Subject: Update on LTEP + Implementation Plan
Attachments: 2017-09-26-Outline of 2017 LTEP Modules Consolidated v2- clean.docx; Content outline for Implementation plan 20170917.docx; Engagement Approach to the Impementation Plan v2.pptx; FW: Follow up and next steps

Hi,

I wanted to share with you some documents that might be of interest, related to LTEP and the Implementation Plan.

- The Ministry would like to release several modules as part of LTEP to provide their readers with more details on the figures and tables contained within LTEP (such as the assumptions used). Bashir's group is taking the lead on this and the other groups will support him, as required. Attached is the outline of these modules.
- Communications and Government Affairs developed a proposed outline for the implementation plan. Stephanie is reviewing and we'll provide comments, soon. Attached is the proposed outline.
- Customer, Stakeholder & Community Engagement put together a draft deck for the IESO's engagement on the implementation plan that will start in late October. Please see slides 11 – 13, which shows the level of detail they propose to include on each initiative in the deck – it will be two slides per initiative. My understanding is that we'll provide our terms of reference to the customer engagement group and they'll create a draft of the two slides. Please note we haven't reviewed the points they made on the customer reliability directive in the slides; it's an example for illustrative purposes and we'll likely be revising these points.
- Attached is an e-mail from Anthy that describes the renewable DG program and a net metering impact assessment. The Ministry would like the net metering impact assessment to be completed by the end of December and based on the scope of the proposed assessment both Resource Integration and Transmission Integration will have to be involved. There is a close relationship between the net metering assessment and the renewable DG program that we will be directed to develop. In the Ministry's words *"In the near term net metering will provide the primary financial framework for deploying and compensating renewable DG in Ontario"*, *"Net metering arrangements are expected to underpin many future innovative renewable DG and net*

zero home or community initiatives". Darryl is the lead on this and will be scheduling meetings next week to get this work started.

Please let me know if you have any questions.

Ahmed
