Clinical Criteria

Maintenance/Renewal:

After 3 months of therapy, patients who respond to therapy should have:

At least a 50% reduction in PASI, AND
at least a 50% reduction in BSA involvement, AND
at least a 5 point reduction in DLQI score

Approvals will only allow for standard dosing for Stelara 45mg to be administered at weeks 0, 4 and every 12 weeks thereafter. Alternatively, 90mg may be used in patients with a body weight of over 100 kg. In patients weighing over 100 kg, both the 45mg and 90mg doses were shown to be efficacious. However, 90mg was efficacious in a higher percentage of these patients. If the patient has not responded after 12 weeks of treatment, the physician should consider switching to an alternative biologic agent.
