Happy to assist - if someone could please send me his original submission I'll start working on it. Edward, perhaps we could have a chat this afternoon?

Cheers,

Tim

I am in Thunder Bay tomorrow. Wondering if Tim has time to help pull the support letter together

When reading through this proposal my mind immediately went to the new Metrolinx sub-stations: this would be an interesting application of flywheels to solve potentially significant frequency regulation impacts right at the source. That's something I might take up here on the M&SO side.

> Chuck - I have seen his academic papers in the past and he seems to be a good bet from that perspective. It sounds like a good initiative that is most applicable at the distribution level , and that is a good thing for the system as a whole. We are also supporting similar but broader work at Ryerson CUE that Tom Aagaard is overseeing.
