OPG REPORTS 2017 SECOND QUARTER FINANCIAL RESULTS

Company Reports Strong Performance at Pickering Nuclear Plant While Continuing to Successfully Execute Darlington Refurbishment Project

Toronto: – Ontario Power Generation Inc. (OPG or Company) today reported net income attributable to the Shareholder of \$303 million for the second quarter of 2017, compared to \$132 million for the same period in 2016, inclusive of a one-time gain of \$283 million on the sale of OPG's head office building and parking facility.

"Our Pickering Nuclear plant continues to demonstrate strong performance this year," said Jeff Lyash, OPG President and CEO. "We're executing outages as planned and generating units continue to produce the clean electricity Ontario homes and businesses rely on in a safe and reliable manner. So far this year, our Pickering plant has produced 1.2 terawatt hours more than last year."

Lyash went on to say, "We're also having strong success with the Darlington Refurbishment Project, which continues to progress on schedule and on budget."

The second quarter's results were impacted by the expected year-over-year decline in generation revenue, reflecting lower nuclear electricity generation due to the refurbishment outage for Unit 2 at the Darlington Generating Station (GS) without the resetting of base regulated prices. The sale of OPG's head office building and parking facility, and the associated one-time gain, offset the earnings impact of the refurbishment outage and was the main driver of the increase in net income for the second quarter of 2017, compared to the same period in 2016.

OPG provides electricity at a price that is 40 per cent less than other generators and is the only electricity generator in Ontario that has its prices set through a public hearing process by the Ontario Energy Board (OEB). In April 2017, OPG completed the public hearing for its current application with the OEB that will set prices for the Company's nuclear and most of its hydroelectric generation for the next five years, with a proposed effective date of January 1, 2017. Final arguments on the application were completed in June 2017, and the OEB is expected to make a decision on the rate application later in the year. In the meantime, OPG is operating under base regulated prices that were set in 2014 and do not reflect reduced nuclear electricity generation, which is primarily due to the Darlington Refurbishment. The continuation of these prices has negatively affected revenue and net income in the second quarter of 2017. The outcome of the current rate application and the effective date of the new regulated prices are expected to affect OPG's revenue and net income for the second half of 2017.

Generating and Operating Performance

Electricity generated during the three months ended June 30, 2017 was 18.0 terawatt hours (TWh), compared to 19.4 TWh for the same quarter in 2016. Total electricity generated during the six months ended June 30, 2017 decreased to 36.6 TWh from 40.4 TWh for the same period in 2016. The decrease in electricity generation reflected lower nuclear generation and lower generation from the contracted plants, partially offset by higher hydroelectric generation from the regulated stations.

Regulated – Nuclear Generation Segment

Lower nuclear generation was primarily due to the removal from service of Unit 2 at the Darlington GS for the duration of the unit's refurbishment that began in October 2016 and is expected to continue until early 2020. Partially offsetting the reduction in generation from the Darlington GS was an increase in generation of 0.9 TWh and 1.2 TWh from the strong performance of the Pickering GS during the three and six month periods ended June 30, 2017, respectively.

For the three months ended June 30, 2017, the unit capability factor at the Darlington GS for operating units was 64.6 per cent, compared to 75.9 per cent for the same quarter in 2016. For the six months ended June 30, 2017, the unit capability factor at the Darlington GS was 74.9 per cent, compared to 86.6 per cent for the same period in 2016. The decrease was primarily a result of a higher number of planned and unplanned outage days at the station in the second quarter of 2017, and a higher number of planned outage days in the first half of 2017 largely driven by constraints related to the transition of the station toward refurbishment.

At the Pickering GS, the unit capability factor increased to 84.2 per cent and 81.4 per cent for the three and six month periods ended June 30, 2017, compared to 71.4 and 72.1 per cent for the same periods in 2016, respectively, primarily due to favourable unit conditions and execution of planned outage work resulting in a lower number of planned outage days at the station in 2017.

Regulated – Hydroelectric Segment

Higher generation from the regulated hydroelectric stations was due to higher water flows, primarily on the eastern Ontario river systems.

The availability of 90.1 per cent at these stations in the second quarter of 2017 was comparable to 90.4 per cent for the same quarter in 2016. For the six months ended June 30, 2017, the availability of the stations decreased to 89.8 per cent, from 92.6 per cent for the same period in 2016. The decrease in the availability was primarily due to a higher number of unplanned outage days.

Contracted Generation Portfolio Segment

Lower generation from the Contracted Generation Portfolio was mainly due to lower generation from the segment's hydroelectric plants.

The availability of these hydroelectric stations for the three months ended June 30, 2017 was 81.4 per cent, compared to 87.0 per cent for the same quarter in 2017. The stations' availability for the six months ended June 30, 2017 was 82.5 per cent,

compared to 85.5 per cent for the same period in 2016. The decrease in the availability was primarily due to an increase in the number of unplanned outage days.

Total Generating Cost

The Enterprise Total Generating Cost per megawatt hour (MWh) for the three months ended June 30, 2017 was \$48.72, compared to \$48.48 for the same quarter in 2016. The marginal increase was mainly due to the expected reduction in nuclear electricity generation due to the Unit 2 refurbishment outage at the Darlington GS and higher sustaining capital expenditures, largely offset by higher hydroelectric electricity generation, adjusted for surplus baseload generation, and lower operations, maintenance and administration (OM&A) expenses before the impact of regulatory variance and deferral accounts. The Enterprise Total Generating Cost per MWh for the six months ended June 30, 2017 was \$48.35, compared to \$45.01 for the same period in 2016. The increase was expected and mainly a result of lower electricity generation due to the Unit 2 refurbishment outage at the Darlington GS and higher sustaining capital expenditures, partially offset by lower OM&A expenses before the impact of regulatory variance and deferral accounts.

If Unit 2 at the Darlington GS was not currently undergoing refurbishment and had continued to operate in a manner consistent with the performance of the remaining units at the Darlington GS, adjusted for generation constraints on these units related to the transition of the station toward refurbishment, the Enterprise Total Generating Cost would have been approximately \$3 to \$4 per MWh lower for the three and six months ended June 30, 2017. This sensitivity was calculated using the estimated incremental electricity generation and associated fuel cost that are expected to have resulted in the absence of the refurbishment.

Generation Development

OPG is undertaking a number of generation development and life extension projects in support of Ontario's electricity planning initiatives. Significant developments during the second quarter of 2017 were as follows:

Darlington Refurbishment

The Darlington Refurbishment project is expected to extend the operating life of the station by approximately 30 years. In October 2016, OPG commenced the refurbishment of the first Darlington GS unit, Unit 2, as planned, as part of the Darlington Refurbishment project. The unit was taken offline safely on October 15, 2016 and de-fuelling of the reactor, the first critical refurbishment activity undertaken once the unit is removed from service, was safely completed in January 2017. Islanding of Unit 2, the physical separation of the unit under refurbishment from the three operating units, was completed in April 2017, signifying the completion of the first major segment of the project.

Preparatory work to support the removal of feeder tubes and fuel channel assemblies, including opening of the reactor air lock doors and installation of bulkhead shielding, was completed in the second quarter of 2017 as part of the second segment of the project. The setup of specialized tooling and equipment needed for the removal and replacement of the reactor components is in progress. The Re-tube Tooling Platform, which will host the tooling for the removal, inspection, and installation activities, was

completed in July 2017, and the disassembly of reactor components commenced in August 2017. The overall project continues to track on schedule and budget. Unit 2 is scheduled to be returned to service, after a 40-month refurbishment outage, in the first quarter of 2020, at which time capital expenditures of approximately \$4.8 billion are planned to be placed in service. This includes expenditures incurred during the definition and planning phase of the overall project. Life-to-date capital expenditures were approximately \$3.8 billion as at June 30, 2017, including expenditures for pre-requisite projects that have been placed in service.

In addition to the execution of refurbishment activities for Unit 2, OPG is continuing planning activities for the refurbishment of the second unit, Unit 3, and is entering into associated commitments to procure major components that require long lead times. As of June 30, 2017, \$51 million has been invested in planning activities related to the refurbishment of the second unit. These planning activities are being undertaken in accordance with the refurbishment project schedule.

Ranney Falls Hydroelectric GS

In the second quarter of 2017, OPG continued construction work for a 10 MW single-unit powerhouse on the existing Ranney Falls GS site, as part of the Regulated – Hydroelectric segment. The new unit will replace an existing unit that reached its end of life in 2014. Civil engineering design work and site clearing and mobilization have been completed. Construction is progressing to expand the existing forebay and tailrace channels to accommodate the new powerhouse. The project's expected in-service date is in the fourth quarter of 2019, with a budget of \$77 million. The project is tracking on schedule and budget.

Nanticoke Solar Facility

The project to construct a 44 MW solar facility at OPG's Nanticoke GS site and adjacent lands through a partnership between OPG and a subsidiary of the Six Nations of Grand River Development Corporation is planned to commence as early as in the fourth quarter of 2017. During the second quarter of 2017, the partnership continued work to obtain approvals and permits required to enable the commencement of construction, and progressed procurement activities for equipment and for engineering and construction services. The facility is expected to be completed in the first quarter of 2019.

FINANCIAL AND OPERATIONAL HIGHLIGHTS

	Three Months Ended June 30		Six Months Ended June 30	
(millions of dollars – except where noted)	2017	2016	2017	2016
Revenue	1,146	1,387	2,322	2,865

ONTARIO POWER GENERATION INC.

MANAGEMENT'S DISCUSSION AND ANALYSIS

This Management's Discussion and Analysis (MD&A) should be read in conjunction with the unaudited interim consolidated financial statements and accompanying notes of Ontario Power Generation Inc. (OPG or Company) as at and for the three and six months ended June 30, 2017. OPG's unaudited interim consolidated financial statements are prepared in accordance with United States generally accepted accounting principles (US GAAP) and are presented in Canadian dollars.

For a complete description of OPG's corporate strategies, risk management, corporate governance, and the effect of critical accounting policies and estimates on OPG's results of operations and financial condition, this MD&A should also be read in conjunction with OPG's audited consolidated financial statements, accompanying notes, the Annual Information Form, and the MD&A as at and for the year ended December 31, 2016.

As required by *Ontario Regulation 395/11*, as amended, a regulation under the *Financial Administration Act* (Ontario), OPG adopted US GAAP for the presentation of its consolidated financial statements, effective January 1, 2012. In 2014, the Ontario Securities Commission approved an exemption which allows OPG to apply US GAAP up to January 1, 2019. The term of the exemption is subject to certain conditions, which may result in the expiry of the exemption prior to January 1, 2019. For details, refer to the section, *Critical Accounting Policies and Estimates* under the heading, *Exemptive Relief for Reporting under US GAAP*, in OPG's 2016 annual MD&A. This MD&A is dated August 11, 2017.

FORWARD-LOOKING STATEMENTS

The MD&A contains forward-looking statements that reflect OPG's current views regarding certain future events and circumstances. Any statement contained in this document that is not current or historical is a forward-looking statement. OPG generally uses words such as "anticipate", "believe", "foresee", "forecast", "estimate", "expect", "schedule", "intend", "plan", "project", "seek", "target", "goal", "strategy", "may", "will", "should", "could", and other similar words and expressions to indicate forward-looking statements. The absence of any such word or expression does not indicate that a statement is not forward-looking.

All forward-looking statements involve inherent assumptions, risks, and uncertainties, including those set out in the section, *Risk Management*, and forecasts discussed in the section, *Core Business, Strategy, and Outlook*. All forward-looking statements could be inaccurate to a material degree. In particular, forward-looking statements may contain assumptions such as those relating to OPG's generating station performance and availability, fuel costs, surplus baseload generation (SBG), cost of fixed asset removal and nuclear waste management, performance and earnings of investment funds, refurbishment of existing facilities, development and construction of new facilities, pension and other post-employment benefit (OPEB) obligations and funds, income taxes, proposed new legislation, the ongoing evolution of Ontario's electricity industry, environmental and other regulatory requirements, health, safety and environmental developments, business continuity events, the weather, financing and liquidity, applications to the Ontario Energy Board (OEB) for regulatory prices, the impact of regulatory decisions by the OEB, and forecasts of earnings, cash flows, Funds from Operations (FFO) Adjusted Interest Coverage, Return on Common Equity Excluding Accumulated Other Comprehensive Income (ROE Excluding AOCI), Total Generating Cost (TGC) and capital expenditures. Accordingly, undue reliance should not be placed on any forward-looking statement. The forward-looking statements included in this MD&A are made only as of the date of this MD&A. Except as required by applicable securities laws, OPG does not undertake to publicly update these forward-looking statements to reflect new information, future events, or otherwise.

THE COMPANY

OPG is an Ontario-based electricity generation company whose principal business is the generation and sale of electricity in Ontario. OPG was established under the *Business Corporations Act* (Ontario) and is wholly owned by the Province of Ontario (Province or Shareholder).

As at June 30, 2017, OPG's electricity generation portfolio had an in-service capacity of 16,210 megawatts (MW). OPG operates two nuclear generating stations, 66 hydroelectric generating stations, three thermal generating stations, and one wind power turbine. In addition, OPG and TransCanada Energy Ltd. co-own the 550 MW Portlands Energy Centre (PEC) gas-fired combined cycle generating station (GS). OPG and ATCO Power Canada Ltd. co-own the 560 MW Brighton Beach gas-fired combined cycle GS (Brighton Beach). OPG's 50 percent share of the in-service capacity and generation volume of these co-owned facilities is included in the generation portfolio statistics set out in this report. The income from the co-owned facilities is accounted for using the equity method of accounting, and OPG's share of income is presented as income from investments subject to significant influence in the Contracted Generation Portfolio segment.

OPG also owns two other nuclear generating stations, the Bruce A GS and the Bruce B GS, which are leased on a long-term basis to Bruce Power LP (Bruce Power). Income from these leased stations is included in revenue under the Regulated – Nuclear Generation segment. The leased stations are not included in the generation portfolio statistics set out in this report.

All of OPG's owned and co-owned generating facilities are located in Ontario. OPG does not operate PEC, Brighton Beach, the Bruce A GS and the Bruce B GS.

A description of OPG's segments is provided in OPG's 2016 annual MD&A in the section, *Business Segments*.

In-Service Generating Capacity

OPG's in-service generating capacity by business segment as at June 30, 2017 and December 31, 2016 was as follows:

(MW)	As at	
	June 30 2017	December 31 2016
Regulated – Nuclear Generation ¹	5,728	5,728
Regulated – Hydroelectric	6,426	6,421
Contracted Generation Portfolio ²	4,056	4,028
Total	16,210	16,177

¹ The in-service generating capacity as of June 30, 2017 and December 31, 2016 excludes Unit 2 of the Darlington GS. The unit, which has a generating capacity of 878 MW, was taken offline in mid-October 2016 and is currently undergoing refurbishment.

² Includes OPG's share of in-service generating capacity of 275 MW for PEC and 280 MW for Brighton Beach.

During the six months ended June 30, 2017, the total in-service capacity increased by 33 MW. The increase was primarily due to the completion of the Peter Sutherland Sr. hydroelectric GS, which was placed in-service at the end of the first quarter of 2017, and the upgrade of Unit 10 of the Sir Adam Beck 1 hydroelectric GS, which was completed in June 2017.

HIGHLIGHTS

Overview of Results

This section provides an overview of OPG's unaudited interim consolidated operating results. Significant factors which contributed to OPG's results during the three and six month periods ended June 30, 2017, compared to the same periods in 2016, are discussed below.

	Three Months Ended June 30		Six Months Ended June 30	
<i>(millions of dollars – except where noted) (unaudited)</i>	2017	2016	2017	2016
Revenue	1,146	1,387	2,322	2,865
Fuel expense	178	182	333	354
Gross margin	968	1,205	1,989	2,511
Operations, maintenance and administration	711	709	1,419	1,395
Depreciation and amortization	172	316	339	628
Accretion on fixed asset removal and nuclear waste management liabilities	236	232	474	464
Earnings on nuclear fixed asset removal and nuclear waste management funds	(194)	(225)	(383)	(372)
Income from investments subject to significant influence	(8)	(9)	(18)	(17)
Property taxes	11	11	22	23
	928	1,034	1,853	2,121
Income before other gains, interest and income taxes	40	171	136	390
Other gains	(380)	(1)	(383)	(24)
Income before interest and income taxes	420	172	519	414
Net interest expense	16	31	35	64
Income before income taxes	404	141	484	350
Income tax expense	97	6	109	87
Net income	307	135	375	263
Net income attributable to the Shareholder	303	132	367	255
Net income attributable to non-controlling interest ¹	4	3	8	8
Electricity production (TWh) ²	18.0	19.4	36.6	40.4
Cash flow provided by operating activities	143	348	261	714

¹ Relates to the 25 percent interest of the Amisk-oo-Skow Finance Corporation, a corporation wholly owned by the Moose Cree First Nation, in the Lower Mattagami Limited Partnership, the 33 percent interest of Coral Rapids Power Corporation (CRP), a corporation wholly owned by the Taykwa Tagamou Nation, in the PSS Generating Station Limited Partnership (PSS), and the 10 percent interest of a corporation wholly owned by the Six Nations of Grand River Development Corporation in the Nanticoke Solar LP.

² Includes OPG's share of generation volume from its 50 percent ownership interests in PEC and Brighton Beach.

Second Quarter

Net income attributable to the Shareholder was \$303 million for the second quarter of 2017, an increase of \$171 million compared to the same quarter in 2016. Income before interest and income taxes for the second quarter of 2017 was \$420 million, an increase of \$248 million compared to the same quarter in 2016.

Significant factor that increased income before interest and income taxes:

- Higher earnings of \$381 million from the Services, Trading, and Other Non-Generation segment, primarily as a result of the gain on sale of OPG's head office premises and associated parking facility, a non-core asset

of the business. A gain on sale of \$283 million, which is net of tax effects of \$95 million, was recognized in net income upon completion of the transaction in the second quarter of 2017. The sale was undertaken pursuant to a Shareholder Declaration and a Shareholder Resolution. Further details can be found under the heading, *Recent Developments – Shareholder Declarations and Shareholder Resolutions to Sell Certain Non-Core Real Estate Properties*.

Significant factors that reduced income before interest and income taxes:

- Lower earnings from the nuclear base regulated price of approximately \$72 million, partially offset by a decrease in nuclear fuel expense of \$11 million, reflecting lower electricity generation of 1.3 terawatt hours (TWh) from the Regulated – Nuclear Generation segment and the continuation of existing base regulated prices set by the OEB in 2014. The lower nuclear generation was primarily due to the ongoing refurbishment of Unit 2 at the Darlington GS since October 2016. The base regulated prices set in 2014 continue to be in effect pending the OEB's decision on OPG's current application for new regulated prices, expected later in 2017. The existing nuclear base regulated price was set to allow the Company to recover its approved nuclear costs over a higher nuclear production volume, based on the 2014 and 2015 outage profile that did not include a refurbishment outage. OPG has requested January 1, 2017 as the effective date of the new regulated prices.
- Lower earnings on the nuclear fixed asset removal and nuclear waste management funds (Nuclear Segregated Funds) of \$31 million, primarily due to lower earnings on the Used Fuel Segregated Fund.
- Higher depreciation and amortization expense of \$11 million, excluding amortization expense related to balances in OEB-authorized regulatory variance and deferral accounts (regulatory accounts), primarily due to new assets in service in the Regulated – Nuclear Generation segment.

The expiry of rate riders for the recovery of approved balances in OEB-authorized regulatory accounts on December 31, 2016 contributed to the decrease in revenue for the three months ended June 30, 2017, compared to the same period in 2016, but was largely offset by a decrease in the amortization expense related to these balances. OPG has requested new rate riders in its current application to the OEB for new regulated prices, with a proposed effective date of January 1, 2017.

Net interest expense decreased by \$15 million during the second quarter of 2017, compared to the same quarter in 2016, primarily due to a higher amount of interest costs deferred in OEB-authorized regulatory accounts and a higher amount of interest costs capitalized for the Darlington Refurbishment project expenditures.

Income tax expense for the three months ended June 30, 2017 was \$97 million, compared to \$6 million for the same period in 2016. The increase in income tax expense was primarily due to higher income before taxes, a lower change in reserves from the resolution of uncertainties, and a lower amount of tax expense deferred in regulatory assets.

Year-To-Date

Net income attributable to the Shareholder was \$367 million for the first six months of 2017, an increase of \$112 million compared to the same period in 2016. Income before interest and income taxes for the first six months of 2017 was \$519 million, an increase of \$105 million compared to the same period in 2016.

Significant factor that increased income before interest and income taxes:

- Higher earnings of \$383 million from the Services, Trading, and Other Non-Generation segment, primarily as a result of the gain on sale of OPG's head office premises and associated parking facility recognized in the second quarter of 2017.

Significant factors that reduced income before interest and income taxes:

- Lower earnings from the nuclear base regulated price of approximately \$206 million, partially offset by a decrease in nuclear fuel expense of \$24 million, reflecting lower electricity generation of 3.6 TWh from the Regulated – Nuclear Generation segment and the continuation of existing base regulated prices set by the OEB in 2014. The lower nuclear generation was primarily due to the ongoing refurbishment of Unit 2 at the Darlington GS.
- Higher OM&A expenses of \$24 million, mainly in the Regulated – Nuclear Generation segment, reflecting planned expenditures related to major maintenance expenditures occurring at the nuclear stations.
- A gain of \$22 million recorded in the first quarter of 2016 to reflect the OEB's decision on OPG's motion asking the OEB to review and vary parts of its November 2014 decision on OPG's regulated prices.
- Higher depreciation and amortization expense of \$20 million, excluding amortization expense related to regulatory account balances, primarily due to new assets in service in the Regulated – Nuclear Generation segment.

The expiry of rate riders for the recovery of approved balances in OEB-authorized regulatory accounts on December 31, 2016 contributed to the decrease in revenue in the first half of 2017, compared to the same period in 2016, but was primarily offset by a decrease in the amortization expense related to these balances.

Net interest expense decreased by \$29 million for the six months ended June 30, 2017, compared to the same period in 2016, primarily due to a higher amount of interest costs capitalized for the Darlington Refurbishment project expenditures and a higher amount of interest costs deferred in OEB-authorized regulatory accounts.

Income tax expense for the six months ended June 30, 2017 was \$109 million, compared to \$87 million for the same period in 2016. The increase in income tax expense was primarily due to higher income before income taxes and a lower change in reserves from the resolution of uncertainties, partially offset by a higher amount of tax expense deferred in regulatory assets.

Segment Results

The following table summarizes OPG's income before interest and income taxes by business segment. A detailed discussion of OPG's performance by reportable segment is included in the section, *Discussion of Operating Results by Business Segment*.

	Three Months Ended June 30		Six Months Ended June 30	
<i>(millions of dollars)</i>	2017	2016	2017	2016
<i>(Loss) income before interest and income taxes</i>				
Regulated – Nuclear Generation	(169)	(76)	(287)	(30)
Regulated – Hydroelectric	172	187	352	383
Contracted Generation Portfolio	77	67	154	145
Total electricity generation business segments	80	178	219	498
Regulated – Nuclear Waste Management	(40)	(5)	(87)	(88)
Services, Trading, and Other Non-Generation	380	(1)	387	4
	420	172	519	414

Electricity Generation

Electricity generation for the three and six month periods ended June 30, 2017 and 2016 was as follows:

(TWh)	Three Months Ended June 30		Six Months Ended June 30	
	2017	2016	2017	2016
Regulated – Nuclear Generation	9.3	10.6	19.3	22.9
Regulated – Hydroelectric	8.2	8.0	16.2	15.9
Contracted Generation Portfolio ¹	0.5	0.8	1.1	1.6
Total OPG electricity generation	18.0	19.4	36.6	40.4
Total electricity generation by all other generators in Ontario ²	16.5	15.5	35.1	34.4

¹ Includes OPG's share of generation volume from its 50 percent ownership interests in PEC and Brighton Beach.

² Non-OPG generation is calculated as the Ontario electricity demand plus net exports, as published by the Independent Electricity System Operator (IESO), minus OPG electricity generation.

Total OPG electricity generation decreased by 1.4 TWh during the second quarter of 2017, compared to the same quarter in 2016, and by 3.8 TWh during the six months ended June 30, 2017, compared to the same period in 2016. As expected, the lower electricity generation from the Regulated – Nuclear Generation segment was primarily the result of the removal from service of Unit 2 at the Darlington GS for the duration of the unit's refurbishment, which began in October 2016. This decrease in electricity generation was partially offset by an increase in generation from the Pickering GS, primarily due to favourable unit conditions and execution of planned outage work resulting in a lower number of planned outage days at the station.

The higher electricity generation of 0.2 TWh and 0.3 TWh from the Regulated – Hydroelectric segment for the three and six month periods ended June 30, 2017, respectively, compared to the same periods in 2016, was largely due to higher water flows primarily on the eastern Ontario river systems, net of water spilled as a result of SBG conditions, discussed below.

The lower electricity generation of 0.3 TWh and 0.5 TWh from the Contracted Generation Portfolio segment for the three and six month periods ended June 30, 2017, respectively, compared to the same periods in 2016, was primarily due to a higher volume of water spilled as a result of SBG conditions.

OPG's operating results are affected by changes in grid-supplied electricity demand resulting from variations in seasonal weather conditions, changes in economic conditions, the impact of small scale generation embedded in distribution networks, and the impact of conservation efforts in the province. For the three and six month periods ended June 30, 2017, Ontario's electricity demand as reported by the IESO was 30.6 TWh and 64.9 TWh, respectively, compared to 31.9 TWh and 67.1 TWh for the same periods in 2016, respectively, excluding electricity exports out of the province.

Power that is surplus to the Ontario market is managed by the IESO, mainly through generation reductions at hydroelectric, other grid-connected renewable resources and nuclear stations. Reducing hydroelectric production, which often results in spilling of water, is the first measure used by the IESO to manage SBG conditions. Baseload generation supply surplus in Ontario continued to be prevalent in 2017, resulting in forgone hydroelectric generation for OPG of 2.6 TWh and 3.4 TWh due to SBG conditions in the three and six month periods ended June 30, 2017, respectively, compared to 1.7 TWh and 3.4 TWh during the same periods in 2016, respectively. The gross margin impact of production forgone at OPG's regulated hydroelectric stations due to SBG conditions during these periods was offset by the impact of a regulatory variance account authorized by the OEB. OPG did not forgo any electricity production at its nuclear stations due to SBG conditions.

Average Sales Prices

The majority of OPG's generation is from the Regulated – Nuclear Generation and Regulated – Hydroelectric segments. The same base regulated prices for electricity generated by these segments, authorized by the OEB effective November 1, 2014, were in effect during the first six months of 2017 as in 2016. These prices will remain in effect until such time as the OEB approves new regulated prices based on OPG's current application. The base regulated prices established in 2014 are discussed in OPG's 2016 annual MD&A in the section, *Revenue Mechanisms for Regulated and Non-Regulated Generation*.

The average sales price for the Regulated – Nuclear Generation segment was 5.7 and 5.8 cents per kilowatt hour (¢/kWh) during the three and six month periods ended June 30, 2017 respectively, compared to 6.9 ¢/kWh during the same periods in 2016. The decrease in the average sales price was primarily due to the expiry, on December 31, 2016, of an OEB-authorized nuclear rate rider of \$10.84 per megawatt hour (MWh) for the recovery of variance and deferral account balances. The average sales price for the Regulated – Hydroelectric segment was 4.0 ¢/kWh and 4.1 ¢/kWh during the three and six month periods ended June 30, 2017, respectively, compared to 4.4 ¢/kWh during the same periods in 2016. The decrease in the average sales price was primarily due to the expiry, on December 31, 2016, of an OEB-authorized regulated hydroelectric rate rider of \$3.19/MWh for the recovery of variance and deferral account balances. The rate riders were established to recover approved balances recorded in the variance and deferral accounts in prior years. As such, the year-over-year changes in revenue from the rate riders were largely offset by changes in amortization expense related to these balances. There were no rate riders in effect during the first half of 2017 for either nuclear or regulated hydroelectric generation, pending the outcome of OPG's current application with the OEB for new regulated prices.

Cash Flow from Operations

Cash flow provided by operating activities was \$143 million for the three months ended June 30, 2017 and \$261 million for the six months ended June 30, 2017, compared to \$348 million and \$714 million for the same periods in 2016, respectively. The decrease in cash flow provided by operating activities was expected and primarily due to lower generation revenue receipts reflecting lower generation from the Regulated – Nuclear Generation segment as a result of the ongoing refurbishment of Unit 2 at the Darlington GS and the expiry, on December 31, 2016, of the OEB-authorized rate riders for nuclear and regulated hydroelectric generation. The decrease in cash flow in the first half of 2017 was also due to higher income tax instalments, compared to the same period in 2016.

The decrease in cash flow provided by operating activities for the three and six month periods ended June 30, 2017 was partially offset by lower pension plan contributions in 2017 reflecting an updated actuarial valuation of the OPG registered pension plan filed with the Financial Services Commission of Ontario in September 2016, and lower contributions to the Used Fuel Segregated Fund and the Decommissioning Segregated Fund in 2017. Both the Used Fuel Segregated Fund and the Decommissioning Segregated Fund were determined to be fully funded based on an updated estimate of OPG's nuclear waste management and nuclear facilities decommissioning obligations pursuant to a reference plan approved by the Province, for years 2017 to 2021, under the Ontario Nuclear Funds Agreement (ONFA), effective January 1, 2017. Pursuant to the ONFA, the reference plan is required to be updated at least once every five years. Contributions to either or both of the Nuclear Segregated Funds may be required in the future should the funds be in an underfunded position at the time of the next ONFA reference plan update. The year-over-year decrease in cash flow also was partially offset by the payment of a supplemental rent rebate to Bruce Power in the first quarter of 2016 in relation to a period in 2015. The lease agreement for the Bruce nuclear generating stations was amended in late 2015 to eliminate this rebate provision going forward.

Return on Common Equity Excluding Accumulated Other Comprehensive Income

ROE Excluding AOCI is an indicator of OPG's performance consistent with the Company's strategy to provide value to the Shareholder. ROE Excluding AOCI is measured over a 12-month period.

ROE Excluding AOCI was 5.0 percent for the 12 months ended June 30, 2017, compared to 4.2 percent for the 12 months ended December 31, 2016. The increase was primarily due to higher net income attributable to the Shareholder for the 12 months ended June 30, 2017, which reflected the gain on sale of OPG's head office premises and associated parking facility recorded in the second quarter of 2017, partially offset by the lower earnings from the decrease in nuclear electricity generation reflecting the Unit 2 refurbishment outage at the Darlington GS without a corresponding increase in the nuclear base regulated price, as expected. The lower nuclear generation as a result of the refurbishment outage will continue to negatively affect OPG's ROE Excluding AOCI until such time as new regulated prices are approved by the OEB, anticipated later in 2017.

Funds from Operations Adjusted Interest Coverage

FFO Adjusted Interest Coverage is an indicator of OPG's ability to meet interest obligations from operating cash flows. The indicator is measured over a 12-month period. FFO Adjusted Interest Coverage for the 12 months ended June 30, 2017 was 4.5 times, compared to 5.1 times for the 12 months ended December 31, 2016. FFO Adjusted Interest Coverage in 2017 reflected a year-over-year decrease in FFO before interest due to lower cash flow provided by operating activities, partially offset by the impact of a lower adjusted interest expense due to a decrease in the excess of interest on pension and OPEB projected benefit obligations over expected return on pension plan assets.

The decrease in the excess of interest on pension and OPEB benefit obligations over expected return on pension plan assets in the first half of 2017 was primarily due to the change in the method used to estimate the interest cost and service cost components of pension and OPEB costs. Effective January 1, 2017, OPG adopted a full yield curve approach to the estimation of these cost components, by applying the specific spot rates along the yield curve used in the determination of the projected benefit obligations to the relevant projected cash flows. Under the previous method, these components of pension and OPEB costs were calculated using the same single weighted-average discount rates as reflected in the calculation of the benefit obligations. This change in the method was accounted for prospectively, as a change in estimate. The resulting reduction in pension and OPEB costs for the three and six month periods ended June 30, 2017 did not have a material impact on net income as it was largely offset by the impact of OEB-authorized variance and deferral accounts in the regulated business segments. Further details on the full yield curve approach can be found in the 2016 annual MD&A in the section, *Critical Accounting Policies and Estimates* under the heading, *Pension and Other Post-Employment Benefits*.

Enterprise Total Generating Cost per MWh

The Enterprise TGC per MWh increased to \$48.72 for the three months ended June 30, 2017, compared to \$48.48 for the same quarter in 2016. The marginal increase was mainly due to the expected reduction in nuclear electricity generation due to the Unit 2 refurbishment outage at the Darlington GS and higher sustaining capital expenditures, largely offset by higher SBG-adjusted hydroelectric electricity generation reflecting higher water flows, and lower OM&A expenses before the impact of regulatory accounts.

The Enterprise TGC per MWh was \$48.35 for the six months ended June 30, 2017, an increase compared to \$45.01 for the same period in 2016. The increase was expected and mainly a result of lower electricity generation due to the Unit 2 refurbishment outage at the Darlington GS and higher sustaining capital expenditures, partially offset by lower OM&A expenses before the impact of regulatory accounts.

If Unit 2 at the Darlington GS was not currently undergoing refurbishment and had continued to operate in a manner consistent with the performance of the remaining units at the Darlington GS, adjusting for generation constraints on these units related to the transition of the station toward refurbishment, the Enterprise TGC would have been approximately \$3 to \$4 per MWh lower for the three and six months ended June 30, 2017. This sensitivity was calculated using the estimated incremental electricity and associated fuel cost that are expected to have resulted in the absence of the refurbishment.

Nuclear Total Generating Cost per MWh

The Nuclear TGC per MWh was \$76.87 for the three months ended June 30, 2017, compared to \$69.25 for the same quarter in 2016. The Nuclear TGC per MWh was \$73.24 for the six months ended June 30, 2017, compared to \$62.44 for the same period in 2016. The increase in the Nuclear TGC per MWh for these periods was expected and primarily due to the decrease in nuclear electricity generation reflecting the Unit 2 refurbishment outage at the Darlington GS.

Hydroelectric Total Generating Cost per MWh

The Hydroelectric TGC per MWh was \$19.83 for the three months ended June 30, 2017, compared to \$22.14 for the same quarter in 2016. The decrease was primarily due to higher SBG-adjusted hydroelectric electricity production reflecting higher water flows and lower sustaining capital expenditures. The Hydroelectric TGC per MWh was \$19.81 for the six months ended June 30, 2017, compared to \$21.08 for the same period in 2016. The decrease was primarily due to lower sustaining capital expenditures.

ROE Excluding AOCI, FFO Adjusted Interest Coverage, Enterprise TGC per MWh, Nuclear TGC per MWh and Hydroelectric TGC per MWh are not measurements in accordance with US GAAP and should not be considered alternative measures to net income, cash flow provided by operating activities, or any other performance measure under US GAAP. OPG believes that these non-GAAP financial measures are effective indicators of its performance and are consistent with the Company's strategic imperatives and related objectives. The definition and calculation of ROE Excluding AOCI, FFO Adjusted Interest Coverage, Enterprise TGC per MWh, Nuclear TGC per MWh and Hydroelectric TGC per MWh are found in the section, *Supplementary Non-GAAP Financial Measures*.

Recent Developments

OEB's Report on Regulatory Treatment of Pension and OPEB Costs

On May 18, 2017, the OEB issued a report on the regulatory treatment of pension and OPEB costs based on a consultation process aimed at developing standard principles to guide the OEB's future review of pension and OPEB costs of rate regulated utilities in the electricity and natural gas sectors, including OPG, that began in May 2015. The report establishes the accrual basis of accounting as the method of determining pension and OPEB amounts for rate-setting purposes, unless the OEB finds that this method does not result in just and reasonable rates in the circumstances of a particular utility. The report also provides for the establishment of a generic variance account to record asymmetric carrying charges in favour of ratepayers on the differences between the forecast pension and OPEB accrual costs recovered by a utility through regulated rates and the actual cash payments made by it for pension and OPEB plans. Carrying charges on this differential are to be assessed at the OEB's prescribed interest rate, on a prospective basis from the effective date of the new variance account. The prescribed interest rate is set quarterly by the OEB based on the quarterly return of a mid-term corporate bond index yield. Certain implementation matters related to the report's requirements remain to be finalized by the OEB. This includes the effective date of the new variance account, the application of carrying charges, and the timing of disposition of both the new and previously established variance and deferral accounts related to pension and OPEB costs.

The report requires utilities, such as OPG, that have been previously directed by the OEB to record differences between pension and OPEB accrual costs and cash payments in a separate variance or deferral account to continue to defer such differences in that account, until such time as the OEB approves the utility to resume the accrual basis of recovery. The future recovery of amounts recorded in the account will be subject to this approval. In setting OPG's existing regulated prices effective November 1, 2014, the OEB limited the recovery of pension and OPEB costs to the regulated portion of the Company's cash expenditures for the pension and OPEB plans. It also required OPG to defer, effective November 1, 2014, the difference between its actual pension and OPEB costs for the regulated business determined on an accrual basis in accordance with US GAAP and the Company's actual cash payments for these plans in the Pension & OPEB Cash Versus Accrual Differential Deferral Account, pending the outcome of an OEB generic proceeding on the regulatory treatment of pension and OPEB costs. Similarly, in its current application for new regulated prices filed with the OEB in May 2016, OPG has proposed to continue recording the difference between actual pension and OPEB accrual costs and actual cash payments for these plans in the Pension & OPEB Cash Versus Accrual Differential Deferral Account, pending the outcome of the OEB's consultation process. The Company recognizes the amount set aside in the Pension & OPEB Cash Versus Accrual Differential Deferral Account as a regulatory asset. As at June 30, 2017, the regulatory asset had a balance of \$533 million.

As currently outlined in the report, OPG does not expect that it would be subject to carrying charges on the difference between pension and OPEB accrual costs and cash payments until either it begins to recover, through future rate riders, amounts deferred in the Pension & OPEB Cash Versus Accrual Differential Deferral Account, or the OEB establishes OPG's base regulated prices to reflect pension and OPEB amounts on an accrual basis. As such, the OEB's report did not impact OPG's financial results for the three and six month periods ended June 30, 2017.

Ontario's Fair Hydro Plan

On March 2, 2017, the Province announced Ontario's Fair Hydro Plan (the Fair Hydro Plan) aimed at reducing electricity bills for all residential consumers in the province on average by 25 percent. As part of the Fair Hydro Plan, a portion of the Global Adjustment costs will be refinanced over a longer time period for Regulated Price Plan (e.g., residential, farm, small businesses) and other eligible consumers. On June 1, 2017, the Province enacted *Bill 132 – An Act to enact the Ontario Fair Hydro Plan Act, 2017, and to make amendments to the Electricity Act, 1998 and the Ontario Energy Board Act, 1998* (Bill 132). Bill 132 establishes a framework under which the costs and benefits associated with the Government of Ontario's clean energy initiative are to be allocated among present and future consumers of electricity, appoints OPG as the Financial Services Manager of the Fair Hydro Plan, unless OPG is not in a position to do so, and provides for a financing entity to be established by the Financial Services Manager for the purpose of funding a portion of the Global Adjustment. Bill 132 also made certain amendments to other legislation, which enables the IESO and OPG to work together to implement this financing.

OPG's Board of Directors, which had established a Special Committee to provide oversight on behalf of the Board of Directors, has conditionally approved OPG's involvement with the Fair Hydro Plan on commercial terms. The form of the financing entity to be established by OPG is being determined, and the specific operating protocol between the IESO, OPG and the financing entity and the requirements for financing the Fair Hydro Plan are being negotiated. OPG continues to prepare for financing activities of the financing entity that are expected to commence later in 2017.

Shareholder Declarations and Shareholder Resolutions to Sell Certain Non-Core Real Estate Properties

In December 2015, OPG received a Shareholder Declaration and a Shareholder Resolution requiring the Company to sell its head office premises and associated parking facility located at 700 University Avenue and 40 Murray Street in Toronto, Ontario. A purchase and sale agreement was executed in December 2016, and the sale was completed in April 2017. A gain on sale of \$283 million, which is net of tax effects of \$95 million, was recognized in net income upon completion of the transaction in the second quarter of 2017. The pre-tax gain on sale was recorded as an item of Other gains in the interim consolidated statement of income in the Services, Trading and Other Non-Generation segment. Pursuant to the Shareholder Declaration and Shareholder Resolution, and as prescribed in the *Trillium Trust Act, 2014*, OPG is required to transfer the proceeds from this disposition, net of prescribed deductions under

the Act, into the Province's Consolidated Revenue Fund. OPG expects that the amount of designated proceeds to be transferred into the Consolidated Revenue Fund will be largely consistent with the after-tax gain on sale, and is working with the Ontario Ministry of Finance to finalize the amount. The transfer is expected to take place later in 2017.

In June 2016, OPG received a Shareholder Declaration and a Shareholder Resolution that requires the Company to sell its former Lakeview GS site located in Mississauga, Ontario. An active program to locate a buyer for the property was initiated in June 2017. Pursuant to the Shareholder Declaration and Shareholder Resolution, and as prescribed in the *Trillium Trust Act, 2014*, OPG is required to transfer the proceeds from this disposition, net of prescribed deductions under the Act, into the Province's Consolidated Revenue Fund. In accordance with the Shareholder Resolution, approximately one-third of the site is to be transferred to the City of Mississauga, by the purchaser, for parkland, institutional, and cultural uses.

CORE BUSINESS, STRATEGY, AND OUTLOOK

The discussion in this section is qualified in its entirety by the cautionary statements included in the section, *Forward-Looking Statements*, at the beginning of the MD&A.

OPG's mission is to provide low cost power in a safe, clean, reliable and sustainable manner for the benefit of its customers and its Shareholder. OPG also seeks to pursue, on a commercial basis, generation development projects and other business growth opportunities to the benefit of the Shareholder.

The following sections provide an update to OPG's disclosures in the 2016 annual MD&A related to its four key strategic imperatives – operational excellence, project excellence, financial strength, and social licence. A detailed discussion of these strategic imperatives is included in the 2016 annual MD&A in the section, *Core Business, Strategy, and Outlook*.

Operational Excellence

Operational excellence at OPG is accomplished by the safe and environmentally responsible generation of reliable and cost-effective electricity from the Company's generating assets through a highly trained and engaged workforce.

Electricity Generation Production and Reliability

- As part of the plan to extend Pickering operations, OPG is continuing to undertake the required technical work to confirm that the station's pressure tubes, a key life-limiting component of the station, will remain fit for service for operation to 2024. OPG is also nearing completion of component condition assessments to identify the work required to support the continued operation of the station. The accounting end of life assumptions for the Pickering GS, currently set at the end of 2020, will be reassessed based on the fuel channel analysis and safety case consistent with submissions for the Canadian Nuclear Safety Commission's (CNSC) approval, discussed below. OPG's current application with the OEB for new base regulated prices, currently pending the OEB's decision, reflects OPG's plans to extend Pickering operations to 2024 and requests inclusion of the corresponding cost and generation impacts in the determination of the nuclear regulated price.
- OPG's current five-year operating licence for the Pickering GS was approved by the CNSC in 2013 and expires on August 31, 2018. This licence was issued assuming that the station would shut down in 2020. On June 28, 2017, OPG confirmed to the CNSC that it intends to cease commercial operation of all Pickering units on December 31, 2024. Work on the Pickering licence renewal application is proceeding and the application is expected to be filed by August 31, 2017 for the CNSC's approval in 2018. The requested licence renewal will span the planned extended operations period, through to the end of the planned period

to de-fuel, de-water, and place the station in a safe storage state in 2028. Through an extensive Periodic Safety Review, OPG will submit a Global Assessment Report and Integrated Implementation Plan (IIP) for the station to the CNSC as part of the licence renewal.

- In 2016, OPG submitted applications with the CNSC seeking a ten-year licence renewal for the Western Waste Management Facility (WWMF), located at the Bruce generating stations' site, to May 31, 2027, and a ten-year licence renewal for the Pickering Waste Management Facility (PWMF) to August 31, 2028. The licence renewal applications were presented to the CNSC at public hearings in April 2017. On May 30, 2017, the CNSC announced that the WWMF licence was renewed for a period of ten years and is now valid from June 1, 2017 to May 31, 2027. A renewal decision on the PWMF licence is expected to be issued prior to the expiry of the current licence on March 31, 2018.
- During the second quarter of 2017, OPG completed the upgrade of Unit 10 of the Sir Adam Beck 1 hydroelectric GS, increasing the capacity of the station by 6 MW.
- Work continues on the rehabilitation of Unit 1 of the Sir Adam Beck Pump hydroelectric GS and the overhaul and upgrade of Unit 1 of the Harmon hydroelectric GS and Unit 2 of the DeCew Falls hydroelectric GS. OPG also has commenced the rehabilitation and overhaul of Unit 2 of the Lower Notch hydroelectric GS.
- OPG has commenced definition phase activities for the Water Conveyance System project to rehabilitate the Sir Adam Beck 1 GS canal and associated structures, ensuring their continued safe and reliable operations for approximately the next 50 years.
- As part of the process to decommission the Nanticoke and Lambton generating stations, OPG is continuing to develop a demolition plan that will ensure that the stations are closed safely, securely and in an environmentally responsible manner. Project milestones in 2017 include the elimination of coal yard equipment and structures, removal of ash silos, and the selection of a contractor to remove the stacks, powerhouse, interior equipment and supporting site structures for the Nanticoke GS. An update of the associated asset retirement obligations related to the Nanticoke and Lambton stations is expected to be finalized later in 2017. A demolition contract for the removal of the Nanticoke powerhouse was awarded in July 2017. A demolition contract for the removal of the Lambton powerhouse is expected to be awarded in 2018.

Environmental Performance

There were no significant changes to environmental legislation affecting the Company during the second quarter of 2017. Disclosures related to the Company's environmental policy and environmental risks can be found in OPG's 2016 annual MD&A.

Project Excellence

OPG is pursuing a number of generation development and other major projects in support of Ontario's electricity planning initiatives. OPG remains focused on delivering projects safely, on time, on budget and with high quality. The status updates for OPG's major projects as at June 30, 2017 are outlined in the following table, with further details below.

Project <i>(millions of dollars)</i>	Capital expenditures		Approved budget	Expected in-service date	Current status
	Year-to-date	Life-to-date			
Darlington Refurbishment	608	3,793	12,800 ¹	First unit - 2020 Last unit - 2026	Islanding of Unit 2 was completed in April 2017. Preparatory work to support the removal of feeder tubes and fuel channel assemblies, including opening of the reactor air lock doors and installation of bulkhead shielding, was completed in the second quarter of 2017. The setup of specialized tooling and equipment needed for the removal and replacement of the reactor components is in progress. The project is tracking on schedule and budget.
Peter Sutherland Sr. Hydroelectric GS	32	268	300	2017	The station was placed in-service on March 31, 2017, ahead of the originally planned schedule, and is expected to close below the approved budget. Project close-out activities are in progress. In April 2017, CRP exercised its right under the partnership agreement to increase its interest in PSS to 33 percent.
Ranney Falls Hydroelectric GS	9	12	77	2019	Civil engineering design work and site clearing and mobilization have been completed. Work is progressing to expand forebay and tailrace channels. The project is tracking on schedule and budget.
Nanticoke Solar Facility	1	2		2019	Project definition work is continuing, with construction planned to commence as early as in the fourth quarter of 2017.
Deep Geologic Repository for low and intermediate level radioactive waste (L&ILW)	5 ²	200 ²			On June 26, 2017, the Canadian Environmental Assessment Agency (CEAA) advised that it was satisfied with the additional information submitted by OPG on May 26, 2017, and that a draft report was being prepared for public review. The Environmental Assessment (EA) Decision Statement by the federal Minister of Environment and Climate Change is expected in the fourth quarter of 2017.

¹ The total project budget of \$12.8 billion is for the refurbishment of all four units at the Darlington GS.

² Expenditures are charged against the nuclear fixed asset removal and nuclear waste management liabilities (Nuclear Liabilities).

Darlington Refurbishment

The Darlington generating units are forecast to be approaching their originally designed end-of-life. Refurbishment of the four generating units is expected to extend the operating life of the station by approximately 30 years.

In 2016, the Darlington Refurbishment project transitioned from the planning phase to the execution phase, as OPG commenced the refurbishment of the first unit, Unit 2, in October 2016, as planned. The unit was taken offline on October 15, 2016. De-fuelling of the reactor, the first critical refurbishment activity undertaken once the unit is removed from service, was safely completed in January 2017, with a total of 480 fuel channels de-fuelled. Islanding of Unit 2, the physical separation of the unit under refurbishment from the three operating units, was completed in April 2017, signifying the completion of the first major segment of the project. The second major segment, which includes preparatory work and the removal of reactor components, commenced immediately following the islanding of Unit 2. Preparatory work to support the removal of feeder tubes and fuel channel assemblies, including opening of the reactor air lock doors and installation of bulkhead shielding, was completed in the second quarter of 2017. The setup of specialized tooling and equipment needed for the removal and replacement of the reactor components is in progress. The Re-tube Tooling Platform, which will host the tooling for the removal, inspection, and installation activities, was completed in July 2017, and the disassembly of reactor components commenced in August 2017. Other key project activities completed during the second segment include the drain and vacuum dry of the primary heat transport system, commencement of the major turbine generator overhaul and continuation of the major electrical scope. Once refurbished, Unit 2 is scheduled to be returned to service in the first quarter of 2020, at which time capital expenditures of approximately \$4.8 billion are planned to be placed in service. This includes expenditures incurred during the definition and planning phase of the overall project. The project is tracking on schedule and budget.

A number of pre-requisite projects in support of the execution phase of the project, including construction of facilities, infrastructure upgrades and installation of safety enhancements, have been completed and placed in service. Completion of the Heavy Water Storage and Drum Handling Facility has been delayed due to challenges with construction. OPG suspended the project in the second quarter of 2017 to evaluate the best approach to optimize cost and schedule and complete the project. Remediation measures are in progress. This delay will not impact the overall Darlington Refurbishment project schedule, as the Heavy Water Storage and Drum Handling Facility is not on the project's critical path. The remaining pre-requisite projects are tracking for completion in line with the refurbishment execution schedule.

In addition to the refurbishment activities on Unit 2 completed to date, other key project activities in 2017 are as follows:

- Completion of preparation activities to support Retube and Feeder Replacement work.
- Continued refurbishment task rehearsals for the specialized tooling to be used for removal and replacement of feeder tubes and fuel channel assemblies at OPG's reactor training and mock-up facility.
- Removal of Unit 2 feeder tubes and commencement of the fuel channel removal series.
- Completion of the Re-tube Waste Processing Building.
- Commencement of the fuel handling power track replacement.
- Continued execution of work to support the requirements set out in the CNSC-approved IIP for the Darlington GS.

In addition to the execution of refurbishment activities on Unit 2, OPG is continuing planning activities for the refurbishment of the second unit, Unit 3, and is entering into associated commitments to procure major components that require long lead times. As of June 30, 2017, \$51 million has been invested in planning activities related to the refurbishment of the second unit. These planning activities are being undertaken in accordance with the refurbishment project schedule.

Ranney Falls Hydroelectric GS

During the second quarter of 2017, OPG continued construction work for a 10 MW single-unit powerhouse on the existing Ranney Falls GS site, as part of the Regulated – Hydroelectric segment. The new unit will replace an existing unit that reached its end of life in 2014. Civil engineering design work and site clearing and mobilization have been completed. Construction is progressing to expand the existing forebay and tailrace channels to accommodate the new powerhouse. The project's expected in-service date is in the fourth quarter of 2019, with a budget of \$77 million. The project is tracking on schedule and budget.

Nanticoke Solar Facility

The project to construct a 44 MW solar facility at OPG's Nanticoke GS site and adjacent lands under a Large Renewable Procurement contract with the IESO, through Nanticoke Solar LP, a partnership between OPG and a subsidiary of the Six Nations of Grand River Development Corporation, is planned to commence as early as in the fourth quarter of 2017. During the second quarter of 2017, the partnership continued work to obtain approvals and permits required to enable the commencement of construction, and progressed procurement activities for equipment and for engineering and construction services. The facility is expected to be completed in the first quarter of 2019.

Deep Geologic Repository for Low and Intermediate Level Waste

OPG has proposed a deep geologic repository as the preferred solution for the safe long-term management of the L&ILW produced from the continued operation of OPG-owned nuclear generating stations. Agreement has been reached with local municipalities for OPG to develop the L&ILW Deep Geologic Repository (DGR) on lands adjacent to the WWMF in Kincardine, Ontario.

In 2012, the CNSC and the CEAA appointed a three-member Joint Review Panel (JRP) for OPG's proposed L&ILW DGR. The JRP examined the environmental effects of the proposed L&ILW DGR to meet the requirements of the *Canadian Environmental Assessment Act*. In May 2015, the JRP submitted its report and recommendations on the EA to the federal Minister of Environment. The report concluded that, given mitigation, there is unlikely to be significant environmental impact from the project and recommended that the Minister approve the EA. The report suggested that the project should be implemented expeditiously.

In February 2016, the federal Minister of Environment and Climate Change requested additional information on certain aspects of the EA, including information related to alternate locations for the project. OPG completed the requested studies and submitted the requested information in December 2016, as planned. Following the CEAA's review of OPG's submission and a period of public comment, the CEAA requested additional information from OPG. OPG provided the additional information on May 26, 2017 and, on June 26, 2017, the CEAA notified OPG that it had sufficient and adequate information to proceed with the next step of the environmental assessment process and advised that a draft report and updated terms and conditions will be prepared for public review. An EA Decision Statement by the Minister is expected in the fourth quarter of 2017. Based on the additional information submitted, the L&ILW DGR at the WWMF site remains OPG's preferred solution for the safe long-term management of the L&ILW. Alternative locations reviewed in the Canadian Shield and southwestern Ontario, while technically feasible, would result in greater negative environmental impacts and higher costs, as well as a project delay of 15 years or more, while offering no additional benefits in safety.

If the EA Decision Statement supports licensing, a number of conditions will need to be met before construction begins. In addition, OPG continues its engagement with the Saugeen Ojibway Nations toward securing community support for the L&ILW DGR. The in-service date of the L&ILW DGR is expected to be approximately six to seven years from the start of construction.

Financial Strength

As a commercial enterprise, OPG's financial priority is to achieve a consistent level of strong financial performance that delivers an appropriate level of return on the Shareholder's investment and positions the Company for future growth.

Increase Revenue, Reduce Costs and Achieve Appropriate Return

In May 2016, OPG filed a 5-year application with the OEB for new regulated prices for production from its regulated hydroelectric and nuclear facilities, with a proposed effective date of January 1, 2017. Consistent with the requirements of *Ontario Regulation 53/05*, the application incorporates a rate smoothing proposal that would defer, for future collection, a portion of the approved annual nuclear revenue requirement for the period from January 1, 2017 to the end of the Darlington Refurbishment project, with a view to making more stable year-over-year changes in OPG's regulated prices. The application seeks to ensure that nuclear regulated prices under the rate smoothing approach allow for sufficient cash flow to meet the Company's liquidity needs, support cost effective funding for the Darlington Refurbishment project and other expenditures, and maintain the Company's investment grade credit rating, while taking into account both near-term and future impacts on customers. OPG expects to recognize amounts deferred under rate smoothing as income in the periods to which the underlying approved revenue requirements relate.

The application will further challenge and incentivize OPG to find additional cost reductions and efficiencies within its operations, as a result of greater de-coupling of nuclear and hydroelectric regulated prices from costs and a longer rate-setting period under the OEB's incentive ratemaking framework, which forms the basis for the ratemaking methodologies reflected in the application.

The application seeks an increase in the nuclear rate base, effective in early 2020, to reflect the planned placement in service of approximately \$4.8 billion of capital expenditures upon the scheduled return to service of Unit 2 at the Darlington GS as part of the Darlington Refurbishment project and, effective in 2017, an increase in the deemed capital structure applied to the total regulated rate base to 49 percent equity and 51 percent debt, from 45 percent equity and 55 percent debt reflected in the existing regulated prices. The application also requests new rate riders, effective January 1, 2017, to recover or repay the December 31, 2015 balances in all of the Company's OEB-authorized variance and deferral accounts, with the exception of the Pension & OPEB Cash Versus Accrual Differential Deferral Account and the portion of these balances previously approved for recovery or repayment through rate riders that were in effect during 2016.

A public oral hearing on the application took place between February 2017 and April 2017, with the final arguments completed on June 19, 2017. The OEB's decision on the application, including the effective date of approved new regulated prices, is expected later in 2017.

For generation assets that do not form part of the assets regulated by the OEB, OPG's strategy has been to secure appropriate long-term revenue arrangements. In line with this strategy, virtually all of OPG's non-regulated operating facilities and assets under construction are subject to long-term Energy Supply Agreements (ESAs) or other long-term contracts with the IESO. This includes the Peter Sutherland Sr. GS, which began receiving contracted revenue under a hydroelectric ESA following IESO's confirmation, in June 2017, of the station's commercial operation effective as of March 31, 2017. The ESA expires in 2067.

Ensure Availability of Cost Effective Funding

In April 2017, DBRS Limited (DBRS) re-affirmed the long-term credit rating on OPG's debt at 'A (low)' and OPG's commercial paper rating at 'R-1 (low)'. All ratings from DBRS have a stable outlook. In July 2017, S&P Global Ratings (S&P) re-affirmed OPG's long-term credit rating at 'BBB+' with a stable outlook. S&P's commercial paper rating for OPG is 'A-1 (low)'.

Social Licence

As the largest electricity generator in Ontario with diverse operations across the province, OPG holds itself accountable to the public and its employees, and continues to focus on maintaining public trust. OPG is committed to maintaining high standards of public safety and corporate citizenship, including environmental stewardship, transparency, community engagement, and Indigenous relations.

OPG is focused on building long-term, mutually beneficial working relationships with Indigenous communities, businesses and organizations across Ontario, and continues to support procurement, employment and educational opportunities with its Indigenous community partners. The Company seeks to establish these relationships based on a foundation of respect for the languages, customs, and political, social and cultural organizations of the Indigenous communities.

In June 2017, OPG launched an Indigenous Business Engagement (IBE) Initiative. The purpose of this initiative is to increase access to procurement opportunities for Indigenous businesses interested in supplying materials and services to OPG. The IBE Initiative is based on a strategy that will identify opportunities in contracts, scopes of work and business plans for potential Indigenous business engagement; include criteria related to suppliers' ability to engage or partner with Indigenous people or businesses in assessing procurement proposals; and invest in relationships with Indigenous communities by increasing outreach efforts to enhance understanding of how to do business with OPG.

As part of its commitment to help de-carbonize Ontario's transportation sector, OPG is a founding sponsor of Plug'n Drive, a non-profit organization working to accelerate the adoption of electric vehicles and to maximize their environmental and economic benefits. In May 2017, Plug'n Drive announced the opening of the world's first experiential learning facility dedicated to electric vehicle education and awareness, with OPG sponsoring the Centre's training facility. Ontario's climate change plan aims for electric and hydrogen passenger vehicles to represent five percent of new vehicle sales in the province by 2020.

Outlook

The financial performance of OPG's regulated operations is driven, in large part, by the outcome of applications for regulated prices to the OEB. The existing base regulated prices were established by the OEB effective November 1, 2014 based on a forecast of costs and production for the regulated facilities for the 2014 to 2015 period. The future outcome of OPG's current application for new regulated prices, currently pending the OEB's decision, is expected to provide substantial price certainty for the regulated business for the 2017 to 2021 period.

In its application, OPG has requested January 1, 2017 as the effective date for the new regulated prices. In December 2016, the OEB issued an order declaring the existing base regulated prices interim, which preserves the OEB's ability to make the new regulated prices effective as early as January 1, 2017. Considering the timing of OPG's application and OPG's procedural adherence throughout the proceeding, the Company believes that the OEB could make the new regulated prices effective January 1, 2017. This would allow OPG to recover the difference between the approved new regulated prices and the existing regulated prices for the period between January 1, 2017 and the implementation date of the new prices based on the OEB's order. The OEB's decision on the application, including the effective date of the new regulated prices, is expected later in 2017. The continuation of existing regulated prices until the issuance of the OEB's decision is expected to continue to contribute to lower income, particularly from the Regulated – Nuclear Generation segment, and, excluding the gain on sale of the Company's head office premises and associated parking facility recorded in the second quarter of 2017, lower ROE Excluding AOCI during 2017, compared to 2016. In large part, this is due to the year-over-year reduction in nuclear electricity generation resulting from the Unit 2 refurbishment outage at the Darlington GS, given that the existing nuclear regulated prices were determined in 2014 based on a higher production forecast that reflected the operation of all four units at the station. As such, the OEB's decision on the effective date of the new regulated prices, as well as the timing of the decision issuance, could have a significant impact on OPG's financial results during 2017.

Nuclear base regulated prices resulting from OPG's current application will be subject to a rate smoothing mechanism that defers collection of a portion of OEB-approved revenues to future periods. As expected, combined with the expiry of rate riders in effect to the end of 2016, a year-over-year reduction in nuclear generation due to the Unit 2 refurbishment outage at the Darlington GS and the continuation of existing regulated prices until such time as new prices are implemented by the OEB, this will result in lower cash flow from operating activities in 2017, compared to 2016. OPG expects to continue to have the necessary financial capacity and sufficient access to cost effective financing sources to continue to fund its capital requirements and other disbursements.

Lower nuclear generation due to the Darlington Refurbishment outages will continue, as planned, to negatively impact the Enterprise TGC metric for the duration of the refurbishment project. Variability in sustaining capital investment expenditures, including major sustaining projects for the hydroelectric operations, also will impact the Enterprise TGC in future periods.

Several OEB-authorized regulatory variance and deferral accounts currently in place contribute to reducing the relative variability of the Company's income and ROE Excluding AOCI. Among others, the regulatory accounts include those related to the revenue impact of variability in water flows and forgone production due to SBG conditions at the regulated hydroelectric stations. As there are no variance or deferral accounts in place related to the impact of generation performance of the nuclear stations on revenue from base regulated prices, the Regulated – Hydroelectric segment generally is expected to produce overall more predictable earnings. OPG continues to operate and maintain its nuclear facilities with a view to optimize their performance and availability, while focusing on improving the overall reliability and predictability of the fleet.

Electricity generated from most of OPG's non-regulated assets is subject to ESAs with the IESO. Based on these agreements, OPG expects the Contracted Generation Portfolio segment to continue to contribute a generally stable level of earnings and cash flow from operations going forward.

OPG's total forecast capital expenditures for the 2017 year are approximately \$1.9 billion. This includes amounts for the Darlington Refurbishment project, hydroelectric and other development projects including the completion of the Peter Sutherland Sr. GS and the expansion of the Ranney Falls GS, and sustaining capital investments across the generating fleet. OPG's major projects are discussed in the section, *Project Excellence*.

In addition to the operating and financial performance of the electricity generation business, OPG's results are affected by the earnings on the Nuclear Segregated Funds, which are reported in the Regulated – Nuclear Waste Management segment. While the Nuclear Segregated Funds are managed to achieve, in the long term, the target rate of return based on the discount rate specified in the ONFA, the rates of return earned in a given period can be subject to various external factors including financial market conditions and, for the portion of the Used Fuel Segregated Fund guaranteed by the Province under the ONFA, changes in the Ontario consumer price index (CPI). In the near term, these factors can be volatile and cause fluctuations in the Company's income. This volatility is partially mitigated by the impact of the OEB-authorized Bruce Lease Net Revenues Variance Account and, as discussed below, the funded status of the two segregated funds.

As OPG does not have the right to withdraw surplus amounts from the Nuclear Segregated Funds when the segregated funds are overfunded relative to the life cycle funding liability per the most recently approved ONFA Reference Plan, OPG limits the amount of Nuclear Segregated Funds assets reported on the balance sheet to the present value of such life cycle funding liability. This reduces the volatility of earnings on the Nuclear Segregated Funds reflected in net income when the funds are in a fully funded or overfunded position. As at June 30, 2017, the Decommissioning Segregated Fund was overfunded by approximately 24 percent, and the Used Fuel Segregated Fund was marginally overfunded, by less than one percent, based on the 2017 ONFA Reference Plan. Variability in asset performance due to volatility inherent in financial markets and changes in Ontario CPI, or changes in funding liability estimates, may result in either or both funds becoming underfunded in the future.

DISCUSSION OF OPERATING RESULTS BY BUSINESS SEGMENT

Regulated – Nuclear Generation Segment

	Three Months Ended June 30		Six Months Ended June 30	
<i>(millions of dollars) (unaudited)</i>	2017	2016	2017	2016
Revenue	609	820	1,261	1,746
Fuel expense	68	79	136	160
Gross margin	541	741	1,125	1,586
Operations, maintenance and administration	593	581	1,182	1,144
Depreciation and amortization	110	231	217	461
Property taxes	7	6	13	13
Loss before other gains, interest, and income taxes	(169)	(77)	(287)	(32)
Other gains	-	(1)	-	(2)
Loss before interest and income taxes	(169)	(76)	(287)	(30)

For the three and six month periods ended June 30, 2017, the segment loss before interest and income taxes increased by \$93 million and \$257 million, respectively, compared to the same periods in 2016. The decrease in earnings was expected and primarily due to reduced revenue from the nuclear base regulated price of approximately \$72 million and \$206 million, partially offset by a decrease in fuel expense of \$11 million and \$24 million, respectively. The decrease in revenue during the three and six month periods ended June 30, 2017, compared to the same periods in 2016, reflected lower electricity generation of 1.3 TWh and 3.6 TWh, respectively, primarily due to the ongoing Unit 2 refurbishment outage at the Darlington GS that began in October 2016, without a corresponding increase in the base regulated price. The existing nuclear base regulated price set by the OEB in 2014 continues to be in effect pending the OEB's decision on OPG's application for new regulated prices, proposed to be effective on January 1, 2017. The existing price does not reflect the lower generation as a result of the Darlington Refurbishment project, as it was set to allow the Company to recover its approved nuclear costs over a higher nuclear production volume, based on the 2014 and 2015 outage profile that did not include a refurbishment outage. The reduction in nuclear electricity generation for the three and six month periods ended June 30, 2017 was partially offset by the higher electricity generation from the Pickering GS.

The increases in OM&A expenses of \$12 million and \$38 million during the three and six month periods ended June 30, 2017, respectively, compared to the same periods in 2016, also contributed to a year-over-year reduction in segment earnings. The higher OM&A expenses reflected planned expenditures related to major maintenance expenditures occurring at the nuclear stations.

Depreciation and amortization expense, excluding amortization expense related to regulatory account balances, increased by \$11 million and \$20 million during the three and six month periods ended June 30, 2017, respectively, compared to the same periods in 2016, primarily due to new assets in service.

The expiry of an OEB-authorized nuclear rate rider on December 31, 2016 contributed to the decrease in segment revenue for the three and six month periods ended June 30, 2017, compared to the same periods in 2016. As rate riders allow for recovery of approved balances in OEB-authorized regulatory accounts, this decrease in revenue was largely offset by a decrease in amortization expense related to these balances. There was no rate rider in effect during the first half of 2017 pending the outcome of OPG's current application to the OEB for new regulated prices.

The Unit Capability Factors for the Darlington and Pickering generating stations were as follows:

	Three Months Ended June 30		Six Months Ended June 30	
	2017	2016	2017	2016
Unit Capability Factor (%) ¹				
Darlington GS	64.6	75.9	74.9	86.6
Pickering GS	84.2	71.4	81.4	72.1

¹ The nuclear Unit Capability Factor excludes unit(s) during the period in which they are undergoing refurbishment. Accordingly, Unit 2 of the Darlington GS was excluded from the measure effective October 15, 2016, when the unit was taken offline for refurbishment.

The Unit Capability Factor at the Darlington GS decreased in the second quarter of 2017, compared to the same quarter in 2016, primarily due to the higher number of planned and unplanned outage days during the second quarter of 2017. The lower Unit Capability Factor at the Darlington GS for the six months ended June 30, 2017, compared to the same period in 2016, reflected the higher number of planned outage days, largely driven by constraints related to the transition of the station toward refurbishment.

The increase in Unit Capability Factor at the Pickering GS for the three and six month periods ended June 30, 2017 was primarily due to favourable unit conditions and execution of planned outage work resulting in a lower number of planned outage days at the station compared to 2016.

Regulated – Nuclear Waste Management Segment

	Three Months Ended June 30		Six Months Ended June 30	
	2017	2016	2017	2016
<i>(millions of dollars) (unaudited)</i>				
Revenue	30	32	57	66
Operations, maintenance and administration	32	34	61	70
Accretion on nuclear fixed asset removal and nuclear waste management liabilities	232	228	466	456
Earnings on nuclear fixed asset removal and nuclear waste management funds	(194)	(225)	(383)	(372)
Loss before interest and income taxes	(40)	(5)	(87)	(88)

The segment loss before interest and income taxes increased by \$35 million in the second quarter of 2017 compared to the same quarter in 2016. The decline in earnings was primarily due to lower earnings from the Nuclear Segregated Funds. The segment loss before interest and income taxes for the six months ended June 30, 2017 was comparable to the same period in 2016.

Lower earnings on the Used Fuel Segregated Fund, net of the impact of the Bruce Lease Net Revenue Variance Account, were the primary reason for the lower Nuclear Segregated Funds earnings during the second quarter of 2017. As the Used Fuel Segregated Fund was overfunded as at March 31, 2017 and June 30, 2017, the earnings on the fund recorded in income during the second quarter of 2017 reflected the growth in the present value of the used fuel life cycle funding liability per the 2017 ONFA Reference Plan. During the second quarter of 2016, the Used Fuel Segregated Fund was underfunded based on the ONFA reference plan then in effect, and therefore earnings on the fund reflected the CPI-adjusted rate of return guaranteed by the Province under the ONFA for funding related to the initial 2.23 million used fuel bundles and market returns for the portion of the fund not guaranteed by the Province.

As of December 31, 2016, OPG recorded a decrease of approximately \$1,570 million to the Nuclear Liabilities and associated asset retirement costs capitalized as part of the carrying value of the nuclear generating stations. The resulting year-over-year decreases in accretion on fixed asset removal and nuclear waste management liabilities recorded in the Regulated – Nuclear Waste Management segment and depreciation and fuel expenses recorded in

the Regulated – Nuclear Generation segment during the three and six month periods ended June 30, 2017, compared to the same periods in 2016, were offset by the impact of the Bruce Lease Net Revenues Variance Account and the Nuclear Liability Deferral Account authorized by the OEB.

Under the current OEB-approved cost recovery methodology, these changes in expenses also are not expected to materially affect OPG's income during the rest of 2017, as they are expected to continue to be largely offset by the impact of the regulatory accounts until such time as the OEB implements corresponding changes to OPG's nuclear regulated prices, and subsequently by the impact of such new regulated prices. Further details on the change in the estimate of the Nuclear Liabilities as of December 31, 2016 are described in OPG's 2016 annual MD&A in the section, *Critical Accounting Policies and Estimates* under the heading, *Asset Retirement Obligation*.

Regulated – Hydroelectric Segment

	Three Months Ended June 30		Six Months Ended June 30	
(millions of dollars) (unaudited)	2017	2016	2017	2016
Revenue ¹	379	413	742	798
Fuel expense	97	92	170	171
Gross margin	282	321	572	627
Operations, maintenance and administration	75	75	151	151
Depreciation and amortization	35	57	69	113
Income before other losses (gains), interest and income taxes	172	189	352	363
Other losses (gains)	-	2	-	(20)
Income before interest and income taxes	172	187	352	383

¹ During the three and six month periods ended June 30, 2017, the Regulated – Hydroelectric segment revenue reflected incentive payment reductions of \$3 million and incentive payments of \$5 million, respectively, related to the OEB-approved hydroelectric incentive mechanism (three and six month periods ended June 30, 2016 – incentive payments of \$1 million and \$2 million, respectively). The mechanism provides a pricing incentive to OPG to shift hydroelectric production from lower market price periods to higher market price periods, reducing the overall costs to customers. The incentive payments are reduced to remove incentive revenues arising in connection with SBG conditions.

The decrease in segment income before interest and income taxes of \$15 million during the second quarter of 2017, compared to the same quarter in 2016, was primarily the result of the income impact of OEB-approved variance accounts and lower hydroelectric incentive mechanism payments.

The decrease in segment income before interest and income taxes of \$31 million during the six months ended June 30, 2017, compared to the same period in 2016, was primarily due to a gain of \$22 million recognized during the first quarter of 2016 to reflect the OEB's January 2016 decision to reverse a portion of an earlier capital cost disallowance related to the Niagara Tunnel project expenditures, in response to a motion by OPG. The income impact of OEB-approved variance accounts also contributed to the year-over-year decrease in income for the period.

The decrease in revenue from the segment for the three and six month periods ended June 30, 2017, compared to the same periods in 2016, was largely due to the expiry of an OEB-authorized rate rider on December 31, 2016. As the rider allowed for the recovery of approved balances in OEB-authorized regulatory accounts, the resulting reduction in revenue was largely offset by lower amortization expense related to these balances. There was no rate rider in effect during the first half of 2017 pending the outcome of OPG's current application to the OEB for new regulated prices.

The Hydroelectric Availability for the stations included in the Regulated – Hydroelectric segment was as follows:

	Three Months Ended June 30		Six Months Ended June 30	
	2017	2016	2017	2016
Hydroelectric Availability (%)	90.1	90.4	89.8	92.6

The Hydroelectric Availability in the second quarter of 2017 was comparable to the same period in 2016. The decrease in Hydroelectric Availability during the six months ended June 30, 2017, compared to the same period in 2016, was primarily due to a higher number of unplanned outage days at the regulated hydroelectric stations.

Contracted Generation Portfolio Segment

	Three Months Ended June 30		Six Months Ended June 30	
(millions of dollars) (unaudited)	2017	2016	2017	2016
Revenue	147	137	290	282
Fuel expense	13	11	27	23
Gross margin	134	126	263	259
Operations, maintenance and administration	40	45	79	85
Depreciation and amortization	20	18	39	37
Accretion on fixed asset removal liabilities	2	2	4	4
Property taxes	3	3	5	5
Income from investments subject to significant influence	(8)	(9)	(18)	(17)
Income before interest and income taxes	77	67	154	145

Income before interest and income taxes from the segment increased by \$10 million and \$9 million during the three and six month periods June 30, 2017, respectively, compared to the same periods in 2016. The increase in earnings for the three months ended June 30, 2017 mainly resulted from revenues from the Peter Sutherland Sr. GS that was placed in-service at the end of the first quarter of 2017, higher revenues from the Lennox GS primarily due to increased production to support electricity system requirements, and lower OM&A expenses. For the six months ended June 30, 2017, the increase in earnings was primarily due to higher revenues from Lennox GS primarily due to increased production to support electricity system requirements, and lower OM&A expenses, partially offset by lower revenues from the Lower Mattagami River hydroelectric generating stations.

The Hydroelectric Availability and the Thermal Equivalent Forced Outage Rate (EFOR) for the Contracted Generation Portfolio segment were as follows:

	Three Months Ended June 30		Six Months Ended June 30	
	2017	2016	2017	2016
Hydroelectric Availability (%)	81.4	87.0	82.5	85.5
Thermal EFOR (%)	2.7	1.0	7.8	1.0

Lower Hydroelectric Availability during the three and six month periods ended June 30, 2017, compared to the same periods in 2016, was primarily due to an increase in the number of unplanned outage days at the Lower Mattagami River hydroelectric generating stations.

The higher Thermal EFOR during the three and six month periods ended June 30, 2017, compared to the same periods in 2016, was primarily due to a higher number of unplanned outage days at a Lennox GS unit as a result of a transmission outage in 2017.

Services, Trading, and Other Non-Generation Segment

	Three Months Ended June 30		Six Months Ended June 30	
<i>(millions of dollars) (unaudited)</i>	2017	2016	2017	2016
Revenue	10	16	27	37
Gross margin	10	16	27	37
Operations, maintenance and administration	-	5	1	9
Depreciation and amortization	7	10	14	17
Accretion on fixed asset removal liabilities	2	2	4	4
Property taxes	1	2	4	5
Income (loss) before other gains, interest, and income taxes	-	(3)	4	2
Other gains	(380)	(2)	(383)	(2)
Income (loss) before interest and income taxes	380	(1)	387	4

Segment income before interest and income taxes increased by \$381 million and \$383 million for the three and six month periods ended June 30, 2017, compared to the same periods in 2016, respectively. The increase in earnings mainly reflected the gain on the sale of OPG's head office premises and associated parking facility recorded during the second quarter of 2017, as further discussed in the section, *Highlights* under the heading, *Recent Developments – Shareholder Declarations and Shareholder Resolutions to Sell Certain Non-Core Real Estate Properties*.

LIQUIDITY AND CAPITAL RESOURCES

OPG's primary sources of liquidity and capital are funds generated from operations, bank financing, credit facilities provided by the Ontario Electricity Financial Corporation (OEFC), long-term corporate debt, and capital market financing. These sources are used for multiple purposes including: to invest in plants and technologies, to undertake major projects, to fund long-term obligations such as contributions to the pension fund and the Nuclear Segregated Funds, to make payments under the OPEB plans, to fund expenditures on Nuclear Liabilities not reimbursable from the Nuclear Segregated Funds, and to service and repay long-term debt.

Changes in cash and cash equivalents for the three and six month periods ended June 30 are as follows:

	Three Months Ended June 30		Six Months Ended June 30	
<i>(millions of dollars) (unaudited)</i>	2017	2016	2017	2016
Cash and cash equivalents, beginning of period	220	540	186	464
Cash flow provided by operating activities	143	348	261	714
Cash flow provided by (used in) investing activities	58	(586)	(305)	(896)
Cash flow (used in) provided by financing activities	(179)	(7)	100	13
Net increase (decrease)	22	(245)	56	(169)
Cash and cash equivalents, end of period	242	295	242	295

For a discussion of cash flow provided by operating activities and the FFO Adjusted Interest Coverage ratio, refer to the details in the section, *Highlights* under the heading, *Overview of Results*.

Investing Activities

Electricity generation is a capital-intensive business. It requires continued investment in plants and technologies to maintain and improve operating performance including asset reliability, safety and environmental performance, to

increase the generating capacity of existing stations, and to invest in the development of new generating stations, emerging technologies and other business growth opportunities.

Cash flow provided by investing activities during the second quarter of 2017 was \$58 million, compared to cash flow used of \$586 million for the same period in 2016. Cash flow used in investing activities decreased by \$591 million for the six months ended June 30, 2017, compared to the same period in 2016. The decrease in cash flow used in investing activities was primarily due to the receipt of proceeds from the sale of OPG's head office premises and associated parking facility in the second quarter of 2017 and the acquisition of nine million common shares of Hydro One Limited (Hydro One) in the second quarter of 2016, partially offset by higher expenditures on the Darlington Refurbishment project in 2017. OPG acquired the Hydro One shares for investment purposes, to mitigate the risk of future price volatility related to the Company's future share delivery obligations under the collective agreements with the Power Workers' Union and The Society of Energy Professionals.

Financing Activities

OPG maintains a \$1 billion revolving committed bank credit facility, which is divided into two \$500 million multi-year term tranches. In the second quarter of 2017, OPG renewed and extended the expiry date of both tranches from May 2021 to May 2022. There were no amounts outstanding under the bank credit facility as at June 30, 2017.

There was no commercial paper outstanding under OPG's commercial paper program as at June 30, 2017.

As at June 30, 2017, OPG also maintained \$25 million of short-term, uncommitted overdraft facilities, and a further \$462 million of short-term, uncommitted credit facilities, which support the issuance of the Letters of Credit. OPG uses Letters of Credit to support its supplementary pension plans and for other general corporate purposes. As at June 30, 2017, a total of \$387 million of Letters of Credit had been issued under these facilities. This included \$349 million for the supplementary pension plans, \$37 million for general corporate purposes, and \$1 million related to the operation of the PEC.

The Company has an agreement to sell an undivided co-ownership interest in its current and future accounts receivable to an independent trust, expiring on November 30, 2018. The maximum amount of co-ownership interest that can be sold under this agreement is \$150 million. As at June 30, 2017, no borrowings were issued under this agreement and there were Letters of Credit outstanding under this agreement of \$150 million, which were issued in support of OPG's supplementary pension plans.

As at June 30, 2017, Lower Mattagami Energy Limited Partnership (LME) maintained a \$500 million bank credit facility to support the funding requirements for the Lower Mattagami River project including support for LME's commercial paper program. The facility consists of a \$300 million tranche maturing in August 2021 and a \$200 million tranche maturing in August 2017. In the third quarter of 2017, OPG expects to extend the maturity of the \$300 million tranche to August 2022, and to reduce the \$200 million tranche to \$100 million while extending its maturity date to August 2018. As at June 30, 2017, there was no external commercial paper outstanding under LME's commercial paper program. There were also no amounts outstanding under LME's bank credit facility as at June 30, 2017.

In June 2016, OPG entered into a \$700 million general corporate credit facility agreement with the OEFC, which expires on December 31, 2017. As at June 30, 2017, there were outstanding long-term borrowings of \$300 million under this credit facility. An amendment to the credit facility agreement with the OEFC to increase the credit facility to \$2,350 million and to extend the expiry to December 2018 is anticipated to be completed in the third quarter of 2017.

In February 2017, OPG issued senior notes payable to the OEFC totalling \$200 million and maturing in February 2047. The effective interest rate and coupon interest rate of these notes was 4.12 percent. In June 2017, OPG issued senior notes payable to the OEFC totalling \$100 million and maturing in June 2047. The effective interest rate and coupon interest rate of these notes was 3.65 percent.

As at June 30, 2017, OPG's long-term debt outstanding was \$5,622 million, including \$1,218 million due within one year.

OPG continues to evaluate arrangements that would appropriately support the Company's financing needs and capital expenditure programs.

BALANCE SHEET HIGHLIGHTS

The following section provides highlights of OPG's unaudited interim consolidated financial position using selected balance sheet data:

<i>(millions of dollars) (unaudited)</i>	As At	
	June 30 2017	December 31 2016
Property, plant and equipment - net	20,510	19,998
The increase was primarily due to capital expenditures on the Darlington Refurbishment project, partially offset by depreciation expense.		
Nuclear fixed asset removal and nuclear waste management funds <i>(current and non-current portions)</i>	16,343	15,984
The increase was primarily due to earnings on the Nuclear Segregated Funds, partially offset by reimbursements of eligible expenditures on nuclear fixed asset removal and nuclear waste management activities.		
Fixed asset removal and nuclear waste management liabilities	19,876	19,484
The increase was primarily a result of accretion expense representing the increase in the liabilities due to the passage of time, partially offset by expenditures on nuclear fixed asset removal and waste management activities.		

Off-Balance Sheet Arrangements

In the normal course of operations, OPG engages in a variety of transactions that, under US GAAP, are either not recorded in the Company's interim consolidated financial statements or are recorded in the Company's interim consolidated financial statements using amounts that differ from the full contract amounts. Principal off-balance sheet activities for OPG include guarantees and long-term contracts.

CHANGES IN ACCOUNTING POLICIES AND ESTIMATES

OPG's significant accounting policies are outlined in Note 3 to the audited consolidated financial statements as at and for the year ended December 31, 2016. A discussion of recent accounting pronouncements and change in accounting estimate are included in Note 2 to OPG's unaudited interim consolidated financial statements as at and for the three and six month periods ended June 30, 2017 under the heading, *Significant Accounting Policies and Estimates*. Disclosure regarding OPG's critical accounting policies is included in OPG's 2016 annual MD&A.

RISK MANAGEMENT

The following provides an update to the discussion of the Company's risks and risk management activities included in OPG's 2016 annual MD&A. As such, the disclosure in this section should be read in conjunction with the *Risk Management* section included in the annual MD&A.

Risks to Achieving Project Excellence

Darlington Refurbishment

During the second quarter of 2017, OPG continued to mitigate and manage risks related to the Darlington Refurbishment project portfolio. Further risk treatment and remediation measures are being developed or implemented for the projects and their upcoming work windows. Several initiatives and plans are also being developed to manage risks associated with reintegration of the refurbished Unit 2 with the other units, which involves coordination between vendors, project teams and station operations.

Risks to Maintaining Financial Strength

Commodity Markets

Changes in the market price of fuels used to produce electricity can adversely impact OPG's earnings and cash flow from operations.

To manage the risk of unpredictable increases in the price of fuels, the Company has fuel hedging programs, which include fixed price and indexed contracts.

The percentages hedged of OPG's fuel requirements are shown in the following table. These amounts are based on yearly forecasts of generation and supply mix, and as such, are subject to change as these forecasts are updated.

	2017 ¹	2018	2019
Estimated fuel requirements hedged ²	75%	74%	70%

¹ Based on actual fuel requirements hedged for the six months ended June 30, 2017 and forecast for the remainder of the year.

² Represents the approximate portion of megawatt-hours of expected generation production (and year-end inventory targets) from each type of OPG-operated facility (nuclear, hydroelectric and thermal) for which the Company has entered into contractual arrangements or obligations in order to secure the price of fuel, or which is subject to regulation. In the case of hydroelectric generation, this represents the gross revenue charge and water rental charges. Excess fuel inventories (nuclear and thermal) in a given year are attributed to the next year for the purpose of measuring hedge ratios.

Foreign Exchange

OPG's earnings and cash flow can be affected by movements in the United States dollar (USD) relative to the Canadian dollar.

OPG's financial results are exposed to volatility in the Canadian/US foreign exchange rate as fuels and certain supplies and services purchased for generating stations and major development projects are denominated in, or tied to, US dollars. To manage this risk, OPG employs various financial instruments such as forwards and other derivative contracts, in accordance with approved risk management policies. As at June 30, 2017, OPG had one foreign exchange contract outstanding, with a notional value of USD \$5 million.

Trading

OPG's financial performance can be affected by its trading activities.

OPG's electricity trading operations are closely monitored, with total exposures measured and reported to senior management on a daily basis. The main metric used to measure the financial risk of trading activity is Value at Risk (VaR). VaR is defined as a probabilistic maximum potential future loss expressed in monetary terms for a portfolio

based on normal market conditions over a set period of time. For the second quarter of 2017, the VaR utilization ranged between \$0.1 million and \$0.3 million.

Credit

Deterioration in energy markets counterparty credit and non-performance by suppliers and contractors can adversely impact OPG's earnings and cash flow from operations.

OPG manages its exposure to suppliers or counterparties by evaluating their financial condition and negotiating appropriate collateral or other forms of security. OPG's credit exposure relating to energy markets transactions as at June 30, 2017 was \$362 million, including \$347 million with the IESO. Management considers the Company's risk exposure relating to electricity sales through the IESO-administered spot market to be low as the IESO oversees the credit worthiness of all market participants. In accordance with the IESO's prudential support requirements, market participants are required to provide collateral to cover funds that they might owe to the market. Of the \$15 million remaining exposure as at June 30, 2017, over 95 percent was related to investment grade counterparties.

Ontario's Fair Hydro Plan

OPG's role in connection with Ontario's Fair Hydro Plan could have significant financial and reputational impacts on the Company.

The *Ontario Fair Hydro Plan Act, 2017* received Royal Assent on June 1, 2017 and regulations under this Act came into force in June and early July. The regulations clarify aspects of the structure and programs that would be required for OPG, as the Financial Services Manager of the Fair Hydro Plan, to refinance a portion of the Global Adjustment through a financing entity. OPG's credit rating and reputation could potentially be adversely impacted by the Fair Hydro Plan, through financial implications to the Company from its involvement with the Fair Hydro Plan and through stakeholder opinions related to this involvement.

Recovery of Pension and OPEB Costs

On May 18, 2017, the OEB issued its report on the guiding principles and the policy for recovery mechanisms of pension and OPEB costs. This report established accrual basis as the default rate-setting method. This outcome reduces OPG's risk related to the recovery of actual pension and OPEB accrual costs and the recovery of the balance in the Pension & OPEB Cash Versus Accrual Differential Deferral Account. Further details can be found in the section, *Highlights* under the heading, *Recent Developments – OEB's Report on Regulatory Treatment of Pension and OPEB Costs*.

RELATED PARTY TRANSACTIONS

Given that the Province owns all of the shares of OPG, related parties include the Province and other entities controlled by the Province.

The related party transactions summarized below include transactions with the Province and the principal successors to the former Ontario Hydro's integrated electricity business, including Hydro One, the IESO and the OEFC. The transactions between OPG and related parties are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties. As one of several wholly owned government business enterprises of the Province, OPG also has transactions in the normal course of business with various government ministries and organizations in Ontario that fall under the purview of the Province.

The related party transactions are summarized below:

<i>(millions of dollars) (unaudited)</i>	Three Months Ended June 30			
	2017 Revenue	2017 Expense	2016 Revenue	2016 Expense
Hydro One				
Electricity sales	1	-	1	-

	2,112	823	2,607	181

¹ The Nuclear Segregated Funds are reported on the consolidated balance sheets net of amounts recognized as due to the Province in respect of excess funding and, for the Used Fuel Segregated Fund, the Province's rate of return guarantee. As at June 30, 2017 and December 31, 2016, the Nuclear Segregated Funds were reported net of amounts due to the Province of \$3,879 million and \$3,415 million, respectively. The details of accounting for the Nuclear Segregated Funds are described in OPG's 2016 annual MD&A in the section, *Critical Accounting Policies and Estimates* under the heading, *Nuclear Fixed Asset Removal and Nuclear Waste Management Funds*.

The receivable, available-for-sale securities, payable and long-term debt balances between OPG and its related parties are summarized below:

(millions of dollars) (unaudited)	June 30 2017	December 31 2016
Receivables from related parties		
Hydro One	-	1
IESO	347	421
OEFC	8	1
PEC	4	4
Province of Ontario	8	2
Available-for-sale securities		
Hydro One shares	195	212
Accounts payable and accrued charges		
OEFC	66	61
Province of Ontario	7	2
IESO	2	2
Long-term debt (including current portion)		
Notes payable to OEFC	3,385	3,295

OPG holds interest-bearing Province of Ontario bonds in the Nuclear Segregated Funds and the OPG registered pension fund. As at June 30, 2017, the Nuclear Segregated Funds held \$1,663 million of interest-bearing Province of Ontario bonds, while the registered pension fund had no such holdings. As at December 31, 2016, the Nuclear Segregated Funds and the registered pension fund held \$1,652 million and \$284 million of interest-bearing Province of Ontario bonds, respectively. These bonds are publicly traded securities and are measured at fair value. OPG jointly oversees the investment management of the Nuclear Segregated Funds with the Province.

There have been no related party transactions related to the Fair Hydro Plan and associated financing activities.

INTERNAL CONTROLS OVER FINANCIAL REPORTING AND DISCLOSURE CONTROLS

The Company maintains a comprehensive system of policies, procedures, and processes that represents its framework for internal controls over financial reporting and for its disclosure controls and procedures (together, ICFR). There were no changes in the Company's internal control system during the current interim period that has or is reasonably likely to have a material impact to the ICFR.

QUARTERLY FINANCIAL HIGHLIGHTS

The following tables set out selected financial information from OPG's unaudited interim consolidated financial statements for each of the eight most recently completed quarters.

<i>(millions of dollars - except where noted) (unaudited)</i>	June 30 2017	March 31 2017	December 31 2016	September 30 2016
Revenue	1,146	1,176	1,388	1,400
Net income (loss)	307	68	(8)	198
Less: Net income attributable to non-controlling interest	4	4	5	4
Net income (loss) attributable to the Shareholder	303	64	(13)	194
Per common share, attributable to the Shareholder (dollars)	\$1.18	\$0.25	(\$0.05)	\$0.76

<i>(millions of dollars - except where noted) (unaudited)</i>	June 30 2016	March 31 2016	December 31 2015	September 30 2015
Revenue	1,387	1,478	1,312	1,426
Net income (loss)	135	128	(100)	85
Less: Net income attribute to the non-controlling interest	3	5	1	5
Net income (loss) attributable to the Shareholder	132	123	(101)	80
Per common share, attributable to the Shareholder (dollars)	\$0.51	\$0.48	(\$0.39)	\$0.31

Trends

OPG's quarterly results are affected by changes in grid-supplied electricity demand, primarily resulting from variations in seasonal weather conditions, changes in economic conditions, the impact of small scale generation embedded in distribution networks, and the impact of conservation efforts in the province. Weather conditions affect water flows, electricity demand, and prevalence of SBG conditions. Historically, OPG's revenues have been higher in the first quarter of a fiscal year as a result of winter heating demands and in the third quarter due to air conditioning and

cooling demands. The financial impact of forgone production due to SBG conditions at the regulated hydroelectric stations and the financial impact of differences between forecast water flows reflected in OEB-approved regulated prices and the actual water flows are mitigated by regulatory variance accounts authorized by the OEB.

The timing of planned outages at a nuclear generating station during the year can cause variability in year-over-year operating results for partial periods of a fiscal year, including the impact on revenue and OM&A expenses, but is not a significant driver of variability for full fiscal year results.

During the fourth quarter of 2016 and the first half of 2017, OPG's electricity generation was reduced as a result of the Unit 2 refurbishment outage at the Darlington GS, which began in October 2016 and is expected to continue until early 2020.

OPG's financial results are also affected by the earnings on the Nuclear Segregated Funds, net of the impact of the Bruce Lease Net Revenues Variance Account.

*net of regulatory variance account

Additional items that affected net income in certain quarters above are described in OPG's 2016 annual MD&A under the section, *Quarterly Financial Highlights*.

SUPPLEMENTARY NON-GAAP FINANCIAL MEASURES

In addition to providing net income and other financial information in accordance with US GAAP, certain non-GAAP financial measures are also presented in OPG's MD&A. These non-GAAP measures do not have any standardized meaning prescribed by US GAAP and, therefore, may not be comparable to similar measures presented by other issuers. OPG utilizes these measures to make operating decisions and assess performance. Readers of the MD&A would utilize these measures in assessing the Company's financial performance from ongoing operations. The Company believes that these indicators are important since they provide additional information about OPG's performance, facilitate comparison of results over different periods, and present measures consistent with the Company's strategies to provide value to the Shareholder, improve cost performance, and ensure availability of cost effective funding. These non-GAAP financial measures have not been presented as an alternative to net income, cash flow provided by operating activities, or any other measure in accordance with US GAAP, but as indicators of operating performance.

The definitions of the non-GAAP financial measures are as follows:

(1) **ROE Excluding AOCI** is defined as net income attributable to the Shareholder divided by average equity attributable to the Shareholder excluding AOCI, for the period. ROE Excluding AOCI is measured over a 12-month period and is calculated as follows:

	Twelve Months Ended	
	June 30	December 31
(millions of dollars – except where noted) (unaudited)	2017	2016
ROE Excluding AOCI		
Net income attributable to the Shareholder	548	436
Divided by: Average equity attributable to the Shareholder, excluding AOCI	10,894	10,442
ROE Excluding AOCI (percent)	5.0	4.2

(2) **FFO Adjusted Interest Coverage** is defined as FFO before interest divided by adjusted interest expense. FFO before interest is defined as cash flow provided by operating activities adjusted for interest paid, interest capitalized to fixed and intangible assets, and changes to non-cash working capital balances for the period. Adjusted interest expense is calculated as net interest expense plus interest income, interest capitalized to fixed and intangible assets, interest related to regulatory assets and liabilities, and the excess of interest on pension and OPEB projected benefit obligations over expected return on pension plan assets, for the period.

FFO Adjusted Interest Coverage is measured over a 12-month period and is calculated as follows:

	Twelve Months Ended	
	June 30 2017	December 31 2016
<i>(millions of dollars – except where noted) (unaudited)</i>		
FFO before interest		
Cash flow provided by operating activities	1,252	1,705
Add: Interest paid	267	269
Less: Interest capitalized to fixed and intangible assets	(158)	(141)
Less: Changes to non-cash working capital balances	(36)	(68)
FFO before interest	1,325	1,765
Adjusted interest expense		
Net interest expense	91	120
Add: Interest income	5	7
Add: Interest capitalized to fixed and intangible assets	158	141
Add: Interest related to regulatory assets and liabilities	41	30
Add: Excess of interest on pension and OPEB projected benefit obligations over expected return on pension plan assets ¹	-	45
Adjusted interest expense	295	343
FFO Adjusted Interest Coverage (times)	4.5	5.1

¹ A value of nil is used in the calculation when interest on pension and OPEB projected benefit obligations is equal to, or lower than, expected return on pension plan assets.

(3) **Enterprise Total Generating Cost per MWh** is used to measure OPG's overall organizational cost performance. Enterprise TGC per MWh is defined as OM&A expenses (excluding the Darlington Refurbishment project and other generation development project costs, the impact of regulatory variance and deferral accounts, and expenses ancillary to OPG's electricity generation business), fuel expense for OPG-operated stations including hydroelectric gross revenue charge and water rental payments (excluding the impact of regulatory variance and deferral accounts), and capital expenditures (excluding the Darlington Refurbishment project and other generation development projects) incurred during the period, divided by total electricity generation from OPG-operated generating stations plus electricity generation forgone due to SBG conditions during the period.

	Three Months Ended June 30		Six Months Ended June 30	
<i>(millions of dollars – except where noted) (unaudited)</i>	2017	2016	2017	2016
Enterprise TGC				
Total OM&A expenses	711	709	1,419	1,395
Total fuel expense	178	182	333	354
Total capital expenditures	451	398	859	718
Less: Darlington Refurbishment capital and OM&A costs	(306)	(243)	(615)	(448)
Less: Other generation development project capital and OM&A costs	(19)	(41)	(36)	(79)
(Less) Add: OM&A and fuel expenses (refundable through) deferred in regulatory variance and deferral accounts	(12)	23	(23)	41
Less: Nuclear fuel expense for non OPG-operated stations	(16)	(15)	(29)	(32)
Add: Hydroelectric gross revenue charge and water rental payments for electricity generation forgone due to SBG conditions	23	15	34	33
Less: OM&A expenses ancillary to electricity generation business	(4)	(7)	(9)	(12)
Other adjustments	(2)	2	(4)	(3)
	1,004	1,023	1,929	1,967
Adjusted electricity generation (TWh)				
Total OPG electricity generation	18.0	19.4	36.6	40.4
Adjust for electricity generation forgone due to SBG conditions and OPG's share of electricity generation from co-owned facilities	2.6	1.7	3.3	3.3
	20.6	21.1	39.9	43.7
Enterprise TGC per MWh (\$/MWh) ¹	48.72	48.48	48.35	45.01

¹ Amounts may not calculate due to rounding.

(4) **Nuclear Total Generating Cost per MWh** is used to measure the cost performance of OPG's nuclear generating assets. Nuclear TGC per MWh is defined as OM&A expenses of the Regulated – Nuclear Generation segment (excluding the Darlington Refurbishment project costs, the impact of regulatory variance and deferral accounts, and expenses ancillary to the nuclear electricity generation business), nuclear fuel expense for OPG-operated stations (excluding the impact of regulatory variance and deferral accounts), and capital expenditures of the Regulated – Nuclear Generation segment (excluding the Darlington Refurbishment project costs) incurred during the period, divided by nuclear electricity generation for the period.

<i>(millions of dollars – except where noted) (unaudited)</i>	Three Months Ended June 30		Six Months Ended June 30	
	2017	2016	2017	2016
Nuclear TGC				
Regulated – Nuclear Generation OM&A expenses	593	581	1,182	1,144
Regulated – Nuclear Generation fuel expense	68	79	136	160
Regulated – Nuclear Generation capital expenditures	375	308	741	557
Less: Darlington Refurbishment capital and OM&A costs	(306)	(243)	(615)	(448)
Add: Regulated – Nuclear Generation OM&A and fuel expenses deferred in regulatory variance and deferral accounts	3	29	1	53
Less: Nuclear fuel expense for non OPG-operated stations	(16)	(15)	(29)	(32)
Less: Regulated - Nuclear Generation OM&A expenses ancillary to nuclear electricity generation business	(1)	(2)	(2)	(3)
Other adjustments	(2)	(3)	(2)	(4)
	714	734	1,412	1,427
Nuclear electricity generation (TWh)	9.3	10.6	19.3	22.9
Nuclear TGC per MWh (\$/MWh) ¹	76.87	69.25	73.24	62.44

¹ Amounts may not calculate due to rounding.

(5) **Hydroelectric Total Generating Cost per MWh** is used to measure the cost performance of OPG's hydroelectric generating assets. Hydroelectric TGC per MWh is defined as OM&A expenses of the Regulated – Hydroelectric segment and the hydroelectric facilities included in the Contracted Generation Portfolio segment (excluding generation development project costs, the impact of regulatory variance and deferral accounts, and expenses ancillary to the hydroelectric electricity generation business), hydroelectric gross revenue charge and water rental payments (excluding the impact of regulatory variance and deferral accounts), and capital expenditures of the Regulated – Hydroelectric segment and the hydroelectric facilities included in the Contracted Generation Portfolio segment (excluding expenditures related to the Peter Sutherland Sr. GS and other hydroelectric generation development projects) incurred during the period, divided by total hydroelectric electricity generation plus hydroelectric electricity generation forgone due to SBG conditions during the period. OPG reports hydroelectric gross revenue charge and water rental payments as fuel expense.

	Three Months Ended June 30		Six Months Ended June 30	
<i>(millions of dollars – except where noted) (unaudited)</i>	2017	2016	2017	2016
Hydroelectric TGC				
Regulated – Hydroelectric OM&A expenses	75	75	151	151
Regulated – Hydroelectric fuel expense	97	92	170	171
Contracted Generation Portfolio OM&A expenses	40	45	79	85
Contracted Generation Portfolio fuel expense	13	11	27	23
Regulated – Hydroelectric and Contracted Generation Portfolio capital expenditures	48	80	85	139
Less: Regulated – Hydroelectric and Contracted Generation Portfolio generation development project capital and OM&A costs	(19)	(39)	(35)	(76)
Less: Thermal OM&A and fuel expenses and capital expenditures in the Contracted Generation Portfolio	(41)	(38)	(80)	(75)
Less: Regulated – Hydroelectric OM&A and fuel expenses refundable through regulatory variance and deferral accounts	(15)	(5)	(24)	(12)
Add: Hydroelectric gross revenue charge and water rental payments for electricity generation forgone due to SBG conditions	23	15	34	33
Other adjustments	2	(2)	1	-
	223	234	408	439
Adjusted hydroelectric electricity generation (TWh)				
Regulated – Hydroelectric electricity generation	8.2	8.0	16.2	15.9
Contracted Generation Portfolio electricity generation	0.5	0.8	1.1	1.6
Adjust for hydroelectric electricity generation forgone due to SBG conditions and non-hydroelectric electricity generation of the Contracted Generation Portfolio, including OPG's share of electricity generation from co-owned facilities	2.6	1.7	3.3	3.3
	11.3	10.5	20.6	20.8
Hydroelectric TGC per MWh (\$/MWh) ¹	19.83	22.14	19.81	21.08

¹ Amounts may not calculate due to rounding.

(6) **Gross margin** is defined as revenue less fuel expense.
