

Straight Talk on Electricity Table of Contents

Ontario's Transition to a Low-Carbon Electricity System

1. *What's this report about?*
2. *How does Ontario make decisions about where its electricity comes from?*
3. *How has Ontario's electricity demand changed? Why?*
4. *Where does our electricity come from and how has the supply mix changed?*

Impact on our Electricity System

5. *Has Ontario's electricity system become more reliable and able to meet peak demand?*
6. *How do we deal with the variability of wind and solar energy?*
7. *Why are we wasting so much electricity?*

Impact on Electricity Prices

8. *How high are Ontario electricity prices?*
9. *What has driven up electricity costs in Ontario?*

Impact on the Environment

10. *What are the environmental impacts of Ontario's different electricity sources?*
11. *How much have the coal phase-out, renewable electricity, and conservation reduced greenhouse gas emissions?*
12. *What impact did the coal phase-out have on air pollution in Ontario?*

Ontario's Electricity Future

13. *What does the 2017 Long-Term Energy Plan propose for Ontario's electricity future?*
14. *What are the consequences of the Long-Term Energy Plan's commitment to nuclear power?*
15. *How much of Ontario's electricity system needs to be electrified in order for the province to meet its climate targets?*
16. *How can we make full use of clean off-peak electricity and prevent it from going to waste?*
17. *How will market renewal work? Will it give conservation and renewables a chance?*
18. *What impact will net metering have on the future of renewable electricity in Ontario?*
19. *What is the value of conservation?*
