

Refinancing the Global Adjustment

- Refinancing the Global Adjustment (GA) would provide significant and immediate rate relief by spreading the cost of electricity investments over a longer period of time.
 - 25% reduction on average for the typical residential customer and rates would follow inflation for the next 4 years.
- Under current forecasts, the immediate reduction (i.e., the financed portion) in the GA would be about \$2.5 billion per year on average over the first ten years, with a maximum annual interest cost of \$1.4 billion.
- This measure would share the associated costs more fairly. The chart below shows how Global Adjustment (GA) cost is front-end loaded and forecast to decline over time.

Forecast Global Adjustment Cost (nominal \$ million)
