

**Conservation Information to be Provided to Intervenor**

In the settlement agreement on the IESO's 2016 Revenue Requirement Submission (EB-2015-0275) section 6.2, the IESO agreed to provide the following information to intervenors by November 1, 2016:

(a) An analysis that will identify which conservation programs have been 100% per cent fully meter-measured as part of the IESO's EM&V process and that will indicate, in addition to the number of programs, the dollar value of these programs that are fully meter-measured. Also, the analysis will show the total number of industrial, commercial and institutional programs that are meter measured as a percentage of the full program portfolio, both in terms of dollar value and in terms of the number of programs.

(b) The estimated useful lives for each conservation measure that the IESO supports.

As the Board decision approving the settlement agreement was not issued by November 1, 2016 the IESO, with the agreement of intervenors, did not provide this information by November 1, 2016.

This information was provided to intervenors on <DATE>. (*NOTE: this information was provided in January 2017*)
