment to the assets reported on the Province's books. (not sure what the question could be referencing w.r.t. different methodology. Any thoughts?)

In Alberta some plans are in a surplus position but the amortization of actuarial losses bring the plans into a liability position for accounting.

Subject: Question (impt)

Matt/Pina,

Cindy has asked if any research was done on how other jurisdictions are accounting for their multi-employer plans. Please advise as we will be discussing our status of

analysis this afternoon with the Panel. If by chance we have not, can we do some research please.

Thanks.

Nadine

To: Petsche, Nadine (TBS)
Cc: Tam, Nelson (TBS)
Subject: Question from pension panel

Hi Nadine,

For the Supplemental Report for the Panel, I had a quick drafting question that I would like to confirm with you.

- In your memos on HOOPP accounting, it includes the calculation of the province's portion of the pension liability as "Province's portion as at March 31, 2016 of the pension liability is 39.1% which is calculated as 85% (the % of members in HOOPP from hospitals consolidated in the public accounts) of 56% (the portion of contributions to HOOPP made by the employers)" with similar language used for CAATPP.
Please confirm that the basis of "% members in HOOPP *from* hospitals consolidated in the public accounts" is the same as "% members in HOOPP *employed by* hospitals consolidated in the public accounts". I would like to confirm that "from" is not a broader calculation (e.g. including retirees or some other metric.)

Regards,
Lucy

Hi Lucy.
Just forwarding a deck (we just became aware of) that demonstrates, based on scenario analysis, that the Province can expect to be in the temporary zone 30% of the time.
Talk to you later.

Subject: potential conflict

Hi Uros,

I want to flag that the Minister may have a conflict with the pensions briefing we have scheduled on August 15th, as the House may still be sitting. I will receive confirmation later this week whether this conflict is happening. Just in case wondering about your availability for August 13th between 3-4:30pm.

Thanks
Sarah

Attachment 1: image001.png

Hi Shayan.

I think for purposes of the noon discussion, Uros' participation may not be necessary. Perhaps suggested topics for Uros to address with Cindy at a subsequent meeting could be raised on Tuesday so that Cindy can assess the timing for a discussion with him. Her availability is limited to the lunch hour on Tuesday and there won't be any time to speak about other topics at that time.

Hope this is ok.

Nadine

Hi Nadine,

Do you think it would be helpful if Uros attended the meeting next week?

The 3 of us are all available at 10am or at 3pm onwards on Tuesday if that works for your team.

Christina and I are still available at noon.

Regards,

Shayan

Subject: Regroup on pension items (misc)

Hi Shayan.

As we look forward to post-Budget release, we would like to schedule some time to regroup on the matters noted in your email of April 11th to Pauline Fong. We have had a chance to discuss your comments internally, and look further to reviewing our analysis with you to determine next steps and timing.

To support consistency in our accounting for each type of pension plan impacting our financials (i.e. sole sponsor, joint sponsor, multi-employer), it would be helpful to have a summary by type of plan that reflects the relevance and appropriate accounting treatment for non-controlled/non-consolidated employers. We were hoping that your team could assist in drafting such a document. Please feel free to connect with

Pauline for further clarification of this request.

In terms of timing, we will continue to have busy days over the coming weeks, but we hoped that we could meet with you next Tuesday at noon? Cindy's current schedule would allow her to participate in the discussion as well.

Please let Shyrose know if that time would work for your team. We look forward to meeting with you again, and to working together to enhance OPCD's pension related processes.

Thanks again to you and your team for your support and advice.

Regards,

Nadine

RE_ Remodeling - OPSEUPP.rtf

From: Christina Chan [Christina.Chan@ca.ey.com]
To: Li, Wendy (TBS) [Wendy.Li@ontario.ca]
CC: Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]; Fong, Pauline (TBS) [Pauline.Fong@ontario.ca]; Shayan Jafrani [Shayan.Jafrani@ca.ey.com]
Subject: RE: Remodeling - OPSEUPP
Date: Friday, June 16, 2017 17:09:06
Attachment 1: image001.jpg

Hi Wendy,

If you like, Shayan and I can come over on Monday PM. Would that work for you?

We briefly discussed on how the % is to be determined and I think that's still up for discussion. I would imagine the change in % would be minimized if it's based on the accumulative contribution amount. However, we note that would also add another layer of recordkeeping/tracking. Right now all years are set to 47.66% as I've setup the spreadsheet such that the all contributions are to increase at the same % (which, is not an unreasonable assumption for projection). We are happy to discuss further.

As for the opening balance adjustment – I think it's best for us to talk through it so that we are all in understanding the adjustment that's required to be made and what's the most appropriate way to do so.

Let us know if Monday works. Have a great weekend.

Thanks!

Christina

Subject: RE: Remodeling - OPSEUPP

Hi Christina,

I have a few questions related to the % calculation.

1. Currently, the same %, i.e. 47.66%, is used for all years. My understanding from our discussion is that the percentage will be calculated based on accumulative contributions, and likely will change from year to year.

2. Impact on assets and liability due to percentage change is adjusted to opening balance as the model is built now. Let's discuss this as I don't think we would want to restate opening balances whenever the % changes in the future.

Depending on where you're with other plans, please let me know if you are coming to our office or I can call you to discuss OPSEUPP.

Thank you,

Wendy Li

Cc: Petsche, Nadine (TBS); Fong, Pauline (TBS); Shayan Jafrani
Subject: Remodeling - OPSEUPP

Hi Wendy, Pauline,

As Shayan is completing his review on OTPP, I updated the OPSEUPP. Shayan will also do a QA review on this model, but thought to share given our timeline.

Attached is the current draft version of the remodeling spreadsheet for OPSEUPP. I have not fully finalized the projection capability (some of the numbers currently remain hardcoded as you had them) due to priority of work.

Based on my conversation with Pauline when we gone over OTPP, it was my understanding that eventually, OPCD may want to provide the ON's own disclosure exhibits for its portion of the plans. As such, and for better clarity, you will find that there is a 100% disclosure tab, as well as a "disclosure (Prov)" tab. This tab represents the portion (47.7%) of ON's reporting of the Plan.

The yellow tabs are "must have" going forward (new data input tab, the two disclosures,

smoothing of assets calculation, gl schedule). All inputs are now done under the “data input” tab.

I have shown the opening balance adjustment as two separate line items: (343) and 40 (row 71 and 72 under the Prov’s disclosure tab). The 323 represents the reversal of the “year-end adjustment and difference in contributions”, and the 40 represents the change due to the % change. The net opening adjustment is then (303). The reason why I setup this way is for potential future % changes – which OPCD should decide how this adjustment would be accounted for going onwards. If the % change is not expect to be significant, this would be the cleanest way – but we can also explore the possibility of amortizing it. I also left the “consolidated agencies contributions” line item similar to PSPP, which is for OPCD to consider how it should be reporting consistent with your other systems inputs.

If it’s helpful, I can also come in to go through the setup with you.

Thanks,

Christina

Cindy

As indicated in my previous email, the expense and contribution will not necessarily be equal.

It will most likely be equal when we have the unamortized gains situation.

In other c

Hi Christina.

Cindy was hoping to review a copy of the revised asset ceiling reports, reflecting the pension adjustments. I know that we were waiting for feedback from the OAG. We should assume no change for this exercise. Is it possible to have them ready for early next week?

Thanks.

Nadine

Subject: Statement of facts

· The OTPP is regulated by the Financial Services Commission of Ontario. Valuation reports must be filed with this regulator to monitor that assets of the fund are reasonably sufficient to meet the liabilities of the pension plan on a continuing basis. Per 78(1) of the Pension Benefits Act: No money that is surplus may be paid out of a pension fund to the employer without the prior consent of the Superintendent.

Hi Matt and Kerry – Legal has reviewed this bullet in the statement of facts – they think

the words in yellow should be changed (used to say funding plans). Otherwise can we attribute this fact to the AG?

Hi Nadine,

Below is the updated weekly summary of our work and priorities based on our discussions to-date.

Please let us know if we've missed something or if you would prefer to prioritize any of the items below differently:

Completed this week

1. Meeting re: balance sheet adjustments

2. Provided a summary of our analysis and suggestions related to the balance sheet adjustments

In progress – next week

1. Review of draft ELHTs memo – OPCD

2. Finalize asset ceiling test documents, subsequent to OPCD's review – OPCD & EY

3. Continue to assist with the balance sheet adjustment of 2,246M (includes differences in contributions due to lags and agency contributions) – EY & OPCD

4. Research on other public plans and identify ones which are comparable to CAATT/HOOPP (BC, Alberta) – EY

5. Provide a specific request list (checklist of items to confirm and list of Plans) for OPCD related to item #4 - EY

6. Assist with sponsor agreement and funding policy review, per EY's request (item

#5) – OPCD

Next week and after

1. Excel tool update and associated “audit checklist”
2. SERP/SRAs reporting

Have a great long weekend!

Regards,

Christina

Hi Nadine,

To address your comments below:

1. There is no current requirement for OPCD related to the pension plans research. We will provide you with a list of additional Plans for OPCD to consider and the related funding policies to review early next week.

2. For the balance sheet adjustment, we have identified the items to be discussed. We will be providing OPCD a list of related questions by Monday. We will arrange for a call to discuss then.

Have a great weekend.

Regards,

Christina

Hi Nadine,

As discussed, here is the updated weekly summary of our work and priorities based on our discussions to-date.

Please let us know if we've missed something or if you would prefer to prioritize any of the items below differently:

Completed this week

1. Asset ceiling test for OTPP document updated

2. Draft asset ceiling test for OPSEUPP document provided

In progress – next week

1. Review of draft ELHTs memo – OPCD

2. Finalize asset ceiling test documents, subsequent to OPCD's review – OPCD & EY

3. Research on other public plans and identify ones which are comparable to CAATT/HOOPP (BC, Alberta) – EY

4. Assist with sponsor agreement and funding policy review, related to item #4 – OPCD (Please advise of any current requirements.)

5. Continue discussions related to balance sheet adjustment of 2,246M (includes differences in contributions due to lags and agency contributions) – EY & OPCD (please advise w.r.t. anticipated timeframe)

Next week and after

1. Excel tool update and associated "audit checklist"

2. SERP/SRAs reporting

Regards,

Christina

Thanks for this status update Christina.

Please see my comments below.

Have a great weekend.

Nadine

Subject: Status update

Hi Nadine,

As discussed, here is the updated weekly summary of our work and priorities based on our discussions to-date.

Please let us know if we've missed something or if you would prefer to prioritize any of the items below differently:

Completed this week

1. Asset ceiling test for OTPP document updated

2. Draft asset ceiling test for OPSEUPP document provided

In progress – next week

1. Review of draft ELHTs memo – OPCD

2. Finalize asset ceiling test documents, subsequent to OPCD's review – OPCD & EY

3. Research on other public plans and identify ones which are comparable to CAATT/HOOPP (BC, Alberta) – EY

4. Assist with sponsor agreement and funding policy review, related to item #4 – OPCD (Please advise of any current requirements.)

5. Continue discussions related to balance sheet adjustment of 2,246M (includes differences in contributions due to lags and agency contributions) – EY & OPCD (please advise w.r.t. anticipated timeframe)

Next week and after

1. Excel tool update and associated "audit checklist"

2. SERP/SRAs reporting

Regards,

Christina

Hi Nadine,

As discussed during our call, here is the summary of our work and priorities based on our discussions to-date.

Let us know if you would like us to structure it any differently going forward. Also, please let us know if we've missed something or if you would prefer to prioritize any of the items below differently:

Completed last week

1. Draft ELHTs memo provided **(should we look into obligations other than 3250/3255 with Blake Langill and Suzie Gignac as per our SOW?)**

2. Draft OTPP's asset ceiling test letter provided

In progress this week

1. Review of draft ELHTs memo – OPCD

2. Finalize OTPP's asset ceiling test letter – EY

3. Prepare OPSEU's asset ceiling test letter – EY

4. Research on other public plans and identify ones which are comparable to CAATT/HOOPP (BC, Alberta) - EY

5. Assist with sponsor agreement and funding policy review, related to item #4 – OPCD

6. Continue discussions related to balance sheet adjustment of 2,246M (includes differences in contributions due to lags and agency contributions) – EY & OPCD

Next week and after

1. Finalize item #4-6 above

2. Update ELHTs memo, subsequent to OPCD's review

3. Excel tool update and associated "audit checklist"

4. SERP/SRAs reporting

Regards,

Christina

Hi Nadine,

Just for a bit of additional colour on item 1 below, we're working on formulating a more specific request for help (ie. a checklist of items to confirm, and the list of plans that would make sense to look into). This would hopefully streamline things on your end and speed up the process overall. In parallel we are also doing our own review of the BC and other plans we already discussed.

Hi Nadine,

To address your comments below:

1. There is no current requirement for OPCD related to the pension plans research. We will provide you with a list of additional Plans for OPCD to consider and the related funding policies to review early next week.

2. For the balance sheet adjustment, we have identified the items to be discussed. We will be providing OPCD a list of related questions by Monday. We will arrange for a call to discuss then.

Have a great weekend.

Regards,

Christina

Hi all,

This summary may be released in connection with the release of the Panel's report, currently planned for February 13. I think we need a call before then to discuss – both between the accountants and between the communications teams.

Shannon – can you work with Matt and Kerry to find a time that works for us (30 minutes) over the next couple of days.

Thanks,

Cindy

RE_ Summary of impact based on proposed year-end adjustments.rtf

From: Fong, Pauline (TBS) []
To: Christina Chan [Christina.Chan@ca.ey.com]
CC: Shayan.Jafrani@ca.ey.com [Shayan.Jafrani@ca.ey.com]; Ma, Patricia (TBS) [Patricia.Ma2@ontario.ca]; Sun, Alicia (TBS) [Alicia.Sun@ontario.ca]; Patel, Bharat (TBS) [Bharat.Patel3@ontario.ca]; Li, Wendy (TBS) [Wendy.Li@ontario.ca]; Petsche, Nadine (TBS) [Nadine.Petsche@ontario.ca]
Subject: RE: Summary of impact based on proposed year-end adjustments
Date: Monday, May 29, 2017 11:12:58
Attachment 1: image002.jpg
Attachment 2: Pensions elimination overall summary 2016.xlsx
Attachment 3: 20170529111043608.pdf

Hi Christina,

As the model for OPSEUPP and PSPP includes all agencies as a reversal within the model, when looking at other agencies column you would need add the impact of not reversing the agencies DC contributions not only for the $47 for each year but also the non-reversal of the organizations of $22M in order to arrive on the total fiscal implications on expense.

The following is the roll-forward of Agency elimination before any adjustment:

($Millions)

April 1, 2016 ($837)

Add: (47M) Elimination with Government Enterprises Dr. Agency Elimination Other Agency Cr. Pension Expense total

Add: (22M) Elimination with Government Organizations Dr. Agency Elimination Other Agency Cr. Expense within the agency itself

Closing March 31, 2016 (906M) *does not add due to some rounding*

Add: (47M) If assumed the same as last year - Elimination with Government Enterprises Dr. Agency Elimination Other Agency Cr. Pension Expense total

Add: (22M) if assumed the same as last year - Elimination with Government Organizations Dr. Agency Elimination Other Agency Cr. Expense within the agency itself

Closing March 31, 2017 (975) estimated.

Also the $906M is actually the March 31, 2016 closing and not the opening.

Please call me if you need further clarification.

Pauline

Subject: Summary of impact based on proposed year-end adjustments

Hi everyone,

Thank you for forwarding us the most updated spreadsheets for all plans. We have reflected them accordingly for our analysis.

As promised, please find attached a summary of impact based on the proposed year-end adjustments. We have prepared an one-pager with both years on it (on legal size paper), as well as an individual summary page for each of the two comparative years.

Let us know if you have any questions.

Regards,

Christina

Subject: Supplemental Report - Pension Panel

Hi Cindy,

Please see attached the supplemental report (final draft) from the Pension Asset Expert Advisory Panel.

If you have any feedback on this document please can you provide this today. The Panel is hoping to finalize it by the end of the day, if possible. It is a much shorter document than the original Report.

The password is the same as the Report. If you need a reminder of it, please let me know and I will provide under separate e-mail.

Regards,
Lucy

Subject: RE: Two follow-up items
Date: Tuesday, August 29, 2017 18:13:25
Attachment 1: image001.gif

Hi Cindy,

Thank you for sharing the wording with us. We agree that it fairly represents our work. A minor point is to perhaps consider referring to EY instead of Ernst & Young LLP, but if there is a reason for using the legal name that's ok. Should there be further changes to the text, please let us know.

Following up on the other three remaining items from our discussion:

· **Assumption setting and documentation**: reviewing our files, it appears that MOF developed assumptions in November last year, TBS reviewed and approved them in December, the actuaries prepared reports based on those assumptions by the end of January and in February TBS/MOF prepared documentation supporting the assumptions. As discussed, I believe we could add value both in terms of the assumption setting process, and separately in terms of support and documentation to assist AG's review. With accelerated timelines this year, we should likely start those discussions in the coming weeks in September.

· **Meeting with Nancy Kennedy**: Thank you for suggesting this meeting. Should we attempt to organize it in the next couple of weeks?

· **HOOPP/CAAT modelling**: I briefly re-confirmed with Christina and it sounds like we have done all the modelling work for HOOPP/CAAT, but if there are any follow up questions or additional items needed, of course we can complete those. Christina will follow up with her contacts to clarify.

Please let me know your thoughts.

Subject: RE: Two follow-up items

Hi Uros,

With respect to the references to the EY report, here is a first draft of what we may communicate:

- The professional staff's interpretation of PSAB standards is supported by their own research and analysis as well as:
    - The report of the Pension Asset Expert Advisory Panel released on xxx, which can be found at xxxxxx.xxx stating that the Government should record an asset for its share of the surplus reported in the accounting valuations for each plan and that no valuation allowance is required.
    - An opinion from Deloitte LLP on OTPP, a summary of which is included in Appendix A, supporting the ability to recognize a pension asset in the absence of having a unilateral right to reduce contributions to the plan.
    - **Analysis completed by Ernst & Young LLP as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. Ernst & Young LLP confirmed no valuation allowance was required for either plan.**

We are still working through our communication plan, so the text above may change,

but in the meantime, if you could let me know if you are OK with the bullet on EY, that would be great.

Please treat as confidential.

Thanks,

Cindy

Subject: Two follow-up items

Hi Cindy,

It was very nice to see you again today. Thank you for a good discussion.

While there were a few follow-up items, I wanted to get back to you today on two of the most urgent:

· References to EY report: I connected with Greg and Blake, and all three of us were in agreement that you can refer to our work as you pull together the supporting documents on which you based your accounting decision. We would like to ask, however, if you could share with us the wording you're planning to use (and continue sharing it as it may evolve through the Public Accounts communications materials sign-off process), just so we are aware of what is being communicated.

· Security clearance: Greg has connected with Mark on this today. Apparently they

know each other as they have already worked together on some prior projects.

I hope you have a great weekend, and I will get back to you next week on the other items.

Sounds good, Mark. I would just note that when we refer to EY, we normally don't include LLP (ie. EY is the operating brand, while Ernst & Young LLP is the legal name). Sometimes in an effort to simplify things we inadvertently make them more complicated!

Sensitivity: Confidential

PLEASE TREAT AS CONFIDENTIAL

Hi Uros,

In addition to Cindy's email below, there are other communication materials being crafted that will go out for circulation in which EY is reference. The references with respect to OTPP and OPSEUPP read consistently as:

“After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY LLP provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements includes these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001.”

This paragraph appears in our backgrounder, and twice in our Q&As.

Just wanting to confirm this was acceptable.

Cheers,

Mark

Hi Uros,

With respect to the references to the EY report, here is a first draft of what we may communicate:

- The professional staff's interpretation of PSAB standards is supported by their own research and analysis as well as:
    - The report of the Pension Asset Expert Advisory Panel released on xxx, which can be found at xxxxxx.xxx stating that the Government should record an asset for its share of the surplus reported in the accounting valuations for each plan and that no valuation allowance is required.
    - An opinion from Deloitte LLP on OTPP, a summary of which is included in Appendix A, supporting the ability to recognize a pension asset in the absence of having a unilateral right to reduce contributions to the plan.
    - **Analysis completed by Ernst & Young LLP as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31,**

2017. Ernst & Young LLP confirmed no valuation allowance was required for either plan.

We are still working through our communication plan, so the text above may change, but in the meantime, if you could let me know if you are OK with the bullet on EY, that would be great.

Please treat as confidential.

Thanks,

Cindy

Subject: Two follow-up items

Hi Cindy,

It was very nice to see you again today. Thank you for a good discussion.

While there were a few follow-up items, I wanted to get back to you today on two of the most urgent:

· References to EY report: I connected with Greg and Blake, and all three of us were in agreement that you can refer to our work as you pull together the supporting

documents on which you based your accounting decision. We would like to ask, however, if you could share with us the wording you're planning to use (and continue sharing it as it may evolve through the Public Accounts communications materials sign-off process), just so we are aware of what is being communicated.

· Security clearance: Greg has connected with Mark on this today. Apparently they know each other as they have already worked together on some prior projects.

I hope you have a great weekend, and I will get back to you next week on the other items.

Sounds good, Mark. I would just note that when we refer to EY, we normally don't include LLP (ie. EY is the operating brand, while Ernst & Young LLP is the legal name). Sometimes in an effort to simplify things we inadvertently make them more complicated!

Subject: RE: Two follow-up items

Sensitivity: Confidential

PLEASE TREAT AS CONFIDENTIAL

Hi Uros,

In addition to Cindy's email below, there are other communication materials being crafted that will go out for circulation in which EY is reference. The references with respect to OTPP and OPSEUPP read consistently as:

"After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY LLP provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements includes these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001."

This paragraph appears in our backgrounder, and twice in our Q&As.

Just wanting to confirm this was acceptable.

Cheers,

Mark

Subject: RE: Two follow-up items

Hi Cindy,

Thank you for sharing the wording with us. We agree that it fairly represents our work. A minor point is to perhaps consider referring to EY instead of Ernst & Young LLP, but if there is a reason for using the legal name that's ok. Should there be further changes to the text, please let us know.

Following up on the other three remaining items from our discussion:

· **Assumption setting and documentation**: reviewing our files, it appears that MOF developed assumptions in November last year, TBS reviewed and approved them in December, the actuaries prepared reports based on those assumptions by the end of January and in February TBS/MOF prepared documentation supporting the assumptions. As discussed, I believe we could add value both in terms of the assumption setting process, and separately in terms of support and documentation to

assist AG's review. With accelerated timelines this year, we should likely start those discussions in the coming weeks in September.

· **Meeting with Nancy Kennedy**: Thank you for suggesting this meeting. Should we attempt to organize it in the next couple of weeks?

· **HOOPP/CAAT modelling**: I briefly re-confirmed with Christina and it sounds like we have done all the modelling work for HOOPP/CAAT, but if there are any follow up questions or additional items needed, of course we can complete those. Christina will follow up with her contacts to clarify.

Please let me know your thoughts.

Subject: RE: Remodeling - OPSEUPP

Hi Wendy,

If you like, Shayan and I can come over on Monday PM. Would that work for you?

We briefly discussed on how the % is to be determined and I think that's still up for discussion. I would imagine the change in % would be minimized if it's based on the accumulative contribution amount. However, we note that would also add another layer of recordkeeping/tracking. Right now all years are set to 47.66% as I've setup the spreadsheet such that the all contributions are to increase at the same % (which, is not an unreasonable assumption for projection). We are happy to discuss further.

As for the opening balance adjustment – I think it's best for us to talk through it so that we are all in understanding the adjustment that's required to be made and what's the most appropriate way to do so.

Let us know if Monday works. Have a great weekend.

Thanks!

Christina

Subject: RE: Remodeling - OPSEUPP

Hi Christina,

I have a few questions related to the % calculation.

1. Currently, the same %, i.e. 47.66%, is used for all years. My understanding from our discussion is that the percentage will be calculated based on accumulative contributions, and likely will change from year to year.

2. Impact on assets and liability due to percentage change is adjusted to opening balance as the model is built now. Let's discuss this as I don't think we would want to restate opening balances whenever the % changes in the future.

Depending on where you're with other plans, please let me know if you are coming to our office or I can call you to discuss OPSEUPP.

Thank you,

Wendy Li

To: Li, Wendy (TBS)
Cc: Petsche, Nadine (TBS); Fong, Pauline (TBS); Shayan Jafrani
Subject: Remodeling - OPSEUPP

Hi Wendy, Pauline,

As Shayan is completing his review on OTPP, I updated the OPSEUPP. Shayan will also do a QA review on this model, but thought to share given our timeline.

Attached is the current draft version of the remodeling spreadsheet for OPSEUPP. I have not fully finalized the projection capability (some of the numbers currently remain hardcoded as you had them) due to priority of work.

Based on my conversation with Pauline when we gone over OTPP, it was my understanding that eventually, OPCD may want to provide the ON's own disclosure exhibits for its portion of the plans. As such, and for better clarity, you will find that there is a 100% disclosure tab, as well as a "disclosure (Prov)" tab. This tab represents the portion (47.7%) of ON's reporting of the Plan.

The yellow tabs are "must have" going forward (new data input tab, the two disclosures, smoothing of assets calculation, gl schedule). All inputs are now done under the "data input" tab.

I have shown the opening balance adjustment as two separate line items: (343) and 40 (row 71 and 72 under the Prov's disclosure tab). The 323 represents the reversal of the "year-end adjustment and difference in contributions", and the 40 represents the change due to the % change. The net opening adjustment is then (303). The reason why I setup this way is for potential future % changes – which OPCD should decide how this adjustment would be accounted for going onwards. If the % change is not expect to be significant, this would be the cleanest way – but we can also explore the possibility of amortizing it. I also left the "consolidated agencies contributions" line item similar to PSPP, which is for OPCD to consider how it should be reporting consistent with your other systems inputs.

If it's helpful, I can also come in to go through the setup with you.

Thanks,

Christina

Hi Cindy

Both are done and final versions are signed off by all Panel members. Lucy will send to Communications today to begin translation etc. Nelson has provided the email addresses as he is ill and not in the office.

Also wanted to check with you who else should get copies at this point. I assume you and Karen should. If so, Lucy can forward at the same time.

Not sure if you have been advised about panel member schedules. Paul is available only week of Feb 6. Murray is in Asia until after mid-Feb. He can participate by phone in morning meetings. Uros and I are fairly open and flexible.

Best
Tricia

Matt,

Further to our discussion, we are seeking permission to share the Section 7600 report with PricewaterhouseCoopers, today if possible.

Please see our request below. We look forward to hearing back from you.

Thanks.

Nadine

This note is to confirm that Deloitte LLP ("Deloitte") consents to the disclosure of its work product, including the accounting opinion, developed by Deloitte as part of or in connection with the work being done by PricewaterhouseCoopers LLP to assist Treasury Board Secretariat in compiling a Whitepaper describing the Province's position on Pension Asset accounting. The purpose of the disclosure is to allow PricewaterhouseCoopers LLP to review and consider the Deloitte LLP documentation in compiling the above-noted Whitepaper. The Whitepaper will not be based solely on Deloitte's work, but for purposes of consistency and completeness, it is considered beneficial to allow PricewaterhouseCoopers LLP to access the Deloitte's document. Please confirm your consent by responding to Karen Hughes and cc'ing me on your response.

Best regards,

Nadine

Cindy,
If it's agreed that we might want to include additional disclosure of the impacts under the AG's approach, perhaps the stated reason for sharing the analysis with the AG is to validate the numbers for supplementary disclosure that the Province would be planning to include in our notes (foe transparency). Adding the disclosure would also make it easier (I think) to sign off on the MLR unless the legislative accounting option is back on the table.. if folks really just want to avoid a battle in the media where he AG looks right, then they should reintroduce the legislated accounting option and take the qualified opinion (which I still think is a false threat). Pauline

I did look into your file and seems reasonable vs the previous illustrations that we have exchanged, just one adjustment

You will see in liability sheet I have a line 29 adjustment for other unamortized (this is the transitional asset amortization that goes back to the initial application which is to be included in the test of unamortized losses) this likely affects your 2002 / 2003 valuation allowance.

Also to note is the flaw of the PS3250 that I have highlighted in previous communication :

- In 2008 we did have very bad asset returns and this creates a significant income through reduction of valuation allowance

- In opposite, the years 2010 and 2011 had good returns but you have significant expense through increase of valuation allowance

Objet : Review: Valuation Allowance

Hi Martin,

I mocked up the annual valuation allowance based on our discussion yesterday. We went through it with Cindy this morning and she would like you to take a look at the mock-up to confirm that it is consistent to your understanding. In particular bringing the unamortized gain/loss from market related values to market values. Thank you in advance.

Lucy,
Please find attached a 'track changes accepted' version of the position paper with some additional edits and notes for consideration. This cleaned version (subject to any additional edits by yourself and Jim) will serve as a revised draft for Cindy to review over the weekend. She will also receive the more detailed track changes version with comments. Can you please take a quick read of this version and insert any additional edits (including context setting w.r.t short term solvency exposure on the Province w.r.t funding requirements).
Thanks in advance.

Draft Pension Asset Position Paper Oct 28 clean2.pdf

Position paper for Ontario Teachers' Pension Plan

Preamble

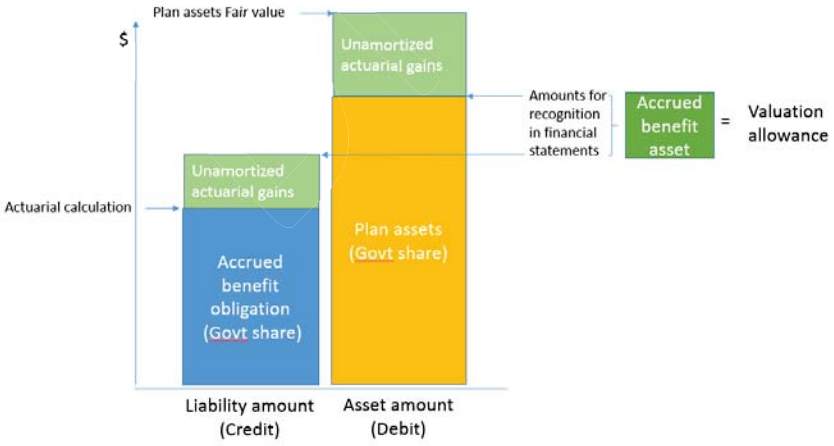
This document addresses the accounting for pension assets by the Province of Ontario in relation to the Ontario Teachers' Pension Plan (OTPP).

The constating documents of OTPP are different from those of the Ontario Public Service Employees' Union Pension Plan (OPSEUPP), the Healthcare of Ontario Pension Plan (HOOPP), and the CAAT pension plan (CAAT). The appropriate accounting for OTTP may be different than for other pension plans in Ontario as well as pension plans in other provinces, for example New Brunswick and British Columbia, as a result of differences in the respective constating documents.

Issue to be considered

In connection with the preparation and audit of the 2015-16 Public Accounts, the Office of the Auditor General of Ontario (OAG) and the government's professional accounting staff disagreed regarding the application of Public Sector Accounting Standards (PSAS) to pension assets related to two pension plans that the Province jointly sponsors –OTPP and OPSEUPP. This position paper addresses the analysis for OTPP. A separate document will provide further analysis on the Province's accounting in relation to OPSEUPP, HOOPP and CAAT.

As described in PSAS, an accrued benefit asset (pension asset) arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. An Accrued Benefit Asset (AcBA) includes the effect of net unamortized experience gains or losses. Actuarial (experience) gains can occur in respect to both plan assets as well as the pension obligation. OTPP currently has net unamortized experience gains. The following illustration reflects the compilation of the net pension asset (accrued benefit asset) reported on the Province's books for the OTPP.



Commented [NP1]: Lucy – Inserted the summary slide here for the Panel's ease of reference. Unfortunately, I can't seem to edit the illustration. I think it would be good to remove some of the text (including ref to OAG view)?

LD – fixed. Note – I don't know whether there are actually amortized gains for both liability and assets for OTPP. Or just net gains. Can someone advise to ensure that the diagram actually reflects the OTPP situation, as it was originally intended as illustrative rather then specific. (there was also the illustration of net losses)

Do you want reference to the OAG view removed from the appendix as well, or just here.

DRAFT

It is important to note that contributions to the plan are based on funding objectives of the plan. In contrast, Benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future.

Commented [NP2]: Reworded

OK

The Province's position is that the asset balance (plan surplus for accounting purposes) in OTPP is an asset to the Province and it is appropriate to reflect it in the financial results in accordance with PSAS. The Province has also concluded that no valuation allowance under PSAS is required against the asset as at March 31, 2016.

The OAG disagrees with this position. The OAG has indicated that the Province does not have the legally enforceable right to unilaterally access the assets of the plan, and as such that the Province does not control the assets which the OAG interprets PSAS as requiring. Further, the OAG considers the lack of an enforceable agreement at year-end with the Ontario Teachers' Federation (OTF) dictating lower contributions in the future as requiring that a full asset valuation allowance be taken against the asset under PSAS.

Commented [NP3]: Reworded.

OK

Financial statements for the Province have been prepared over the prior 14 years in accordance with the CPA Canada Public Sector Accounting (PSA) Handbook. RETIREMENT BENEFITS, Section PS 3250 of the PSA Handbook addresses the accounting of obligations for employee retirement benefits in government financial statements. Since 2001, there have been no consequential changes to Section PS 3250. As a result Ontario has followed the same pension accounting treatment for OTPP over the past 14 years. The pension liability (asset) and expense reported by the Province of Ontario for OTPP over the period is reflected in Appendix F. Unqualified audit reports have been received for each of the years from the OAG on the Public Accounts. The pension accounting initially adopted by the Province for OTPP had been accepted by the current Auditor General for the last two years and by the three previous Auditors Generals for the prior years.

In light of the contrasting views on interpretation of PS 3250 to the Province's jointly sponsored pension plans, a regulation was necessary to allow the public service to sign-off on the impact of the OAG's view on accounting for pension assets in Ontario's 2015-16 financial statements. The regulation is time-limited and legislates the accounting for pension assets of its two jointly-sponsored pension plans (OTPP and OPSEUPP) for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The change in accounting treatment for 2015-16 resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the 2015-16 annual deficit of $1.5 billion.

To clarify, the government's regulated accounting for the 2015-16 Public Accounts although resulting in a consistent fiscal impact as would be reflected under the Auditor General's accounting, does not reflect the Province's interpretation of pension accounting under the PSAS.

Position paper for Ontario Teachers' Pension Plan

On October 5, 2016, the Auditor General issued a qualified report on the 2015-16 Public Accounts. While the 2015-16 results were accepted by the Auditor General, the audit opinion was qualified because the comparative financial balances were not restated for the prior year to reflect the Auditor General's interpretation of PSAS. Restating the previous year's results would have had no impact on the financial results for 2015-16, including the annual deficit and net debt.

Background

Overview of OTPP

OTPP is a jointly sponsored pension plan[1] (JSPP) as defined in the *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 and as established under the *Teachers' Pension Act (Ontario),* R.S.O. 1990, c. T.1. The sponsors of OTPP are the Province of Ontario (the "Province"), through the Minister of Education and the Ontario Teachers' Federation represented by its Executive (the "OTF") (collectively, the "sponsors").

The plan administrator of the OTPP is a board of directors. The plan administrator is an independent entity, members of which are appointed by the sponsors.

The constating documents for OTPP set out the respective rights of the sponsors, and describe the powers of the plan administrator. The OTPP is governed by:

a) The *Teachers' Pension Act* (TPA), R.S.O. 1990, c.T.1 (TPA);
b) The *Pension Benefits Act (Ontario),* R.S.O. 1990, c. P.8 (PBA) and the regulations thereunder (PBR);
c) Plan text for the OTPP ;
d) An agreement between Her Majesty the Queen in right of the Province of Ontario represented by the Minister of Education and Training and The Ontario Teachers' Federation represented by its Executive, dated July 15, 1991, as amended (The Partners' Agreement);
e) A Funding Management Policy, attached as Appendix A to the Partners' Agreement (FMP);
f) The Ontario Teachers' Pension Plan; and
g) The Term Sheet agreed to by the Sponsors dated March 13, 2013 (the "2013 Term Sheet") describing the implications of the Freeze Period on the Funding Management Policy.

DRAFT

[1] **Jointly sponsored pension plans**
(2) For the purposes of this Act, a pension plan is a jointly sponsored pension plan if it has the following characteristics:
a. It provides defined benefits.
b. The defined benefits are contributory benefits.
c. Members of the pension plan are required, by virtue of the documents that create and support the plan, to make contributions in respect of any going concern unfunded liability and solvency deficiency of the plan.
d. The plan satisfies such additional criteria as may be prescribed. 2005, c. 31, Sched. 18, s. 1 (2).

Three material implications for OTPP as a result of qualifying as a JSPP under the PBA are:
1. Plan Governance - Under a JSPP, the employers (or any persons or entities who make contributions on behalf of the employers or represent the employers) and the members of the pension plan (or any representatives of the members) are jointly responsible for making all decisions about the terms and conditions of the pension plan and any amendments to the pension plan. [2]
2. Funding – OTPP is exempt from solvency funding requirements under the PBR. [3]
3. Cost Sharing - In a defined benefit pension plan which does not qualify as a JSPP, the employer is solely responsible for funding any going concern unfunded liability or solvency deficiency. Given that the OTPP qualifies as a JSPP, however, the PBA permits members to be required to make contributions in respect of any going concern unfunded liability or solvency deficiency. [4]

With respect to the cost-sharing principle referred to in #3 above, the TPA contains limitations on the contributions that the Province (and other participating employers) may make under the OTPP:

> *5(1.1) The total amount of the contributions payable by the Minister of Education and the employers who contribute under the pension plan in respect of any year shall not exceed the amount of contributions payable by or on behalf of active plan members in respect of credited service for that year.*

Despite this general principle, under the TPA the Province is required to make additional contributions to the OTPP in the event that there are insufficient assets to make required payments out of the plan in any particular year. [5] This clause has been interpreted as a short term solvency protection clause, rather than a clause that transfers substantive residual risk to the Province, as the rest of the arrangement is structured such that the risk of these payments is minimal and the risks of the long term funding of the plan must still be equitably shared. The Province is also permitted to make additional contributions in respect of a solvency deficiency[6] (although, as noted above, solvency funding is not required under the OTPP). Notwithstanding that subsection 5(1.1) of the OTPP provides a cap on the Province's normal cost contribution obligation, rather than requiring 50/50 cost sharing, in practice there has been 50/50 cost sharing of the normal contribution cost under the OTPP since the OTPP became jointly sponsored (and for the majority of periods of time since the inception of the plan in 1917). [7] The plan text itself also provides for equal contributions, at the basic level (see sections 25(1) and 26(1)).

Commented [NP4]: Lucy to add wording to reflect short term liquidity risk vs. long-term risk sharing. (focus of the paper is on asset recognition – worth stating? I don't think that additional risk on the liability side would impact the asset recognition, would it?)

The only implication would be that it would not be a JDBP if there was not an equitable sharing of risk – 3250 is clear that if the govt has residual risk it's not a JDBP

[2] PBR, subsection 3.1(1).
[3] PBR, subsection 1.3.1(3).
[4] PBA, subsection 1(2) and subsection 55(4).
[5] TPA, subsection 5(3).
[6] TPA, subsection 5(7).
[7] See, Ontario Teachers' Pension Plan: "How Contribution Rates Have Evolved" available at:

Joint governance and cost sharing form two of the core features of the OTPP. Consistent with the equal sharing of risk permitted under a JSPP, there is a requirement for decisions relating to plan design and plan amendments to be made jointly by the Sponsors. In this regard, the Partner's Agreement requires the Sponsors to negotiate and agree upon decisions relating to surplus or deficit utilization, which currently is outlined in the FMP. [8] The FMP indicates that deficits (or surpluses) may be addressed through increases (decreases) to the contribution rates, lowering (increasing) the amount of indexation and/or other decreases (increases) in benefits. While not binding upon the Sponsors, as the Sponsors can change the FMP at any time, any changes are required to have the mutual consent of both Sponsors. Accordingly, the Sponsors can be said to have equal opportunity to benefit from surplus utilization through the negotiation process.

Additional excerpts from constating documents for OTPP relating to use of the Plan's surplus and the sharing of responsibilities amongst the Sponsors are included in appendix E. Some important elements of these are:

1. Paragraph 10(1)3 of the TPA provides that the Minister of Education and the executive of the OTF may enter into an agreement that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. We note that the Sponsors have in fact entered into such an agreement, in the form of the Partners' Agreement (to which is appended the FMP).

2. The Plan Documentation (specifically the FMP) and applicable legislation allow for the Sponsors to utilize surplus in a variety of ways, depending on the funded status of the OTPP. These surplus utilization options include the following avenues through which the Province may receive a financial benefit through the utilization of surplus (the three "zones" describe different levels of surplus, a greater amount of surplus being required in order for the next "zone" to come into play):

a. In the Restoration Zone, a Restoration Contribution Reduction may be approved once certain other requisite conditions have been met.

---

https://www.otpp.com/documents/101791209401-l5e47lc2b-23f1-44e6-b5cld22e3e50dbc3lHow+ Contribution+Rates*HaverEvolved.pdf As noted above, for the period from January l, 2008 to December 31, 2008 the employee contribution rate was slightly lower than the employer contribution rate for earnings both above and below the YMPE (9.6%/11.20lo versus l0.4yo/l2Vo, respectively). It is our understanding that member contribution rates in 2008 were partially subsidized by the OTF with a credit reserve from the 1998 to 2001 pension negotiations, which accounts for this difference.

[8] See, for example, Section 3.09 and 3.11 of the FMP.

DRAFT

b. In the Temporary Improvement Zone, surplus may be utilized to provide a temporary contribution reduction (i.e., a contribution holiday), either as a stand-alone measure or in combination with other surplus utilization options (i.e., benefit improvements or surplus withdrawal).

c. In the Permanent Improvement Zone, surplus may be utilized to permanently reduce the current contribution obligations of the employers and the members, either as a stand-alone measure or in combination with changes to benefits.

Notwithstanding the foregoing, under the FMP the Sponsors have the discretion to, by mutual agreement, utilize surplus in any other manner.

3. Any enforceable legal right to obtain some value from any surplus pursuant to the Partners' Agreement (and FMP appended thereto) would be grounded in the law of contract. As the relevant provisions of the FMP require the Sponsors to agree upon the manner in which surplus is to be utilized, neither Sponsor has a legally enforceable right to unilaterally utilize surplus in the OTPP. As such, the provisions in the FMP that contemplate the ability for the Province to receive a financial benefit through the utilization of surplus would not, in and of themselves, give rise to a legally enforceable right. What the Province does have, however, is a right to negotiate with the OTF the use of funding surpluses that may arise under the plan.

4. Negotiations on the use of the surplus occur as specified in the Partners' Agreement. The Partner's Agreement requires that any actuarial funding valuation submitted to the pension regulators must be "actuarially balanced" (Section 57 of the Partners' Agreement). This must occur at least once every three years, but can occur every year if the partners agree. If a preliminary funding valuation shows a funding surplus or deficit then the joint sponsors must negotiate how this surplus or deficit is to be resolved prior to filing the funding valuation.

Accounting for OTPP by the Province

Since fiscal year 2001-2002, the Province has recorded a pension asset for OTPP on the Statement of Financial Position. A pension asset has arisen because the government's share (50%) of the total contributions to OTPP plus recognized investment returns on the plan's assets have exceeded the government's share of the accumulated retirement benefit expense (see illustrative examples in Appendix J). The accounting for the accrued benefit obligation results from a complex process involving significant assumptions and actuarial calculations covering a very long time frame as is required by RETIREMENT BENEFITS, Section PS 3250.

Commented [NP5]: Added

OK

With regards to any comparisons between surplus or deficit amounts reported in the Province's financial statements verses the OTPP's financial statements or funding reports, it is important to acknowledge

the different objectives of funding and accounting for a pension plan which are also explicitly addressed in Section PS 3250 as follows:

> *.008 Determining whether a retirement benefit plan should be funded and the amount to be funded each period is a financial management matter. The funding objective is to determine an acceptable policy for financing the estimated ultimate cost of a benefit plan. An actuarial valuation for funding purposes is performed to calculate the contributions required to secure the benefits promised.*
>
> *.009 The accounting objective is to measure and report the obligation for employee retirement benefits and to attribute the costs of those benefits to the periods in which the related services are rendered. To meet that objective, a method is needed to determine the amount of the obligation for retirement benefits outstanding, which represents the liability at the financial statement date, and the value of the benefits employees earned during the period, which represents the expense of that period. …*
>
> *.010 Because the objectives of determining the most appropriate funding policy are not necessarily the same as those of determining the most appropriate accounting method, the liability for accounting purposes may not be the same as the amount due but not yet funded at the financial statement date according to the funding plan. In addition, the retirement benefit expense of the period for accounting purposes may not be the same as the contribution computed in the period for funding purposes.*

Paragraph PS 3250.051 includes an explicit acknowledgement that the accounting position and funding position can be quite different, as follows: "Contributions reflect the funding objectives of the Plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons…"

OTPP's most recent preliminary funding valuation reported a preliminary funding surplus of $13.2 billion as at January 1, 2016, as reported on the OTPP website. The Province's relative portion of this surplus would be $6.6 billion. The OTPP's public financial statements showed a deficit for accounting purposes of $1.8 billion in its financial statements as at December 31, 2015, for which the Province's portion would be a deficit of $900 million. The following background helps to clarify the reasons for these different results. OTPP's financial statements are prepared under accounting standards for pension plans in Part IV of the CPA Canada Handbook ("Part IV"), which is a different accounting framework than the Province uses for its financial reporting and is also a different framework than is used to calculate the net surplus or deficit for funding purposes.

Accounting for employee future benefits requires the use of assumptions and methodologies to calculate both the obligation incurred to date and the value of the assets already set aside to meet those obligations. Accounting frameworks differ in standards that must be applied in determining appropriate assumptions and methodologies. Further, the assumptions and methodologies used in developing a "funding valuation" on a going concern basis may also differ from those required by accounting standards. These differences result in a number of different valuations for the same plan, depending on

the purpose of the valuation and can be affected by certain choices made between acceptable options within each framework. A summary of the main differences between the methodologies used to calculate a going concern funding valuation, OTPP's accounting valuation and the Province's accounting valuation is shown in Appendix I.

Specifically, the discount rate used to value the obligations of the plan has a significant impact on the overall position of the plan. A lower discount rate results in a higher liability and a higher discount rate results in a lower liability, all else being equal. Put another way, a higher estimate of the time-value of money makes the promises made today that will be paid out in the future cheaper. OTPP uses a discount rate based on corporate/government bond rates in its financial statements, as permitted by Part IV. The Province uses a discount rate based on the expected asset return, as permitted by PSAS. The rationale for using a corporate or government bond approach is that a pension promise is akin to a bond as it is a promise to pay a series of cash flows in the future regardless of what the asset returns actually are (which could be higher or lower than expected). The rationale for using an asset return approach is that it represents the amount of contributions that, combined with investment returns, should be sufficient to pay the promised benefits, particularly as pension plans will often invest in higher risk/higher return assets then simple corporate bonds. Both a discount rate based on the expected asset return and one based on corporate/government bonds are "best estimate" rates; they must both be based on management's best estimate of the applicable discount rate. In both cases the estimates must be supportable. The difference results not from one being more "right" or "wrong" relative to the other but from fundamentally different approaches within the accounting standards to what the discount rate should be.

Typically the funding discount rate used for the funding valuation falls between the bond discount rate and the expected asset return, but it differs in that it does not purport to be the "best estimate" of the discount rate, rather it is designed to indicate the contributions that are required to fund the promised benefits with an additional conservative margin for adverse deviations. Note that over the long term the difference between funding valuations and accounting valuations would diminish as the impact of the discount rate unwinds and the asset valuation methods converge.

In practice, the discount rates used in the financial statements of government sponsored and joint defined benefit pension plans prepared under Part IV of the CPA Canada Handbook (Section 4600) use diverse methodologies. For example, in Alberta there are seven plans which prepare their financial statements under Part IV with reference to IFRS (same framework as OTPP). Of these none use a government bond discount rate and all use a discount rate calculated with some reference to a rate of return on invested assets, which may include factors for expenses, diversification and rebalancing. The analysis of a number of government sponsored plans is included as Appendix G. The analysis demonstrates that a significant number of government sponsored plans use a discount rate aligned to an asset investment return rather than a bond discount rate. OTPP is actually in the minority of plans that choose to use the rate required by IFRS, resulting in a lower discount rate and higher liability for financial reporting purposes.

The above analysis explains how different discount rates impact the net surplus/deficit reported on OTPP's financial statements, OTPP funding reports and the Province's financial statements. The fact that OTPP reports a deficit on its financial statements, or that the 50% of the net surplus reported by OTPP for funding purposes is lower than the surplus reported on the government's financial statements under PSAB standards is of no consequence or relevance to the pension asset amount or pension expense reported by the Province for OTPP. .

To further clarify, that there is a deficit reported in the OTPP financial statements while the Province of Ontario calculates a surplus under PSAS requirements does not mean that there is no accounting surplus and therefore no reportable asset for the Province. In fact, if the OTPP had chosen (as an acceptable accounting policy choice) to use a discount rate more consistent with its counterparts in other jurisdictions (see Appendix G) such as a discount rate based on an asset return which would be closer to that used by the Province, it would eliminate much of the existing differences between the reported net surplus/deficit amounts between the OTPP statements and the Province's share of OTPP reported for accounting purposes in the Public Accounts.

Sufficiency of PS 3250 in assessing appropriate accounting for pension assets

Commented [NP6]: replaced 'completeness'

OK

GENERALLY ACCEPTED ACCOUNTING PRINCIPLES, Section PS 1150 prescribes that, in developing and applying accounting policies, all primary sources of GAAP should be applied (paragraph PS 1150.04). Primary sources of GAAP are Sections PS 1200-PS 3510, Public Sector Guidelines and appendices and illustrative material to those pronouncements. Only when there are no primary sources of GAAP that relate to the transactions or events under consideration, or more specific guidance is needed (paragraph PS 1150.05), does an entity consider other primary sources of GAAP dealing with similar issues and also the concepts described in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 (issued January 2003). Section PS 1000 is not, however, a "primary source of GAAP" under the PSA Handbook.

The primary sources of GAAP specific to the accounting for pension assets is RETIREMENT BENEFITS, Section PS 3250 (issued in September 2001 replacing the prior EMPLOYEE PENSION OBLIGATIONS, Section PS 3250 which was based on Accounting Statement No. 5).

Other primary sources of GAAP that deal with similar issues might also be considered where additional interpretation or guidance may be required. For the issues dealt with in this paper - recognition and measurement of a joint defined benefit plan - this could include standards that relate to shared control, as OTPP is a joint defined benefit plan, standards that relate to the definition of an asset and standards that relate to measurement uncertainty:

- GOVERNMENT PARTNERSHIPS, Section PS 3060 (issued in October 1999)
- ASSETS, Section 3210 (issued in June 2015, effective from April 1, 2017)
- MEASUREMENT UNCERTAINTY, Section PS 2130 (issued in April 2005)

There have not been consequential changes to any of the above standards since their introduction into the PSA Handbook. Furthermore, all the standards were developed several years ago with the exception

of ASSETS, PS 3210 which is more recent and will be effective in for periods beginning on or after April 1, 2017. Section PS 3210 provides additional guidance on the various components of the existing asset definition found in Section PS 1000; it does not change the definition.

Accounting Analysis

Question 1 – Classification of a pension asset

The analysis below addresses whether the Province's share of the pension surplus in OTPP, calculated in accordance with PSA standards under PS 3250, represents a reportable asset to the Province of Ontario in the Public Accounts.

Standards in the PSA Handbook

The focus of the following analysis is on the accounting requirements in RETIREMENT BENEFITS, Section PS 3250 as this standard is a primary source of GAAP which specifically addresses the accounting for pension assets. The following highlights some key concepts and guidance contained in this standard.

RETIREMENT BENEFIT, Section PS 3250 – Purpose and Scope

The purpose and scope of Section PS 3250 is included in paragraph .001 which states:

PURPOSE AND SCOPE

> *.001 This Section establishes standards on how to account for and report obligations for employee retirement benefits in government financial statements. Other employee future benefits are specifically dealt with in POST-EMPLOYMENT BENEFITS, COMPENSATED ABSENCES AND TERMINATION BENEFITS, Section PS 3255.*

Obligations for retirement benefits are further explained in RETIREMENT BENEFITS, Section PS 3250, paragraph .003 as follows:

> *.003 Obligations for **retirement benefits** result from a promise by a government to provide these benefits to employees because of retirement in return for their services. Pensions and other retirement benefits, such as extended health care and life insurance benefits, are a form of compensation offered for services rendered and accrue over the years employees render those services. The fundamental accounting task is to determine the amount of the obligation for retirement benefits to attribute to each period of employee service. Determining such amounts involves not only accounting for past transactions and events; it also requires forecasts of future events, such as inflation, investment returns, medical costs and employee turnover and mortality.*

RETIREMENT BENEFITS, Section PS 3250 applies to the accounting for OTPP in the Province of Ontario's financial statements as the pension plan represents an obligation of the Province to provide retirement benefits to the members of the plan in return for their services.

RETIREMENT BENEFITS, Section PS 3250 – Types of pension plans

RETIREMENT BENEFITS, Section PS 3250 addresses the accounting for different types of pension plans including:

- defined benefit plans (of which joint defined benefit plans are a subset),
- defined contribution plans, and
- multi-employer and multiple-employer benefit plans.

The definition of a joint defined benefit plan is included in the glossary to Section PS 3250 as follows:

> *A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:*
>
> *(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;*
>
> *(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;*
>
> *(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and*
>
> *(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.*
>
> *The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.*

Additional guidance on identifying Joint Defined Benefit Plans (JDBPs) is in PS 3250 paragraphs .79 to .80 which similarly highlight the importance of both shared control and shared risks and rewards in a JDBP:

> *.079 Governments may participate jointly in defined benefit plans where the government shares the risks and rewards jointly with plan participants, represented by a sponsor or sponsors. Joint defined benefit plans are governed by a formal agreement between the sponsors, which establishes that the sponsors have shared control over the plan. A governing board is generally appointed by the joint sponsors with equal representation and a mutually agreed-upon chair.*

DRAFT

> *.080 A government would consider the characteristics of the plan to determine whether it meets the definition of a joint defined benefit plan. In a joint defined benefit plan, funding contributions are shared mutually between the government and the plan members. The sponsors have control over decisions related to the administration of the plan and the level of benefits and contributions on an ongoing basis based on the terms of the contractual agreement. The sponsors share, on an equitable basis, the significant risks associated with the benefit plan. Risk would not be considered to be equitably shared in an arrangement where the government and the joint sponsors fund the plan equally but where the government retains the full risk of the accrued benefit obligation. If the government retains the residual risks it is unlikely that the plan meets the definition of a joint defined benefit plan.*

It should be noted that the definition of a Joint Defined Benefit Plan under Section 3250 is not the same as the definition of a JSPP under the PBA, although there are some overlapping concepts between the two. A JDBP is a unique sort of retirement benefit plan where the sponsors have shared control over the plan. As a result, no one party can, by itself, control decisions around funding, benefits and other matters; funding contributions, risks and benefits are to be shared mutually between the sponsors. The Province has concluded that OTPP meets the definition of a JDBP as the Province and OTF are sponsors of the plan. The OTPP is a contractual arrangement between the Province and OTF in which:

(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees (addressed in paragraph 8 of the Partners' Agreement for example);

(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example);

(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis (addressed in paragraph 8 of the Partners' Agreement for example) ; and

(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor (addressed in paragraph 5(1.1) of the TPA for example).

The TPA, the Partners' Agreement and the plan text collectively set out this shared control and that the Province of Ontario has an equitable sharing of the risks and rewards (surpluses and deficits) of the plan, thus meeting the definition of a joint defined benefit plan.

The classification of OTPP as a JDBP for accounting purposes [and a JSPP under the PBA] by the Office of the Provincial Controller has been consistent since 2001 and had been consistently accepted without question by the Office of the Auditor General, including throughout the 2015/16 Public Accounts.

Question 2 – Recognition of a pension asset for a JDBP

RETIREMENT BENEFITS, Section PS 3250 paragraphs .081 to .082 provide guidance on the accounting for a JDBP in the financial statements of the government sponsor. As OTPP meets the definition of a JDBP for the reasons noted above, the relevant guidance for the Province for purposes of reporting retirement benefits in the Public Accounts includes:

> *.081 When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans. [SEPT. 2001]*
>
> *.082 A government may convert an existing defined benefit plan for which it is the sole sponsor to a joint defined benefit plan where the risks and benefits are shared. When converting to a joint plan, a government would consider whether there are any special accounting issues that arise, including whether the predecessor plan has been settled or partially settled and/or curtailed or partially curtailed. In assessing such issues a government would have regard to its specific circumstances and the terms of the joint defined benefit plan.*

Section PS 3250.81 clearly states that "The government should account for its portion of the plan in accordance with the standards for defined benefit plans". It is clear from this that only the government's portion of the plan is included in the government's financial statements consistent with the requirements of Section PS 3250 (recognition) and the measurement of that portion is based on the requirements of Section PS 3250 (measurement). It is also then clear that the requirements of the standard for recognition and measurement, including the Limit of the Carrying Amount of an Accrued Benefit Asset guidance, are designed to be applied to a shared control situation and not only to situations where there is unilateral control. If it was intended that no pension asset could be recognized because the asset was subject to shared control and not unilateral control paragraph .081 would have made this clear. This paper discusses the question of measurement separately in Question 3.

The balance sheet recognition guidance for retirement benefits is stated in Section PS 3250.016 to .017:

> *.016 The statement of financial position should report the retirement benefit liability and the statement of operations should report the expenses for retirement benefits on the basis of the value of the benefits attributed to employee service to the financial statement date. [SEPT. 2001]*
>
> *.017 The components of the retirement benefit liability are:*
>
> > *(a) accrued benefit obligation including the effects of plan amendments, settlements and curtailments;*
> >
> > *(b) plan assets, if any; and*

DRAFT

(c) unamortized actuarial gains and losses.

As the OTPP is a funded plan there are plan assets that are recognized as part of the retirement benefit liability. When plan assets and the net impact of unamortized actuarial gains and losses exceed the accrued benefit obligation then there is an "Accrued benefit asset" (ABA). An ABA is defined in Section PS 3250 as follows:

> GLOSSARY - *An **accrued benefit asset** is the amount of any asset recognized on a government's statement of financial position in respect of employee retirement benefits before deducting any valuation allowance that may be required. It is the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance).*

Accordingly, the portion of the government's plan to be recognized includes their share of the accrued benefit obligation and also their share of the plan assets. In the case of the Province's portion of OTPP there is no uncertainty regarding the *existence* of an ABA for the government's portion of the plan; the ABA is calculated by reference to accrued benefit obligation and plan assets, both determined based on the best estimate assumptions and the methodologies required by with Section PS 3250 for these items. As noted above an ABA is defined as the sum of the government's accumulated cash contributions less the sum of the current and prior years' benefit expenses (before any change in the valuation allowance). For a jointly sponsored plan, this is the government's accumulated cash contributions less the government's share of the current and prior years' benefit expenses that are attributable to the government under the joint defined benefit plan. The Province's portion of OTPP resulted in an ABA of $10.1 billion as at March 31, 2016. There is no uncertainty regarding the occurrence of the cash contributions made (and the interest earned thereon) measured in accordance with Section PS 3250 and the existence of the government's obligation. As Paragraph 3250.80 *requires* a government to account for its portion of the plan in accordance with the standards for defined benefit plans, this would include the recognition of any asset that meets the definition of an ABA under the standard.

Further, Section PS 3250 paragraph 3250.50 refers to the presentation of the ABA; this amount is presented in the financial statements, net of any valuation allowance. This indicates that an ABA should be recognized in the financial statements, but measured in reference to the limit on the carrying amount of the asset - essentially a measurement requirement rather than a recognition requirement, as the limit could result in an ABA being measured at anything from $nil to its full amount. Note that the *measurement* of any net asset is subject to guidance in Section PS 3250 paragraphs .50-.59 and is discussed later in this paper.

To recognize only their share of the liability and not their share of the plan assets, or to recognize only a net liability (accrued benefit obligation exceeds plan assets) but never a net asset (when plan assets exceeds the accrued benefit obligation, subject to the valuation allowance guidance discussed in the Measurement section below), would indicate that the Province does not share equitably in the risks and rewards of the OTPP because they bear only the risk of increased liabilities without being able to bear

any rewards of investment returns on the plan assets and under this interpretation the plan would not therefore be a joint defined benefit plan.

Concept of Shared Control and Asset Recognition

Included in the definition of a JDBP is the concept of shared control. Points (c) and (d) of the definition of a JDBP require shared control of decisions relating to administration, levels of benefits and contributions between the sponsors; and the sharing of risks between the government and the plan members. The concept of Shared Control resulting in a recognition of an asset could on the surface appear to conflict with the definition of an asset under FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210, as part of the definition of an asset under PS 1000 would suggest that the government must control the economic resource and access to the future economic benefits. Since shared control does not equate to control, there is a need to consider whether the recognition of any asset under PS 3250 is appropriate where there is only shared control.

The Province's position is that PSAS does not preclude asset recognition for assets under shared control and specifically for plan assets of joint defined benefit plans for the following reasons:

- As discussed above GENERALLY ACCEPTED ACCOUNTING PRINCIPLES Section PS 1150 states that a reporting entity applies every primary source of GAAP that deals with the transactions and events encountered by that entity. Section PS 3250 is a primary source of GAAP for dealing specifically with joint defined benefit plans and, as noted above, requires the government to account for their portion of the plan – both the accrued benefit obligation and plan assets in accordance with Section PS 3250. As such, reference to Section PS 3250 is sufficient to indicate that the recognition criteria are met for joint defined benefit plan assets, no further source of PSAS guidance need be considered.
- Similarly, if other primary sources of GAAP are considered then it is relevant to consider GOVERNMENT PARTNERSHIPS, Section PS 3060 which also includes the concept of shared control. Under Section PS 3060, shared control is sufficient for asset recognition.
- The concept of shared control is not addressed in the definition and guidance of an asset in FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210. Although shared control is not included in FINANCIAL STATEMENT CONCEPTS, Section PS 1000, it has been a concept in the PSA Handbook since the introduction of Sections PS 3060 and PS 3250. With the introduction into the PSA Handbook of Section PS 1000 or Section PS 3210, the concept of shared control was not removed from Sections PS 3060 and PS 3250. This indicates that PSAB did not consider Section PS 3250 (or Section PS 3060) to be inconsistent with the general concepts in Section PS 1000.

- The Province's reporting of a pension asset for the JDBP is therefore consistent with these primary sources of GAAP, subject to measurement guidance including impairment considerations.

The similarities between the definitions of a JDBP and a government partnership under PSAS are demonstrated in Appendix B to this paper, and further support PS 3060 as being a relevant primary source of GAAP dealing with similar circumstances, should it be considered necessary to go outside of the requirements of Section PS 3250 to look for further clarification and guidance on recognition.

Under Section PS 3060 a critical condition for a Government partnership is shared control. Section PS 3060 explicitly acknowledges that under shared control "none of the partners is in a position to exercise unilateral control over the government partnership" (PS 3060.20), yet the accounting model required by Section PS 3060 for non- GBPs[9] is that of proportionate consolidation which is the recognition of a pro rata share of assets, liabilities, revenues and expenses of the partnership. Joint defined benefit plans are excluded from the scope of Section PS 3060 on the basis that control is shared with employees rather than with a party outside of the reporting entity (3060.06 footnote 3). This reason indicates that such plans are excluded because of a closer relationship between the government and the other party than normally exists for government partnerships. Even when an independent third party shares control, Section PS 3060 still requires the recognition of a share in an asset subject to shared control, indicating that the PSAS framework does not require unilateral control in order to support asset recognition when there is shared control. It would not be appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3060 for proportionate consolidation, and similarly it is not appropriate to use Section PS 1000 to over-ride the requirement in Section PS 3250 to account for the government's portion of a joint defined benefit plan. In other words, PS 3250 is a primary source of GAAP and provides sufficient and complete guidance on how to account for assets related to joint defined benefit plans.

Concept of Contingent Asset

CONTINGENT ASSETS, Section PS 3320, provides guidance on the disclosure of contingent assets in a government's financial statements. It characterizes a contingent asset as one where there is uncertainty as to the existence of an asset (Section PS 3320.04). It is the Province's position that the existence of the pension asset is not uncertain – there is an accrued benefit asset calculated in accordance with Section PS 3250 as noted above that is based on past transactions, being the impact of cumulative contributions and benefit expense. The fact that shared control exists with regards to access to the assets of the plan does not create additional uncertainty that would impact asset recognition under PSAS. The Province anticipates that in a broad sense, s any OTPP surplus would be shared in an "equitable manner" under the terms of the arrangement, and this is enabled through the ability to negotiate the utilization of the surplus including the ability to prevent the utilization of the surplus in a manner that does not benefit

[9] Government business partnerships (GBPs) are accounted for under the modified equity method rather than proportionate consolidation.

the Province. This expectation is further supported by past history of surplus utilization (see Appendix X). The method, extent and timing of which the Province will obtain the expected future benefits (contributions reductions vs increase in benefits) is not certain. However PS section 3320 also states "The mere fact that an estimate of an amount is involved (measurement uncertainty) does not, in and of itself, constitute the type of uncertainty that characterizes a contingent asset. For example, even though there may be measurement uncertainty related to income tax receivable, there is nothing uncertain about the fact that this asset exists. Any uncertainty is related solely to the amount thereof" (Section PS 3320.07). Based on past history of surplus utilization for OTPP and based on the constating documents, expected future benefits for the Government are present. The uncertainty as with many types of assets relates to measurement uncertainty which will be discussed below.

Conclusion on recognition

Therefore the Province has concluded that PSAS permits the recognition of a pension plan asset in respect of a joint defined benefit plan and does not require that all recognized assets must be subject to unilateral control. The Province's share of OTPP's pension surplus meets the definition of an Accrued Benefit Asset under Section PS 3250. The measurement of that accrued benefit asset is determined by reference to the guidance in PS 3250 regarding the Limit on the Carrying Amount of an Accrued Benefit Asset, which is discussed in Question 2 of this position paper.

Question 3 – Measurement of a pension asset

For an asset to be recognized it must be reliably measureable (paragraph PS 1000.55). Section PS paragraphs 3250.050 to .059 address how to measure a pension asset. This is a two-step process. Firstly the accrued plan obligation (a Credit) and the plan assets (a Debit) are measured in accordance with the standard, and adjusted for any unamortized actuarial gains or losses (a Debit for gains not yet realized, a Credit for losses not yet realized). This measurement results in a retirement benefit liability when it is a net liability (a Credit) amount or an accrued benefit asset when it is a net asset (a Debit) amount. When the resulting amount is an asset, the standard requires a second step to test that the asset is not impaired. It should be noted that impairment testing in some form is required for all assets recognized under PSAS standards except those carried at fair value, although the methodology of impairment tests will vary depending on the nature of the asset. The amount that is tested is the "adjusted benefit asset". When there are net unamortized gains the ABA is equal to the adjusted benefit asset. When there are net unamortized losses the ABA is reduced by those net unamortized losses to calculate the adjusted benefit asset. A graphical illustration of the calculation of the Accrued Benefit Asset (AcBA) and the Adjusted Benefit Asset (AdBA) are shown in appendix J. Section PS 3250 paragraphs .052 to .059 go on to explain what the standard means by expected future benefit and how a government may benefit from the ABA or adjusted benefit asset. Note that for OTPP the accrued benefit asset equals the adjusted benefit asset as there are net unamortized actuarial gains.

DRAFT

Section PS 3250.50-.59 are included here for completeness and ease of reference:

Limit on the carrying amount of an accrued benefit asset (i.e. Asset Ceiling Test)

.050 An accrued benefit asset should be presented on a government's statement of financial position net of any valuation allowance. When a defined benefit plan gives rise to an accrued benefit asset, a government should recognize a valuation allowance for any excess of the adjusted benefit asset over the expected future benefit. A change in valuation allowance should be recognized in the statement of operations for the period in which the change occurs. [SEPT. 2001]

.051 A government with a defined benefit plan may have an accrued benefit asset for accounting purposes. An accrued benefit asset arises when the government's total contributions to the plan, including interest earned thereon, are greater than the retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the accounting objectives and may differ for a number of reasons, including the fact that actuarial gains and losses are deferred and amortized in future periods.

.052 A government may benefit from an accrued benefit asset either by withdrawing surplus assets or by taking a contribution holiday or receiving a refund of contributions. The accrued benefit asset may become impaired when there is a plan surplus for accounting purposes that the government is not entitled to benefit from fully. For example, there may be a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

.053 To determine the extent to which an accrued benefit asset may be impaired, the government first determines the adjusted benefit asset. The adjusted benefit asset is the accrued benefit asset less net unamortized actuarial losses (determined on a basis using market value of assets).

.054 The adjusted benefit asset is then compared to the expected future benefit. When the expected future benefit exceeds the adjusted benefit asset, the accrued benefit asset is not impaired and, accordingly, no valuation allowance is required. The chart included as Appendix A to this Section is intended to set out the relationship between the various defined terms.

.055 The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions.

.056 A government determines its expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

.057 A government's expected future accruals for service for the current number of active employees are determined on a basis consistent with that used to determine its accrued benefit obligation. These expected future accruals for service, less required employee contributions and minimum contributions the government is required to make regardless of any surplus, are then discounted back to the current period to determine the present value. The interest rate used to calculate this present value is the expected rate of return on plan assets used to determine the benefit expense in the period.

.058 When administration expenses are paid by the plan and included in the normal cost calculation, a best estimate of the future administration expense is included in the expected future accruals for service. When administration expenses are paid by the plan and not included in the normal cost calculation, the rate of return on plan assets is adjusted to reflect the deduction of the administrative expenses.

.059 A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal. It excludes any withdrawable plan surplus a government is currently required, or intends, to allocate to employees. A government may not anticipate obtaining a legally enforceable right to withdraw a portion of a plan surplus to which it is not currently entitled, whether on the basis of precedent or otherwise. Accordingly, when withdrawal of plan surplus requires the approval of employees or an appropriate regulatory authority or a court of law, a government excludes any amount subject to this restriction from its expected future benefit until such approval has been obtained. A change in the allocation of surplus between a government and its employees is incorporated into the calculation of the expected future benefit only when it has been agreed to and, when required, approved by the appropriate regulatory authorities.

Paragraph .052 states that a government may benefit from an ABA by either i) withdrawing surplus assets from the plan or ii) by taking a contribution holiday or receiving a refund of contributions. This is an explanatory paragraph on how a government may benefit from an ABA and why a valuation allowance may be needed, rather than detailing the test to be applied. Part of this justification is to note that that an ABA may be impaired when "the government is not entitled to benefit from [the ABA] fully". Examples of when a government may not be entitled to benefit from the ABA fully are given, such as a regulatory moratorium on pension surplus withdrawals or uncertainties as to a government's legal right to use a plan's accounting surplus.

Section PS 3250.059 gives additional guidance to apply when an entity contemplates realizing future benefits through a surplus withdrawal: "A key factor in determining a government's expected future benefit from a defined benefit plan with a plan surplus for accounting purposes is the ability of the government to withdraw assets from the plan. The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal". This introduces the concept of a legally enforceable right but only in the context of a government's withdrawal of surplus and not in the context of contribution holidays. If the standard setters had intended legal enforceability to be the test throughout the standard, they would not have raised it only in the context of a withdrawal of surplus, but as a more fundamental notion in the guidance on expected future benefit.

It is acknowledged that the Province does not have a unilateral legal right to reduce its contribution levels without agreement from the OTF because OTPP is by nature a JDBP subject to shared control, they are entitled to an equitable share of the risks and rewards of the JDBP, essential to the definition of a JDBP. Paragraph .052 does not state that being "entitled to benefit" means having a legally enforceable right as at the reporting date to take contribution holidays. When considering the ability to realize expected future benefits under Section PS 3250.052, the Province's legal rights to utilize a surplus to reduce future contributions must be analyzed. Our interpretation of this guidance is that it presents a lower threshold than legal enforceability which is not explicitly required by the standard to support recognition and measurement of JDBP pension assets. Specifically, the amount of pension asset that gets recorded needs to take into account considerations around any legal uncertainties. This consideration involves significant professional judgment. However, it is our view that uncertainty does not need to be reduced to zero in order to recognize a pension asset in the Public Accounts. Pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". Expected does not equate to certainty (Section PS 1000.056).

Under the Plan and Partners' Agreement, if funding surpluses occur the partners are required to negotiate the use of the funding surplus (at least once every three years) and the Province is entitled to negotiate a reduction in contributions in respect of its share of the surplus. Under the Partners' Agreement any funding surplus must be dealt with so that the funding valuation becomes actuarially balanced. *In other words when there is a funding surplus over a certain range the "status quo" cannot be maintained, the surplus must be reduced by a combination of reductions in contributions, increases in benefits or withdrawals of surplus*. This is confirmed by the Partners' Agreement Section 57 that requires an actuarially balanced valuation to be prepared at least once every three years, allowing for a contingency reserve, combined with the FMP which sets out the framework for determining when a

DRAFT

surplus or deficit outside of agreed upon ranges are met and action must be taken. While the Province might choose to accept an increase in member benefits rather than to reduce funding, any such decision is at the Province's discretion since the OTF cannot force the Province to increase benefits instead of reducing contributions. In other words it is at the Province's discretion whether to address the actuarial balancing requirements by allowing its portion of the surplus to be utilized through increased benefits. The OTF equally has the right to not agree to reduced contributions from the Province, but they do not have the right to force an inequitable sharing of the surplus. Therefore, the Province is entitled to negotiate their share of the JDBP which may include taking contribution holidays in future negotiations and can effectively use their power in negotiations to benefit from the ABA. The joint partners do have the ability to renegotiate all aspects of the partners' agreement including the FMP. However all changes require the agreement of both parties and as such the Province can veto any changes to the agreement. Note that while the negotiations are based on funding surplus amounts rather than accounting surplus amounts, any differences would be captured in the mechanics of the calculation of the expected future benefit rather than precluding an ability to benefit from any of the accounting surplus.

Further, paragraph PS 3250.055 indicates "The objective of the standard in paragraph PS 3250.050 is to limit a government's accrued benefit asset to the amount it can realize in the future. The expected future benefit is a calculated amount representing the benefit a government expects to realize from a plan surplus. An expected future benefit includes any withdrawable surplus or reduction in future contributions". Many generally accepted accounting frameworks use "expected" in a number of principles and is typically used in the probabilistic sense – something is expected when it is probable at some level, it does not equate to certainty. The Province has an expectation that they will benefit fully from the ABA by exercising their current rights under the plan arrangements to negotiate the use of current and future surpluses in the form of contribution holidays. This position is supported by the review of the constating documents and past history of negotiations that indicate:

1. The TPA prohibits the total amount of the contributions payable by the Province (and other participating employers) to exceed the amount of contributions paid by or on behalf of active members in respect of credited service for the year (subject to certain exceptions for payment of a solvency deficiency and where there are insufficient cash and liquid assets in the fund). In practice, this has resulted in 50/50 sharing of the regular contribution costs between the participating employers (including the Province) and plan members since the OTPP became jointly sponsored.
2. The history of surplus utilization after the OTPP became a jointly sponsored plan and prior to the date that the FMP was established demonstrates a past practice of the Sponsors equally sharing (in the aggregate) the financial benefits of surplus utilization, although surplus was not shared equally each time (refer to Appendix H for a history of surplus utilization for OTPP). Since the time the FMP was established, the OTPP has not reached the requisite level of surplus such that the Sponsors could negotiate its utilization under the Temporary Improvement Zone or Permanent Improvement Zone.

3. The inability for either party to unilaterally require surplus to be utilized in a particular manner (subject to the OTF Call Right[10]), and the requirement to negotiate and agree (or in the absence of agreement, arbitrate) presents the Sponsors with an equal opportunity to benefit from surplus utilization.
4. One could argue that the obligation to bargain in "good faith" found in the Partners' Agreement may include the obligation to take into account the "sharing" principles described elsewhere in this opinion, given that the OTPP is a jointly-sponsored plan. Under the plan, contributions are generally borne equally by the Province and the employees. Employees benefit economically from both an increase in benefits and from a reduction of contributions. The Province benefits economically directly from a reduction in contributions. This makes it reasonable that at least some contribution reductions would be agreed to by the joint sponsors as a highly unequal weighting towards increases in benefits would not balance the interests of taxpayers and teachers therefore may be unlikely to be a reasonable outcome of "good faith" negotiations between the Province and the OTF.

   This is further supported by the historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses, should also be considered. As previously discussed in respect of conditional indexing, a decrease in benefits by the employees were offset by an increase in payments by the Province. Similarly as the sponsors agreed to restore indexation, this increase in benefits resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change,$1.98B for the 2015 change, and $1.68B for the 2014 change). This demonstrates that historically and over the long term an equitable sharing of the deficits and surpluses has resulted in changes in the Province's contributions, even when there are decreases or increases to benefits for employees.

5. In the event that the Sponsors cannot agree upon how surplus is to be utilized in the Restoration Zone, the Temporary Improvement Zone or the Permanent Improvement Zone, the matter can be submitted to an arbitration board of three arbitrators. Arbitration provisions are generally procedural in nature and therefore do not provide a strong foundation upon which to base parties' reasonable expectations about their substantive rights under an agreement. To resolve a dispute, the arbitration board would engage in an exercise in interpretation of the operative substantive provisions of the relevant governing documents, including any applicable statutory provisions. However, the arbitral award must meet certain mandatory conditions set forth in the Partners' Agreement. Among other things, the arbitral award is required to ensure that the

[10] The OTF Call Right is a one-time arrangement intended to compensate Plan members for absorbing 100% (rather than 50%) of funding shortfalls arising the government initiated Freeze period. Part of a previously agreed upon arrangement to ensure equitable sharing of the risks and rewards over the long term of the plan, it is not a general unilateral right to utilize future surpluses beyond the recovery of the specific funding shortfalls.

DRAFT

contributions of the Minister and those employers who are required to contribute are equal to the contributions of members (section 92(c) of the Partners' Agreement).

As part of the arbitration board's interpretation exercise of the relevant governing documents, in the event of ambiguity in the written terms of the documents, evidence of the parties' post-agreement practices can be admitted as an aid to interpreting the agreement. Past practices may illustrate the parties' intentions at the time of the agreement. These considerations of past practices would be in conjunction with any explicit mandatory considerations set out in the governing document, e.g. prevailing economic conditions and the overall state of the provincial economy under section 91 of the Partners' Agreement. The past practices which the arbitrator may consider would include those described herein: the long history of 50/50 member/employer contributions to the plan, and the equal sharing of surpluses prior to 2003 (from 2003 onwards the plan was mostly in deficit, with surpluses used to restore foregone escalated adjustments for members).

Based on the above analysis, the Province believes that the uncertainties around how and when to utilize a surplus in the OTPP do not result in an inability or lack of entitlement to utilize the surplus in accordance with Section PS 3250.52.

Calculating the limit on the carrying amount of an accrued benefit asset

Section PS 3250.53 to .58 lay out a mathematical calculation that determines the value of the adjusted benefit asset and the expected future benefit, and tests whether a government can expect to recover its accrued benefit asset through a withdrawal of surplus or through the reduction of future contributions. The stated objective of this exercise, as set out in PS3250.055, is to limit the amount of the government's accrued benefit asset to the amount "it can realize in the future." The expected future benefit is further described as "a calculated amount representing the benefit a government expects to realize from a plan surplus", where actual realization of the benefit would be reflected in a reduction in future contributions. A valuation allowance is recorded against the Pension Asset to limit the asset value, if necessary, based on this analysis. This is a prescriptive test under PS 3250, specifically that the amount of an asset is limited to the "expected future benefit" as defined in paragraph 56.

Therefore in accordance with Section PS 3250.56 the Province calculated the expected future benefit as the sum of:

a) the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus; and

b) the amount of the plan surplus that can be withdrawn in accordance with the existing plan and any applicable laws and regulations.

DRAFT

Each of these is discussed separately.

Through withdrawal of the surplus (Section PS 3250.056 (b))

In relation to the ability of a government to benefit from a surplus through the withdrawal of the surplus, paragraph 3250.059 indicates "The expected future benefit includes amounts to which a government has a legally enforceable right of withdrawal."

The TPA for OTPP does not specify a method for a potential withdrawal of surplus funds. Section 10(1), item 3 states:

> 10(1) The Minister of Education and the executive of The Ontario Teachers' Federation may enter into an agreement that provides for the following matters:
>
> 3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members.

Therefore, the conditions under which a surplus may be withdrawn from the fund is outlined outside of the text of the TPA itself, as OTF and the Province must reach mutual agreement on these terms in the form of the OTPP Funding Management Policy, as envisioned in Section 10(1).3 above.

Section 4.06 of the OTPP Funding Management Policy states:

> Side Agreement: The commitment value shall be used to provide a surplus distribution referred to in Section 4.04(d) or a temporary benefit improvement referred to in Section 4.04(e) only if the partners have entered into a written agreement governing the manner in which the contributions by the Minister and the Employers may be adjusted to offset any surplus distribution or temporary improvement of benefits that is reflected in the value of the liabilities.

4.04(d) and 4.04(e) refer to actions that may be taken in the event that"...assets exceed current liabilities" (Section 4.04), meaning a surplus.

As Section 4.06 stipulates, a written agreement must be established between the sponsors (the Province and the OTF) to provide a surplus distribution. The Province does not have a legally enforceable right to withdraw assets from OTPP until such an agreement is reached.

The consent of the OTF would need to be obtained to be able to access surplus assets in OTPP through a withdrawal. As the Province does not have consent of OTF to withdrawal the plan surplus (for example at the end of fiscal year 2015-16), no expected future benefit should be recognized by the government based on its ability to withdrawal surplus from the plan.

DRAFT

The Province's position is that there is no amount of expected future benefit included in respect of withdrawable plan surplus.

Through reducing future contributions (Section PS 3250.056 (a))

PS 3250.56(a) sets out that the government's calculation of expected future benefit would be the present value of its expected future accruals for service for the current number of active employees, less the present value of required employee contributions and minimum contributions the government is required to make regardless of any surplus. Note that in the case at hand, the calculations are done on a 50% basis since the starting point, per PS 3250.81 and as set out in the fact summary above, is that the government accounts for its portion of the Plan. For this same reason, employee contributions are also excluded in this case since they would represent the teachers' portion of the Plan.

PS 3250.55 indicates that the expected future benefit is a calculation that represents the benefit a government expects to realize from a plan surplus. The expected future benefit would operate as a ceiling on the Pension Asset value to be recorded in the accounts. For example, if the Pension Asset were $150, but the expected future benefit calculated as described above were $100, a valuation allowance of $50 would be recorded against the Pension Asset and the asset recorded in the government's financial statements would be reduced to $100.

There are two parts to the calculation of expected future benefit. The first part of the calculation is the sum of the present value of the expected future accruals for service for the current number of active employees. This amount is required to be calculated using consistent assumptions as those used for the calculation of the accrued benefit obligation itself. It is therefore relatively straightforward and is typically calculated based on the Province's share of the current service cost reported in the actuarial valuation taken into perpetuity unless there is evidence to indicate the workforce will significant diminish over time (for example a closed plan).

The second part of the calculation is the present value of required employee contributions and minimum required contributions by the government itself, regardless of any surplus. The main area for judgment in the above calculation is in this second part of the calculation. Note that consistent with the calculation of the expected future accruals for service, no amounts are considered for employee contributions as these relate to the OTF's portion of the plan. The number of years that contributions are assumed in determining the asset ceiling are those minimum contributions that are required to be made "regardless of any surplus" (3250.56(a)). There is no further guidance in S 3250 as to how the calculation of minimum required contributions should be performed and what restrictions or parameters should be factored into this calculation. Typically for defined benefit plans minimum contributions include those that are required by the pension regulator to be made for funding. However, minimum contributions regardless of any surplus, may be required by plan text, legislation or other agreements with employees. For OTPP a key element of judgment is determining what contributions are required by the current plan arrangements "regardless of any surplus". The

constating agreements for OTPP require that the parties negotiate every 3 years as a minimum, and when there is a funding surplus.

Determining the number of years of contributions to include should involve an assessment of the facts and circumstances of the plan and should consider uncertainty. With respect to this uncertainty, there are a number of considerations that may be relevant. Uncertainties should be evaluated taking into consideration the contractual agreements between the Sponsors that provide for the sharing of risks and benefits and specifically in respect of assessing the minimum contributions required by the plan agreements the following:

- One view of minimum contributions might be that the agreed upon level of contributions are the minimum contributions until they are altered in the plan text. As this can only happen with agreement from OTF it cannot be assumed that changes will be made and therefore that the contribution formula as stated in the current agreements will continue in perpetuity. This view provides the most conservative view of minimum payments. However as the current contribution amounts are greater than the government's share of the annual current service cost for the existing workforce this indicates that continued contributions at this rate will result in ever increasing surpluses. Extrapolating the surpluses, at a certain point other requirements that are currently incorporated into the plan text, such as provisions in the Income Tax Act that limit the accumulation of surplus in a plan will apply to reduce the contributions. The effect of these caps on contributions would have to be estimated but cannot be ignored as they form part of the current contribution arrangements. Modelling could be performed to develop expectations as to when these CRA limits could be expected to be reached assuming no changes in the contribution levels. As is the most conservative view (highest minimum contributions) the impact of this has been considered, as discussed below.
- An alternative view of the minimum contributions required by the plan is that there is a contractual obligation under the Partners' Agreement that the Province and OTF negotiate and set both the benefits and the contributions every three years. A failure to agree might lead to mediation or arbitration, but not an assumption of the 'status quo'. On this basis it could be argued that any agreed upon contribution levels are mandatory for only a three year period, after which the contributions must be renegotiated to stay the same, increase or decrease, such that the stated contribution level in the plan text constitute minimum payments for only three years. It should be noted that the plan text requires an actuarially balanced funding valuation, so to the extent that a funding deficit currently existed a contribution holiday (contributions lower than the annual cost of the plan) could not be negotiated. However because the funding situation at the time of future negotiations is not known it could be argued that no amount is a fixed "minimum contribution" in this context, because all of the contribution amount is subject to future changes in funding and negotiation by the joint sponsors.

DRAFT

- Other views of what the minimum contributions are would fall between these two views, such as that the current funding level is set to ensure that there is no funding deficit over a 11 year period and after that changes in contributions would be negotiated. This view has been used in calculating the actuarial calculation of the asset ceiling as noted in the table below.
- Another consideration might be the specific framework within the Funding Management Plan for OTPP which contemplates specified funding zones and expectations regarding possible contribution reductions by the sponsors. Informed stochastic modelling would be necessary to estimate when the different funding zones will be reached and probability of contribution reductions may be increased.
- The historical actions of the parties, which reflect a history of working together to resolve both funding deficits and use of funding surpluses should also be considered. As previously discussed, most recently in 2014, 2015 and 2016 with respect to OTPP, the sponsors agreed to use some of the funding surplus to restore indexation, which resulted in a decrease in the amount of future contributions that the Province would have otherwise had to pay to the plan in the amount of $7.8 billion ($4.3B for the 2016 change, $1.98B for the 2015 change, and $1.68B for the 2014 change).

In determining the range of possible outcomes, it is noted that measurement uncertainty may exist (PS 2130.03). This paragraph also notes that many items are measured using management's best estimates based on assumptions that reflect the most probable set of economic conditions and planned courses of action. As noted in PS 2130.13, “As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.”

As part of the 2015/16 Public Accounts audit, the Office of the Provincial Controller engaged external consultants to conduct asset ceiling tests to assess the requirement for a valuation allowance against the $10.1 billion of net pension assets reported by the Province for OTPP . The results of those reports are summarized in Table 1 below.

DRAFT

Table 1: Summary of Asset Ceiling Models performed for OTPP

Model Assumptions	Expected Future Benefit or Asset Ceiling ($ Billions)	Results
1. No minimum employer contributions are required regardless of any surplus.	$44.6	There is no minimum employer contribution under the plan/legislation that is required even if a surplus is present. This view leads to no reduction in the expected future benefit (EFB) where no minimum percentage of contributions exist in the plan provisions.
2. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of the current funding report. Contribution requirements are $1.7B per year for 2015, 2016 and 2017.	$41.2	The minimum contribution requirement applies to the current period of the valuation report and until a new report is completed. EFB is reduced by 2 years of $1.7B.
3. The employer minimum contribution considers the most recent funding valuation dated January 1, 2015 for the period of contribution requirement (i.e. 10 years through 2026) not just for the period of the current funding report.	$29.3	Uses a period to 2026 (11 year horizon) based on the funding report special contribution requirement. The EFB at March 31, 2016 is reduced by $15.3B in minimum funding requirement.
4. The surplus is never used until the time it reaches the Income Tax Act (ITA) threshold. Once attained, the excess surplus is used at 50% for employees and 50% for the Province to reduce contributions in the following years.	$23.2	Assumes the Government uses 50% of the surplus above the ITA surplus threshold for a contribution holiday and the employees use the other 50%. ITA limit for surplus is attained at end of 2025, leading to forced contribution reductions from year 2026. EFB is reduced by minimum employer funding requirements of

DRAFT

		$21.4B as at March 31, 2016
5. Every year, 50% of new surplus is applied to improve member benefits and the remaining 50% of the new surplus is retained and continues to accrue. Once the ITA threshold is attained, the excess surplus is used 50%-50% to reduce contributions by employees and Government.	$12.9	ITA limit for surplus is attained at the end of 2041. As surplus used at 50% before to improve employee benefits, once ITA limit is attained, forced contribution reduction from year 2042. EFB is reduced by minimum employer funding requirement of $37.7B.

Note: Models above made no assumption on any value of the surplus withdrawal.

Under the Partners' Agreement, the parties are mandated to negotiate benefits and contributions every three years as a minimum and if agreement is not reached, it is reasonable to expect that a change in contributions might occur rather than the 'status quo' being retained.

For purposes of the OTPP, 11 years has been used. However, it is worth noting that up to 33 years of contributions could be factored into this calculation before the calculation would result in a conclusion that the OTPP asset is impaired.

In addition to the above calculations, the impact of the provision in the Income Tax Act that limits the amount of surplus that can be held in a plan should also be considered. Based on preliminary analysis assuming no changes to management's assumptions, contribution levels and benefits provided to employees, we believe that the OTPP will be required to begin using its surplus through a reduction in contributions in between 10 and 15 years into the future. Taking this timing into account, the pension asset ceiling is in excess of the pension asset recognized (pension asset ceiling of between $19.9 Billion and $22.3 Billion); therefore indicating that no valuation allowance is required.

The determination of the minimum contribution levels required as input to the calculation of the expected future benefit involves significant judgements, estimation and assumptions about future funding surplus levels. These judgements, estimates and assumptions should be made on a consistent basis with best estimates used in developing the accrued benefit obligations and plan asset amounts. Regardless of the need to apply judgements, estimates and assumptions for the calculation, this does not imply that no asset can be recognized or that it cannot be reliably measured. In fact, pension plans, by their nature, include significant estimates - whether they be related to the value of assets held by the plan that are not publicly traded (e.g. investments in private companies and real assets) or in the present value of the projected benefit obligation that is based on a series of economic assumptions

DRAFT

related to inflation, salary escalation, mortality and the rate of return that the assets in the plan will earn over the period that benefit payments are paid to pensioners. Any change in these assumptions will have an impact on the accounting surplus, so to apply a test requiring no uncertainty to the recognition of an asset is inconsistent with the accounting for pension plans as a whole. Further, the term used to describe the cap in the asset ceiling test is "expected future benefit". From the Province's perspective, 'expected' does not equate to 'certainty'.

The assumptions used in the calculation of the accrued benefit obligation are required to be the "government's best estimate of expected long-term experience and short-term forecasts" (3250.42) and each key assumption must be based on the government's best estimate of those future events that have an effect on the accrued benefit obligation (3250.41). This approach is designed to recognize the long-term nature of the retirement promises with appropriate consideration of, but not undue influence of, experience expected in the short-term. 3250.57 requires that the future service cost calculation included in the calculation of the valuation allowance be determined on a consistent basis with that used to determine the accrued benefit obligation itself. The Province has determined the discount rate to be used in valuing the pension obligation related to OTPP by referencing the expected rate of return on Plan Assets, which is one of the acceptable references suggested on PS 3250.44.

The OAG and the Government differ regarding whether it needs to be "expected" that the Government will benefit from the surplus in OTPP through future contribution reductions or whether it needs to be "legally enforceable". The OAG considers there needs to be the same level of assurance the government will benefit from the surplus through reduced contributions (legal enforceable) as is required in paragraph .059. The Government considers that it needs to be expected that future economic benefits are to be obtained as reflected in the definition of an asset in Section PS 1000 and as reflected in the definition of "expected future benefit" defined in the glossary to Section PS 3250 with consideration as to uncertainties as to the right to use a plan surplus.

Other guidance in the PSA Handbook on measurement

MEASUREMENT UNCERTAINTY, Section PS 2130 provides guidance on dealing with measurement uncertainty through additional disclosure in the financial statements, which we believe would be a useful addition to the current year financial statements. PS 2130 also provides guidance on how to deal with measurement uncertainty and includes the following guidance:

> *.12 The estimation of the amount of an item to be accrued or disclosed in financial statements may be based on information that provides a range of amounts. When a particular amount within such a range appears to be a better estimate than any other, that amount would be used. When uncertainty exists, estimates used would attempt to ensure that assets, revenues and gains are not overstated and that liabilities, expenses and losses are not understated. Estimates of the financial effect are determined using professional judgment, supplemented by experience of similar transactions and, in some cases, reports from independent experts.*

Estimates include any additional evidence provided by subsequent events occurring after the financial statement date.

.13 As a result of the estimation process, a government would be able to determine a range of reasonably possible amounts in accordance with assumptions that are realistic, supportable, internally consistent, and consistent with planned courses of action. The range of reasonably possible amounts would exclude amounts at the outer edges of possibility since such amounts, while possible, are considered to be outside the best estimate range. Relevant information available to the government to develop a reasonable range includes past experience, precedents, and opportunities to reach alternative arrangements.

The estimate of the valuation allowance, and in fact pension plan accounting as a whole, is subject to measurement uncertainty. As previously noted, accounting for pension plans involves significant estimates in all aspects of the accounting whether that be in valuation of non-traded assets, estimation of the economic assumptions used to value current service cost and the projected benefit obligation or the valuation allowance. One of the key assumptions impacting the measurement of the pension asset is the discount rate which reflects management's best estimate of rate of return. The rate used by the government is an acceptable alternative under PSAB and consistent with rates followed by other senior Canadian governments. Historical results since the inception of the plans corroborate the reasonableness of the rates used by management and the continued appropriateness for purposes of determining pension expense and pension assets reported in the Public Accounts.

Impact of valuation allowance

The current AG's view challenges previous interpretations of the Provincial Controller and former Auditor Generals regarding the interpretation and application of PS 3250 to those JDBPs where the government is a joint sponsor. The impact of the OAG's view is that no pension accounting surplus should be recognized in the Province's Public Accounts for JDBPs until the joint sponsor agrees to a change in the plan text for the Province to provide for unilateral authority to access surplus or reduce future contributions to enters into an agreement by year-end enabling the government to take a contribution holiday. In the absence of meeting either the criteria set out by the AG, any ABA would therefore be fully provided for through a valuation allowance, impacting each year's statement of operations by the amount by which the asset would otherwise increase in value. These results are counterintuitive with pension expense being higher in years in which increased funding is made and also higher when poor investment returns create actuarial losses that have not yet been amortized into the statement of operations. These examples are illustrated in Appendix J.

For information purposes, refer to Appendix D for a comparison of the pension expense, surplus (deficit), net debt and net debt-to-GDP of the Province over the prior 10 years following the Auditor General's approach to pension accounting compared with following the Province's interpretation of the

DRAFT

PSAS. Of particular note is the impact in 2008 when the deficit would have be lower by $3 billion in a year when pension asset values fell significantly because of the financial crisis.

Comparability of Ontario accounting for JDBPs to other Provinces

Included in Appendix C is a legal opinion prepared by lawyers, Koskie Minsky, comparing access to the pension surplus of OTPP relative to JDBPs in British Columbia. The Province of British Columbia does not report a pension asset in their financial statements as the Province has given up any rights to the surplus in the Joint Trust Agreements. The provision was established to support the independence of the four pension plan Boards. As a result the accounting by British Columbia is appropriately different than the accounting by Ontario for OTPP.

Quebec, Nova Scotia, Manitoba and New Brunswick also have pension plans that are in a net accrued benefit asset position before valuation allowance. In New Brunswick, the target benefit pension plans are governed by an Agreement and Declaration of Trust which restricts the province's access to the plan assets. As a result, the Province of New Brunswick records the value of plan net assets as nil.

Conclusion on measurement

As discussed, there is significant professional judgement and estimation in determining how to measure the valuation allowance under Section PS 3250, including the determination of the minimum contributions required by the current plan arrangements. It is the Province's position that the attributes of the joint defined benefit plan arrangements for the OTPP entitle the Province to access its portion of any plan surplus through the right to negotiate its use to the Province's benefit and that this results in an expected future benefit through the use of any plan surplus through reduced contributions.

The Province has applied reasonable estimates of the plan's funding status necessary to determine what minimum contributions are required under the current plan contribution arrangements. Based on the results of those models to date no valuation allowance appears to be required and the OTPP pension assets should continue to be recorded on the books of the Province.

Commented [NP7]: Jim to update for additional details received by Pauline, if any.

Commented [NP8]: Are these jdbp?
LD – I checked the New Brunswick FS. It seems that several of their target benefit plans are not JDBPs. They do have one JDBP, but it is in deficit. It's not clear to me whether this plan is a target benefit pension plan or not and therefore whether an asset could be recognized if it was in an asset position.

Commented [NP9]: If we don't have any info. Let's delete for now.

Agree – have deleted

DRAFT

Appendix A – Guidance in the PSA Handbook - FINANCIAL STATEMENT CONCEPTS, Section PS 1000 and ASSETS, Section PS 3210

Guidance in FINANCIAL STATEMENT CONCEPTS, Section PS 1000

.35 **Assets** are economic resources controlled by a government as a result of past transactions or events and from which future economic benefits are expected to be obtained.

.36 Assets have three essential characteristics:

(a) they embody future economic benefits that involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows, or to reduce cash outflows;

(b) the public sector entity can control the economic resource and access to the future economic benefits; and

(c) the transaction or event giving rise to the public sector entity's control has already occurred. [Former paragraph PS 1000.36 retained in Archived Pronouncements.]

.37 An item is not an asset of a government if it lacks one or more of the essential characteristics listed in the preceding paragraph. Thus, for example, an item does not qualify as an asset of a government if the item involves:

(a) no future economic benefit;

(b) future economic benefit, but the government cannot obtain it; or

(c) future economic benefit that the government may obtain, but the events or circumstances that give the government control of the benefit have not yet occurred.

(paragraph PS 1000.38 deleted) [Former paragraph PS 1000.38 retained in Archived Pronouncements.]

RECOGNITION

.52 Recognition is the process of including an item in the financial statements of an entity. Recognition consists of the addition of the amount involved into item totals on a financial statement together with a narrative description of the item (for example, receivables, user fees, grants) in a statement. Similar items may be grouped together in the financial statements for the purpose of presentation.

.53 Recognition means inclusion of an item within one or more individual statements and does not mean disclosure in the notes to the financial statements. Notes either provide further details about items recognized in the financial statements, or provide information about items that do not meet the criteria for recognition and thus are not recognized in the financial statements.

.54 The recognition criteria below provide general guidance on when an item is recognized in the financial statements. Whether a particular item is recognized or not will require the application of professional judgment in considering whether the specific circumstances meet the recognition criteria.

.55 The recognition criteria are as follows:

(a) the item has an appropriate basis of measurement, and a reasonable estimate can be made of the amount involved; and

(b) for an item that involves obtaining or giving up future economic benefits, it is expected that such

benefits will be obtained or given up.

.56 It is possible that an item will meet the definition of an element but still not be recognized in the financial statements because it is not expected that future economic benefits will be obtained or given up or because a reasonable estimate cannot be made of the amount involved. It may be appropriate to provide information about items that do not meet the recognition criteria in notes to the financial statements. "Expected" is used with its usual general meaning and refers to that which can reasonably be anticipated, contemplated or believed on the basis of available evidence or logic but is neither certain nor proved. The use of the word in the recognition criteria is intended to acknowledge that economic activities occur in an environment characterized by uncertainty. It is not intended to accommodate the recognition of items that do not meet the definition of one of the elements of financial statements. By implication, recognition would, therefore, not be appropriate without the occurrence of a past transaction or economic event that gives rise to an asset, liability, revenue or expense as defined in this Section.

.57 Purchased natural resources and Crown lands are recognized in government financial statements. However, when natural resources and Crown lands have been inherited by the government in right of the Crown and have not been purchased, they are not given accounting recognition as assets in government financial statements. These items are not recognized as assets because the costs, benefits and economic value of such items cannot be reasonably and verifiably quantified using existing methods. Similarly, art and historic treasures are also not recognized as assets.

.58 In the absence of appropriate public sector recognition and measurement criteria for intangibles, all intangibles, including those that have been purchased, developed, constructed or inherited in right of the Crown, are not recognized as assets in government financial statements. The intangible often called "human capital" that embodies the talent or intellectual capital of government employees is not recognized as an asset under existing accounting principles.

.59 Items recognized in government financial statements are accounted for in accordance with the accrual basis of accounting. The accrual basis of accounting recognizes the effect of transactions and events in the period in which the transactions and events occur, regardless of whether there has been a receipt or payment of cash or its equivalent. Accrual accounting recognizes a liability until the obligation or condition(s) underlying the liability is partly or wholly satisfied. Accrual accounting recognizes an asset until the future economic benefit underlying the asset is partly or wholly used or lost.

Guidance in ASSETS, Section PS 3210

Economic resources

.06 Economic resources embody value because they enable an entity to meet its objectives, such as the provision of public goods and services, redistribution of wealth, generation of cash inflows or reduction of cash outflows.

.07 To embody value as an economic resource, there must also be some restriction on its availability. For example, the air we breathe generally cannot be an economic resource unless access to it is restricted.

.08 Economic resources can arise from, but are not limited to, the following:

DRAFT

(a) contracts or agreements (for example, accounts receivable and leases);
(b) another government's legislation (for example, transfers receivable);
(c) government's own legislation (for example, taxes, fines and penalties);
(d) voluntary contributions (for example, donations); or
(e) construction and development (for example, roads).

.09 Economic resources can be:

(a) financial in nature (for example, cash, accounts receivable and investments); or
(b) non-financial in nature (for example, tangible capital property, prepaid items and inventories of supplies).

.10 Without an economic resource, future economic benefits cannot be obtained. For example, a fire truck (the economic resource) needs to exist before it can provide fire suppression services (the future economic benefits).

Future economic benefits

.11 The essence of assets are their future economic benefits. Assets embody future economic benefits that allow public sector entities to achieve their objectives. The future economic benefits embodied in assets involve a capacity, singly or in combination with other assets, to provide goods and services, to provide future cash inflows or to reduce cash outflows.

.12 Often the public is the beneficiary of the goods and services provided by a public sector entity. For example, assets such as fire trucks are used to provide fire suppression services to the public. Hospital buildings and medical equipment are used to provide health care services. Parks, schools and libraries provide recreational, educational and research opportunities to the public. Water treatment plants provide goods, such as potable water. Such assets benefit public sector entities as they assist in achieving the entity's primary objective of providing public goods and services. This benefit is different from the benefit that the public receives.

.13 The future economic benefits embodied in an asset may also be in the form of generating future cash inflows. Cash inflows benefit the public sector entity because cash can be used to purchase or to provide goods and services, redistribute wealth or settle liabilities. Benefits in the form of cash inflows relate to resources, such as loans receivable, inventory for resale and portfolio investments. Also, some public sector resources generate cash inflows because they have user fees associated with them.

.14 The future economic benefits may also take the form of a capacity to reduce cash outflows. For example, this may be the case when betterment of a tangible capital asset reduces the cost of providing goods and services.

.15 There is a close association between incurring a cost and the generation of an asset. However, not all costs result in a future economic benefit. For example, costs incurred to maintain the current service capacity of an asset do not provide a future economic benefit. Also, a public sector entity may obtain an asset without incurring costs. For example, items that have been donated to the public sector entity may provide that entity with future economic benefits and, hence, satisfy the definition of assets.

Control

.16 A public sector entity controls the economic resource and access to the future economic benefits when it:

(a) can benefit from the economic resource through its capacity to provide goods and services, to provide future cash inflows or to reduce cash outflows;
(b) can deny or regulate access to those benefits by others; and
(c) is exposed to the risks associated with the economic resource.
.17 An entity that controls an economic resource has the ability to benefit from the economic resource. For example, a recipient of a transfer benefits from the transfer as it can use the transfer to provide goods or services.
.18 An entity that controls an economic resource has the ability to deny or regulate access to the future economic benefits associated with the economic resource by others. For example, an entity controlling a bus has the ability to deny or regulate access to the related transportation services.
.19 An entity that controls an economic resource is exposed to the risks associated with the economic resource. For example, the entity may hold an investment, the value of which may decline and result in a loss.
.20 Some economic resources are subject to certain external restrictions that specify the purpose(s) for which resources are to be used. For example, there may be external restrictions imposed on the public sector entity's own assets, as is the case with some sinking fund investments. Such restrictions on the use of an economic resource do not negate the public sector entity's control of the economic resource.
.21 Although control may be seen as applying to an asset as a whole, the concept can also be applied to individual rights related to the asset. For example, a single leased asset embodies different economic benefits. It may give the lessee the right to use the property and the lessor the right to receive rents and any residual value. Thus, both parties may have assets corresponding to their respective rights.
.22 Control of an economic resource and of access to the future economic benefits are essential characteristics of an asset, whereas possession or ownership is not. For example, a public sector entity may control the economic resource and access to the future economic benefits through a capital lease arrangement yet not own the economic resource.
.23 A public sector entity's ability to regulate an economic resource does not, in and of itself, constitute control of an asset. A public sector entity may establish the regulatory environment in an industry or sector within which organizations operate and impose conditions or sanctions on their operations. For example, a pollution control authority may have the ability to close down the operations of entities that are not complying with environmental regulations. However, this power does not constitute control because the pollution control authority's interest extends only to the regulatory use of the economic resources and does not include the ability to control access to the future economic benefits.
.24 A public sector entity may act as trustee when it administers trusts on behalf of the beneficiaries specified in the agreement or statute. As trustee, the public sector entity merely administers the assets, following the terms and conditions set out in the agreement. It does not control the asset because it does not have access to the future economic benefits. Those benefits flow to the beneficiaries.

DRAFT

Appendix B - Definitions of a Joint Defined Benefit Plan and Government Partnership

The definition of a government partnership is provided in GOVERNMENT PARTNERSHIPS, paragraph PS 3060.06. GOVERNMENT PARTNERSHIP, Section PS 3060 was introduced into the PSA Handbook in October 1999.

The definition of a joint defined benefit plan is provided in the glossary to RETIREMENT BENEFITS, Section PS 3250. RETIREMENT BENEFITS, Section PS 3250 was introduced into the PSA Handbook subsequent to Section PS 3060 in September 2001.

Both standards use similar wording in the definitions of a government partnership and of a joint defined benefit plan illustrating the development of Section PS 3250 considered the content in Section PS 3060.

Below is a comparison of the two definitions as currently in the PSA Handbook (consistent wording between the two definitions are underlined):

	Definition of a government partnership (GP)	Definition of a joint defined benefit plan (JDBP)	Comparison
Introductory paragraph	A **government partnership** is not a government organization but is a contractual arrangement [2] between the government and a party or parties outside of the government reporting entity [3] that has all of the following characteristics:	A **joint defined benefit plan** is a contractual arrangement between the government and another sponsor or sponsors representing plan participants that has all of the following characteristics:	Consistent in concept with the wording in the GP definition being more general.
Criteria 1	(a) the partners co-operate toward achieving significant clearly defined common goals;	(a) the sponsors co-operate toward achieving the significant clearly defined common goal of providing retirement benefits in exchange for services rendered by the employees;	
Criteria 2	(b) the partners make a financial investment in the government partnership;	(b) funding contributions are shared mutually between the government and the plan members, represented by the non-government sponsor;	Consistent in concept with the definition of a GP focusing on investments in the partnership and the definition of a JDBP

			focusing on contributions into the plan.
Criteria 3	(c) the partners share control of decisions related to the financial and operating policies of the government partnership on an ongoing basis; and	(c) the sponsors share control of decisions related to the administration of the retirement benefit plan and to the level of benefits and contributions on an ongoing basis; and	Consistent in concept with the wording in the GP definition being more general.
Criteria 4	(d) the partners share, on an equitable basis, the significant risks and benefits associated with the operations of the government partnership.	(d) the significant risks associated with the retirement benefit plan are shared on an equitable basis between the government and the plan members, represented by the non-government sponsor.	
Concluding paragraph	The contractual arrangement establishes that the parties have shared control over the government partnership, regardless of the difference in their ownership interest. Nevertheless, overall, there must be an equitable relationship between the financial investment of the government in the government partnership, the extent of control it is able to exercise over the activities of the government partnership, and the risks and benefits that accrue to the government from the government partnership.	The contractual arrangement establishes that the sponsors have shared control over the retirement benefit plan, and ensures that neither party is in a position to control the plan unilaterally. Nevertheless, overall, there must be an equitable relationship between the funding by the government of the retirement benefit plan, the extent of control it is able to exercise over the plan and the risks and benefits that accrue to the government from the plan.	

DRAFT

	Government partnerships may be structured as operations under shared control, assets under shared control or organizations under shared control. [Former paragraph PS 3060.06 retained in Archived Pronouncements.]		

In addition to consistent wording, the concepts in the definitions of a government partnership and a joint defined pension plan are similar.

While similar in concept and wording, the definition of a joint defined pension plan is more specific than the general definition of a government partnership. GOVERNMENT PARTNERSHIPS, Section PS 3060 is a general standard for all types of government partnerships. Alternatively RETIREMENT BENEFITS, Section PS 3250 addresses specific types of employee retirement benefits including joint defined pension plans.

There is one principle in the JDBP paragraphs in Section PS 3250. Paragraph .081 indicates "*When a government participates in a joint defined benefit plan, the government's risk is limited to its portion of the plan. The government should account for its portion of the plan in accordance with the standards for defined benefit plans.* [SEPT. 2001]". This principle is consistent with the proportionate consolidation method included in Section PS 3060.

DRAFT

Appendix C – Analysis of the British Columbia pension plans in relation to OTPP (prepared by lawyers, Koskie Minsky)

BRITISH COLUMBIA PLANS

In British Columbia, the Municipal Pension Plan, the Colleges Pension Plan, the Teachers' Pension Plan and the Public Sector Pension Plan were all converted from employer sponsored pension plans to jointly sponsored plans in accordance with the Public Sector Pension Plans Act, S.B.C. 1999, c.44 (the PSPPA").

A. British Columbia Municipal Pension Plan (the "MPP")

The MPP is governed by:

(a) Municipal Pension Plan Joint Trust Agreement (consolidated), updated to September 30, 2015 (the "MPP Trust Agreement"); and

(b) Municipal Pension Plan Rules effective April 1, 2000 (current to November 19, 2015).

Under the MPP Trust Agreement, the following rules govern the Sponsors of the MPP and the Board of Trustees of that arrangement in regard to Plan surpluses:

The Board of Trustees may amend the MPP to utilize surpluses under section 11.5, provided that the conditions in 11.5(a) and (b) are met. These provisions permit the Board of Trustees to utilize Plan surpluses to improve Plan benefits for Plan members, provided that the surplus is sufficient to fund the benefit improvement "based on the open group of Plan Members and using a twenty-five year amortization schedule for the Plan actuarial excess to be used to fund the benefit improvement". Any benefit improvement made by the Board of Trustees cannot result in increased contribution rates nor can it create an unfunded liability. Any such improvement must also be consistent with the Trustees' fiduciary responsibilities. Within these parameters, however, the Board of Trustees of the MPP does have the authority to utilize Plan surpluses on an ongoing basis.

The MPP Partners may also amend the MPP using ongoing surpluses in accordance with section 11.3 of the MPP Trust Agreement. This section permits the Partners to direct the Board of Trustees to amend the Plan rules and requires the Board of Trustees to comply with that direction so long as three conditions are met: (a) the Partners first receive and consider the advice of the Board respecting the proposed amendment, (b) the proposed amendment is compliant with the Trustees' fiduciary responsibilities and (c) the proposed amendment will not result in the Plan failing to be funded in accordance with the PBSA going concern funding requirements. Significantly, the MPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners'

Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Accordingly, under the MPP, both the Partners and the plan administrator may utilize Plan surpluses by amending the Plan terms in regard to either or both of contribution rates and benefits.

It should be noted that, during a Transitional Period, the use of actuarial gains in the MPP is prescribed by Appendix "B" to the MPP Joint Trust Agreement. During the Transitional Period, all gains must first be used to eliminate unfunded liabilities. Then, actuarial gains must be applied to both (a) reconfigure employer contribution rates and (b) make specified benefit improvements. Employer contribution rates are to be reconfigured by eliminating the 'doubling' feature of employer contribution rates applicable to employees in certain Plan membership categories once they reach either 45 or 50 years of age (depending on the employment category). The transitional provisions prescribe the new base rates for each of the 5 categories of members in the BC, but also stipulate that employer contribution rates for two of the five categories will be increased beyond those base rates to reflect the differential current service cost for those two groups. The surplus implications of the reconfiguration of employer contribution rates are not predictable, and depend, at least in part, on the relationship between the 'base rates' under the transitional provisions and the actual rates being paid by employers at the time of the reconfiguration. Once the employer contribution rates are reconfigured and the specified benefit improvements are made, then 50% of any additional actuarial excesses must be used to fund a contribution rate stabilization reserve, and the balance of the actuarial excess must be transferred to the Inflation Adjustment Account to an aggregate total of $1 billion. The contribution rate stabilization reserve is intended to be shared on an equal (50/50) basis between Plan members and employers in order to maintain or reduce future contribution rates. Until such time as the objectives identified for the Transitional Period are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

B. British Columbia Public Service Pension Plan (''PSPP")

The PSPP Joint Trust Agreement contains provisions regarding the authority of the Partners and the Board of Trustees to utilize ongoing surpluses that are equivalent to the provisions cited above with respect to the MPP. Accordingly, under the PSPP, both the Partners and the Board of Trustees have the authority, in the circumstances and subject to the conditions described in relation to the MPP, to utilize ongoing surpluses to reduce contributions or improve Plan Member benefits.

DRAFT

In this regard, section 10.3(c) of the PSPP Joint Trust Agreement expressly provides the Board of Trustees[11] with the authority to apply ongoing surpluses (the term used in the PSPP Joint Trust Agreement is "surplus assets") in one or more of the following manners:

1. transfer all or portions of surplus assets to the reserve established within the Pension Fund for stabilising contribution rates;

2. transfer all or portion of the surplus assets to the Inflation Adjustment Account;

3. apply all or a portion of the surplus assets to an equal reduction or elimination of Employer and Plan Member contributions to the Basic Account for a period of time;

4. apply all or a portion of the surplus assets to fund changes to the PSPP's benefit provisions provided that any change to benefits does not result in contribution rate increases, does not create or increase an unfunded liability, is consistent with the Trustees' fiduciary obligations and does not conflict the requirement (in s. 13.5) that, upon the termination and wind-up of the PSPP any remaining assets are to be equally shared between the employees and the employers.

At the same time, as is the case for the MPP, the Partners have the authority, pursuant to s.11.3 of the PSPP Joint Trust Agreement, to direct the Board of Trustees to amend the PSPP Plan rules and change either or both of the PSPP's contribution rates or benefits so long as the Partners have received and considered the advice of the Board respecting both the cost and administrative impact of any proposed amendments, the amendment is not inconsistent with the Trustees' fiduciary responsibilities or any funding policy adopted by the board and the proposed amendment will not result in the PSPP failing to be funded in accordance with British Columbia's Pension Benefits Standards Act. Significantly, the PSPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the MPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

Section 15.4 of the PSPP Joint Trust Agreement provides that certain benefit improvements must be made using Plan surpluses that are identified in actuarial valuations dated March 31, 2001 and March 31, 2002. Unlike with respect to the MPP, the PSPP does not appear to have an indefinite 'Transitional Process' that commits all ongoing surpluses until the Transitional objectives are accomplished. Rather, the PSPP Trustees and Partners have had discretionary authority with respect

[11] It is noteworthy that s. 14(c) of the PSPP Joint Trust Agreement stipulates that the Trustees are not acting in a fiduciary capacity when they make decisions that apply ongoing surpluses, and may take account of the financial and other interests of the party that appointed them.

DRAFT

to ongoing PSPP surpluses

C. British Columbia Teachers Pension Plan ("TPP")

The TPP is governed by:

(a) a Joint Trust Agreement made as of April 2, 2001 between Her Majesty the Queen in right of the Province of British Columbia as represented by the Minister of Finance and Corporate Relations (the "Government") and the British Columbia Teachers' Federation ("BCTF");

(b) the TPP Rules.

The Joint Trust Agreement contains provisions permitting both the Partners and the TPP Board of Trustees to amend the Plan rules using ongoing Plan surpluses (section 11 of the Joint Trust Agreement). These provisions are the equivalent of the MPP Joint Trust Agreement provisions regarding the same matters, as described above. In particular, it is significant that the TPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution for either Partner in the event that the they cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses.

As well, Appendix "B" to the TPP Joint Trust Agreement adopts special funding rules for a "Transitional Period" during which the Board of Trustees is directed to use surpluses to achieve specified contribution and benefit improvement outcomes. The transitional objectives for the TPP are not the same as for the MPP, although they entail both contribution rate changes and benefit improvements. In the case of the TPP, however, the transitional provisions build in a 4% reduction in the employer contribution rate from its July 1, 2010 level. As with the MPP, the Transitional Period is of indefinite duration, and only ends when the transitional objectives have been satisfied. During the transitional period, all ongoing surpluses are committed to the transitional objectives and no ongoing surpluses are available for discretionary reductions in contributions or surplus withdrawals.

D. British Columbia Colleges Pension Plan ("CPP")

The CPP is governed by:

(c) the CPP Joint Trust Agreement made April 4, 2011; and

(d) the CPP rules, effective June 22, 2012 (current to April 1, 2016).

The CPP Joint Trust Agreement allocates powers and authorities with respect to ongoing surpluses in the

same way as the other BC Plans.

The Partners have the authority (s.14 (2) of the Joint trust Agreement) to direct the Board to amend the Plan rules, and the Plan Board is required to amend those rules, provided that the Partners "first receive and consider the advice of the Board respecting both the cost and the administrative impact of implementing the proposed amendment" and the proposed amendment is not inconsistent with applicable law or the Trustees' fiduciary responsibilities. Significantly, the CPP constating documents contain no right of recourse to arbitration or other final and binding dispute resolution in the event that the CPP Partners cannot agree on surplus utilization. This contrasts with the OTPP Partners' Agreement, which does provide for third party determinations of differences arising between Partners with respect to surplus uses

Pursuant to subsection 14(4) of the CPP Joint Trust Agreement, the Board of Trustees is also permitted to amend the Plan rules and to utilize Plan surpluses so long as there is no resulting increased in contribution rates, there is no creation of, or increase in, an unfunded liability and the proposed amendment is consistent with the Trustees' fiduciary responsibilities. As with the other BC Plans, the Board of Trustees must use a twenty-five year period for the amortization of the Plan surplus.

Unlike the MPP, TPP and PSPP, the CPP Joint Trust Agreement has no transitional provisions that direct the Board of Trustees as to the application of ongoing surpluses during a transitional period.

III. SUMMARY AND CONCLUSIONS

A. Ontario Plans

OTPP - The governance arrangements with respect to the OTPP provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may utilize ongoing surpluses as they believe appropriate, subject only to the Ontario Pension Benefits Act, R.S.O.
1990, c.P.8 (the "Ontario PBA"). The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses. The OTPP Partners' Agreement anticipates that the Partners will, on a triennial basis, review the results of a preliminary actuarial valuation and determine whether and how they wish to adjust Plan benefits or contribution rates in view of any existing funding deficiencies or ongoing surpluses. The Partners are obliged to bargain in good faith with each other with respect to the disposition of ongoing surpluses, and may have recourse to mediation and final and binding arbitration should they not reach an agreement on their own. An arbitration panel may apply ongoing surpluses to improve benefits or reduce contributions, subject to the limitations set out in section 92 of the Partners Agreement.

DRAFT

B. BC Plans

Ongoing Surpluses - All of the BC Plans follow the same pattern with respect to the authority to use ongoing surpluses. In the normal course, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to utilize ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules does not result in an increased contribution rate for employees or employers, does not create or increase an unfunded liability in the Plan and is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

At the same time, each of the BC Plans also permits the Plan Partners to utilize ongoing surpluses by directing the Board of Trustees to amend the Plan rules. The Partners may so direct the Board of Trustees after receiving advice from the Board with respect to the costs of any Plan amendment and the administrative implications of such an amendment, and so long as the proposed amendment is compliant with law and with the Trustees' fiduciary obligations. However, unlike for the OTPP, the BC Plans' constating documents provide neither Partner with a right of recourse to a third party for a final and binding determination concerning surplus utilization.

Transitional Period- In addition, three of the four BC Plans we have reviewed (MPP, TPP and, for only two years, the PSPP) contain special rules governing the utilization of ongoing surpluses during a "Transitional Period". In these cases, the Transitional rules require that ongoing surpluses that emerge during the Transitional Period are to be used to restructure the employer contribution obligation and improve benefits. In the cases of the MPP and TPP, the Transitional Periods do not come to an end until all of the intended uses of ongoing surplus during the Transitional Period have been fulfilled. We are not currently aware as to whether the Transitional Periods for the MPP and the TPP remain ongoing, or have terminated. Until such time as the objectives identified for the Transitional Periods are fulfilled, there is no discretion left to either the Partners or the Board of Trustees to utilize ongoing MPP surpluses.

We trust that these comments have been of assistance to you. Should you have any questions in regard to them, please do not hesitate to contact the undersigned.

Appendix E – Guidance in the various constating documents for OTPP relating to use of the surplus and the sharing of responsibilities

Pension Benefits Act (PBA) and the regulations (PBR)
While they do address surplus withdrawals, the PBA and PBR do not otherwise mandate any particular use of ongoing surplus that may arise in a pension plan, e.g. for benefit improvements or contribution holidays. One must therefore look to the Teachers' Act and to the Partners' Agreement and FMP in order to determine how ongoing surplus is dealt with under the OTPP.
Teachers' Pension Act (TPA)
Paragraph 10(1)3 of the Teachers' Act provides that the Minister of Education and the executive of the OTF may enter into an agreement (i.e., the Partners' Agreement) that provides for certain matters, including: "3. The sharing of entitlement to gains or surplus under the plan and of liability for deficiencies in the pension fund by the Minister, the employers who contribute under the plan and the active plan members". This is a fundamental legislative pronouncement that the Province and the members of the plan are meant to "share" both upside (surplus) and downside (deficit) under the plan. Although it is not an express statement of 50/50 sharing, it would presumably inform the expectations of the Sponsors regarding how any surpluses are to be utilized. Pursuant to Section 10 of the TPA, the Minister of Education and the OTF (collectively the Sponsors) have entered into an agreement for the management of the Plan (Partners' Agreement), to which is appended a Funding Management Policy (FMP) that is deemed to form part of the Partners' Agreement. The FMP provides a framework for the funding of the Plan and how deficits and surpluses will be addressed. The Partners can deviate from the FMP by agreement.
Partners' Agreement
The Partners' Agreement is between the Province of Ontario and the OTF and sets out the formal relationship between the partners in sponsoring the OTPP. Paragraph 8 of the Partnership Agreement states that the partners will be responsible for designing the Plan structure, setting the benefits of the Plan, developing new policy, deciding what the contribution rate will be, what the funding levels, margins and contingency reserves will be, how to make changes to the Plan and other Plan documents, deciding whether or not to file a valuation more frequently than required by the Pension Benefits Act, appointing the OTTP Board, and defining the role of the Board. By contrast, section 19 of the Partners Agreement sets out the responsibilities of the OTPP Board, and does not confer any authority on the OTPP Board to change benefits or contribution rates that are provided under the OTPP. This means that the OTPP Board has no authority to use ongoing surpluses either to improve benefits or reduce contributions. Only the Sponsors to the OTPP have the authority to utilize ongoing surpluses. The process governing the use of ongoing surpluses by the Sponsors is set out in the Partners' Agreement. It anticipates that the OTPP Board will prepare an actuarial valuation of the OTPP every

Commented [LD11]: JIM to do
Can you also insert references to Sections 10 and section 57.
Also to Section 58 to 60 that are relevant.
Section 19 requires a valuation to be prepared every three years.
This is also important.

DRAFT

three years (section 73).

Paragraph 74 requires negotiation in good faith regarding changes to the Plan that flow from a valuation that is be filed with the regulators.

Paragraph 75 of the Partners' Agreement requires the Sponsors to advise the Board of OTPP of what changes affecting benefits and contribution rates they are proposing so that the Board can provide cost estimates and comments on the administrative impact of the changes to both partners as soon as possible.

Section 77 of the Partners' Agreement anticipates that the Sponsors may appoint a mediator to assist them and sections 84 and 86 of the Partners' Agreement provide for the appointment of a Board of Arbitration to make a final and binding order with respect to the utilization of an ongoing surplus disclosed by the actuarial valuation. A Board of Arbitration is empowered to change contribution rates and/or benefits under the Plan, or to keep an amount of surplus in reserve, but is subject to certain limits that are set out in section 92.
