Subject: Ontario's class distinction stings ordinary hydro customers

To all, Hope you are all enjoying what appears to be the first beautiful summer weekend without rain. I don't wish to spoil it but I think its worth drawing attention to a costly item buried in the Global Adjustment that affects Class B ratepayers and my be on its way to surpassing the losses on our surplus export sales.

My latest post is one that gets little if any attention from the media for some unknown reason. What I am referring to is the "B" ratepayers subsidies that are paid to keep our Class A shareholders from closing up shop and leaving the province. I have looked at the June numbers (comparison with prior years) only but I think you will agree that the annual subsidy cost is part of the reason Premier Wynne is kicking the can down the road with her Fair Hydro Act.

Find it here: <https://parkergallantenergyperspectivesblog.wordpress.com/2017/07/30/ontarios-class-distinction-stings-ordinary-hydro-customers/>

My friend Scott Luft earlier this month also took a look at this B to A subsidy transfer; earlier this month but from a different angle. You can find his post here:
