**Reason for
Use Code**
Clinical Criteria

In contrast to bacterial infections, viral replication precedes clinical signs and symptoms. Since antiviral agents are only active against replicating viruses, clinical benefit in reducing severity of symptoms and duration of illness is only marginal, at best. Therefore, treatment initiated beyond the stated time frames below is of no value, and treatment of mild cases should be carefully considered, in light of the minimal benefit which will be achieved. In addition, the balance of evidence indicates that the use of acyclovir in normal hosts in an attempt to prevent post-herpetic neuralgia is of no value.

Where specified, treatment must begin within the time frames indicated for the product to be reimbursed. There is no benefit from the therapy begun after these time frames.

Acyclovir tablets will be reimbursed when prescribed for:

- 95 Herpes zoster in immunocompetent patients 50 years of age or older, up to 72 hours after appearance of lesions. Dose: 800mg 5 times/day for 7 days.

LU Authorization Period: 1 Year.

- 96 Herpes zoster ophthalmicus regardless of age, up to 72 hours after appearance of lesions. Dose 800mg 5 times/day for 7 days.

LU Authorization Period: 1 Year.

- 97 Herpes zoster in immunocompromised patients regardless of age and time elapsed from onset. Dose: 800mg 5 times/day for 7 days.

LU Authorization Period: 1 Year.

- 314 Varicella zoster in immunocompetent patients greater than or equal to 12 years of age, up to 24 hours after appearance of lesions. Dose: 20mg/kg/dose (max 800mg) 4 times/day for 5 days

NETWORK NOTE: Network will limit supply up to 7 days and up to 35 tablets.

LU Authorization Period: 1 Year.

(Interchangeable with Prevacid)					
Reason for Use Code	Clinical Criteria				
293	Gastroesophageal Reflux Disease (GERD) For the treatment of erosive GERD or upper GI malignancy; OR For the treatment of non-erosive GERD after failure of H2-receptor antagonist therapy. Patients with GERD should be reassessed within 6 months after initial treatment with a PPI. The reassessment could include confirmation of need for PPI with endoscopy, a trial of PPI withdrawal, or stepdown therapy to H2-receptor antagonist therapy. Note: There is a lack of published evidence to support double-dose PPI therapy in this setting. LU Authorization Period: 1 year				
295	H. pylori-positive Peptic Ulcers For the treatment of H. pylori-positive peptic ulcers where H. pylori is documented, by serology, urea breath test or endoscopy, for a one-week course in combination with antimicrobial therapy. Retreatment of H. pylori-positive peptic ulcers must be documented by persistent H. pylori infection on urea breath test or endoscopy. Maximum duration: 7 days (for retreatment, a four-week period must elapse since the end of the previous treatment). LU Authorization Period: 1 year				
297	Confirmed Peptic Ulcers or NSAID-induced Ulcer Prophylaxis: For the treatment of confirmed peptic ulcers and NSAID-induced ulcers; OR For the prophylaxis of NSAID-induced ulcers for patients at increased risk of GI bleeding. Note: There is a lack of published evidence to support double-dose PPI therapy in this setting. LU Authorization Period: 1 year				
401	Other Gastrointestinal Disorders For the treatment of gastroduodenal Crohn's disease, short-gut syndrome, scleroderma, or pancreatitis. Note: There is a lack of published evidence to support double-dose PPI therapy in these settings LU Authorization Period: 1 year

Severe Conditions:

For the treatment of severe esophagitis, Zollinger-Ellison syndrome, esophageal stricture, persistent symptoms of GERD or persistent erosive esophagitis, or upon hospital discharge following a gastrointestinal bleed.

For patients receiving double-dose therapy, the need to continue treatment at higher doses should be reassessed after eight weeks. For re-treatment at higher doses, a four-week period should have elapsed from the end of the previous treatment. Reassessment could include a procedural assessment of the condition or step-down therapy to lower-dose proton pump inhibitor (PPI) therapy.

02343045	Ticlopidine (Interchangeable with Ticlid)	250mg	Tab	SAI	0.3141
Reason for Use Code	Clinical Criteria Ticlopidine is restricted to patients with transient cerebral ischemia. Ticlopidine may be somewhat more effective than ASA in preventing fatal and non fatal strokes. However, it is associated with neutropenia in 0.8-2.4% of patients, a serious side-effect which may be fatal. Patients on ticlopidine require blood tests every two weeks for the first three months of therapy. There have been more than 60 cases of ticlopidine associated thrombotic thrombocytopenic purpura (TTP) with 33% mortality rate. As well, there are other side effects such as diarrhea that occurs in 12.5% of patients. Ticlopidine should be used only after careful consideration. The appropriate use of ticlopidine in the management of patients with cerebral ischemic events (TIA or stroke) is based on the following: (a) Determining that the symptoms are due to focal cerebral ischemia, and differentiating the symptoms of dizziness due to vestibular dysfunction, lightheadedness, or syncope from antihypertensive drugs or cardiac dysfunction, and from symptoms due to migraine, epilepsy, hypoglycemia, or other causes, such as tumor. (b) If investigation demonstrates that the events are caused by emboli from the heart, the patient should be treated with anticoagulants, such as warfarin. (c) If the events are due to artery-to-artery emboli from the carotid bifurcation with a severe stenosis, the patient should probably be treated with ASA and offered carotid endarterectomy if medically suitable (70% to 99% stenosis). (d) ASA should be the first line of defense for patients with TIA and threatened stroke, and after an initial stroke of any severity. (e) The only drugs other than ASA that are available as platelet inhibitors and which have been shown to be of value for such patients are ticlopidine and clopidogrel. (f) Before abandoning ASA in favour of ticlopidine, efforts should be made to improve the tolerability of ASA by reducing the dose, taking it with food, and using enteric coated ASA. Ticlopidine will be reimbursed for patients: 219 Who are known to be, or become, intolerant of ASA; LU Authorization Period: Indefinite. 220 Where ASA is contraindicated; LU Authorization Period: Indefinite. 221 Who continue to have TIA or stroke symptoms while being treated with ASA. LU Authorization Period: Indefinite.

Reason for Use Code Clinical Criteria 420 ESAs (Eprex or Aranesp) for patients with: . Cancer diagnosis and receiving chemotherapy; AND . Presence of anemia caused by chemotherapy with a hemoglobin count less than 100g/L; AND . Patient has been informed of the risks and benefits of ESA therapy AND Anemia cannot be managed by use of blood transfusions due to at least one of the following: . Religious beliefs do not allow the patient to receive transfusions. . Previous severe (potentially life-threatening) reactions to a transfusion or difficulty cross-matching. . Myeloid cancers that cannot be managed with blood transfusions . Patient lives far away from treatment centre and/or transfusions cannot be coordinated with chemotherapy . Patients receiving neoadjuvant chemotherapy with anemia and at risk of high blood losses due to surgery Please refer to the product monograph for starting dose, dose adjustment and discontinuation recommendations. NOTE: Health Canada has issued the following statements regarding ESA therapy for the treatment of anemia due to chemotherapy in patients with non-myeloid malignancies: . In patients with a long life expectancy, the decision to administer ESAs should be based on a benefit-risk assessment with the participation of the individual patient. This should take into account the specific clinical context such as (but not limited to) the type of tumor and its stage, the degree of anemia, life expectancy, the environment in which the patient is being treated and known risks of transfusions and ESAs.					
Continued on next page....					

.... Continued from previous page

**Reason for
Use Code**

Clinical Criteria

- . If appropriate, red blood cell transfusion should be the preferred treatment for the management of anemia in patients with a long life expectancy and who are receiving myelosuppressive chemotherapy.
- . ESAs are not indicated for use in patients receiving hormonal agents, therapeutic biologic products, or radiotherapy unless receiving concomitant myelosuppressive chemotherapy.

Health Canada has also issued the following Serious Warnings and Precautions for cancer patients regarding ESAs:

- . ESAs increase the risks for death and serious cardiovascular and thromboembolic events in some controlled clinical trials.
- . ESAs shortened overall survival and/or increased the risk of tumour progression or recurrence in some clinical studies in patients with breast, head and neck, lymphoid, cervical and non-small cell lung cancers when dosed to target a hemoglobin of ≥ 120 g/L.
- . To minimize the above risks, use the lowest dose needed to avoid red blood cell (RBC) transfusions.
- . Use ESAs only for treatment of anemia due to concomitant myelosuppressive Chemotherapy.
- . If appropriate, red blood cell transfusion should be the preferred treatment for the management of anemia in patients with a long life expectancy and who are receiving myelosuppressive chemotherapy.
- . Discontinue ESAs following completion of a chemotherapy course.

LU Authorization Period: 1 year
