Notes: Patients greater than 6 years of age diagnosed with ADHD according to DSM-IV criteria and where symptoms are not due to other medical conditions which affect concentration, and who require 12-hour continuous coverage due to academic and/or psychosocial needs, and who meet the following:

- 1) Patients who demonstrate significant and problematic disruptive behaviour or who have problems with inattention that interfere with learning; AND
- 2) Prescribed by or in consultation with a specialist in pediatric psychiatry, pediatrics or a general practitioner with expertise in ADHD; AND
- 3) Have been tried on methylphenidate immediate release (IR) or methylphenidate slow release (SR) or Dexedrine IR, and have experienced unsatisfactory results due to poor symptom control, side effects, administrative barriers, or societal barriers.

Administrative barriers include:

- inability of a school to dose the child at lunch;
- the school lunch hour does not coincide with the dosing schedule;
- poor compliance with noon or afternoon doses;
- the patient is unable to swallow tablets.

Societal barriers include:

- the patient or patient's caregiver(s) has (have) a history of substance abuse or diversion of listed immediate-release alternatives;
- the patient or patient's caregiver(s) is/are at risk of substance abuse or diversion of listed immediate-release alternatives.

02378612	Xarelto	20mg	Tab	BAH
Reason for Use Code	Clinical Criteria			
435	For the prevention of stroke and systemic embolism in at-risk patients who have non-valvular atrial fibrillation (AF) AND in whom:			
	1) Anticoagulation is inadequate following a reasonable trial on warfarin; OR 2) Anticoagulation with warfarin is contraindicated or not possible due to inability to regularly monitor via International Normalized Ratio (INR) testing (i.e., no access to INR testing services at a laboratory, clinic, pharmacy, and at home).			
	Exclusion Criteria: Patients who:			
	(a) have impaired renal function (creatinine clearance or estimated glomerular filtration rate less than 30mL/min); OR (b) are greater than or equal to 75 years in age without documented stable renal function; OR (c) have hemodynamically significant rheumatic valvular heart disease, especially mitral stenosis; OR (d) have prosthetic heart valves.			
	Definitions and Clarification:			
	(a) “documented stable renal function” is defined as creatinine clearance or estimated glomerular filtration rate that maintained for at least 3 months (i.e., 30-49mL/min for 15mg once daily dosing or greater than or equal to 50mL/min for 20mg once daily dosing for at least 3 months). (b) “at-risk patients with atrial fibrillation” are defined as those with a CHADS2 score of greater than or equal to 1. Although the ROCKET-AF trial included patients with higher CHADS2 score (greater than or equal to 2), other landmark studies with the other newer oral anticoagulants demonstrated a therapeutic benefit in patients with a CHADS2 score of 1. Prescribers may consider an antiplatelet regimen or oral anticoagulation for patients with a CHADS2 score of 1.			
Continued on the next page:				

**Reason for
Use Code**

Continued from the previous page

Clinical Criteria**Definitions and Clarification:**

- (c) "inadequate anticoagulation" is defined as INR testing results that are outside of the desired INR range for at least 35% of the tests during the monitoring period (i.e., adequate anticoagulation is defined as INR test results that are within the desired INR range for at least 65% of the tests during the monitoring period).
- (d) "a reasonable trial on warfarin" is defined as at least 2 months of therapy.
- (e) Since renal impairment can increase bleeding risk, renal function should be regularly monitored. Other factors that increase bleeding risk should also be assessed and monitored (see Xarelto product monograph).
- (f) Patients starting rivaroxaban should have ready access to appropriate medical services to manage a major bleeding event.
- (g) There is currently no data to support that rivaroxaban provides adequate anticoagulation in patients with rheumatic valvular disease or those with prosthetic heart valves, so rivaroxaban is not recommended in these populations.

LU Authorization Period: Indefinite

444

For the treatment of deep vein thrombosis (DVT) without symptomatic pulmonary embolism (PE) for up to six (6) months.

LU Authorization Period: 6 months.

Notes:

- . The recommended dose of rivaroxaban for patients initiating DVT treatment is 15mg twice daily for 3 weeks, followed by 20mg once daily.
- . ODB Program coverage for rivaroxaban is an alternative to heparin/warfarin for up to 6 months. When used for greater than 6 months, rivaroxaban is more costly than heparin/warfarin. As such, patients with an intended duration of therapy greater than 6 months should be considered for initiation on heparin/warfarin.
- . Since renal impairment can increase bleeding risk, it is important to monitor renal function regularly. Other factors that increase bleeding risks should also be assessed and monitored (see product monograph).

Reason
for Use
Code

Clinical Criteria

422

For the treatment of patients with new onset (< 3 months) neovascular (wet) age-related macular degeneration (AMD) in a verteporfin PDT (Visudyne)-naïve eye.

Initial diagnosis should be confirmed by an appropriate diagnostic procedure and administration should be done by a qualified ophthalmologist experienced in intravitreal injections.

Patients receiving concurrent administration of verteporfin PDT (Visudyne) are not eligible for reimbursement.

Treatment should be initiated with a loading phase of one injection per month for three consecutive months, followed by a maintenance phase.

During the maintenance phase, patients should be monitored for best corrected visual acuity or continued disease activity. If there is clinical or diagnostic evidence of disease activity such as a loss of greater than 5 letters in visual acuity (Early Treatment Diabetic Retinopathy Score (ETDRS) chart or one Snellen line equivalent), Lucentis may be administered. The interval between two doses should not be shorter than one month.

LU Authorization Period: 1 year

439

For the treatment of patients with clinically significant diabetic macular edema (DME) for whom laser photocoagulation is also indicated; and a hemoglobin A1c of less than 11%.

Treatment to be given monthly and continued until maximum visual acuity is achieved, confirmed by stable visual acuity for three consecutive monthly assessments performed while on Lucentis treatment. Thereafter patients should be monitored monthly for visual acuity.

Treatment is resumed with monthly injections when monitoring indicates a loss of visual acuity due to DME and continued until stable visual acuity is reached again for three consecutive monthly assessments.

LU Authorization Period: 1 year

Clinical Criteria

445

For the treatment of patients with clinically significant macular edema secondary to branch retinal vein occlusion (BRVO) or central retinal vein occlusion (CRVO).

Treatment to be given monthly and continued until maximum visual acuity is achieved, confirmed by stable visual acuity for three consecutive monthly assessments performed while on Lucentis treatment. Thereafter patients should be monitored monthly for visual acuity.

Treatment is resumed with monthly injections when monitoring indicates a loss of visual acuity due to macular edema secondary to retinal vein occlusion and continued until stable visual acuity is reached again for three consecutive monthly assessments.

LU Authorization Period: 1 year
