ONTARIO GUIDELINES FOR

CLASSIFICATION OF PESTICIDES PRODUCTS

INTRODUCTION

Under the authority of The Pesticides Act 1973 and Regulations administered by the Ministry of the Environment, all pesticide products sold in the Province of Ontario must be classified and assigned a schedule, and subsequent marketing of each product must be in accordance with the regulations relating to the classification. Six schedules exist and are described herein.

A function of the Pesticides Advisory Committee is to classify all such products. The resulting classification, when published in the Ontario Gazette, becomes an amendment to the regulations under The Pesticides Act.

DEFINITION

Pesticides classified under The Pesticides Act 1973 are defined as pesticides registered under the Agriculture Canada Pest Control Products Act and are identifiable by both a code in the registered products list and a P.C.P. number designating the actual product offered for sale by trade name. The Ontario classification takes into consideration the marketable formulation when considering LD₅₀ values, but the active ingredient when considering persistence of parent compounds or their metabolites. Specific use patterns relating to environmental impact or to the humaneness of pest animal control are also considered.

CLASSIFICATION PROCEDURE

All applications for classification must be submitted to the Chairman, Ontario Pesticides Advisory Committee, Ministry of the Environment, Queen's Park, Toronto, Ontario M7A 1A2.

Information required for classification purposes is described on pages 8-9.

SCHEDULES DESCRIBED

Schedules 1 and 5

Schedule 1 pesticides are restricted and can only be used under the authority of a specific use permit. Schedule 5 pesticides are limited to application on agricultural land. Sales of both Schedule 1 and Schedule 5 pesticides are permitted only through wholesale vendors and holders of Class 1 retail vendor licences. A record must be kept of each sale.

The criteria for defining Schedule 1 include:

- 1) pesticides that pose a serious hazard to public health and/or the natural environment.
- 2) pesticides exhibiting acute oral LD₅₀ values of less than 50 mg/kg (see Table 1).
- 3) pesticides exhibiting acute dermal LD₅₀ values of less than 100 mg/kg (see Table 1).
- 4) pesticide formulations that are gaseous at room temperature and possess high inhalation toxicities at normal temperatures (see Table 1).
- 5) pesticides that are persistent and/or give rise to persistent metabolites that produce undesirable side effects on non-target organisms either by acute or chronic toxicity.
- 6) pesticides which through their mode of action may inflict unnecessary suffering to pest vertebrate animals.

The criteria for defining Schedule 5 include:

- 1) pesticides that pose a serious hazard to public health and/or the natural environment.
- 2) pesticides exhibiting acute oral LD₅₀ values of less than 50 mg/kg (see Table 1).
- 3) pesticides exhibiting acute dermal LD₅₀ values of less than 100 mg/kg (see Table 1).
- 4) pesticide formulations that have high inhalation toxicities at normal temperatures (see Table 1).
- 5) the lack of less hazardous control products which could provide adequate protection to agricultural crops.

Schedule 2

Pesticides and/or pesticide formulations in this group are restricted to agriculturalists, licensed exterminators and registered custom sprayers. Sales are permitted through wholesale vendors and holders of Class 1 and Class 2 retail vendor licences. Sales records must be kept.

The criteria defining Schedule 2 include:

- 1) pesticides that could pose a hazard but are considered suitable for use by the experienced professional applicator.
- 2) pesticides exhibiting medium acute oral toxicities (see Table 1).
- 3) pesticides exhibiting medium acute dermal toxicities (see Table 1).
- 4) pesticide formulations that have moderate inhalation toxicities at normal temperatures (see Table 1).
- 5) organic pesticides that do not present problems of long term persistence or accumulation in biological tissues, and those inorganic pesticides that may present a degree of hazard to the environment.

Schedule 3

Pesticides and/or pesticide formulations in Schedule 3 may be made available for domestic purposes as the hazards accompanying their use are considered minimal. Sale of Schedule 3 pesticide products is restricted to wholesale vendors and holders of Class 1, Class 2 or Class 3 retail vendor licences. Sales records are not required.

The criteria for defining Schedule 3 include:

- 1) pesticides or dispersants should pose minimal hazards to the environment or to public health.
- 2) pesticides exhibiting low acute oral toxicities (see Table 1).
- 3) pesticides exhibiting low acute dermal toxicities (see Table 1).
- 4) pesticide formulations that have low inhalation toxicities at normal temperature (see Table 1).
- 5) organic pesticides that are short-lived and do not produce either persistent or toxic metabolites.
- 6) those inorganic pesticides that present a minimal environmental hazard.
- 7) product residues should not pose a problem when 'empty' containers are disposed of in municipal garbage.

Schedules 4 and 6

Schedule 4

Pesticides and/or pesticide formulations in this group are those that can safely be handled by any type of outlet and would be available for sale in food handling establishments. Wholesalers are required to have at the least a limited wholesale vendor licence but no vending licence is required at the retail level.

The criteria for defining this group include:

- 1) pesticide formulations that can be considered relatively innocuous to humans. This includes compounds that are currently available for non-pesticide uses, or are used as insect or animal repellents classified as "Domestic" under the federal Pest Control Products Act, or are pesticides formulated in very low concentrations.
- 2) pesticide formulations exhibiting very low acute oral toxicities (LD_{50} values of greater than 5,000 mg/kg). Products for which the LD_{50} values are less than 5,000 mg/kg but greater than 2,500 mg/kg may be accepted if product toxicological data is presented (see Table 1).
- 3) pesticide formulations exhibiting very low acute dermal toxicities (see Table 1).
- 4) pesticides that are of no known hazard to the environment or to domestic pets.
- 5) all products must carry a federally approved 'Domestic' label.
- 6) maximum package content must not exceed 2 lbs. by weight or 40 fl. ozs. by volume or if metric, 1 kilogram or 1 litre respectively, and all containers must be physically inspected and approved by the Pesticides Advisory Committee after acceptance of the active ingredients as Schedule 4 candidates.

Schedule 6

Pesticide products assigned to this group are identical to those in Schedule 4 but there is no limit to package size and the product may be designated for commercial use. Sale of Schedule 6 pesticide products may be sold by wholesale vendors, limited wholesale vendors and holders of Class 1, Class 2, or Class 3 retail vendor licences.

GUIDELINES FOR ORAL, DERMAL AND INHALATION TOXICITY EVALUATION

TABLE 1

	Schedules 1 and 5	Schedule 2	Schedule 3	Schedules 4 and 6
Acute Oral LD ₅₀ (single dose - mg/kg)	0-50	50-500	500-5,000	over 5,000 (1)
Acute Dermal LD ₅₀ (single dose - mg/kg)	0-100	100-1,000	1,000-10,000	over 10,000
Inhalation Limits IC ₅₀ (continuous for 8 hours - mg/L air)	0-2	2-20	20-200	over 200

(1) an LD₅₀ of $\geq$ 2,500 may be accepted for a schedule 4 or 6 candidate product if individual product toxicological data are provided.

Test Animals for toxicological data in order of preference:

- (a) primates
- (b) dogs and cats
- (c) rodents
- (d) fish and birds

Classification will be based on lowest valid LD₅₀ values.
Other effects considered - carcinogenesis, etc.

CRITERIA FOR CLASSIFYING FERTILIZERS CONTAINING PESTICIDES

Fertilizers containing one pesticide active ingredient

Fertilizers containing only one pesticide active ingredient will be classified according to the classification for that active ingredient.

Fertilizers containing more than one pesticide active ingredient

a) Except as described in (b) below, fertilizers containing two or more pesticide active ingredients will not be accepted for normal classification and will be classified under Schedule 1.

b) Fertilizers containing two or more herbicides that are complementary for the control of a similar group of weeds will be classified according to the total percentage of all active ingredients present, e.g. 2,4-D, mecoprop, dicamba for broad leaf weed control in turf grass.

CLASSIFICATION CRITERIA FOR CONTROL PRODUCTS CLASSIFIED "RESTRICTED" UNDER THE PEST CONTROL PRODUCTS ACT

Where a pesticide product is submitted for classification under The Pesticides Act 1973, and contains an active ingredient or a mixture of active ingredients acceptable under Schedule 3 or 6 but carries a federal label exclusively "Restricted" under The PCP Act, that product will be classified in a schedule no less restrictive than Schedule 2. The criteria for Schedules 1, 2 and 5 will be followed when classifying all other exclusively "Restricted" control products.

REVIEW OF PREVIOUSLY CLASSIFIED ACTIVE INGREDIENTS AND/OR PREVIOUSLY CLASSIFIED PESTICIDE PRODUCTS

Active ingredients are reviewed from time to time as additional technical data become available. Reclassification to a more restrictive or a less restrictive schedule may result, or the compound may remain in its original schedule. If, in the Committee's opinion, a more restrictive classification is deemed necessary, Registrants will be invited to appear before the Committee for discussion and clarification.

Where a Registrant desires a product review for the purpose of reclassification to a less restrictive category, a submission must be provided in writing, accompanied by supportive documents.

PACKAGING GUIDELINES: SCHEDULE 4 PRESICIDE PRODUCTS ONLY

All products must carry a federally approved "Domestic" label, and must meet Schedule 4 active ingredient classification guidelines.

MAXIMUM CONTENT

Maximum package content must not exceed 2 lbs. by weight or 40 fl. ozs. by volume or if metric, 1 kilogram or 1 litre respectively, and all containers must be submitted to the Pesticides Advisory Committee for physical inspection and approval.

SHAKER OR SIFTER CAN DISPENSERS

All shaker-can dispensers used in packaging pesticide products must have an approved device for reclosure. Formulators are invited to discuss those approved devices with the Committee. In some cases, a simple plastic cap, similar to that used on coffee cans, may be sufficient.

PRESSURIZED DISPENSERS

Every pressurized spray dispenser used in packaging pesticide products must have a cap, locking device or seal, so as to prevent accidental activation during transit, storage and display.

FOLDING PAPER BOARD CARTONS

Folding paper-board cartons may be approved when the product, if formulated as a granule, impregnated fabric, pellet, powder, particulate (e.g. rodent bait), solid, slow-release generator, tablet or wettable powder, is packaged in an acceptable inner liner (e.g. plastic or foil liner).

PLASTIC BAGS OR POUCHES

Plastic bags or pouches used to package rodent baits must be sufficiently strong to prevent accidental spillage during transit, storage and display, and must be packaged in an outer display carton. Individual bags or pouches, or those which, in the opinion of the Committee, could be easily torn, will not be approved.

GLASS BOTTLES

Glass bottles shall not be used for packaging Schedule 4 pesticides if, in the opinion of the Committee, such containers can be easily shattered or broken during transit, storage and display.

PAPER BAGS

No paper bags will be allowed in Schedule 4.

OTHER LIMITATIONS

Where, in the opinion of the Committee, a pesticide container can be mistaken for a food or toy container, the product will not be permitted in Schedule 4.

All labels must contain suitable guidance for the general public and must not be misleading.

APPROVAL OF NON-CONFORMING CONTAINERS

The Committee may approve non-conforming containers that, in its opinion, warrant special consideration due to the type of product or method of application of that product.

Registrants are encouraged to discuss with the Committee any packaging improvements they may make in order to conform with these requirements.

TRANSFER TO SCHEDULE 6

Domestic products containing only Schedule 4 active ingredients, but not meeting the packaging requirements, will be classified under Schedule 6.

INFORMATION REQUIRED FOR PESTICIDES CONTAINING NEW
OR PREVIOUSLY UNCLASSIFIED ACTIVE INGREDIENTS (see Appendix)

If a Report of New Registration (RNR) has been issued by the Control Products Section, Agriculture Canada, items B, D.4 and E.1 below, need not be submitted.

A. General

1. Technical data sheet
2. Two copies of label text followed by two copies of federally approved label when printed.

B. Use Precautions

1. Flammability
2. Corrosiveness
3. Storage stability
4. Safety precautions for handling and application
5. Decontamination and disposal

C. Container

1. Type and size of containers
2. If classification in Schedule 4 is requested empty container samples complete with closures and labels must be provided (see Schedule 4 packaging guidelines).

D. Registration Information

1. One copy of application for federal registration under The Pest Control Products Act.
2. P.C.P. number and status (full or temporary registration)
3. P.C.P. classification (restricted, commercial or domestic)
4. Tolerance

E. Toxicology

1. Technical material: acute oral, dermal, and inhalation LD₅₀'s, subacute toxicity, teratogenicity, carcinogenicity, other effects on mammals.
2. Formulated material: acute oral, dermal and inhalation LD₅₀'s

F. Other Ingredients

1. The Committee reserves the right to request information or data on carriers, solvents, inert materials, propellants and other ingredients.

G. Environmental and Other Hazards

1. The Committee reserves the right to request additional data should these be required.

H. Source

1. Information prepared by: Name and address of manufacturer preparing data and date of submission.

INFORMATION REQUIRED FOR CLASSIFICATION OF NEW PESTICIDE PRODUCTS
CONTAINING PREVIOUSLY CLASSIFIED ACTIVE INGREDIENTS *

- A. One copy of application for federal registration under the Pest Control Products Act.
- B. Two copies of official label text followed by two copies of label when printed.
- C. P.C.P. number and status (full or temporary registration).
- D. Type and size of containers.
- E. If the product(s) is a candidate for Schedule 4 (Domestic classification with no controls) and the acute oral LD₅₀ is greater than 2,500 but equal to or less than 5,000 individual product toxicological data must be provided.
- F. Container approval is required for all Schedule 4 products. Empty container samples complete with closures and labels must be submitted. (See Schedule 4 packaging guidelines on page 7)
- G. The Committee reserves the right to request information or data on carriers, solvents, inert materials, propellents and other ingredients.

* See Appendix

ADDITIONAL INFORMATION

Section 5 of The Pesticides Act 1973 states:

"Unless exempt by the regulations, no person shall sell, offer to sell or transfer any pesticide unless the pesticide is classified by the regulations and except under and in accordance with a licence that shall be for such class and in respect of each premises on, in or from which the pesticide is or will be sold, offered for sale or transferred. 1973, c. 25, s. 5."

It is in the Registrant's interest to submit all new products for classification as early as possible or immediately following federal registration under the P.C.P. Act.

Additional information on classification can be obtained from the Ontario Pesticides Advisory Committee, Queen's Park, Toronto, Ontario, M7A 1A2, telephone (416) 965-7048.

Enquires concerning marketing and use, and requests for copies of The Ontario Pesticides Act 1973 and Regulations should be directed to the Pesticides Control Section, Ministry of the Environment, 7th Floor, 40 St. Clair Ave. W., Toronto, Ontario, telephone (416) 965-2401.
