To all, A relatively short one about the last two weeks of May and how it demonstrated what a mess the electricity sector is in here in Ontario. Looks like we may have a new record coming shortly for lowest HOEP price along with the highest GA price for any month. That may just mean the early days of the Wynne Government's "Fair Hydro Plan" has already blown past the budgeted amounts and the estimated deferrals will be easily surpassed.

Read my take on the last two weeks of electricity generation here:
