For the treatment of schizophrenia or schizoaffective disorders in patients who have:
A history of non-adherence; AND one of the following:

- (a) Inadequate control or significant side-effects from two or more formulary oral antipsychotic medications, including at least one atypical agent; OR
- (b) Inadequate control or significant side-effects from one or more conventional depot antipsychotic agents.

Clinical Criteria

402

Severe Conditions:

For the treatment of severe esophagitis, Zollinger-Ellison syndrome, esophageal stricture, persistent symptoms of GERD or persistent erosive esophagitis, or upon hospital discharge following a gastrointestinal bleed.

For patients receiving double-dose therapy, the need to continue treatment at higher doses should be reassessed after eight weeks. For re-treatment at higher doses, a four-week period should have elapsed from the end of the previous treatment. Reassessment could include a procedural assessment of the condition or step-down therapy to lower-dose proton pump inhibitor (PPI) therapy.
